The Lex Iulia et Papia Poppaea placed certain restrictions on marriage as to the parties between whom it could take place. (See Lex, p. 942.) Thus certain marriages were prohibited on account of disparagement, as marriages between senators and freedwomen. The law allowed freeborn persons (*ingenui*) to marry freedwomen (*libertinae*). Persons within certain prohibited degrees of relationship could not intermarry. A union of persons within the prohibited degrees was an incestuous one. Relations who had the *ius osculi*, or right to kiss one another, could not marry one another. See Klenze, *Das Familienrecht der Cognaten und Affinen nach röm. und verwandten Rechten*, p. 16; and Muirhead, *Roman Law*, iii. p. 26.

In early times there could be no marriage between cognates within the seventh degree, but subsequently the prohibited circle was made less wide. There could be no marriage between ascendants and descendants, whether the relation was natural or by adoption; and a man could not marry an adopted daughter or granddaughter, even after he had emancipated her. Brothers and sisters, whether of the whole or half blood, could not marry, but a man might marry a sister by adoption after her emancipation, or after his own emancipation. It became legal to marry a brother's daughter after Claudius had set the example by marrying Agrippina; but the rule was not car-

ried further than the example, and in the time of Gaius it remained unlawful for a man to marry his sister's daughter (Gaius, i. 62; Tac. *Ann.* xii. 5; Sueton. *Claud.* 26). Constantine prohibited a marriage between a man and his brother's daughter. Marriages between first cousins were in later times recognized.

Betrothal was a necessary preliminary to marriage, on which see SPONSALIA.

A marriage *cum conventione* might be effected by *confarreatio*, *coemptio*, or *usus*. *Confarreatio* was a form of marriage peculiar to the patricians, while *coemptio* seems to have been originally confined to the plebeians; but when *connubium* was extended to the plebeians, *coemptio* became a common form of intermarriage between the two orders. *Confarreatio* or *farreum* was a religious form of marriage, which principally consisted in an offering, with solemn words, of spelt bread (*panis farreus*) to Iupiter Farreus, in the presence of ten witnesses, the Pontifex Maximus and Flamen Dialis taking part in the ceremony. See COEMPTIO; USUS.

It remains to describe the actual ceremonies of Roman marriage: and it must be premised (1) that there was some difference according to the precise form of marriage adopted, though this distinction gradually disappeared and (2) that, as was said above, the greater part of marriage formality was voluntary, and that then, as in our own day, there might be weddings of a far simpler character. When therefore the complete ceremony of the most elaborate kind is described, it must be understood that a great deal of it was often omitted, and the marriage rites narrowed to little beyond the procession. In the choice of the wedding-day, superstition played a large part. May (as by many even now) and the first half of June were unlucky for marriages (Ovid, *Fasti*, v. 487; vi. 225). The reason was that the month of May took its general character from the festivals of the Lemuria (q. v.). In the first part of June came *dies religiosi* connected with the worship of Vesta. Besides these periods, it was necessary to avoid the *dies parentales*, Feb. 13–21; the first half of March; the three days of the opening of the lower world (*mundus patet*), viz.: Aug. 24, Oct. 5, Nov. 8; and also the days of Kalends, Ides, and Nones.

At the *sponsalia*, besides the formal words of the parent or guardian, *Spondesne? Spondeo* (Plaut. *Aul.* ii. 2, 78), the bridegroom gave the bride a present, as an earnest or pledge (*arra*, *pignus*), which was often a ring placed on the fourth finger of the left hand (our "ring finger"), which Gellius (x. 10) says is connected by a nerve with the heart.

On the day before the marriage the bride put aside her *toga praetexta*, which, with other belongings of childhood, was laid before the Lares, and put on the *tunica recta*, or *regilla*, which was woven in one piece in the old-fashioned way at the upright loom. The bride wore this dress also at the marriage, and a flame-coloured veil (*flammeum*), with which she was said *nubere caput*. The dress was fastened by a woollen girdle (*cingulum*) in the *nodus Herculeus*, as to the significance of which there is some difference of opinion. It has been explained by some as intended to secure a fruitful marriage, because Hercules had many children: Göll takes it to be an amulet against the evil eye (*fascinum*). But it is perhaps nearer the truth to take it to be the symbol of a stable marriage, and perhaps the original of the "true lovers' knot." The hair was arranged in six locks (*sex crines*) parted by the point of a spear (*hasta caelibaris*), and held in place by *vittae* or bands. Hence the words *crines* and *vitta* are used by poets as a synonym for marriage. The custom of parting it with a spear is perhaps a relic of the old marriage by capture, and may convey the idea of the word ἀδρίλητος. The bride had also a wreath of flowers and sacred herbs (*verbenae*) gathered by herself, and the bridegroom wore a similar wreath (Plut. *Pomp.* 55). As an account of the dressing of the bride, the passage in Claudian, *VI. Cons. Hon.* 523–528, is well worth reading.

In the house of the bride, which was decked with garlands (Juv. vi. 227; Stat. *Silv.* i. 2, 230), were assembled the relations, friends, and clients, as an *officium* (Juv. ii. 132). Then the omens were taken and announced by the *auspices* (Cic. *Pro Cluent.* 4, 14; Juv. x. 336), with the sacrifice of a sheep (cf. Verg. *Aen.* iv. 56). It had always been the custom to begin the sacred ceremony of *confarreatio* by consulting the omens, and the practice probably was as a rule extended to all marriages (Cic. *De Div.* i. 16, 28; Plaut. *Cas. Prol.* 85; Plin. *H. N.* x. § 21). Valerius Maximus (ii. 1, 1) says that in his time the *auspices* formed in name part of the attendance, though no *auspicia* for marriage were any longer taken. After these preliminaries, the omens being favourable, the marriage ceremonies began. They were in four main parts: (1) the contract; (2) the giving away of the bride, with whatever sacred rites were used; (3) the conducting (*deductio*) to her husband's house (the only *invariable* part); (4) her reception there. First the marriage tablets (*tabulae nuptiales* or *dotales*) were signed before witnesses (*signatores*), though the marriage was valid without this formality. When the form of marriage called *coemptio* was adopted (when either or both were plebeians), the formalities of an imaginary sale were gone through before not less than five witnesses, and a *libripens* (who held the scales at a sale): questions and answers as to the willingness on both sides followed, and with that ended this distinctive part of the marriage *per coemptionem;* the other ceremonies followed which were usual in all marriages. After the *coemptio*, or, where that was not used, after the signing of the *tabulae nuptiales*, a married woman, who must have been married only once, acting as *pronuba*, led the bride up to the bridegroom and joined their right hands. It seems probable that there was always some formal expression of willingness to marry, in the old patrician rite of *confarreatio* the set form of response from the bride was *Quando tu Gaius, ego Gaia*, which form of words was used also in the *coemptio* (Cic. *Pro Muren.* 12, 27). When the rite of *confarreatio* was followed the bloodless offering was made: a cake of spelt (*farreum libum*) was offered by the Pontifex Maximus and the Flamen Dialis to Iupiter: ten witnesses were present. With the offering to Iupiter a prayer was recited by the Flamen to Iuno as the goddess of marriage, and the deities of the country and its fruits — Tellus, Picumnus, and Pilumnus. During this ceremony the bride and bridegroom sat together upon two seats, which were placed side by side and covered with the skin of the sheep sacrificed before for the auspices: they sat to the left of the altar in the atrium and looked towards it: meanwhile a *camillus*, i. e. an attendant boy who was *patrimus et matrimus*, held (perhaps) all

that was required by the priest for the offering in a covered basket called *cumerus*. Sir John Lubbock suggests that the wedding-cake cut by the bride is a survival of the *farreum* in this rite; but the original for that will be found, if anywhere in the Roman marriage, in the *mustaceum*. The rite of *confarreatio* suggests rather the sacramental view of marriage.

In what follows, marriages in general of all forms are described. The prayer where there was no *confarreatio* (and therefore no Flamen Dialis) was pronounced by the *auspex*, and was addressed to five deities—Iupiter, Iuno, Venus, Suadela, and Diana. It would seem that sometimes, at least, a victim was here offered. There was next a formal congratulation from the wedding guests in the word *feliciter* (which, if there was no sacred rite, came directly after the contract). Then came the *cena nuptialis*, which was certainly, as a rule, given by the bride's father, and therefore before the procession (Catull. 62, 3; Dio Cass. xlviii. 44; Capitol. *Ant. Pius*, 10). But, as in modern weddings, the place of the wedding-feast might be altered from considerations of space or economy, and it seems sometimes to have been in the bridegroom's house. The wedding-cake (*mustaceum*), which was made of meal steeped in *must* and placed on bay-leaves (Pliny, xv. § 127), was cut up and distributed to the guests. Afterwards came the procession (*deductio*), the invariable part of the marriage. This took place usually at dusk, whence arose the custom of having torches (Catull. 62, 1). The bride was taken with simulated force from her mother's arms—clearly a survival of the marriage by capture, or, as the Romans themselves put it, a reminiscence of the Sabine marriage. Flute-players and torch-bearers went in front. The bride was conducted by three boys, *patrimi et matrimi*, two leading her by the hand, the third carrying a torch of whitethorn for luck. In the procession, besides the general crowd, there came also the *camillus* with his *cumerus*, and the bride's spindle and distaff were carried after her. Fescennine songs were sung during the procession (Catull. 61, 126), with interjections of *Talasse*. As to this deity of the wedding-day, reference may be made to Marquardt, *Privatl.* p. 54; Preller, *Röm. Myth.* p. 584 foll. He appears as Talasius, Talasio, Talassus, Thalassius, Thalassio. Livy (i. 9) gives us as bearing that name a companion of Romulus prominent in the rape of the Sabines, and derives the cry *Talasse* from him: but Talus (Fest. p. 359) is an old Sabine name, and Talassius may have been a Sabine deity of marriage: Varro connects him with *τάλαρος*, a work-basket. On the whole a Sabine origin is most probable. The part of the bridegroom in the procession was to scatter nuts for the boys in the crowd (Verg. *Ecl.* viii. 30; Catull. 61, 131). Though Catullus says that it shows the putting away of childhood, it is much more likely that the nuts symbolized fruitfulness of marriage and plenty. The custom, which may be compared with the Greek *καταχύσματα*, has its representative in the throwing of rice at the present day. When the bridal train reached the bridegroom's house, the bride bound the door-posts with wool, probably as dedicating her work to it, and anointed them with oil or fat to signify health and plenty. All these actions were, so to speak, personified in a Dea Iterduca, Domiduca, and Unxia. The bride was lifted over the threshold (Plaut. *Cas.* iv. 4, 1; Catull. 61, 166), which, according to some, symbolizes the marriage by capture: others suppose the object to be the prevention of the bad omen, which would be caused by her stumbling on it. Sir John Lubbock (*op. cit.* p. 97) adopts the former view, and finds a similar custom among such widely divided races as the American Indians, the Chinese, and the Abyssinians. At the entrance the wife repeated the formula *ubi tu Gaius, ego Gaia;* and the husband met her bearing fire and water, to signify that he admitted her to a share in the family hearth and the family lustral rites: the bride, on her part, brought three coins; one she gave as symbol of the dowry to her husband, another to the Lares of the house, a third was dropped in the neighbouring street as an offering for the Lares Compitales. The torch of whitethorn seems to have been scrambled for by the guests as a lucky possession, and the ceremonies were over. The *lectus genialis* had been prepared by the *pronuba* in the atrium. On the following day the second wedding-feast, called *repotia*, was given to the friends and relations in the new home (Hor. *Sat.* ii. 2, 60; Gell. ii. 24, 14), and the bride as a *matrona* offered at the family shrine.

Matron (*Μάτρων*). A celebrated writer of parodies on Homer. He lived about the year 380 B.C. at Pitana in Mysia. He is frequently quoted by Eustathius and Athenaeus, and the latter writer has preserved a line relating to a dinner which parodies the opening verse of the *Odyssey:*

Δεῖπνα μοι ἔννεπε, Μοῦσα, πολύτροφα καὶ μάλα πολλά.

The fragments of his parodies are printed in Brunck's *Analecta*, ii. p. 245 foll. See the dissertation by Moser, *Ueber Matron den Parodiker.*

Matrōna. A name applied by the Romans to every honourable married woman. She enjoyed the highest esteem; the way was cleared for her in the street, in which she could not appear unaccompanied, and she was not allowed to be touched even when cited before a law court. She was distinguished by the long white *stola*, the cloak called *palla*, and her hair divided into six plaits, with woollen ribbons (*vittae*) wound round it.

Matrŏna. The modern Marne, a river in Gaul, falling into the Sequana, a little south of Lutetia (Paris).

Matronalia. The chief festival of Iuno (q. v.), celebrated on the first day of March, when all the matrons of Rome marched in procession to the temple of the goddess on the Esquiline to offer flowers and libations.

Mattiăci. A people in Germany, dwelling on the east bank of the Rhine, between the Main and

the Lahn. They were a branch of the Chatti. Their chief towns were Aquae Mattiacae (Wiesbaden) and Mattiacum (Marburg).

Mattium. The modern Maden, the chief town of the Chatti, situated on the Adrana (Eder).

Mattrass. See LECTUS; STRAGULUM.

Mattya (*ματτύη*). Dainties of any kind.

Matŭla and **Matella** (*ἀμίς*). A chamber utensil (Plaut. *Most.* ii. 1, 39).

Matūta (usually MATER MATUTA). An old Italian goddess of dawn and of birth, also goddess of harbours and of the sea, and hence identified with the Greek Leucothea (q. v.). In her temple at Rome in the Forum Boarium, on the 11th of June, the Matralia, or festival of mothers, was celebrated in her honour by the women of Rome; no slaves were admitted to it, and only a matron who had not been married before was allowed to place a wreath on the statue of the goddess. The women first prayed for the well-being of their nephews and nieces, and then for that of their own children. This custom was referred to the myth of Ino-Leucothea, who tended Dionysus, the son of her sister Semelé.

Mauretania and **Mauritania** (*Μαυρουσία*, from *μαῦρος*, "black") (Pausan. i. 33, § 5; viii. 43, § 3). The most westerly of the principal divisions of northern Africa, lying between the Atlantic on the west, the Mediterranean on the north, Numidia on the east, and Gaetulia on the south; but the districts embraced under the names of Mauretania and Numidia respectively were of very different extent at different periods. The earliest known inhabitants of all northern Africa west of the Syrtes were the Gaetulians, who were displaced and driven inland by peoples of Asiatic origin, who are found, in the earliest historical accounts, settled along the northern coast under various names; their chief tribes being the Mauri or Maurusii, west of the river Malva or Malucha (Muluia); thence the Massaesylii to (or nearly to) the river Ampsaga (Wady-el-Kebir), and the Massylii between the Ampsaga and the Tusca (Wady-Zain), the western boundary of the Carthaginian territory. Of these people, the Mauri, who possessed a greater breadth of fertile country between the Atlas and the coasts, seem to have applied themselves more to the settled pursuits of agriculture than their kindred neighbours on the east, whose unsettled warlike habits were moreover confirmed by their greater exposure to the intrusions of the Phœnician settlers. Hence arose a difference, which the Greeks marked by applying the general name of *Νομάδες* to the tribes between the Malva and the Tusca; whence came the Roman names of Numidia for the district, and Numidae for its people. (See NUMIDIA.) Thus Mauretania was at first only the country west of the Malva, and corresponded to the later district of Mauretania Tingitana, and to the modern empire of Morocco, except that the latter extends further south; the ancient boundary on the south was the Atlas.

The Romans first became acquainted with the country during the war with Ingurtha in B.C. 106. From 106 to 33 the kingdom of Mauretania was increased by the addition of the western part of Numidia, as far as Saldae, which Iulius Caesar bestowed on Bogud, as a reward for his services in the African war. A new arrangement was made about 25, when Augustus gave Mauretania to Iuba II., in exchange for his paternal kingdom of Numidia. Upon the murder of Iuba's son, Ptolemaeus, by Caligula (A.D. 40), Mauretania became finally a Roman province, and was formally constituted as such by Claudius, who added to it nearly half of what was still left of Numidia—namely, as far as the Ampsaga, and divided it into two parts, of which the western was called Tingitana, from its capital Tingis (Tangier), and the eastern Caesariensis, from its capital Iulia Caesarea (Zershell), the boundary between them being the river Malva, the old limit of the kingdom of Bocchus I. The latter corresponded to the western and central part of the modern French department of Algiers. These "Mauretaniae duae" were governed by an equestrian procurator. In the later division of the Empire under Diocletian and Constantine, the eastern part of Mauretania Caesariensis, from Saldae to the Ampsaga, was erected into a new province, and called Mauretania Sitifensis from the inland town of Sitifi (Setif); at the same time the western province, Mauretania Tingitana, seems to have been placed under the same government as Spain, so that we still find mention of the two Mauretanias, meaning now, however, Caesariensis and Sitifensis. From A.D. 429 to 534 Mauretania was in the hands of the Vandals, and in 650 and the following years it was conquered by the Arabs. Its ancient inhabitants still exist as powerful tribes in Morocco and Algeria, under the names of Berbers, Kabyles, and Tuariks. Under the later Roman emperors Mauretania was remarkable for the great number of its episcopal sees. See Chénier, *Recherches Historiques sur les Maures* (1787); Gibbon, *Decline and Fall*, chapters 41 and 43.

Mauri (*Μαυρούσιοι*, *Μαῦροι*). See MAURETANIA.

Mauriciānus, IUNIUS. A Roman jurist under Antoninus Pius (A.D. 138–161).

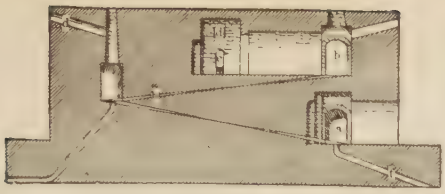
Maurĭcus, IUNIUS. A friend of the younger Pliny, banished by Domitian, but restored by Nerva.

Mauritania. See MAURETANIA.

Maurus, TERENTIĀNUS. See TERENTIANUS.

Mausolēum (*Μαυσωλεῖον*). A splendid sepulchre at Halicarnassus, built in honour of King Mausolus of Caria, who died B.C. 353, by his wife Artemisia, and reckoned by the ancients one of the seven wonders of the world (Pliny, *H. N.* xxxvi. §§ 30, 31). It consisted of an oblong substructure surrounded by thirty-six columns, with a circuit of 440 feet, crowned by a pyramid diminishing by twenty-four steps to its summit, on which stood a marble *quadriga*, the work of Pythis (or Pythius, Brunn, *Gr. Künstler*, ii. 377, first ed.). The height of the whole building, gorgeous with the most varied colours, was 140 feet. Satyrus and Pythius were the architects, and the sculptures on the four sides were executed by Scopas, Bryaxis, Timotheus, and Leochares. In the twelfth century after Christ the work was still in a good state of preservation; in succeeding centuries it fell to pieces more and more, until the Knights of St. John used it as a quarry from the time when they built their castle on the site of the old Greek acropolis in 1402, down to the repair of their fortifications in 1522, when they made lime of its marble sculptures. In 1845, a number of reliefs were extracted from the walls

Restoration of the Mausoleum of Halicarnassus. (Reber.)



of the castle and placed in the British Museum. In 1857 the site was discovered by Newton, acting under a commission from the English government, and the sculptures thus unearthed, including the statue of Mausolus and important fragments of the marble *quadriga*, were removed to the British Museum. See Newton's *History of Discoveries at Halicarnassus*, etc., 1862; *Travels and Discoveries*, ii. 84–137; and for a restoration, the article ARCHITECTURA in this Dictionary, p. 113.

The Romans gave the name of Mausoleum to all sepulchres which approached that of Mausolus in size and grandeur of execution, as, for instance, (1) that erected by Augustus for himself and his family, the magnificence of which is attested by the still extant walls inclosing it, on the Via de' Pontefici in Rome (see AUGUSTUS, p. 170); and (2) the sepulchre of Hadrian, which is in part preserved in the Castle of S. Angelo, a circular building of 220 feet in diameter and 72 feet high, resting on a square base, the sides of which are almost 100 yards long. It was originally covered with Parian marble, and profusely ornamented with colonnades and statues, and probably had a pyramid on the top.

Present Appearance of the Mausoleum of Hadrian at Rome.

Mausōlus (Μαύσωλος). A king of Caria and eldest son of Hecatomnus. He reigned B.C. 377–353. In 362 he joined in a revolt against Artaxerxes Mnemon, and thereby added to his dominions. In 358 he aided the Rhodians and their allies against Athens, and died in the year 353, leaving no children. He was succeeded by his wife and sister Artemisia, who erected to his memory the costly monument called from him the Mausoleum. See ARTEMISIA; MAUSOLEUM.

Section of Hadrian's Mausoleum.

a. Entrance, with Statue of Hadrian. d. Ventilating Channel.
b. Ventilating Passage. f. Drainage Outlet.
c. Central Tomb-chamber.

Mavors. See MARS.

Maxentius, M. AURELIUS VALERIUS. A Roman emperor, who ruled A.D. 306–312. He was passed over in the division of the Empire which followed the abdication of his father Maximianus and Diocletian in A.D. 305; but he seized Rome, where he was proclaimed emperor in 306. He reigned till 312, when he was defeated by Constantine at Saxa Rubra, near Rome. He tried to escape over the Milvian Bridge into Rome, but perished in the river. Maxentius is represented by all historians as a monster of rapacity, cruelty, and lust. See CONSTANTINUS.

Maxilūa. A town of Hispania Baetica, where bricks were said to be made of such lightness as to swim in water (Pliny, *H. N.* XXXV. 14).

Maxĭma Caesariensis. See BRITANNIA.

Maximianopŏlis. (1) The later name of PORSŬLAE in Thrace, east of Abdera. (2) The Hadad Rimmon of the Old Testament; a town in Palestine in the valley of Megiddo.

Maximiānus, M. AURELIUS VALERIUS. (1) A Roman emperor, who ruled A.D. 286–305, originally a Pannonian soldier. He was made by Diocletian his colleague in the Empire, but was compelled to abdicate along with the latter. (See DIOCLETIANUS.) When his son Maxentius assumed the imperial title in the following year (306), he resided some time at Rome; but being expelled from the city by Maxentius, he took refuge in Gaul with Constantine, who had married his daughter Fausta. Here he was compelled by Constantine, against whom he is said to have conspired, to put an end to his own life in 310. (2) GALERIUS MAXIMIĀNUS, usually called GALERIUS, Roman emperor, A.D. 305–311. He was first made Caesar by Diocletian, whose daughter he had married; and upon the abdication of Diocletian and Maximianus (305), he became Augustus or emperor. He died in 311, of the disgusting disease known in modern times by the name of *morbus pediculosus*. He was a cruel persecutor of the Christians. (3) MAXIMIĀNUS of Etruria. A Latin poet in the beginning of the sixth century after Christ. He is the author of six amatory elegies, modelled on classical poets, from whom he borrowed largely. His chief theme is a lament for the prospective loss of his youth. Edited first by Gauricus (Venice, 1501), who ascribed the elegies to Cornelius Gallus; and lately by Bährens in his *Poetae Latini Minores*, v. 316; and Petschenig (Berlin, 1890). See Professor Robinson Ellis in the *American Journal of Philology* (1884).

Maximīnus. (1) GAIUS IULIUS VERUS. A Roman emperor who reigned from A.D. 235 to 238. He was born in a village on the confines of Thrace, of barbarian parentage, his father being a Goth, and his mother a German from the tribe of the Alani. Brought up as a shepherd, he attracted the attention of Septimius Severus by his gigantic stature and marvellous feats of strength, and was permitted to enter the army. He eventually rose to the highest rank in the service; and on the murder of Alexander Severus by the mutinous troops in Gaul (235) he was proclaimed emperor. He immediately bestowed the title of Caesar on his son Maximus. During the three years of his reign he carried on war against the Germans with success, but his government was characterized by a degree of oppression and sanguinary excess hitherto unexampled. The Roman world became at length tired of this monster. The Senate and the provinces gladly acknowledged the two Gordiani, who had been proclaimed emperors in Africa, and after their death the Senate itself proclaimed Maximus and Balbinus emperors (238). As soon as Maximinus heard of the elevation of the Gordians, he hastened from his winter-quarters at Sirmium. Having crossed the Alps he laid siege to Aquileia, and was there slain by his own soldiers along with his son Maximus in April. The most extraordinary tales are related of the physical powers of Maximinus, which seem to have been almost incredible. His height exceeded eight feet. The circumference of his thumb was equal to that of a woman's wrist, so that the bracelet of his wife served him for a ring. It is said that he was able single-handed to drag a loaded wagon, could with his fist knock out the teeth, and with a kick break the leg of a horse; while his appetite was such that in one day he could eat forty pounds of meat and drink an amphora of wine. (2) A Roman emperor (305–314), originally called DAZA, and subsequently GALERIUS VALERIUS MAXIMĪNUS. He was the nephew of Galerius by a sister, and in early life followed the occupation of a shepherd in his native Illyria. Having entered the army, he rose to the highest rank in the service; and upon the abdication of Diocletian in 305, he was adopted by Galerius and received the title of Caesar. In 308 Galerius gave him the title of Augustus, and on the death of the latter, in 311, Maximinus and Licinius divided the East between them. In 313 Maximinus attacked the dominions of Licinius, who had gone to Milan for the purpose of receiving in marriage the sister of Constantine. He was, however, defeated by Licinius near Heraclea, and fled to Tarsus, where he soon after died. Maximinus possessed no military talents. He owed his elevation to his family connection. He surpassed all his contemporaries in the profligacy of his private life, in the general cruelty of his administration, and in the furious hatred with which he persecuted the Christians. An account of the two Maximini is given by Iulius Capitolinus in the *Augusta Historia*.

Maxims. See PROVERBIUM.

Maxĭmus, FABIUS. See FABIUS.

Maxĭmus, MAGNUS CLEMENS. A Roman emperor, A.D. 383–388, in Gaul, Britain, and Spain, was a native of Spain. He was proclaimed emperor by the legions in Britain in 383, and forthwith crossed over to Gaul to oppose Gratian, who was defeated by Maximus, and was shortly afterwards put to death. Theodosius found it expedient to recognize Maximus as emperor of Gaul, Britain, and Spain, in order to secure Valentinian

in the possession of Italy. Maximus, however, aspired to the undivided empire of the West, and accordingly, in 387, he invaded Italy at the head of a formidable army. Valentinian was unable to resist him, and fled to Theodosius in the East. Theodosius forthwith prepared to avenge his colleague. In 388 he forced his way through the Noric Alps, which had been guarded by the troops of Maximus, and shortly afterwards took the city of Aquileia by storm and there put Maximus to death. Victor, the son of Maximus, was defeated and slain in Gaul by Arbogastes, the general of Theodosius.

Maxĭmus, Petronius. A Roman emperor, A.D. 455, belonged to a noble Roman family, and enjoyed some of the highest offices of State under Honorius and Valentinian III. In consequence of the violence offered to his wife by Valentinian, Maximus formed a conspiracy against this emperor, who was assassinated, and Maximus proclaimed emperor in his stead. His reign, however, lasted only two or three months. Having forced Eudoxia, the widow of Valentinian, to marry him, she resolved to avenge the death of her former husband, and accordingly Genseric was invited to invade Italy. When Genseric landed at the mouth of the Tiber, Maximus prepared to fly from Rome, but was slain by a band of Burgundian mercenaries, commanded by some old officers of Valentinian.

Maxĭmus, Planŭdes. A learned Greek monk of the Byzantine period, and distinguished as a theologian and philologist. He lived from A.D. 1260 to 1330, and took some part in public life, being sent by Andronicus II. in 1327 as ambassador to Venice. His writings comprise treatises on grammar and syntax, scholia to Theocritus and Hermogenes, a collection of excerpts from Plato, Aristotle, Strabo, Dio Cassius, etc., and translations from Latin into Greek (e. g. Caesar's *De Bello Gallico*, Cicero's *Somnium Scipionis*, the *Metamorphoses* and *Heroides* of Ovid, and Boethius, *De Consolatione*); but, above all, he is remembered for his famous collection known as the *Anthologia Planudea*, which was the only Greek anthology known to Western Europe until 1606, when Salmasius discovered the older and richer collection of Cephalas at Heidelberg. See Professor Alfred Gudeman in Calvary's *Berl. Stud.* viii. 3 (1888), and in the *Proc. of the American Philological Assoc.* xx. pp. 6 foll.; also M. Treu's commentary on the *Epistulae* of Planudes (Breslau, 1890); A. Palmer, *Ovid's Heroides* (Oxford, 1894); and the article Anthology.

Maxĭmus Tyrius. A native of Tyre, a Greek rhetorician and Platonic philosopher, who lived during the reigns of the Antonines and of Commodus, and was the author of forty-one extant dissertations (Διαλέξεις or Λόγοι) on philosophical subjects, written in an easy and pleasing style. There is an edition by Reiske (Leipzig, 1774–75), in two volumes.

Maxĭmus, Valerius. See Valerius Maximus.

Maxŭla. The name of the Roman city built upon the site of the older Carthaginian Adis, on the modern Bay of Tunis.

Mazăca. See Caesarea (3).

Mazăra (Μαζάρα). Now Mazzara; a town on the western coast of Sicily.

Mazĭces (Μάζικες). A people of Northern Africa, in Mauretania Caesariensis.

Mazonŏmum (μαζονομεῖον). (1) A round wooden trencher on which barley-cakes were served (Hesych.). (2) A bronze or golden salver for incense (Athen. v. 27). (3) A large dish for gamepies (Hor. *Sat.* ii. 8, 86).

Meals. See Cena.

Mecyberna (Μηκύβερνα). A town of Macedonia in Chalcidicé, at the head of the Toronaic Gulf, east of Olynthus, of which it was the sea-port.

Medaura, Madaura, Ad Meděra, or Amedĕra. A city of Northern Africa, on the borders of Numidia and Byzacena. It was the birthplace of Apuleius. It is probably to be identified with the Madaura, to which St. Augustine was sent to be educated (*Confess.* ii. 3).

Meddix Tutĭcus (also Medix, Maedix). "Community-manager." The title of the chief magistrate in the Oscan and Sabellian towns in Italy. So we find the name used at Pompeii, Herculaneum, and Bovianum, and at Capua after the Samnites got possession of the city. The word *meddix* is probably cognate with μέδω, and *tuticus* with the Oscan *tauta, tuta*, "a town." See Mommsen, *Unterital. Dialekte*, p. 278; Curtius, *Gk. Etym.* p. 225; and Mommsen, *Hist. of Rome*, i. p. 321 (Amer. ed.).

Medēa (Μήδεια). The daughter of Aeëtes, king of Colchis, by the Oceanid Idyia, or, according to others, by Hecaté, the daughter of Perses. She was celebrated for her skill in magic. The principal parts of her story are given under Absyrtus, Argonautae, and Iason. It is sufficient to state here that, when Iason came to Colchis to seek the Golden Fleece, she fell in love with the hero, assisted him in accomplishing the object for which he had visited Colchis, and afterwards fled with him as his wife to Greece; that, having been deserted by Iason for the youthful daughter of Creon, king of Corinth, she took fearful vengeance upon her faithless husband by murdering the two children whom she had borne to him and by destroying his young wife by a poisoned garment; and that she then fled to Athens in a chariot drawn by winged dragons. So far her story has been related elsewhere. (See Iason.) At Athens she is said to have married King Aegeus, or to have been beloved by Sisyphus. Zeus himself is said to have sued for her, but in vain, because Medea dreaded the anger of Heré; and the latter rewarded her by promising immortality to her children. Her children are, according to some accounts, Mermerus, Pheres, or Thessalus, Alcimenes, and Tisander; according to others, she had seven sons and seven daughters, while others mention only two children, Medus (some call him Polyxenus) and Eriopis, or one son Argus. Respecting her flight from Corinth, there are different traditions. Some say, as stated above, that she fled to Athens and married Aegeus; but

Medea. Pompeian Painting. (Overbeck.)

when it was discovered that she had laid snares for Theseus, she escaped and went to Asia, the inhabitants of which were called after her Medes (Μῆδοι). Others relate that she first fled from Corinth to Heracles at Thebes, who had promised her his assistance while yet in Colchis, in case of Iason being unfaithful to her. She cured Heracles, who was seized with madness; and as he could not afford her the assistance he had promised, she went to Athens. She is said to have given birth to her son Medus after her arrival in Asia, where she had married a king; whereas others state that her son Medus accompanied her from Athens to Colchis, where her son slew Perses, and restored her father Aeëtes to his kingdom. The restoration of Aeëtes, however, is attributed by some to Iason, who accompanied Medea to Colchis. At length Medea is said to have become immortal, to have been honoured with divine worship, and to have married Achilles in Elysium. The story of Medea is the subject of plays by Euripides (q. v.) and Seneca (q. v.).

Medeon (Μεδεών). (1) A town in the interior of Acarnania, near the road which led from Limnaea to Stratos. (2) A town on the coast of Phocis, near Anticyra. (3) A town in Boeotia, near Onchestus and Lake Copaïs. (4) A town of the Labeates in Dalmatia, near Scodra.

Media (Μηδία). An important country of Asia above Persia, and bounded on the north by the Araxes, on the west and southwest by the range of mountains called Zagros and Parachoatras (Mountains of Kurdistan and Louristan), which divided it from the Tigris and Euphrates valley, on the east by the Desert, and on the northeast by the Caspii Montes (Elburz Mountains). It was a fertile country, well peopled, and one of the most important provinces of the ancient Persian Empire. After the Macedonian conquest it was divided into two parts—Great Media and Atropatené. See Atropatené.

The earliest history of Media is involved in much obscurity. Herodotus reckons only four kings of Media, namely: (1) Deioces, B.C. 710–657; (2) Phraortes, 657–635; (3) Cyaxares, 635–595; (4) Astyages, 595–560. The last king was dethroned by a revolution, which transferred the supremacy to the Persians, who had formerly been the subordinate people in the united Medo-Persian Empire. (See Cyrus.) The Medes made more than one attempt to regain their supremacy; the usurpation of the Magian pseudo-Smerdis was no doubt such an attempt (see Smerdis); and another occurred in the reign of Darius II., when the Medes revolted, but were soon subdued (B.C. 408). With the rest of the Persian Empire, Media fell under the power of Alexander; it next formed a part of the kingdom of the Seleucidae, from whom it was conquered by the Parthians in the second century B.C., from which time it belonged to the Parthian, and then to the later Persian Empire. See Persia, with bibliography there given.

It is important to notice the use of the names Medus and Medi by the Roman poets for the nations of Asia east of the Tigris in general and for the Parthians in particular.

Mediae Murus (τὸ Μηδίας τεῖχος). An artificial wall which ran from the Euphrates to the Tigris, at the point where they approach nearest, and divided Mesopotamia from Babylonia. It is described by Xenophon (*Anab.* ii. 4) as being 20 parasangs long, 100 feet high, and 20 thick, and as built of baked bricks, cemented with asphalt. Its erection was ascribed to Semiramis.

Medials (μέσα). In phonetics, the voiced non-aspirate explosives—*g*, *d*, *b*.

Mediastīni. Slaves of all work (Schol. *ad* Hor. *Epist.* i. 14, 14) in either city or country. See Servus.

Medicamĭna Faciēi. See Ovidius.

Medicīna (ἰατρική). The ancients ascribed the origin of the medical art to the gods (Pliny, *H. N.* xxix. 2), and Prometheus, Chiron, and Asclepius were among those who made it known to men. It was also believed to have been improved by the observation of the remedies instinctively sought out by animals when suffering from injuries or disease (Pliny, *H. N.* viii. 97). Thus, dogs taught the Egyptians the use of purgatives, bleeding was learned from the hippopotamus, and enemata from the ibis. Sheep and cattle led men to the use of the natural saline and chalybeate waters. The results of these and various other observations of cures were recorded on tablets, and suspended by the priests in the temples of the gods both in Egypt and in Greece. These tablets were the beginnings of medical literature.

The Asclepiadae, to which family Hippocrates belonged, were, in a way, hereditary physicians (see Aesculapius), and founded a number of medical schools, of which the most famous in early times were those of Rhodes, Cnidos, and Cos (Galen, *De Meth. Med.* i. 1). From the second came the collection of medical observations called Κνίδιαι Γνῶμαι, "Cnidian Maxims," which long enjoyed a considerable repute. The school of Cos was, however, the best known of the three, and one of its representatives was Hippocrates himself. Herodotus mentions other schools at Crotona in Italy and Cyrené in Africa (iii. 131). Of the different medical sects that sprang up at different times, the following deserve especial mention: (1) The Dogmatĭci or Hippocratĭci, founded about B.C. 400 by Thessalus, the son, and Polybus, the son-in-law of Hippocrates; (2) the Empirĭci, founded in the third century B.C., and so called because they professed to base their knowledge and practice on experience alone; (3) the Methodĭci, founded in the first century B.C. by Themison, who taught doctrines partly theoretical and partly empirical; (4) the Pneumatĭci, founded by Athenaeus in the first century A.D.; and (5) the Eclectĭci, founded at about the same time by Agathinus of Sparta, or perhaps his pupil Archigenes.

For further details regarding ancient medicine, see the articles Celsus; Chirurgia; Dioscorides; Galenus; Hippocrates; and Medicus.

Medicīna Plinĭana. The title of an anonymous compilation on medical topics drawn chiefly from bks. xx.–xxxii. of the *Historia Naturalis* of Pliny the Elder. (See Plinius.) It was made in the fourth century A.D., and was much used in succeeding centuries as a book of reference. It is edited by Rose (Leipzig, 1875).

Medĭcus (ἰατρός). A physician or surgeon, the name being indiscriminately used of either. In Greece and Asia Minor, physicians were held in higher repute than at Rome, probably because of the traditional association of medicine with re-

ligion. A law of the Locrians quoted by Aelian (*Var. Hist.* ii. 37), punished with death the patient who disobeyed the orders of his physician. Hippocrates was treated as a demigod by the Athenians, if the account of Soranus be true.

The Greek physician compounded his own medicines, and either sat in his consulting-room (*ἰατρεῖον*) or visited his patients, in the latter duty being often accompanied by his pupils or assistants. There is only one mention of a Greek hospital prior to the Roman period. (See VALETUDINARIA.) State physicians were employed in Greece, receiving a salary and their expenses, but no fees (Aristoph. *Aves*, 587; *Acharn.* 994). Thus Democedes received from the public treasury of Aegina about $1400 per annum, and from Athens afterwards a salary of some $2000 (Herod. iii. 131). A physician who cured King Antiochus received from him a fee of over $100,000 (Pliny, *H. N.* vii. 123; xxix. 5). State physicians attended gratis any one who called for them.

In the early days of the Republic, Rome had no regular physicians. The haruspices and augurs pretended to some knowledge of medicine; but when a man fell ill, he was usually treated by the

Aesculapius and a Sick Man. (Millin.)

old women with their simples; or if the disease was a very serious one, he trusted to religious rites, vows, and sacrifices for his recovery. The various deities of disease were propitiated by temples and altars. In Varro's time there were in Rome three temples to the goddess of Fever; in the Esquiline quarter, an altar to Mefitis, the goddess Malaria; in the centre of the Forum Romanum, an altar to Cloacina, "the goddess of typhoid" (so Lanciani), and near the Praetorian Camp, an altar to Verminus, the god of disease-germs. Cf. Lanciani, *Ancient Rome*, pp. 49–73.

At a later period, among the Greeks who first came in numbers to Rome in the second century B.C., were many professed physicians; and from that time the practice of medicine became a lucrative profession among the Romans, though the chief practitioners remained Greeks, a fact to which the Latin vocabulary bears witness in that its medical terms are nearly all of Greek origin. The elder Pliny gives some interesting details regarding the fees received by the leading doctors. The native physicians of celebrity, Cassius, Calpetanus, and Arruntius, received, he estimates, an income of not less than 250,000 sesterces ($10,000) a year. Quintus Stertinius, a fashionable physician, was asked by the emperor to give up his private practice and devote himself to the imperial family alone. Stertinius said that, as an especial favour, he would do it if he could receive a salary of 500,000 sesterces ($20,000). This struck the emperor as an exorbitant demand, but Stertinius showed from his books that his private practice was worth to him at least 600,000 sesterces per annum. The brother of this Stertinius had a sort of partnership with him, and when they died, which they did at about the same time, they left a property of 30,000,000 sesterces ($1,200,000), though they had lived very expensively, and given large sums to public objects. The Greek physicians at Rome probably earned still larger sums. An ex-praetor paid 200,000 sesterces ($8000) as a single fee to the practitioner who treated him for leprosy. Pliny mentions one Thessalus, of whom he says: "No popular actor, no famous jockey, had a greater throng attending him when he appeared in public."

Nothing is known of the course of study necessary to qualify a man for medical practice. That there were medical students and clinical lectures is seen from Martial (v. 9). It is probable that the profession was open to all kinds of quacks and impostors, for we read of men taking up medicine as they would any form of trade, with no mention of any special qualification. It is, in fact, likely that, in the main, ancient medicine was little better than quackery, and that the best physicians were men like Crinas who made a careful study of dietetics, and like Asclepiades, who said "Nature is the true physician." How absurd much of the treatment must have been is shown in the list of remedies given by Pliny in his *Historia Naturalis* (bk. xxix.). The patent medicines of to-day sink into insignificance beside them. Thus, we read of a mysterious preparation called *Theriaca* with 600 ingredients, and of another known as "the Mithridatic antidote" with 450. Pliny mentions 35 nostrums prepared from wool, 22 from eggs, and also several pastes of which the principal constituent was pounded bugs. The notion, which is still largely prevalent among the laity, that the efficacy of a drug is in direct proportion to its nastiness seems to have had a strong hold on the minds of the ancients. Dog's blood was given for narcotic poisons; urine for gout; goat's gall for ophthalmia; bull's gall and garlic for ear-ache. Superstition entered largely into the treatment. A person afflicted with hiccoughing was gravely advised to touch his lips to a mule's nostrils and be cured. Hydrophobia was treated by applying to the bite the ashes of the dead dog's hair. A still more effectual remedy for the same disease was to cut out the liver of the dog and to eat it raw, applying at the same time to the wound, horse-dung sprinkled with vinegar.

All these prescriptions are the serious advice of men of reputation. It is not surprising if, on the whole, the profession was less esteemed than others. Pliny the Elder sums up the matter in the following sentences:

"There is no doubt that physicians in pursuit of celebrity, by the introduction of some novelty or other, purchase it at the cost of human life. Hence these woful discussions, these consultations at the bedside of the patient; hence, too, the ominous inscription to be read upon a tomb—'I perished by the multitude of physicians' . . . And there is, moreover, no law to punish the mistakes of a physician, and no instance before us of any punishment so inflicted. They acquire skill at our risk, and put us to death for the sake of making an experiment; for a physician is the only person who is licensed to kill."

Other scandals besides those due to ignorance

were not unknown. So many unprincipled persons entered the profession that it is not surprising to find complaints made of their conduct. Even the palace of the Caesars was the scene of strange occurrences, for it is recorded that both Livia, the wife of Drusus, and the empress Messalina were criminally intimate with their medical attendants. It is not remarkable, therefore, to find a Roman writer concluding a discussion of the subject with the words: "Medicine is the only one of the arts of Greece that, lucrative though it be, Roman dignity still refuses to cultivate."

Nevertheless, medicine flourished, and its followers kept increasing in number. We hear of the practice of specialties. General practitioners were known as *medici;* surgeons as *chirurgi* and *vulnerarii*. There were also oculists (*ocularii*) and dentists (*medici a dentibus*). We even read of female physicians (Orell. *Inscript.* 4320–31), and, of course, of numerous midwives (*obstetrices*). Pharmacies existed, their sign being the Aesculapian snake; and though physicians usually furnished their own drugs, they also gave signed prescriptions (Duruy). The physicians attached to the imperial household were under the direction of a chief styled *archiater* (ἀρχίατρος), or in pure Latin *dominus medicorum*. The name *archiater* was also applied to the dispensary-physicians who gave their services to the people (*archiatri populares*). See Goldhorn, *De Archiatris Romanis* (Leipzig, 1841).

Surgery was the branch of medicine most scientifically pursued, and successful operations were performed by the ancient surgeons for stone and cataract, while trephining was not unknown. See CHIRURGIA.

For a full discussion of the subject of ancient medicine, see Daremberg, *Histoire des Sciences Médicales* (Paris, 1870–73); Watson, *The Medical Profession in Ancient Times* (N. Y. 1856); Dunglison, *History of Medicine* (Philadelphia, 1872); and Berdoe, *Origin and Growth of the Healing Art* (London, 1894).

Medimnus (*μέδιμνος* or *μέδιμνος σιτηρός*). The principal dry measure of the Greeks. It contained 6 *hectes*, 12 *hemiecta*, 48 *choenices*, 96 *xestae* (= *sextarii*), 192 *cotylae*, and 1152 *cyathi*. The Attic medimnus = 2 Rom. *amphorae* = 52.53 litres = 12 gallons (nearly) or 1½ bushel. The Sicilian medimnus was the same as the Attic, but the Aeginetan was about half as much again. See Hultsch, *Metrologie*, pp. 104, 503.

Mediolānum (Μεδιολάνιον). (1) The modern Milan; the capital of the Insubres in Gallia Transpadana. It was taken by the Romans B.C. 222, and afterwards became both a municipium and a colony. From the time of Diocletian till its capture by Attila it was the usual residence of the emperors of the West. It is celebrated in ecclesiastical history as the see of St. Ambrose. When the Western Empire fell it became the residence of Theodoric the Great and the capital of the Ostrogothic kingdom. At one time it surpassed Rome in population. It was taken and partly destroyed by the Goth Vitiges in A.D. 539. (2) The modern Saintes; a town of the Santones in Aquitania, northeast of the mouth of the Garumna; subsequently called Santones after the people, whence its modern name. (3) The modern Evreux, a town of the Aulerci Eburovices in the northern part of Gallia Lugdunensis. It was subsequently called Civitas Ebroicorum, whence came its present name.

Mediomatrĭci. A people in the southeast of Gallia Belgica, on the Moselle, south of the Treviri. Their chief town was Divodurum (Metz).

Mediterraneum Maré. See INTERNUM MARÉ.

Meditrīna. A Roman goddess of the healing art, whose festival, the MEDITRINALIA, was observed annually on October 11. See Varro, *L. L.* vi. 21.

Medoăcus or **Meduăcus**. A river in Venetia, in the north of Italy, falling into the Adriatic Sea near Edron, the harbour of Patavium.

Medobrēga. A town in Lusitania, on the road from Emerita to Scalabis. It is now Marvao.

Medon (Μέδων). (1) Son of Codrus, the first archon. (See CODRUS.) (2) A Lacedaemonian statuary, who made the chryselephantine statue of Athené for the Heraeum at Olympia.

Medŭli. A people in Aquitania, on the coast of the ocean, south of the mouth of the Garumna, in the modern Médoc. There were excellent oysters found on their shores.

Medulli. A people on the eastern frontier of Gallia Narbonensis and in the Maritime Alps, in whose country the Druentia (Durance) and Duria (Doria Minor) took their rise.

Medullia. A colony of Alba, in the land of the Sabines, situated between the Tiber and the Anio.

Medullus. A mountain in Hispania Tarraconensis near the Minius (Minho).

Medus (Μῆδος). Son of Aegeus and Medea (q. v.).

Medūsa (Μέδουσα). See GORGO.

Megabazus (Μεγάβαζος) or **Megabyzus** (Μεγάβυζος). One of the seven Persian nobles who conspired against the magian Smerdis (q. v.), B.C. 521. He afterwards subdued Perinthus and other cities on the Hellespont and the coast of Thrace (Herod. iii. 70; iv. 143; v. 1–16).

Megăcles (Μεγακλῆς). (1) A name borne by several of the Athenian family of the Alcmaeonidae. The most important of these was the Megacles who put to death Cylon and his adherents after they had taken refuge at the altar of Athené, B.C. 612. (See CYLON.) (2) Son of Alcmaeon, son-in-law of Clisthenes, leader of the Alcmaeonidae in the time of Solon. At first he was opposed to Pisistratus, and expelled him from Athens; but afterwards he became reconciled to him, gave him his daughter Coesyra in marriage, and assisted in his restoration to Athens. Pisistratus not having treated his wife in a proper manner, Megacles resented the affront, and again drove the former out of Athens; with the aid of large sums from the Thebans and other States, Pisistratus again raised an army, defeated his opponents, and drove Megacles and the partisans of the Alcmaeonidae into exile. (3) A Syracusan, brother of Dion, and brother-in-law of the elder Dionysius. He accompanied Dion in his flight from Syracuse, B.C. 358, and afterwards returned with him to Sicily.

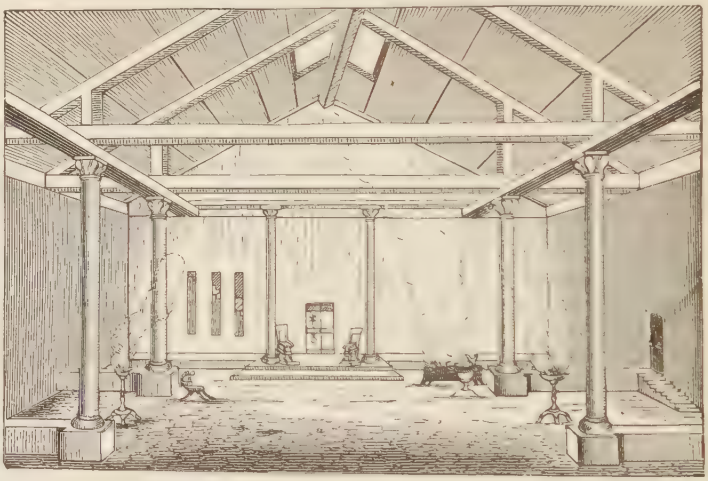
Megaera (Μέγαιρα). See EUMENIDES.

Megalesia. A Roman festival in honour of Rhea (q. v.). These games are also styled MEGALENSIA and MEGALENSES LUDI. The name is derived from the title of Cybelé, *ἡ μεγάλη θεός* (Cic. *De Harusp. Resp.* 12, 24), whose image, a black stone, was brought to Rome in the year B.C. 204 at the time

of the Second Punic War, and placed in the temple of Victory on the Palatine.

The games were scenic and probably *circenses* (Mommsen, *C. I. L.* i. 391), and were held on the Palatine and later in the theatres. They were directed by the curule aediles till B.C. 22, when Augustus placed them in charge of the praetor. At the celebration, the *galli* or eunuch priests of Cybelé carried the sacred ensign in procession through the city, singing Greek hymns and collecting coins from the people in the streets. This procession is described by Lucretius (ii. 618 foll.). The ceremony lasted seven days, on the third of which the scenic exhibitions especially took place, and the whole celebration ended with a grand carnival. The date of the Megalesia was April 4th to April 10th. Four of the existing plays of Terence were first performed at the Megalesia. See Marquardt, *Staatverwaltung*, pp. 367–374.

Megalia or **Megăris**. A small island in the Tyrrhenian Sea, opposite Neapolis.



Megalopŏlis (Μεγαλόπολις). (1) The most recent but the most important of the cities of Arcadia, was founded on the advice of Epaminondas after the battle of Leuctra, B.C. 371, and was formed out of the inhabitants of thirty-eight villages. It was situated in the district Maenalia, near the frontiers of Messenia, on the river Helisson, which flowed through the city. It became afterwards one of the chief cities of the Achaean League. Philopoemen and the historian Polybius were natives of Megalopolis. (2) A town in Caria. (See APHRODISIAS.) (3) A town in Pontus. (See SEBASTIA.) (4) A town in the north of Africa.

Megăra (τὰ Μέγαρα). (1) The town of Megara, the capital of Megaris, a small district in Greece between the Corinthian and Saronic Gulfs, bounded on the north by Boeotia, on the east and northeast by Attica, on the south by the territory of Corinth, and situated a mile from the sea, opposite the island of Salamis. Its citadel was called Alcathoë, from its reputed founder, Alcathoüs, son of Pelops. Its seaport was Nisaea, which was connected with Megara by two walls, built by the Athenians when they had possession of Megara, B.C. 461–445. In front of Nisaea lay the small island Minoa, which added greatly to the security of the harbour. In ancient times Megara formed one of the four divisions of Attica. It was next conquered by the Dorians, and was for a time subject to Corinth; but it finally asserted its independence, and rapidly became a wealthy and powerful city. Its power at an early period is attested by the flourishing colonies which it founded, of which Selymbria, Chalcedon, and Byzantium, and the Hyblaean Megara in Sicily, were the most important. After the Persian wars, Megara was for some time at war with Corinth, and was thus led to form an alliance with Athens, and to receive an Athenian garrison into the city, B.C. 461; but the oligarchical party having got the upper hand, the Athenians were expelled, B.C. 441. Megara is celebrated in the history of philosophy as the seat of a philosophical school, usually called the Megarian, which was founded by Euclid, a native of the city. See EUCLIDES (2). (2) A town in Sicily on the east coast north of Syracuse, founded by Dorians from Megara in Greece, B.C. 728, on the site of a small town, Hybla, and hence called MEGARA HYBLAEA, and its inhabitants Megarenses Hyblaei. From the time of Gelon it belonged to Syracuse.

Megăreus (Μεγαρεύς). The son either of Onchestus or of Poseidon, and father of Hippomenes and Evaechmé.

Megăris (Μεγαρίς). See MEGARA.

Megăron (μέγαρον). In many Greek temples a space divided off and sometimes subterranean, which only the priest was allowed to enter. (See TEMPLUM.) The word originally denoted the large hall or chief room in the early (Homeric) Greek house, with the roof supported by columns, the light entering through the doors, the smoke-hole, and the apertures (ὀπαῖα) just under the roof. See DOMUS, p. 537.

Megaron of Early Greek House. (Autenrieth.)

Megasthĕnes (Μεγασθένης). A Greek historian, who stayed for a considerable time, as ambassador of King Seleucus Nicator, at the court of the Indian king Sandracus or Sandracottus (B.C. 315–291), at Palibothra on the Ganges. From information about the country and the people, obtained while he occupied that position, he compiled a historical and geographical work about India (τὰ Ἰνδικά), the chief treatise on that country left us by the ancients. On it are founded the accounts of Diodorus and Arrian; beyond this only fragments are preserved. His record of the state of India at the time has been discredited; but recent investigations have, to a great extent, shown its trustworthiness. The remains of Megasthenes have been edited by Schnaubeck (Bonn, 1846), and cf. Müller's *Frag. Hist. Graec.* (Paris, 1868–74).

Megiddo (Μαγεδδώ). A considerable city of Palestine, on the river Kishon, in a valley of the same name, on the confines of Galilee and Samaria.

Megistāni. An Armenian people dwelling near the Euphrates.

Mela. See MELLA.

Mela. (1) M. Annaeus. Youngest son of M. Annaeus Seneca, the rhetorician, brother of L. Seneca, the philosopher, and father of the poet Lucan. (2) Pomponius. A native of Tingentera in Spain, under Claudius or Caligula, and author of an excellent Latin work on geography, entitled *De Situ Orbis Libri III.*, containing a description of the world as known to the Romans of his time. It is written in a clear and simple style; and, though very concise, is enlivened by bits of interesting description of manners and customs. The number of geographical names mentioned by Mela amounts to more than 1500. The principal MS. of the work is in the Vatican, and dates from the tenth century. Editions are those of Voss (last ed. Franeker, 1700); A. Gronovius (Leyden, 1696); Tzschucke (Leipzig, 1807), revised by Parthey (Berlin, 1867); and Frick (Leipzig, 1880). See Fink, *Pomponius Mela und seine Chorographie* (1881); and the article Geographia.

Melaena Acra (ἡ Μέλαινα Ἄκρα). "Black Cape." (1) The northwestern promontory of the peninsula of Ionia, formed by Mount Mimas. (2) The northwestern promontory of the island of Chios. (3) A promontory of Bithynia, east of the Bosporus.

Melampus (Μελάμπους). (1) The son of Amythaon (see Aeolus) and of Idomené; brother of Bias, the oldest Greek seer, and ancester of the family of seers called Melampodidae. The brothers went with their uncle Neleus from Thessaly to Pylus in Messenia, where they dwelt in the country. Melampus owed his gift of soothsaying to some serpents, which he had saved from death and reared, and who in return cleansed his ears with their tongues when he slept; on awaking he understood the voices of birds, and thus learned what was secret. When Neleus would only give Bias his beautiful daughter Pero on condition that he first brought him the oxen of Iphiclus of Phylacé in Thessaly, which were guarded by a watchful dog, Melampus offered to bring the oxen for his brother, though he knew beforehand that he would be imprisoned for a year. He was caught in the act of stealing them, and kept in strict confinement. From the talk of the worms in the woodwork of the roof he gathered that the house would soon fall to pieces. He thereupon demanded to be taken to another prison; and this was scarcely done when the house broke down. When, on account of this, Phylacus, father of Iphiclus, perceived his prophetic gifts, he promised him the oxen, if, by his art, he would find out some way of curing his son's childlessness. Melampus offered a bull to Zeus, cut it in pieces, and invited the birds to the meal. From these he heard that a certain vulture, that had not come, knew how it could be effected. This vulture was made to appear, and related that the defect in Iphiclus was the result of a sudden fright at seeing a bloody knife, with which his father had been castrating some goats; he had dug the knife into a tree, which had grown round about it; if he took some of the rust scraped off it, for ten days, he would be cured. Melampus found the knife, cured Iphiclus, obtained the oxen, and Bias received Pero for his wife.

Afterwards he went to Argos, because, according to Homer (*Od.* xv. 225–240), Neleus had committed a serious offence against him in his absence, for which he had taken revenge; while, according to the usual account, he had been asked by king Proetus to heal his daughter, stricken with madness for acting impiously towards Dionysus or Heré. He had stipulated that his reward should be a third of the kingdom for himself, another for Bias; besides which Iphianassa became his wife, and Lysippé that of Bias, both being daughters of Proetus. A descendant of his son Antiphates was Oïcles, who was a companion of Heracles in the expedition against Troy, and was slain in battle by Laomedon; he again was ancestor of the seer and hero Amphiaraüs. Descendants of his other son Mantius were Cleitus, whom Eos, the goddess of dawn, carried off on account of his beauty, and Polypheides, whom, after the death of Amphiaraüs, Apollo made the best of seers. The son of Polypheides was the seer Theoclymenus, who, flying from Argos on account of committing a murder, met Telemachus at Pylus, was led by him to Ithaca, and announced to Penelopé the presence in Ithaca of Odysseus and to the suitors their approaching death. The seer Polyidus (q. v.) was also said to be a great-grandson of Melampus. At Argos Melampus was held to be the first priest of Dionysus, and originator of mysterious customs at festivals and at ceremonies of expiation.

(2) The author of two short works in Greek on divination, who lived in the third century B.C. at Alexandria. Edition by Franz (Altenburg, 1780).

Melan (*μέλαν*). Ink. It was made of the liquid of the cuttle-fish, or of soot and gum, or gall-apples. (See Atramentum.) An inkstand was called *μελανδόχον* (*atramentarĭum*).

Melanchlaeni (Μελάγχλαινοι). A people in the north of Asia, about the upper course of the river Tanaïs (Don), resembling the Scythians in manners, though of a different race. Their Greek name was derived from their dark clothing.

Melăneus (Μελανεύς). A son of Apollo. He was king of the Dryopes, and was a famous archer. He founded the town of Oechalia, which he named after his wife.

Melanippé (Μελανίππη). Daughter of Chiron, also called Evippé. Being with child by Aeolus, she fled to Mount Pelion, and was there metamorphosed by Artemis into a mare, and placed among the stars as a constellation (Hyg. *Fab.* 86).

Melanippĭdes (Μελανιππίδης). A celebrated Greek lyric poet in the department of the dithyramb, who flourished about B.C. 440 at Melos. His fragments will be found in Bergk, *Poet. Lyric. Graec.* See Dithyrambus.

Melanippus (Μελάνιππος). A Theban, who mortally wounded Tydeus in the fight of the Seven against Thebes, and was himself slain by Amphiaraüs. See Tydeus.

Melanogaetūli. A black race of mixed blood dwelling in Gaetulia.

Melanthius (Μελάνθιος). (1) A goat-herd of Odysseus. (2) An Athenian tragic poet attacked by Aristophanes (*Pax*, 796, and elsewhere). (3) A Greek painter of the Sicyonian School, contemporary with Apelles (B.C. 332), with whom he studied under Pamphilus (Pliny, *H. N.* xxxv. 50).

Melanthus (Μέλανθος). A king of Messenia driven out by the Heraclidae (Herod. i. 147).

Melas (*Μέλας*). The name of several rivers, whose waters were a dark colour. (1) A small river in Boeotia, flowing between Orchomenus and Aspledon. (2) A river of Thessaly, in the district Malis, falling into the Malic Gulf. (3) A river of Thessaly in Phthiotis, falling into the Apidanus. (4) A river of Thrace, falling into the Melas Sinus. (5) A river in the northeast of Sicily, flowing into the sea between Mylae and Naulochus, through excellent meadows, in which the oxen of the Sun are said to have fed. (6) A river in Asia Minor, the boundary between Pamphylia and Cilicia.

Melas Sinus (*Μέλας Κόλπος*). A gulf between the coast of Thrace and the Thracian Chersonesus. See MELAS.

Meldi or **Meldae**. A people in Gallia Lugdunensis, upon the river Sequana (Seine).

Meleāger (*Μελέαγρος*). (1) The son of Oeneus of Calydon and Althaea, husband of Cleopatra (see IDAS), one of the most celebrated heroes of Greek legend. He took part in the expedition of the Argonauts, and brought about the celebrated chase of the Calydonian boar (see OENEUS), to which he invited the most renowned heroes of the time, Admetus, Amphiaraüs, Iason, Idas, Lynceus, Castor and Pollux, Nestor, Theseus, and Pirithous, Peleus, Telamon, and others. Many lost their lives, till at last Meleager slew the monster. However, Artemis thereupon stirred up a furious strife between the Calydonians and the Curetes who dwelt at Pleuron, about the head and skin of the

Meleager. (From a Painting at Pompeii.)

boar, the prize of victory. The Calydonians were victorious as long as Meleager fought at their head; but when he slew the brother of his mother, she invoked a terrible curse on him, and he retired sullenly from the fray. The Curetes immediately forced the Calydonians to retreat, and were already beginning to climb the walls of Calydon, when, at the height of their distress, he yielded to the prayers of his wife, and again joined in the fight to ward off destruction from the city; but he did not return alive, for the Erinys had accomplished the curse of his mother. According to a later legend, the Moerae appeared to his mother on the seventh day after his birth, and announced to her that her son would have to die when a log of wood on the hearth was consumed by the flame; whereupon Althaea immediately snatched the log from the fire and concealed it in a chest. At the Calydonian Hunt, Meleager fell in love with Atalanté (q. v.), and gave her (who had inflicted the first wound) the prize, the skin of the animal which he had killed. He slew the brothers of his mother, the sons of Thestius, when they were lying in wait for the virgin to rob her of the boar's hide. Overcome by pain at the death of her brothers, Althaea set fire to the log, and Meleager died a sudden death. His mother and wife hanged themselves; his sisters wept so bitterly for Meleager, that Artemis for pity changed them into guineahens (*μελεαγρίδες*). Legends relate that even in the nether world Meleager retained his dauntless courage; for when Heracles descended to Hades, all the shades fled before him except Meleager and Medusa. (2) A Greek epigrammatist of Gadara in Palestine, who flourished about B.C. 60. His collection of epigrams, by himself and others, entitled *Stephanos* (wreath), formed the nucleus of the Greek anthology. Of his own poems there remain 131, in which amatory themes are cleverly and wittily treated. See ANTHOLOGY.

Meles (*Μέλης*). A small stream in Ionia, on whose banks near Smyrna Homer was said to have been born. Hence he is styled *Μελησιγένης*. One legend makes Meles, the river-god, to have been the poet's father. See HOMERUS.

Melēté. See MUSAE.

Melētus (*Μέλητος*) or **Melītus** (*Μέλιτος*). An obscure tragic poet, but notorious as one of the accusers of Socrates (q. v.). It was he who made the formal accusation before the archon; but he was really the least important of the three accusers, and is said to have been bribed to take part in the proceedings. After the death of Socrates, Meletus was stoned to death by the people, in the revulsion of feeling which they experienced (Plat. *Apol.*; Diod. xiv. 37; Diog. Laërt. ii. 43).

Melia (*Μελία*). A nymph, daughter of Oceanus, who became by Inachus the mother of Phoroneus and Aegialeus; by Silenus, the mother of the centaur Pholus (q. v.); by Poseidon, the mother of Amycus; and by Apollo, the mother of Ismenus and of the prophet Tenerus. She was worshipped at Thebes in the Ismenium.

Meliae (*Μελίαι*) and **Meliādes** (*Μελιάδες*). (1) The nymphs who, with the Gigantes and Erinnyes, sprang from the drops of blood that fell from Uranus and were received by Gaea. (2) The nymphs who nursed the infant Zeus (q. v.).

Meliboea (*Μελίβοια*). (1) A town on the coast of Thessaly in Magnesia, between Mount Ossa and Mount Pelion, where Philoctetes reigned, who is hence called by Vergil, *dux Meliboeus*. It was noted for its purple dye (Lucret. ii. 499). (2) An island at the mouth of the river Orontes in Syria.

Melicertes (*Μελικέρτης*). In Greek mythology the son of Athamas and Ino, and changed after his death by drowning into the marine deity Palaemon, while his mother became Leucothea. (See INO.) His name (=*Melkart*), however, shows him to have been originally a Phœnician god. Like Ino-Leucothea, he was worshipped on all the coast of the Mediterranean, especially on that of Megara and at the Isthmus of Corinth, where he was so closely connected with the cult of Poseidon that the Isthmian Games, originally instituted in honour of this god, came to be looked upon as the funeral games of Melicertes. The Romans regard-

ed him as a beneficent god of the sea, and identified him with Portunus, the god of harbours.

Melĭna. A bag or pouch made of the skin of the badger (*meles*) (Plaut. *Epid.* i. 21).

Mĕlinno (Μελιννώ). A Greek poetess, the author of an ode to Rome consisting of five Sapphics usually ascribed to Erinna. See Welcker's *Kleine Schriften*, ii. p. 160.

Melissa (Μέλισσα). (1) A nymph who was said to have discovered the use of honey, and from whom bees were believed to have received their name (*μέλισσαι*). There can be no doubt, however, that her name really came from *μέλι*, "honey," and was hence given to nymphs. The name was commonly given to priestesses of Demeter, Persephoné, Apollo, and Artemis. (2) The wife of Periander and daughter of Procles. She was slain by her husband.

Melissa (Μέλισσα). A village of Phrygia Magna containing the tomb of Alcibiades, of whom the emperor Hadrian caused a marble statue to be erected there.

Melissus (Μέλισσος). (1) A Samian philosopher of Eleatic tendencies. He is probably not the person who commanded the fleet opposed to Pericles in B.C. 440, but of earlier date. Only fragments of his work remain. (2) A Latin grammarian and comic poet, the freedman of Maecenas. Augustus intrusted him with the arrangement of a library in the portico of Octavia (Suet. *Gramm.* 21).

Melĭta or **Melĭté** (Μελίτη). (1) The modern Malta, an island in the Mediterranean Sea, about seventeen miles long and nine in breadth. It was colonized by the Phœnicians, and afterwards belonged to the Carthaginians, from whom it was taken by the Romans in the Second Punic War (B.C. 216). It is celebrated as the island on which the Apostle Paul was shipwrecked; though some writers erroneously suppose that the Apostle was shipwrecked on the island of the same name off the Illyrican coast. The inhabitants manufactured fine cloth (*Melitensia*, sc. *vestimenta*); and the lapdogs (*catuli Melitaei*) were much petted by Roman ladies. Cicero speaks of it as the home of pirates (*Verr.* iv. 46, 47), but himself often thought of making it a place of exile. The Ogygia of Homer is sometimes identified with Malta. In the fifth century A.D. it was taken by the Vandals, then by the Goths, and in 870 by the Arabs. See Caruana, *Reports on Phœnician and Roman Antiquities in Malta* (1881–1882); and James Smith, *Voyage and Shipwreck of St. Paul* (1866). (2) Now Meleda, a small island in the Adriatic Sea, off the coast of Illyria (Dalmatia), northwest of Epidaurus. (3) A deme of Attica which gave its name to one of the city gates. (4) A lake in Aetolia.

Melitaea (Μελιταία), **Melitēa** (Μελίτεια), or **Melitia** (Μελιτία). A town in Thessaly in Phthiotis, on the northern slope of Mount Othrys, and near the river Enipeus (Thuc. iv. 78).

Melĭté (Μελίτη). A nymph, one of the Nereïdes, a daughter of Nereus and Doris.

Melitēné (Μελιτηνή). A city and district of Armenia Minor, between the Anti-Taurus and the Euphrates. It was known for its fruit, oil, and wine, and under the Roman Empire was the station of a legion and the capital of the province. Here the Romans defeated the Persians in A.D. 577.

Melitensia Vestimenta. See Melita.

Melĭto (Μελίτων). A bishop of Sardes under Marcus Aurelius, to whom he inscribed a defence of the Christians, fragments of which are extant.

Melium. A leather dog-collar studded with nails (Varr. *R. R.* ii. 9. 15). See Millus.

Mella or **Mela**. The modern Mella, a river in Gallia Transpadana, flowing by Brixia (Brescia), and falling into the Ollius (Oglio).

Mellaria. (1) A town of the Bastuli in Hispania Baetica, between Belon and Calpé. (2) A town in the same province, considerably north of the former.

Melodūnum. The modern Melun; a town of the Senones in Gallia Lugdunensis, on an island of the Sequana (Seine) (Caes. *B. G.* vii. 58).

Melos (Μῆλος). An island in the Aegaean Sea, the most westerly of the Cyclades. It was first colonized by the Phœnicians, who called it Byblos or Byblis, and afterwards by the Lacedaemonians, or at least by Dorians. Hence, in the Peloponnesian War, it embraced the side of Sparta. In B.C. 416 it was taken by the Athenians, who killed all the adult males, sold the women and children as slaves, and peopled the island with an Athenian colony. The length of the island is about fourteen miles from east to west, and its breadth from north to south eight miles. In 1820, among the ruins of the ancient city of Melos near the theatre was found the exquisite statue usually called the Venus of Milo (Venere di Milo), now in the Louvre at Paris, having been purchased by the Marquis de Rivière, and by him presented to Louis XVIII. It is composed of two blocks of marble, which unite just above the garment which covers the legs. See illustration on p. 96; and Perry, *Greek and Roman Sculpture*, pp. 600–605 (London, 1882). Melos was the birthplace of Diagoras the Atheist, whence Aristophanes calls Socrates also "the Melian" (*Nub.* 830).

Melpomĕné (Μελπομένη, from *μέλπομαι*). "The singing goddess." One of the nine Muses, and presiding over Tragedy. (See illustration on next page.) See Musae.

Membrāna (*διφθέρα*). Parchment. See Liber; Paleography; Writing and Writing Materials.

Memmia Gens. A Roman family (plebeian), whose members pretended to be descended from the Trojan Mnestheus (cf. Verg. *Aen.* v. 117).

Memmius. The name of a Roman gens, which claimed descent from the Trojan Mnestheus. (1) C. Memmius, tribune of the plebs B.C. 111, an ardent opponent of the oligarchical party at Rome during the Jugurthine War. He was slain by the mob of Saturninus and Glaucia while a candidate for the consulship in 100. (2) C. Memmius Gemellus, tribune of the plebs in B.C. 66, curule aedile in 60, and praetor in 58, was impeached for bribery, and withdrew from Rome to Mitylené. Memmius married Fausta, a daughter of the dictator Sulla, by whom he had a son. He was eminent both in literature and in eloquence, though profligate in his private character. Lucretius dedicated to him his poem *De Rerum Natura*.

Memnon (Μέμνων). (1) The beautiful son of Tithonus and Eos (Aurora), was king of the Ethiopians, and came to the assistance of Priam towards the end of the Trojan War. He wore armour

Melpomené. (Vatican.)

made for him by Hephaestus at the request of his mother. He slew Antilochus, the son of Nestor, but was himself slain by Achilles after a long and fierce combat. While the two heroes were fighting, Zeus weighed their fates, and the scale containing Memnon's sank. To soothe the grief of his mother, Zeus conferred immortality upon Memnon, and caused a number of birds to issue out of the funeral pile, which fought over the ashes of the hero. These birds were called Memnonides, and were said to have visited every year the tomb of the hero on the Hellespont. The Greeks gave the

Weighing the Fates of Achilles and Memnon.

name of Memnonium and Memnonia to certain very ancient buildings and monuments in Europe and Asia, which they supposed to have been erected by or in honour of Memnon. Of these the most celebrated was a great temple of Thebes, behind which was a colossal statue (called the statue of Memnon, *τὸ Μεμνόνιον*), which, when struck by the first rays of the rising sun, was said to give forth a sound like the snapping asunder of a chord. It appears, however, that the statue represented in reality the Egyptian king Amenophis. The citadel of Susa was also called Memnonion by the Greeks. On the musical statue, cf. Pliny, *H. N.* xxxvi. 58; Pausan. i. 42; and a paper in the *Edinburgh Review* for July, 1886. (2) A native of Rhodes, who had the command of the western coast of Asia Minor when Alexander invaded Asia. He was an able officer, and his death, in B.C. 333, was an irreparable loss to the Persian cause. (3) A native of Heraclea Pontica who wrote an elaborate history of that city, extracts from which have been preserved by Photius and are separately edited by Orelli (Leipzig, 1816).

Memnonium (*Μεμνόνιον*). See MEMNON.

Memorabilia. See XENOPHON.

Memphis (*Μέμφις*; in the Old Testament, *Moph*). A great city of Egypt, second in importance only to Thebes, after the fall of which it became the capital of the whole country, a position which it had previously shared with Thebes. It is said to have been founded by Menes. It stood on the left bank of the Nile, about ten miles above the Pyramids. See AEGYPTUS.

Menaechmi. A play of Plautus's (q. v.), from which Shakespeare derived the plot of his *Comedy of Errors*. Recent edition, with English notes, by Fowler (Boston, 1889).

Menaenum or **Menae**. A town on the eastern coast of Sicily, south of Hybla, the birthplace and residence of the Sicel chief Ducetius (q. v.), who long made himself a terror to the Greek cities of Sicily.

Menageries. See VIVARIUM.

Menalippus. See MELANIPPUS.

Menander (*Μένανδρος*). (1) The chief representative of the New Comedy. He was born in B.C. 342, at Athens, of a distinguished and wealthy family, received a careful education, and led a comfortable and luxurious life, partly at Athens, and partly at his estate in the Piraeus, the harbour of Athens, enjoying the intimate friendship of his contemporary and the friend of his youth, Epicurus, of Theophrastus, and of Demetrius Phalereus. He declined an invitation from King Ptolemy I. of Egypt, so as not to have his comfort disturbed. At the height of his poetic productiveness he was drowned while bathing in the Piraeus, at the age of fifty-two. His uncle Alexis had given him some preparatory training in dramatic composition. As early as 322 he made his first appearance as an author. He wrote above a hundred pieces, and worked with the greatest facility; but he only obtained the first prize for eight comedies, in the competition with his popular rival Philemon. The admiration accorded him by posterity was all the greater: there was only one opinion about the excellence of his work. His principal merits were remarkable inventiveness, skilful arrangement of plots, life-like painting of

character, a clever and refined wit, elegant and graceful language, and a copious supply of maxims based on a profound knowledge of the world. These last were collected in regular anthologies, and form the bulk of the extant fragments. Unfortunately not one of his plays has survived, although they were much read down to a late date. However, apart from about seventy-three titles, and numerous fragments (some of considerable length), we have transcripts of his comedies (in which, of course, the delicate beauties of the original are lost), in a number of Latin plays by Plautus (*Bacchides*, *Stichus*, *Poenulus*) and Terence (*Andria*, *Eunuchus*, *Heauton Timorumenos*, *Adelphi*). Lucian also, in his Conversations of Hetaerae, and Alciphron in his epistles, have made frequent use of Menander. Menander's most popular play seems to have been the *Thais*, a line of which is quoted by St. Paul (1 Cor. xv. 33). The fragments of Menander were printed in the collections of Meineke (1841) and Kock (1880). See the monographs by Guizot (1855), Horkel (1857), and Lübke (1892). (2) A Greek rhetorician of Laodicea, who probably lived at the end of the third century after Christ. He is the author of two treatises about speeches for display, which add to our knowledge of the theory of the sophistic type of oratory. They can be found in Spengel's *Rhetores Graeci*, iii. 331–446. (3) A Byzantine historian of the sixth century A.D., who wrote a history of the Empire from 559–582, in eight books, of which some portions are preserved, edited by Bekker and Niebuhr (Bonn, 1830).

Menander. (Vatican.)

Menapii. A powerful people in the north of Gallia Belgica. They originally dwelt on both banks of the Rhine, but were afterwards driven out of their possessions on the right bank by the Usipetes and Tenchteri, and inhabited only the left bank near its mouth, and west of the Mosa. Their country is described as heavily wooded, and with great swamps and marshes. They had a fortified place on the Mosa (Meuse) called Castellum Menapiorum, the modern Cassel.

Menas (Μηνᾶς). A familiar form of Menodōrus (Μηνόδωρος). A freedman of Pompey the Great and one of the principal commanders of the fleet of Sextus Pompey against Antony and Octavianus (B.C. 40). In B.C. 39 he tried in vain to dissuade his master from concluding a peace with Octavianus and Antony; and, at an entertainment given to them by Sextus on board his ship at Misenum, Menas suggested to him to cut the cables of the vessel, and, running it out to sea, despatch both his rivals. The treacherous proposal, however, was rejected by Pompey. On the breaking out of the war again in B.C. 38, Menas deserted Pompey and went over to Octavianus. In B.C. 36 he returned to his old master's service; but in the course of the same year he again played the deserter, and joined Octavianus. In B.C. 35 he accompanied Octavianus in the Pannonian campaign, and was slain at the siege of Siscia. According to the old scholiasts, this Menas is the person so vehemently attacked by Horace in the Fourth Epode.

Mendē (Μένδη) or **Mendae.** A town on the west coast of the Macedonian peninsula Pallené and on the Thermaic Gulf, a colony of the Eretrians, and celebrated for its wine (Pausan. x. 5, 27).

Mendes (Μένδης). A city of the Delta of Egypt, on the bank of one of the lesser arms of the Nile, named after it the Mendesian mouth (Μενδήσιον στόμα). Here was worshipped a deity of the Egyptians, called Mendes, and identified by Herodotus (ii. 42, 46) with the Arcadian Pan.

Mendīcus (πτωχός). A beggar. Beggars abounded in ancient times, but were less numerous, apparently, in Greece than in Italy, where the beggar's trade was, in ancient as in modern times, a recognized profession. The bridges over the Tiber were favourite resorts for mendicants (Juv. iv. 116; xiv. 134), as also the vicinity of the theatres and the temples (Orelli, *Inscr.* 4097), and the great *viae* in the neighbourhood of Rome. Children were trained up as beggars, and were often mutilated to excite compassion, after the manner of the *comprachicos* of later days (Sen. *Controv.* 33). Blind beggars were led by a dog (Mart. xiv. 81), as shown in the accompanying illustration from a painting found at Herculaneum and given by Rich. The

Roman Beggar. (Herculaneum.)

priests of Cybelé were a sort of mendicant order, and lived on the alms of the charitable (Hor. *Sat.* i. 2, 2).

Menĕcles (Μενεκλῆς). (1) Of Barcé in Cyrené, an historian of uncertain date. (2) Of Alabanda, a celebrated rhetorician. He and his brother Hierocles taught rhetoric at Rhodes, where the orator M. Antonius heard them, about B.C. 94.

Menecrătes (Μενεκράτης). (1) A Syracusan physician at the court of Philip, king of Macedon, B.C. 359–336. He made himself ridiculous by calling himself "Zeus," and assuming divine honours. There is a tale that he was invited one day by Philip to a magnificent entertainment, where the other guests were sumptuously fed, while he himself had nothing but incense and libations, as not being subject to the human infirmity of hunger. He was at first pleased with his reception; but afterwards, perceiving the joke and finding that no more substantial food was offered him, he left the party in disgust (Athen. p. 289). (2) Tiberius

Claudius Menecrătes, a physician mentioned by Galen, composed more than 150 medical works, of which only a few fragments remain.

Menedēmus (Μενέδημος). A Greek philosopher, a native of Eretria. Though of noble birth, he was poor, and worked for a livelihood either as a builder or as a tent-maker. According to one story, he seized the opportunity afforded by his being sent on some military service to Megara to hear Plato, and abandoned the army to addict himself to philosophy; but it may be questioned whether he was old enough to have heard Plato before the death of the latter. According to another story, he and his friend Asclepiades got their livelihood as millers, working during the night that they might have leisure for philosophy in the day (Athen. p. 168). The two friends afterwards became disciples of Stilpo at Megara. From Megara they went to Elis, and placed themselves under the instruction of some disciples of Phaedo. On his return to Eretria Menedemus established a school of philosophy, which was called the Eretrian. He did not, however, confine himself to philosophical pursuits, but took an active part in the political affairs of his native city, and came to be the leading man in the State. He went on various embassies to Lysimachus, Demetrius, and others; but being suspected of the treacherous intention of betraying Eretria into the power of Antigonus, he quitted his native city secretly, and took refuge with Antigonus in Asia. Here he starved himself to death in the seventy-fourth year of his age, probably about B.C. 277. Of the philosophy of Menedemus little is known, except that it closely resembled that of the Megarian School, on which see Euclides, p. 630.

Menelaï Portus (Μενελαΐος λίμην). An ancient city on the coast of Marmarica in Northern Africa, founded, according to tradition, by Menelaüs, and where Agesilaüs died.

Menelaïum (Μενελάϊον). A mountain in Laconia near Therapné, where the *heroum* of Menelaüs was situated.

Menelāüs (Μενέλαος and Μενέλεως). A son of Atreus, and younger brother of Agamemnon, with whom he was exiled by Thyestes, the murderer of Atreus, and fled to King Tyndareos, at Sparta, whose daughter Helen he married, and whose throne he inherited after the death of Helen's brothers, Castor and Polydeuces (Pollux). When Paris had robbed him of his wife and of great treasures, he went with Odysseus to Troy to demand restitution, and they were hospitably received there by Antenor. His just claims were refused, and his life was even put in danger. He and Agamemnon accordingly called on the Greek chieftains to join in an expedition against Troy, and himself furnished sixty ships. At Troy he distinguished himself in counsel and in action, and was specially protected by Athené and Heré. In the single combat with Paris he was victorious, but his opponent was rescued and carried off by Aphrodité. On demanding that Helen and the treasures should be restored, he was wounded by an arrow shot by the Trojan Pandarus. He was also ready to fight Hector, and was only prevented by the entreaties of his friends. When Patroclus had fallen, he shielded the dead body, at first alone, and then with the aid of Aiax, and bore it from the field of battle with Merioues. He was also one of the heroes of the wooden horse. Having recovered Helen he hastened home, but on rounding the promontory of Malea was driven to Egypt with five ships, and wandered about for eight years among the peoples of the East, where he was kindly received everywhere, and received rich presents. He was finally detained at the isle of Pharos by contrary winds, and with the help of the marine goddess Eidothea artfully compelled her father Proteus to prophesy to him. He thus learned the reason for his being detained at the island, and was also told that, as husband of the daughter of Zeus, he would not die, but enter the Elysian plains alive. After appeasing the gods in Egypt with hecatombs, he returned prosperously to his home, where he arrived on the very day on which Orestes was burying Aegisthus and Clytaemnestra. He spent the rest of his life quietly with Helen, in Lacedaemon. Their only daughter Hermioné was married to Neoptolemus, son of Achilles. See Helena; Trojan War.

Menenius Lanātus. (1) Agrippa. Roman consul in B.C. 503. It was owing to his mediation that the first great rupture between the patricians and plebeians, when the latter seceded to the Sacred Mount, was brought to a happy and peaceful termination in B.C. 493; and it was upon this occasion he is said to have related to the plebeians the well-known fable of the belly and the members. (2) Titus. A Roman who as consul in B.C. 477 was defeated by the Etruscans. He had previously, by his treacherous neglect, allowed the Fabii to be destroyed by the enemy. Being tried by the tribunes, he was fined, and, by constant brooding over his disgrace, pined away and died (Livy, ii. 51).

Menes (Μήν and Μήνης). The first king of Egypt, according to the Egyptian traditions, and the one who introduced into Egypt the worship of the gods, sacrifices, and many of the usages of advanced civilization (Herod. ii. 4, 99). His date is given as between B.C. 4500 and 4000. See Aegyptus, p. 28.

Menestheus (Μενεσθεύς). (1) The son of Peteos, who seized the government of Attica, while Theseus pined away in the nether world, and commanded the Athenians before Troy, where he fell. (See Demophoön; Theseus.) (2) The charioteer of Diomedes. (3) The son of the Athenian general Iphicrates. With his father and his father-in-law he was impeached by their colleague Chares for misconduct in their command during the Social War (B.C. 356); but Iphicrates and Menestheus were acquitted (Diod. xvi. 21).

Menexĕnus (Μενέξενος). An Athenian, the son of Demophoön, introduced by Plato as one of the interlocutors in his dialogues *Lysis* and *Menexenus*.

Meninx (Μῆνιγξ) or **Lotophagītis** (Λωτοφαγῖτις). An island close to the coast of Africa Propria, at the southeastern extremity of the Lesser Syrtis. It was the birthplace of the Roman emperors Vibius Gallus and Volusianus.

Menippé (Μενίππη). A daughter of Orion, who offered to die with her sister Metioché, when a pestilence was raging in Boeotia, and the oracle demanded the sacrifice of two virgins. (See Orion.) They were changed into comets by Pluto and Persephoné, and had a sanctuary near Orchomenus (Ovid, *Met.* xiii. 685).

Menippus (*Μένιππος*). (1) A Greek philosopher of Gadara in Syria, who flourished about B.C. 250. He was originally a slave, and afterwards an adherent of the Cynic School of philosophy. His writings (now completely lost) treated of the follies of mankind, especially of philosophers, in a sarcastic tone. They were a medley of prose and verse, and became models for the satirical works of Varro (hence called *Saturae Menippeae*), and afterwards for those of Lucian. (See SATIRA.) (2) A Carian orator of Cicero's time, and regarded by many as almost equal to the great Attic orators. (3) A geographer of Pergamus, who, in the Augustan Age, wrote a *Periplus*, of which an abridgment was made by Marcianus (q. v.).

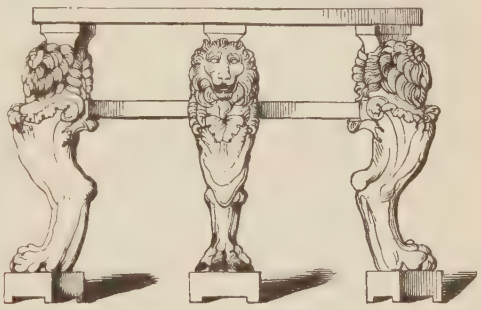
Menodōrus. See MENAS.

Menoeceus (*Μενοικεύς*). (1) Grandson of Pentheus of Thebes, father of Hipponomé, Creon, and Iocasta. (2) The grandson of the above, son of Creon. At the siege of Thebes by the Seven, Tiresias prophesied that the Thebans would conquer if the wrath of Ares at the slaying of the dragon by Cadmus were appeased by the voluntary death of a descendant of the warriors that had sprung from the dragon's teeth. Menoeceus, one of the last of this race, slew himself, in spite of his father's prohibition, on the castle wall, and fell into the chasm which had once been the haunt of the dragon that guarded the spring Dircé.

Menoetius (*Μενοίτιος*). Son of Actor and Aegina and father of Patroclus, who is hence called Menoetiades.

Menon (*Μένων*). A Thessalian adventurer, one of the generals of the Greek mercenaries in the army of Cyrus the Younger, when the latter marched into Upper Asia against his brother Artaxerxes, B.C. 401. After the death of Cyrus he was apprehended along with the other Greek generals by Tissaphernes, and was put to death by lingering tortures, which lasted for a whole year. His character is drawn in the blackest colours by Xenophon. He is the same as the Menon introduced in the dialogue of Plato which bears his name.

Mens. Under this name the Romans personified intelligence and prudence. After the battle at Lake Trasimenus, which was lost through the carelessness of the Romans, a temple was erected to her on the Capitol. The anniversary of its foundation was celebrated on the eighth of June.



Mensa (*τράπεζα*). (1) Originally a board or plank, and then a table, which the ancients had in all varieties and shapes. The simplest table was one with three legs and a round top (*cilliba*), used in wineshops. The Greek table was originally four-legged, as the name *τράπεζα* implies. Tables were made of white marble (Hor. *Sat.* i. 6, 16) and of wood, and in the houses of the rich at Rome were very costly, being regarded as heirlooms. The most valued woods were the maple (*acerna*) and the *citrus*, whose roots and tubers were used, displaying when cut a great variety of markings and curling veins. These were called *tigrinae* or *pantherinae* from their spots, and also *pavoninae* (Mart. xiv. 85) as suggesting the "eyes" in a peacock's tail. Enormous sums were paid for fine tables. Pliny (*H. N.* xiii. 91–99) speaks of Cicero as paying 500,000 sesterces ($20,000) for one, and Pollio as giving 1,000,000 sesterces ($40,000). A table with a single leg was called *monopodium*; *orbis* denotes any round table. The feet were often of ivory, beautifully carved; and the tables themselves were often overlaid with plates of gold, silver, or bronze (Petron. 73; Mart. iii. 31), and were inlaid with jewels.

Three-legged Table. (Pompeii.)

The table was a little lower than the couches surrounding it. Among the Greeks and later Romans it was covered by a cloth (*mantele*), and was cleaned by sponges or woollen cloths.

(2) MENSA PRIMA (*πρώτη τράπεζα*), the first course at dinner. In early times, the whole table was

Marble Table. (Overbeck.)

carried away at the end of each course, whence the expressions *mensam ponere, auferre, tollere, removere*.

(3) MENSA SECUNDA (*δεύτερα τράπεζα*), the last course of a meal, i. e. the dessert. See CENA.

(4) MENSA DELPHĬCA, an ornamental table as a part of the furniture of a house. See ABACUS.

(5) MENSA SACRA, a table used as an altar (Verg. *Aen.* ii. 764).

(6) MENSA ARGENTARIA, a broker's counter.

(7) MENSA PUBLĬCA, a bank (Cic. *In Pison.* 36).

(8) See CATASTA.

(9) A square flat gravestone laid over a grave and with a hole in the centre for sacrificial oils, etc. (Cic. *De Leg.* ii. 26).

Mensarii. See TRAPEZITAE.

Mensis. A month. See CALENDARIUM.

Mensōres. Persons employed in taking any kind of measurements, such as (1) land-surveyors (see GROMATICI); (2) the persons who marked out the various divisions of the camp (see CASTRA); (3) house-builders (Pliny, *Epist.* x. 19, 5); and (4) *mensores frumentarii*, officials who measured out the corn brought to the public granaries. See FRUMENTARII LEGES; HORREA.

Menstruum. See SERVUS.

Mensularii. See TRAPEZITAE.

Mensūra (*μέτρον*). Measure. The earliest measures known are probably those derived from parts of the human body (Vitruv. iii. 1, 5), and were at first, naturally, less definite and exact than those

employed in later times. Thus, the foot, the finger, the palm of the hand, the forearm were all employed as primitive units of length and breadth. Units of capacity were generally based upon such natural objects or measures as were approximately uniform. The Jews and some of the Kelts employed the hen's egg as a unit; the natives of Zanzibar the gourd; the Romans a mussel-shell (*cochlear*). Possibly the Greek *κύαθος* was originally a pod or gourd of some kind. The filled hand also is mentioned as serving as a measure of capacity. Afterwards a more precise system was adopted and ratified by law. Thus Phidon of Argos fixed the standard measure for the people of the Peloponnesus (Herod. vi. 127), Solon for the Athenians (Andoc. 11, 25), and Augustus for the later Romans.

The principal measure of length among the Greeks was the foot (*πούς*), there being three different standards, the Attic, the Olympic, and the Aeginetan. The first was 295.7 millimetres; the second, 320.5 mill.; the third, 330 mill. In Western Europe there were three kinds of foot (*pes*), the Italian (275 mill.), the Roman (296 mill.), and the *pes Drusianus* (333 mill.). In both the Greek and the Roman systems the unit (*μονάς*) was the finger-breadth (*δάκτυλος, digitus*). The *palmus* (*δοχμή*) was four *digiti*. The foot was regarded as equal to 16 *digiti*. The cubit (*πῆχυς, cubitus*) was the distance from the point of the elbow to the point of the middle finger, and = 24 *digiti*.

The fathom (*ὀργυιά, ulna* or *tensum* in Low Lat.) was the length of the extended arms = six feet. The *πλέθρον* (Oscan and Umbr. *vorsus*) was about 100 feet. The Roman *actus* was 120 feet. Among the itinerary measures the *stadium* (*στάδιον*) was 600 feet; the *ἱππικόν*, or race-course, was four *stadia;* the parasang (*παρασάγγης*), a Persian measure, was 30 *stadia* or four Roman miles; the *millarum* (*μίλιον*) was 1000 feet (*milia passuum*).

Of land measures were the Homeric unit *γύης* (*γύη*), about 60 feet; the square plethrum = 10,000 sq. ft.; the *scripulum* = 100 sq. ft.; the *iugerum* = 288 sq. rods; the *heredium* = 2 *iugera;* the *centuria* = 200 *iugera* (perhaps originally 100); the *saltus* = 800 *iugera*.

Of liquid and dry measures, the chief are the *κύαθος* = .08 of an Eng. pint; the *κοτύλη* = 6 *cyathi;* the Roman *sextarius* (*ξέστης*) = 12 *cyathi*, nearly an Eng. pint; the *χοῦς, congius* = 12 *cyathi*, or about six pints; the *ἀμφορεύς, amphora* = 8 *congii* or 48 *sextarii*, about 22 quarts; and the *culleus* = 20 *amphorae*. Distinctly for dry measure were the *χοῖνιξ* = four *κοτύλαι*, or about one quart; the *μόδιος, modius* = about a peck; the *μέδιμνος* = 6 *modii*.

See the standard work by Hultsch, *Griechische und römische Metrologie* (Berlin, 1882); R. Lepsius, *Längenmasse der Alten* (Berlin, 1884); Queipo, *Essai sur les Systèmes Métriques Monétaires des Anciens Peuples* (Paris, 1859); and for a full list of equivalents, the tables given in the Appendix to this Dictionary.

Mentĕsa. (1) Called Bastia, a town of the Oretani in Hispania Tarraconensis. (2) A small town of the Bastuli in the south of Hispania Baetica.

Mentor (*Μέντωρ*). (1) Son of Alcimus of Ithaca, friend of Odysseus, who, on departing for Troy, confided to him the care of his house and the education of Telemachus (*Odyss.* ii. 225). His name has hence become a proverbial one for a wise and faithful adviser or monitor. Athenê assumed his shape when she brought Telemachus to Pylus, and when she aided Odysseus in fighting the suitors and made peace between him and their relatives. (2) The most celebrated master of the toreutic art among the ancients (Pliny, *H. N.* xxxiii. § 154). As some of his works were destroyed at the burning of the temple of Artemis at Ephesus, in B.C. 356, obviously he lived before that event, and probably flourished in the best period of Greek art, though he is never mentioned by any earlier Greek writer than Lucian (*Lexiphanes*, 7). He worked mainly in silver. The orator Crassus paid 100,000 sesterces ($4000) for two cups chased by his hand, but, from regard to their value, refrained from using them. Varro possessed a statue wrought by him in bronze; and one Diodorus at Lilybaeum, two fine cups in the style of those adorned with figures of animals by Thericles, the Corinthian potter. Martial (iii. 41) mentions a cup with a lifelike representation of a lizard, and often refers to him (cf. Juv. viii. 104). (3) A Rhodian Greek who with his brother Memnon served the Persian Artabazus and later King Nectanabis of Egypt. He aided Tennes, king of Sidon, against Darius Ochus, and, when Tennes went over to the Persians, entered the service of Darius, who made him satrap of the western part of Asia Minor (Arrian, *Anab.* vii. 419).

Menŭsis (*μήνυσις*). An accusation made by a disqualified person or by an unwilling witness. See Ecclesia; Eisangelia.

Mercenarii (*μισθωτοί, μισθοφόροι, ξένοι*, and collectively *τὸ ξενικόν*). Mercenary troops. Apart from a few earlier examples of the employment of mercenaries, a regular organization of such troops was formed among the Greeks in the course of the Peloponnesian War, especially by the Arcadians, who were compelled by the poverty of their own country to utilize their strength and courage by seeking employment outside it. It was most easily found by serving as soldiers in the continual wars between the Grecian States. When the mercenary system was at its height, Arcadians formed by far the larger portion of the mercenary forces, even as early as in the first great army of mercenaries of 13,000 men, which the younger Cyrus led against his brother Artaxerxes, king of Persia, in B.C. 401. In Greece in the fourth century the ground became more and more favourable to the growth of the mercenary body, and the citizens of the Greek States, instead of bearing arms themselves, became more and more inclined to leave their wars to be fought out by mercenaries, especially since it had become a trade to form troops of mercenaries, and to let them out wholesale for service, no matter whether to Greeks or barbarians. Even prominent men, such as Agesilaüs and Philopoemen, did not consider it beneath their dignity to fight for strangers at the head of mercenaries. One of the chief recruiting places in the fourth century was Corinth, and afterwards for a time the district near the promontory of Taenarum in Lacedaemon. The generals of mercenaries were called *στρατηγοί*; their captains, through whom they raised companies of different kinds of troops, known as *λόχοι*, one hundred men in number, *λοχαγοί*. The usual monthly pay of a common soldier was on the average a gold daric (= 20 silver drachmae or $3 in intrinsic value of silver, but in intrinsic value of the

gold contained in it a little more than $5). Out of this he had to maintain himself entirely, to buy his armour, and keep it in good condition. The pay of the λοχαγοί was double and of the στρατηγοί four times that amount. In later times the στρατηγοί, when they entered with complete armies into the service of some power at war, seem to have generally received considerable sums at the conclusion of the contract. The Romans also employed foreign mercenaries after the Second Punic War, especially as archers and slingers, and after the time of Marius a recruited army of mercenaries (see LEGIO) had sprung out of the earlier levied army of citizens; but the mercenary organization never took among the Romans a form similar to that among the Greeks.

Mercurii Promontorium. See HERMAEUM.

Mercurius. See HERMES.

Mercurius Trismegistus. See HERMES TRISMEGISTUS.

Merenda. Breakfast or luncheon. See CENA.

Merētrix (πόρνη). A woman of loose character. There are a number of words in Greek and Latin to designate the harlot; ἑταίρα and *concubina* usually implying one who has a quasi-recognized connection with a single man, while πόρνη, *meretrix*, *scortum*, etc., designate the common prostitute: παλλακή, παλλακίς, and *pellex* usually imply the kept mistress of a married man. See CONCUBINA.

I. GREEK.—In Greece the State not only tolerated but protected the public courtesans. Solon is said to have established a brothel (πιρνεῖον) from whose profits he built a temple to Aphrodité Pandemos. In later times the number of such places increased and were licensed (πορνικὸν τέλος), as in Paris and other Continental cities to-day. Women living by themselves also paid a regular tax like the *filles inscrites*. The keepers of houses of ill-fame were known as πορνοβοσκοί. Private courtesans were very numerous at Athens and especially at Corinth, which last city was proverbial for its loose morals and the beauty of its *hetaerae*. Some of these persons were famous throughout Greece for their wit and accomplishments, and seem to have prided themselves on their mental gifts. Thus the Arcadian Lasthenea was a pupil of Plato, Leontion of Epicurus, and Aspasia (q. v.) is said to have instructed Sophocles and Pericles. For other famous courtesans, see the articles HARMODIUS; LAÏS; PHRYNÉ.

As virtuous women in Greece (outside of Sparta and a few Dorian communities) were kept strictly at home and possessed few accomplishments, we find the *hetaera* occupying often the influential position which in modern times belongs to the lawful wife; and so long as the husband did not altogether neglect his wife, any associations that he might have outside his own home with *hetaerae* were not regarded with severity. It is probable that the indulgence with which women of this class were looked upon sprang in part from the semi-religious character of the prostitute as being associated with the worship of Aphrodité. At Corinth, for instance, a large number of these women were formally dedicated to the service of that goddess and were styled ἱερόδουλοι. Few citizens ever entered the ranks of the πορναί, and whenever such a case happened loss of citizenship was the penalty, as also for a person who kept a πορνεῖον.

II. ROMAN.—In the early days of the Roman Republic prostitution was little known, and when recognized was branded with infamy. It seems to have been first introduced as a regular profession from Etruria, and at last assumed frightful proportions and had little or no legal restriction. Its growth was fostered by the spread of slavery among the Romans, since from the slave-markets both men and women, bred in the midst of Oriental corruption, came from Asia and Africa to taint the old-time purity of Rome by their influence. The pages of Ovid, Petronius, Juvenal, and Martial supply a mass of information regarding the frightful prevalence of the social evil. Under the Empire, so lightly was public debauchery regarded that ladies of noble birth voluntarily abandoned their rank in order to enroll themselves in the police-registers as courtesans; while Juvenal states that the empress Messalina, the wife of Claudius, used to steal away from the imperial palace at night and under the assumed name of Lycisca occupy a harlot's cell (Juv. vi. 638). Dancing-girls, actresses, musicians, and professional women in general were regularly classed as *meretrices;* and there were both those who occupied public houses (*lupanaria*) and those who lived in private lodgings. The parts of the city that were most frequented by them were the Suburra (q. v.), the Vicus Tuscus, the Vicus Patricius, the baths, the Summoenium (near the walls), and the arcades of the Circus Maximus, where remains of their low-vaulted cells (*cellae*) still exist. These places were small and a little lower than the sidewalk, and were also known as *fornices* from the arch (*fornix*) that formed their roof. At the entrance to each was usually a sign (*titulus*) bearing the name of the *meretrix* and her price. The wording of one of them has been preserved for us in the *Apollonius Tyrius* (ch. xxx.). Besides the names given above, these women were called *lupae*, "wolves," *prostibulae* (*pro*+*stabulum*), *prosedae* (*pro*+*sedeo*), *bustuariae* (as plying their trade near the *bustae* or cemeteries), *diobolariae*, *alicariae* (from the bakeries), and *nonariae* (as forbidden to appear on the streets before the *hora nona*, 3 p. m.).

Some few attempts were made to control and regulate this evil. *Meretrices* were forbidden to wear the *stola* of the matron, but dressed in a dark toga; and the city praetor had power to imprison, scourge, or banish them without a trial. Yet the restraint put upon them was only nominal, and as they were publicly recognized in some of the great festivals, such as the Floralia (q. v.), they may be said to have had a sort of official standing.

BIBLIOGRAPHY. — See Dufour, *Histoire de la Prostitution*, 6 vols. (Paris, 1853); Lecky, *Hist. of European Morals*, vol. i. (N. Y. 1884); Becker-Göll, *Charikles*, vol. ii. pp. 85–104; vol. iii. pp. 306–398; Fr. Jacobs, *Vermischte Schriften*, vol. iv. (1844). The ancient authorities for Roman prostitution are carefully collected by Jeannel, *La Prostitution* (Paris, 1874). A Roman *lupanar* is among the houses excavated at Pompeii, where it is now shown to visitors. The paintings on the walls are still too plainly preserved. The other objects found in this house are now kept in the Raccolta Pornografica of the Museo Nazionale at Naples.

Merga. An agricultural implement used in the harvest, but of uncertain form. Plautus (*Poen.* v.

2, 58) speaks of it as used for reaping, but Festus as a sort of fork (*furca*).

Merges. A bundle or sheaf of grain. The quantity taken up or cut by a *merga* (Verg. *Georg.* ii. 517).

Meridiāni. See GLADIATORES.

Meriŏnes (Μηριόνης). Son of Molus, a half-brother of Idomeneus of Crete, whom he accompanied to Troy with eighty ships. In Homer we read that he was there one of the bravest in the fight, and with Teucer specially distinguished in archery, an art in which the Cretans had always excelled. According to a later legend, on his return from Troy his vessel was driven to Engyion in the north of Sicily, which was supposed to be a Cretan settlement. At Gnossus in Crete his grave was shown, and both he and Idomeneus, his friend and companion in battle, were honoured as heroes (Diod. iv. 79).

Merměrus (Μέρμερος). (1) One of the Centaurs present at the wedding of Pirithoüs. (2) Son of Iason and Medea. He, with his brother Pheres, was murdered by his mother at Corinth. He is also called MACĂREUS and MORMŎRUS.

Mermessus (Μερμησσός) and **Myrmessus** (Μυρμησσός); also **Marmessus** and **Marpessus.** A town of Mysia near Polichus; famous as the home of a sibyl (Pausan. x. 12, 2).

Merobaudes, FLAVIUS. A rhetorician born in Spain and distinguished as a general, and also as a Latin poet, in the first half of the fifth century after Christ. Besides a short hymn, *De Christo* (or *Laus Christi*), there are preserved fragments of five secular poems, the longest being part of a panegyric on the third consulate of Aëtius (A.D. 446), with a preface in prose, discovered by Niebuhr on a palimpsest at St. Gallen and published by him at Bonn in 1824. They prove him to be no unskilful imitator of Claudian; in language and metre he possesses an elegance rare in his time. The bust of a statue exhumed in the Forum of Ulpian in 1813 contained an inscription eulogizing Merobaudes. See Winnefeld, *Sortes Sangallenses Ineditae* (Bonn, 1887).

Meroë (Μερόη). The island formed by the rivers Astapus (Blue Nile) and Astaboras (Atbarah), and the portion of the Nile between their mouths, was a district of Ethiopia. Its chief city, also called Meroë, became at a very early period the capital of a powerful State. The priests of Meroë were closely connected in origin and customs with those of Egypt; and, according to some traditions, the latter sprang from the former, and they from India. From Meroë in the eighth century B.C. sprang the Ethiopian dynasty of Egypt (the twenty-fifth), reigning at Thebes. See AECYPTUS; AETHIOPIA; THEBAE.

Merom Lacus. See SEMECHONITIS.

Merŏpé (Μερόπη). (1) One of the Heliades or sisters of Phaëthon. (2) Daughter of Atlas, one of the Pleiades, wife of Sisyphus of Corinth and mother of Glaucus. In the constellation of the Pleiades she is the seventh and the least visible star, because she is ashamed of having had intercourse with a mortal man (Apollod. i. 9, 3; iii. 10, 1). (3) Daughter of Cypselus, wife of Cresphontes, and mother of Aepytus. See AEPYTUS.

Merops (Μέροψ). (1) A king of the Ethiopians, by whose wife, Clymené, Helios (Sol) became the father of Phaëthon. (2) A king of Cos, husband of the nymph Ethemea, and father of Eumelus. His wife was slain by Artemis for neglect of her worship; whereupon Merops wished to take his own life, but was changed by Heré into an eagle and placed among the stars (Hyg. *Astr.* ii. 16). (3) King of Rhyndacus on the Hellespont. He is also called MACAR or MACAREUS, and was a famous seer. His children were Clité, Arisbé, Amphius, and Adrastus.

Merŭla, L. CORNELIUS. A flamen Dialis who, on the deposition of Cinna in B.C. 87, was elected consul, but committed suicide on the capture of Rome by Marius and Cinna (Plut. *Mar.* 41, 45).

Merŭla, PAULUS (PAUL VAN MERLE). A Dutch classical scholar, born at Dordrecht in 1558, and Professor of History from 1592. Because of ill-health he went to Rostock, where he died in 1607. He edited Eutropius, and, for the first time, the fragments of Ennius, besides writing other works of less importance. See ENNIUS.

Merum (ἄκρατον). Unmixed wine. See VINUM.

Mesambria (Μεσαμβρία). A peninsula on the coast of Persis.

Meschĕla (Μεσχέλα). A large city on the northern coast of Africa, and said to have been founded by the Greeks while returning from the Trojan War.

Mesembria (Μεσημβρία). (1) A celebrated town of Thrace on the Pontus Euxinus, and at the foot of Mount Haemus, founded by the inhabitants of Chalcedon and Byzantium in the time of Darius Hystaspis, and hence called a colony of Megara, since those two towns were founded by the Megarians. (2) A town in Thrace, but of less importance, on the coast of the Aegaean Sea, and in the territory of the Cicones, near the mouth of the Lissus.

Mesēné (Μεσηνή). "Midland." The part of Babylonia which consisted of the great island formed by the Euphrates, the Royal Canal, and the Tigris.

Mesoa or **Messoa.** See SPARTA.

Mesōgis. See LYDIA.

Mesomēdes (Μεσομήδης). A Greek lyric poet of Crete, who lived about A.D. 130, and was a freedman of Hadrian. Three small poems of his have come down to us (*Anthologia Graeca*, xiv. 63; xvi. 323). They are not unattractive, and the one on Nemesis is of peculiar interest, as its musical composition is indicated according to the ancient notation. See Brunck's *Analecta*, iii. 292; Bellermann, *Hymnen des Dionysius und Mesomedes*, pp. 13, 26.

Mesopotamia (Μεσοποταμία). A district of Asia, named from its position between the Euphrates and the Tigris, divided by the Euphrates from Syria and Arabia, and by the Tigris from Assyria. On the north it was separated from Armenia by a branch of the Taurus, called Masius, and on the south from Babylonia by the Median Wall. The name was first used by the Greeks in the time of the Seleucidae. In earlier times the country was reckoned a part, sometimes of Syria, and sometimes of Assyria. In the division of the Persian empire it belonged to the satrapy of Babylonia. The northern part of Mesopotamia was divided into the districts of Mygdonia and Osroëné. In a wider sense, the name is sometimes applied to

the whole country between the Euphrates and the Tigris.

Mesostic Verse. See ACROSTICHA.

Mespila (Μέσπιλα). A city of Assyria, on the eastern side of the Tigris, which, in the time of Xenophon, had fallen into decay (*Anab.* iii. 4).

Messa (Μέσσα). A town and harbour in Laconia, near Cape Taenarum.

Messabatēné (Μεσσαβατηνή) and **Messabatĭcé** (Μεσσαβατική). A district on the southeastern margin of the Tigris and Euphrates Valley.

Messāla or **Messalla.** The name of a distinguished family of the Valeria gens at Rome. The first who bore the name of Messala was M'. VALERIUS MAXĬMUS CORVĪNUS MESSALA, consul B.C. 263, who carried on the war against the Carthaginians in Sicily, and received this cognomen in consequence of his relieving Messina. The most celebrated member of the family was M. VALERIUS MESSĀLA CORVĪNUS. He fought on the republican side at the battle of Philippi (B.C. 42), but was afterwards pardoned by the triumvirs, and became one of the chief generals and friends of Augustus. He was consul B.C. 31, and proconsul of Aquitania in 28, 27. He died about B.C. 3–A.D. 8. Messala was a patron of learning, and was himself an historian, a poet, a grammarian (Quint. i. 7, 37), and an orator: but none of his works are extant. His friendship for Horace and his intimacy with Tibullus are well known. In the elegies of the latter poet the name of Messala is continually introduced.

Messalīna and **Messallīna.** (1) STATILIA, granddaughter of T. Statilius Taurus, consul in A.D. 11. She was the third wife of the emperor Nero, who married her in A.D. 66. She had previously espoused Atticus Vestinus, whom Nero put to death without accusation or trial merely that he might marry Messalina. (2) VALERIA, daughter of M. Valerius Messala Barbatus and of Domitia Lepida. She

Supposed Bust of Messalina. (Capitoline Museum, Rome.)

was the third wife of the emperor Claudius. She married Claudius, to whom she was previously related, before his accession to the Empire. Her profligacy and licentiousness were notorious; and the absence of virtue was not concealed by a lingering sense of shame or even by a specious veil of decorum, inasmuch as she often visited the public brothels (Juv. vi. 115). She was as cruel as she was profligate, and many members of the most illustrious families of Rome were sacrificed to her fears or her hatred. She long exercised an unbounded empire over her weak husband, who alone was ignorant of her infidelities. For some time she was supported in her career of crime by the freedmen of Claudius; but when Narcissus, the most powerful of the emperor's freedmen, perceived that he should probably fall a victim to Messalina's intrigues, he determined to get rid of her. The insane folly of Messalina furnished the means of her own destruction. Having conceived a violent passion for a handsome Roman youth, C. Silius, she publicly married him with all the rites of a legal connubium during the absence of Claudius at Ostia, A.D. 48. Narcissus persuaded the emperor that Silius and Messalina would not have dared such an outrage had they not determined also to deprive him of empire and life. Claudius wavered long, and at length Narcissus himself issued Messalina's death-warrant. She was put to death by a tribune of the guards in the gardens of Lucullus (Tac. *Ann.* xi. 26–38; Suet. *Claud.* 17–39; Juv. x. 333).

Messāna (Μεσσήνη). The modern Messina; a celebrated town of Sicily, on the strait separating Italy from this island, which is here about four miles broad. The Romans called the town Messana, according to its Doric pronunciation, but Messené was its more usual name among the Greeks. It was originally a town of the Siceli, and was called Zanclé, or a sickle, on account of the shape of its harbour, which is formed by a singular curve of sand and shells. It was first colonized by Chalcidians, and was afterwards seized by Samians, who had come to Sicily after the capture of Miletus by the Persians (B.C. 494). The Samians were shortly afterwards driven out of Zanclé by Anaxilas, who changed the name of the town into Messana or Messené, both because he was himself a Messenian and because he transferred to the place a body of Messenians from Rhegium. In B.C. 396 it was taken and destroyed by the Carthaginians, but was rebuilt by Dionysius. It afterwards fell into the hands of Agathocles. Among the mercenaries of this tyrant were a number of Mamertini, an Oscan people from Campania, who had been sent from home, under the protection of the god Mamers, or Mars, to seek their fortune in other lands. These Mamertini were quartered in Messana; and after the death of Agathocles (B.C. 282) they made themselves masters of the town, killed the male inhabitants, and took possession of their wives, their children, and their property. The town was now called MAMERTĪNA, and the inhabitants Mamertini; but its ancient name of Messana continued to be in more general use. The new inhabitants could not lay aside their old predatory habits, and in consequence became involved in a war with Hieron of Syracuse, who would probably have conquered the town had not the Carthaginians come in to the aid of the Mamertini, and, under the pretext of assisting them, taken possession of their citadel. The Mamertini had at the same time applied to the Romans for help, who gladly availed themselves of the opportunity to obtain a footing in Sicily. Thus Messana was the immediate cause of the First Punic War, 264. The

Mamertini expelled the Carthaginian garrison, and received the Romans, in whose power Messana remained till the latest times. See Siefert, *Zankle-Messana* (1854); and Axt, *Topographie v. Messana* (1887).

Messapia (Μεσσαπία). The Greek name of Calabria (q. v.).

Messapii (Μεσσαπιοί). A name given to the early inhabitants of southeastern Italy, often regarded as the earliest historical inhabitants of the peninsula. They are the same as the Iapyges or Iapygii, and are also loosely described as Pencetii, Dauni, Bruttii, Sallentini, Paediculi, etc. They perhaps represent an early migration from Hellas into Italy, though the remains of their language contained in a comparatively few inscriptions show that they were not Greeks proper. Scholars generally hold them to have been of the same stock as the Illyrians (Albanians). Their inscriptions have not been deciphered. The most noticeable features of their language appear to have been the genitive endings *-aihi* and *-ihi* (Skt. *-asya*, Gk. *-οιο*), the use of the aspirated consonants, and the avoidance of final *m* and *t*. See Mommsen, *Hist. of Rome*, i. pp. 31–33 (Amer. ed.); id. *Unteritalische Dialekte* (1850); Nissen, *Italische Landeskunde*, vol. i. (1883); Deecke in the *Rheinisches Museum*, vols. xxxvi., xxxviii., and xl.; and the articles Indo-European Languages; Italia.

Messenia (Μεσσηνία). A country in Peloponnesus, bounded on the east by Laconia, from which it was separated by Mount Taygetus, on the north by Elis and Arcadia, and on the south and west by the sea. In the Homeric times the western part of the country belonged to the Neleid princes of Pylos, of whom Nestor was the most celebrated; and the eastern to the Lacedaemonian monarchy. On the conquest of Peloponnesus by the Dorians, Messenia fell to the share of Cresphontes, who became king of the whole country. Messenia was more fertile than Laconia; and the Spartans soon coveted the territory of their brother-Dorians; and thus war broke out between the two people. The First Messenian War lasted twenty years, B.C. 743–723; and notwithstanding the gallant resistance of the Messenian king, Aristodemus, the Messenians were obliged to submit to the Spartans after the capture of their fortress Ithomé. (See Aristodemus.) After bearing the yoke thirty-eight years, the Messenians again took up arms under their heroic leader, Aristomenes (q. v.). The Second Messenian War lasted seventeen years, B.C. 685–668, and terminated with the conquest of Ira and the complete subjugation of the country. Most of the Messenians emigrated to foreign countries, and those who remained behind were reduced to the condition of Helots or serfs. In this state they remained till 464, when the Messenians and other Helots took advantage of the devastation occasioned by the great earthquake at Sparta to rise against their oppressors. This Third Messenian War lasted ten years (464–455), and ended by the Messenians surrendering Ithome to the Spartans on condition of being allowed a free departure from Peloponnesus. When the supremacy of Sparta was overthrown by the battle of Leuctra, Epaminondas collected the Messenian exiles, and founded the town of Messené (B.C. 369), at the foot of Mount Ithomé, which formed the acropolis of the city. Messené was made the capital of the country. Messenia was never again subdued by the Spartans, and it maintained its independence till the conquest of the Achaeans and the rest of Greece by the Romans (B.C. 146). See Niese, *Die älteste Geschichte Messeniens* (1891).

Mēstra (Μήστρα). Daughter of Erysichthon (q. v.). She supported her famished father by employing the power to change herself into any form she pleased, the gift of her lover Poseidon. She let herself be sold in various forms, and then always returned to her father (Ovid, *Met.* viii. 738–878).

Meta. The columns at the upper and lower end of the Roman Circus, round which the competitors usually had to drive seven times. See Circus.

Meta Sudans. The name given to the partly restored brick interior of a beautiful fountain erected by the emperor Domitian near the Colosseum at Rome. It is shown in the illustration on p. 73. It was originally a tall marble cone spouting water from the top and from several jets below (Sext. Ruf. *De Reg. Urb.* 4).

Metăbus. A chief of the Volsci, father of Camilla (q. v.).

Metageitnia (*μεταγείτνια*). An Athenian festival in honour of Apollo (q. v.).

Metageitnion (Μεταγειτνιών). The second Attic month, nearly equivalent to our August. See Calendarium.

Metal, Artistic Work in. See Caelatura; Toreutica.

Metallum (*μέταλλον*). In Greek, a mine; in Latin, either a mine or a metal.

It is the purpose of this article to give a brief list of the metals known and used in antiquity, and of the working of mines.

I. Metals.

(*a*) Gold. See Aurum.

(*b*) Silver. See Argentum.

(*c*) Copper. See Aes.

(*d*) Brass. See Orichalcum.

(*e*) Electrum or gold alloyed with silver; "white gold." See Electrum.

(*f*) Iron (*σίδηρος*, *ferrum*). Iron is one of the latest metals to come into use owing to the difficulty of working it (Hesiod, 150); but it had begun to be employed in the Homeric Age (*Il.* xviii. 34) for swords and also for ploughshares, though bronze was much commoner. In Hesiod's *Shield of Heracles* hot iron is plunged into water to harden it. By the time of Croesus (i. e. the sixth century B.C.) iron had supplanted bronze for weapons (Herod. i. 67; Pausan. iii. 3, 6). Pliny (*H. N.* xiv. 139) implies that the Romans used iron in the time of Porsena; and in the early Gallic invasions the Roman weapons of iron were a source of superiority over the Gauls, whose weapons were easily bent. Later, in the first century B.C., the Cimbri who invaded Italy had swords, javelins, and even corselets of iron, according to Plutarch. In Greece, Cyprus and the cities of Chalcis and Lacedæmon were celebrated for their iron ware; but external nations like the Chalybes of Pontus surpassed the best work of the Hellenic smiths (Xen. *Anab.* v. 5, 1). Iron was sometimes used in art, as we learn that Aecon made an iron statue of Heracles. The people of Sparta (q. v.) and of Byzantium used iron in their coinage (Pollux, ix. 78).

(*g*) Lead (*μόλυβδος, plumbum nigrum*). Being easy to work, lead was much employed in ancient times, especially for coffins, water-pipes, etc. It was recognized also in ancient medicine. See Pliny, *H. N.* xxxiv. 156 foll., for a full account.

(*h*) Tin (*κασσίτερος, plumbum album*). Tin was very widely used and is found employed in the Homeric Age in the adornment of arms. Herodotus (iii. 115) speaks of it as produced in the islands of the Western Sea, the Cassiterides, perhaps the Scilly Isles (see CASSITERIDES); Diodorus mentions the coast of Britain as its source; while Pliny (*H. N.* xxxiv. 156) says that it came from Spain. It is probable that the Phœnicians were the principal purveyors and importers of it. The name *κασσίτερος* suggests the Sanskrit *kastíra*, so that it may first of all have been brought from India.

(*i*) *Stannum*, an alloy of silver with lead, used for plating bronze (Pliny, *H. N.* xxxiv. 159).

(*j*) Mercury or quicksilver (*ὑδράργυρος, argentum vivum*) was produced by the ancients from cinnabar and used in gold-mining (Pliny, *H. N.* xxxiii. 97).

(*k*) Zinc. Zinc is not specifically mentioned in the ancient writings, but was known to the Romans at any rate, for an analysis of Roman coins shows its presence to a considerable extent (Mommsen, *Römisches Münzwesen*, p. 763).

(*l*) Nickel, a metal also not named, but found in the coins of some of the Greek kings of India in the third century B.C. (*Numismatic Chronicle* for 1868, p. 305).

II. MINING. Information regarding the ancient mines is scanty, the chief authorities dealing only with the lead and silver mines of Attica and the gold and silver mines of Spain. The most satisfactory source is Xenophon's treatise *De Vectigalibus* (iv. 2), which deals with the Attic mines. The mines had shafts and adits. The ores were smelted with charcoal (*ἄνθρακες*). Fuller explanations regarding the Roman mines are given by Pliny (*H. N.* xxxiii.), Diodorus Siculus (v. 36), and Strabo (iii. pp. 146 foll.). Shafts, galleries, pumps, cross-drains, etc., were elaborate and scientific. In Spain gold was obtained in large quantities by washing, as in modern placer mining; while gold found in nuggets was refined by being first treated with an astringent and afterwards by heat.

Tomb of Caecilia Metella, on the Appian Way

In Greece the mines were the property of the State, which leased them for various terms, but only to citizens and *ἰσοτελεῖς*. The labour was performed by slaves. Under the Roman Republic mines were private property, but under the Empire were worked for the emperor and yielded a considerable revenue to the *fiscus*. (See FISCUS.). The workmen were usually slaves, criminals, or soldiers.

See the essay by Boeckh given as an appendix to his *Public Economy of Athens;* Lenz, *Mineralogie der alten Griechen und Römer* (1861); Marquardt, *Staatsverwaltung*, ii. 252 foll.; and the article VECTIGALIA.

Metanīra (*Μετάνειρα*). The wife of Celeus, and mother of Triptolemus. See CELEUS.

Metapontium (*Μεταπόντιον*) and **Metapontum**. A celebrated Greek city in Lucania, and on the Tarentine gulf, originally called Metabum (*Μέταβον*). It was founded by the Greeks at an early period, was afterwards destroyed by the Samnites, and was repeopled by a colony of Achaeans. It fell into the hands of the Romans with the other Greek cities in the south of Italy in the war against Pyrrhus; but it revolted to Hannibal after the battle of Cannae (Livy, xxii. 61), and soon after disappears from history. Pythagoras died at Metapontium, whither he had transferred his school.

Metatōres. See CASTRA.

Metaulos (*μέσαυλος*). The inner door of a house. See DOMUS.

Metaurum. See METAURUS (2).

Metaurus. (1) Now Metaro; a small river in Umbria, flowing into the Adriatic Sea, memorable by the defeat and death of Hasdrubal, the brother of Hannibal, on its banks, B.C. 207. (2) Now Marro; a river on the eastern coast of Bruttium, at whose mouth was the town of Metaurum.

Metella, Caecilia. (1) The daughter of L. Metellus Dalmaticus, consul B.C. 119. She was first married to M. Aemilius Scaurus, consul in 115, and afterwards to the dictator Sulla, who avenged upon Athens an affront put upon her by the Athenians (Plut. *Sulla*, 6, 13, 22, 35). She fell ill in 81, during the celebration of Sulla's triumphal feast; and as her recovery was hopeless, Sulla for religious reasons sent her a bill of divorce, and had her removed from his house, but honoured her memory with a splendid funeral. (2) The daughter of Metellus Creticus, and daughter-in-law of Crassus, the triumvir. In her memory, the magnificent tomb on the Appian Way was erected.

Metellus. A distinguished plebeian family of the Caecilia gens at Rome. (1) L. CAECILIUS METELLUS, consul B.C. 251, carried on the war in Sicily against the Carthaginians. In the following year he gained a great victory at Panormus over Hasdrubal, the Carthaginian general. The elephants which he took in this battle were exhibited in his

triumph at Rome. Metellus was consul a second time in 249, and was elected pontifex maximus in 243, and held this dignity for twenty-two years. He must, therefore, have died shortly before the

Coin of Caecilius Metellus, referring to the Battle of Panormus.

commencement of the Second Punic War. In 241 he rescued the Palladium when the Temple of Vesta was on fire, but lost his sight in consequence. He was dictator in 224 for the purpose of holding the comitia. (2) Q. CAECILIUS METELLUS, son of the preceding, was plebeian aedile B.C. 209; curule aedile 208; served in the army of the consul Claudius Nero 207, and was one of the legates sent to Rome to convey the joyful news of the defeat and death of Hasdrubal; and was consul with L. Veturius Philo, 206. In his consulship he and his colleague carried on the war against Hannibal in Bruttium, where he remained as proconsul during the following year. In 205 he was dictator for the purpose of holding the comitia. Metellus survived the Second Punic War many years, and was employed in several public commissions. (3) Q. CAECILIUS METELLUS MACEDONĬCUS, son of the last, was praetor in B.C. 148, and carried on war in Macedonia against the usurper Andriscus, whom he defeated and took prisoner. He next turned his arms against the Achaeans, whom he defeated at the beginning of 146. On his return to Rome in 146, he triumphed, and received the surname of Macedonicus. Metellus was consul in 143, and received the province of Nearer Spain, where he carried on the war with success for two years against the Celtiberi. He was succeeded by Q. Pompeius in 141. Metellus was censor 131. He died 115, full of years and honours. He is frequently quoted by the ancient writers as an extraordinary instance of human felicity. He had filled all the highest offices of the State with reputation and glory, and was carried to the funeral pile by four sons, three of whom had obtained the consulship in his lifetime, while the fourth was a candidate for the office at the time of his death. (4) L. CAECILIUS METELLUS CALVUS, brother of the last, consul B.C. 142. (5) Q. CAECILIUS METELLUS BALEARĬCUS, eldest son of No. 3 was consul B.C. 123, when he subdued the inhabitants of the Balearic Islands, and received in consequence the surname of Balearicus. He was censor B.C. 120. (6) L. CAECILIUS METELLUS DIADEMĀTUS, second son of No. 3, has been frequently confounded with Metellus Dalmaticus, consul B.C. 119. Metellus Diadematus received the latter name from his wearing for a long time a bandage round his forehead, in consequence of an ulcer. He was consul B.C. 117. (7) M. CAECILIUS METELLUS, third son of No. 3, was consul B.C. 115, the year in which his father died. In 114 he was sent into Sardinia as proconsul, and suppressed an insurrection in the island, in consequence of which he obtained a triumph in B.C. 113 on the same day as his brother Caprarius. (8) C. CAECILIUS METELLUS CAPRARIUS, fourth son of No. 3. The origin of his surname is quite uncertain. He was consul B.C. 113, and carried on war in Macedonia against the Thracians, whom he subdued. He obtained a triumph in consequence in the same year and on the same day with his brother Marcus. He was censor B.C. 102 with his cousin Metellus Numidicus. (9) L. CAECILIUS METELLUS DALMATĬCUS, elder son of No. 4, and frequently confounded, as has been already remarked, with Diadematus, was consul B.C. 119, when he subdued the Dalmatians, and obtained in consequence the surname Dalmaticus. He was censor with Cn. Domitius Ahenobarbus in 115; and he was also pontifex maximus. He was alive in 100, when he is mentioned as one of the senators of high rank who took up arms against Saturninus. (10) Q. CAECILIUS METELLUS NUMIDĬCUS, younger son of No. 4, was one of the most distinguished members of his family. The character of Metellus stood very high among his contemporaries; in an age of growing corruption, his personal integrity remained unsullied; and he was distinguished for his abilities in war and peace. He was one of the chief leaders of the aristocratic party at Rome. He was consul B.C. 109, and carried on the war against Iugurtha in Numidia with great success. (See IUGURTHA.) He remained in Numidia during the following year as proconsul; but as he was unable to bring the war to a conclusion, his legate C. Marius industriously circulated reports in the camp and the city that Metellus designedly protracted the war for the purpose of continuing in the command. These rumours had the desired effect. Marius was raised to the consulship, Numidia was assigned to him as his province, and Metellus saw the credit of finishing the war snatched from his grasp. (See MARIUS.) On his return to Rome in 107 he was received with the greatest honour. He celebrated a splendid triumph, and received the surname of Numidicus. In 102 he was censor with his cousin Metellus Caprarius. In 100 the tribune Saturninus and Marius resolved to ruin Metellus. Saturninus proposed an agrarian law, to which he added the clause that the Senate should swear obedience to it within five days after its enactment, and that whosoever should refuse to do so should be expelled from the Senate and pay a heavy fine. Metellus refused to take the oath, and was therefore expelled from the Senate; but Saturninus, not content with this, brought forward a bill to punish him with exile. The friends of Metellus were ready to take up arms in his defence; but Metellus quitted the city and retired to Rhodes, where he bore his misfortune with great calmness. He was, however, recalled to Rome in the following year (99) on the proposition of the tribune Q. Calidius. The orations of Metellus are spoken of with praise by Cicero, and they continued to be read with admiration in the time of Fronto. (11) Q. CAECILIUS METELLUS NEPOS, son of Balearicus and grandson of Macedonicus, appears to have received the surname of Nepos because he was the eldest grandson of the latter. Metellus Nepos exerted himself in obtaining the recall of his kinsman Metellus Numidicus from banishment in B.C. 99, and was consul in 98 with T. Didius. In this year the two consuls carried the lex Caecilia Didia. (12) Q. CAECILIUS METELLUS PIUS, son of Numidicus, received the surname of Pius on account of the love which he displayed for his father when he besought the people to recall him from banishment in B.C. 99. He was praetor B.C. 89, and was one of the commanders in the Marsic or Social War. He was still in

arms in 87, prosecuting the war against the Samnites, when Marius landed in Italy and joined the consul Cinna. The Senate, in alarm, summoned Metellus to Rome; but as he was unable to defend the city against Marius and Cinna, he crossed over to Africa. After remaining in Africa three years, he returned to Italy and joined Sulla, who also returned to Italy in 83. In the war which followed against the Marian party, Metellus was one of the most successful of Sulla's generals, and gained several important victories both in Umbria and in Cisalpine Gaul. In 80 Metellus was consul with Sulla himself; and in the following year (79) he went as proconsul into Spain, in order to prosecute the war against Sertorius, who adhered to the Marian party. Here he remained for the next eight years, and found it so difficult to obtain any advantages over Sertorius that the Senate sent Pompey to his assistance with proconsular power and another army. Sertorius, however, was a match for them both, and would probably have continued to defy all the efforts of Metellus and Pompey if he had not been murdered by Perperna and his friends in 72. (See SERTORIUS.) Metellus was pontifex maximus, and, as he was succeeded in this dignity by Iulius Caesar in 63, he must have died either in this year or at the end of the preceding. (13) Q CAECILIUS METELLUS CELER, elder son of Nepos. In B.C. 66 he served as legate in the army of Pompey in Asia; and was praetor in 63, the year in which Cicero was consul. During his year of office he afforded warm and efficient support to the aristocratic party. He prevented the condemnation of C. Rabirius by removing the military flag from the Ianiculum. He coöperated with Cicero in opposing the schemes of Catiline; and, when the latter left the city to make war upon the Republic, Metellus had the charge of the Picentine and Senonian districts. By blocking up the passes he prevented Catiline from crossing the Apennines and penetrating into Gaul, and thus compelled him to turn round and face Antoninus, who was marching against him from Etruria. In the following year, 62, Metellus went with the title of proconsul into the province of Cisalpine Gaul, which Cicero had relinquished because he was unwilling to leave the city. In 60 Metellus was consul with L. Afranius, and opposed all the efforts of his colleague to obtain the ratification of Pompey's acts in Asia and an assignment of lands for his soldiers. He died in 59, and it was suspected that he had been poisoned by his wife Clodia, with whom he lived on the most unhappy terms, and who was a woman of the utmost profligacy. (14) Q. CAECILIUS METELLUS NEPOS, younger son of the elder Nepos (No. 11). He served as legate of Pompey in the war against the pirates and in Asia from B.C. 67 to 64. He returned to Rome in 63 in order to become a candidate for the tribunate, that he might thereby favour the views of Pompey. His election was opposed by the aristocracy, but without success. His year of office was a stormy one. One of his first acts in entering upon his office on the 10th of December, 63, was a violent attack upon Cicero. He maintained that the man who had condemned Roman citizens without a hearing ought not to be heard himself, and accordingly prevented Cicero from addressing the people on the last day of his consulship, and only allowed him to take the usual oath, whereupon Cicero swore that he had saved the State. In the following year (62) Metellus brought forward a bill to summon Pompey, with his army, to Rome, in order to restore peace; but on the day on which the bill was to be read, the two parties came to open blows; and Metellus was obliged to take to flight. He repaired to Pompey, with whom he returned to Rome in 61. He was praetor in 60, and consul in 57 with P. Lentulus Spinther. Notwithstanding his previous enmity with Cicero, he did not oppose his recall from exile. In 56 Metellus administered the province of Nearer Spain, where he carried on war against the Vaccaei. He died in 55. Metellus did not adhere strictly to the political principles of his family. He did not support the aristocracy, like his brother; nor, on the other hand, can he be said to have been the leader of the democracy. He was rather the faithful henchman of Pompey, opposing or supporting Cicero as his master required. (15) L. CAECILIUS METELLUS CRETĬCUS, tribune of the people in B.C. 49 and a supporter of the aristocracy. At the outbreak of the Civil War he did not leave the city when Pompey fled, but remained and opposed Caesar, who demanded possession of the sacred treasury. Metellus yielded only on compulsion (Plut. *Caes.*, *Pomp.*; Caes. *B. C.* i. 33).

Methāna. See METHONÉ (3).

Metharmé (Μεθάρμη). A daughter of King Pygmalion and wife of Cinyras (q. v.).

Methōné (Μεθώνη). (1) A town at the southwest corner of Messenia, with an excellent harbour, protected from the sea by a reef of rocks, of which the largest was called Mothon. (2) A town in Macedonia on the Thermaic Gulf, founded by the Eretrians, and celebrated from Philip having lost an eye at the siege of the place. (3) Or METHĀNA, an ancient town in Argolis, situated on a peninsula of the same name, opposite the island of Aegina.

Methŏra (Μέθορα). Matra, the sacred city of Krishna; a city of India on the river Iomanes (Jumna). It was the seat of the Indian god whom the Greeks identified with Heracles (Arrian, *Ind.* 8).

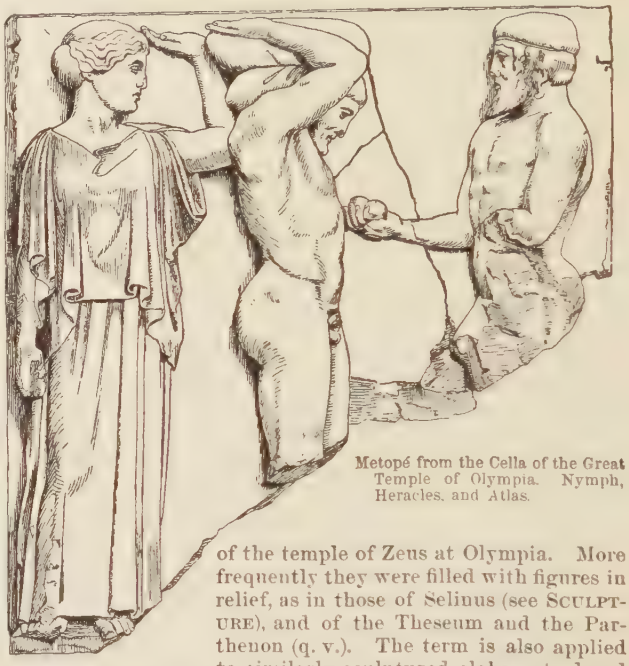
Methydrium (Μεθύδριον). A town of central Arcadia (Thuc. v. 58).

Methymna (Μήθυμνα and Μέθυμνα, the first form being the better). The second city of Lesbos, standing at the northern extremity of the island. It was the birthplace of the poet Arion and of the historian Hellanicus. The celebrated Lesbian wine grew in its neighbourhood. In the Peloponnesian war it remained faithful to Athens, even during the great Lesbian revolt (see MITYLENÉ); afterwards it was sacked by the Spartans (B.C. 406), and never recovered its former prosperity.

Metiŏché (Μητιόχη). See MENIPPÉ; ORION.

Metion (Μητίων). The son of Erechtheus and Praxithea and husband of Alcippé. His sons, the Metionidae, expelled their cousin Pandion (q. v.) from Athens, of which he was king, but were themselves afterwards expelled by his sons (Apollod. iii. 15; Pausan. i. 5, 3).

Metis (Μῆτις, "counsel"). A daughter of Oceanus, first wife of Zeus, by whom she was devoured, as he feared she would bear a son mightier than himself; whereupon Athené (q. v.) sprang from the head of the god. See ATHENÉ.



Metius. See METTIUS.

Mĕtoeci (*μέτοικοι*). The name given at Athens to aliens (other than slaves) resident in Attica. When the State was most flourishing, they numbered 10,000 adult men (B.C. 309). The favourable position of Athens for commerce and the rich opportunities for carrying on trade and for selling merchandise induced both Greeks and barbarians to settle there. The Athenians besides had the reputation among the Greeks of being friendly towards foreigners. For the legal protection granted them by the State, they paid a sum of twelve drachmae ($2) annually for each man, and half as much for each independent woman; and they had to choose a patron (*προστάτης*) to conduct their dealings with the State in all public and private affairs — e. g. the bringing of an action. Whoever failed to do the one or the other was summoned before a law court, and, if guilty, sold as a slave. They were prohibited from marrying citizens and from obtaining landed property; but they could follow any trade they pleased, on payment of a tax (*μετοίκιον*). They also had to pay the extraordinary taxes for war (*εἰσφοραί* and *λειτουργίαι*), and were obliged to serve either in the fleet or in the army; they might be hoplites, but not knights. At festivals (e. g. the Panathenaea) it was their duty to follow the processions, carrying sunshades, pitchers, and bowls or trays filled with honey or cakes. A decree of the people could, in return for special services, confer on them the *ἰσοτέλεια*, which placed them on a level with the citizens with regard to liturgies, or public burdens, freed them from the necessity of having a patron or paying a tax for protection, and gave them the right of holding property in land and of transacting business with the people or the authorities without an intermediary; but even this privileged class did not possess the active rights of a citizen.

Resident aliens were found in most other cities and States besides Athens. (See the list given by Schenkl in the *Wiener Studien* for 1880, ii. pp. 163 foll.) At Sparta, however, they were not allowed to settle (Xen. *Resp. Lac.* xiv. 4), and so, possibly, Apollonia (Ael. *V. H.* xiii. 16).

Meton (*Μέτων*). A Greek astronomer of Athens, who instituted in B.C. 432 the cycle of nineteen years called after him; it was intended to reconcile the lunar and the solar year: 235 lunar months of 29 or 30 days (on an average $29\frac{2}{47}$) = 19 solar years of $365\frac{5}{19}$ days. This cycle was not adopted at Athens till much later, probably in B.C. 330. (See CALENDARIUM.) He is said to have feigned insanity in order to avoid going on the ill-fated Sicilian expedition in the Peloponnesian War (Diod. xii. 36).

Mĕtŏpae (*μετόπαι*, Vitruv. iv. 2, § 4; literally, "interstices between two beam-ends"). A name given in Doric architecture to the spaces between the triglyphs (q. v.) in the frieze. They were originally left open. Thus, Orestes manages to make his way into the Tauric temple of Artemis through one of these openings (Eurip. *Iph. T.* 113). They were afterwards filled with panels of wood, which were in course of time superseded by plain slabs of marble, as in the temples at Paestum, etc. These slabs were sometimes slightly ornamented with a round shield in low relief, as in the frieze

Metopé from the Cella of the Great Temple of Olympia. Nymph, Heracles, and Atlas.

of the temple of Zeus at Olympia. More frequently they were filled with figures in relief, as in those of Selinus (see SCULPTURE), and of the Theseum and the Parthenon (q. v.). The term is also applied to similarly sculptured slabs not placed between the triglyphs, but on the wall of the *cella*, as in the temple of Zeus at Olympia. See OLYMPIA.

Metoposcŏpus (*μετωποσκόπος*). A physiognomist; one who told fortunes by studying the face (Suet. *Tit.* 2).

Metragyrti. The vagrant begging priests of Rhea (q. v.). See AGYRTI.

Metrētes (*μετρητής*), or **amphŏra metrētes.** The largest liquid measure of the Greeks, a little less than nine gallons. Its chief subdivisions were the Greek *χοῦς* ($\frac{1}{12}$), *ξέστης* ($\frac{1}{72}$), *κοτύλη* ($\frac{1}{144}$), *κύαθος* ($\frac{1}{864}$). The name is also given to a large earthenware vessel for oil (Cato, *R. R.* 100).

Metrodōrus (*Μητρόδωρος*). A name of several Greek philosophers, the most important of whom was a native of Lampsacus or Atheus, an Epicurean philosopher, and the most distinguished of the disciples of Epicurus, with whom he lived on terms of the closest friendship. He died 277, in the fifty-third year of his age, seven years before Epicurus, who would have appointed him his successor had he survived him. The philosophy of Metrodorus appears to have been of a more grossly sensual kind than that of Epicurus. Perfect happiness he made to consist in having a well-constituted body. He found fault with his brother Timocrates for not admitting that the stomach was the test and measure of every thing that pertained to a happy life. He was the author of several works, quoted by the ancient writers.

Another Metrodorus, of Scepsis, was raised to a

Metrodorus, the Epicurean.

position of great influence and trust by Mithridates Eupator, being appointed supreme judge without appeal even to the king. Subsequently he was led to abandon his allegiance, when sent by Mithridates on an embassy to Tigranes, king of Armenia. Tigranes sent him back to Mithridates, but he died on the road. According to some accounts he was despatched by order of the king; according to others he died of disease. In consequence of his hostility to the Romans he was surnamed "the Roman-hater" (Cic. *De Orat.* ii. 88, 360; Strabo, p. 609).

Metronŏmi (*μετρονόμοι*). Officers chosen by lot from among the Athenian police and assigned to the duty of seeing that proper weights and measures were used in the market. They also prosecuted those whom they found using false measures. They were probably ten in number, one from each tribe. Their subordinates were called *prometretae.* See Schömann, *Antiquities of Greece,* pp. 416, 420.

Metrōon (*μητρῷον*). The temple of the Mother of the Gods in Athens, in which the public archives were kept in charge of the president of the Boulé. See Curtius, *Das Metroön in Athen* (1868).

Metropŏlis (*μητρόπολις*). The mother State. A name given to a city or State in relation to its colonies. Thus, Athens was the metropolis of the Ionians, Meropé of the Aethiopians, Corinth of the Corcyraeans, etc. See Colonia.

Metropŏlis (Μητρόπολις). A town of Thessaly in Histiaeotis, near the Peneus, and between Gomphi and Pharsalus. There were several other cities of this name, one in Phrygia, one in Lydia, and one in Acarnania.

Mettius or **Metius.** (1) Curtius. See Curtius. (2) Fuffetius, dictator of Alba, and torn asunder by chariots driven in opposite directions by order of Tullus Hostilius, third king of Rome, on account of his treachery towards the Romans (Livy, i. 23–28).

Metŭlum. The chief town of the Iapydes in Illyricum, situated on the twin peaks of a high mountain. Here the emperor Augustus nearly lost his life in reducing the place (Dio Cass. xlix. 35).

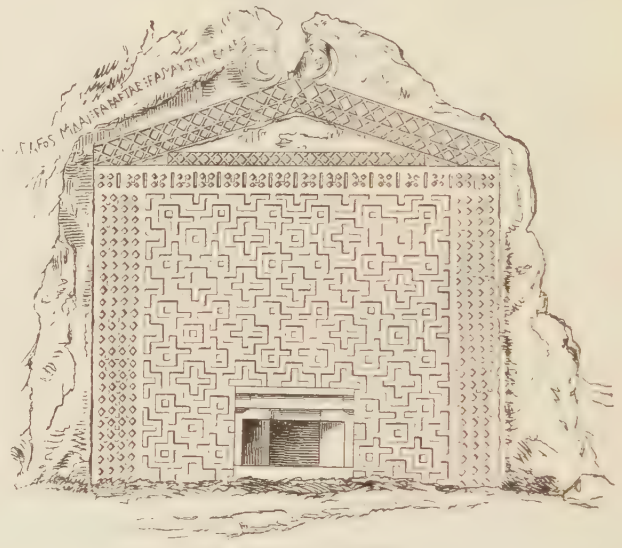
Mevania. The modern Beragna; an ancient city in the interior of Umbria on the river Tinea, situated in a fertile country, and celebrated for its breed of beautiful white oxen. According to some accounts, Propertius was a native of this place (Pliny, *H. N.* xxxv. 173).

Mezentius (Μεσέντιος) or **Medientius.** A king of Caeré in Etruria. He aided Turnus of Ardea against Aeneas, but was killed in battle by the latter or by his son Ascanius (Verg. *Aen.* viii. 480; x. 689, 785, 800). Dionysius, however, relates that Mezentius finally concluded a peace with Ascanius and became his ally (Dionys. i. 64). Still another tradition states that Mezentius demanded of the Latini the produce of their vineyards, but that they vowed the firstfruits to Iupiter and thereby won the victory (Plut. *Quaest. Rom.* 45). See Mommsen, *Hist. of Rome,* i. 173 (Amer. ed.).

Micāre Digĭtis. To play a game that was popular among the Romans, and still survives in modern Italy under the name *morra* (in French, *la mourre*). It is also mentioned by Aristotle (*De Insomn.* 2), but seems not to have been very common in Greece. It was played by two persons, who simultaneously held up their right hands with one, more than one, or none of the fingers extended. At the same time each called out a number which represented his guess at the sum of all the fingers extended by both players. The correct guesser, of course, won; or, as sometimes played, the one whose successful guesses first amounted to five in number was the winner (Nonius, xxxiii. 77). A proverbial expression for a thoroughly honest man describes him as one with whom you would be willing to play *morra* in the dark (*quicum in tenebris mices,* Cic. *De Off.* iii. 19; Petron. 44). The game was the modern equivalent of throwing dice or matching coins. See Marquardt, *Privatleben,* 836.

Game of Morra. (Baumeister.)

Micipsa (Μικίψας). A king of Numidia, the eldest of the sons of Masinissa (q. v.), on whose death (B.C. 148) Scipio divided the supreme power between Micipsa and his two brothers, Gulussa and Mastanabal. The death of his brothers soon made him sole monarch of Numidia, which he ruled mildly and with wisdom until his death (Sall. *Iug.* 5–11; Florus, iii. 2). He died B.C. 118, leaving two sons, Adherbal and Hiempsal. See IUGURTHA.



Micon (Μίκων). An Athenian painter, who flourished about B.C. 460. He was also known as a sculptor (Pausan. vi. 6, 1).

Midaēum (Μιδάειον). A city of Phrygia Epictetus where Sex. Pompeius was captured by the troops of Antony, B.C. 35 (Dio Cass. xlix. 18).

Midas (Μίδας). The son of Gordius and Cybelé. He was the wealthy but effeminate king of Phrygia, a pupil of Orpheus, and a great patron of the worship of Dionysus. His wealth is alluded to in a story connected with his childhood, for it is said that while a child, ants carried grains of wheat into his mouth to indicate that one day he should be the richest of all mortals. Midas was introduced into the satyric drama of the Greeks, and was represented with the ears of a Satyr, which were afterwards lengthened into the ears of an ass. He is said to have built the town of Ancyra, and as king of Phrygia he is called *Berecynthius heros* (Ovid, *Met.* xi. 106).

There are several stories connected with Midas, of which the following are the most celebrated: Silenus, the companion and teacher of Dionysus, had gone astray in a state of intoxication, and was caught by country people in the rose-gardens of Midas. He was bound with wreaths of flowers and led before the king. These gardens were in Macedonia, near Mount Bermion or Bromion, where Midas was king of the Bruges, with whom he afterwards emigrated to Asia, where their name was changed into Phryges. Midas received Silenus kindly; and, after treating him with hospitality, he led him back to Dionysus, who allowed Midas to ask a favour of him. Midas in his folly desired that all things which he touched should be changed into gold. The request was granted; but as even the food which he touched became gold, he implored the god to take his favour back. Dionysus accordingly ordered him to bathe in the source of Pactolus near Mount Tmolus. This bath saved Midas, but the river from that time had an abundance of gold in its sand.

Midas, who was himself related to the race of Satyrs, once had a visit from a Satyr, who indulged in all kinds of jokes at the king's expense. Thereupon Midas mixed wine in a well; and when the Satyr had drunk of it, he fell asleep and was caught. This well of Midas was at different times assigned to different localities. Xenophon (*Anab.* i. 2, § 13) places it in the neighbourhood of Thymbrium and Tyraeum, and Pausanias at Ancyra. Once when Pan and Apollo were engaged in a musical contest on the flute and lyre, Midas was chosen to decide between them. The king decided in favour of Pan, whereupon Apollo changed his ears into those of an ass. Midas contrived to conceal them under his Phrygian cap, but the servant who used to cut his hair discovered them. The secret so much harassed this man that, as he dared not betray it to a human being, he dug a hole in the earth, and whispered into it, "King Midas has ass's ears." He then filled the hole up again, and his mind was relieved. But on the same spot a reed grew up, which in its whispers betrayed the secret. Midas is said to have killed himself by drinking the blood of an ox. (Strabo, p. 61.)

So-called Tomb of Midas.

A tomb found at Dogan-lu, in Phrygia, is called "the tomb of Midas" from the one legible word, MIDAI, upon it.

Milanion (Μειλανίων). The faithful lover of Atalanta (q. v.).

Miles Gloriōsus. "The Braggart Soldier." An amusing play of Plautus. See PLAUTUS.

Milesian Tales. See NOVELS AND ROMANCES.

Miletopŏlis (Μιλητόπολις). (1) A city of Mysia. (2) See BORYSTHENES.

Milētus (Μίλητος). The son of Apollo and Aria of Crete, who fled from Minos to Asia, where he built the city of Miletus. Ovid (*Met.* ix. 442) calls him a son of Apollo and Deïoné, and hence Deïonides.

Milētus (Μίλητος). (1) One of the greatest cities of Asia Minor. It belonged territorially to Caria and politically to Ionia, being the southernmost of the twelve cities of the Ionian confederacy. The city stood upon the southern headland of the Sinus Latmicus, opposite to the mouth of the Maeander, and possessed four distinct harbours, protected by a group of little islands; its territory was rich in flocks, and the city was celebrated for its woollen fabrics, the *Milesia vellera*. At a very early period it became a great maritime State, and founded numerous colonies, especially on the shores of the Euxine. Among these were Abydos, Tomi, Olbia, Cyzicus, and Odessus; and in Egypt, Naucratis. It was the birthplace of the philosophers Thales, Anaximander, and Anaximenes, and of the historians Cadmus and Hecataeus. It was the centre of the great Ionian revolt against the Persians,

after the suppression of which it was destroyed (B.C. 494). (See ARISTAGORAS; HISTIAEUS.) It recovered sufficient importance to oppose a vain resistance to Alexander the Great, which brought upon it a second ruin. Under the Roman Empire it still appears as a place of some consequence. The earlier name of Miletus is said to have been PITYUSA (Πιτυοῦσα) or ANACTORIA (Ἀνακτορία). See Herod. i. 17–20, 141; vi. 6; Arrian, *Anab.* i. 18; and Rayet and Thomas, *Milet et le Golfe Latmique* (Paris, 1877). (2) A town in Crete on the northeastern coast.

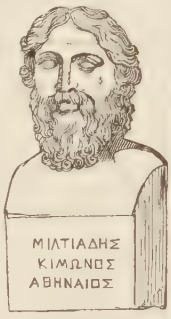
Milĭchus (Μείλιχος). A river in Achaia flowing by the town of Patrae, on whose banks victims were in early times sacrificed to Artemis (Pausan. vii. 19, 9).

Milĭtes. See EXERCITUS.

Milliarium. The Roman milestone, a stone column, such as were set up at intervals of a thousand (*mille*) *passus* = 5000 Roman feet, on the military roads, partly during the last years of the Republic, and regularly since Augustus. They gave in numbers, usually preceded by M.P. (*milia passuum*), the distance from the place from which the measurement was made, besides its name and those of the persons who had constructed the road or erected the milestone, and of the emperor in whose reign the road had been made. A great number of these milestones in every part of the Roman Empire has been preserved, and also the base of the central column of the gilded one (*milliarium aureum*) erected by Augustus in the Forum near the temple of Saturn, and said to have been regarded as the centre of the Empire; but this cannot be taken literally, as the distances were really measured from the city gates (Macer, *Dig.* l. 16, 154). It is probable that each of the chief cities of the Empire had its own milliarium.

Milliarium. (Capitol at Rome; originally a stone marking the first mile out of Rome.)

Millus. A dog-collar fitted with spikes (Fest. s. h. v.).



Milo or **Milon** (Μίλων). (1) Of Crotona, a celebrated athlete, six times victor in wrestling at the Olympic Games, and as often at the Pythian. He was one of the followers of Pythagoras, and also commanded the army which defeated the Sybarites, B.C. 511. Many stories are related of his extraordinary feats of strength: such as his carrying a heifer four years old on his shoulders through the stadium at Olympia, and afterwards eating the whole of it in a single day. Passing through a forest in his old age, he saw the trunk of a tree which had been partially split open by wood-cutters, and attempted to rend it further, but the wood closed upon his hands, and thus held him fast, in which state he was attacked and devoured by wolves (Gell. xv. 16). (2) TITUS ANNIUS MILO PAPINIĀNUS, was born at Lanuvium, of which place he was in B.C. 53 dictator or chief magistrate. As tribune of the plebs, B.C. 57, Milo took an active part in obtaining Cicero's recall from exile; and from this time he carried on a fierce and memorable contest with P. Clodius. In 53 Milo was candidate for the consulship, and Clodius for the praetorship of the ensuing year. Each of the candidates kept a gang of gladiators, and there were frequent combats between the rival ruffians in the streets of Rome. At length, on the 20th of January, 52, Milo and Clodius met apparently by accident at Bovillae, on the Appian Way. An affray ensued between their followers, in which Clodius was slain. At Rome such tumults followed upon the burial of Clodius that Pompey was appointed sole consul in order to restore order to the State. Milo was brought to trial. He was defended by Cicero; but was condemned, and went into exile at Massilia (Marseilles). The soldiers who lined the Forum intimidated Cicero, and he could not deliver the oration which he had prepared. Milo returned to Italy in 48, in order to support the revolutionary schemes of the praetor, M. Caelius; but he was slain under the walls of an obscure fortress in Thurii. Milo, in 57, married Fausta, a daughter of the dictator Sulla, a worthless woman with whom the historian Sallust carried on an intrigue, for which he was soundly beaten by Milo. See the articles CICERO; CLODIUS; POMPEIUS.

Milo, VENUS OF. See APHRODITÉ.

Miltiădes (Μιλτιάδης). (1) The son of Cypselus. He was a man of considerable distinction in Athens in the time of Pisistratus. The Doloncians, a Thracian tribe dwelling in the Chersonesus, being hard pressed in war by the Absinthians, applied to the Delphic oracle for advice, and were directed to admit a colony led by the man who should be the first to entertain them after they left the temple. This was Miltiades, who, eager to escape from the rule of Pisistratus, gladly took the lead of a colony under the sanction of the oracle, and became tyrant of the Chersonesus, which he fortified by a wall built across its isthmus. In a war with the people of Lampsacus he was taken prisoner, but was set at liberty on the demand of Croesus. He died without leaving any children, and his sovereignty passed into the hands of Stesagoras, the son of his half-brother Cimon. Sacrifices and games were instituted in his honour, in which no Lampsacene was suffered to take part (Herod. vi. 34, 38, 103).

(2) The son of Cimon and brother of Stesagoras. He became tyrant of the Chersonesus on the death of the latter, being sent out by Pisistratus from Athens to take possession of the vacant inheritance. By a stratagem he got the chief men of the Chersonesus into his power and threw them into prison, and took a force of mercenaries into his pay. In order to strengthen his position still more, he married Hegesipylé, the daughter of a Thracian prince named Olorus. He joined Darius Hystaspis on his expedition against the Scythians, and was left with the other Greeks in charge of the bridge over the Danube. When the appointed time had expired, and Darius had not returned, Miltiades recommended the Greeks to destroy the bridge and leave Darius to his fate. Some time after the expedition of Darius, an inroad of the Scythians drove Miltiades from his possessions; but after the enemy had retired the Doloncians brought him back. It appears to have been between this period and his withdrawal to Athens, that Miltiades conquered and expelled the Pelasgian inhabitants of Lemnos and Imbros and subjected the islands to the dominion of Attica. Lemnos and Imbros belonged to the Persian dominions; and it is probable that this encroachment on the Persian possessions was the cause which drew upon Miltiades

the hostility of Darius, and led him to fly from the Chersonesus, when the Phœnician fleet approached, after the subjugation of Ionia. Miltiades reached Athens in safety, but his eldest son Metiochus fell into the hands of the Persians. At Athens Miltiades was arraigned, as being amenable to the penalties enacted against tyranny, but was acquitted. When Attica was threatened with invasion by the Persians under Datis and Artaphernes, Miltiades was chosen one of the ten generals. Miltiades by his arguments induced the polemarch Callimachus to give the casting vote in favour of risking a battle with the enemy, the opinions of the ten generals being equally divided. Miltiades waited till his turn came, and then drew his army up in battle array on the ever-memorable field of Marathon. (See MARATHON.) After the defeat of the Persians, Miltiades endeavoured to urge the Athenians to measures of retaliation, and induced them to intrust to him an armament of seventy ships, without knowing the purpose for which they were designed. He proceeded to attack the island of Paros, for the purpose of gratifying a private enmity. His attacks, however, were unsuccessful; and after receiving a dangerous hurt in the leg, while penetrating into a sacred enclosure on some superstitious errand, he was compelled to raise the siege and return to Athens, where he was impeached by Xanthippus for having deceived the people. His wound had turned into a gangrene, and, being unable to plead his cause in person, he was brought into court on a couch, his brother Tisagoras conducting his defence for him. He was condemned; but on the ground of his services to the State the penalty was commuted to a fine of fifty talents, the cost of the equipment of the armament. Being unable to pay this, he was thrown into prison, where he not long after died of his wound. The fine was subsequently paid by his son Cimon. See Herod. iv. 137; vi. 41, 132–136; Pausan. i. 15, 3; Nepos, *Miltiades*.

Miltiades.

Milvius Pons. See PONS; ROMA.

Milyas (Μιλυάς). A name originally given to all Lycia (Herod. i. 173), but afterward restricted to the table-land in the north of that country. It became a part of the dominions of Eumenes, king of Pergamus (Livy, xxxviii. 39), and finally a part of the Roman province of Pamphylia. See LYCIA.

Mimallŏnes (Μιμάλλονες) or **Mimallonĭdes.** The Macedonian name of the Bacchantes, formed from the name of Mt. Mimas.

Mimas (Μίμας). One of the giants who warred against the gods and was slain by a flash of lightning. See GIGANTES; PROCHYTE.

Mimas (Μίμας). A promontory and mountain in Ionia, opposite the island of Chios.

Mimetic Words. See ONOMATOPOEIA.

Mimnermus (Μίμνερμος). A native of Colophon or Smyrna; and creator of the erotic type of Greek elegy, an older contemporary of Solon. He flourished about B.C. 630–600. He gave his collection of love elegies the name of the beautiful flute-player Nanno, who on account of his advanced age would not return his love. There are only a few fragments of his poems left; their chief themes are the melancholy complaint of old age abandoned by love, the transitoriness of the life of man, and the exhortation to enjoy youth, the age of love. His language is simple and tender, and the ancients therefore called him "the sweet singer" (Λιγυαστάδης, in Solon's lines to Mimnermus; Bergk's *Poëtae Lyrici*, Solon, *fragm.* 20). The remains of Mimnermus have been separately edited by Bach (Leipzig, 1826).

Mimus (μῖμος). Literally "imitation" or "imitator"; hence applied both to the play and the actor.

I. GREEK.—A sort of popular composition full of slang, dialect, and aphorism, and written in a sort of rhythmic prose (Mahaffy, *Greek Lit.* § 240), performed as a private comedy. This sort of literature in Greece apparently originated with Sophron of Syracuse in the fifth century B.C., and was written also by his son Xenarchus. Plato the comedian was fond of the mime, and is said to have kept a copy of Sophron under his pillow. He also imitated him. The fragments of Sophron were collected by Botzon (1867). See Fuhr, *De Mimis Graecorum* (1860).

II. ROMAN.—The Roman mimus was a more or less unconventional character-play of every-day life acted without masks or buskins. It deals more with town life than the Atellanae, which it somewhat resembles, and was developed among the Latins out of the character-dances that were originally performed between the acts at the theatres or in private houses (Mommsen, *Hist. of Rome*, iv. 689). The mimus became very popular at Rome, and was finally made a sort of afterpiece (*exodium*). It was acted in front of the curtain (*siparium*) by an actor (also called *mimus*) who wore no buskins, and was hence styled *planipes*. He also had no mask, but wore a sort of harlequin coat of many colours (*centunculus*) and a *phallus*. The chief characters were the *archimimus*, or hero, and the *stupidus* or *parasitus*, the butt of the hero. The female parts were played by women (*mimae*). Dancing, largely of an indecent and suggestive character, formed a feature of the mime, and horse-play was the rule. (See Mayor on Juv. v. 171.) Contrary to the usual rule of the Roman stage, political criticism was allowed in the dialogue of the mimes. The subjects were very miscellaneous, ranging from seduction to ghost-stories. The greatest writer of mimes was Publilius Syrus (q. v.), who was famous for the maxims (*sententiae*) with which he furnished his text. Some 500 lines ascribed to him are collected by Ribbeck in his *Com. Lat. Reliquiae*. See Patin, *Études sur la Poésie Latine*, ii. 346–365 (Paris, 1875); Grysar, *Der röm. Mimus* (1854); and Friedländer, *Sittengeschichte Roms*, vol. ii.

Mina (μνᾶ; Lat. *mina*). An old Greek weight, and a sum of coined money equal to it, the sixtieth part of a talent, like which it varied in value. The weight of the *mina* (= 100 *drachmae*) was 1¼ lb., and the intrinsic value of the Attic mina of silver was about $16.

Minaei (Μιναῖοι). A people dwelling on the western coast of Arabia Felix (Pliny, *H. N.* xii. 54).

Minas Sabbătha (Μείνας Σαβαθά). A late Roman fortress in Babylonia, built on the site of Seleucia.

Mincius. Now the Mincio; a river in Gallia Transpadana, flowing through Lake Benacus (Lago di Garda), and falling into the Po a little below Mantua.

Mindărus (*Μίνδαρος*). A Lacedaemonian who succeeded Astyochus in command of the Spartan fleet, B.C. 411; and who was defeated and slain by the Athenians near Cyzicus the next year (Thuc. viii. 85, 104).

Minerva, originally **Menerva** (Etruscan, Menfra). One of the great Roman divinities, the goddess of wisdom; identified with the Greek Athenê (q. v.). Her name contains the same root as *mens, me-min-i, mentio*, etc., and she is accordingly the thinking, calculating, and inventive power personified. Iupiter was the first, Iuno the second, and Minerva the third in the number of the Capitoline divinities. Tarquin, the son of Demaratus, was believed to have united the three divinities in one common temple, and hence, when repasts were prepared for the gods, these three always went together. She was the daughter of Iupiter, and is said to have sometimes wielded the thunderbolts of her father. As Minerva was a virgin divinity, and her father the supreme god, the Romans easily identified her with the Greek Athenê, and accordingly all the attributes of Athenê were gradually transferred to the Roman Minerva; but we confine ourselves at present to those which were peculiar to the Roman goddess. Being a maiden goddess, her sacrifices consisted of calves which had not borne the yoke. She is said to have invented numbers; and it is added that the law respecting the driving in of the annual nail was for this reason attached to her temple. (See CLAVUS.) She was worshipped as the patroness of all the arts and trades, and at her festival she was particularly invoked by all who desired to distinguish themselves in any art or craft, such as painting, poetry, the art of teaching, medicine, dyeing, spinning, weaving, and the like. This character of the goddess may be perceived also from the proverbs "to do a thing *pingui Minerva*," i. e. to do a thing in an awkward or clumsy manner; and *sus Minervam* (*docet*) of a stupid person who presumed to set right an intelligent one. Minerva, however, was the patroness, not only of women, on whom she conferred skill in sewing, spinning, weaving, etc., but she also guided men in the dangers of war, where victory is gained by cunning, prudence, courage, and perseverance. Hence she was represented with a helmet, shield, and a coat of mail; and the booty made in war was frequently dedicated to her. Minerva was further believed to be the inventor of musical instruments, especially wind instruments, the use of which was very important in religious worship, and which were accordingly subjected to a sort of purification every year on the last day of the festival of Minerva. This festival lasted five days, from the 19th to the 23d of March, and was called *Quinquatrus*, because it began on the fifth day after the Ides of the month. On this date the Roman boys brought to their teachers the school fee (*Minerval*). This number of days was not accidental, for we are told that the number five was sacred to Minerva. The most ancient temple of Minerva at Rome was probably that on the Capitol; another existed on the Aventine; and she had a chapel at the foot of the Caelian Hill, where she bore the surname of CAPTA—a title borrowed from the Faliscans, but of doubtful import (Ovid, *Fasti*, iii. 843).

Minerva. (Gem in the King Collection.)

Minervae Castrum or **Minervium.** Now Castro; a hill on the coast of Calabria, the traditional landing-place of Aeneas in Italy.

Minervae Promontorium. A rocky promontory in Campania, running out a long way into the sea, six miles southeast of Surrentum, on whose summit was a temple of Minerva, said to have been built by Odysseus. Here the Sirens are reported to have dwelt.

Minerval. The school fee among the Romans. See EDUCATION; LUDUS LITTERARIUS; QUINQUATRUS.

Mines and **Mining.** See METALLUM.

Minio. Now Mignone; a small river in Etruria, falling into the Tuscan Sea, between Graviscae and Centum Cellae.

Minius. Now the Minho; a river in the northwestern part of Hispania, deriving its name from the *minium* (vermilion) carried down by its stream. It was also called BAENIS.

Minōa (*Μινώα*). (1) See MEGARA. (2) A town on the eastern coast of Laconia. (3) A town on the northern coast of Crete. (4) A town on the northeastern coast of Crete. (5) See HERACLEA.

Minor. See CURATOR; INFANS.

Minos (*Μίνως*). The son of Zeus and Europa, brother of Rhadamanthus, was the king and legislator of Crete. After his death he became one of the judges of the shades in Hades. He was the father of Deucalion and Ariadnê; and, according to Apollodorus, the brother of Sarpedon. Some traditions relate that Minos married Itonê, daughter of Lyctius, by whom he had a son, Lycastus, and that the latter became, by Ida, the father of another Minos. But it should be observed that Homer and Hesiod know of only one Minos, the ruler of Cnossus, and the son and friend of Zeus; and that they relate nearly the same things about him which later traditions assign to a second Minos, the grandson of the former. In this case, as in many other mythical traditions, a rationalistic criticism attempted to solve contradictions and difficulties in the stories about a person, by assuming that the contradictory accounts must refer to two different personages.

Assuming, however, the fact of a second Minos, he was also a king and lawgiver of Crete. He is described as the husband of Pasiphaë, a daughter of Helios; and as the father of Catreus, Deucalion, Glaucus, Androgeos, Acallê, Xenodicê, Ariadnê, and Phaedra. After the death of Asterius, Minos aimed at the supremacy of Crete, and declared that it was destined to him by the gods; in proof of which, he asserted that the gods always answered his prayers. Accordingly, as he was offering up a sacrifice to Poseidon, he prayed that a bull might come forth from the sea, and promised to sacrifice the beast. The bull appeared and Minos became king of Crete. Minos, however, admiring the beauty of the bull, did not sacrifice him, but substituted another in his place, where-

upon Poseidon rendered the bull furious, and made Pasiphaë conceive a passion for the animal. Daedalus enabled Pasiphaë to gratify her passion, and she became by the bull the mother of the Minotaurus, a monster with a human body and a bull's head, or, according to others, with a bull's body and a human head. The monster was kept in the labyrinth at Cnossus, constructed by Daedalus. Daedalus fled from Crete to escape the wrath of Minos and took refuge in Sicily. Minos followed him to Sicily, and was there slain by Cocalus and his daughters.

Minos is further said to have divided Crete into three parts, and to have ruled nine years. The Cretans traced their legal and political institutions to Minos. He is said to have been instructed in the art of legislation by Zeus himself; and the Spartan Lycurgus was believed to have taken the legislation of Minos as his model. In his time Crete was a powerful maritime State; and Minos not only checked the piratical pursuits of his contemporaries, but made himself master of the Greek islands of the Aegean. The most ancient legends describe Minos as a just and wise lawgiver, whereas the later accounts represent him as an unjust and cruel tyrant. In order to avenge the wrong done to his son Androgeos (q. v.) at Athens, he made war against the Athenians and Megarians. He subdued Megara, and compelled the Athenians either every year or every nine years to send him as a tribute seven youths and seven maidens, who were devoured in the labyrinth by the Minotaurus. The monster was slain by Theseus. See ARIADNĒ; THESEUS.

It is generally held that the tradition of Minos embodies a certain amount of historical truth, and that there really was a king of that name who ruled Crete before the Dorian migration, and developed a formidable sea-power, which he used in putting down piracy. Cf. Thuc. i. 4, 8; Aristotle, *Polit.* ii. 10; iv. 10; and see the article NISUS.

Minotaurus. See MINOS; THESEUS.

Mintha or **Minthé** (Μίνθη). A daughter of Cocytus, beloved by Hades, and metamorphosed by Demeter, or Persephoné (Proserpina), into a plant called after her *mintha*, or mint. A hill near Pylos bore this name, and at its foot was a temple of Pluto and grove of Demeter.

Minturnae. An important town in Latium, on the frontiers of Campania, situated on the Via Appia, and on both banks of the Liris, and near the mouth of this river. It was an ancient town of the Ausones or Aurunci, but surrendered to the Romans of its own accord, and received a Roman colony B.C. 296. In its neighbourhood was a grove sacred to the nymph Marica, and also extensive marshes (*Paludes Minturnenses*), formed by the overflowing of the river Liris, in which Marius (q. v.) was taken prisoner. Here are now the remains of an aqueduct and the ruins of an amphitheatre, at the modern Trajetta.

Minuciānus (Μινουκιανός). An Athenian, son of Nicagoras, and known as a rhetorician. He flourished under the Roman emperor Gallienus (A.D. 260–263), and wrote several works in Greek. A portion of his Τέχνη Ῥητορική still exists and is included in Walz's *Rhetores Graeci* (Stuttgart, 1832–36).

Minucius. The name of a Roman gens, of whom the most celebrated was M. Minucius Rufus, *magister equitum* to the dictator Q. Fabius Maximus (B.C. 217), in the war against Hannibal. He fell at the battle of Cannae. Others of the gens are MARCUS MINUCIUS, who, in B.C. 121, when serving as tribune of the plebs, brought forward a bill to repeal the laws of C. Gracchus (Florus, iii. 15); and who with his brother Quintus is mentioned in an interesting inscription (*C. I. L.* i. 199); and QUINTUS MINUCIUS, who built the Porticus Minucia near the Circus Flaminius at Rome in memory of his triumph over the barbarians in Thrace, B.C. 110. MINUCIUS ANGURĪNUS, who was consul in B.C. 305, constructed the Via Minucia from Rome to Brundisium (Cic. *Ad Att.* ix. 6). MINUCIUS BASĬLUS was one of Caesar's assassins (Appian, *B. C.* iii. 96).

Minucius Felix, MARCUS. The first Latin Christian author, a man of excellent education, and a distinguished lawyer at Rome. After becoming a Christian at an advanced age, he wrote in the second half of the second century a dialogue entitled *Octavius*, and carried on by one Caecilius, a heathen, and Octavius, a Christian, in which the aim is to refute the objections raised against Christianity. The work is marked by purity of diction and by acuteness and precision of argument. The oldest MS. is one at Paris, of the ninth century. The text is printed in Migne's *Patrologia* (Paris, 1844), and is edited by Bährens (Leipzig, 1886). A version in German is given by Dombart (2d ed. Erlangen, 1882), accompanied by the Latin text.

Minucius Thermus. See THERMUS.

Minutio Capĭtis. See DEMINUTIO CAPITIS.

Minyădes (Μινυάδες). The daughters of Minyas, the rich king of Orchomenus and mythical ancestral hero of the race of the Minyae; their names were Alcathoë (Alcithoë), Leucippé, and Arsippé. When the worship of Dionysus was introduced into Boeotia, and all the other women wandered in frenzy over the mountains in honour of the god, they alone remained at home, and profaned the festival by working at their looms, in spite of the warning of the god, who had appeared to them in the shape of a maiden. It was not till he had assumed the shapes of a bull, a lion, and a panther, had made milk and wine flow from the yarnbeams, and had changed their weft into grapes and vine-leaves, that they were terrified and drew lots who should offer a sacrifice to the god; and Leucippé, on whom the lot fell, tore her own son Hippasus to pieces in her Bacchic fury. They then raged about on the mountains till they were transformed into bats. With this legend was connected the custom, that at the annual festival of Dionysus the priest of the god was allowed to pursue the women of the Minyan race with a drawn sword and kill them (Aelian, *V. H.* iii. 42; Plutarch, *Quaest. Gr.* 38; Ovid, *Met.* iv. 1–40, 390–415).

Minyae (Μινύαι). An ancient Greek race, originally dwelling in Thessaly. Their ancient hero, Minyas, is said to have migrated from Thessaly into the north of Boeotia, and there to have established the empire of the Minyae, with the capital of Orchomenus. (See ORCHOMENUS.) As the greater part of the Argonauts were descended from the Minyae, they are themselves called Minyae. The Minyae founded a colony in Lemnos, called Minyae, whence they proceeded to Elis Triphylia, and to the island of Thera.

Minȳas (*Μινύας*). The son of Chryses. He was the ancestral hero of the Minyae (q. v.). There are many and conflicting accounts of his genealogy. (See the schol. *ad* Pind. *Ol.* xiv. 4; *Pyth.* iv. 69.) His tomb was shown at Orchomenus.

Mirrors. See SPECULUM.

Misēnum. Now Punta di Miseno. A promontory in Campania, south of Cumae, said to have derived its name from Misenus, the companion and trumpeter of Aeneas, who was drowned and buried here. The bay formed by this promontory was converted by Augustus into an excellent harbour, and was made the principal station of the Roman fleet on the Tyrrhenian Sea. A town sprang up around the harbour. Here was the villa of C. Marius, which afterwards passed into the hands of the emperor Tiberius, who died at this place (Suet. *Tib.* 72).

Missio. The Roman term for the dismissal of soldiers from service, whether on account of illness (*missio causaria*) or of some dishonourable offence (*missio ignominiosa*), or at the expiration of their period of service. The last-mentioned, *missio honesta* or honourable dismissal, carried with it, under the Empire, the maintenance of the dismissed soldier. At first a fixed sum of money was given him; afterwards a parcel of land in Italy or the provinces was assigned. He also received the rights of citizenship, if he did not already possess them, and the privilege of contracting a legal marriage. The imperial decree which contained a list of those dismissed, arranged according to the subdivisions of the army and with the privileges granted, was posted on a public building on the Capitol or in the Forum, and each one of those specified received an extract from this document, made out in the presence of seven witnesses and inscribed on a bronze *diptychon* (q. v.). Sixty-two such military diplomas have been preserved completely or in part. (See EXERCITUS.) The same term was used of the release of gladiators from the gladiatorial school. See GLADIATORES, p. 733.

Misthophŏri (*μισθοφόροι*). See MERCENARII.

Misthoseos Phasis (*μισθώσεως φάσις*). An action in Attic law brought against a guardian for having neglected to make a profitable use of the property of his ward, or for having made no use of it at all. Complaints of this sort were made before the first archon. See EPITROPUS.

Mithras (*Μίθρας*). The Persian god of created light and of all earthly wisdom. In the course of time he became identified with the sun-god, who conquers all demons of darkness. In the time after Alexander the Great, his worship, mixed with various customs peculiar to Western Asia, was extended over all the Oriental kingdoms. In the first half of the first century B.C. it is said to have been introduced into the Roman provinces in the West by the Cilician pirates who were at that time masters of the Mediterranean (Plut. *Pomp.* 24). There are traces of his worship at Rome under Tiberius; and in the beginning of the second century after Christ, under the Antonines, it became common throughout the whole Roman Empire, and was kept up till the end of the fourth century. Mithras was a special favourite of the Roman armies. Being born from the rocks, he was worshipped in natural or artificial caves, such as have been found in every part of the Roman Empire. He is represented as a young man in Oriental dress and as an invincible hero, stabbing a bull with his dagger, or standing upon a bull that he has thrown down. The sacrifice of a bull and the purification of his worshippers with bull's blood formed a part of the rites of Mithras. See TAUROBOLIUM.

Specimens of a Mithras group may be seen in the Louvre, in the British Museum, and elsewhere. The cave itself was explained by the ancients to signify the world, into which the human soul must descend, that it may be purified by many trials before leaving it. Before any one was initiated into the mysteries of Mithras, it was necessary for the person to undergo a series of (it is said eighty) trials of increasing difficulty; and an undaunted,

Mithras. (Louvre.)

unsubdued spirit had to be maintained in fire and water, hunger and thirst, scourging, and solitude, and the aspirant was thus prepared for the initiation. It consisted of seven degrees, that of the ravens, the secret, the fighters, the lions or she-lions (for women were also received), the Persians, the sun-runners, and the fathers (*κόρακες*, *κρύφιαι*, *λέοντες* or *λέαιναι*, *Ἡλιόδρομοι*, *patres* or *ἀετοί*). Various Christian rites seem also to have been introduced into the mysteries of Mithras. Epithets like "Lord and Creator of all things," "Father and source of all life," enable us to recognize Mithras as one of the pantheistic divinities of declining heathendom.

See Hammer-Purgstall, *Mithriaca* (1833); Windischmann, *Mithra* (1857); Lajard, *Recherches sur le Culte Publique et les Mystères de Mithra* (Paris, 1847–1867).

Mithridātes (*Μιθριδάτης*) and **Mithradātes** (*Μιθραδάτης*). A name given to certain kings of Parthia and Persia. The name is derived from the Persian *Mithra*, "the sun," and probably means "sun-given."

(1) MITHRIDATES I., king or, more properly, satrap of Pontus, was son of Ariobarzanes I., and was succeeded by Ariobarzanes II., about B.C. 363. The kings of Pontus claimed to be lineally descended from one of the seven Persians who had conspired against the Magi, and who was subsequently established by Darius Hystaspis in the government of the countries bordering on the

Euxine Sea. Very little is known of their history until after the fall of the Persian Empire. (2) MITHRIDATES II., king of Pontus (337–302), succeeded his father Ariobarzanes II., and was the founder of the independent kingdom of Pontus. After the death of Alexander the Great, he was for a time subject to Antigonus; but during the war between the successors of Alexander he succeeded in establishing his independence. He died at the age of eighty-four. (3) MITHRIDATES III., king of Pontus (302–266), son and successor of the preceding. He enlarged his paternal dominions by the acquisition of great part of Cappadocia and Paphlagonia. He was succeeded by his son Ariobarzanes III. (4) MITHRIDATES IV., king of Pontus (about 240–190), son and successor of Ariobarzanes III. He gave his daughter Laodicé in marriage to Antiochus III. He was succeeded by his son Pharnaces I. (5) MITHRIDATES V., king of Pontus (about 156–120), surnamed EUERGĔTES, son and successor of Pharnaces I. He was the first of the kings of Pontus who made an alliance with the Romans, whom he assisted in the Third Punic War and in the war against Aristonicus (131–129). He was assassinated at Sinopé by a conspiracy among his own immediate attendants. (6) MITHRIDATES VI., king of Pontus (120–63), surnamed EUPÁTOR, also DIONŸSUS, but more commonly "the Great," was the son and successor of the preceding, and was only eleven years old at the period of his accession. We have very imperfect information concerning the earlier years of his reign, and much of what has been transmitted wears a suspicious aspect. It is said that immediately on ascending the throne he found himself assailed by the designs of his guardians, but that he succeeded in eluding all their machinations, partly by displaying a courage and address in warlike exercises beyond his years, partly by the use of antidotes against poison, to which he began thus early to accustom himself. In order to evade the designs formed against his life, he also devoted much of his time to hunting, and took refuge in the remotest and most unfrequented regions, under pretence of pursuing the pleasures of the chase. Whatever truth there may be in these accounts, it is certain that when he attained to manhood he was not only endowed with consummate skill in all martial exercises, and possessed of a bodily frame inured to all hardships as well as a spirit to brave every danger, but his naturally vigorous intellect had been improved by careful culture. As a boy, he had been brought up at Sinopé, where he had probably received the elements of a Greek education; and so powerful was his memory that he is said to have learned not less than twenty-two languages, and to have been able in the days of his greatest power to transact business with the deputies of every tribe subject to his rule in their own peculiar dialect.

The first steps of his career were marked by blood. He is said to have murdered his mother, to whom a share in the royal authority had been left by Mithridates Euergetes; and this was followed by the assassination of his brother. In the early part of his reign he subdued the barbarian tribes between the Euxine and the confines of Armenia, including the whole of Colchis and the province called Lesser Armenia, and even extended his conquests beyond the Caucasus. He assisted Parisades, king of the Bosporus, against the Sarmatians and Roxolani, and rendered the whole of the Tauric Chersonesus tributary to his kingdom. After the death of Parisades the kingdom of Bosporus itself was incorporated with his dominions. He was now in possession of such great power that he began to deem himself equal to a contest with Rome itself. Many causes of dissension had already arisen between them, but Mithridates had hitherto submitted to the mandates of Rome. Even after expelling Ariobarzanes from Cappadocia and Nicomedes from Bithynia in 90, he offered no resistance to the Romans when they restored these monarchs to their kingdom. But when Nicomedes, urged by the Roman legates, invaded the territories of Mithridates, the latter made preparations for immediate hostilities. His success was rapid and striking. In 88 he drove Ariobarzanes out of Cappadocia and Nicomedes out of Bithynia, defeated the Roman generals who had supported the latter, made himself master of Phrygia and Galatia, and at last of the Roman province of Asia. During the winter he issued the sanguinary order to all the cities of Asia to put to death, on the same day, all the Roman and Italian citizens who were to be found within their walls. So hateful had the Romans rendered themselves, that these commands were obeyed with alacrity by almost all the cities of Asia, and eighty thousand Romans and Italians are said to have perished in this fearful massacre. Meantime Sulla had received the command of the war against Mithridates, and crossed over into Greece in 87. Mithridates, however, had resolved not to await the Romans in Asia, but had already sent his general Archelaüs into Greece at the head of a powerful army. The war proved unfavourable to the king. Archelaüs was twice defeated by Sulla with immense loss near Chaeronea, and Orchomenus in Boeotia (86). About the same time Mithridates was himself defeated in Asia by Fimbria. (See FIMBRIA.) These disasters led him to sue for peace, which Sulla was willing to grant, because he was anxious to return to Italy, which was entirely in the hands of his enemies. Mithridates consented to abandon all his conquests in Asia, to pay a sum of two thousand talents, and to surrender to the Romans a fleet of seventy ships. Thus terminated the First Mithridatic War (84). Shortly afterwards Murena, who had been left in command of Asia by Sulla, invaded the dominions of Mithridates (83) under the pretext that the king had not yet evacuated the whole of Cappadocia. In the following year (82) Murena renewed his hostile incursions, but was defeated by Mithridates on the banks of the river Halys. But shortly afterwards Murena received peremptory orders from Sulla to desist from hostilities, in consequence of which peace was again restored. This is usually called the Second Mithridatic War. Mithridates, however, was well aware that the peace between him and Rome was in fact a mere suspension of hostilities, and that the Republic would never suffer the massacre of her citizens in Asia to remain ultimately unpunished. No formal treaty was ever concluded between Mithridates and the Roman Senate; and the king had in vain endeavoured to obtain the ratification of the terms agreed on between him and Sulla.

The death of Nicomedes III., king of Bithynia, at the beginning of 74, brought matters to a crisis.

That monarch left his dominions by will to the Roman people; and Bithynia was accordingly declared a Roman province; but Mithridates asserted that the late king had left a legitimate son by his wife Nysa, whose pretensions he immediately prepared to support by his arms. He had employed the last few years in forming a powerful army, armed and disciplined in the Roman manner; and he now took the field with one hundred and twenty thousand foot soldiers, sixteen thousand horse, and a vast number of barbarian auxiliaries. This was the commencement of the Third Mithridatic War. The two Roman consuls, Lucullus and Cotta, were unable to oppose his first irruption. He traversed Bithynia without encountering any resistance, and when at length Cotta ventured to give him battle under the walls of Chalcedon, the consul was totally defeated both by sea and land. Mithridates then proceeded to lay siege to Cyzicus both by sea

Coin of Mithridates the Great.

and land. Lucullus marched to the relief of the city, cut off the king's supplies, and eventually compelled him to raise the siege early in 73. On his retreat Mithridates suffered great loss, and eventually took refuge in Pontus. Hither Lucullus followed him in the next year. The new army which the king had collected was entirely defeated by the Roman general; and Mithridates, despairing of opposing the further progress of Lucullus, took refuge in the dominions of his son-in-law Tigranes, the king of Armenia. Tigranes at first showed no disposition to attempt the restoration of his father-in-law; but being offended at the haughty conduct of Appius Claudius, whom Lucullus had sent to demand the surrender of Mithridates, the Armenian king not only refused this request, but determined to prepare for war with the Romans. Accordingly, in 69, Lucullus marched into Armenia, defeated Tigranes and Mithridates near Tigranocerta, and in the next year (68) again defeated the allied monarchs near Artaxata. The Roman general then turned aside into Mesopotamia, and laid siege to Nisibis. Here the Roman soldiers broke out into open mutiny, and demanded to be led home; and Lucullus was obliged to raise the siege, and return to Asia Minor. Meanwhile Mithridates had taken advantage of the absence of Lucullus to invade Pontus at the head of a large army. He defeated Fabius and Triarius, to whom the defence of Pontus had been committed; and when Lucullus returned to Pontus, he was unable to resume the offensive in consequence of the mutinous spirit of his own soldiers. Mithridates was thus able, before the close of 67, to regain possession of the greater part of his hereditary dominions. In the following year (66) the conduct of the war was intrusted to Pompey. Hostilities were resumed with greater vigour than ever. Mithridates was obliged to retire before the Romans; he was surprised and defeated by Pompey; and as Tigranes now refused to admit him into his own dominions, he resolved to plunge with his small army into the heart of Colchis, and thence make his way to the Palus Maeotis and the Cimmerian Bosporus. Arduous as this enterprise appeared, it was successfully accomplished; and he at length established himself without opposition at Panticapaeum, the capital of Bosporus. He had now nothing to fear from the pursuit of Pompey, who turned his arms first against Tigranes, and afterwards against Syria. Unable to obtain peace from Pompey, unless he would come in person to make his submission, Mithridates conceived the daring project of marching round the northern and western coasts of the Euxine, through the wild tribes of the Sarmatians and Getae, and, having gathered round his standard all these barbarous nations, to penetrate into Italy itself. But meanwhile disaffection had made rapid progress among his followers. His son Pharnaces at length openly rebelled against him. He was joined both by the whole army and the citizens of Panticapaeum, who unanimously proclaimed him king; and Mithridates, who had taken refuge in a strong tower, saw that no choice remained to him but death or captivity. Hereupon he took poison, which he constantly carried with him; but his constitution had been so long inured to antidotes that it did not produce the desired effect, and he was compelled to call in the assistance of one of his Gaulish mercenaries to dispatch him with his sword. He died in 63. His body was sent by Pharnaces to Pompey at Amisus, as a token of his submission; but the conqueror caused it to be interred with regal honours in the sepulchre of his forefathers at Sinopé. He was sixty-eight or sixty-nine years old at the time of his death, and had reigned fifty-seven years, of which twenty-five had been occupied, with only a few brief intervals, in one continued struggle against the Roman power. The estimation in which he was held by his adversaries is the strongest testimony to his great abilities: Cicero calls him the greatest of all kings after Alexander, and in another passage says that he was a more formidable opponent than any other monarch whom the Roman arms had yet encountered. See Reinach, *Mithridate Eupator* (Paris, 1890).

(7) Kings of Parthia. (See ARSACES.) (8) Of Pergamus, son of Menodotus; but his mother having had an amour with Mithridates the Great, he was generally looked upon as, in reality, the son of that monarch. The king himself bestowed great care on his education; and he appears as early as 64 to have exercised the chief control over the affairs of his native city. At a subsequent period he served under Iulius Caesar in the Alexandrian War (48); and after the defeat of Pharnaces in the following year (47) Caesar bestowed upon Mithridates the kingdom of the Bosporus, and also the tetrarchy of the Galatians. But the kingdom of the Bosporus still remained to be won; for Asander, who had revolted against Pharnaces, was, in fact, master of the whole country, and Mithridates, having attempted to expel him, was defeated and slain.

Mithridātis Regio (*Μιθριδάτου χώρα*). A district of Sarmatia Asiatica, on the western side of the river Rha (now Volga), so called because it was the place of refuge of the last Mithridates in the reign of Claudius.

Greek Mitra. (Rich.)

Mitra (*μίτρα*). (1) A band of of any kind. (2) A head-dress, something like a turban. (3) A kerchief which women wore round the head. See CALANTICA; COMA.

Mitra (*Μίτρα*). The Persian Aphroditē (Herod. i. 131).

Mitylēnē (*Μιτυλήνη*) or **Mytilēnē** (*Μυτιλήνη*), the latter being the earlier form. The chief city of Lesbos, stood on the east side of the island opposite the coast of Lesbos, upon a promontory which was once an island, and both sides of which formed excellent harbours. Its first foundation is ascribed to Carians and Pelasgians. It was early colonized by the Aeolians. Important hints respecting its political history are furnished by the fragments of the poetry of Alcaeus, whence (and from other sources) it seems that, after the rule and overthrow of a series of tyrants, the city was nearly ruined by the bitter hatred and conflicts of the factions of the nobles and the people, till Pittacus was appointed to a sort of dictatorship, and the nobles were expelled. (See ALCAEUS; PITTACUS.) Meanwhile, the city had grown to great importance as a naval power, and had founded colonies on the coasts of Mysia and Thrace. At the beginning of the seventh century B.C. the possession of one of these colonies, Sigeum, at the mouth of the Hellespont, was disputed in war between the Mitylenaeans and Athenians, and assigned to the latter by the award of Periander, tyrant of Corinth. Among the other colonies of Mitylenē were Achilleum, Assos, and Antandrus. Mitylenē submitted to the Persians after the conquest of Ionia and Aeolis, and furnished contingents to the expeditions of Cambyses against Egypt and of Darius against Scythia. It was active in the Ionian revolt, after the failure of which it again became subject to Persia, and took part in the expedition of Xerxes against Greece. After the Persian War it formed an alliance with Athens, and remained one of the most important members of the Athenian confederacy, retaining its independence till the fourth year of the Peloponnesian War (B.C. 428), when it headed a revolt of the greater part of Lesbos, the progress and suppression of which forms one of the most interesting episodes in the history of the Peloponnesian War. This event destroyed the power of Mitylenē. Its subsequent fortunes cannot be related in detail here. It fell under the power of the Romans after the Mithridatic War. See Leithäuser, *Der Abfall Mytilenes von Athen* (1874); Cichorius, *Rom und Mytilene* (Leipzig, 1888); Conze, *Reise auf der Insel Lesbos*, and LESBOS.

Mixta Actio. See ACTIO, in the Appendix.

Mna (*μνᾶ*). See MINA; TALENTUM.

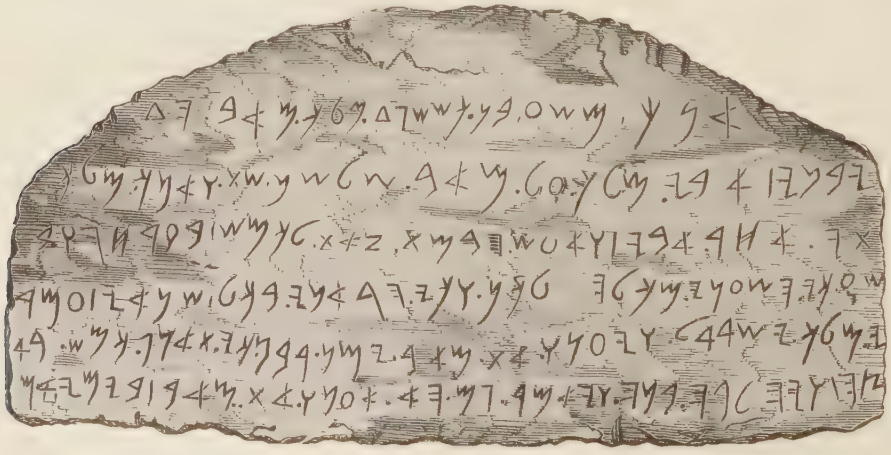
Mnaseas (*Μνασέας*). A native of Patara in Lycia, who studied under Eratosthenes of Alexandria, and became noted as a grammarian. He wrote two works—one a *Periplus* and one on the oracles given at Delphi (Athen. pp. 158, 296, 530).

Mnemăta (*μνήματα*), **Mnemeia** (*μνημεῖα*). See SEPULCRUM.

Mnemē (*Μνήμη*). See MUSAE.

Mnemosȳnē (*Μνημοσύνη*). Daughter of Uranus and Gaea (Heaven and Earth) and one of the Titanides, the goddess of memory, by Zeus, mother of the Muses, in company with whom she was usually worshipped. See MUSAE.

Mnesarchus (*Μνήσαρχος*). (1) See PYTHAGORAS. (2) A Stoic philosopher, a pupil of Panaetius, who taught at Athens about B.C. 110 (Cic. *De Fin.* i. 2, 6).



Mnesĭcles (*Μνησικλῆς*). A Greek architect, the builder of the Propylaea (q. v.) of the Athenian Acropolis.

Mnesitheüs (*Μνησίθεος*). An Athenian physician of the fourth century B.C., who is frequently mentioned by Galen and others.

Mnester (*Μνήστηρ*). A pantomimic actor, who was one of the lovers of Messalina, wife of the emperor Claudius, and who was put to death on her downfall (Tac. *Ann.* ix. 4, 36).

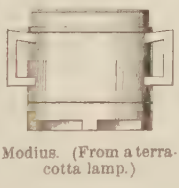
Mnestheüs (*Μνησθεύς*). A Trojan, who accompanied Aeneas to Italy, and is said to have been the ancestral hero of the Memmii (Verg. *Aen.* v. 117).

Moabite Stone. A stone discovered by Klein in 1868 at Dhibân, the ancient Dibon. It was of

Moabite Stone. (Ginsburg.)

black basalt of the shape shown in the illustration, of a height of 3 feet 10 inches, a thickness of 14½ inches, and a breadth of 2 feet. It was covered by an inscription in Hebrew Phœnician characters, extending to thirty-four lines. After its discovery it was broken up by the Arabs, but has been pieced together again, and the whole is now in the Louvre at Paris. The inscription is a record relating to Mesha, king of Moab, and relates to his successful revolt against the Jewish king (cf. 2 Kings, ch. iii.). See Ginsburg, *The Moabite Stone* (2d ed. 1871); Smend and Socin, *Die Inschrift des Königs Mesa* (Freiburg, 1886).

Moabītis (*Μωαβῖτις*, *Μόαβα*), called MOAB in the Old Testament. A district of Arabia Petraea, east of the Dead Sea. The Moabites were frequently at war with the Israelites. They were conquered by David, but afterwards recovered their independence.



Mochlus (*μοχλός*). See IANUA.

Modestīnus, HERENNIUS. A late Roman jurist and pupil of the great lawyer Ulpian, who flourished A.D. 222–244. There are 345 extracts from his writings given in the *Digest*.

Modestus. (1) IULIUS. A Roman grammarian of the first century A.D. (Gell. iii. 9, 1). (2) A Roman military writer, whose treatise on military terms (*De Vocabulis Rei Militaris*) is still extant. It is dedicated to the emperor Tacitus (A.D. 275).

Modicia. A town of Gallia Transpadana, north of Mediolanum (Milan), where Theodoric built a palace and the Lombard queen Theodolinda a church, the latter still remaining.

Modin (*Μοδεΐν*). A mountain village in the northwestern part of Judaea, famous as being the birthplace of the Maccabaei (Jos. *Ant. Iud.* xii. 8, 1).

Modius. (From a terra-cotta lamp.)

Modius and **Modium**. The principal dry measure of the Romans, equal to nearly two gallons, a sixth part of the Greek medimnus. It was divided into 16 *sextarii*, 32 *heminae*, 64 *quartarii*, 128 *acetabula*, 192 *cyathi*.

Moenia. See MURUS.

Moenus, **Moenis**, **Maenus**, **Menus**. Now the Main; a river of Germany. It flowed through the territory of the Hermunduri and the Agri Decumates, emptying into the Rhine opposite Mogontiacum (Mainz). See Tac. *Germ.* 28.

Moerae (*Μοῖραι*). The Greek goddesses of fate. Homer, in one passage (*Il.* xxiv. 209), speaks generally of the Moera, that spins the thread of life for men at their birth; in another (ib. 49), of several Moerae; and elsewhere (*Od.* vii. 197), of the *Κλῶθες*, or Spinners. Their relation to Zeus and other gods is no more clearly defined by Homer than by the other Greeks. At one time fate is a power with unlimited sway over men and gods, and the will of fate is searched out and executed by Zeus with the other gods (*Il.* xix. 87; *Od.* xxii. 413); at another, Zeus is called the highest ruler of destinies; or again, he and the other gods can change the course of fate (*Il.* xvi. 434), and even men can exceed the limits it imposes (*Il.* xx. 336). In Hesiod, they are called in one passage (*Theog.* 211–17) daughters of night and sisters of the goddesses of death (*Κῆρες*), while in another (*Theog.* 904) they are the daughters of Zeus and Themis and sisters of the Horae, who give good and bad

Clotho, Atropos, and Lachesis. (Roman relief, in Schloss Tegel, near Berlin.)

fortunes to mortals at their birth; their names are CLOTHO (the Spinner), who spins the thread of life; LACHĔSIS (Disposer of Lots), who determines its length, and ATRŎPOS (Inevitable), who cuts it off. As exerting power at the time of birth, they are connected with Ilithyia, the goddess of birth, who was supposed to stand beside them, and was invoked together with them, these and the Keres being the powers that decided when life should end. As at birth, they determine men's destinies in life; they are also able to predict them. While, on the one hand, they are regarded as the impartial representatives of the government of the world, they are, on the other hand, sometimes conceived as cruel and jealous, because they remorselessly thwart the plans and desires of men.

In art, they appear as maidens of grave aspect. Clotho is usually represented with a spindle; Lachesis with a scroll, or a globe; and Atropos with a pair of scales, or shears, or else drawing a lot (as in the illustration). The Romans identified the Moerae with their native goddesses of fate—the PARCAE. These were also called FATA, and were invoked, at the end of the first week of an infant's life, as FATA SCRIBUNDA, the goddesses that wrote down men's destiny in life.

Moeris (*Μοῖρις*) or **Myris** (*Μύρις*). A supposed king of Egypt, who is said to have dug, about B.C. 1350, the great lake known by his name. It covered over sixty square miles at the entrance to the Fayûm; and was really constructed by Amenemhat III. of the Twelfth Dynasty about B.C. 2300. It was employed for storing the water of the Nile for irrigation, and is now properly to be identified with the natural lake Birket-el-Kurûn. Herodotus says that the king erected two pyramids in

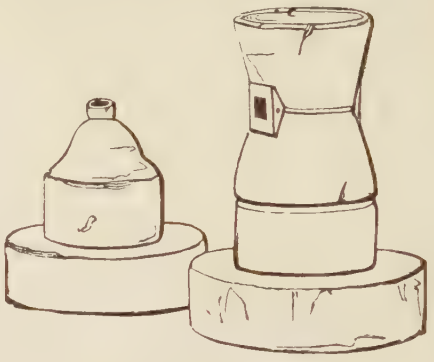
the lake, one supporting a statue of himself and the other a statue of his wife. Remains of these pyramids have been discovered in modern times. The name *Moeris* is the Egyptian *meri*, "a lake," and no such king as Moeris ever lived. See Herod. ii. 13, 101, 149; Diod. i. 52; Pliny, *H. N.* v. 9, 50; xxxvii. 12, 76; and Linant Bey, *Mémoire sur le Lac Moeris* (1843).

Moeris, Aelius. Known as "the Atticist" (Moeris Atticista). A Greek grammarian of the second century A.D. He was the author of an Attic lexicon (Λέξεις Ἀττικαί), a list, in alphabetical order, of a number of expressions and forms used by Attic writers, with the parallel expressions used in his own time, and in other dialects. It is edited by Pierson (1759) and Bekker (1833).

Moeris Lacus. See Moeris.

Moero (Μοιρώ) or **Myro** (Μυρώ). A Byzantine poetess, mother of the grammarian and tragic poet Homerus. She lived about B.C. 300, and wrote epic, elegiac, and lyric verse (Athen. p. 490).

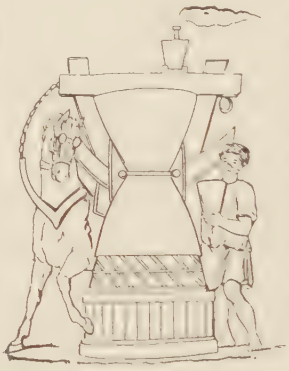
Moesia (Μοισία). A country of Europe, called by the Greeks Mysia (Μυσία ἡ ἐν Εὐρώπῃ). It was bounded on the south by Thrace and Macedonia, on the west by Illyricum and Pannonia, on the north by the Danube, and on the east by the Pontus Euxinus, thus corresponding roughly to the present Servia and Bulgaria. This country was subdued in the reign of Augustus (B.C. 29), and was made a Roman province at the commencement of the reign of Tiberius. It was afterwards formed into two provinces, called Moesia Superior and Moesia Inferior, the former being the western and the latter the eastern half of the country. When Aurelian surrendered Dacia to the barbarians and removed the inhabitants of that province to the south of the Danube, the middle part of Moesia was called Dacia Aureliani.



Moeso-Goths. See Gothi.

Mogontiăcum, Moguntiăcum, or **Magontiăcum.** The modern Mainz or Mayence; a town on the left bank of the Rhine, opposite the mouth of the river Moenus (Main). It lay within the territories of the Vangiones, and finally became the capital of Germania Prima. (See Germania.) It was strongly fortified by Drusus, and until the downfall of the Roman Empire remained one of the chief of the Rhenish fortresses (Tac. *Hist.* iv. 15, 24; Amm. Marc. xv. 11).

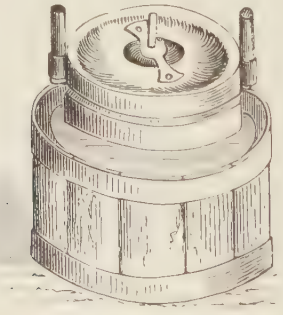
Moicheias Graphé (μοιχείας γραφή). A suit brought to punish adultery. See Adulterium.



Moirae. See Moerae.

Mola (μύλη). The generic term for a mill. The following varieties may be specified: (1) Mola manuaria or trusatĭlis (χειρομύλη), a hand-mill, used for grinding wheat, beans, and other farinaceous products. Several of these have been found in the bakers' shops at Pompeii (see Pistor), and all of them show the same general construction.

Pompeian Hand-mills.



The base is a cylindrical stone of some five feet in diameter and one in height, out of which rises a conical projection two feet high, forming the lower millstone (*meta*). This has an iron pivot fastened at its top. The outer stone (*catillus*) is formed in the shape of an hour-glass, so that one half fits like a cap upon the conical surface of the lower stone, receiving the iron pivot mentioned above in a socket made in the centre of the narrowest part between the two hollow cones. The grain was poured into the hollow cup at the top, which served as a hopper, and ran gradually down through from holes pierced in it to the solid cone beneath, where it was ground to flour between the outer surface of the cone and the inner surface of its cap as the latter was turned round and round (*lapis lapidem terit*, Plaut. *Asin.* i. 1, 16). The turning was done by slaves, with the aid of a wooden bar inserted in each of its sides, for which a socket was provided. The flour, when ground, fell from the bottom into a receptacle cut round the base. (2) Mola Buxea. A smaller hand-mill, used

Mola Machinaria. (From a marble in the Vatican.)

Mola Versatilis. (From a Gem.)

Hand-mill.

for grinding pepper (Petron. 74). (3) Mola Machinaria or Asinaria. A mill constructed like a hand-mill, but so large as to require an ass, ox, or horse to work it, as shown in the illustration (Cat. *R. R.* 11, 4). (4) Mola Versatĭlis. A species of grindstone worked by the foot, as at the present time. The use of it is attested by the engraved gem, from which the illustration is taken; but there is no certain reference to it in the classical writers.

Moliŏné (Μολιόνη). See Molionidae.

Moliŏnes. See Molionidae.

Molionĭdae (Μολιονίδαι) and **Moliŏnes** (Μολίονες). Eurytus and Cteatus, the sons of Actor (whence they were also called Actorĭdae), or else of Poseidon and Molioné. (Homer [*Il.* xi. 750] calls them by the dual and double name Actorione Molione.) As boys they fought against Nestor and the men of Pylos. When they had grown up, they defeated the army of Heracles that threatened their uncle Augeas, but were killed by the former near Cleonae in Argolis. In Homer their sons Thalpius and Antimachus are the chieftains of the Epeians before Troy. A later legend describes them as having only one body but two heads (Athen. ii. 58).

Molo. A very celebrated Greek rhetorician of Rhodes, under whom both Caesar and Cicero studied oratory.

Molochath. See Mulucha.

Molon (Μόλων). A satrap of Media under Antiochus the Great, against whom he revolted, and by whom he was defeated near Babylon (B.C. 220), upon which he put an end to his own life (Polyb. v. 40–54).

Molossi (Μολοσσοί). A people of Epirus, inhabiting a narrow strip of country, called after them Molossia or Molossis, which extended along the western bank of the Arachthus as far as the Ambracian Gulf. They were the most powerful people in Epirus, and their kings gradually extended their dominion over the whole of the country. The first of their kings, who took the title of King of Epirus, was the Alexander who perished in Italy B.C. 326. (See Epirus.) Their capital was Ambracia. The Molossian hounds were celebrated in antiqnity (Verg. *Georg.* iii. 405).

Molus (Μόλος). The son of Deucalion and father of Meriones (q. v.).

Molycrĭum (Μολύκρειον). A town in the south of Aetolia, at the entrance of the Corinthian Gulf.

Momus (Μῶμος). In Greek mythology the evil spirit of blame and mockery, according to Hesiod (*Theog.* 214) the son of Night. According to Lucian (*Hermotimus*, 20), he found fault with the man formed by Hephaestus for not having little doors in his breast, so as to allow of his secret thoughts being seen. In Philostratus (*Ep.* 21=37) the only faults he finds in Aphrodité are that she is too talkative and that her sandals make too much noise.

Mona (Μόνα). The modern Anglesey (Angles Ey, "Englishman's island"); an island off the coast of the Ordovices in Britain, one of the chief seats of the Druids. Caesar erroneously describes this island as half way between Britannia and Hibernia (*B. G.* v. 13). Hence it has been supposed by some critics that the Mona of Caesar is the Isle of Man; but it is more probable, on account of the celebrity of Mona in connection with the Druids, that he had heard of Anglesey, and that he received a false report respecting its real position. The island was taken in A.D. 61 by Suetonius Paulinus, who broke the power of the Druids; and was again subdued by Agricola in A.D. 78 (Tac. *Agric.* 18; *Ann.* xiv. 29). See Monapia.

Monaeses. A Parthian general mentioned by Horace, probably the same as Surenas, the general of Orodes, who defeated Crassus (*Carm.* iii. 6, 9).

Monapia or **Monarīna.** The Isle of Man; an island lying between Britannia and Hibernia (Pliny, *H. N.* iv. 103). It is probably this island that Caesar intends in speaking of Mona. See Mona.

Monarchia (*μοναρχία*). A form of government in which the supreme functions of political administration are vested in a single person, no matter whether this person is an hereditary or an elective ruler, or one who has usurped power. When he appoints all the other officials, Aristotle speaks of the form of government as *παμβασιλεία*. Plutarch describes the Roman dictatorship as *μοναρχία*. See Aristot. *Polit.* iii. 14.

Monda or **Munda.** Now the Mondego; a river in Spain between the Tagus and Durius. It empties into the ocean (Mela, iii. 1, 7).

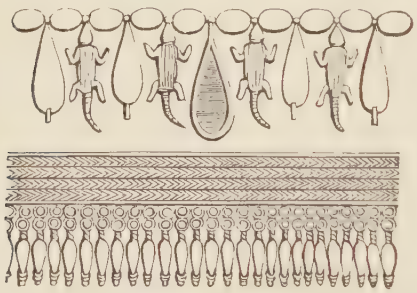
Monēta (*ἀργυροκοπεῖον*). A mint. In Persia the king enjoyed the sole right of issuing gold money (see Daricus); but the cities on the coast of Asia Minor coined copper, silver, and even electrum coins at pleasure; and the different satraps struck silver money bearing their own names. In Greece proper and the Greek colonies each State or *πόλις* issued such money as it chose, so that a great variety of Greek coins have come down to us. Fully 2000 mints are known to have existed prior to the fall of the Roman Empire (A.D. 410). Sicily had more than fifty different mints, and even the little island of Ceos had three. The cities of Magna Graecia in Italy issued coins of a general uniformity, as did the Aetolian and Achaean Leagues. Under the Romans the Greek cities ceased to coin silver money, except a few favoured ones like Antioch, the Cappadocian Caesarea, and Tarsus, though copper coins were still struck in many towns of Greece and Asia.

As the Roman dominion extended over Italy, the State gradually put down the rival issues of Oscan, Etruscan, and other non-Latin coinages, and introduced a uniform system. At Rome, however, various personages at different times controlled the mintage. In the city, money was usually struck under the direction of three officials, the *triumviri monetales;* but generals in the field and abroad issued money as they found it necessary, placing upon it not only their names but their effigies. When Augustus assumed the supreme power he took to himself the sole right to issue gold and silver coins, leaving to the Senate the mintage of copper. Hence copper coins of the Empire bore the letters S. C., indicating that they were issued by authority of the Senate.

The ancient processes of minting were very simple. One engraved die was let into an anvil, another into the end of a metal bar. Between the two was placed the blank, roughly cast into the required shape and size and heated red hot. A single blow of a heavy hammer on the upper end of the bar usually finished the coin, which was

then removed by a pair of tongs. Collars and milling were unknown. See NUMISMATICS.

Monēta. A name given to Iuno (q. v.) as the goddess of good counsel (from *moneo*), under which title a temple was built to her on the Capitol. Attached to it was the mint (Livy, vii. 28), which on this account received the name of *moneta*.



Iuno Moneta.

Money. See MONETA; NUMISMATICS.

Money-changers. See TRAPEZITAE.

Monīlé (*ὅρμος, μάννος*). A necklace. In Homer, necklaces of gold and amber are mentioned (*Odyss.* xv. 460; xviii. 295), and in later times necklaces were in common use among both the Greeks and Romans, being worn by men as well as by women, though for men to wear them was regarded as effeminate. They were especially in vogue as bridal ornaments (Lucan, ii. 361). The simplest form was that of the bead necklace (*monile bacatum*), in which small globes of gold, silver, amber, crystal, and glass were strung together, often in rows. Very costly necklaces of exquisite workmanship were also made for the wealthy, with pendants and clasps, often adorned with pearls, rubies, and other precious stones. The ornamentation also included disks, rosettes, lozenges, lotus-buds, heads of animals, ivy-leaves, etc. The hooks or fastenings at the back of the neck were called

Necklaces. (Naples.)

clusurae. See the articles ARMILLA; CAELATURA (with illustration, p. 243); CATENA; GEMMA; TORQUES. The name *monile* is also applied to a collar or necklace placed about the neck of a horse or other favourite animal (Verg. *Aen.* vii. 278).

Monochromăta (*μονοχρώματα*). Paintings tinged with a single colour upon a dark ground, as frequently upon vases (Pliny, *H. N.* xxxiii. 39; xxxv. 36).

Monoeci Portus, also **Herculis Monoeci Portus.** The modern Monaco; a port-town on the coast of Liguria, founded by the Massilians, was situated on a promontory (hence the *arx Monoeci* of Vergil), and possessed a temple of Hercules Monoecus, from whom the place derived its name (Verg. *Aen.* vi. 801).

Monogrammăta. Paintings drawn in outline (Pliny, *H. N.* xxxv. 5).

Monopodium. A one-legged table. See MENSA.

Monoptĕros (*μονόπτερος*). An epithet descriptive of a round temple with its columns arranged in a circle and supporting a cupola. See TEMPLUM.

Montānus. (1) CURTIUS. A Roman exiled by Nero, A.D. 67; but soon afterwards recalled at his father's petition. On the accession of Vespasian he vehemently attacked in the Senate the notorious informer, Aquilius Regulus. (2) VOLTIĒNUS, an orator and declaimer in the reign of Tiberius. From his propensity to refine upon thought and diction, he was named "the Ovid of the rhetorical schools." He was convicted on a charge of treason, and died an exile in the Balearic Islands, A.D. 25. (3) A noted heresiarch, who appeared in A.D. 156 at Ardaban in Phrygia, professing to have a mission to reform the Church. See TERTULLIANUS.

Montfaucon, BERNARD DE. A French classical scholar, born in 1655. After serving in the army he entered the Benedictine Order and gave his time to the study of classical antiquity. He died at Paris in 1741. He was the author of critical editions of several of the Greek Fathers and of the following great works: *Palaeographia Graeca* (1708); *L'Antiquité Expliquée et Representée en Figures* (15 vols. 1719–1724); and *Bibliotheca Bibliothecarum MSS. Nova* (2 vols. 1739). The first establishes palaeography as a science, and is based upon a careful examination of nearly 12,000 manuscripts. The second is still consulted by all archaeologists; and the third is a list of the manuscripts examined by him in the course of forty years of study. See De Broglie, *La Société de l'Abbaye de St. Germain* (2 vols. 1891).

Months. See CALENDARIUM.

Monumentum. See SEPULCRUM.

Monumentum Adulitānum. A monument at Adulé in Aethiopia on a bay of the Red Sea, bearing inscriptions in Greek letters, commemorating the tribute received from the Arabs and Aethiopians by Ptolemy Euergetes (B.C. 247–222), and also the conquests of a certain Aethiopian king whose name is not given. The monument is of white marble in the shape of a throne. The inscriptions were copied in the sixth century A.D. by Cosmas Indicopleustes, and have been edited by Buttmann in the *Museum der Alterthumswissenschaft.* ii. 1. p. 105.

Monumentum Ancyrānum. See ANCYRANUM MONUMENTUM; AUGUSTUS CAESAR, p. 171.

Moon, GODDESS OF THE. See LUNA; SELENÉ.

Mopsia or **Mopsopia** (*Μοψοπία*). An ancient name of Attica, whence Mopsopius is frequently used by the poets as equivalent to Athenian.

Mopsia or **Mopsopia.** A name of Pamphylia derived from that of Mopsus, a mythical leader of a band of Greeks who were reputed to have settled in that country after the Trojan War.

Mopsium (*Μόψιον*). A town of Thessaly in Pelasgiotis, on a hill of the same name.

Mopsucrēné (*Μόψου κρήνη*). A city of Cilicia, on the southern slope of the Taurus. Here the emperor Constantine died, A.D. 364.

Mopsuestia (*Μόψου ἑστία*, also *Μόψου πόλις* and *Μόψος*). Now Messis; an important city of Cilicia Campestris, on both banks of the river Pyramus, twelve Roman miles from its mouth, on the road from Tarsus to Issus, in the beautiful plain called

τὸ Ἀλήϊον πεδίον, was a *civitas libera* under the Romans. The two parts of the city were connected by a handsome bridge built by Constantius over the Pyramus. In ecclesiastical history, it is notable as the birthplace of Theodore of Mopsuestia. In the Middle Ages it was called Mampsista.

Mopsus (Μόψος). (1) The son of Ampyx or Ampycus by the nymph Chloris. Being a seer, he was also called a son of Apollo by Himantis. He was one of the Lapithae of Oechalia or Titaeron in Thessaly, and took part in the combat at the wedding of Pirithoüs. He was one of the Calydonian hunters, and also one of the Argonauts. He died in Libya of the bite of a snake, and was buried there by the Argonauts. He was afterwards worshipped as an oracular hero. (2) The son of Apollo and Manto, the daughter of Tiresias, and also a celebrated seer. He contended in prophecy with Calchas at Colophon, and showed himself superior to the latter in prophetic power. He was believed to have founded Mallos in Cilicia in conjunction with the seer Amphilochus. A dispute arose between the two seers respecting the possession of the town, and both fell in combat by each other's hands. Mopsus had an oracle at Mallos, which existed as late as the time of Strabo. See CALCHAS.

Mora (μόρα). One of the six principal divisions of the army at Sparta, which included all Spartans and Perioeci that were obliged to serve. It was under the command of a polemarch, and consisted of four *lochi*, eight *pentecostyes*, and sixteen *enomotiae*, which were under as many *lochagi*, *pentecosteres*, and *enomotarchi*. These divisions were never sent on a campaign in their full strength, but only the men of particular years, specified in each case. The polemarch always took the command of the first levy. See EXERCITUS.

Mora. In Roman law, a term used of a delay in the discharge of a legal duty. A debtor was not *in mora* if he had a good excuse for the nonperformance of his obligation; but when mora could be legally imputed to a man, he was bound to make good to his creditor whatever loss had been sustained in consequence of the delay. Delay on the part of the creditor is called *mora accipiendi;* on the part of the debtor, *mora solvendi.* See Madai, *Die Lehre von der Mora;* and Wolff, *Zur Lehre von der Mora.*

Morētum. "The Country Breakfast." A poem in 124 hexameters, usually ascribed to Vergil and perhaps translated by him from a Greek original. It describes a peasant, Simylus, rising in the morning, baking bread, and preparing a mess of herbs in a mortar before going to work. See Barth, *Sprache und Versbau des Moretum* (Horn, 1879); Egli, *Pseudo-Verg. Gedichte* (Leipzig, 1886); and the article VERGILIUS.

Morgantium (Μοργάντιον), **Morgantīna** (Μοργαντίνη), **Murgantia, Morgentia.** A town in Sicily, southeast of Agyrium, and near the Symaethus, founded by the Morgetes, after they had been driven out of Italy by the Oenotrians.

Morgētes (Μόργητες). An ancient people in the south of Italy. According to Strabo, they dwelt in the neighbourhood of Rhegium, but being driven out of Italy by the Oenotrians crossed over to Sicily and there founded the town of Morgantium. According to Dionysius of Halicarnassus, Morges was the successor of the Oenotrian king Italus, and hospitably received Siculus, who had been driven out of Latium by the Aborigines, in consequence of which the earlier Oenotrians were called Italietes, Morgetes, and Siculi; according to this account, the Morgetes ought to be regarded as a branch of the Oenotrians.

Moria or **Morĭa** (Μώριον ὄρος). A mountain of Iudaea, within the city of Jerusalem, on the summit of which the Temple was built. See HIEROSOLYMA.

Moriměné (Μοριμενή). The northwestern district of Cappadocia, on the banks of the Halys, assigned under the Romans to Galatia.

Morĭni. The most northerly people in all Gaul, whence Vergil calls them *extremi hominum* (*Aen.* viii. 727). They dwelt on the coast, at the narrowest part of the channel between Gaul and Britain (*fretum Morinorum*). Their chief town was Gesoriacum (q. v.), now Boulogne.

Morio. A buffoon. See NANI.

Mormo (Μορμώ) and **Mormolўcé** (Μορμολύκη). A female spectre, whose name was used by the Greeks to frighten children (Aristoph. *Ach.* 582; *Pax*, 474; Theoc. xv. 40). cf. LAMIAE.

Morpheus (Μορφεύς, "the moulder" or "fashioner"). The Greek god of dreams (Ovid, *Met.* xi. 635).

Mors. See THANATOS.

Morsĭmus (Μόρσιμος). A tragic poet, ridiculed by Aristophanes (*Ran.* 181).

Mortarium (ὅλμος, θύεια), in Latin also **Pila.** A mortar, used in early times for pounding grain, over which act the domestic deity Pilumnus (q. v.) presided. They were made of either wood or stone, and occasionally of baked white clay. Besides its primitive use, the mortar was also employed in pounding drugs, making perfumes, paint, plaster, and drugs, and in some of the processes of ancient metallurgy. The philosopher Anaxarchus was pounded to death in a mortar with iron pestles. See MOLA; PILA.

Mortgage. See PIGNUS.

Morўchus (Μόρυχος). A tragic poet, ridiculed by Aristophanes for his gluttony (*Vesp.* 504).

Mos. See IUS.

Mosa. Now the Maas or Meuse; a river in Gallia Belgica, rising in Mount Vogesus and falling into the Vahalis, or west branch of the Rhine.

Mosaic. See MUSIVUM OPUS.

Moscha (Μόσχα). Now Muscat; a seaport on the northwestern coast of Arabia Felix. It was an important seat of the trade between Arabia and India (Ptol. vi. 7).

Moschi (Μόσχοι). A people of Asia, dwelling in the southern part of Colchis.

Moschĭci Montes (τὰ Μοσχικὰ ὄρη). A range of mountains forming the boundary between Colchis and Iberia. They were named from the Moschi who dwelt among them.

Moschion (Μοσχίων). A Greek gynaecologist, who lived about the second century A.D. A short treatise of his remains is edited by Dewez (Vienna, 1793).

Moschus (Μόσχος). A Greek bucolic poet, who lived in Syracuse about B.C. 150. Four longer and four shorter poems have been handed down as

his; they show the greatest elegance of expression without the truth to nature and the dramatic power of his model, Theocritus. His lament for Bion is marked by melody and genuine pathos. Edited with Bion (q. v.) by Jacobs (1795); Wakefield (1795); Hartung (1858); and Ahrens (1875).

Mosella. The Moselle, a river in Gallia Belgica, rising in Mount Vogesus, and falling into the Rhine at Confluentes (Coblenz). The name gives its title to a graceful poem by Ausonius in 483 hexameters, a translation of which into English has been made by C. T. Brooks in Waring's *Bride of the Rhine* (Boston, 1878).

Mosquito-netting. See CONOPEUM.

Mostellaria. "The Ghost Story." A play of Plautus. Edited with English notes by Ramsay (1880) and Morris (1881). See PLAUTUS.

Mostēni (*Μοστηνοί*). A city of Lydia, southeast of Thyatira.

Mosȳchlus (*Μόσυχλος*). A mountain in Lemnos regarded by the ancients as a volcano.

Mosynoeci (*Μοσύνοιχοι*). A barbarous people on the northern coast of Asia Minor, in Pontus, so called from the conical wooden houses in which they dwelt (Xen. *Anab.* iv. 4; v. 4).

Mothăces. See HELOTAE.

Mothōné. See METHONÉ.

Motoria (sc. *fabula*). A comedy of a lively character as opposed to a *fabula statoria*, which has little or no action. The *Phormio* of Terence is a good specimen of a *fabula motoria;* the *Andria* of the other kind.

Motūca (*Μότουκα*). A town in the south of Sicily, west of the promontory Pachynus. The inhabitants were called Motycenses.

Motȳa (*Μοτύη*). An ancient town in the northwest of Sicily, situated on a small island (now S. Pantaleo) near the coast, with which it was connected by a mole. It was founded by the Phœnicians, and next belonged to the Carthaginians, who transferred its inhabitants to the town of Lilybaeum, B.C. 397 (Thuc. vi. 2).

Mound. See AGGER; TUMULUS.

Mountebank. See CIRCULATOR.

Moustache. See BARBA; MUSTAX.

Mucia. The daughter of Q. Mucius Scaevola, the augur, consul B.C. 95, married Cn. Pompey, by whom she had two sons, Gneius and Sextus, and a daughter, Pompeia. She was divorced by Pompey in 62. She next married M. Aemilius Scaurus, a stepson of the dictator Sulla. In 39, Mucia went to Sicily to mediate between her son Sex. Pompey and Augustus. She was living at the time of the battle of Actium, 31. Augustus treated her with great respect (Dio Cass. xxxvii. 49; lvi. 38).

Mucĭānus. (1) P. LICINIUS CRASSUS DIVES MUCIĀNUS, the son of P. Mucius Scaevola, and adopted by P. Licinius Crassus Dives. He was consul B.C. 131, and carried on the war against Aristonicus in Asia, but was defeated by the latter. He succeeded Scipio Nasica as pontifex maximus. He was distinguished both as an orator and a lawyer. (2) C. LICINIUS MUCIĀNUS, three times consul in A.D. 52, 70, and 75. On Nero's death, in 68, Mucianus had the command of the province of Syria; and he rendered efficient aid to Vespasian, when the latter resolved to seize the imperial throne. As soon as Vespasian was proclaimed emperor, Mucianus set out for Europe to oppose Vitellius; but the Vitellians were entirely defeated by Antonius Primus before Mucianus entered Italy. Antonius, however, had to surrender all power into the hands of Mucianus upon the arrival of the latter at Rome. Mucianus was an orator and an historian. His powers of oratory are greatly praised by Tacitus. He made a collection of the speeches of the republican period, which he published in eleven books of *Acta* and three of *Epistolae*. The subject of his history is not mentioned; but it appears to have treated chiefly of the East. He is frequently quoted by Pliny the Elder. See Peter, *Hist. Reliq.* p. cccli.; and Brunn, *De Gaio Licinio Muciano* (Leipzig, 1870).

Mucīnum or **Mucinium.** A handkerchief for wiping the nose (Arnob. ii. 5). See SUDARIUM.

Mucius Scaevŏla. See SCAEVOLA.

Mucro. The point of any weapon, especially of the sword, though a spear-point is *cuspis*.

Mulcĭber. An epithet of Vulcanus (q. v.).

Mulcta. See MULTA.

Mulctra, Mulctrālé, and **Mulctrum** (*ἀμολγεύς*). A milk-pail (Verg. *Ecl.* iii. 30).

Muli Mariāni. A nickname given to soldiers who carried a heavy kit (Festus, s. h. v.).

Mulio. (1) A muleteer (Suet. *Nero*, 30). (2) A person who keeps mules to hire (Suet. *Vesp.* 4).

Müller, KARL OTFRIED. A remarkable archæologist and classical scholar, born at Brieg, in Silesia, August 28, 1797. He was educated at Breslau and at Berlin under Boeckh, and when only twenty-two years of age was made Professor Extraordinarius of Archæology and Director of the Philological Seminary at the University of Göttingen (1819), and Professor Ordinarius in 1823. In 1840, while in Greece, he died from the effects of a fever contracted at Delphi, where he had been copying inscriptions. Müller was the author of a number of works that were really epoch-making, in that they opened up questions upon which several generations of scholars have since been continuously at work, and he may be said to have permanently established archæology upon a scientific basis. His chief works in this field are *Orchomenos und die Minyer* (1820); *Die Dorier* (2 vols. 1824; Eng. tr. 1829); *Die Etrusker*, which received a prize from the Berlin Academy (2 vols. 1828; 2d ed. revised by Deecke, 1877), on which see the article ETRURIA; a treatise on the Macedonians (1825); *Prolegomena zu einer wissenschaftlichen Mythologie* (1825); *Handbuch der Archäologie der Kunst* (1830, last ed. 1878; Eng. tr. 1847); and a *History of the Literature of Ancient Greece*, undertaken at the request of the British Society for the Diffusion of Useful Knowledge (1841, published by Dr. Müller's brother), of which the English version is by Sir George Cornewall Lewis and Dr. Donaldson, the latter continuing it through the Byzantine Period (last ed. 1882–84). He also edited the *Eumenides* of Aeschylus (1833–35), with valuable excursus on questions of scenic antiquities—a work that involved him in a bitter polemic with Gottfried Hermann, "the despot of Leipzig"; Varro, *De Lingua Latina* (1833); and Festus (1839), until lately the standard edition. See the memoirs by Lücke (1841) and F. Ranke (1870); and Bursian, *Geschichte*

der classischen Philologie in Deutschland, pp. 1007–1028 (Munich, 1883).

Mulleus. See CALCEUS.

Mulsum. See VINUM.

Multa (also spelled *mulcta*, and possibly from *mulgeo*, "a milking"). The Roman term for a fine, inflicted either by a magistrate for disobedience or insubordination, or at the motion of an official by the decision of the people at the Comitia Tributa, or prescribed in laws, wills, etc., in case any one contravened them. It originally consisted in cattle, sheep, or oxen; then, after B.C. 430, the Lex Iulia Papiria permitted the payment in money according to a fixed scale (a sheep = 10 *asses*, an ox = 100 *asses*). The lowest amount of the *multa* inflicted by a magistrate in virtue of his office was a sheep; when acts of disobedience were repeated, the fine could be raised to 30 oxen (*suprema multa*). Against heavier penalties, such, in particular, as were imposed by the tribunes of the people on account of political crimes—e. g., when a general had waged war unskilfully or had exceeded the limits of his power—an appeal to the Comitia Tributa was granted, and they were decided by that body in the regular legal manner. The fines imposed by the people were always, and those imposed by the magistrates usually, set apart for sacred purposes; otherwise they fell to the Treasury, as was the rule under the Empire. This also received a part of the penalties fixed by laws; the other was given to the plaintiff. Fines for contravention of the clauses of a will were either paid to the funds of a temple or to the community to which the testator belonged, and at Rome to the Treasury. See Huschke, *Die Multa* (Leipzig, 1882); and the article POENA.

Mulŭcha and **Molŏchath** (Μολοχάθ). A river in the north of Africa, rising in the Atlas Mountains and forming the boundary between Mauretania and Numidia.

Mummius. (1) LUCIUS. A tribune of the plebs B.C. 187, and praetor 177. (2) LUCIUS, surnamed ACHAĬCUS, son of the last, was praetor 154, when he carried on the war successfully in further Spain against the Lusitanians. He was consul in 146, when he won for himself the surname of Achaicus by the conquest of Greece and the establishment of the Roman province of Achaia. After defeating the army of the Achaean League at the isthmus of Corinth, he entered Corinth without opposition. The city was burned, razed, and abandoned to pillage; the native Corinthians were sold for slaves, and the rarest specimens of Grecian art were given up to the rapacity of an ignorant conqueror. Polybius, the historian, saw Roman soldiers playing at draughts upon the far-famed picture of Dionysus by Aristides; and Mummius himself was so unconscious of the real value of his prize that he sold the rarer works of painting, sculpture, and carving to the king of Pergamus, and took bonds from the masters of vessels who conveyed the remainder to Italy to replace by equivalents any picture or statue lost or injured in the passage (Polyb. iii. 32; xl. 7–11; Vell. Paterc. i. 13). He remained in Greece during the greater part of 145 with the title of proconsul. He arranged the fiscal and municipal constitution of the newly-acquired province, and won the confidence and esteem of the provincials by his integrity, justice, and equanimity. He triumphed in 145. He was censor in 142 with Scipio Africanus the younger. The political opinions of Mummius inclined to the popular side. (3) SPURIUS, brother of the preceding, and his legate at Corinth in 146–145, was an intimate friend of the younger Scipio Africanus. In political opinions Spurius was opposed to his brother Lucius, and was a noted aristocrat. He composed ethical and satirical epistles, which were extant in Cicero's day, and were probably in the style which Horace afterwards cultivated so successfully. (4) A writer of Atellanae, who flourished later than B.C. 90 (Macrob. *Sat.* i. 10, 3).

Munatius Plancus. See PLANCUS.

Munda. (1) A Roman colony and an important town in Hispania Beatica, situated on a small river, and celebrated on account of two battles fought in its neighbourhood, the victory of Cn. Scipio over the Carthaginians in B.C. 216, and the important victory of Iulius Caesar over the sons of Pompey in 45. The town had fallen into decay as early as the time of Pliny. The site of the ancient town is usually supposed to be the modern village of Monda, southwest of Malaga; but Munda was more probably in the neighbourhood of Cordova, and there are ruins of ancient walls and towers between Martos, Alcandete, Espejo and Baena, which are conjectured to be the remains of Munda (Livy, xxiv. 42). (2) See MONDA.

Munerātor. See GLADIATORES, p. 732.

Munĭceps. The Latin term for an inhabitant of a free town; a burgher. See FOEDERATAE CIVITATES; MUNICIPIUM.

Municipium. Originally the Roman term for a town the inhabitants of which, called *municipes*, possessed only part of the rights of Roman citizenship—viz., the private rights of *commercium* and *conubium*, while they were excluded from the political rights, the *ius suffragii* and the *ius honorum*, the right to elect and to be elected to office. As Roman citizens, they did not serve (like the allies) in cohorts under a prefect, but in the legions under tribunes; they were, however, assigned to legions distinct from the others, since they were not inscribed on the lists of the Roman tribes, and therefore could not be levied in accordance with those lists. After the dissolution of the Latin League in B.C. 338, the allied towns were put into the position of municipia.

At first there were two classes of municipia, according as they retained an independent communal constitution or not. The second class, which had no senate, magistrates, or popular assembly of its own, and was governed directly by Rome, consisted of the *praefecturae* (q. v.). As the municipia gradually obtained the full rights of citizenship, their nature changed; all persons were now called *municipes*, who did not belong to the town of Rome by birth, but were full Roman citizens; and hence belonged to a Roman tribe, were registered at Rome, could elect and be elected to office, and served in the Roman legions.

The Lex Iulia of B.C. 90 made all the towns of Italy municipia with full civic rights, and every Italian country town was now called a Roman municipium. Gradually the towns in the provinces received municipal rights, till finally Caracalla made all towns of the Empire municipia. Originally one class of municipia had retained their own laws and their own constitution; this arrangement underwent a change when they were

received into the Roman citizenship, inasmuch as the Roman law then became binding upon them, and a regularly organized administration on the Roman model was introduced. The citizens were divided into *curiae*, and at their Comitia Curiata passed all kinds of decrees, and chose officers; most of these rights, however, passed into the hands of the local senate towards the end of the first century. This senate usually consisted of 100 life-members, called *decuriones*, and in every fifth year the vacancies were filled up from those who had held office or were qualified by their property. The highest officials were the *duo viri*, who were judges and presided at the assemblies of the people, especially at elections, and in the senate; the two *quinquennales*, chosen for a year, once in five years, and corresponding to the Roman censors; and *quaestores* and *aediles*, officials with similar duties to the Roman officials of the same name. (See MAGISTRATUS.) Besides the decuriones, whose position became hereditary at the end of the Empire, there were, under the heathen emperors, a second privileged class, known as Augustales, chosen by decree of the local senate and next to that body in rank. They made up a collegium, which was originally dedicated to the worship of the Julian family, and in later times seems to have extended its functions to the worship of the other emperors. The decline of the municipal system, the prosperity of which had depended on the liberty and independence of the administration, set in at the end of the second century after Christ, when the emperors began to transfer to the municipia the burdens of the State, and the decuriones gradually became mere imperial officials, who were more especially responsible for the collection of the tribute imposed.

Munro, HUGH ANDREW JOHNSTONE. A brilliant classical scholar, born at Elgin, in Scotland, in 1819. He was educated at Shrewsbury and the University of Cambridge, and was elected to a fellowship in 1843. From 1869 to 1872 he filled the Latin chair at Cambridge. He died at Rome, March 30, 1885. Professor Munro's greatest work is his edition of Lucretius (2 vols. 1864; 4th ed. 1885), a remarkable monument of learning, taste, and critical skill, and accompanied by a prose translation that is itself a classic. He also edited Horace (1869), and wrote *Criticisms and Elucidations of Catullus* (1878), besides publishing many minor papers and a good deal of excellent Greek and Latin verse. See a memoir in the (English) *Journal of Philology* for 1885.

Munus. See HONORES; GLADIATORES, p. 732.

Munychia (*Μουνυχία*). A hill in the peninsula of Piraeus, which formed the citadel of the ports of Athens. It was strongly fortified, and is frequently mentioned in Athenian history. At its foot lay the harbour of Munychia, one of the three harbours in the peninsula of Piraeus, fortified by Themistocles. The names of these three harbours were Piraeus, Zea, and Munychia. The entrance to the harbour of Munychia was very narrow, and could be closed by a chain. The hill of Munychia contained several public buildings. Of these the most important were: (1) a temple of Artemis Munychia, in which persons accused of crimes against the State took refuge; (2) the Bendideum, the sanctuary of the Thracian Artemis Bendis, in whose honour the festival of the Bendidea was celebrated; (3) the theatre on the northwestern slope of the hill, in which the assemblies of the people were sometimes held (Pausan. i. 1, 4).

Munychia (*τὰ μουνύχια*). A festival celebrated in April, in honour of Artemis Munychia, as goddess of the full moon shining alone by night, and instituted to commemorate the defeat of the Persians at Salamis (Plut. *De Gloria Ath.* p. 349 F).

Munychion (*Μουνυχιών*). The tenth month of the Attic year, corresponding to our April. It had twenty-nine days. See CALENDARIUM.

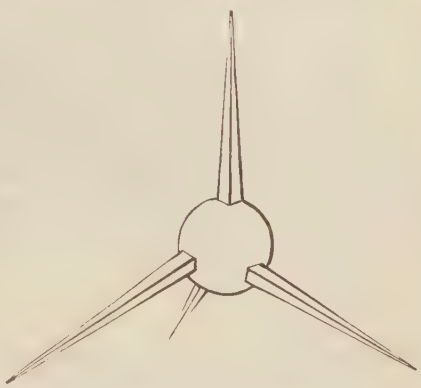
Mural Crown. See CORONA.

Muratori, LODOVICO ANTONIO. A distinguished archaeologist, born at Vignola, October 21, 1672. Though he took orders at an early age, his time was principally given to historical and antiquarian research, being appointed, when twenty-three years of age, director of the Ambrosian Library at Milan. Here he published a collection of hitherto unedited Greek and Latin fragments, *Anecdota Graeca* and *Anecdota Latina*. In 1700 he was placed in charge of the great D'Este Library and of the ducal archives at Modena. In 1723 he began to publish his first collection, entitled *Rerum Italicarum Scriptores*, the twenty-eighth and last volume of which appeared in 1723. Most important to classical scholars is his collection of inscriptions, in six volumes, which appeared between 1739 and 1743, supplanting the collections of Gruter and earlier epigraphists. He died at Modena, January 28, 1750. See his life by G. F. Muratori (Omer, 1758).

Muratorian Fragment. A fragment of 85 lines first published by Muratori from a MS. of the eighth century, in Milan. It is a list of the writings in the New Testament, and is interesting from the evidence it gives of the corrupt condition of the Latin language at the time when it was written, such forms as *Spaniam* (*Hispaniam*), *desceplina* (*disciplina*), *seconda* (*secunda*) occurring in it. A fac-simile is printed by Tregelles (Oxford, 1867).

Murcia, **Murtea**, or **Murtia**. A surname of Venus at Rome, where she had a chapel in the circus, with a statue. This surname, which is said to be the same as Myrtea (from *myrtus*, a myrtle), was believed to indicate the fondness of the goddess for the myrtle-tree. See VENUS.

Murcus. A nickname given by the Roman soldiers to a malingerer, one who maimed himself by cutting off his thumbs, in order to be excused from military service (Amm. Marcel. xv. 12, 5; Suet. *Aug.* 24). Compare the English word "poltroon"; Ital. *poltrone* (*pollice trunco*).



Murcus, L. STATIUS. A legate of Iulius Caesar, B.C. 48, and praetor 45. He went to Syria after his year of office expired, and after Caesar's death became an active supporter of the Republican party. Cassius appointed him praefect of the fleet. After the ruin of the Republican party at Philippi, in 42, Murcus went over to Sex. Pompey in Sicily. Here he was assassinated by Pompey's order at the instigation of his freedman Menas, whom Murcus had treated scornfully (Caes. *B. C.* iii. 15; Dio Cass. xlviii. 19; Vell. Paterc. ii. 77).

Murēna, LICINIUS. The name Murena (not Murræna) is said to have been given in consequence of one of the family having a great liking for the lamprey (*murena*), and building tanks (*vivaria*) for them. (1) PUBLIUS, a man of some literary knowl-

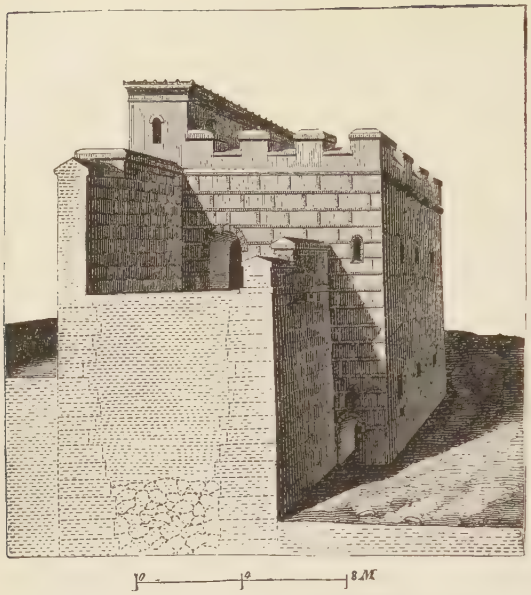
edge, lost his life in the wars of Marius and Sulla, B.C. 82, and (2) LUCIUS, brother of the preceding, served under Sulla in Greece in the Mithridatic War. After Sulla had made peace with Mithridates (84), Murena was left as propraetor in Asia. Anxious for distinction, Murena sought a quarrel with Mithridates; and after carrying on the war for two years, was at length compelled, by the strict orders of Sulla, to stop hostilities. Murena returned to Rome, and had a triumph in 81. He probably died soon after. (3) LUCIUS, son of the last, served under his father in the Second Mithridatic War and also under Lucullus in the Third Mithridatic War. In 65 he was praetor, in 64 propraetor of Gallia Cisalpina, and in 63 was elected consul with D. Iunius Silanus. Serv. Sulpicius, an unsuccessful candidate, instituted a prosecution against Murena for bribery (*ambitus*), and he was supported in the matter by M. Porcius Cato, Cn. Postumius, and Serv. Sulpicius the Younger. Murena was defended by Q. Hortensius, M. Tullius Cicero, who was then consul, and M. Licinius Crassus. The speech of Cicero, which is extant, was delivered in the latter part of November. The orator handled his subject skilfully by joking about the formulae and the practice of the lawyers, to which class Sulpicius belonged, and with the paradoxes of the Stoics, to which sect Cato had attached himself. Murena was acquitted, and was consul in the following year, 62. (4) A. TERENTIUS VARRO MURĒNA, probably the son of the preceding, was adopted by A. Terentius Varro, whose name he took, according to the custom in such cases. In the Civil Wars, he is said to have lost his property, and C. Proculeius, a Roman knight, is said to have given him a share of his own property. This Proculeius is called the brother of Varro; but, if we take the words of Horace literally (*Carm.* ii. 2), Proculeius had more than one brother. It is conjectured that this Proculeius was a son of the brother of No. 3, who had been adopted by one Proculeius. This would make Proculeius the cousin of Varro. It was common enough among the Romans to call cousins by the name of brothers (*frater patruelis* and *frater*). In 25 Murena subdued the Salassi in the Alps, and founded the town of Augusta (*Aosta*) in their territory. He was consul suffectus in 23. In 22 he was involved in the conspiracy of Fannius Caepio, and was condemned to death and executed, notwithstanding the intercession of Proculeius and Terentia, the sister of Murena and wife of Maecenas.

Murētus, MARCUS ANTONIUS (MARC ANTOINE MURET). A celebrated French classical scholar, born at Muret, April 12, 1526. In early life he studied jurisprudence and lectured on the civil law, but later took up literature. In 1576 he entered the priesthood, and then resided in Rome until his death, which occurred June 4, 1585. Muretus was a brilliant stylist of the Italian or "Ciceronian" school of modern Latinity, and wrote Latin with the ease and purity of an ancient Roman. Many of his orations are absolutely faultless, so that for many generations they were read in the schools of Europe side by side with Cicero and Livy. His Latin verse was also very graceful and fluent, though now little read. He published five volumes of *Variae Lectiones*, full of much acute criticism and still often referred to. His works have been edited by Ruhnken (1789), Frotscher (1834–41), and two volumes of selected writings by Frey (1871–73). See the life in French by Dejob (Paris, 1881); and the paper by Pattison in his *Essays* (Oxford, 1889).

Murex. A shell-fish with a sharp-pointed shell, used to ornament grottos (Ovid, *Met.* viii. 563), some of which have been found at Pompeii. A species of murex (*murex trunculus* or *murex brandaris*) was crushed to produce the famous Tyrian purple, so called (Pliny, *H. N.* ix. 36, 60). The name is also used of any sharp substance, as a stone (Verg. *Aen.* v. 205), a bridle-bit (Stat. *Achill.* i. 221), and especially of a "caltrop," called also *tribulus*

Murex or Tribulus. (Caylus, *Recueil*, iv. pl. 98.)

(τρίβολος), a ball furnished with spikes, used to impede the advance of cavalry (Val. Max. iii. 7, 2).



Murgantia. (1) See MORGANTIUM. (2) A town in Samnium.

Muropolium (μυροπώλιον). A perfumer's shop (Plaut. *Epist.* ii. 2, 17).

Murrhīna or **Murrea** (VASA). A name given by the Romans to vessels made of an oriental mineral called *murra*, which only occurred in small plates, opaque, of dull lustre and changing colours, and very brittle. The first vessels of this kind were brought to Rome by Pompey in B.C. 61 among the spoils of King Mithridates (Pliny, *H. N.* xxxvii. 18). In Rome, enormous prices were paid for them on account of their material, which is unknown to us, but is held by many to have been a rare kind of fluor spar, while others identify it with porcelain (Propert. iv. 5, 26) or agate. Nero paid for his cup with a handle, made of murra, the sum of a million sesterces, about $50,000 (Pliny, *H. N.* xxxvii. § 20). Murra, as well as every variety of precious stone, was imitated in glass. See Mayor's notes on Juvenal (vii. 133), and King, *Nat. Hist. of Precious Stones and Gems*, pp. 237–245 (London, 1864).

Mursa or **Mursia**. A town in Pannonia Inferior, on the Dravus. Here Magnentius was defeated by Constantius II., A.D. 351.

Murus or **Moenia** (τείχος). A wall surrounding an unroofed enclosure, as opposed to *paries* (τοῖχος), the wall of a building. The word *maceria* denotes a boundary wall, fence-wall. Cities were enclosed by walls at a very early period of Greek history, as is shown by the epithet used by Homer —"well-walled"—of Tiryns, Mycenae, etc., and the massive remains of those cities have also demonstrated the fact So vast, in truth, are some of these structures as to have induced a belief among the ancients that they were the work of Cyclopes.

Part of the Wall at Pompeii. (Overbeck.)

(See CYCLOPES.) The following principal species of city walls are to be distinguished: (*a*) those in which the masses of stone are of irregular shape and put together loosely, the interstices being filled by smaller stones, as in the wall at Tiryns (see TIRYNS); (*b*) those in which polygonal stones are carefully fitted together, and their faces cut so as to give the whole a comparatively smooth surface, as in the walls at Larissa and at Cenchreae (see the second illustration on page 452); and (*c*) those in which the blocks are laid in horizontal courses more or less regular with the vertical joints either perpendicular or oblique, and are more or less accurately fitted together, as in the walls beside the "Lion Gate" at Mycenae. See MYCENAE.

Brick was largely used in Egypt, Assyria, and Chaldaea, and also in Greece and Italy; but was often defended against the weather by an outer casing of stone, when the bricks were sun-dried instead of burned. (See FICTILÉ.) After the first Persian War the Athenians began to use marble for their finest buildings, as in the Propylaea (q. v.) and the Parthenon. A century later marble was also used for facing walls of brick. Less important structures were made of smaller stones, rough or square, flints, or bricks.

At Rome there were several kinds of masonry. (See CAEMENTUM.) (*a*) Blocks of stone were laid in alternate courses, lengthwise in one course and crosswise in the next. (*b*) The stones in each course were laid alternately along and across. (*c*) The stones were laid all lengthwise. (*d*) The stones entirely crosswise. (*e*) The courses were alternately higher and lower than each other. The earliest walls at Rome, largely of Etruscan origin, were built of huge quadrangular stones, hewn, and placed together without cement. Such were the Carcer Mamertinus (see CARCER), the Cloaca Maxima (see CLOACA), and the Servian Walls (see ETRURIA, p. 628). The Romans also used small rough stones, not laid in courses, but held together by mortar (*opus incertum*) and courses of flat tiles. Tiles were also introduced in the stone and brick walls. Brick covered with painted stucco was a very common material at Rome, and even columns were so constructed.

See Blümner, *Technologie und Terminologie* (Leipzig, 1875–87); Schliemann's works on Tiryns, Troy, and Mycenae; and Middleton, *Remains of Ancient Rome*, vol. i. (London, 1892).

Mus, DECIUS. See DECIUS.

Musa, ANTONIUS. A celebrated physician at Rome just before the beginning of the Christian era. He was brother to Euphorbus, the physician to King Iuba, and was himself the physician to the emperor Augustus. He had been originally a slave. When the emperor was seriously ill, and had been made worse by a hot regimen and treatment, B.C. 23, Antonius Musa succeeded in restoring him to health by means of cold bathing and cooling drinks, for which service he received from Augustus and the Senate a large sum of money and permission to wear a gold ring; and also had a statue erected in his honour by public subscription near that of Aesculapius. He seems to have been attached to this mode of treatment, to which Horace alludes (*Epist.* i. 15, 3), but failed when he applied it to the case of M. Marcellus, who died under his care a few months after the recovery of Augustus, B.C. 23. He wrote several pharmaceutical works, which are frequently quoted by Galen, but of which nothing except a few fragments remains, edited by Caldani (Bassano, 1800). There are, however, two short Latin medical works ascribed to Antonius Musa, but they are universally considered to be spurious. See Pliny, *H. N.* xxx. 117.

Musa or **Muza** (Μοῦσα, Μοῦζα, probably Moushid, north of Mokha). A celebrated port of Arabia Felix, on the western coast, near its southern extremity, or, in other words, on the eastern shore of the Red Sea, near the Strait of Bab-el-Mandeb.

Musae (Μοῦσαι). In Greek mythology the Muses were originally the nymphs of springs, whose waters gave inspiration, such as Hippocrené, Castalia, etc.; then goddesses of song in general; and afterwards the representatives of the various kinds of poetry, arts, and sciences. In Homer, who now speaks of one, and now of many Muses, but without specifying their number or their names, they are considered goddesses dwelling in Olympus, who at the meals of the gods sing sweetly to the lyre of Apollo, inspire the poet and prompt his song. Hesiod (*Theog.* 52–76) calls them the nine daughters of Zeus and Muemosyné, born in Pieria, and mentions their names, to which we shall at the same time add the province and the attributes afterwards assigned to each. (1) CALLIÓPÉ (she of the fair voice), in Hesiod the noblest of all, the Muse of epic song; among her attributes are a wax tablet and a pencil. (2) CLIO (she that extols), the Muse of history; with a scroll. (3) EUTERPÉ (she that gladdens), the Muse of lyric song; with the double flute. (4) THALÍA (she that flourishes), the Muse of comedy and bucolic poetry; with the comic mask, the ivy wreath, and the shepherd's staff. (5) MELPOMÉNÉ (she that sings), the Muse of tragedy; with tragic mask, ivy wreath, and oc-

casionally with attributes of individual heroes—e. g. the club, the sword. (6) TERPSICHŌRÉ (she that rejoices in the dance), the Muse of dancing; with the lyre. (7) ERĂTO (the lovely one), the Muse of erotic poetry; with a smaller lyre. (8) POLYMNIA or POLYHYMNIA (she that is rich in hymns), the Muse of serious sacred songs; usually represented as veiled and pensive. (9) URANIA (the heavenly), the Muse of astronomy; with the celestial globe. See the separate articles on the Muses.

Three older Muses were sometimes distinguished from these. Meleté (Meditation), Mnemé (Remembrance), Aoidé (Song), whose worship was said to have been introduced by the Aloadae, Otus and Ephialtes, near Mount Helicon. Thracian settlers in the Pierian district at the foot of Olympus and of Helicon in Boeotia are usually mentioned as the original founders of this worship. At both these places were their oldest sanctuaries. According to the general belief, the favourite haunts of the Muses were certain springs, near which temples and statues had been erected in their honour: Castalia, at the foot of Mount Parnassus, and Aganippé and Hippocrené, on Helicon, near the towns of Ascra and Thespiae. After the decline of Ascra, the inhabitants of Thespiae attended to the worship of the Muses and to the arrangements for the musical contests in their honour that took place once in five years. They were also adored in many other places in Greece. Thus the Athenians offered them sacrifices in the schools, while the Spartans did so before battle. As the inspiring nymphs of springs they were early connected with Dionysus; the god of poets, Apollo, is looked on as their leader (*Μουσαγέτης*), with whom they share the knowledge of past, present, and future. As beings that gladden men and gods with their song, Hesiod describes them as dwelling on Olympus along with the Charites and Himeros. They were represented in art as virgin goddesses with long garments of many folds, and frequently with a cloak besides; they were not distinguished by special attributes till comparatively later times. See *Die Musen in der antiken Kunst* (Berlin, 1887).

The Roman poets identified them with the Italian CAMĒNAE, prophetic nymphs of springs and goddesses of birth, who had a grove at Rome outside the Porta Capena. (See EGERIA.) The Greeks gave the title of Muses to their nine most distinguished poetesses: Praxilla, Moero, Anyté, Erinna, Telesilla, Corinna, Nossis, Myrtis, and Sappho.

Musaeus (*Μουσαῖος*). (1) A mythical singer, seer, and priest, who appears especially in Attic legends. He is said to have lived in pre-Homeric times, and to have been the son of Selené and Orpheus or Linus or Eumolpus. Numerous oracular sayings, hymns, and chants of dedication and purification were ascribed to him which had been collected, and also interpolated, by Onomacritus, in the time of the Pisistratidae. His tomb was shown at Athens on the Museum Hill, southwest of the Acropolis (Pausan. i. 22, x. 9). See Eberhard, *De Pampho et Musaeo* (1864). (2) A grammarian and Greek poet, who, in the beginning of the sixth century after Christ, wrote, in imitation of Nonnus (q. v.), a short epic of love, on the subject of Hero and Leander, which shows intense warmth of feeling, and has touches that are almost modern. It is edited by Passow (Leipzig, 1810), Schaefer (Leipzig, 1825), and Dilthey (Bonn, 1874). See Schwabe, *De Musaeo Nonni Imitatore* (Tübingen, 1876).

Musagĕtes (*Μουσαγέτης*, leader of the Muses). A title of Apollo, the god of poets, but sometimes given to Heracles. See HERACLES, p. 793.

Muscŭlus. The Latin name of a shelter used by soldiers while engaged in undermining the walls of a hostile fortification. It was made of wood with a sloping roof, and is fully described by Caesar, *B. C.* ii. 10. See TESTUDO; VINEA.

Musēa (*Μούσεια*). (1) A festival in honour of the Muses celebrated with contests on the slopes of Mount Helicon, near Aganippé, every fifth year (Pausan. ix. 29, 1, etc.). (2) A festival celebrated in schools (Theophrast. 25, 11). It appears to have been a sort of school-exhibition.

Museion (*Μουσεῖον*). See MUSEUM.

Musēum (*Μουσεῖον*). Originally a temple of the Muses, then a place dedicated to the works of the Muses. In this sense the most remarkable and most important museum of antiquity was that established at Alexandria by Ptolemy Philadelphus in the first half of the third century B.C., or perhaps by his father, Ptolemy Soter. This institution contributed very largely towards the preservation and extension of Greek literature and learning. It was a spacious and magnificent edifice, supplied with everything requisite for its purpose, such as an observatory, a library, a portico (*περίπατος*), a public lecture-room (*ἐξέδρα*), and a large hall or common-room where the professors dined together. There were also botanical and zoölogical gardens. It lay near the royal palace and communicated immediately with the temple of the Muses. Noted men of erudition were there supported at the cost of the State, to enable them to devote themselves to their learned studies without interruption. They were under the supervision of principals chosen from their own body, while the priest of the Muses was at their head. The Museum was practically, therefore, a great university. Its scholars formed four faculties—letters, mathematics, astronomy, and medicine; and there are said to have been at one time as many as 14,000 students in attendance. Under the Roman emperors, when Egypt had become a province of the Empire, it was still continued as an imperial institute and the centre of all learning, especially in mathematics and astronomy (Strabo, p. 794). Caracalla confiscated the pensions of the learned men attached to it, and the institution itself was completely destroyed during the Civil Wars under Aurelian in the third century.

The Alexandrian Museum was probably suggested by the Museum at Athens founded in accordance with the will of Theophrastus, the pupil of Aristotle (Diog. Laërt. v. 5). This may have taken its name from the earlier *Μουσεῖον* at Stagira, Aristotle's birthplace. The Athenian Museum was like that of Alexandria in its general purpose, though on a much smaller scale. See EDUCATION, p. 572; and for the Alexandrian Library attached to the Museum, the article BIBLIOTHECA. On the influence of the two, see ALEXANDRIAN SCHOOL; CANON ALEXANDRINUS. The following works may also be consulted: Parthey, *Das alexandrinische Museum* (Berlin, 1838); Ritschl, *Opuscula*, i. pp. 1–70, 123–172, 197–237; Susemihl, *Gesch. der alexandrin. Literatur*, i. pp. 327 foll.

MODERN MUSEUMS.—The modern museums that

are of the greatest interest to the classical student because of the value of their archaeological collections, are the following: (1) the various collections of the *Vatican* at Rome, comprising the Museo Chiaramonte, the Museo Pio-Clementino (in which are the Apollo Belvidere, the Laocoön group, the so-called statue of Antinoüs, the most beautiful statue in the world, and the tomb of Scipio Barbatus), the Braccio Nuovo, opened in 1820; the Museo Gregoriano, with a superb collection of Etruscan antiquities, and the Egyptian Museum; (2) the *Palazzo dei Conservatori* on the Capitol, containing the famous Capitoline Wolf, with Romulus and Remus, and many Etruscan terra-cottas; (3) the *Capitoline Museum*, founded by Innocent X., and containing the so-called Dying Gladiator, the Satyr of Praxiteles (a copy), a fine collection of busts of celebrated characters of antiquity, a collection of the busts of the Roman emperors, the mosaic called the Capitoline Doves, and the Capitoline Venus; (4) the *Kircherian Museum*, founded by the Jesuit, Kircher, about 1680, containing the Cista Ficoroniana (q. v.) and the famous caricature of the crucifixion (see GRAFFITI); (5) the *Museum of the Lateran* (Museum Gregorianum Lateranense), established in 1843 by Pope Gregory XVI., and containing a famous statue of Sophocles; (6) the *Museo Nazionale* at Naples, formerly the *Museo Reale Borbonico*, famous for its immense collection of objects found at Herculaneum and Pompeii, for its collection of inscriptions, and for the statues of the Farnese Hercules, the Farnese Bull, Venus Callipygé, etc.; (7) the collections of the *Galleria degli Uffizi* at Florence, containing the Venus de' Medici, the Wrestlers (see p. 758), and numerous inscriptions, bronzes, and gems; (8) the *Louvre* in Paris, with a splendid collection of inscriptions, the Venus de Milo, the Borghese Athlete, the Victory of Samothrace, the Melpomené, the Polymnia, and remarkable terra-cottas, fragments of sculptures from the Parthenon, Olympia, and Assos, with many painted vases; (9) the *British Museum* in London, opened in 1759, and containing the Elgin Marbles, the Phigalion Marbles, the Xanthian (Lycian) Marbles, the Halicarnassian Marbles, besides immense treasures of art in the shape of statuary, with inscriptions, etc., making it perhaps the finest collection in the world; (10) the *Glyptothek* at Munich, with a remarkable collection of some 1300 ancient vases; (11) the *Royal Museum* at Berlin, with objects found at Troy and Pergamus; (12) the *Imperial Museum* at Vienna, with an especially fine collection of bronzes; (13) the *Museum of the Hermitage* at St. Petersburg, rich in vases and jewels; (14) the *Museum at Athens*, with marbles from the Theseum, objects from Mycenae, and funerary remains. The most noted museum in America is the *Metropolitan Museum* in New York, containing a fine collection of objects from Cyprus, collected by Gen. di Cesnola. See CYPRUS.

Musĭca (*μουσική*, sc. *τέχνη*, "art of the Muses"). A term which included among the Greeks everything that belonged to a higher intellectual and artistic education. Plato (*Rep.* p. 136), while discussing education, speaks of "gymnastic for the body and music for the soul," and ranks literature under the head of music. Music in the narrower sense was regarded by the Greeks both as an agreeable amusement and as one of the most effective means of cultivating the feelings and the character. The great importance they attached to music is also shown by their idea that it was of divine origin; Hermes or Apollo is said to have invented the lyre, Athené the simple flute, Pan the shepherd's pipe. Besides these gods and the Muses, Dionysus also was connected with music. Numerous myths, as, for instance, those concerning Amphion and Orpheus, tell of its mighty power, and testify to the Greeks having cultivated music at a very early epoch. It was always intimately allied to poetry. Originally epic poems were also sung to the accompaniment of the cithara, and the old masters of poetry, such as Orpheus and Musaeus, are at the same time masters of music, just as in historical times the lyric and dramatic poets were at the same time the composers of their works. It was not until the Alexandrian Age that the poet ceased to be also a musician. Owing to its connection with poetry, music developed in the same proportion and flourished at the same period as lyric and dramatic poetry. Of the Greek races, the Dorians and Aeolians had a special genius and capacity for music, and among both are found the first traces of its development as an art.

The actual foundation of the classical music of the Greeks is ascribed to Terpander (q. v.), of the Aeolian island of Lesbos, who, in Dorian Sparta (about B.C. 675), first gave a truly artistic form to song accompanied by the cithara, and especially to the citharodic *νόμος*. In the Peloponnesian school of the Terpandridae, who followed his teaching and formed a closely united guild, *κιθαρῳδική* received its further artistic development. What Terpander had done for *κιθαρῳδική* was done not long afterwards by Clonas of Thebes or Tegea for *αὐλῳδική*, or song accompanied by the flute. The artistic flute-playing which had been elaborated by the Phrygian Olympus in Asia, was introduced by Clonas into the Peloponnesus, which long remained the principal seat of all musical art. Of the two kinds of independent instrumental music, which throughout presupposes the development of vocal music and always adapts itself to this as its model, the earlier is the music on the flute (*αὐλητική*), which was especially brought into favourable notice by Sacadas of Argos (about B.C. 580), while the music on stringed instruments (*κιθαριστική*) is later. Music was much promoted by the contests at the public festivals, above all by those at the Pythian Games. Its highest point of development was attained in the time of the Persian Wars, which seems to have seen the completion of the ancient system as it had been elaborated by the tradition of the schools. The lyric poets of this time, as Pindar and Simonides, the dramatists, as Phrynichus and Aeschylus, were held by the critics to be unsurpassable models. What was added in subsequent times can hardly be called a new development of the art. Athens in her golden age was the central city where professional musicians met one another—Athens the home of Greek dramatic poetry. At this time vocal combined with instrumental music largely prevailed over instrumental music alone. The latter was chiefly limited to solo performances.

Ancient vocal music is distinguished in one important point from ours: throughout classical times part-singing was unknown. There was at most a difference of octaves, and that only when men and boys sang in the same choir. Theoretically, however, the Greeks were acquainted with some of the effects upon which harmonic systems are

based, though in practice the nature of their harmonics was extremely simple, with no sure trace of chords or groups of more than two notes. Again, in classical times, the music was subordinate to the words, and was therefore necessarily much simpler than it is now. It is only in this way that we can explain the fact that an ancient audience could follow the musical representation of the often intricate language of the odes, even when the odes were sung by the whole choir. Critics regarded it as a decline of art when, at the end of the Peloponnesian War, the music began to be the important element instead of the poetry. This change took place at first in single branches of the art, as in the solos (*μονῳδίαι*) in tragedy and in the dithyrambic choruses. Thenceforward ancient music, like modern music, raised itself more and more to a free and independent position beside that of poetry.

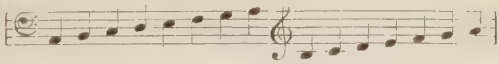
The first place among the various kinds of music was assigned to the indigenous citharodic art, which was connected with the first development of the musical art; and, indeed, stringed instruments were always more esteemed than wind instruments, in part on account of the greater technical difficulties which had to be overcome, and which led to musicians giving particular attention to them. Moreover, playing on the flute

was limited to certain occasions, as its sound seemed to the ancients to arouse enthusiasm and passion (Arist. *Polit.* viii. 3). There is evidence that, on the one hand, the ancient theory of singing and of instrumentation, in spite of the primitive nature of the instruments, was brought to a high degree of perfection; and that, on the other hand, the public must have possessed a severely critical judgment in matters of music. The characteristic feature of ancient music is the great clearness of its form, resulting, above all, from the extreme precision of the rhythmic treatment.

This was not the only point in which ancient music differed from modern music; it also differed from it in the number of its modes. The modes were distinguished from one another by the place of the semitones in the octave. While modern music has only two modes, the major and the minor, the Greek had seven. These seven modes, the names of which are taken from the three great Greek races and the neighbouring Asiatic nations (Dorian, Aeolian or Hypodorian, Ionian or Hypophrygian, Phrygian, Lydian, Mixolydian, and Hypolydian), were all employed at some time in the classical period, though they did not all of them come into use at the same date. It is significant of the distinction between ancient and modern music that of these modes the Dorian, which was the oldest and the lowest in pitch, and is described as dignified, severe, and grave, was most extensively used in all kinds of music.

As the basis of every melodic series of sounds the ancients had the *tetrachord*, a scale of four notes, to which, according to tradition, the earliest music was limited. The *heptachord* was certainly in use before Terpander, who is said to have given the lyre seven strings instead of four (Strabo, p. 618); but Pausanias (iii. 12, § 10) states with greater accuracy that he added four strings to the previously existing seven. The heptachord consisted of two tetrachords, as the central note was at once the highest of the first and the lowest of the second tetrachord.

Next came the *octachord* or octave, and at last, after various additions, the following scale of notes was formed:



From the lowest *b* onward, this scale was divided into tetrachords in such a way that the fourth note was always also regarded as the first of the following tetrachord; the intervals between the sounds of the tetrachord were, in ascending order, semitone, tone, tone. This sequence was called the "diatonic genus." Besides this there was also the "chromatic," the tetrachords of which were as follows: *b c* ♭*d e f* ♭*g a* (the intervals in this case were semitone, semitone, tone and a half). Thirdly, there was the "enharmonic," the tetrachord of which had for its intervals ¼ tone, ¼ tone, 2 tones, and accordingly cannot be expressed in modern notation.

The musical notation (*σημασία*) of the Greeks consisted of two distinct systems of signs—one for the voice, the other for the instrument. The vocal signs are taken from the common or Ionic alphabet. The notes of the middle part of the scale are denoted by the letters in their usual order; those of the lower part by an alphabet of inverted or otherwise altered letters; the upper notes are distinguished by accents—an accent signifying that the note is an octave higher than that of the unaccented letter. The following is a brief summary of Westphal's discoveries:

(1) The instrumental notation was derived from the first fourteen letters of a Peloponnesian alphabet, possessing *digamma*, Ϝ, the old form of *iota*, ϟ, and two forms of *lambda*, ˂ and ⊢. In a few cases the forms of the letters have been modified: thus *alpha* (originally ⋊) appears as ϒ, *beta* as Ⅽ, *delta* as ⅂, *theta* as Ⅽ, *my* (originally Ϻ) as Ρ, *iota* as Ⱨ. By treating the two forms of *lambda* as distinct characters the number is raised to fifteen.

(2) These characters are applied to denote a scale of two octaves, as follows:

Ⱨ Ⱨ Ɛ ⊢ Γ Ρ F C K ⅂ ˂ Ⅽ N Z ϒ

The arrangement of the letters is worth notice. The inventor began by taking *alpha* for the highest note of his scale. Then he took the other characters in pairs, Ⅽ Γ, ⅂ Ɛ, F Z, Ⱨ C, Ⱨ K, ˂ ⊢, Ρ N, and made each pair stand for the extreme notes of an octave. This scale may be regarded as the framework of the system of notation.

(3) A character may be varied by being reversed—i. e. written from right to left (*ἀπεστραμμένον*), or by being turned half round backward (*ἀνεστραμμένον, ὕπτιον*). When reversed, it denotes a note half a tone higher; when half reversed, it denotes a note a quarter of a tone higher. The

combination of the two varieties evidently gives an Enharmonic *πυκνόν*, or group obtained by dividing a semitone—e. g. if we take the four "stable" notes of the central octave, Γ C K Ɛ, we complete the scale in the Enharmonic genus by inserting the varieties of Γ and K, thus obtaining Γ L ⅂ C K ⋊ ⋊ Ɛ.

In some cases this method of varying the letters is impracticable—e. g. H reversed does not change; N half-reversed becomes Z, and vice versa. Other modifications are accordingly employed, and we have the groups Ч Ƨ Ч, Z ⅄ ⅄, N ⁄ ⅃, ⅂ ⊲ Δ, and H ⊟ ⊟.

(4) In the Diatonic genus the second lowest note of a tetrachord is not represented, as we should expect, by the reversed letter, but by the half-reversed one, the same character as the second lowest Enharmonic note.

(5) In the Chromatic genus the characters used are the same as in the Enharmonic, but the reversed letter is distinguished by an accent. Thus the Chromatic tetrachord *e f f ♯a* is written Γ L ⅂ ′C or (in the upper octave) Ɛ ⊔ ⊐ ′Ч.

(6) The system was enlarged by the addition of two tones, each with the corresponding *πυκνόν*, at the lower end of the scale, and an octave, except the highest note, at the upper end. The two groups were denoted by the characters ⍺ Ɛ T and Є ω Ǝ,

Fragment found at Delphi in 1893 with part of a Hymn to Apollo in musical notation.

which are evidently invented on the analogy of the letters already in use. The new upper notes were denoted by accented letters, K′ to Z′, repeating the scale from K to Z an octave higher.

We now have only seven pieces of ancient music whose authenticity is practically undisputed—the beginning of the First Pythian Ode of Pindar (see Boeckh's Pindar, *De Metris Pindari*, iii. 12); two hymns to Calliopé and Apollo, ascribed to one Dionysius (q. v. 4); a papyrus fragment of the music of a chorus of Euripides (*Orestes*, 338–344); an inscription found at Tralles in 1883, giving a musical setting to four short gnomes; a hymn of Mesomedes (q. v.) of the second century after Christ, published, with fac-similes, in Bellermann's *Hymnen des Dionysius und Mesomedes* (Berlin, 1840); and the fragments of a hymn found inscribed at Delphi in 1893. This last appears to be composed in a mood identical with the modern minor. It was composed after the repulse of the Gauls from Delphi in B.C. 279 and was first published in the *Bulletin de Correspondance Hellénique*, xvii. 569–610. The fragments of this hymn are fourteen in number; and from them various reconstructions of the piece reduced to the modern system of notation have been published, one of which was performed before the king of Greece at Athens not long after the discovery of the inscription. See the work by Monro cited at the end of the article.

Besides the pieces cited above there are also a few passages in the nature of short instrumental exercises; and a hymn to Demeter, first published by the Venetian composer Marcello, but regarded by Gevaert and other scholars as of very doubtful authenticity.

With regard to the musical instruments it may be mentioned that only stringed instruments (see especially CITHARA and LYRA) and the flute, which closely resembled our clarionet, were employed in music proper (see TIBIA); and that the other instruments, such as trumpets (see SALPINX), Pan's pipes (see SYRINX), cymbals (*cymbala*), and kettle-drums (see TYMPANUM), were not included within its province.

In proportion to the amount of attention paid to music by the Greeks, it early became the subject of learned research and literary treatment. The philosopher Pythagoras occupied himself with musical acoustics; he succeeded in representing numerically the relations of the octave, the fifth, and the fourth. For representing the symphonic relations the Pythagorean School invented the monochord or canon, a string stretched over a sounding-board and with a movable bridge, by means of which the string could be divided into different lengths; it was on this account known as the school of the Canonici as opposed to the Harmonici, who opposed this innovation and continued to be satisfied with a system of scales ("harmonics") sung by the sole guidance of the ear. Among the Canonici were philosophers such as Philolaüs, Archytas, Democritus, Plato, and Aristotle. Lasus of Hermioné, the master of Pindar, is mentioned as the first author of a theoretical work on music. The "harmonic" Aristoxenus (q. v.) Tarentum, a pupil of Aristotle, was held by the ancients to be the greatest authority on music; from his numerous works was drawn the greatest part of subsequent musical literature. Of other writers on music we may mention the well-known mathematician Euclid, and the great astronomer Claudius Ptolemaeus, who perfected musical acoustics.

Among the Romans a native development of music was completely wanting. They had, in-

deed, an ancient indigenous musical instrument, the short and slender Latin flute with four holes; but their national art of flute-playing was, at an early period, thrown into the background by the Etruscan, which was practised as a profession by foreigners, freedmen, and people of the lowest classes of the Roman population. Among the nine old guilds, said to have been instituted by King Numa, there was one of flute-players (*tibicines*), who assisted at public sacrifices. With the Greek drama, Greek dramatic music was also introduced; it was, however, limited to flute-playing. Stringed instruments were not originally known at Rome, and were not frequently employed till after the Second Punic War. Indeed, as Greek usages and manners in general gained ground with the beginning of the second century, so also did Greek music. Greek dances and musical entertainments became common at the meals of aristocratic families, and the younger members of respectable households received instruction in music as in dancing. Though it was afterwards one of the subjects of higher education, it was never considered a real and effective means of training. Entertainments like our concerts became frequent towards the end of the Republic, and formed part of the musical contests instituted by Nero, a great lover of music, in A.D. 60, on the model of the Greek contests. Domitian had an "Odeum" built on the Campus Martius for the musical entertainments of the Agon Capitolinus, instituted by him in A.D. 86, and celebrated at intervals of four years to the end of the classical period. Passages bearing on music in Roman literature have no independent value, as they are entirely drawn from Greek sources, as in the writings of Martianus Capella and Boetius. See the general histories of music by Naumann, 2 vols. (London, 1882–86); Ambros (2d ed. Leipzig, 1880–81); and Fétis (5 vols. unfinished, Paris, 1868–76). Also Westphal, *Die Musik des griechischen Alterthums* (Leipzig, 1883); Fortlage, *Das musikalische System der Griechen* (Leipzig, 1847); Chappell, *History of Music* (1874); Paul, *Boetius und die griechische Harmonik* (Leipzig, 1872); Engel, *The Music of the Most Ancient Nations* (London, 1864); Gevaert, *Histoire et Théorie de la Musique dans l'Antiquité* (Ghent, 1881); and Monro, *Modes of Ancient Greek Music* (Oxford, 1894).

Musīvum Opus. Mosaic. The term mosaic is usually derived from a post-classical word *musivum* (*μουσεῖον*), occurring in Spartianus (*Vit. Pescenn.* 6, *pictum de musivo*), and St. Augustine (*De Civ. Dei*, xvi. 8, *hominum genera musivo picta*). It is the art of arranging small cubes or *tesserae* of marble, coloured stone, terra-cotta, glass, or some other artificial substance, so as to produce an ornamental pattern or picture, and to provide a durable form of decoration for walls and pavements. The only mosaic hitherto found in Greece Proper is that discovered in 1829, in the floor of the east portico of the temple of Zeus, at Olympia, possibly little later than the first half of the fourth century B.C. It is formed of rough round pebbles of various colours from the bed of the Alpheus, and it represents Tritons of graceful design surrounded by a tasteful border of palmettes and meandering lines.

The earliest mosaics mentioned in literature are those made for the ship of Hiero II., about the middle of the third century, with scenes from the *Iliad*, which took 300 skilled workmen a whole year to execute (Athenaeus, 206 D). To the same age belongs the only artist in mosaic whose name is recorded in literature, Sosus of Pergamun, famous as the inventor of a kind of mosaic called the *ἀσάρωτον* (the "unswept" floor), in which the floor of a room is inlaid with representations of fruits, fishes, and fragments of food that have fallen from the table (Pliny, *H. N.* xxxvi. § 184; cf. Statius, *Silvae* i. 3, 36). Mosaics of this type have been found not only at Pompeii, but also at Aquileia and in Algiers (see p. 825). According to Pliny, the original design by Sosus included a remarkable representation of a dove drinking and casting the shadow of its head on the water beneath, while several other doves were to be seen sunning themselves on the rim of the bowl. The best-known copy of this is that called "The Capitoline Doves," found at Hadrian's Villa near Tivoli. It is entirely composed of cubes of marble, without any admixture of coloured glass.

The art of reproducing paintings in mosaic probably originated in Egypt, and thence found its way to Greece and Italy. It is doubtless connected in its origin with the brick-work and tiling of Egypt and Mesopotamia. In fact, just as wall-paintings were first suggested by tapestries, so mosaic work is a natural development from carpets. All these arts, indeed, were closely related, and the subjects of paintings are also used by the makers of mosaic. One of the finest pieces of mosaic at Pompeii, signed by Dioscorides of Samos, reproduces a wall-painting found in the same city. The largest mosaic picture of Roman workmanship is that executed for the temple

The Capitoline Doves. (Rome, Capitoline Museum.)

of Fortune at Praenesté, restored by Sulla (Pliny, *H. N.* xxxvi. 189). This was discovered in 1640, and is generally supposed to represent a popular *fête* on the occasion of an inundation of the Nile. It probably belongs to the time of Hadrian.

Among the mosaics of Pompeii the most famous is that identified as the "Battle of Issus," possibly a copy of the painting of the same subject by a female artist, Helena, "daughter of Timon the Egyptian," which was placed in the Temple of Peace in the time of Vespasian (Photius, *Bibl.* p. 482). It represents the critical moment when Alexander is charging, bare-headed, in the thick of the fray, and has just transfixed with his lance one of the leaders of the Persians; while Darius, with his lofty tiara and red chlamys, is extending his right hand in an attitude of alarm and despair. In the mosaic itself the lower border represents a river, apparently the Nile, with a crocodile, hippopotamus, ichneumon, ibis, etc., thus confirming the conjecture as to the Egyptian origin of the design. See illustrations, pp. 296 and 890.

Threshold in Mosaic. (Pompeii.)

Mosaics bearing the artist's name are seldom found. The two finest of this class are those from Pompeii inscribed with the name of Dioscorides of Samos. One of these represents four masked figures playing on various instruments. The work is composed of very small pieces of glass, of the most beautiful colours and in various shades. (See Dyer's *Pompeii*, p. 276). Another of similar construction portrays a rehearsal for a satyric drama. The ground is black, the drapery mainly white, but the robe of the flute-player is bordered with purple, the lips are a bright red, and the flutes and ornaments coloured like gold. The finest mosaic of the early part of the second century A.D. is the highly pictorial centaur-mosaic now at Berlin, found at the Villa of Hadrian (Baumeister's *Denkmäler*, fig. 941). The most celebrated works of a later date include that in the Thermae of Caracalla, with numerous gladiatorial figures of colossal size and ungraceful drawing (ib. fig. 174); and that of the Roman villa at Nennig, near Trèves. The dimensions of the latter are fifty feet by thirty-three, and the design includes several groups of figures enclosed in a square or hexagonal framework of tessellated marble (ib. figs. 1001–2343). Among the mosaics in the British Museum are an Amphitrité and Tritons, with Dionysus, Meleager, and Atalanta, all from Halicarnassus, and of Roman times, since figures of Dido and Aeneas were found in the same villa (Newton's *Travels and Discoveries*, ii. 76). Among mosaics still preserved in England may be mentioned those at Woodchester, Biguor, and Brading.

Mosaic pavements are known by different names descriptive of certain varieties of structure. (1) A *pavimentum sectile* is composed of thin plates of coloured marble of various sizes, cut (*secta*) into slices of regular form and arranged in an ornamental geometrical pattern including triangles, hexagons, etc. (Vit. vii. 1, 3, 4; Suet. *Caes.* 46 fin.) (2) The epithet *tessellatum* describes a pavement of the same general kind, but made up of regular square dies (*tesserae, tessellae, tesserulae*), forming rectangular designs. (3) *Vermiculatum* is applied to a design formed of small pieces of marble in various colours, arranged so as to imitate the object represented with a high degree of pictorial effect. The dies are of different shapes, so as to allow of their following the wavy contours of the outline of the object. The name owes its origin to the fact that the general effect of such an arrangement resembles the contortions of a cluster of worms (*vermes*). (Cf. Pliny, *H. N.* xxxv. 2; and Lucilius, quoted in Cicero's *Orator*, 149.) (4) The term *lithostrotum* (Varro, *R. R.* iii. 2, § 4; 1, § 10; Pliny, *H. N.* xxxvi. 189) was probably applied to a pavement made of small pieces of stone or marble of natural colours, and distinguished from those of coloured glass or some other artificial composition. Mosaics of glass were used to decorate ceilings.

The gilt *tesserae* used in Christian mosaics for the background of the pictures were formed by applying to a cube of earthenware two thin plates of glass with a film of gold-leaf between them, and vitrifying the whole in a furnace. It was this discovery that led to the extensive application of mosaic for the decoration of the walls, and more particularly the apses, of Christian churches. After the ninth century the art of working in mosaic ceased for a while in Rome and in Italy in general, to be revived at a later date in the church of S. Cyprian at Murano (1109) and the basilica of St. Mark's at Venice (in and after the eleventh century), and afterwards at Rome itself. In Sicily, the mosaics of the Cappella Palatina in the Royal Palace at Palermo were finished in 1143, while those of the cathedral at Monreale were begun in 1172.

The reader is referred to Marquardt, *Das Privatleben der Römer*, 625–632; Blümner's *Technologie*, iii. 323–343; Von Rohden on *Mosaik* in Baumeister's *Denkmäler*; Gerspach, *La Mosaïque* (1883); and Morgan, *Romano-British Mosaic Pavements* (1886).

Musonius Rufus, GAIUS. A Stoic philosopher, son of a Roman knight. He was banished by Nero in A.D. 66 to the island of Gyaros for his alleged share in the conspiracy of Piso. When Galba became emperor, the philosopher returned to Rome, and continued there under Vespasian, whose favour he had secured (Tac. *Ann.* xv. 71; Dio Cass. lxvi. 13).

Mustaceum. A wedding-cake which was cut up and divided among the guests as the bride and groom left the feast. It was made of flour mixed with new wine (*mustum*), cheese, and anise-seed, and was laid upon bay-leaves while baking (Juv. vi. 202; Cato, *R. R.* 121).

Mustax (*μύσταξ*). A moustache; also called *ὑπήνη*. The Greeks took pride in well-developed moustaches, as indicative of manly vigour (Theocr. xiv. 4; Pollux, ii. 80, x. 120). At Sparta, however, the people were required by the ephors to shave their moustaches (Plut. *Cleom.* 9). See BARBA.

Muster. See DELECTUS.

Mustum. New wine. See VINUM.

Muta. The same as Mania. See LARES.

Mutatiōnes. Posting-stations at which relays of horses were kept for the public service (see CURSUS PUBLICUS) and for the use of travellers. From twenty to forty horses were usually in readiness at these stations. See MANSIO.

Mutātor. The same as *desultor* (q. v.).

Muthul. Now Melleg; a river of Numidia which formed the boundary between the kingdoms of Iugurtha and Adherbae (Sall. *Iug.* 48).

Mutĭlus, C. Papius. A Samnite general in the Marsic War (B.C. 90–89).

Mutĭna. Now Modena; an important town in Gallia Cispadana, originally a town of the Boii, and afterwards a Roman colony. It is celebrated in the history of the Civil War after Caesar's death. Decimus Brutus was besieged here by M. Antonius from December, B.C. 44 to April, 43; and under its walls the battles were fought in which the consuls Hirtius and Pansa perished. Hence this war is called the BELLUM MUTINENSE.

Mutŭlus. See COLUMNA.

Mutunus Tutunus. A deity of the primitive Italians presiding over fruitful marriage, and resembling the later Priapus (q. v.) (Arnob. iv. 7). See PHALLUS.

Mutuum. The Latin word for a loan.

Mycălé (*Μυκάλη*). A mountain in the south of Ionia in Asia Minor, north of the mouth of the Maeander, and opposite the island of Samos. On the north side of the promontory near Priené was a great temple of Poseidon, where the Pan-Ionic festival was held (Pausan. v. 7, 3). Here a great victory was gained by the Greeks over the Persian fleet on the same day as the battle of Plataea, B.C. 479.

Mycalessus (*Μυκαλησσός*). An ancient city in Boeotia, on the road from Aulis to Thebes. In B.C. 413 it was sacked by some Thracian mercenaries in the pay of Athens. Here was a famous temple of Demeter, who was in consequence called Mycalessia (*Il.* ii. 498; Pausan. ix. 19).

Mycēnae and **Mycēné** (*Μυκῆναι, Μυκήνη*). A city at the head of the plain of Argolis, reputed in Greek tradition to have been the residence of Agamemnon. Its most flourishing period probably fell within the latter half of the second thousand years before Christ. At that time the seat of wealthy and powerful chieftains, it subsequently fell under the power of Argos, and was during the historical period a place of no importance. The wall of the citadel and several "bee-hive" tombs have always been visible. Excavations, carried on by Schliemann in 1876, and later by the Greek Archæological Society, have enormously increased our knowledge of Mycenae and of the early civilization which it represents.

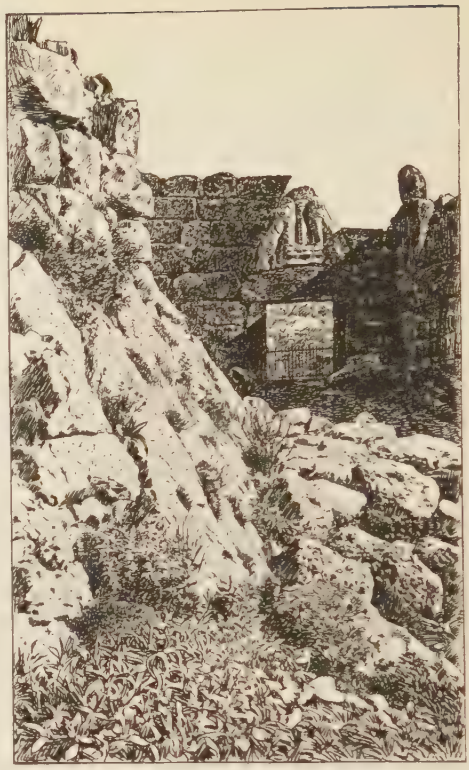
The first illustration shows in the middle distance the acropolis of Mycenae, with a portion of its encompassing wall. This wall, for the most part, resembles in its construction that of Tiryns (q. v.), though the blocks are not so gigantic. In places, however, we find an outer facing of approximately regular ashlar masonry (so, e. g., at the Lion Gate); in other places, of carefully jointed polygonal work. The principal entrance, the so-called Lion Gate, is shown in the third illustration. It consists of two upright posts surmounted by an enormous flat lintel. The relieving triangle above the lintel is filled by a relief representing

Acropolis at Mycenae and Mount St. Elias. (From a photograph.)

two lions (or lionesses) facing one another, and having between them an object of doubtful interpretation. There is, in addition, a smaller gate on the north side of the citadel.

Within the Lion Gate is a circular enclosure, nearly ninety feet in diameter. This was formed by two concentric rows of upright slabs, the space between the two rows being covered by horizontal slabs. Within the enclosure are six rectangular graves of various sizes, sunk in the rock at various depths below the double ring of slabs. The graves when opened contained the remains of from one to five corpses each (buried unburned), or nineteen in all, together with gold masks and ornaments, vessels of gold and of bronze, bronze weapons, pottery of the so-called Mycenae type, etc. Above the graves (in precisely what positions it is now difficult to make out) stood a number of grave-stones, partly unsculptured, partly sculptured with rude reliefs.

At the summit of the acropolis remains of a palace, similar in plan to that of Tiryns, but less well preserved, were discovered in 1886 by the Greek Archæological Society. The great *μέγαρον* or hall, with its circular hearth surrounded by four pillars and its double vestibule, is easily recognizable. Above the palace, and partly upon its ruins, are remains of what is thought to have been an early Doric temple.



Outside the acropolis was the city, consisting apparently of several detached settlements. In this region eight large subterranean buildings, doubtless tombs, of bee-hive form, are known to exist. The most imposing of these is the so-called "Treasury of Atreus" or "Tomb of Agamemnon," of which a vertical section is shown on p. 452. It is approached by a passage-way or *δρόμος*, walled at the sides, but open above. Then comes the doorway, once closed by heavy doors. The principal inner chamber is about fifty feet in diameter at

Principal Approach to Citadel of Tiryns.

the bottom and the same in height. It is built of great stones, laid in horizontal courses, each course pushed a little farther inward than the one below; compare the construction of the relieving triangle over the Lion Gate. There is, besides, a smaller side-chamber, cut in the rock. The other seven bee-hive tombs are built in a similar fashion, but with smaller stones. In addition to these, upwards of sixty smaller tomb-chambers, excavated in the solid rock and approached likewise by *δρόμοι*, have been discovered and opened.

The prehistoric civilization to which the Mycenaean remains bear witness must have been, in comparison with what meets us at the dawn of the historical period in Greece, a brilliant one. That

Lion Gate, Mycenae. (From a photograph.)

it was powerfully influenced by the earlier civilizations of the East, and especially by that of Egypt, there is abundant evidence to show. But the whole subject of its relations to what went before and what came after is in too uncertain a state to be treated in a sketch like the present.

See Steffen, *Karten von Mykenai* (Berlin, 1884); Schliemann, *Mycenae* (London, 1878); *Πρακτικὰ τῆς Ἀρχαιολογικῆς Ἑταιρίας* (1886); *Ἐφημερὶς Ἀρχαιολογική* (1887, 1888, 1891); Furtwängler und Loeschke, *Mykenische Thongefässe* (Berlin, 1879), and *Mykenische Vasen* (Berlin, 1886); Schuchhardt, *Schliemann's Ausgrabungen* (2d ed. Leipzig, 1891; Engl. trans. *Schliemann's Excavations*, London, 1891); Gardner, *New Chapters in Greek History* (London, 1892); Tsountas, *Μυκῆναι* (Athens, 1893).

Mycēnē (*Μυκήνη*). A daughter of Inachus and wife of Arestor. From her the city of Mycenae was said to have derived its name (Pausan. ii. 16, 3).

Mycerīnus (*Μυκερῖνος*). A son of Cheops, king of Egypt, succeeded his uncle Chephren on the throne, and reigned with justice. He began to build a pyramid, but died before it was finished. The Egyptian form of the name is Men-Kau-Ra. A pyramid erected by him is in the plain of Gizeh; and the coffin containing the body of the king is in the British Museum. See Herod. ii. 129–34; Diod. i. 64.

Mycŏnus (*Μύκονος*). A small island in the Aegaean Sea, one of the Cyclades, east of Delos, is celebrated in mythology as one of the places where the giants were defeated by Heracles. The island was popularly supposed to contain an unusual number of bald persons (Pliny, *H. N.* xi. 130).

Mygdon (Μύγδων). The son of Aemon, who fought against the Amazons, and from whom some of the Phrygians are said to have been called Mygdonides (Pausan. x. 27).

Mygdonia (Μυγδονία). (1) A district in the east of Macedonia, bordering on the Thermaic Gulf and the Chalcidic peninsula. (2) A district in the east of Mysia and the west of Bithynia, named after the Thracian people, Mygdones, who formed a settlement here, but were afterwards subdued by the Bithyni. (3) The northeast district of Mesopotamia, between Mount Masius and the Chaboras, which divided it from Osroëné.

Myia (Μυῖα). (1) A daughter of Pythagoras and Theano, and wife of the great athlete Milo of Crotona. (2) See CORINNA.

Myinda (μυΐνδα). The game of blindman's-buff, in which one person was blindfolded and was obliged to keep his eyes shut (μύειν). It was played in two ways: the blindfolded person (καταμύων), after crying φυλάττου ("look out"), tries to catch one of the players, who must then be blindfolded in his place; or else the καταμύων stands still and tries to guess the identity of those who touch him. In still another form of the game the players struck the blindfolded person with whips of papyrus. See Pollux, ix. 113; and Becq de Fouquières, *Les Jeux des Anciens*, p. 84.

Mylae (Μυλαί). A town on the eastern part of the north coast of Sicily, founded by Zanclé (Messana), and situated on a promontory running out into the sea. It was off Mylae that C. Duilius won his victory over the Carthaginians in B.C. 260, and that Agrippa defeated the fleet of Sex. Pompeius (B.C. 36).

Mylāsa (τὰ Μύλασα) or **Mylassa**. A flourishing inland city of Caria, in a fertile plain.

Myndus (Μύνδος). A Dorian colony on the coast of Caria, situated at the western extremity of the same peninsula on which Halicarnassus stood.

Myonnēsus (Μυόννησος). A promontory of Ionia, with a town and a little island of the same name, forming the northern headland of the Gulf of Ephesus. Here the Romans defeated Antiochus the Great in B.C. 190 (Livy, xxxviii. 27).

Myos Hormos (ὁ Μυὸς ὅρμος, i. e. "Musselport"), an important port-town of Upper Egypt, built by Ptolemy II. Philadelphus, on the Red Sea, six or seven days' journey from Coptos. It was afterwards called VENĔRIS PORTUS (Ἀφροδίτης ὅρμος).

Myra (τὰ Μύρα) and **Myron** (Μύρων). One of the chief cities of Lycia, built on a rock two miles from the sea. Remarkable ruins still exist here.

Rock-cut Tombs at Myra.

Myriandrus (Μυρίανδρος). A Phœnician colony in Syria, on the east side of the Gulf of Issus, a little south of Alexandria.

Myrii (μυρίοι). The name of the popular assembly of the Arcadians, established after the battle of Leuctra. See Grote, *Hist. of Greece*, x. p. 318.

Myrīna (Μυρίνα). (1) An ancient and important city of the Aeolians on the western coast of Mysia. At Gryneum, which belonged to it, was a famous oracle of Apollo. The city was also called SMYRNA, and in Roman times SEBASTOPŎLIS. (2) A town in Lemnos.

Myrlēa (Μύρλεια). A city of Bithynia, not far from Prusa, founded by the Colophonians, and almost rebuilt by Prusias I., who called it Apamēa, after his wife.

Myrmĭdon (Μυρμιδών). A son of Zeus and Eurymedusa, daughter of Clitos, to whom Zeus managed to obtain access in the form of an ant (μύρμηξ). He was the legendary ancestor of the Thessalian Myrmidones; and was by Pisidicé the father of Antiphus and Actor (Apollod. i. 7, 3; Apoll. Rhod. i. 56).

Myrmidŏnes (Μυρμιδόνες). A race in Southern Thessaly, said to have originally dwelt in the island of Aegina and to have emigrated from it with Peleus. They fought before Troy under their chieftain Achilles. For a legend about their origin, see Aeacus.

Myrmillo. See Gladiatores.

Myron (Μύρων). One of the most celebrated Greek artists of Eleutherae, in Attica, an older contemporary of Phidias and Polyclitus, and, like them, a pupil of Ageladas. His works, chiefly in bronze, were numerous and very varied in subject — gods, heroes, and especially athletes and representations of animals, which were admired by the ancients for their life-like truth to nature. Most famous among these were his statue of the Argive runner Ladas; of Marsyas, of which a marble copy is now in the Lateran at Rome; his "Discobolus," or quoit-thrower (see Discus), which we are enabled to appreciate in several copies in marble, the best being that in the Palazzo Massimi and one in bronze in the Palazzo Lancelotti in Rome; and his "Cow on the Market-place at Athens," which received the very highest praise among the ancients, was celebrated in thirty-six extant epigrams in the Greek anthology, all quoted in Overbeck's *Schriftquellen*, §§ 550–588, and may be regarded as his masterpiece. He was also the first to represent what is really a genre portrait in his "Drunken Old Woman" (Pliny, *N. H.* xxxvi. 32); but this is now attributed to another artist, one Socrates (Overbeck, § 2092). See Collignon, *Histoire de la Sculpture Grecque* (Paris, 1892).

Myrrha (Μύρρα), also called **Smyrna** (Σμύρνα). Mother of Adonis by her own father Cinyras, for whom she entertained an unnatural passion, in consequence of which she was changed into a myrtle-tree. See Adonis; Cinyras.

Myrrhīnūs (Μυρρινοῦς). A deme on the eastern coast of Attica, belonging to the tribe Pandionis (Pausan. i. 31, 4).

Myrsĭlus (Μύρσιλος). (1) See Candaules. (2) A Lesbian historical writer of uncertain date; one of the sources used by Dionysius of Halicarnassus in his account of the Pelasgians (i. 23).

Myrsĭnus. See Myrtuntium.

Myrtĕa. See Murcia.

Myrtĭlus (Μυρτίλος). Son of Hermes, by Cleobulé or Myrto. He was the charioteer of Oenomaüs, whose defeat by Pelops in the race was due to his treachery. When he demanded the reward that had been settled, the half of the realm of Oenomaüs, Pelops threw him into the sea near Geraestus, in Euboea, and that part of the Aegean was thence called the Myrtoan Sea. He was placed among the stars as the constellation Auriga. See Oenomaüs; Pelops.

Myrtis (Μύρτις). A lyric poetess of Anthedon, in Boeotia, who is said to have been the teacher of Pindar, to which there is an allusion in an extant fragment of Corinna (*Anthol. Pal.* ix. 26). See Pindarus.

Myrtōum Maré (τὸ Μυρτῶον πέλαγος). The part of the Aegaean Sea south of Euboea, Attica, and Argolis, which derived its name from the small island Myrtus, though others suppose it to come from Myrtilus, whom Pelops threw into the sea. (See Pelops.) The name of Mygdonia was first introduced after the Macedonian conquest.

Myrtuntium (Μυρτούντιον), called **Myrsĭnus** in Homer. A town of the Epeans in Elis, on the road from Elis to Dymé.

Myrtus. See Myrtoum Maré.

Mys (Μῦς). A famous toreutic artist who engraved the "Battle of the Centaurs" on the inside of the shield of the Athené Promachos of Phidias. The work was executed after a design by Parrhasius (Pausan. i. 28, 2), a generation after Phidias. It was Parrhasius also who designed the "Capture of Troy" for a cup embossed by Mys (Athen. p. 782 b; see also Pliny, *H. N.* xxxiii. 154).

Myscĕlus (Μύσκελος). A native of Achaia, who founded Croton in Italy, B.C. 710, by order of the Delphic oracle, which had commanded him to build a city, where he should find rain with fine weather. For a long time he thought it impossible to fulfil the command of the oracle, till at length he found in Italy a beautiful woman in tears; whereupon he perceived that the oracle was accomplished, and straightway founded Croton on the spot (Dionys. ii. 59).

Mysia (τὰ Μύσια). A festival held in honour of Demeter Mysia at Pellené in Arcadia (Pausan. vii. 27, 9). It lasted for seven days.

Mysia (Μυσία). A district of Asia Minor, called also the Asiatic Mysia (Μυσία ἡ Ἀσιανή), in contradistinction to Moesia on the banks of the Danube. Originally, it meant the territory of the Mysi; but in the usual division of Asia Minor, as settled under Augustus, it occupied the whole of the northwestern corner of the peninsula between the Hellespont on the northwest, the Propontis on the north, the river Rhyndacus and Mount Olympus on the east, which divided it from Bithynia and Phrygia, Mount Temnus and an imaginary line drawn from Temnus to the southern side of the Elaïtic Gulf on the south, where it bordered upon Lydia, and the Aegean Sea on the west. It was subdivided into five parts: (1) Mysia Minor (ἡ μικρά), along the northern coast; (2) Mysia Maior (ἡ μεγάλη), the southeastern inland region, with a small portion of the coast between the Troad and the Aeolic settlements about the Elaïtic Gulf; (3) Troas (ἡ Τρωάς), the northwestern angle, between the Aegean and Hellespont and the southern coast along the foot of Ida; (4) Aeŏlis or Aeolia (ἡ Αἰολίς or Αἰολία), the southern part of the western coast around the Elaïtic Gulf, where the chief cities of the Aeolian confederacy were planted; but applied in a wider sense to the western coast in general; and (5) Teuthrania (ἡ Τευθρανία), the southwestern angle, between Temnus and the borders of Lydia, where, in very early times, Teuthras was said to have established a Mysian kingdom, which was early subdued by the kings of Lydia; this part was also called Pergamené, from the cel-

ebrated city of Pergamus, which stood in it. This account applies to the time of the early Roman Empire; the extent of Mysia and its subdivisions varied greatly at other times.

In the Heroic Age we find the great Teucrian monarchy of Troy in the northwest of the country and the Phrygians along the Hellespont; as to the Mysians, who appear as allies of the Trojans, it is not clear whether they were Europeans or Asiatics. The Mysia of the legends respecting Telephus is the Teuthranian kingdom in the south, only with a wider extent than the later Teuthrania. Under the Persian Empire, the northwestern portion, which was still occupied in part by Phrygians, but chiefly by Aeolian settlements, was called Phrygia Minor, and by the Greeks Hellespontus. Mysia was the region south of the chain of Ida; and both formed, with Lydia, the second satrapy. In the division of the Empire of Alexander the Great, Mysia fell, with Thrace, to the share of Lysimachus, B.C. 311, after whose defeat and death, in 281, it became a part of the Graeco-Syrian kingdom, with the exception of the southwestern portion, where Philetaerus founded the kingdom of Pergamus (280), to which kingdom the whole of Mysia was assigned, together with Lydia, Phrygia, Caria, Lycia, Pisidia, and Pamphylia, after the defeat of Antiochus the Great by the Romans in 190. With the rest of the kingdom of Pergamus, Mysia fell to the Romans in 133 by the bequest of Attalus III., and formed part of the province of Asia. Under the later Empire, Mysia formed a separate proconsular province under the name of Hellespontus.

The country was, for the most part, mountainous, its chief chains being those of Ida, Olympus, and Temnus, which are terminal branches of the northwestern part of the Taurus chain, and the union of which forms the elevated land of southeastern Mysia. Their prolongations into the sea form several important bays and capes—namely, among the former, the great Gulf of Adramyttium (Adramytti), which cuts off Lesbos from the continent, and the Sinus Elaïticus (Gulf of Chandeli); and, among the latter, Sigeum (Cape Yenicheri) and Lectum (Gulf of Baba), at the northwestern and southwestern extremities of the Troad, and Cane (Cape Coloni) and Hydria (Fokia), the northern and southern headlands of the Elaïtic Gulf. Its rivers are numerous; some of them considerable, in proportion to the size of the country; and some of first-rate importance in history and poetry; the chief of them, beginning on the east, were Rhyndacus and Macestus, Tarsius, Aesepus, Granicus, Rhodius, Simoïs and Scamander, Satnoïs, Evenus, and Caïcus. The peoples of the country, besides the general appellations mentioned above, were known by the following distinctive names: the Olympieni or Olympeni (Ὀλυμπιηνοί, Ὀλυμπηνοί), in the district of Olympené at the foot of Mount Olympus; next to them, on the south and west, and occupying the greater part of Mysia proper, the Abretteni, who had a native divinity called by the Greeks Ζεὺς Ἀβρεττηνός; the Trimenthuritae, the Pentademitae, and the Mysomacedones, all in the region of Mount Temnus.

Mystae (*μύσται*). The Greek term for those who had been initiated into the mysteries of the Lesser Eleusinia. Opposed to *ἐπόπται*, who were those admitted to the third or higher grade. See ELEUSINIA.

Mystagōgus (*μυσταγωγός*). One who performs the initiation into the Mysteries. See ELEUSINIA.

Mysteria (*τὰ μυστήρια*). The Mysteries, also called *ὄργια*. The term *τελεταί* is likewise employed, and the Latin equivalent is INITIA (Cic. *De Leg.* ii. 14, 36). The Mysteries were ceremonies in the ancient religions practised in seclusion and known only to bodies of initiates. They were held at certain fixed seasons and were largely symbolical in their character, though their origin is not very satisfactorily understood. It is held by many that they were intended to strengthen men's hopes in a future life in which the good who fail of a reward here should there receive it, while punishment should be visited upon the wicked. Hence a part of the ceremonial had to do with the resurrection of the gods and heroes; and we find some remarkable passages in the Greek poets that support this view. Thus Pindar (*Frag.* 137): "Blessed is he who has seen them before he goes below the earth;" and the inscription (*Ephem. Arch.* 1883): "To the initiated, death is not an evil; it is a gain." Cf. also Soph. *Frag.* 719; and Aristoph. *Ran.* 455.

The Mysteries consisted of purifications, sacrifices, processions, songs, dances, dramatic spectacles, and similar ceremonies. The formulae or liturgies (*δεικνύμενα, λεγόμενα, δρώμενα*) were kept profoundly secret, to be revealed only to those who had been fully initiated. The *mystagogi*, or priests of the Mysteries, had undoubtedly at their command an abundance of mechanical devices to produce effects most startling and convincing to the credulous worshippers. All the arts, in fact, were taxed to the utmost to astonish, dazzle, and appal. Marvels of light, sound, and colour were displayed. Mysterious harmonies stole upon the ears of the attendant throngs; sighs and whispers were audible amid the intervals of awful silence; lights gleamed in strangely beautiful colours; and dazzling figures appeared and disappeared. In the earlier times the fame of the Mysteries was very great. Herodotus speaks of some 30,000 persons attending them (viii. 65); but in later times they degenerated, the secrecy was removed, and they became orgies in the modern sense of the word, at which the most shameless indecencies were practised, until under the Romans they had to be suppressed as public nuisances.

The most important Mysteries were those of Eleusis and the Thesmophoria, both symbolizing the rape of Persephoné and the search for her by her mother Demeter (see ELEUSINIA; THESMOPHORIA); those of Cybelé and Aphrodité, referring to the mystery of procreation (see APHRODISIA; RHEA); those of Orpheus, who was regarded as the founder of all Mysteries (see ORPHICA); of Bacchus (see DIONYSIA); of Zeus in Crete; of the foreign gods Mithras (see MITHRAS), Sabazius (see SABAZIUS), the Cabeiri (see CABEIRIA), and Isis (see ISIS). The most famous Mysteries of Roman origin were those of the Bona Dea (see BONA DEA) and of the Arval Brethren (see FRATRES ARVALES).

The principal works in modern times relating to the Mysteries are those of Creuzer, *Symbolik und Mythologie der alten Völker* (1810–12), which regards their nature as wholly symbolical; the profoundly learned treatise of Lobeck, *Aglaophamus* (1829), anti-symbolistic and lacking in the religious sense; Preller, *Demeter und Persephoné* (1837); Lenormant, *Voie Sacrée Eleusinienne* (1864); Strabo,

Studien über den Bilderkreis von Eleusis (1872); Förster, *Der Raub und die Rückkehr der Persephone* (1874); Haggenmacher, *Die eleusinischen Mysterien* (1880); Stengel, *Griechische Kultusalterthümer* (1890), Rubensohn, *Die Mysterienheiligthümer in Eleusis und Samothrake* (1892); and Gardner, *New Chapters in Greek History*, pp. 381–402 (1892).

Mystilé (*μυστίλη*). A sort of spoon used by the Greeks. See CENA, p. 311.

Mytilēné. See MITYLENÉ.

Mystrum (*μύστρον*, "a spoonful"). A Greek liquid measure of two sizes—the small = $\frac{1}{30}$ of an English pint, the large being variable, but usually about $\frac{1}{4}$ more than the small one.

Mythologia (*μυθολογία*, Plato, *De Rep.* 394 B). Mythology; a term sometimes used of the collected myths of a race or nation, and sometimes of the scientific study of such myths. A myth (*μῦθος*) is a story, more or less poetic, related of gods or heroes. It is not a pure product of the imagination, but is best regarded as in a way related to fact, whether the fact be a preceding reality or some often-recurring phase of nature. The Greeks, a people most prolific in the development and elaboration of myths, themselves took the view that there is necessarily some meaning in a myth, either an historical occurrence disguised and exaggerated or an operation of nature veiled in an allegory. Thus Anaxagoras regarded the true meaning of most of the myths to be psychological; Empedocles, philosophical. Euhemerus (q. v.) gave a rationalistic turn to mythology, stripping away the element of the supernatural altogether; though Gruppe takes the ground that the work of Euhemerus is best regarded as a work of pure fiction, with no ulterior motive behind it. The Stoics at Rome tried to explain all myths as allegorical descriptions of physical facts, but this failed to account for just those myths which most required explanation—the hideously immoral and bestial myths that troubled the minds of men like Plato.

It is safe to say that most myths are the result of man's observations of nature, whose various forms are personified as powerful beings by the imaginations of primitive men. These forms were regarded as in part hostile and in part friendly to man. A more advanced stage of mental development elaborated these crude conceptions, and began to regard these beings as acting in accordance with fixed moral laws and endowed with human forms. Thus we have Anthropomorphism. Poets and story-tellers brought the gods into connection with one another by inventing genealogies for them and building up a whole political system, presided over by Zeus, the father alike of gods and men. Around the earlier and ruder fancies a wonderful maze was now woven, adorned by all the arts of poetry and prose and embedded in the nation's literature. Among the Romans the cruder and simpler notion prevailed much longer—in fact, throughout the whole period of purely national development. To them the gods were still only the natural forces—beings strangely impersonal and making little demand upon the imagination or the affection. They were to be propitiated, but not loved. Their worship was a State affair, and the early Roman performed his religious duties in much the same spirit as he paid his taxes. This is shown in the very nature of the deities at Rome—gods not only of the sky and the earth, the sea and the world below, but gods of thievery and lust, of typhoid fever and sewers. Later, when the Romans came into contact with the Greeks and began the systematic study of their literature, they adopted the Greek conception of the gods and the genealogies worked out by Hesiod and others. They transplanted the Greek myths and told them of such of their own gods and goddesses as bore the closest likeness to those of the Greeks, identifying Zeus with Iupiter, Heré with Iuno, Ares with Mars, Athené with Minerva, and so on. For some of their deities, as, for instance, Ianus, they could find no Hellenic prototype.

In modern times the Graeco-Roman mythology has been differently viewed. Creuzer made it wholly symbolical and allegorical; Lobeck overthrew this doctrine in its extreme form and paved the way for a thoroughly scientific study of the subject. The brothers Grimm taught that mythology was not, as Creuzer implied, the work of the superior few, of a learned caste, but was the way in which the multitude expressed their religious feeling. This view is supported by the fact that in peoples widely apart the same myth is found, varying in its form, but identical in its main outlines. Hence arose the study of Comparative Mythology, the creation of two scholars—Adalbert Kuhn (1812–81) in Germany, and Max Müller in England. The object of this study is to trace all myths back to the pre-historic period when the Indo-European peoples were united; and, having done so, to determine the original forms and the original meanings. More recent mythologists, such as Mannhardt (1831–89), view the folk-tales as the earliest stratum accessible to the comparative mythologist, rejecting the Sanskrit Vedas as a later and literary compilation. Gruppe, one of the very latest investigators, rejects the comparative method altogether, and thinks that myths have been simply borrowed by one nation from another, and not handed down from a common ancestry at all.

For a discussion of the theory of myths, the standard works are: Creuzer, *Symbolik und Mythologie* (1810–12); Lobeck, *Aglaophamus* (1829); Max Müller, *Comparative Mythology* (1856); Schrader, *Prehistoric Antiquities of the Aryan Peoples* (Engl. trans. 1890); Gruppe, *Die griechischen Culte und Mythen* (1887); Mannhardt, *Wald- und Feldkulte* (1876); Tylor, *Primitive Culture* (3d Amer. ed. 1888); A. Lang, *Custom and Myth* (1884); id. *Myth, Ritual, and Religion* (1887).

Good descriptive works of the Greek and Roman systems of mythology are: Preller, *Griechische Mythologie* (4th ed. 1887); id. *Römische Mythologie* (3d ed. 1883); Gayley, *Classic Myths* (popular, 1893); Guerber, *Myths of Greece and Rome* (popular, 1893); Seelmann, *The Mythology of Greece and Rome* (elementary; Engl. trans. 1892). There is a dictionary of mythology giving the latest views, in German, by Roscher, *Ausführliches Lexicon der griechischen und römischen Mythologie* (Leipzig, still in course of publication). See also RELIGIO.

Myus (*Μυοῦς*). The least city of the Ionian confederacy. It stood in Caria, on the bank of the Maeander.

N

N, as a symbol.

In Greek.—

N = *νεώτερος*.

NX = *νομίσματος χαλκοῦ*.

N̊ = Νουμήνιος or Νουμήριος.

NΦ = *νομοφύλαξ*.

As a numeral = 13 (old system) or 50. ,*ν* = 50,000.

In Latin.—

N = natalis, natus, nauta, nefastus, nepos, niger, nonae, noster, novus.

N·A·S = numini Augusti sacrum.

N·D = numen deorum.

N·D·A·N·M = nullum dolorem accepit nisi morte.

N·I = natione Itala.

N·M = numerus militum, Noricum mediterraneum.

N·M·Q·E·D = numini maiestatique eius dicatissimus.

N·M·V = nobilis memoriae vir.

N·P(V) = Neptunus, nobilissimus puer (vir).

N·S·S·I·M = numen sanctum Solis invicti Mithrae.

Naarmalcha (Νααρμάλχας). "The King's Canal"; a great canal connecting the Euphrates and the Tigris, near the northern boundary of Babylonia (Herod. i. 193; Pliny, *H. N.* vi. 120).

Nabalia or **Navalia**. Now the Yssel; a river flowing into the Flevum (Zuyder Zee). See Tac. *Hist.* v. 26.

Nabarzānes (Ναβαρζάνης). A Persian who conspired with Bessus (q. v.) against Darius, the last king of Persia.

Nabataei, Nabăthae (Ναβαταῖοι, Ναβάται). An Arabian race said to have descended from Ishmael. They originally dwelt in the northwestern part of Arabia, east of the Moabites; but later occupied the Sinaitic peninsula. Their capital in Roman times was Petra (q. v.). At first they were a roving pastoral people; but, as their position gave them the command of the trade between Arabia and the west, they prosecuted that trade with great energy, establishing regular caravans between Leucé Comé, a port of the Red Sea, and the port of Rhinocolura (El-Arish) on the Mediterranean, upon the frontiers of Palestine and Egypt. Sustained by this traffic, a powerful monarchy grew up, which resisted all the attacks of the Greek kings of Syria, and which, sometimes at least, extended its power as far north as Syria. Thus, in the reign of Caligula, even after the Nabathaeans had nominally submitted to Rome, we find even Damascus in possession of an ethnarch of "Aretas the king," i. e. of the Nabathaean Arabs: the usual names of these kings were Aretas and Obodas. Under Augustus the Nabathaeans are found, as nominal subjects of the Roman Empire, assisting Aelius Gallus in his expedition into Arabia Felix, through which, and through the journey of Athenodorus to Petra, Strabo derived important information. Under Trajan the Nabathaeans were conquered by A. Cornelius Palma, and Arabia Petraea became a Roman province, A.D. 105–107. In the fourth century it was considered a part of Palestine, and formed the diocese of a metropolitan, whose see was at Petra. The Mohammedan conquest finally overthrew the power of the Nabathaeans. See C. Doughty, *Documents Épigraphiques Recueillis dans le Nord de l'Arabie* (1884).

Nabis (Νάβις). A person who succeeded in making himself tyrant of Lacedaemon on the death of Machanidas, B.C. 207. He carried his tyranny to the furthest possible extent. All persons possessed of property were subjected to incessant exactions, and the most cruel tortures if they did not succeed in satisfying his rapacity. One of his engines of torture resembled "the Maiden" of more recent times. It was a figure resembling his wife Apega, so constructed as to clasp the victim and pierce him to death with the nails with which the arms and bosom of the figure were studded (Polyb. xiii. 7). The money which he got by these means and by the plunder of the temples enabled him to raise a large body of mercenaries, whom he selected from among the most abandoned and reckless villains. With these forces he was able to extend his sway over a considerable part of Peloponnesus; but his further progress was checked by Flamininus, who after a short campaign compelled him to sue for peace (B.C. 195). The tyrant, however, was allowed to retain the sovereignty of Sparta, and soon after the departure of Flamininus from Greece he resumed hostilities. He was opposed by Philopoemen, the general of the Achaean league; and though Nabis met at first with some success, he was eventually defeated by Philopoemen, and was soon afterwards assassinated by some Aetolians who had been sent to his assistance, B.C. 192 (Livy, xxxv. 12–35; Pausan. viii. 50).

Nabla (*νάβλα*). A kind of lyre. See Lyra.

Nabonassar (Ναβονάσαρος). A king of Babylon, who lived about the middle of the eighth century before the Christian era, and who gave name to what is called the Nabonassarian Era. The origin of this era is thus represented by Syncellus from the accounts of Polyhistor and Berosus, the earliest writers extant in Chaldaean history and antiquities: "Nabonassar, having collected the acts of his predecessors, destroyed them, in order that the computation of the reigns of the Chaldaean kings might be made from himself." It began, therefore, with the reign of Nabonassar (February 26, B.C. 747). The form of year employed in it is the movable year of 365 days, consisting of twelve equal months of thirty days, and five supernumerary days, which was the year in common use among the Chaldaeans, Egyptians, Armenians, Persians, and the principal Oriental nations from the earliest times. This year ran through all the seasons in the course of 1461 years. The freedom of the Nabonassarean Year from intercalation rendered it peculiarly convenient for astronomical calculation. Hence it was adopted by the early Greek astronomers Timocharis and Hipparchus, and by those of the Alexandrian school, Ptolemy, etc. In consequence of this, the whole historical catalogue of reigns has been commonly, though improperly, called Ptolemy's Canon, because he probably con-

tinued the original table of Chaldaean and Persian kings, and added thereto the Egyptian and Roman down to his own time.

Nabopolassar (*Ναβοπωλάσαρος*). A king of Babylon, who united with Astyages against Assyria, which country they conquered, and, having divided it between them, founded two kingdoms, that of the Medes under Astyages, and that of the Chaldaeans under Nabopolassar, B.C. 626. Necho, king of Egypt, jealous of the power of the latter, declared war against and defeated him. Nabopolassar died after a reign of twenty-one years.

Nacolīa (*Νακόλεια*, *Νακώλεια*, and *Νακολία*). A town of Phrygia Epictetus on the river Thymbrius, where the Roman emperor Valens defeated his rival Procopius in A.D. 366 (Ammian. Marc. xxvi. 6).

Naenia. See NENIA.

Naevius, GNAEUS. A Roman epic and dramatic poet. He was probably born in Campania, about B.C. 270; served in the Roman army during the First Punic War; and, settling after this at Rome, brought out his first play in 235, soon after the first appearance of Livius Andronicus. Owing to the recklessness with which he attacked the Roman nobles, especially the Metelli, he was thrown into prison, and though liberated by the tribunes of the people (Gell. iii. 3), was afterwards banished from Rome. He died in exile at Utica about the year 199. See the epitaph in Gellius (i. 24).

His poetical account of the First Punic War (*Bellum Punicum*), written when an old man in the Saturnian verse, made him the creator of the Roman national epic. (See EPOS.) This work originally formed one continuous whole, but in a later age was divided into seven books by the scholar Octavius Lampadio (Suet. *Gram.* 2). The fragments preserved give the impression of its having been little more than a chronicle in verse. Even in its plan, it bears a close resemblance to the prose chronicles of the Roman annalists; for here, as there, the real subject of the poem was preceded by an account of the early history of Rome, dating from the flight of Aeneas from Troy. Naevius also made an important departure in the province of dramatic poetry by creating a national drama. Besides imitations of Greek tragedies, of which seven alone are known by name and by extant fragments, it was he who first attempted to adapt the materials of Roman history to the dramatic form handed down by the Greeks. Thus, in the *Romulus* or *Lupus*, he treated of the youth of Romulus and Remus; and, in the play *Clastidium*, of a contemporary historical event. From the number of titles of his comedies still preserved (thirty-three), and from the verdict of antiquity, we may infer that his forte lay in that species of composition; and he appears to have been no mere translator of his Greek originals, but to have handled them with considerable freedom. It was in his comedies especially that he introduced his attacks on men and events of the day. The fragments of Naevius will be found in Ribbeck's *Poeseos Scenicae Fragmenta*. See De Moor, *Cn. Névius* (Tournai, 1877); and Mommsen's *Hist. of Rome*, ii. pp. 519, 538, 540 (American ed.).

Naevius Macro. See MACRO.

Nägelsbach, KARL FRIEDRICH. A German classical scholar, born near Nuremberg in 1806. He became Professor in the University of Erlangen in 1842; and died in 1859. He wrote *Die homerische Theologie* (1861); *Die nachhomerische Theologie* (1857); and edited the *Agamemnon* of Aeschylus (ed. by List, 1863); but is best known by his elaborate treatise, *Lateinische Stilistik* (1846; last ed. by I. Müller, 1890).

Naharvăli. A tribe of the Lygii in Germany, probably dwelling on the banks of the Vistula (Tac. *Germ.* 43).

Nahrmalcha. See NAARMALCHA.

Naïădes (*Νηΐδες*). Inferior deities who presided over rivers, brooks, springs, and fountains. Their name is derived from *ναίω*, "to flow," as indicative of the gentle motion of water. The Naiades are generally represented as young and beautiful virgins, leaning upon an urn, from which flows a stream of water. They were held in great veneration among the ancients, and sacrifices of goats and lambs were offered them, with libations of wine, honey, and oil. Sometimes they received only offerings of milk, fruit, and flowers. See NYMPHAE.

Nails. See CLAVUS.

Naïsus, Naïssus, or **Naesus** (*Naΐσος*, *Naΐσσός*, *Naΐσσος*). The modern Nisch; a town of Upper Moesia, situated on an eastern tributary of the Margus, and celebrated as the birthplace of Constantine the Great, who enlarged and beautified it.

Namatiānus, RUTILIUS CLAUDIUS. A Roman poet, by birth a Gaul and a pagan, who was *praefectus urbi* under the emperor Honorius. After the sack of Rome by Alaric, he returned to his native country, then overrun by the Visigoths, and described his journey home in a poem in two books, *De Reditu Suo*, of which a portion of the first and the end of the second have perished. The poem is pure and correct in language and metrical form, and is interesting on account of its pathetic description of the misfortunes of the time. He detests the Jews (i. 383), and speaks of Christianity as *deterior Circaeis secta venenis* (i. 525). His philosophy is Stoic. See F. Müller, *De Namatiano Stoico* (1882). There is an edition by L. Müller with an introduction (Leipzig, 1870); and a (German) translation with notes by Reumont (Berlin, 1872).

Names. See NOMEN.

Namnētae (*Ναμνηταί*) or **Namnētes.** A people on the west coast of Gallia Lugdunensis, on the north bank of the Liger. Their chief town was Condivincum, afterwards Namnetes (Nantes) (Caes. *B. G.* iii. 9).

Nana. The mother of Attis. See ATTIS; RHEA.

Nani (*νάννοι*, *νᾶνοι*, *σκωπαῖοι*, *στίλπωνες*). Pygmies or dwarfs, beings of diminutive stature, kept for amusement and as rarities among the number of State slaves (Suet. *Tib.* 61), both males and females (*nanae*) (Lamprid. *Alex. Sev.* 34). They were neither always distorted in figure, nor always of mental imbecility, like the *moriones*, for they were taught music and other accomplishments (Propert. iv. 8, 41). Deformity, however, added to their value; and this was often caused by artificial means, children being kept in a casting or frame to stunt their growth (Longin. *De Sublim.* 44, 5). See Mayor on Juv. viii. 32; Marquardt, *Privatleben*, 152; and PUMILIO.

Nanus. (Rich.)

Nantuātae or **Nantuātes**. A people in the southeast of Gallia Belgica, at the eastern extremity of the Lacus Lemannus (Lake of Geneva). See Caes. *B. G.* iv. 10.

Naos (*νάος*). The Greek term for the inner portion of a temple. See TEMPLUM.

Napaeae (*Ναπαῖαι*). Nymphs haunting forests, groves, and glens. See NYMPHAE.

Napăta (*τὰ Νάπατα*). The capitol of an Aethiopian kingdom, at the great bend of the Nile between the fourth and fifth cataracts (Strabo, p. 820).

Napkins. See MAPPA.

Napōca or **Napŭca**. Now Clausenberg; a Roman colony in Dacia (*C. I. L.* iii. 860, 865).

Nar. The modern Nera; a river in Central Italy, rising in Mount Fiscellus, forming the boundary between Umbria and the land of the Sabini, and falling into the Tiber, not far from Ocriculum. It was celebrated for its sulphureous waters and white colour (Verg. *Aen.* vii. 517).

Naragăra (*Νεράγαρα*). An important inland city of Numidia, where Scipio had an interview with Hannibal before the battle of Zama (Livy, xxx. 29).

Narbo Martius, afterwards **Narbōna**. The modern Narbonne; a town in the south of Gaul and the capital of the Roman province of Gallia Narbonensis, situated on the river Atax (Aude). It was made a Roman colony by the consul Q. Marcius or Martius B.C. 118, and hence received the surname Martius. It was the first colony founded by the Romans in Gaul, and gave the name Narbonensis to a part of that country. See Vell. Paterc. i. 15; Eutrop. iv. 3.

Narbonensis Gallia. See GALLIA.

Narcissus (*Νάρκισσος*). (1) The beautiful son of the river-god Cephissus. He rejected the love of the nymph Echo (q. v.), and Nemesis punished him for this by inspiring him with a passion for the reflection of himself which he saw in the water of a fountain (Ovid, *Met.* iii. 341–510; Pausan. ix. 10). He pined away in the desire for it; and to see one's reflection in the water was hence considered as a presage of death. The flower of the same name, into which he was changed, was held to be a symbol of fragility and death, and was sacred to Hades, the divinity of the world below. Persephoné had just gathered a narcissus, when she was carried off by Hades (Hom. *Hymn. Ad Cer.* 15; see PERSEPHONÉ). (2) A freedman of the emperor Claudius. He afterwards became his private secretary, and in the exercise of this office acquired immense riches by the most odious means. Messalina, jealous of his power, endeavoured to remove him, but her own vices made her fall an easy victim to this unprincipled man, who betrayed to Claudius her intrigue with C. Silius. (See MESSALINA.) Agrippina, however, was more successful. She was irritated at his having endeavoured to prevent her ascending the imperial throne; while Narcissus, on his side, espoused the interests of the young Britannicus, and urged Claudius to name him as his successor. Apprised of these plans, Agrippina drove Narcissus into a kind of temporary exile by compelling him to go to the baths of Campania for his health; and, having taken advantage of his absence from Rome to poison the emperor, she next compelled Narcissus to put himself to death. He is said to have amassed a fortune of 400,000,000 sesterces or $16,000,000 (Tac. *Ann.* xi. 30–35, xii. 57, xiii. 1; Suet. *Claud.*). (3) An athlete who strangled the emperor Commodus (A.D. 192), and was exposed to the lions by Severus (Dio Cass. lxxii. 22; lxxiii. 16).

Narcissus. (Naples Museum.)

Narisci or **Varisci**. A Suevic people in the south of Germany, in the Upper Palatinate and the country of the Fichtelgebirge (Tac. *Germ.* 42).

Narmalcha. See NAARMALCHA.

Narnia. The modern Narni; a town in Umbria, situated on a lofty hill, on the southern bank of the river Nar, originally called NEQUĪNUM, and made a Roman colony B.C. 299, when its name was changed into Narnia, after the river (Livy, x. 9).

Naro or **Nar**. The Narenta; a river in Dalmatia emptying into the Adriatic Sea (Ptol. ii. 16, 5).

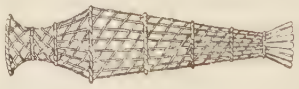
Narōna. A Roman colony in Dalmatia, situated on the river Naro (Ptol. ii. 16, 5).

Narses (*Ναρσῆς*). A eunuch of the emperor Justinian I. at Constantinople. The place of his birth is unknown. He so ingratiated himself with the emperor, that he appointed him his chamberlain and private treasurer. In A.D. 538 he was placed at the head of an army destined to support Belisarius in the expulsion of the Ostrogoths from Italy; but the dissensions which soon arose between them occasioned his recall. In 552 he was again sent to Italy, to check the progress of Totila the Goth, and, after vanquishing Totila, he captured Rome. He also conquered Teias, whom the Goths had chosen king in the place of Totila, and, in the spring of 554, Bucellinus, the leader of the Alemanni. After Narses had cleared nearly all Italy of the Ostrogoths and other barbarians, he was appointed governor of the country, and ruled it fifteen years. During this time he endeavoured to enrich the treasury by all the means in his power, and excited the discontent of the provinces

subject to him, who laid their complaints before the emperor Justin. Narses was deposed in disgrace, and sought revenge by inviting the Lombards to invade Italy, which they did in 568, under their king Alboin. After his deposition he lived at Naples, and died at an advanced age at Rome, in 568 (Procop. *B. G.* ii. 13; iii. and iv.).

Naryx (*Νάρυξ*), **Narȳcus** (*Νάρυκος*), or **Narycium** (*Ναρύκιον*). A town of the Locri Opuntii, on the Euboean Sea, described as the birthplace of Aias, son of Oïleus, who is hence called *Narycius heros*. Since Locri Epizephyrii, in the south of Italy, claimed to be a colony from Naryx, in Greece, we find the town of Locri called Narycia by the poets, and the pitch of Bruttium was also named Narycia (Verg. *Aen.* iii. 399).

Nasamōnes (*Νασαμῶνες*). A powerful, but savage, Libyan people, originally inhabiting the shores of the Great Syrtis, but driven inland by the Greek settlers of Cyrenaïca, and afterwards by the Romans (Herod. iv. 172; cf. ii. 32). Like the Chinese, they worshipped their ancestors. See NIGEIR.



Nasīca, SCIPIO. See SCIPIO.

Nasidiēnus. A wealthy Roman, who gave a supper to Maecenas, which Horace ridicules in one of his satires (*Sat.* ii. 8).

Nasidius, QUINTUS (LUCIUS?). A Roman sent by Pompey in B.C. 49 with a squadron to relieve Massilia (Marseilles) when besieged by Decimus Brutus. Brutus routed him, and he fled to Africa, where he continued to serve Pompey as a naval commander, and afterwards Sex. Pompey in Sicily. In the contest of Antony with Octavianus, he sided with the former (Caes. *B. C.* ii. 3–7; App. *B. C.* v. 139).

Naso, P. OVIDIUS. See OVIDIUS.

Nassa (*κημός, κύρτη*). A weel, or basket for snaring fish, made of wicker work with a wide funnel-shaped mouth, long body, and narrow throat, constructed as our own are, in such a manner that the fish could enter it, but not get out again. See Festus, s. v. and Sil. Ital. v. 48, where the form and manner of making it are described at length.

Nassa. (Rich.)

Nassiterna. A vessel for carrying water (Plaut. *Stich.* ii. 2, 28), described by Festus, s. h. v., as wide, and having handles.

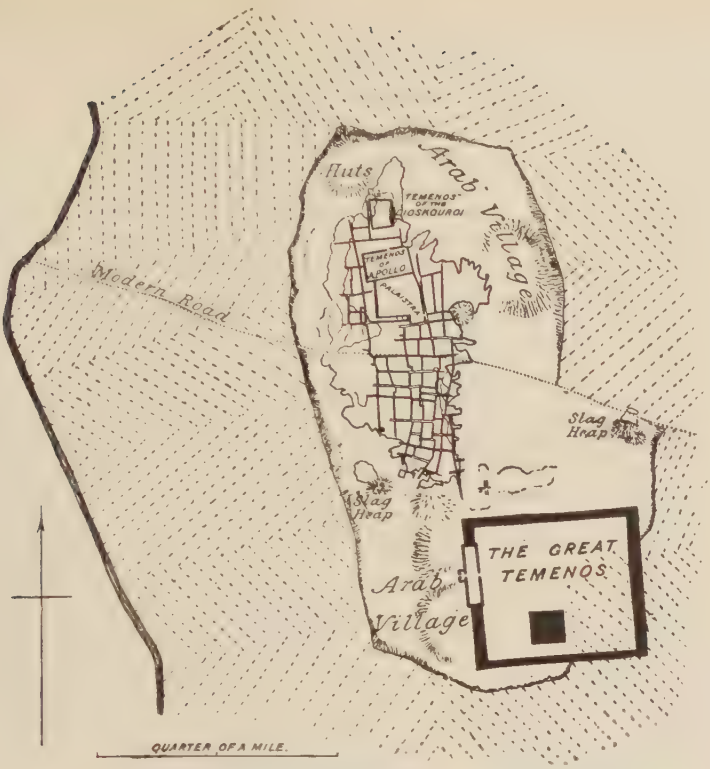
Nasus or **Nesus.** See OENIADAE.

Natalicii Ludi. See LUDI.

Natatio or **Natatorium.** See BALNEAE, p. 191.

Natĭso. A river of Venetia, in Cisalpine Gaul, rising in the Alps and falling into the Adriatic near Aquileia. It is now the Natisone (Pliny, *H. N.* iii. 126).

Natta or **Nacca.** "A fuller;" the name of an ancient family of the gens Pinaria. The Natta satirized by Horace for his dirty habits was perhaps a member of the Pinarian family, and therefore attacked by the poet for such conduct; but more likely the name was given to heighten a contrast between the appellation and the manners of the man (Hor. *Sat.* i. 6, 124).



Nauarchus (*ναύαρχος*, "commander of a ship"). The Spartan term for the commander of the fleet, chosen for one year; also a general term for the captain of a ship, and regularly so used in the fleets of the Roman Empire (Veget. iv. 32, 43). At Athens the name was used only of the commander of the sacred triremes. See THEORIS.

Nauck, AUGUST. A classical scholar born at Auerstadt, in Germany, in 1822. He was educated at the University of Halle, and taught for some years at several gymnasia in Berlin. In 1856 he received a position as Member Extraordinary of the Imperial Academy of Sciences in St. Petersburg, and made that city his home until his death, which occurred in 1892. As a text-critic and editor, Nauck must be ranked among the greatest of the century, and his writings in this field are very numerous. As a controversialist he was often too harsh in his language. The following are his best-known works: An edition of the fragments of Aristophanes of Byzantium (1848); the complete works of Euripides, with the fragments (1854; last ed. 1877); an annotated edition of Sophocles based upon Schneidewin (1867); the *Odyssey* and *Iliad* of Homer (1874–77); Iamblichus on Pythagoras (1884); select works of Porphyrius (1886); and greatest of all his *Tragicorum Graecorum Fragmenta* (1856), with a lexicon or rather index (1892). This is now the standard edition. Nauck's writings are enumerated and his life told by Zielinski in his monograph, *August Nauck* (Berlin, 1894).

Naucraria (*ναυκραρία*). An early administrative division at Athens, dating from prehistoric times, for taxation for military purposes. They were forty-eight in number, twelve from each of the old phylae. Each of them was obliged to furnish two horsemen and a ship towards the army and navy. The naucrari, who were at their head, seem to have formed a college or corporate body, who occupied themselves especially with all military and financial affairs, while current business was managed by the *πρυτανεῖς*, whose office was the Prytaneum. Clisthenes raised their number to fifty, five from each of the ten new phylae, and probably restricted in functions to the services of the State, and especially the fleet. It is likely that they were given up after the fleet had been increased by Themistocles, and that their place was probably taken by the trierarchies. See LITURGIA.

Naucrătes (*Ναυκράτης*). A Greek rhetorician of Erythrae, a pupil of Isocrates. With others he competed for a prize offered by Artemisia (q. v.) to the orator who should deliver the best funeral discourse in honour of her husband Mausolus, and which was won by Theopompus (Gell. x. 18).

Naucrătis (*Naύκρατις*). A city in the Delta of Egypt, on the eastern bank of the Canopic branch of the Nile. It was a colony of the Milesians, flourishing in the reign of Amasis, about B.C. 550, and remained a purely Greek city. It was the only place in Egypt where Greeks were permitted to settle and trade. Its importance was lessened after Alexandria was founded. It was the birthplace of Athenaeus and Iulius Pollux. Important excavations were made here by Mr. Flinders Petrie in 1885 and 1886, with the result of adding greatly to our knowledge of the Graeco-Egyptian period. Naucratis possessed a temple to Aphrodité, one to Heré, and a smaller one to Castor and Pollux, besides a very great one, the Panhellenion, the central religious meeting-place of all the Greeks in Egypt. In the heart of the city stood the oldest temple of all, dedicated to the Milesian Apollo.

Plan of Naucratis.

The recent discoveries have added to our knowledge of the relations of Greece with earlier Egypt, and the writing found here is of great value in the study of the Greek alphabet. An ancient factory for making Greek imitations of the Egyptian scarabs is one of the curious things revealed by Mr. Petrie's researches. For an account of Petrie's archaeological discussions and of the temple-ruins, see his monograph *Naukratis* (1886); and his *Ten Years' Digging in Egypt* (1895).

Naulŏchus (*Ναύλοχος*). (1) A naval station on the eastern part of the northern coast of Sicily, between Mylae and the promontory Pelorus. (2) An island off the coast of Crete (Pliny, *H. N.* iv. § 12). (3) The port of the town of Bulis in Phocis (Pliny, *H. N.* iv. 3).

Naumachia (*ναυμαχία*). A name given by the Romans to a contest between ships, represented for the amusement of the people, and commemorating naval engagements famous in history. The first representation of this kind was given by Caesar in B.C. 46 in a basin dug out for this purpose on the Campus Martius, on which occasion a Tyrian and an Egyptian fleet fought against each other, each with 2000 oarsmen and 1000 marines on board. In B.C. 2 Augustus, at the dedication of the Temple of Mars Ultor, had a sea-fight between Athenians and Persians, represented with thirty ships. The greatest of all naumachiae was that of Claudius in A.D. 52; it took place on the Lacus Fucinus, and 19,000 men in the dress of Rhodians and Sicilians fought in 100 fully armed men-of-war. For similar contests the arena of the amphitheatre was sometimes filled with water. The crews of the ships consisted of gladiators, prisoners, and criminals who had been condemned to death. See Friedländer, *Sittengeschichte*, ii. 367 foll.; Marquardt, *Privatleben*, iii. 558 foll.; and the article AMPHITHEATRUM, p. 73.

Naumachia. (From a Medal of Domitian.)

Naupactus (*Ναύπακτος*). The modern Lepanto; an ancient town of the Locri Ozolae, near the promontory Antirrhium, possessing the best harbor on the northern coast of the Corinthian Gulf. It is said to have derived its name from the Heraclidae having here built the fleet with which they crossed over to the Peloponnesus (from *ναῦς* + *πήγνυμι*) (Apollod. ii. 7, 2). After the Persian Wars it fell into the power of the Athenians, who settled here the Messenians who had been compelled to leave their country at the end of the Third Messenian War, B.C. 455. During the Peloponnesian War it was the military base of the Athenians in their operations against Western Greece (Thuc. i. 103; ii. 83). In later times, Philip of Macedon assigned it to Aetolia, and the Romans to Locris (Livy, xxxvi. 30).

Nauplia (*Ναυπλία*). The port of Argos, situated on the Saronic Gulf. It was never a place of importance in antiquity, but is at the present day one of the chief commercial centres of Greece, with handsome buildings, and still retaining its ancient name. The name of Nauplius, its alleged founder, and his sons Oeax (steersman) and Nausimedon (shipmaster), prove its early maritime importance. See NAUPLIUS.

Nauplius. (1) Son of Poseidon and Amymoné (see DANAÜS; Pausan. ii. 38), founder of Nauplia (q. v.), and a famous navigator. (2) A king of Euboea, husband of Clymené. (See CATREUS.) After the unjust execution of his son Palamedes (q. v.) at the siege of Troy, the Greeks refused to give him the

satisfaction he demanded. Thereupon he avenged his son's death by raising deceptive fire-signals, and stranding the returning Greeks among the breakers near the cliffs of Caphareus in Euboea. He thus caused the shipwreck and destruction of a large number, while he also put many others to the sword (Apollod. ii. 1, 4; iii. 2, 2; Hyg. *Fab.* 116). He is said to have finally thrown himself into the sea.

Nauportus. Now Ober or Upper Laibach; an important town of the Taurisci, situated on the river Nauportus (Laibach), a tributary of the Savus, in Pannonia Superior (Vell. Paterc. ii. 110). The name was traditionally derived from the legendary landing of the Argonauts at this place, where they are said to have founded the town, afterwards carrying their vessel across the Alps to the Adriatic. See ARGONAUTAE.

Nausicăa (*Ναυσικάα*). A daughter of Alcinoüs, king of the Phaeacians, and Areté, who conducted Odysseus to the court of her father when he was shipwrecked on the coast of Scheria. The passages in which Nausicaa is introduced are among the most pleasing and graceful of any in Homer. See *Od.* bks. vi., vii., viii.

Nausithoüs (*Ναυσίθοος*). The son of Poseidon and Periboea, and father of Alcinoüs, king of the Phaeacians. See CORCYRA; PHAEACES; SCHERIA.

Naustathmus (*Ναύσταθμος*). (1) A port and harbour in Sicily, at the mouth of the river Cacyparis, below Syracuse; now Asparanetto. (2) A village and anchoring-place of Cyrenaïca, between Erythron and Apollonia (Mela, i. 8). (3) An anchoring-place on the coast of the Euxine, in Asia Minor, about ninety stadia from the mouth of the Halys.

Nauta. See NAVIS.

Nautes. See NAUTIA GENS.

Nautia Gens. A patrician gens at Rome, claiming descent from Nautes, one of the companions of Aeneas, who was said to have brought with him the Palladium from Troy, which was placed under the care of the Nautii at Rome. All the Nautii had the surname Rutilus (Verg. *Aen.* v. 704; Dionys. vi. 4).

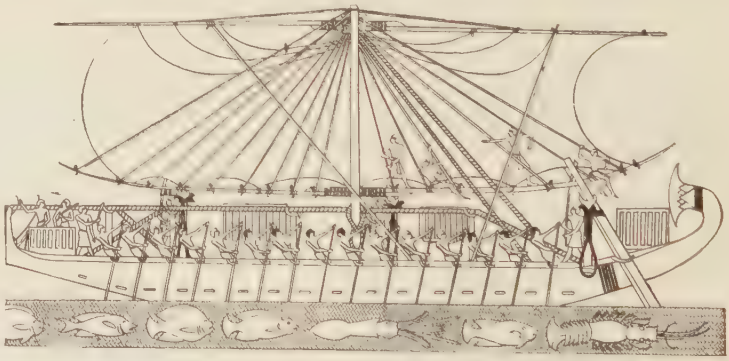
Nautĭcon (*ναυτικόν*). See FENUS.

Nautodĭcae (*ναυτοδίκαι*). Commercial judges. At Athens a judicial board, having cognizance in disputes between traders and suits against foreigners who pretended to be citizens. The former class of cases they settled themselves; the latter they prepared and brought before the Heliastic court. In Demosthenes' time they had ceased to exist, and both kinds of suits came under the jurisdiction of the Thesmothetae.

Nava. The modern Nahe; a tributary of the Rhine, falling into it at Bingen.

Navalia. See NABALIA.

Navalia (*νεώρια*). Dry-docks in which vessels were drawn up for repairs or when out of commission. Those at the Piraeus (Athens) were built by Pericles. At Rome the chief docks were in the upper bend of the Tiber, above the Aventine (Livy, iii. 26; viii. 15).



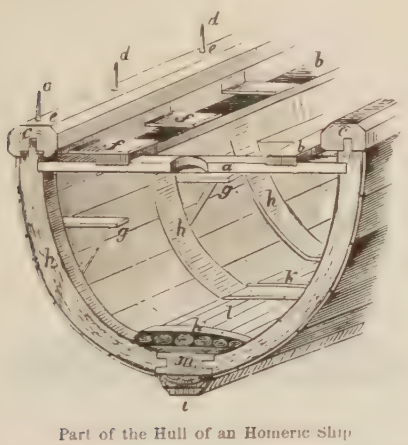
Navālis Corōna. See CORONA.

Navarchus. See NAUARCHUS.

Navia. See CAPITA AUT NAVIA.

Navigium (*πλοῖον*). Any kind of a craft, whether used for sailing or rowing. See NAVIS.

Navis (*ναῦς*). A ship. It is doubtless owing to the fact that the Mediterranean suffers from frequent calms lasting for days at a time, that the characteristic implements of navigation in that sea were oars, and that the chief problems of ancient shipbuilding were problems relating to the use of oars. The art of rowing is historically first discernible upon the river Nile. The earliest representation of rowing found on the Egyptian monuments dates from at least B.C. 2500, and there is evidence that paddling was the older practice. Among the Greeks, the generic term for the oars of a ship was *τάρσος*, a word applicable to the wing of a bird; so that the name sufficiently indicates the earliest "wings" of a ship to have been its oars. In the *Iliad*, ships of twenty rowers and fifty rowers are often mentioned, and in the *Odyssey* as well. In the so-called Homeric "Catalogue of Ships" there is mention of vessels with as many as 118 oarsmen. In the course of time, since the ships could not be indefinitely lengthened as the number of oarsmen increased, the oars began to be arranged in two and then in three banks, one above the other. Two-banked ships-of-war were used by the Phœnicians as early as B.C. 700, for they are represented in the Assyrian sculptures of that date, and Herodotus states that three-banked war-ships were built in Egypt about B.C. 600. Among the Greeks the first vessels of this type were not generally employed until about B.C. 500, chiefly in Sicily and Corfu. Ships with four banks of oars were built by the Athenians a little earlier than B.C. 330, and ships of five banks in B.C. 325.



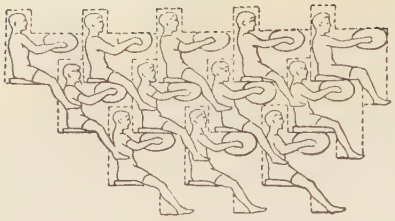
Egyptian Ship (Mariette).

Pliny the Elder speaks of ships having six banks as built at Syracuse; Quintus Curtius says that seven-banked ships were built by Alexander, and Pliny also speaks of ships having ten banks of oars. Plutarch tells of a thirteen-banked ship built by Demetrius in B.C. 301, and of fifteen, and sixteen-banked ships in B.C. 288. Polybius and Plutarch mention a sixteen-banked ship belonging to the Macedonians as arriving in the Tiber in B.C.

167, and as giving a name to one of the docks at Rome. Under the Ptolemies in Egypt, ships of twenty, thirty, and forty banks of oars are spoken of by Pliny and Plutarch, and these statements are apparently confirmed by an inscription discovered in Cyprus some years ago.

While, however, the art of rowing was developed before the art of sailing, in later times the use of oars was in general restricted to ships-of-war, which were thus made independent of the wind. In merchant vessels, on the other hand, sails were generally used, thus requiring a much smaller crew and thereby securing an economy of men. Ships-of-war, however, were also rigged with sails, though in a somewhat peculiar manner. The mast was low and carried a square sail attached to a yard. This mast was unshipped during a battle and in its stead a small foremast with a similar sail was used in place of it. Only merchant vessels appear to have carried three sails, and were very much more seaworthy than ships-of-war, being built heavier and of greater depth. The helm was usually strengthened by a stay made of two strong beams stretched between the two ends of the vessel; the bow and stern were built after the same form, and were usually the only parts of the ship to be covered with half-decks, the middle of the vessel being left open except in later times, though merchant vessels occasionally had the regular full deck.

Part of the Hull of an Homeric Ship



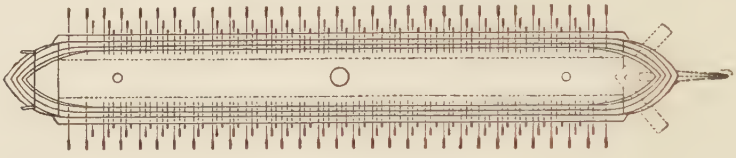
[*a*, μεσόδμη, mast-box; *b*, beams parallel to *c*, the gunwale; *d*, κληῖδες, rowlocks; *e*, bed of the oar; *f*, ζύγα, thwarts (should cross the hold); *g*, θρῆνυς, braces for the feet; *h*, ἴκρια, ribs; *i*, τρόπις, keel; *k*, ἁρμονίαι, slabs sustaining the floor; *l*, ἔδαφος, floor; *m*, keelson.]

Homeric Ship.—The Homeric ship or galley had a sharp black hull, but was not as yet provided with a ram. The keel (τρόπις) was probably first laid upon short upright banks (δρύοχοι) of timber, laid level at suitable intervals. From the keel sprang the stem-post (στεῖρα), carried upward to a good height, as was also the stern-post. The sides (τοῖχοι) were held together by the thwarts (ζύγα), which formed the seats for the oarsmen. At the bow was a raised platform or deck (ἴκρια πρώρης), on which stood the fighting men of the ship; and there was a similar deck at the stern, on which the arms were kept, and under which there was room for stowage. The length of the fifty-oared galley is calculated to have been about 90 to 100 feet from stem to stern, with a breadth amidships of 10 to 12 feet. The galley was propelled by oars and sails together, the mast (ἱστός) being raised or lowered as stated above. When raised it was held in a sort of box (μεσόδμη), and kept in its place by forestays (πρότονοι). When lowered it rested on a sort of crutch (ἱστοδόκη). There was also a backstay (ἐπίτονος). The sail was hoisted on a yard (ἐπίκριον) having braces (ὑπέραι) and halyards (κάλοι). The sails were square in shape and white in colour. The ropes were of thong; but larger cables (ὅπλα) were made of byblus (*Odyss.* xxii. 391), occasionally of hemp or rushes (σπάρτα). The ship was steered by paddles (πηδάλια). The oars (ἐρετμά) were of fir-wood, the parts being the handle (κώπη) and blade (πηδόν). The oars were fastened to thowls (σκαλμοί) by thongs, and when not in use were drawn in, leaving the blade projecting. The master of the ship (κυβερνήτης) had his place on the forward deck. At times a long pole for pushing (κοντός) was used as an instrument of propulsion.

The Post-Homeric Ship.—As civilization and commerce grew and extended, various types of vessel were evolved. The two-banked ship (διήρης, *biremis*) and the three-banked ship (τριήρης, *triremis*) now appear to replace the earlier μονήρης, and are soon developed into the ship of many banks (πολυήρεις) mentioned above. In the bireme the second row of oarsmen sat a little lower than the first row, nearer the water-line, and with shorter oars. (From their being more in the hold (θάλαμος) of the vessel, they get the name of θαλαμῖται.) This was a great step in advance, as it doubled the motive power without adding appreciably to the length or bulk of the vessel. In the trireme we have merely an extension of the principle. The arrangement of the oarsmen in this type of ship and in those in which the number of banks of oars was still larger is not definitely known, and the question involves great difficulties. It is really impossible to conceive how the thirty or forty banked ships could have been worked, since the longest oars would have had a length of 38 cubits, or say 57 English feet. Mr. Ridgeway ingeniously suggests (*Class. Review*, June, 1895) that the word στοῖχος, rendered "bank" or "tier," really refers to the *rows* of men viewed from stem to stern, five or six oarsmen pulling each oar, and not to banks of oars at all. He calls attention to the significant fact that no representation of a many-banked ship has come down to us on coins, medals, etc. All that we do know is that the rowers in the three-banks were not separated by decks; that the whole rowing strength of the trireme was 170 men; and that the crew was densely packed, so that Cicero says that not a single additional person could enter. Each man had a cushion (ὑπηρέσιον), and the rowing port-holes were protected by leather bags (ἀσκώματα), intended to prevent the wash in a rough sea from entering the hold.

The oarsmen having the longest oars were called θρανῖται, and were 62 in number; those with the next longest were called ζύγιοι or ζυγῖται, 54 in number; and those with the shortest oars, θαλαμῖται, 54 in number. They all entered in regular order, and took their places with the strictest regard to discipline, and thus also they disembarked. The whole complement of an Athenian trireme was about 210 persons—170 oarsmen, 15 to 20 sailors, and 10 to 12 marines (ἐπιβάται), besides the officers.

The normal dimensions of the Attic trireme are differently estimated by different archaeologists. Cartault regards the length over all as 113 feet,



Supposed Arrangement of Oarsmen in a Trireme. (Cartault.)

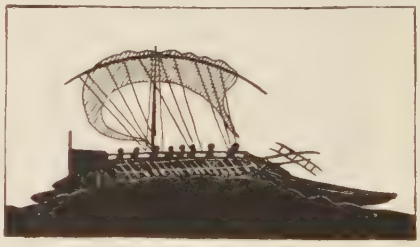
with a maximum breadth of about 15½ feet, height of deck above water 10 feet, and draught 6 feet. Graser puts the length at 149 feet, the maximum breadth at 18 feet, a deck height of 11 feet, a draught of 8½ feet, and a capacity of 232½ tons.

constructed of wicker-work, and sometimes merely of canvas. Later ships have deck-houses all along the upper deck, and these were sometimes fitted up very luxuriously, like the *cabines de luxe* on a modern transatlantic liner, having paintings, statuary, marble-baths, and even libraries in the saloons. Alongside ran covered promenades, lined with rows of vines, and even trees planted in tubs (Athen. v. 41; Suet. *Calig.* 37). But these vessels partook probably more of the nature of barges than of actual ships. A decked ship was called *κατάφρακτος*; an open ship, *ἄφρακτος*.

War-vessels carried turrets on their upper decks, whence missiles might be showered upon an enemy; and these are also found on merchant-vessels that traversed waters infested by pirates. These turrets were movable. Some ships carried as many as eight; and they were often of several stories. The colours in which they were painted

Supposed Plan of a Trireme. (Graser.)

There were developed, roughly speaking, in the post-Homeric times, three types of ship: (1) the trading-vessel, propelled principally by sail-power, roomy, wide, and safe; (2) the pirate-vessel, using both sails and oars, swift, sharp, yet with sufficient room for storing the plunder; and (3) the man-of-war (*ναῦς μακρά*, *navis longa*), intended first of all for fighting. This last was high out of water, less steady than the trader, having bulwarks of great strength running the whole length of the ship, propelled principally by oars. This type finds its highest expression in the Athenian trireme.



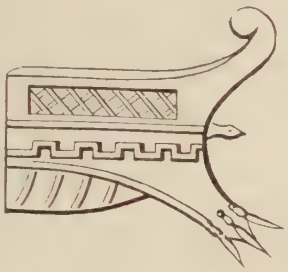
A ship with a single bank of oars (*μονήρης*) was also named according to the number of oarsmen employed—thus, *πεντηκόντορος*, with fifty rowers; *ἑξηκόντορος*, with sixty rowers, etc.

Trading-ship. (From a Vase in the British Museum.)

Decks.—The earliest Greek ships were decked over at the stem and at the stern, as described above; but towards B.C. 500 the ships appear without poop. Occasionally about this time the forecastle is represented as supporting the forepart of a hurricane-deck and enclosing a cabin below. The stern now held a tier of seats for the steerer and for officers. There was also usually a deck-house at the stern for the commander, oftenest lightly

identified the squadron to which they belonged. Lest the ships should be made top-heavy by these turrets, large quantities of ballast were carried at the bottom of the hold, usually gravel or sand or

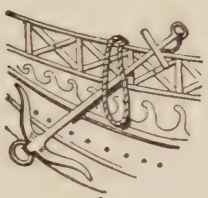
Pirate-ship. (From a Vase in the British Museum.)



stone. Vessels were baled by a machine worked by a sort of tread-mill (Athen. v. 43), but in early times by buckets (*ἀντλητήρια*, *sentinacula*). Drinking-water was carried in cisterns.

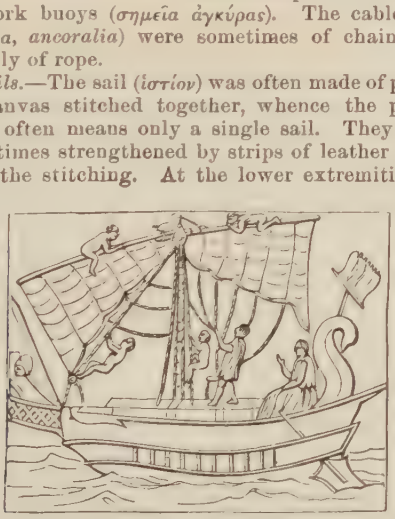
Rams.—The forepart of war-ships was constructed largely with regard to the use of the ram (*ἔμβολος*, *rostrum*), being built very strongly, with massive cat-heads projecting far enough to tear away the upper works of a hostile ship. There were auxiliary rams besides the principal one. Rams were

Ram. (Montfaucon.)



usually of bronze, but sometimes of iron. The principal ram of a trireme weighed some 170 pounds. It usually had three prongs, and often sloped downward, as the one shown above. Before the use of rams, heads of animals had usually been carved upon the prows as figure-heads, the subject corresponding to the name of the ship. Thus, a crocodile would go with a ship named *Nilus;* a mountain with one named *Ida*, etc. There were regular national emblems so used, as the statue of Pallas Athené by Athenian ships and a head of Ammon by the Carthaginians. In Roman ships of about A.D. 50 a gilded swan or goose was common. The stern was often ornamented by a painting or relief, and by a carving resembling originally the Egyptian lotus, but developed, in time, into a sort of plume or fan. On the bow of the ship there was also generally a huge eye, or sometimes a pair of eyes.

Ram. (From a medal.)



Rudders.—See GUBERNACULUM.

Anchors.—In early times the anchors (*ἀγκύρα, ancora*) were stones (*ἐὐναί*). The metal anchor with arms was said to be the invention of Anacharsis (B.C. 600). They were first of iron and later of lead with a wooden shank. The remains of one lately found near Cyrené afford evidence that for a ship of some 200 tons the anchor weighed some 1400 pounds. The anchor was often slung over the stern, and when in use had its position marked by cork buoys (*σημεῖα ἀγκύρας*). The cables (*τὰ σχοῖνα, ancoralia*) were sometimes of chain, but usually of rope.

Anchor. (Column of Trajan.)

Sails.—The sail (*ἱστίον*) was often made of pieces of canvas stitched together, whence the plural *ἱστία* often means only a single sail. They were sometimes strengthened by strips of leather sewn over the stitching. At the lower extremities of the sail were the sheets (*πόδες*) and tacks (*πρόποδες*). Instead of reefing the sails the ancients appear rather to have brailed them up (*στέλλειν, παραιρεῖν*) to reduce the area exposed to the wind. In battle the war-ships depended wholly upon their oars.

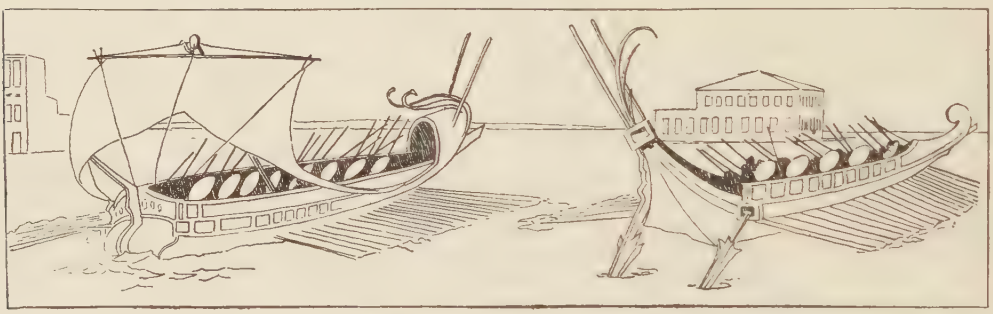
Brailing the Sails of a Ship. (Mazois, *Pomp.* i. 22.)

Material for Ships.—The hull was usually of pine or fir; cedar and cypress are also mentioned. The keels were of pine and the false keels of oak or beech. Barbarian ships of leather (Caes. *B. C.* i. 54) are mentioned. The masts and yards were made of fir or pine, and so also the oars. The seams of the ship were calked by packing them with tow fastened by wax or tar; and the whole outer planking was protected by a coating of similar materials, coloured. Pliny (*H. N.* xxxv. 31 and 41) mentions seven colours as used; but in later times a colour resembling that of the sea-water was employed, probably to enable the vessel to escape observation from enemies, a device employed in modern navies. The timbers were held together by wooden pegs and metal nails.

THE ROMAN SHIP.—The Romans, though not a seafaring people, appear from the treaty with Carthage to have been familiar with the sea, and to have had maritime interests as early as the time of the kings. The existence of *duumviri navales*, officers charged with repairing the fleet, the right of electing whom was transferred to the people in B.C. 311, proves that the State had, at that time and previously, some naval force; and coins of a date as early as B.C. 350 bear the representation of the bows of a ship of a type more rude than the Greek, but still very possibly borrowed from the Greek cities in Magna Graecia. In the instances exhibited by the coins, which belong to the half-century preceding the First Punic War, there are apparently two varieties of construction. In one the depression of the beak is remarkable, and the timbers which support it appear to be compacted with cross-pieces. These vessels were probably triremes. In the year B.C. 303 a treaty was made with the Tarentines, by which the Lacinian Promontory was made the boundary beyond which the Roman war-ships were not to pass. L. Cornelius in B.C. 282 violated that treaty, and was defeated by the Tarentines with the loss of half his fleet. The Samnite Wars seem to have diverted the attention of the Romans entirely from maritime affairs, and at the beginning of the Punic Wars they were practically without a fleet. They then first seem to have realized the fact that in the conflict which was before them the mastery of the Mediterranean was an absolute necessity, not only for the protection of their own coasts, which already had suffered from the descents of the Carthaginian fleets, but also as the first step towards empire (Polyb. i. 20, 21). Hence, in the year B.C. 260, when a Carthaginian quinquereme which had been driven on shore fell into their hands, they determined to construct a fleet of similar vessels. No less than 100 were built in six weeks, while their future crews were practised rowing in frame-work set up on land. Cn. Cornelius with seventeen of these vessels sailed in advance to attack the Carthaginians, but was himself attacked and taken with all his vessels. Duilius, who then took the command of the fleet, by the invention of the *corvus* (Polyb. i. 22, 23)—a swinging bridge with a heavy iron spike, which, when let fall on the enemy's deck, not only grappled his vessel, but gave the boarders access to it—was enabled to neutralize the ramming tactics of the Carthaginians and their superior naval skill. The battles

of Mylae and of Ecnomus, in which the Carthaginians were defeated with great loss, were the prelude of maritime dominion to Rome. The importance of the ram was thus much diminished, and in the coins of the century following we see the ram much less projecting and apparently less strongly supported. On the other hand, the δελφίς, great beams and great grappling hooks, iron hands, and *falces* with curved steel heads, such as those with which the sailing vessels of the Veneti were crippled by Caesar off the coast of Gaul (Caes. *B. G.* iii. 14), came into favour. Huge towers (*turres*) were placed in the bows—whence our term "forecastle"—from which missiles could be showered on the enemy's deck. The main object of Roman tactics seemed to be to leave as little as possible to seamanship and skill, and to come to close quarters and a hand-to-hand fight as soon as possible. In a word, boarding tactics superseded ramming tactics. See Polyb. i. 61; Livy, xxxvi. 44, 45; xxxvii. 24, 30.

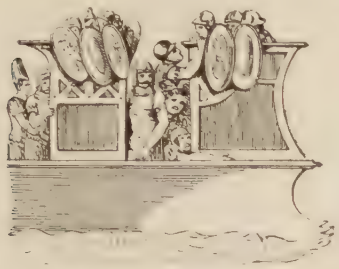
As early as B.C. 413 the use of fire (Thuc. vii. 53) in a naval action is mentioned. Later, catapults, the precursors of artillery, launched Greek fire rocket-fashion against the enemy.



The Liburnian galleys were biremes (Lucan, iii. 534). The name seems to have been taken from the vessels of the Liburnians, an Illyrian race, inhabiting the islands of that coast and much given to piracy. The name Liburnian, in the same way as the name trireme, came afterwards to be used for any ship of war.

In the time of Trajan some attempt was made to build larger rates than biremes, and Valentinian had quinqueremes constructed. But in the Byzantine period no vessels with more banks than two appear; and the tendency is to return to single banks, which, according to the emperor Leo (*Tactica*), are called γαλαῖαι, "galleys."

Under the emperors two great naval stations were established for the fleets that were intended to keep the peace of the Mediterranean—(1) at Ravenna, for the east; and (2) at Misenum, on the Campanian coast, for the west. There were also guard-ships regularly stationed on the coast of Gaul at Forum Iulii (Fréjus) and Portus Herculis Monoeci (Monaco). But after Actium there is little to interest us in naval affairs, with the exception perhaps of Germanicus's operations in the North Sea, and at a later date the war with the Vandals, for which Procopius is our authority, until the time of the Byzantine emperor Leo (A.D. 960). In the following centuries came the invention of the *apostis* (a projecting framework, upon the edge of which were set the thowlpins, thus enabling oars of greater length to be used) and the birth of the mediæval galley, which, with its long sweeps worked by several men, was a vessel distinct from the ancient men-of-war.



SAILORS AND MARINES.—The Athenian fleet was manned in its best days by freemen. Xenophon tells us that the seafaring habits of the Athenians were such that every one knew how to handle an oar, and that the crew of a trireme could be got together at once. At the time of the Peloponnesian War the pay of an ordinary oarsman was three obols a day, increased towards the end of the war to four obols. The pay of the *thranitae* was higher, their services being valued at a drachma. Raising the pay of seamen during hostilities was a favourite expedient with a view to induce the enemy's crews to desert. There were, however, many causes that led to the employment of forced labour, and with it to the deterioration and unpopularity of sea-service. The unavoidable discomfort in a decked ship must have been extreme. In a hot climate, with little ventilation, the participation with 200 or 300 human beings, all stark naked and packed closely in a laborious mechanical toil, could only have been voluntarily endured under the pressure of some great necessity or sense of duty. The heat, the smell, the drudgery, must have been terrible. Besides the discomfort, the actual danger was very great. The crews might at any time be drowned or burned, or, as at Sybota (Thuc. i. 50), butchered perhaps in cold blood. We have only to think of the moment of conflict—the crash of the beak through the timbers, and the mangled mass of humanity hurled into the bilge, while the water swiftly followed the blow, the *thranitae*, perhaps, escaping, but the lower ranks almost certainly drowned—and it is easy to understand how the service was avoided by the free and left to slaves. The marines (ἐπιβάται) varied in number, the Athenian ship carrying few, and the Chians, at the battle of Ladé, for instance, as many as forty to each vessel.

The Romans manned their fleet by levies from the lowest orders and forced service of the allies. The greater proportion of the crews were slaves contributed as substitutes, and it is this fact, perhaps, which explains the equanimity with which such wholesale loss of life at sea as is recorded by Polybius was endured. Among the Romans themselves service on board ship was most unpopular;

Naval Battle. (Pompeian Painting.)

and it is not surprising to find discontented *classiarii* wishing to be transferred to the legions. The Roman term for marines is *classiarii milites*. They were held in less esteem than regular soldiers.

Roman Marines. (Scheffer.)

BIBLIOGRAPHY.—See Scheffer, *De Militia Navali Veterum* (Upsala, 1654); Graser, *De Re Navali Veterum* (Berlin, 1864); id. *Die Gemmen des königlichen Museums zu Berlin* (1867); id. *Die ältesten Schiffsdarstellungen auf antiken Münzen* (Berlin, 1870); id. *Das Modell eines alt-griechischen Kriegsschiffes* (Berlin, 1873); De la Gravière, *La Marine des Anciens*, 2d ed. For special types of ships and boats, see the following articles: ACATUS; APHRACTUS; BARIS; CATAPHRACTI; CATASCOPIUM; CELOX; CYMBA; HEMIOLIA; LEMBUS; LINTER; RATIS; SCAPHA; THALAMEGUS.

Navius, ATTUS or ATTIUS. A renowned augur in the reign of Tarquinius Priscus, who opposed the project of the king to double the number of the equestrian centuries. Tarquin then commanded him to divine whether what he was thinking of at the time could be done; and when Navius declared that it could, the king held out a whetstone and a razor to cut it with. Navius immediately bade him apply the razor to the stone, which he did; and the blade passed through the flint with so much force as to cut the king's hand. The statue of Navius was placed in the Comitium, and beside it was preserved the whetstone (Livy, i. 36; Dionys. iii. 70; Cic. *Nat. Deor.* ii. 3; *De Div.* i. 17).

Naxos (*Νάξος*). (1) Now Naxia; an island in the Aegaean Sea, the largest of the Cyclades, especially celebrated for its wine. It is about eighteen miles in length and twelve in breadth. It was also called DIA, STRONGŸLE, and DIONYSIAS. Here Dionysus is said to have come to Ariadné after she had been deserted by Theseus. (See ARIADNÉ.) It was colonized by Ionians, who had emigrated from Athens. After the Persian Wars, the Naxians were the first of the allied States whom the Athenians reduced to subjection (B.C. 471). The chief town of the island was also called Naxos. See Dugit, *De Insula Naxo* (Paris, 1867); and Tozer, *Islands of the Aegean* (Oxford, 1890). (2) A Greek city on the eastern coast of Sicily, founded B.C. 735 by the Chalcidians of Euboea, and the first Greek colony established in the island. In B.C. 403 the town was destroyed by Dionysius of Syracuse; but nearly fifty years afterwards (358) the remaining Naxians scattered over Sicily, were collected by Andromachus, and a new city was founded on Mount Taurus, to which the name of Tauromenium was given. See TAUROMENIUM.

Nazareth (*Ναζαρέθ*) or **Nazăra** (*Ναζαρά*). A city of Galilee in Palestine, south of Cana.

Nazarius. A Latin panegyric writer; the author of a eulogy on the emperor Constantine, delivered A.D. 321. Text in Bährens' edition of the Panegyrici (Leipzig, 1874). His daughter Eunomia is also said to have won fame by her eloquence. See PANEGYRICUS.

Nazianzus (*Ναζιανζός*). A city of Cappadocia, celebrated as the diocese of a distinguished Father of the Church—Gregory Nazianzenus.

Neaera (*Νέαιρα*). The name of several nymphs and maidens mentioned by the poets.

Neaethus (*Νέαιθος*). Now Nieto; a river in Bruttium, falling into the Tarentine Gulf a little north of Croton. Here the captive Trojan women are said to have burned the ships of the Greeks, from which circumstance some of the ancients fancifully derived the name of the place (qs. *ναῦς* + *αἴθω*). See Strabo, p. 262.

Neanthes (*Νεάνθης*). A Greek of Cyzicum, who flourished in the third century B.C. He was a voluminous writer on historical topics, and some of his fragments have come down to us, for which see Müller's *Fragment. Hist. Graecorum.*

Neapŏlis (*Νεάπολις*). The name of a number of ancient cities.

I. EUROPEAN.—(1) Now Napoli (Naples); a city of Campania in Italy on the western slope of Mount Vesuvius and the river Sebethus (Maddalena). It was founded about B.C. 1056 by Aeolian Chalcidians of Cumae, on the site of an ancient place called PARTHENŎPÉ (*Παρθενόπη*), after the Siren of that name. Hence we find the town called Parthenopé by Vergil and Ovid. The year of the foundation of Neapolis is not recorded. It was perhaps called the "New City," because regarded simply as a new quarter of the neighbouring city of Cumae. When the town is first mentioned in Roman history it consisted of two parts, divided from each other by a wall, and called respectively Palaeopolis and Neapolis. This division probably arose after the capture of Cumae by the Samnites,

Coin of the Campanian Neapolis (about B.C. 300.)

when a large number of the Cumaeans took refuge in the city they had founded, whereupon the old quarter was called Palaeopolis, and the new quarter, built to accommodate the new inhabitants, was named Neapolis. There has been a dispute respecting the site of these two quarters; but it is probable that Palaeopolis was situated on the west side near the harbour, and Neapolis on the east side near the river Sebethus. In B.C. 327 the town was taken by the Samnites, and in 290 it

passed into the hands of the Romans, who allowed it, however, to retain its Greek constitution. At a later period it became a municipium, and finally a Roman colony. Under the Romans the two quarters of the city were united, and the name of Palaeopolis disappeared. It continued to be a prosperous and flourishing place till the time of the Empire; and its beautiful scenery and the luxurious life of its Greek population made it a favourite residence with many of the Romans. In the reign of Titus the city was destroyed by an earthquake, but was rebuilt by this emperor in the Roman style. The modern city of Naples does not stand on exactly the same site as Neapolis. The ancient city extended farther east than the modern city, since the former was situated on the Sebethus, whereas the latter does not reach so far as the Fiume della Maddalena; but the modern city, on the other hand, extends farther north and west than the ancient one, since the island of Megaris, on which the Castel del Ovo now stands, was situated in ancient times between Pausilypum and Neapolis. In the neighbourhood of Neapolis there were warm baths, the celebrated villa of Lucullus, and the Villa Pausilypi or Pausilypum, bequeathed by Vedius Pollio to Augustus, and which has given its name to the celebrated grotto of Posilippo between Naples and Pozzuoli, at the entrance of which what is called the tomb of Vergil is still shown. Augustus frequently visited the city, and Tiberius, Claudius, Nero, Titus, and Hadrian favoured it in many ways. In 536 it was taken by Belisarius, and in 543 by the Goths under Totila. Naples is a city of much interest to archaeologists, both because of its proximity to Pompeii and Herculaneum, and because of its remarkable collection of ancient works of art and industry preserved in the Museo Nazionale. (See MUSEUM.) (2) A part of Syracuse. (See SYRACUSAE.) (3) Napoli, a town on the west coast of the island of Sardinia, celebrated for its warm baths. (4) Kavallo, a sea-port town in Thrace, subsequently Macedonia adjecta, on the Strymonic Gulf, between the Strymon and Nessus.

II. ASIATIC.—(1) A small Ionian city, on the coast of Lydia, north of Mycalé and southwest of Ephesus. The Ephesians, to whom it at first belonged, exchanged it with the Samians for Marathesium. (2, 3) Two towns of Caria, the one near Harpasa, the other on the coast, perhaps the new town of Myndus. (4) In Pisidia, south of Antioch; afterwards reckoned to Galatia. (5) In Palestine, the SYCHEM or SYCHAR of Scripture (Συχέμ, Συχάρ, Σικίμα, Nablous), one of the most ancient cities of Samaria, stood in the narrow valley between Mounts Ebal and Gerizim, and was the religious capital of the Samaritans, whose temple stood on Mount Gerizim before its destruction by Hyrcanus, B.C. 129. Its full Roman name was FLAVIA NEAPŎLIS. Here was born Justin Martyr.

III. AFRICAN.—(1) A town in North Africa on the coast west of the Great Syrtis, and by some identified with the modern Tripoli. (2) A Phœnician colony, now Nabal, on the eastern coast of Zeugitana near the northern end of the gulf called from it Sinus Neapolitanus.

Nearchus (Νέαρχος). A Greek writer of Crete, resident afterwards at Amphipolis. He was a friend of Alexander the Great in his youth, and, participating in his youthful intrigues, was banished by Philip. Later he administered the satrapy of Lycia for five years after the battle of the Granicus (B.C. 334). He then took part in the Indian expedition (B.C. 327), and returned, as commander of the fleet, down the Indus and along the coast of Asia to the mouth of the Tigris. After Alexander's death he attached himself to Antigonus, and under him governed the provinces of Lycia and Pamphylia. He wrote an account (Παράπλους) of his voyage, which was rich in geographical discoveries. Of this we possess, besides fragments, an abstract in Arrian's *Indica*. The investigations of later times have in many respects confirmed the trustworthiness of his statements concerning ancient India. See INDIA.

Nebo. The name of an Assyrian deity who presided over learning and had many of the attributes of the Greek Hermes. See p. 143.

Nebo. A mountain in Palestine opposite Jericho, on the eastern side of the Jordan.

Nebris (from νεβρός). A faun-skin; worn originally by hunters, but assumed by Bacchanals;

Priestess of Bacchus with a Nebris. (Hamilton's vases, i. 37.)

and in works of art forming a part of the attire of Pan and of the satyrs.

Nebrissa, or **Colonia Venerea Nebrissa.** A town of the Turdetani, in Hispania Baetica, northeast of Gades and southwest of Hispalis. It is now Lebrija.

Nebrŏdes. The principal chain of mountains in Sicily, running through the whole of the island, and forming a continuation of the Apennines.

Necessĭtas (Ἀνάγκη). A goddess regarded as superior even to the gods themselves, since she represented the Inevitable. At Corinth there was a

Necessitas. (Causei, *Museum Romanum.*)

temple dedicated to Ἀνάγκη and Βία (Force), which no one was permitted to enter (Pausan. ii. 4, 6). Among the Romans her symbol is the nail, as fixing fast the decrees of Fate. See Hor. *Carm.* i. 35, 17.

Necklace. See Monilé.

Neco or **Necho** (Νεκώς, Νεχώς, Νεκαῦς, Νεχαώς: in Egyptian, *Neku*). (1) An Egyptian, the grandfather (or father) of Psammetichus. He was defeated and imprisoned by Sardanapalus; but being at length released, became king of Saïs and Memphis (Herod. ii. 152). (2) The son of Psammetichus, succeeding his father on the throne of Egypt in B.C. 612. He attempted to cut a canal to connect the Nile with the Arabian Gulf—a project that had interested his predecessors, Seti I. and Rameses II. The attempt was abandoned after he had lost 120,000 men and had received a warning from an oracle to the effect that he was only labouring for the barbarians (Herod. ii. 158). In his reign it is reported that Phœnicians in his service circumnavigated the continent of Africa, setting sail from the Arabian Gulf, and, at the end of two years, entering the Mediterranean through the Strait of Gibraltar (Herod. iv. 42). See Africa.

Necrodeipnon (νεκρόδειπνον). See Funus, p. 697.

Necropŏlis (from νεκρός, "dead," and πόλις, "city"). The city of the dead; a name applied to the cemeteries in the neighbourhood of many of the ancient cities, such as Thebes in Egypt, Cyrené, Alexandria, etc.

Nectanăbis (Νεκτάναβις: Egyptian, *Nekt-Hor-Heb*). (1) A king of Egypt (B.C. 378–364), who successfully resisted the invasion of the Persian force under Pharnabazus and Iphicrates. He was succeeded by Tachos. (2) The nephew of Tachos, deprived the latter of the sovereignty in B.C. 361, with the assistance of Agesilaüs. He was defeated by the Persians in 350, and fled into Aethiopia. He was the last king of Egypt of the Egyptian race. See Diod. Sic. xv. 92; xvi. 48 foll.; Pausan. iii. 10.

Nectar. The drink of the Greek gods (see Ambrosia), which Homer describes as a red beverage (*Il.* xix. 38) poured out by Hebé for the immortals (*Il.* iv. 3).

Neda (Νέδα). A river in the Peloponnesus, rising in Arcadia and emptying into the Ionian Sea (Pausan. iv. 20, 1).

Needles. See Acus.

Nefasti Dies. See Dies.

Negligentia. A term in Roman law to denote carelessness in performing any obligation; a breach of duty; the opposite of *diligentia*. See Culpa.

Negotiatōres (πραγματευόμενοι). Provincial citizens who lent money on interest and bought grain on speculation (Caes. *B. G.* vii. 3). Transactions of the former sort were, however, their principal occupation, so that *negotiator* meant, as a rule, the same thing in the provinces as *argentarius* or *fenerator* at Rome. Senators were not allowed to be negotiatores, so that, like the *publicani*, these were of the equestrian order. See the monograph by Ernesti, *De Negotiatoribus* in his *Opuscula Philologica*; Marquardt, *Staatsverwaltung*, vol. i. p. 542 (2d ed.); and the articles Fenus; Publicani; Trapezitae.

Nekysia (τὰ νεκύσια). A feast in honour of the dead. See Funus.

Neleus (Νηλεύς). (1) The son of Poseidon and Tyro, daughter of Salmoneus, and brother of Pelias. The brothers were exposed after birth by their mother, who afterwards married Cretheus of Iolcus; they were found by a herdsman and brought up by him until they grew up and were acknowledged by their mother. After Cretheus's death they quarrelled about the possession of Iolcus; and Neleus, together with Melampus and Bias, the sons of his half-brother Amythaon, retired into exile in Messenia, where Aphareus, Tyro's cousin, allowed them to occupy Pylus. By Chloris, daughter of Amphion, the king of the Minyan Orchomenus (it is only a later myth that identifies him with Amphion of Thebes), he became father of twelve sons, of whom Periclymenus and Nestor (q. v.) were the most celebrated, and one daughter, the beautiful Pero, bride of Bias. (See Melampus.) On his refusing to purify Heracles from the murder of Iphitus, Heracles invaded his country and slew all his sons, except Nestor, who chanced to be absent from home at the time. Nestor became the champion and avenger of the aged Neleus when the Epeans and their king Augeas, emboldened by his misfortune, ventured on acts of injustice towards him. According to one account, it was Neleus who renewed the Olympian Games, and died at Corinth, where, it was said, he was buried at the isthmus; according to others, he was slain along with his sons by Heracles. (2) The younger son of Codrus, who disputed the right of his elder brother Medon to the throne. The Delphic oracle declared against him, and he migrated to Ionia, where he founded the city of Miletus (Herod. ix. 97). (3) A disciple of Aristotle and Theophrastus. See Aristoteles, p. 129.

Nelīdes (Νηλείδης) or **Neleïădes** (Νηληιάδης). Patronymics of Neleus, by which both Nestor, the son of Neleus, and Antilochus, his grandson, are designated.

Nemausus. The modern Nîmes; an important town of Gallia Narbonensis, the capital of the Arecomici and a Roman colony. It was situated west of the Rhone on the high-road from Italy to Spain.

Roman Aqueduct at Nemausus.

The Roman remains at Nîmes are among the most perfect found north of the Alps, and include the so-called Maison Carrée, which is a Corinthian temple admirably preserved, and the splendid Roman aqueduct, the Pont du Gard, some fourteen miles from the town. It consists of three rows of arches, 180 feet in height, and spans the little river Gard. Its construction is traditionally ascribed to Agrippa, the general of Augustus. There are also an amphitheatre, built to seat 20,000 people, a Nymphaeum, baths, a mausoleum, and two ancient gates.

Neméa (Νεμέα) or **Nemeë** (Νεμέη). A valley in Argolis between Cleonae and Phlius, celebrated in mythical story as the place where Heracles slew the Nemean lion. (See HERACLES.) In this valley there was a splendid temple of Zeus Nemeus surrounded by a sacred grove, in which the Nemean Games were celebrated every other year. See NEMEA.

Nemĕa (*τὰ Νέμεα* or *Νέμεια*). The Nemean Games; one of the four Greek national festivals, which was celebrated in the valley of Nemea in the territory of the Argive town Cleonae. In historic times the festival was held in honour of Zeus, who had here a temple with a sacred grove. Originally it is said to have consisted of funeral games, instituted by the Seven during their expedition against Thebes (Apollod. iii. 6, 4), in memory of the boy Archemorus as an *ἀγὼν ἐπιτάφιος*. (See SEVEN AGAINST THEBES.) Heracles afterwards changed it into a festival in honour of Zeus. From about B.C. 575 onwards, athletic competitions were added to the festival, after the model of those at Olympia; and, like the latter, it was only gradually that it developed into a general Hellenic celebration. It was held twice in a period of four years—once in August, every fourth year; once in winter, every second or first Olympic year. It is more probable, however, that the so-called "Winter Nemea" were only local games held in Argos, and that the Panhellenic Nemea were celebrated in alternate years at the end of every first and third Olympic year, at a time corresponding to our July. The question is discussed by Unger in the *Philologus* (xxxiv. 50), but Droysen, in *Hermes* (xiv. 1), considers it still unsettled. The management of the festival was originally possessed by the Cleonaeans, but soon passed, together with the possession of the sanctuary, into the hands of the Argives. The games, which lasted more than one day (Livy, xxvii. 31), consisted of gymnastic, equestrian, and musical contests (for the two former, see OLYMPIA); the prize was a palm-branch and a garland of fresh *σέλινον*, often rendered "parsley," but more probably identical with the "wild celery." See Krause, *Pythien, Nemeen, und Isthmien*, and the scholiasts on Pindar.

Nemean Lion. See HERACLES.

Nemesīa (*τὰ Νεμέσεια*). The same as the Genesia (*τὰ γενέσια*). A festival celebrated at Athens on the fifth of Boedromion, of which no particulars are known. See A. Mommsen, *Heortologie*, p. 209; and the article FUNUS.

Nemesiānus, MARCUS AURELIUS OLYMPIUS, of Carthage. A Roman poet famous in his own times, belonging to the end of the third century A.D. He flourished under the emperor Carus and his sons (212–284). We possess by him the first 325 hexameter lines of a well-written poem on the chase (*Cynegetica*), and four eclogues, in which he has closely followed Calpurnius (q. v.). Editions by Stein (Leipzig, 1832), and by Bährens in his *Poetae Latini Minores* (Leipzig, 1879).

Neměsis (Νέμεσις). A post-Homeric personification of the moral indignation felt at all derangements of the natural equilibrium of things, whether by extraordinarily good fortune or by the arrogance usually attendant thereon. According to Hesiod (*Theog.* 223) she is the daughter of Night (Nyx), and with Aidos, the goddess of Modesty, left the earth on the advent of the Iron Age. A legend makes her to have been by Zeus the mother of Helen and the Dioscuri (Athen. p. 334). As goddess of due proportion she hates every transgression of the bounds of moderation, and restores the proper and normal order of things. As, in doing this, she punishes wanton boastfulness, she is a divinity of chastisement and vengeance. She enjoyed special honour in the Attic district of Rhamnus (where she was believed to be the daughter of Oceanus), and is often called the Rhamnusian goddess. Her statue there (of which fragments were found in 1890) was said to have been executed by Phidias out of a block of Parian marble which the Persians had brought with them in presumptuous confidence to Marathon, to erect a trophy of victory there. She was also called Adrastia, that name appropriate only to the Phrygian Rhea-Cybelé, being interpreted as a Greek word with the meaning, "She whom none can escape." She was also worshipped at Rome, especially by victorious generals, and was represented as a meditative, thoughtful maiden with the attributes of proportion and control (a measuring-rod, a bridle, and a yoke), of punishment (a sword and scourge), and of swiftness (wings, a wheel, and a chariot drawn by griffins).

Neměsis. A lady loved by Tibullus and celebrated by him in his verse. See Doncieux, *De Tibulli Amoribus* (Paris, 1887), and the article TIBULLUS.

Nemesius (Νεμέσιος). The author of a treatise in Greek on the nature of man (*Περὶ Φύσεως Ἀνθρώπου*). He was bishop of Emesa in Syria, and lived in the fourth or early in the fifth century A.D. Edition by Matthaei (Halle, 1802).

Nemetăcum or **Nemetocenna.** See ATREBATES.

Nemētes or **Nemētae.** A people in Gallia Belgica on the Rhine, whose chief town was Noviomagus, subsequently Nemetae (Speyer or Spires). Cf. Caes. *B. G.* i. 51; Tac. *Germ.* 28.

Nemorensis. An epithet of Diana (q. v.).

Nemorensis Lacus. See ARICIA.

Nemossus. The chief town of the Arverni, a Gallic people in the modern Auvergne. It was situated on the Elaver (Allier), with a citadel known in the early Middle Ages as Clarus Mons, whence the modern name of the town—Clermont. As the capital of the Arverni it replaced the earlier capital Gergovia (Caes. *B. G.* i. 45; vi. 7 foll.).

Nenia (better than NAENIA). A name given by the Romans to the funeral dirge in honour of the dead, sung to the accompaniment of flutes, at first by the relatives, in later times by hired mourners (*praeficae*). There was also a goddess so called, the dirge personified, who had a chapel outside the Porta Viminalis. See FUNUS, p. 699.

Neobūlé. See ARCHILOCHUS.

Neocaesarēa (*Νεοκαισαρεία*). A city of Pontus in Asia Minor, standing on the river Lycus. It was the native place of Gregory Thaumaturgus. The modern name is Niksar.

Neocŏrus (*νεωκόρος*). A Greek term, corresponding to the Latin *aedituus* (q. v.); a verger who has the charge of a temple, and the objects contained in it; and whose duty it was to attend to the sweeping and cleaning of the same. Hence the inhabitants of the Greek towns often styled themselves the *νεωκόροι* of their patron divinity; and in later times, as a piece of refined flattery, of the Roman emperor; thereby intending to express devotion and piety towards the sovereign, and at the same time insinuate his divinity (Firm. Math. 3, 7, n. 9).

Neodamōdeis (*νεοδαμώδεις*). See HELOTAE.

Neon (*Νέων*). An ancient town in Phocis, at the eastern side of Mount Tithorea, a branch of Mount Parnassus, destroyed by the Persians under Xerxes, but rebuilt and named Tithorea (*Τιθορέα*), after the mountain on which it was situated (Herod. viii. 33).

Neontīchos (*Νέον Τεῖχος*, "New Wall"). (1) One of the twelve cities of Aeolis, on the coast of Mysia. (2) A fort on the coast of Thrace, near the Chersonesus (Xen. *Anab.* vii. 5, 8).

Neoplatonism. A form of later Greek philosophy, founded upon Plato. See PHILOSOPHIA.

Neoptolĕmus (*Νεοπτόλεμος*, also called PYRRHUS; i.e. the ruddy). (1) The son of Achilles and Deïdamia. He was brought up by his grandfather Lycomedes in Scyros. After Achilles' death, however, he was led by Odysseus to Troy, since, according to the prophecy of Helenus, that town could be taken only by a descendant of Aeacus. Here, like his father, he distinguished himself above all by a courage which none could withstand. He slew Eurypylus, son of Telephus, and was one of the heroes in the wooden horse, where he alone remained undaunted. Later legend depicts him as fierce and cruel: at the taking of Troy he killed the aged Priam at the altar of Zeus, hurled Hector's son, Astyanax, down from the walls, and offered up Polyxena upon his father's tomb. In Homer he arrives safely with much booty at Phthia, his father's home, and weds Menelaüs's daughter Hermioné, who was promised him during the siege of Troy (*Od.* iv. 5). Later legend represents him as accompanied by Andromaché, Hector's wife, who is allotted him as a part of his booty, and Helenus, and then, on the strength of a prophecy of Helenus, as going to Epirus and settling there. It was to a son of his by Lanassa, granddaughter of Heracles, that the later kings of Epirus traced back their descent, and accordingly styled themselves Aeacidae; while from his son by Andromaché, Molossus, the district of Molossia was said to derive its name (Pausan. i. 11). He afterwards went to Phthia, to reinstate his grandfather Peleus in his kingdom whence he had been expelled by Acastus and wedded Hermioné. He soon, however, met his death at Delphi, whither, according to one story, he had gone with dedicatory offerings, or, according to another, to plunder the temple of Apollo in revenge for his father's death. The accounts of his death vary, some attributing it to Orestes, the earlier lover of Hermioné; others to the Delphians, at the instance of the Pythian priestess; others again to a quarrel about the meat-offerings. The scene of his death was the altar, a coincidence which was regarded as a judgment for his murder of Priam. His tomb was within the precincts of the Delphic temple, and in later times he was worshipped as a hero with annual sacrifices by the Delphians, as he was said to have vouchsafed valuable assistance against the Gauls when they threatened the sacred spot (B.C. 279) (Pausan. x. 23). (2) A king of Epirus, father of Alexander I. and of Olympias, the mother of Alexander the Great. He died about B.C. 360. (3) A king of Epirus, the son of Alexander I. and grandson of the preceding (Plut. *Pyrr.*). (4) A general of Alexander the Great. He obtained the government of Armenia after Alexander's death. He was slain in battle by Eumenes (q. v.) (Plut. *Eum.* 4, 7). (5) A general of Mithridates (App. *Mith.* 17).

Neoterĭci and **Novelli.** A name applied to the minor poets who sprang up in great numbers during and after the reign of Hadrian and who wrote pretty little poems on trifling themes of no great merit. See Diomedes in the *Grammatici Latini* (Keil), i. 514 foll.; and Schultz in *Hermes*, xxii. 274; and Leo, ib. xxiv. 294.

Nepa. According to Festus, an African word, and equivalent to the Latin *sidus*. Cicero often employs it in his translation of Aratus, and it occurs in Manilius (ii. 32) and elsewhere. Plautus uses it (*Casin.* ii. 8, 7) for Cancer, and Cicero (*De Fin.* v. 15) for Scorpio. This latter writer, moreover, who, in his translation of Aratus, commonly employs *Nepa* in the sense of *Scorpio*, in one passage (v. 460) uses it in the sense of *Cancer*. In Columella, also (xi. 2, 30), *Nepa* occurs for *Cancer*, according to some, but perhaps with more correctness for *Scorpio*.

Nepĕté or **Nepé.** The modern Nepi. An ancient town of Etruria, situated near the Saltus Ciminius. It was an important strategic point (Livy, vi. 9).

Nephĕlé (*Νεφάλη*). Wife of Athamas and mother of Phrixus and Hellé. Hence Hellé is called by Ovid, Nepheleïs. See ATHAMAS.

Nepos. (1) CORNELIUS. A Roman historical writer, born in Northern Italy about B.C. 100. He was the friend of Cicero, Atticus, and of the poet Catullus, who dedicated to him a volume of poems. He died about B.C. 24. Besides erotic poems, three books of *Chronica*, five books of *Exempla* (probably an account of the men who were typical of the early Roman virtues), biographies of Cato and Cicero, and a geographical treatise, all of which, except a few fragments, are lost, he wrote a series of biographies in at least sixteen books (*De Viris Illustribus*), in which the lives of famous Greeks and Romans were narrated in parallel arrangement. Of this work there remain the part treating of foreign generals and the biographies of Cato and Atticus. The style of Nepos is not good, as it borders on the colloquial; but the biographies are of considerable historical value, as being fair, sympathetic, and well arranged. The best MS. of Nepos is the Codex Parcensis at Louvain, dating from the fifteenth century. Others of a greater age exist, but are of an inferior "family," and very corrupt. Principal editions are those of Lambinus (Paris, 1569); Bremi (4th ed. Zürich, 1827); Roth (Basel, 1841); with commentary by Nipperdey (Leipzig, 1849; rev. ed.

by Lupus, Berlin, 1879); Siebelis (11th ed. 1885); with index by Gitlbauer (Freiburg, 1883); Weidner (2d ed. Prague, 1888); with English notes by O. Browning (Oxford, 1868); and by Lindsay (last ed. New York, 1895). There is a lexicon in Halm's ed. by Haacke (9th ed. Leipzig, 1887), by Jahr in Andresen's ed. (Prague, 1884); and by Koch and Georges (5th ed. Hanover, 1885).

(2) IULIUS. A Roman emperor of the West, the last but one, reigning A.D. 474–475. He was placed on the throne by the Byzantine emperor Leo, the usurper Glycerius being deposed. Nepos, however, was, in his turn, soon deposed by his general Orestes, who soon crowned his own son Romulus Augustulus. Nepos went into exile in Dalmatia, where he was killed in A.D. 480.

Nepotiānus, FLAVIUS POPILIUS. A son of Eutropia, the half-sister of the emperor Constantine. He proclaimed himself emperor (A.D. 350) after the death of his cousin Constans, marched to Rome with a body of gladiators and other disreputable followers, defeated Anicetus, the praetorian prefect, and pillaged the city. He enjoyed his usurped power only twenty-eight days, at the end of which period he was defeated and slain by Marcellinus, one of the lieutenants of Magnentius.

Neptūnus. The Italian god of the sea, husband of Salacia, the goddess of salt water (Varro, *L. L.* v. 72), and identified by the Romans with the Greek Poseidon. This identification dated from B.C. 399, when a *lectisternium* (q. v.) was ordained in his honour by the Sibylline Books (Livy, v. 13). Like Poseidon, he was worshipped as god of the sea and of equestrian accomplishments. As such he had a temple in the Circus Flaminius, while in the Circus Maximus the old Italian god Consus had an altar in a similar capacity. In after-times Agrippa built a temple and portico to Neptune on the Field of Mars, in honour of his naval victory over Sextus Pompeius and Antonius. A festival of Neptune (Neptunalia), accompanied by games, was celebrated on July 23. The old harbour-god of the Romans was Portunus (q. v.). The original conception of Neptunus was of a god presiding over rivers and springs, as the early Romans had little to do with the sea. The wider view which made him primarily a sea-god is possibly due to the influence of the Etruscan religion in which Neptune (Nethuns) was so regarded. See POSEIDON.

Nereïd Monument. A sculptured temple at Xanthus in Lycia, discovered in 1838 by Sir Charles Fellows. The sculptures with which it was adorned are now in the British Museum. The name was given from ten draped female figures, whose moist, clinging garments and the accompanying sea-weed and shells led many archæologists to regard them as Nereïds. See Perry's *Greek and Roman Sculpture*, pp. 501 foll., where illustrations are given.

Nereïdes (Νηρηΐδες). The nymphs of the sea, daughters of Nereus (q. v.) and Doris. They were said to be fifty in number, though Propertius (iii. 5, 33) makes them a hundred. The best known were Amphitrité, wife of Poseidon, Thetis, Galatea, Doto, etc. They were originally represented as having sea-grown hair and descending into a fish-like form, like the mermaids of later times. See Pliny, *H. N.* ix. 4; and the articles NAIADES; NYMPHAE; OCEANIDES.

Nereïd. (Pompeii.)

Nerēïus. A name given by the poets to any descendant of Nereus, such as Phocus and Achilles.

Nerētum. Now Narbo; a town of the Salentini in Calabria.

Nereus (Νηρεύς). The eldest son of Pontus and Gaea, husband of Doris, daughter of Oceanus, father of fifty (according to a later account, a hundred) beautiful sea-nymphs, the Nereids. He is described as a venerable old man, of a kindly disposition towards mortals, and as dwelling in a resplendent cave in the depths of the Aegean. Like all gods of water, he had the gift of prophecy and of transforming himself into any shape he chose to assume. He was represented as an old man with the leaves of sea-weed for hair and a sceptre or trident. His daughters were likewise benevolent beings, well disposed to mortals (*Il.* xviii. 141; *Odyss.* xxiv. 58). The myths related of Nereus strongly suggest those told of Glaucus (q. v.) and Proteus (q. v.).

Nerĭcus. See LEUCAS.

Nerīné. Equivalent to Nereïs, a daughter of Nereus. See NEREÏDES.

Nerio, Neriēné or **Neriēnis**. See MARS.

Nerĭtos. A mountain in Ithaca, and also a small rocky island near Ithaca (Hom. *Odyss.* i. 21). The adjective Neritius is often used by the poets as equivalent to Ithacan or Odyssean.

Nerium Celtĭcum. A promontory of Spain, the same as Artabrum; now Cape Finisterre.

Nerius, GNAEUS. A Roman who accused P. Sestius of *vis* in the case defended by Cicero in his oration *Pro Sestio* (Cic. *Q. Fratr.* ii. 3, 5).

Nero. A Sabine word meaning "brave," cognate with ἀνήρ. (1) TIBERIUS, a son of Appius Claudius, from whom all the Claudii Nerones were descended. (2) A general in the Second Punic War, who defeated and slew the Carthaginian Hasdrubal at the battle of the Metaurus, thus probably saving Rome from capture (B.C. 207). (3) TIBERIUS, father of the emperor and a partisan of Iulius Caesar and afterwards of Antony. He surrendered his beautiful wife Livia (q. v.) to Octavianus (Augustus), who married her. Nero died soon after (Tac. *Ann.* i. 10; v. 1; Dio Cass. xlviii. 44). (4) CLAUDIUS CAESAR. The sixth of the Roman emperors, born at Antium, in Latium, A.D. 37, nine months after the death of Tiberius. He was the son of Domitius Ahenobarbus and Agrippina, the daughter of Germanicus, and was originally named Lucius Domitius. After the death of Ahenobarbus, and a second husband, Crispus Passienus, Agrippina married her uncle, the emperor Claudius, who gave his daughter Octavia in marriage to her son Lucius, and subsequently

adopted him with the formal sanction of a *lex Curiata*.

The education of Nero was carefully attended to in his youth. He was placed under the care of the philosopher Seneca, and appears to have applied himself with considerable perseverance to study. He is said to have made great progress in Greek, of which he gave a specimen in his sixteenth year, by pleading in that tongue the rights of the Rhodians, and of the inhabitants of Ilium (Suet. *Nero*, 7; Tac. *Ann.* xii. 58). At the death of Claudius (A.D. 54), while Agrippina, by flatteries and lamentations, detained Britannicus, the son of Claudius and Messalina, within the palace, Nero, presenting himself before the gates, was lifted by the guard-in-waiting into the covered chariot used for the purpose of carrying in procession an elected emperor, and was followed by a multitude of the people, under the illusion that it was Britannicus. He entered the camp, promised a donative to the cohorts, was saluted emperor, and pronounced before the Senate, in honour of Claudius, a panegyric composed by his preceptor Seneca.

Coin of Nero.

Agrippina soon endeavoured to obtain the chief management of public affairs; and her vindictive and cruel temper would have hurried Nero, at the commencement of his reign, into acts of violence and bloodshed, if her influence had not been counteracted by Seneca and Burrus, to whom Nero had intrusted the government of the State. Through their counsels the first five years of Nero's reign were distinguished by justice and clemency; and an anecdote is related of him, that, having on one occasion to sign an order for the execution of a malefactor, he exclaimed, "Would that I could not write!" (Suet. *Nero*, 10). He discouraged public informers, refused the statues of gold and silver which were offered him by the Senate and people, and used every art to ingratiate himself with the latter. But his mother was enraged to find that her power over him became weaker every day, and that he constantly disregarded her advice and refused her requests. His neglect of his wife Octavia, and his criminal love of Acté, a woman of low birth, still farther widened the breach between him and his mother. She frequently addressed him in the most contemptuous language; reminded him that he owed his elevation solely to her, and threatened that she would inform the soldiers of the manner in which Claudius had met his end, and would call upon them to support the claims of Britannicus, the son of the late emperor. The threats of his mother only served to hasten the death of Britannicus, whose murder forms the commencement of that long catalogue of crimes which afterwards disgraced the reign of Nero. But while the management of public affairs appears, from the testimony of most historians, to have been wisely conducted by Burrus and Seneca, Nero indulged in private in dissipation and profligacy. He was accustomed, in company with other young men of his own age, to sally into the streets of Rome at night, in order to rob and maltreat passengers, and even to break into private houses and carry off the property of their owners. But these extravagances were comparatively harmless; his love for Poppaea, whom he had seduced from Otho, led him into more serious crimes. Poppaea, who was ambitious of sharing the imperial throne, perceived that she could not hope to attain her object while Agrippina was alive, and, accordingly, induced Nero to consent to the murder of his mother. The entreaties of Poppaea appear to have been supported by the advice of Burrus and Seneca; and the philosopher did not hesitate to justify the murder of a mother by her son (Tac. *Ann.* xiv. 11; Quint. viii. 5).

In the eighth year of his reign, Nero lost his best counsellor, Burrus; and Seneca had the wisdom to withdraw from the court, where his presence had become disliked, and where his enormous wealth was calculated to excite the envy even of the emperor. About the same time Nero divorced Octavia and married Poppaea, and soon after put to death the former on a false accusation of adultery and treason. In the tenth year of his reign (A.D. 64) Rome was almost destroyed by fire. Of the fourteen districts into which the city was divided, four only remained entire. The fire originated at that part of the Circus which was contiguous to the Palatine and Coelian Hills, and raged with the greatest fury for six days and seven nights; and, after it was thought to have been extinguished, it burst forth again, and continued for two days longer. Nero appears to have acted on this occasion with the greatest liberality and kindness; the city was supplied with provisions at a very moderate price; and the imperial gardens were thrown open to the sufferers, and buildings erected for their accommodation. But these acts of humanity and benevolence were insufficient to screen him from the popular suspicion. It was generally believed that he had set fire to the city himself, and some even reported that he had ascended the top of a high tower in order to witness the conflagration, where he amused himself with singing the "Destruction of Troy." From many circumstances, however, it appears improbable that Nero was guilty of this crime. His guilt, indeed, is asserted by Suetonius (*Nero*, 38) and Dio Cassius (lxii. 17), but Tacitus admits that he was not able to prove the truth of the accusation (*Ann.* xv. 38). In order, however, to remove the suspicions of the people, Nero spread a report that the Christians were the authors of the fire, and numbers of them, accordingly, were seized and put to death. Their execution served as an amusement to the people. Some were covered with skins of wild beasts, and were torn to pieces by dogs; others were crucified; and several were smeared with pitch and other combustible materials, and burned in the imperial gardens in the night: "Whence," says the historian, "pity arose

Nero. (Bust in the Louvre.)

for the guilty (though they deserved the severest punishments), since they were put to death, not for the public good, but to gratify the cruelty of a single man" (Tac. *Ann.* xv. 44).

In the following year (A.D. 65) a powerful conspiracy was formed for the purpose of placing Piso upon the throne, but it was discovered by Nero, and the principal conspirators were put to death. Among others who suffered on this occasion were Lucan and Seneca; but the guilt of the latter is doubtful. (See SENECA.) In the same year Poppaea died, in consequence of a kick which she received from her husband while she was in an advanced state of pregnancy. A long list of victims is to be found in the pages of the annalists. The distinguished general Domitius Corbulo, Thrasea Paetus, and Barea Soranus are among these.

During the latter part of his reign, Nero was principally engaged in amateur theatricals, and in contending for the prizes at the public games. He had previously appeared as an actor on the Roman stage; and he now visited in succession the chief cities of Greece, and received no less than 1800 crowns for his victories in the public Grecian games. He also began the canal across the Isthmus of Corinth, but ordered the work to be stopped (Dio Cass. lxiii. 6 foll.), leaving its completion to our own times (1893). On his return to Italy he entered Naples and Rome as a conqueror, and was received with triumphal honours. But while he was engaged in these extravagances, Vindex, who commanded the legions in Gaul, declared against his authority; and his example was speedily followed by Galba, who commanded in Spain. The praetorian cohorts espoused the cause of Galba, and the Senate pronounced sentence of death against Nero, who had fled from Rome as soon as he heard of the revolt of the Praetorian Guards. Nero, however, anticipated the execution of the sentence which had been passed against him, by requesting one of his attendants to put him to death, after making an ineffectual attempt to do so with his own hands. He died A.D. 68, in the thirty-second year of his age, and the fourteenth of his reign. See the chapter in Baring-Gould's *Tragedy of the Caesars*, vol. ii. (1892).

Neronēa. A name given to Artaxata by Tiridates, who had been restored to his kingdom by Nero. See ARTAXATA.

Neronia. See QUINQUENNALIA.

Nertobrīga. (1) A city of Hispania Baetica, some distance to the west of Corduba. It was also called Concordia Iulia, and is now Valera la Vieja (Pliny, *H. N.* iii. 14). (2) A city of Hispania Tarraconensis, in the territory of the Celtiberi, between Bilbilis and Caesaraugusta. It is now Almuña.

Nerva. (1) MARCUS, the grandfather of the emperor Nerva. He was consul in A.D. 22, and starved himself to death in the year 33. He was a famous lawyer, and is often cited in the *Digest*. He also had charge of the public works under Tiberius, and originated the tunnel (Grotta di Posilipo) near Naples. (2) MARCUS, the son of the preceding and father of the emperor. He won distinction as a jurist, and is quoted in Gaius and the Digest under the name of Nerva Filius. (3) MARCUS COCCEIUS. The thirteenth Roman emperor, was born at Narnia, in Umbria, A.D. 27 according to Eutropius (viii. 1), or A.D. 32 according to Dio Cassius (lxviii. 4). His family originally came from Crete; but several of his ancestors rose to the highest honours of the Roman State. His grandfather, Cocceius Nerva, who was consul A.D. 22, and a great favourite of the emperor Tiberius, was one of the most celebrated jurists of his age. Nerva is first mentioned in history as a favourite of Nero, who bestowed upon him triumphal honours, A.D. 66, when he was praetor elect. The poetry of Nerva, which is mentioned with praise by Pliny and Martial, appears to have recommended him to Nero; and he was employed in offices of trust and honour during the reigns of Vespasian and Titus, though he incurred the suspicion of Domitian, who banished him to Tarentum. On the assassination of Domitian, A.D. 96, Nerva succeeded to the sovereign power, through the influence of Petronius Secundus, commander of the praetorian cohorts, and of Parthenius, the chamberlain of the palace.

The mild and equitable administration of Nerva is acknowledged and praised by all ancient writers, and forms a striking contrast to the bloody reign of his predecessor. He discouraged informers, recalled the exiles from banishment, relieved the people from some oppressive taxes, and tolerated the Christians. Many instances of his liberality and clemency are recorded by the younger Pliny; he allowed no senator to be put to death during his reign; and he practised the greatest economy, in order to relieve the wants of the poorer citizens. But his impartial administration of justice met with little favour from the Praetorian Guard,

Nerva. (Bust in the Vatican.)

which had been allowed by Domitian to indulge in excesses of every kind. Enraged at the loss of their benefactor and favourite, they compelled Nerva to deliver into their hands Parthenius and their own commander Petronius, both of whom they put to death. The excesses of his guards convinced Nerva that the government of the Roman Empire required greater energy both of body and mind than he possessed, and he accordingly adopted Trajan as his successor, and associated him with himself in the sovereignty. Nerva died A.D. 98, after a reign of sixteen months and nine days. His life is sketched by Suetonius.

Nervii. A powerful and warlike people in Gallia Belgica, whose territory extended from the river Sabis (Sambre) to the ocean. Their chief towns were Bagacum (Bavia), Camaracum (Cambray), and Turnacum (Tournay) (Caes. *B. G.* v. 39). In B.C. 58 they were defeated by Iulius Caesar with terrible slaughter (Caes. *B. G.* ii. 15; v. 38; vi. 2).

Nervus. (1) (*ξύλον, ποδοκάκκη, χοῖνιξ*). A sort of stocks or pillory for the confinement of criminals and the punishment of refractory slaves. Festus speaks of it as confining both the neck and the feet; but its form is uncertain. All that is known is that it had a framework of wood, with holes for hands, neck, and feet. See Plaut. *Poen.* v. 4, 99; Gell. xx. 1; and Aristoph. *Eq.* 1047. (2) (*νεῦρον*). The string of a musical instrument. (3) A bowstring.

Nesis. The modern Nisita; a small island off the coast of Campania, between Puteoli and Neapolis. It was a favourite residence of the Roman nobles (Stat. *Silv.* iii. 1, 148).

Nessōnis (*Νεσσωνίς*). A lake in Thessaly, a little south of the river Peneus, usually reduced in summer to a mere marsh. The ancients regarded it as the remains of a vast body of water which they supposed to have at one time covered the whole of Thessaly and finally to have been drawn off through the vale of Tempé (Strabo, p. 430).

Nessotrophīum (*νησσοτροφεῖον*). A duck-yard with a pond (Varro, *R. R.* iii. 10).

Nessus (*Νέσσος*). A Centaur, who used to ferry travellers over the river Evenus. On attempting to outrage Deïanira, the wife of Heracles, he was shot by the latter with one of his poisoned arrows. Upon this he presented Deïanira with a portion of his poisoned blood, professedly to enable her to regain her husband's affections, should he prove false to her. A robe smeared with this blood proved fatal to Heracles, as related in the article HERACLES, p. 792. See Sophocles, *Trachiniae*, 558, 1141.

Nestor (*Νέστωρ*). Son of Neleus and Chloris, ruler of the Messenian and Triphylian Pylus, and later also, after the extinction of the royal family there, of Messenia. He was married to Eurydicé, by whom he had seven sons and two daughters. He was the only one of twelve sons of Neleus who escaped being slain by Heracles, since he was, it is said, living at the time among the Gerenians in Messenia, from whom he derives the name *Γερήνιος*, given him in Homer. After this disaster, the king of the Epeans, Augeas, illegally kept back a four-horse chariot which Neleus had sent to Elis to compete in a contest. Nestor, as yet hardly a youth, retaliated by driving off the herds of the Epeans; upon which the latter with a large army besieged the Pylian fortress of Thyroessa on the Eurotas. Nestor formed one of the relieving army, serving as a foot-soldier, owing to his father's having, from regard to his youth, had the war-horses concealed from him. He slew in battle Augeas's son-in-law, and, fighting from the dead man's chariot, won a most brilliant victory, so that the Pylians offered thanks to him among men just as they offered them to Zeus among the gods. In like manner in the war against the Arcadians, when he was the youngest of all the combatants, he killed the gigantic and much-dreaded hero Ereuthalion. He also took an important part in the battle between the Centaurs and the Lapithae, and is mentioned as among the Argonauts (Val. Flac. i. 380). In old age, when he was ruling over the third generation of his people, he was involved in the expedition against Troy, owing, as the story went, to the obligation incurred by his son Antilochus as a suitor of Helen; with Odysseus he gained the help of Achilles and Patroclus for the undertaking, and himself sailed, in the company of his sons Antilochus and Thrasymedes, with ninety ships to the seat of war at Ilium. Here, according to Homer, "Nestor the horseman," in spite of his great age, took a prominent part among the heroes in council and battle alike: the qualities which adorned him

were wisdom, justice, eloquence, "from his lips flows language sweeter than honey" (*Il.* i. 248), experience in war, unwearied activity, and courage. All valued and loved him, and none more than Agamemnon, who wished that he had ten such counsellors: in which case, he said, Troy would soon fall (*Il.* ii. 372). He is so great a favourite with Homer that in ancient times it was conjectured that the poet was himself a native of Pylos. After the destruction of Troy he returned in safety with his son Thrasymedes to Pylos, Antilochus (q. v.) having for the sake of his father, who was in sore peril, sacrificed his own life in battle against Memnon. Ten years afterwards, Telemachus found him still at Pylos, amidst his children, in the enjoyment of a cheerful and prosperous old age. On the "cup of Nestor," see TOREUTICÉ.

Nestorĭdes (Νεστορίδης). A patronymic applied to a son of Nestor—e. g. Antilochus or Pisistratus.

Nestorius (Νεστόριος). A native of Germanicia in Northern Syria, who from his eminence as a zealous and eloquent priest was made Patriarch of Constantinople (A.D. 428). He is famous for his views on the divine and human natures of Christ, and by his connection with the sect that took his name. He held that the Virgin was the mother of Christ (Χριστοτόκος), and that while the divinity of the Word (λόγος) is to be distinguished from the temple of his flesh enshrining it, yet there still remained but one true Person. His opponents charged him, however, with teaching the doctrine of a duality of Persons—the human person of Christ and the divine person of the Logos. He was denounced by Cyril of Alexandria in twelve anathemas, and at a grand council held at Ephesus in A.D. 431, Nestorius was condemned and deposed. He died in exile somewhere in Egypt, the date and place of his death being alike unknown. See Anderson's *Oriental Churches* (1872).

Nestus (Νέστος), sometimes **Nessus**. A river in Thrace, rising in Mount Rhodopé, and falling into the Aegean Sea opposite the island of Thasos. The Nestus formed the eastern boundary of Macedonia from the time of Philip and Alexander the Great.

Nesus. The fortress of Oeniadae. See OENIADAE.

Net. See RETÉ.

Netum (Νέητον). A town in Sicily, southwest of Syracuse.

Neuri (Νεῦροι, Νευροί). A people of Sarmatia Europaea, to the northwest of the sources of the Tyras (Dniester). See Herod. iv. 17, 51, 100, 125.

Neuron. See NERVUS.

Neurospasta. A doll worked by wires. See PUPA.

Nevirnum. See NOVIODUNUM.

New Academy, also called the THIRD ACADEMY. The form which the Academic philosophy of Plato received at the hands of Carneades. (See CARNEADES.) It was largely skeptical in its teaching, denying the possibility of aiming at absolute truth or at any certain criterion of truth. Carneades argued that if there were any such criterion it must exist in reason (λόγος) or sensation (αἴσθησις) or conception (φαντασία); but as reason depends on conception and this in turn on sensation, and as we have no means of deciding whether our sensations really correspond to the objects that produce them, the basis of all knowledge is always uncertain. Hence, all that we can attain to is a high degree of probability, which we must accept as the nearest possible approximation to the truth. The New Academy teaching is in the nature of modern agnosticism, and represents the spirit of an age when religion was decaying, and philosophy itself, losing its earnest and serious spirit, was becoming merely a vehicle for rhetoric and dialectical ingenuity. Cicero's speculative philosophy was in the main in accord with the teachings of Carneades, looking rather to the probable (*illud probabile*) than to certain truth. See his *Academica*.

Newspapers. See ACTA.

Nexum. In the old Roman legal system *nexum* was the solemn process of entering upon a relationship of debtor and creditor under the form of *mancipatio* (q. v.). In the formula used therein the borrower gave the lender, in case of non-fulfilment of the obligation incurred, the right to seize him (cf. MANUS INIECTIO) without more ado as his bondsman, since he stood in the position of a defendant against whom judgment had already been given (*iudicatus*), or who had admitted his liability in open court (*in iure confessus*). There was no limit in respect of time to the right of the creditor over a debtor whose person thus became forfeit to him: it consisted in the fact that the creditor could keep the *nexus* in his private dungeon and make him work as a slave for him. The latter, however, continued to be a citizen; but, as long as the debt existed, was considered dishonoured, and was accordingly excluded from service in the legion and voting in the assemblies of the people. After the Lex Poetilia Papiria of B.C. 326 had, in the interest of the plebeians, for the most part abolished personal security, the *nexum* gradually passed into a mere contract of loan. Varro defines it as *quodcumque per aes et libram geritur* (*L. L.* vii. 105).

In Nettleship's *Lectures and Essays*, pp. 363–66 (Oxford, 1885), there is a note which attempts to show that the proper meaning of *nexum* is "a thing pledged (bound)," and of *nexus* (second declension), "a prisoner"; that the evidence for making *nexum* mean "a solemn process" is weak; and that *nexus -ūs* is the proper word for the contract or bond between debtor and creditor. In almost all the passages where *nexum -i* is supposed to mean "a process," it might as well come from *nexus* (fourth declension). Cicero, however, in the oration *Pro Caecina* 102, has *nexa atque hereditates;* and in *De Rep.* ii. 59, *propter unius libidinem omnia nexa civium liberata nectierque postea desitum.* See Bachofen, *Das Nexum* (1843); Huschke, *Ueber das Recht des Nexum* (1846); and Giraud, *Des "Nexi,"* etc. (1847).

Nicaea (Νικαία). (1) A celebrated city of Asia, situated on the eastern side of Lake Ascania (Isnik) in Bithynia, built (about B.C. 300) by Antigonus, king of Asia, and originally called Antigonea; but Lysimachus soon after changed the name into Nicaea, in honour of his wife. Under the kings of Bithynia it was often the royal residence; and under the Romans it continued to be one of the chief cities of Asia; and at the time of the Byzantine emperors it was a great military outpost of Constantinople against the Turks. It fell in A.D.

1330, being taken by the Turk Orchan, the son of Ottoman. The great double walls of the ancient city still exist, and there are ruins of an aqueduct, a theatre, a gymnasium, and the two moles of the ancient harbour. It is famous in ecclesiastical history as the seat of the great Oecumenical Council which Constantine convoked in A.D. 325, chiefly for the decision of the Arian controversy, and which drew up the Nicene Creed. See Stanley's *History of the Eastern Church* (1861). The modern name is Isnik (εἰς Νίκαιαν). (2) A fortress of the Epicnemidian Locrians on the sea, near the pass of Thermopylae, which it commanded. (3) The modern Nizza or Nice; a city on the coast of Liguria, to the east of the river Var; a colony of Massilia, and subject to that city.

Nicander (Νίκανδρος). (1) A king of Sparta, father of Theopompus. He reigned about B.C. 809–770. (2) A Greek poet, born at Colophon, in Asia, about B.C. 150. He was an hereditary priest of Apollo, as well as a physician, and lived a great deal in Aetolia as well as later in Pergamum. He wrote numerous works, such as those on agriculture, of which considerable fragments are still preserved, and on mythological metamorphoses (used by the Roman poet Ovid). Two of his poems, written in a dull and bombastic manner, are still extant: the Θηριακά, on remedies against the wounds inflicted by venomous animals; and the Ἀλεξιφάρμακα, on poisons taken in food and drink, with their antidotes. These poems are edited by Schneider, and revised by Keil (1856).

Nicānor (Νικάνωρ). (1) A Macedonian officer of Alexander the Great, who, on the death of Perdiccas, received the government of Cappadocia. Antigonus made him governor of Media and its adjacent provinces, but in 312 he was deposed by Seleucus. (2) A Macedonian officer under Cassander, by whom he was secretly despatched, immediately on the death of Antipater in B.C. 319, to take the command of the Macedonian garrison at Munychia. Nicanor arrived at Athens before the news of Antipater's death, and thus readily obtained possession of the fortress. Soon afterwards he surprised the Piraeus also, and placed both fortresses in the hands of Cassander on the arrival of the latter in Attica in 318. Nicanor was afterwards despatched by Cassander with a fleet to the Hellespont, where he gained a victory over the admiral of Polysperchon. On his return to Athens he incurred the suspicion of Cassander, and was put to death (Diod. xviii. 64 foll.; Plut. *Phoc.* 33).

Nicarchus (Νίκαρχος). A writer to whom are ascribed thirty-eight epigrams in the Greek Anthology. Of his personality nothing is known.

Nicātor (Νικάτωρ—i. e. "Victor"). A surname assumed by Seleucus I., the founder of the Syrian monarchy. See SELEUCUS.

Nicephorium (Νικηφόριον). (1) A fortified town of Mesopotamia, on the Euphrates, and due south of Edessa, built by order of Alexander the Great, and probably completed under Seleucus. It is identical with CALLINĪCUS. Still later it was called LEONTOPŎLIS. (2) A fortress on the Propontis.

Nicephorius (Νικηφόριος). A river of Armenia Maior, on which Tigranes built his residence Tigranocerta. It was a tributary of the Upper Tigris, probably identical with the CENTRĪTES, or a small tributary of it.

Nicephŏrus (Νικηφόρος). (1) CALLISTUS XANTHOPŪLUS, the author of an ecclesiastical history, was born in the latter part of the thirteenth century, and died about 1450. His ecclesiastical history was originally in twenty-three books, of which there are eighteen extant, extending from the birth of Christ down to the death of the tyrant Phocas, in 610. Although Nicephorus compiled from the works of his predecessors, he entirely remodelled his materials, and his style is vastly superior to that of his contemporaries. (2) GREGŎRAS. (See GREGORAS.) (3) PATRIARCHA, originally the notary or chief secretary of state to the emperor Constantine V. Copronymus, subsequently retired into a convent, and was raised to the patriarchate of Constantinople in 806. He was deposed in 815, and died in 828. Several of his works have come down to us, of which the most important is entitled *Breviarium Historicum*, a Byzantine history, extending from 602 to 770, and one of the best works of the Byzantine period. It is edited by Gedner (1832).

Nicer. Now the Neckar, a river in Germany falling into the Rhine at Mannheim (Auson. *Mosell.* 423).

Nicētas (Νικήτας). (1) EUGENIĀNUS, author of one of the poorest of the Greek romances that have come down to us. He appears to have lived not long after Theodore Prodromus, whom, according to the title of his work as given in a Paris manuscript, he selected for his model. He wrote of the loves of Drosilla and Chariclea. Boissonade gave to the world an edition of this romance, published in 1819 at Paris (2 vols.). (2) ACŌMINĀTUS, surnamed CHONIĀTES, from his having been born at Chonae, or Colossae, in Phrygia. He filled many posts of distinction at Constantinople, under the emperor Isaac II. (Angelus). About A.D. 1189 he was appointed by the same monarch governor of Philippopolis, an office of which Alexius V. deprived him. He died A.D. 1216 at Nicaea, in Bithynia, to which city he had fled after the taking of Constantinople by the Latins. He wrote a history of the Byzantine emperors, in twenty-one books, commencing A.D. 1118 and ending A.D. 1206. It is edited by Bekker (1835) and Migne (1865). (3) An ecclesiastical writer, who flourished during the latter half of the eleventh century. He was at first bishop of Serrae in Macedonia (whence he is sometimes surnamed Serrariensis), and afterwards metropolitan of Heraclea, in Thrace. He is known by his commentary on sixteen discourses of St. Gregory Nazianzen and by other works connected with theology and sacred criticism. He was the author, likewise, of some grammatical productions, of which, however, only a small remnant has come down to us, in the shape of a treatise, "On the Names of the Gods" (Εἰς τὰ Ὀνόματα τῶν Θεῶν), edited by Creuzer (Leipzig, 1817).

Niceterium (νικητήριον). A badge or reward of victory, worn on the breast or neck (Juv. iii. 68). It was not, as Rich appears to think, of a military character, but denoted athletic prowess, like the modern medals given in amateur contests.

Nicia. A small river of Cisalpine Gaul, rising in the territory of the Ligures Apuani and falling into the Po at Brixellum. The Aemilian Way crossed it a little before Tanetum.

Nicias (*Νικίας*). (1) An Athenian general who was a man of birth and fortune; but one in whom a generous temper, popular manners, and considerable political and military talent were marred by unreasonable diffidence and an excessive dread of responsibility. Nicias, however, signalized himself on several occasions. He took the island of Cythera from the Lacedaemonians, subjugated many cities of Thrace which had revolted from the Athenian sway, shut up the Megarians within their city-walls, cutting off all communications from without, and taking their harbour Nisaea. When the unfortunate expedition against Syracuse was undertaken by Athens, Nicias was one of the three commanders who were sent at its head, the other two being Alcibiades and Lamachus. He had previously, however, used every effort to prevent his countrymen from engaging in this affair, on the ground that they were only wasting their resources in distant warfare and multiplying their enemies. After the recall of Alcibiades, the natural indecision of Nicias, increased by ill-health and dislike of his command, proved a principal cause of the failure of the enterprise. In endeavouring to retreat by land from before Syracuse, the Athenian commanders, Nicias and Demosthenes (the latter had come with re-enforcements), were pursued, defeated, and compelled to surrender. The generals were put to death (B.C. 414); their soldiers were confined at first in the quarry of Epipolae, and afterwards sold as slaves. There is a life of Nicias by Plutarch. (2) An Athenian painter, a son of Nicomedes, and a pupil of Euphranor's pupil Antidotus. He lived during the latter half of the fourth century B.C., and was a younger contemporary of Praxiteles. The latter, when asked which of his works in marble he specially approved, was in the habit of answering, "Those that have been touched by the hand of Nicias"—such importance did he attribute to that artist's method of tinting, or "touching up with colour," *circumlitio* (Pliny, *H. N.* xxxv. 133). He painted mainly in encaustic, and was especially distinguished by his skill in making the figures on his pictures appear to stand out of the work by means of a proper treatment of light and shade. He was celebrated for his painting of female figures and other subjects which were favourable to the full expression of dramatic emotions, such as the rescue of Andromeda and the questioning of the dead by Odysseus in the lower world. This latter picture he presented to the city of his birth, after Ptolemy I. had offered sixty talents (about $60,000) for it (Pliny, *H. N.* xxxv. §§ 130–133). He insisted on the importance of an artist's choosing noble themes, such as cavalry engagements and battles at sea, instead of frittering away his skill on birds and flowers (Demet. *De Elocutione*, 76). (3) The younger, an Athenian painter, son of Nicomedes, and pupil of Euphranor. He began to practise his art about B.C. 320. Nicias is said to have been the first artist who used burnt ochre in his paintings (Pliny, *H. N.* xxxv. 6, 20). (4) The physician of Pyrrhus, king of Epirus, who offered to poison that monarch for a sum of money to be paid by the Romans. The Roman general, Fabricius, rejected this offer with scorn, and delivered Nicias over to Pyrrhus (Gell. iii. 8).

Niche. See AEDICULA.

Nicknames. See NOMEN.

Nico. An architect and geometrician, father of Galen, who lived in the beginning of the second century of the Christian era (Suid. s. v. *Γαληνός*).

Nicochăres (*Νικοχάρης*). An Athenian poet of the Old Comedy, and contemporary with Aristophanes.

Nicŏcles (*Νικοκλῆς*). (1) A king of Paphos, in the island of Cyprus. He owed his throne to the kindness of Ptolemy I., king of Egypt, who continued thereafter to bestow upon him many marks of favour. Having learned, however, at last, that Nicocles had formed an alliance with Antigonus, Ptolemy sent two emissaries to Cyprus, with orders to despatch Nicocles in case his treachery should be clearly proved. These persons, having taken with them a party of soldiers, surrounded the palace of the king of Paphos, and compelled him to destroy himself, although he protested his innocence (B.C. 310). His wife Axiothea, when she heard of her husband's death, killed her daughters with her own hand, and then slew herself. The other female relatives followed her example. The brothers of Nicocles also, having shut themselves up in the palace, set fire to it, and then fell by their own hands (Diod. Sic. xx. 21). (2) King of Salamis, in Cyprus, succeeding his father Evagoras B.C. 374. He celebrated the funeral obsequies of his parent with great splendour, and engaged Isocrates to write his eulogy. (See ISOCRATES.) (3) A tyrant of Sicyon, deposed by Aratus in B.C. 251.

Nicocreon (*Νικοκρέων*). A tyrant of Cyprus in the age of Alexander the Great. A fabulous story is related of his having caused the philosopher Anaxarchus to be pounded alive in a mortar (Diod. xix. 59–79; Cic. Tusc. ii. 22, 52; Diog. Laërt. ix. 59).

Nicolāus (*Νικόλαος*). (1) Called DAMASCENUS. A Greek historian of Damascus. At the suggestion of the Jewish king, Herod the Great, whose intimate friend he was, and who had recommended him to Augustus (B.C. 6), he wrote an autobiography, of which fragments remain; a comprehensive history of the world down to his own times in 144 books, which is partly preserved in fragments exhibiting an agreeable style. A portion of his panegyrical biography of Augustus has come down to us. The remains of Nicolaüs are edited by Dindorf in the *Hist. Graeci* (1870). See Steinmetz, *Herod und Nicolaus* (1861). (2) Called CHALCOCONDYLES, a Byzantine historian of the fifteenth century A.D., who wrote a history of the Empire from 1298 to 1463, including the capture of Constantinople (1453). It is in ten books.

Nicomăchus (*Νικόμαχος*). (1) A scribe at Athens, who, in transcribing the laws of Solon, altered them for a bribe (Xen. *Hellen.* i. 7, 35). (2) A Greek painter, probably of Thebes, about B.C. 360. He was celebrated as an artist who could paint with equal rapidity and excellence, and was regarded as rivalling the best painters of his day. A famous painting of his was "The Rape of Persephoné" (Pliny, *H. N.* xxxv. 108). (3) The father of Aristotle (q. v.). (4) The son of Aristotle, by a slave-girl, Herpyllis. He wrote some philosophical works; and some of Aristotle's writings are called the *Nicomachean Ethics* (*Ἠθικὰ Νικομάχεια*). (See ARISTOTELES.) (5) Of Gerasa, in Arabia, a follower of the Pythagorean philosophy, about A.D. 150. He composed an introduction to mathematics in two books and a hand-book on harmony, of which only

the first book is preserved entire, the second consisting of two fragments, which cannot be said, with certainty, to come from Nicomachus. The first-mentioned work gives valuable information as regards the arithmetic of the Greeks in earlier times. It was translated into Latin by Boëtius, and has been edited by Hoche (1863). The musical work was edited by Meibomius (Amst. 1652).

Nicomēdes (Νικομήδης). (1) Nicomēdes I., king of Bithynia, was the eldest son of Zipoetes, whom he succeeded, B.C. 278. With the aid of the Gauls, whom he invited into Asia, he defeated and put to death his brother Zipoetes, who had for some time held the independent sovereignty of a considerable part of Bithynia. The rest of his reign appears to have been undisturbed, and under his sway Bithynia rose to a high degree of power and prosperity. He founded the city of Nicomedia, which he made the capital of his kingdom. The length of his reign is uncertain, but he probably died about 250. He was succeeded by his son Zielas. (2) Nicomēdes II., surnamed Epiphanes, king of Bithynia, reigned B.C. 149–91. He was the son and successor of Prusias II., and fourth in descent from the preceding. He was brought up at Rome, where he succeeded in gaining the favour of the Senate. Prusias, in consequence, became jealous of his son, and sent secret instructions for his assassination. The plot was revealed to Nicomedes, who thereupon returned to Asia, and declared open war against his father. Prusias was deserted by his subjects, and was put to death by order of his son, B.C. 149. Of the long and tranquil reign of Nicomedes, few events have been transmitted to us. He courted the friendship of the Romans, whom he assisted in the war against Aristonicus, 131. He subsequently obtained possession of Paphlagonia, and attempted to gain Cappadocia by marrying Laodicé, the widow of Ariarathes VI. He was, however, expelled from Cappadocia by Mithridates; and he was also compelled by the Romans to abandon Paphlagonia, when they deprived Mithridates of Cappadocia. (3) Nicomēdes III., surnamed Philopator, king of Bithynia (B.C. 91–74), son and successor of Nicomedes II. Immediately after his accession, he was expelled by Mithridates, who set up against him his brother Socrates; but he was restored by the Romans in the following year (90). At the instigation of the Romans, Nicomedes now proceeded to attack the dominions of Mithridates, who expelled him a second time from his kingdom (88). This was the immediate occasion of the First Mithridatic War, at the conclusion of which (84) Nicomedes was again reinstated in his kingdom. He reigned nearly ten years after this second restoration. He died at the beginning of B.C. 74, and, having no children, by his will bequeathed his kingdom to the Roman people. (4) A geometrician famous for the invention of the "conchoid curve," much used by the ancients in solid geometry. See Ball's *Short History of Mathematics*, p. 78 (London, 1888).

Nicomedīa (Νικομήδεια). A celebrated city of Bithynia, built by King Nicomedes I. (B.C. 264), at the northeastern corner of the Sinus Astacenus. Under the Romans it was a colony, and a favourite residence of several of the later emperors, especially of Diocletian and Constantine the Great. It is memorable in history as the scene of Hannibal's death, and was the birthplace of the historian Arrian.

Nicon (Νίκων). A citizen of Tarentum, who betrayed his native city to Hannibal (B.C. 212). When the Romans retook the place, he was put to death (B.C. 209). See Livy, xxv. 8; Polyb. viii. 26.

Niconia or **Niconium**. A town in Scythia on the right bank of the Tyras (Dniester).

Nicopŏlis (Νικόπολις). A city at the southwestern extremity of Epirus, on the point of land which forms the north entrance to the Gulf of Ambracia, opposite to Actium. It was built by Augustus in memory of the victory (νίκη) of Actium, and was peopled from Ambracia, Anactorium, and other neighbouring cities, and also with settlers from Aetolia. (See Actium.) There were cities of the same name in Moesia Inferior, Armenia Minor, Cilicia, Lower Egypt (now Kars), and Thrace.

Nicostrătus (Νικόστρατος). One of the sons of Aristophanes, and ranked among the poets of the Middle Comedy. The titles of some of his own and his brothers' comedies are preserved in Athenaeus (pp. 108, 118, 230, 597). The names of his brothers were Araros and Philippus.

Niebuhr, Barthold Georg. A great historian and critic, born at Copenhagen, August 27, 1776. He studied at the Universities of Kiel and Göttingen, and entered the Danish public service in 1796, holding various offices. In 1806 he removed to Berlin, where he served the Prussian governor in the bureau of finance; but owing to various personal disputes resigned, and in 1810 was made Historiographer to the King of Prussia, delivering in the same year the first of a course of lectures in the newly founded University of Berlin. The subject of this course was the early history of Rome, and his treatment of the subject was so new, so brilliant, and so profoundly learned as to excite widespread notice. He applied to the hitherto accepted narrative the laws of evidence and the searching methods of historical research, demonstrating that the whole account of the founding and the early regal period is purely mythical and legendary. This demonstration he elaborated more fully in his *Römische Geschichte*, 3 vols. (1811–32), which carries the story of Rome down to the First Punic War. The negative and destructive part of his work has completely revolutionized the views of Rome's historians, so that all writers now accept the view of Niebuhr in the main as sound; his constructive work, however, has been generally rejected, especially his "epic hypothesis," which traces the source of the Roman legends to ballads and sagas which he assumes to have existed. Niebuhr inaugurated a new epoch in the study of history by establishing and demonstrating a fundamental difference between legend and history, and his critical methods have been universally adopted as sound.

Barthold Georg Niebuhr.

Niebuhr's later life was one of great activity. From 1816–22 he served as Prussian ambassador to the papal court at Rome; and in the latter year accepted a call to the chair of History in the University of Bonn. Here he founded the *Rheinisches Museum* (1827), and took part with Bekker in the publication of the *Corpus Scriptorum Historiae Byzantinae*, besides issuing *Kleine historische und philologische Schriften*, 2 vols. (1828), an edition of Fronto (1816), and *Griechische Heroengeschichte* (1842). His Roman history has been translated into English by Hare, Thirlwall, and Smith, and a volume of lectures on Roman history appeared in 1850, edited by Leonhard Schmitz. Dr. Schmitz also published English editions of Niebuhr's lectures on ancient history (1852), and on ancient ethnography and geography (1853). See Winkworth, *Life and Letters of Niebuhr*, 3 vols. (London, 1852); Eyssenhardt, *Barthold Georg Niebuhr* (Gotha, 1886); and Bursian, *Geschichte der class. Philologie in Deutschland*, pp. 647–663 (Munich, 1883).

Niger, Nigir, Nigris (Νίγειρ, Νίγιρ). A great river of Aethiopia Interior, which modern usage has identified with the river called Joli-ba (i. e. Great River) and Niger in West Africa. Many of the ancients imagined the Niger to be a branch of the Nile (Pliny, *H. N.* v. 30; viii. 77). Ptolemy states that a branch of the Niger communicated with Lake Libya (probably Lake Tchad), and mentions a city Thamondocana (Timbuctoo?) as situated on the river itself (Ptol. iv. 6, 14). The name seems to be based upon an African word *geir*, *gar*, or *jir*, "river." See AFRICA.

Niger, GAIUS PESCENNIUS. A Roman of humble origin, but one whose great military talents recommended him successively to the notice of Marcus Aurelius, Commodus, and Pertinax, by whom he was employed in offices of trust and honour. He was consul together with Septimius Severus, and obtained the government of Syria. On the murder of Pertinax, A.D. 193, the Empire was exposed for sale by the Praetorian Guards, and was purchased by Didius Iulianus, whom the Senate was compelled to acknowledge as emperor. The people, however, did not tamely submit to this indignity, and three generals, at the head of their respective legions—Septimius Severus, who commanded in Pannonia; Clodius Albinus in Britain, and Pescennius Niger in Syria—refused to acknowledge the nomination of the Praetorians, and each claimed the Empire. Of these Niger was the most popular, and his cause was warmly espoused by all the provinces of the East. But instead of hastening to Italy, he quietly remained at Antioch, while Severus marched to Rome, dethroned Didius, and made active preparations for prosecuting the war against Niger in Asia. Roused at length from his inactivity, Niger crossed over to Europe, and established his headquarters at Byzantium; but he had scarcely arrived at this place, before his troops in Asia were defeated near Cyzicus by the generals of Severus. He was soon, however, able to collect another army, which he commanded in person; but, being defeated successively near Nicaea and at Issus, he abandoned his troops and fled towards the Euphrates, with the intention of seeking refuge among the Parthians. Before he could reach the Euphrates, he was overtaken by a detachment of the enemy, and put to death on the spot (Spartian. *Vit. Nig.*; Eutrop. viii. 10).

Night, GODDESS OF. See NYX.

Nigidius Figŭlus, PUBLIUS. See FIGULUS.

Nigir. See NIGER.

Nigrītae (Νιγρῖται). An African people dwelling on the banks of the Niger (Ptol. iv. 6, 16).

Nigrītis Lacus (Νιγρῖτις λίμνη). An African lake probably the same as Lake Debu, south of Timbuctoo. Ptolemy incorrectly regards it as the source of the Niger (iv. 6, 27).

Niké (Νίκη). The Greek goddess of victory, according to Hesiod, daughter of Pallas and Styx, by whom she was brought to Zeus to assist him in his struggle with the Titans; thenceforward she remained always with Zeus on Olympus. She is the sister of Zelos (zeal), Cratos (power), and Bia (force). Sculptors often represent her in connection with divinities who grant victory: thus the Olympian Zeus and the Athené on the Acropolis at Athens held in one hand a statue of Niké. She was generally represented as winged and with a wreath and a palm-branch. As herald of victory she also bore the wand of Hermes. This mode of representing her was adopted for the statues of the goddess specially revered by the Romans under the name Victoria. Vica Pota ("Victorious Issue") was an earlier designation of the same goddess. Such statues were erected chiefly on the Capitol by triumphant generals. The most famous was the statue, brought from Tarentum and therefore probably the work of a Greek artist, which Augustus dedicated to her in the Curia Iulia, in memory of his victory at Actium. When the Curia Iulia had been destroyed by fire in the reign of Titus and rebuilt by Domitian, the statue was placed in the new building, and was adored as the guardian goddess of the Senate until Christianity became the religion of the Empire. Athené was also styled Niké as giving victory, and the Niké Apteros or Wingless Victory, to whom the famous temple at Athens was built (see illustration on p. 1097), was Athené, she being thus distinguished from Niké proper, who was conventionally represented with wings. See Baudrillart, *Les Divinités de la Victoire en Grèce et en Italie* (Paris, 1894).

Nilupŏlis (Νείλου πόλις) or **Nilus** (Νείλος). A city of Middle Egypt in the Nomos Heracleopolites, built on an island of the Nile. There was a temple here in which the Nile was worshipped.

Nilus (Νεῖλος). The Nile, a great river of Egypt. The name is probably cognate with the Semitic *Nahar* or *Nahal*, "river." Homer calls it Αἴγυπτος (*Od.* iv. 477); and the name Νεῖλος occurs first in Hesiod (*Theog.* 338) and Hecataeus (*Frag.* 279). The Jews called it Nahal-Misraim, "River of Egypt." The Nile takes its rise in the two lakes Victoria Nyanza and Albert Nyanza, which are themselves fed by various streams. For three hundred miles after leaving the former, it flows with a swift current in rapids and cataracts and between high walls of rock. It leaves the northern end of Lake Albert Nyanza, where it is known as the Bahr-el-Jebel, and flows in a northerly course towards the Mediterranean Sea. The first six score miles are through a level country, then for another equal distance is contracted into a narrow stream (in places not more than a quarter of a mile in width), and then, being forced over the Yarbovah Rapids, it enters the plains and flows in a sluggish stream to Khartoum, distant some 800 miles. In

Temple of Nikė Apteros. (Acropolis at Athens.)

7° 30′ north latitude it divides into two streams, the so-called White Nile (Bahr-el-Abiad) and the Bahr-el-Jebel. In 9° 30′ north latitude the latter receives the Bahr-el-Ghazal from the west. At Khartoum (15° 37′ north latitude) the White Nile and the Blue Nile (Bahr-el-Azrak) unite, and the great stream then flows on, taking up the Black Nile (Bahr-el-Aswad), whose black sediment makes the Delta so remarkable for its fertility. The point of junction is the apex of the island Meroë, where the river has a breadth of two miles. Thence it flows through Nubia in a rocky valley, falling over six cataracts, the northernmost being known as the First Cataract, and marking now, as in antiquity, the southern boundary of Egypt. See AEGYPTUS.

The Nile emptied into the Mediterranean by three channels, parted into seven, of which, according to Herodotus, two were artificial and five natural. From these seven channels come the names applied to it by Moschus (*ἑπτάπορος*), Catullus (*septemgeminus*), and Ovid (*septemplex*). Most of the seven mouths had names derived from their cities (i. e.

View on the Nile. (From a photograph.)

the Canopic, Bolbitic, Sebennytic, Pathmetic or Bucolic, Mendesian, Tanitic or Saïtic, and Pelusiac). At the present time there are only two principal mouths, known as the Rosetta on the west and the Damiat on the east. From the dark sediment deposited by the river came the native name of Egypt—Chemi or Kemi, "the black land." A great artificial canal (Bahr-Yussouf, i.e. "Joseph's Canal") runs parallel to the river, at the distance of about six miles, from Diospolis Parva in the Thebais to a point on the west mouth of the river about half-way between Memphis and the sea. Many smaller canals were cut to regulate the irrigation of the country A canal from the east mouth of the Nile to the head of the Red Sea was commenced under the native kings, and finished by Darius, son of Hystaspes. There were several lakes in the country, respecting which see BUTO, MAREOTIS, MOERIS, SIRBONIS, and TANIS. For the use of the Nile in irrigation, see AEGYPTUS, p. 24.

The ancients knew little of the Nile beyond the First Cataract at Meroë. It was generally believed that the great river originated in Mauretania and flowed for a long distance underground until it

The God of the Nile. (Vatican.)

came to the southern part of Aethiopia, whence it flowed northward as the Astapas. The emperor Nero undertook to discover its sources, and sent out two expeditions for that purpose, which succeeded only in reaching the confluence of the Sobat and the White Nile, some thirty miles beyond the junction of the White Nile with the Bahr-el-Zereb. Ptolemy, however, speaks of the river as issuing from two great lakes six and seven degrees respectively south of the equator, and fed by the melting snows of the Mountains of the Moon, lately identified by Stanley with Gordon Bennett, Ruwenzovi, and adjacent peaks. This is about as much as any one had learned until the present century, when the discoveries of Speke (1858 and 1862), Baker (1864), Schweinfurth (1868–71), and Stanley (1875 and 1889) solved bit by bit the mystery of the ages.

The Nile was deified by the Egyptians and worshipped as a god. A famous statue in the Vatican at Rome represents the river deity as a reclining figure pillowed on a sphinx and holding a cornucopia (typical of the fertility caused by the river's overflow), while sixteen children, representing the affluents of the Nile, play about. The work belongs to the Graeco-Egyptian period.

See Herod. ii. 19–26; Pliny, *H. N.* v. 51, 58; viii. 77; Dio Cass. lxxv. 13; Solin. 35; and on the deification of the river by the Egyptians, Herod. ii. 101; Diod. i. 6–26. See also Budge, *The Nile* (1890).

Nimrod or **Nimroud.** See BABYLONIA.

Nineveh. See NINUS.

Nīnus (*Nîνος*) or **Nĭnus** (*Νίνος*). The reputed founder of the city of Ninus, or Nineveh, and the husband of Semiramis (q. v.). Ninus is doubtless a mystical personage, but Semiramis is probably to be identified with Sammuramat, wife of Ramman-Nirari III. (B.C. 811–782).

Ninus (*Νίνος*), **Ninĭvé** (*Νινεύη*, *Νινευί*), in Assyrian NINUA (cf. Herod. i. 193; ii. 150). The name is perhaps derived from the Assyrian *nûnu*, "fish." Nineveh, the capital of the great Assyrian monarchy, standing on the eastern side of the Tigris, at the upper part of its course, in the district of Aturia. The prophet Jonah (B.C. 825) describes it as "an exceeding great city, of three days' journey," and as containing "more than 120,000 persons that cannot discern between their right and their left hand," which, if this phrase refer to children, would represent a population of 600,000 souls. Diodorus also describes it as an oblong quadrangle of 150 stadia by 90, making the circuit of the walls 480 stadia (more than fifty-five miles); if so, the city was nearly twice as large as London, with its suburbs. In judging of these statements, not only must allowance be made for the immense space occupied by palaces and temples, but also for the Oriental mode of building a city, so as to include large gardens and other open spaces within the walls. The walls of Nineveh are described as 100 feet high, and thick enough to allow three chariots to pass each other on them; with 1500 towers, 200 feet in height. The city is said to have been entirely destroyed by fire when it was taken by the Medes and Babylonians, about B.C. 606; and frequent allusions occur to its desolate state. Under the Roman Empire, however, we again meet with a city Nineva, in the district of Adiabené; but this must have been some later place built among or near the ruins of the ancient Nineveh.

Of all the great cities of the world, none was long thought to have been more utterly lost than the capital of the most ancient of the great monarchies. Tradition pointed out a few shapeless mounds opposite Mosul on the Upper Tigris as all that remained of Nineveh; but within the last fifty years, especially since 1870, those shapeless mounds have been shown to contain the remains of great palaces. The excavations conducted by Layard, Botta, and Smith have brought to light the sculptured remains of immense palaces, not only at the traditional site of Nineveh, namely, Kouyunjik and Nebbi-Younus, opposite to Mosul, and at Khorsabad, about ten miles to the northeast, but also in a mound, eighteen miles lower down the river, in the tongue of land between the Tigris and the Great Zab, which still bears the name of Nimroud. Which of these ruins corresponds to the true site of Nineveh, or whether that vast city may have extended all the way along the Tigris from Kouyunjik to Nimroud and to a corresponding breadth northeast of the river as far as Khorsabad, are questions still under discussion. Some splendid fragments of sculpture, obtained by Layard from Nimroud, are now to be seen in the British Museum. The moat and wall of the city are still discernible, and their ruined temples, a palace built by Shalmaneser I. and destroyed by Sennacherib, a palace of Tiglath-Pileser III. (B.C. 745–727), a palace built by Shalmaneser I. (B.C. 1320), a temple of Nebo, and palaces of Ramman-Nirari and Sennacherib, are among the buildings buried in the vast mound. These palaces were of great magnificence and were adorned with the finest products of Oriental art. See Assyria; Babylonia; Cuneiform Inscriptions.

Ninyas (*Νινύας*). See Semiramis.

Niŏbé (*Νιόβη*). The daughter of Tantalus and Dioné. She was the sister of Pelops and wife of Amphion of Thebes. Like her father, she stood in close connection with the gods, especially with Leto, the wife of Zeus, and fell into misfortune by her own arrogance. In her maternal pride for her numerous progeny of six sons and six daughters, the ill-fated woman ventured to compare herself to Leto, who had only two children. To punish this presumption Apollo and Artemis slew with their arrows all Niobé's children in their parents' palace. For nine days they lay in their blood without any one to bury them, for Zeus had changed all people into stone. On the tenth day the gods buried them. Niobé, who was changed to stone on the lonely hills of Sipylus, could not, even in this form, forget her sorrow. So runs Homer's account (*Il.* xxiv. 612), in which we have the earliest reference to "a colossal relief roughly carved on the rocks" of Mount Sipylus, in Lydia, the face of which is washed by a stream in such a manner that it appears to be weeping (cf. Jebb on Soph. *Antig.* 831). Pausanias (i. 21, 5) declares that he saw this relief which modern archaeologists now regard as referable to the art of the Hittites.

The accounts of later writers vary greatly in respect of the number of the daughters of Niobé and of the scene of her death. Sometimes the spot where the disaster occurs is Lydia, sometimes Thebes, where, moreover, the grave of Niobé's children was pointed out; the sons perish in the chase, or on the race-course, while the daughters die in the royal palace at Thebes, or at the

Niobé. (Uffizi Gallery, Florence.)

burial of their brethren. This story describes Niobé as returning from Thebes to her home on Sipylus, and as there changed into a stone by Zeus, at her own entreaty. The fate of Niobé was often, in ancient times, the theme both of poetry and of art. The group of the children of Niobé, discovered at Rome, near the Lateran Church, in 1583, and now (since 1775) at Florence, is well known; it is probably the Roman copy of a Greek work which stood in Pliny's time in a temple of Apollo at Rome, and with regard to which it was a mooted point with the ancients whether it was from the hand of Scopas or of Praxiteles (Pliny, *H. N.* xxxvi. 28). See Stark, *Niobe und die Niobiden* (1863).

Niphātes (*Νιφάτης*—i. e. "Snow Mountain"). A mountain chain of Armenia, forming an eastern prolongation of the Taurus.

Nireus (*Νιρεύς*). Son of Charopus and Aglaïa, a native of the island of Symé, near Rhodes, and the handsomest among the Greeks at Troy. He was slain by Aeneas or Eurypylus (Hom. *Il.* ii. 671; Diod. v. 53).

Nisaea (*Νίσαια*). See Margiana; Megara.

Nisaeus Campus (*τὸ Νίσαιον πεδίον*). A plain in the north of Great Media, near Rhagae, celebrated for its breed of horses (Strabo, pp. 529, 536).

Nisĭbis (*Νίσιβις*), also called Antiochia Mygdoniae. A celebrated city of Mesopotamia, and the capital of the district of Mygdonia, stood on the river Mygdonius in a very fertile district. It was of great importance as a military post. Its name was changed into Antiochia, but it soon resumed its original name. In the successive wars between the Romans and the Parthians and Persians, it was several times taken and retaken, until at last it fell into the hands of the Persians in the

MARSHALL HIGH SCHOOL
LIBRARY

reign of Jovian (Strabo, pp. 522, 747; Ammian. Marcell. xxv. 9).

Nisus (Νῖσος). (1) A son of Hyrtacus, born on Mount Ida, near Troy. He came to Italy with Aeneas, and was attached to Euryalus, son of Opheltes. During the war with Turnus, Nisus, to whom the defence of one of the entrances of the camp was intrusted, sallied forth in search of Aeneas, and Euryalus accompanied him. Fortune at first aided their efforts, but they were at length surprised by a Latin detachment. Euryalus was cut down by Volscens; the latter was as immediately despatched by Nisus, who, however, overpowered by numbers, soon shared the fate of his friend (Verg. *Aen.* ix. 176 foll.; cf. v. 334 foll.). (2) A king of Megara. In the war waged by Minos, king of Crete, against the Athenians, on account of the death of Androgeus (see ANDROGEUS), Megara was besieged, and it was taken through the treachery of Scylla, the daughter of Nisus. This prince had a golden or purple lock of hair growing on his head, and as long as it remained uncut, so long was his life to last. Scylla, having seen Minos, fell in love with him, and resolved to give him the victory. She cut off her father's precious lock as he slept, and he immediately died; the town was then taken by the Cretans. But Minos, instead of rewarding the maiden, disgusted with her unnatural treachery, tied her by the feet to the stern of his vessel, and thus dragged her along until she was drowned (Apollod. iii. 15, 1). Another legend adds that Nisus was changed into the bird called the Sea-eagle (ἁλιάετος) and Scylla into that named Ciris (κεῖρις), and that the father continually pursues the daughter to punish her for her crime (Ovid, *Met.* viii. 145; Verg. *Cir.*). According to Aeschylus (*Choëph.* 609 foll.), Minos bribed Scylla with a golden collar.

Nisȳrus (Νίσυρος). A small island in the Carpathian Sea, off Caria. Its volcanic nature gave rise to the fable respecting its origin that Poseidon tore it off the neighbouring island of Cos to hurl it upon the giant Polybotes. (See POLYBOTES.) It is now Nikero.

Nitaquest. See NITOCRIS (2).

Nitiobrīges. A Keltic people in Gallia Aquitanica, between the Garumna (Garonne) and the Liger (Loire). Their chief town was Aginnum (Agen).

Nitōcris (Νίτωκρις). (1) A queen of Babylon, generally supposed to have been the wife of Nebuchodonosor or Nebuchadnezzar (B.C. 604–562), and grandmother, consequently, to Labynetus or Nabonedus, who is called in Daniel Belshatzar or Beltzasar. Wesseling, however, and others make her the queen of Evilmerodach, son of Nebuchadnezzar. Herodotus informs us that Nitocris, in order to render her territories more secure from the Medes, altered the course of the Euphrates, and made it so very winding that it came, in its course, three times to Ardericca. She also faced the banks of the Euphrates, where it passed through Babylon, with burned bricks, and connected the two divisions of the city by a bridge of stone (Herod. i. 186). The historian likewise informs us that she prepared a sepulchre for herself over the most frequented gate of the city, with an inscription to this effect: that if any of her successors should find himself in want of money, he should open this sepulchre and take as much as he might think fit; but that, if he were not reduced to real want, he ought to forbear; otherwise he would have cause to repent. This monument remained untouched till the reign of Darius, who, judging it unreasonable that the gate should remain useless to the inhabitants (for no man would pass under a dead body), and that an inviting treasure, moreover, should be rendered unserviceable, broke open the sepulchre; but, instead of money, he found only the remains of Nitocris, and the following inscription: "Hadst thou not been insatiably covetous, and greedy after the most sordid gain, thou wouldst not have violated the sepulchres of the dead" (Herod. i. 187). Plutarch tells the same story of Semiramis. (2) Also called NITAQUEST, a queen of Egypt, who succeeded her brother. The Egyptians, having dethroned and put to death the latter, set her over them. She took a singular revenge, however, for the death of her brother; for, having constructed a large subterranean apartment, and having invited to an entertainment in it those individuals who had been most concerned in her brother's murder, she let in the river by a secret passage and drowned them all. She then destroyed herself (Herod. ii. 100).

Nitriae (Νιτρίαι) or **Nitrariae** (Νίτραιαι). The celebrated natron lakes ("nitre-producing") in Lower Egypt, which lay in a valley on the south-western margin of the Delta (Pliny, *H. N.* xxxi. 111).

Nitzsch, GREGOR WILHELM. A distinguished Homeric scholar, born at Wittenberg, November 22, 1790. He was Professor of Ancient Literature in the University at Kiel from 1827 to 1852, and later Professor of Classical Philology at Leipzig. He died, July 22, 1861. His principal works are: *Erklärende Anmerkungen zu Homers Odyssee*, 3 vols. (1826–40); *Meletemata de Historia Homeri*, 2 vols. (1837); *Die Sagenpoesie der Griechen* (1852); and *Geschichte der epischen Poesie der Griechen* (1862). Nitzsch was perhaps the most eminent of those who argue for the essential unity of authorship of the two great Homeric poems. See the critical estimate of his work by Lübker, *G. W. Nitzsch in seinem Leben und Wirken* (Jena, 1864), and the article HOMERUS, pp. 838 foll.

Nivaria. (1) One of the Fortunatae Insulae, off the western coast of Mauritania Tingitana. It is now the island of Teneriffe. The name Nivaria has reference to the snows which cover the summits of the island for a great part of the year. It was also called CONVALLIS (Pliny, *H. N.* iv. 32). (2) A city of Hispania Tarraconensis, in the territory of the Vaccaei, and to the north of Cauca.

Nixi Dii. Male deities, by some supposed to aid Iuno Lucina in her task of presiding over childbirth (Ovid, *Met.* ix. 294), but this view is regarded as erroneous.

Nobĭles, Nobilĭtas. The aristocracy of office, which, at Rome, took the place of the patrician aristocracy of birth, after the admission of the plebeians to all the offices of State and the levelling of the distinction between patricians and plebeians consequent thereon. It comprised those patrician and plebeian families whose members had held one of the curule magistracies. These families, for the most part the most illustrious and wealthy, had the influence and money, which afforded them the

necessary means to canvass for and hold an office. Thus, in spite of the theoretical equality of rights now existing, they almost completely excluded from the higher magistracies all citizens who had neither wealth nor noble relatives to support them. It was quite exceptional for a man who did not belong to the nobility to be fortunate enough to attain to them. If he did so, he was styled a *novus homo* ("new man," "parvenu"), and his condition *novitas*. It was one of the privileges of the nobility that they enjoyed the right (*ius imaginum*) to possess images of their ancestors, and this was the chief external distinction between the *nobiles* and the *ignobiles*. See IMAGINES.

Nobilior. The name of a distinguished family of the Fulvia gens. The most distinguished member of the family was M. Fulvius Nobilior, consul B.C. 189, when he conquered the Aetolians, and took the town of Ambracia. He had a taste for literature and art, and was a patron of the poet Ennius, who accompanied him in his Aetolian campaign (Cic. *Tusc.* i. 2).

Noctilūca. A Roman surname of Diana, as indicating the goddess that shines during the night season. The epithet would also appear to have reference to her temple's being adorned with lights during the same period. This temple was on the Palatine Hill. Cf. Varro, *L. L.* iv. 10.

Nola (in Oscan, *Nuvia*). The modern Nola; one of the most ancient towns in Campania, twenty-one Roman miles southeast of Capua, celebrated as the place where the emperor Augustus died. In the neighbourhood of the town some of the most beautiful Campanian vases have been found in modern times. The town was destroyed by Genseric in A.D. 455.

Nomădes (*Νομάδες*). A name given by the Greeks to the pastoral nations of antiquity, who lived in wandering tribes, as the Scythians, Arabs, etc. Sallust makes the Numidians to have obtained their name in this way (*Iug.* 18), but without the least propriety. The term Numidae is evidently of Phœnician origin.

Nomen (*ὄνομα*). I. GREEK. The Greeks had no names denoting family, and so corresponding to modern surnames (Pausan. vii. 7, 4). Hence the name of the new-born child was left to the free choice of the parents, like the Christian name with us. The child usually received it on the tenth day (*δεκάτη*) after birth, the occasion being a family festival. (See AMPHIDROMIA.) According to the most ancient custom, the son, especially the first-born, received the name of his grandfather, sometimes that of his father, or a name derived from it (Phocus=Phocion) or similarly compounded (Theophrastus=Theodorus). Girls, in like manner, received the name of the grandmother (Isae. *De Pyrrh. Herod.* 30). As a rule, a Greek had only one name, to which was added that of his father, to prevent confusion—e. g. *Ἀλκιβιάδης ὁ* (sc. the son) *Κλεινίου*. Sometimes, also, the name of the country was added in the form of an adjective—e. g. *Θουκυδίδης ὁ Ἀθηναῖος*. A great many names were compounded with the names of gods (Heracleitus, Herodotus, Artemidorus, Diogenes), or derived from them (Demetrius, Apollonius). Frequently names of good omen for the future of the child were chosen. Sometimes a new name was afterwards substituted for the original one; so Plato was originally called Aristocles, and Theophrastus, Tyrtamus. Slaves were usually called after their native country, or their physical or moral peculiarities. See Becker-Göll, *Charikles*, ii. p. 26.

II. ROMAN. The development of the Roman name was co-ordinate with the growth and development of the Roman State. In the early period, when, in the small community, the individual was all-important, the strictly personal name was prominent; but as the community increased in size and consequence, added importance was given to certain determinatives, which marked the individual as a member of society and distinguished him from his fellows. These determinatives probably belonged to the name in its early history, notwithstanding the statement, *Varro simplicia in Italia nomina fuisse ait*, found in the fragment *De Praenominibus*, assigned to Valerius Maximus by Julius Paris of the fourth century. This statement is there supported by reference to Romulus and Remus, names belonging to a mythology of late origin, but is controverted by reference to Rhea Silvia and Silvius Numitor. The first of these early determinatives was the word, indicating *potestas*, *manus*, *mancipium*, in the genitive case—e. g. Marcus Marci, Caecilia Crassi—followed later, as shown in the inscriptions, by *f(ilius)* or *f(ilia)*, *uxor*, or *s(ervus)*. The second early determinative was the word indicating the family (*gens*) distinguished from the other elements by the suffix *-ius*. Thus the three elements of the early name were the individual name, the name of the one in authority, and the name of the family. Among the Romans the order of the last two was reversed, while among the Greeks, Umbrians, and Volscians the original order was maintained.

In the course of time the necessity of still further identifying the individual led to the use of other elements, the name of the tribe and the *cognomen*, an additional personal name. The latter afterwards came to indicate the branch or family, *stirps*, of the *gens*. The name of a free-born citizen then consisted of a *praenomen*, *nomen*, *cognomen*, with the insertion in formal usage, before the *cognomen*, of the words denoting filiation and descent, followed by *filius*, *nepos*, *pronepos*, *abnepos*, *adnepos*, and of the name of the tribe. The order indicated—*praenomen*, *nomen*, *cognomen*—is violated in the inscriptions only for metrical reasons, or because of Greek influence or rustic usage. In literature the same order is observed in prose of the good period, even in Livy, when the *praenomen* is given; but if the *praenomen* is omitted the older order, that followed by Cicero, is *cognomen*, *nomen*; while the later order, that followed by Caesar, is *nomen*, *cognomen*. In social intercourse children, clients, slaves, addressed the master of the house by his *praenomen*, while strangers used his *cognomen*. In more formal address both *nomen* and *cognomen* were employed.

Praenomen.—The strictly personal name was conferred by parents upon their children on the *dies lustricus*, the ninth day after birth in case of boys and the eighth in case of girls. The assertion of Q. Scaevola, as given in *De Praenominibus*, to the effect that boys did not receive the *praenomen* until they assumed the *toga virilis*, or girls before their marriage, must refer to the formal conferring of the name, for the inscriptions of persons dying in childhood often contain the *praenomina*.

Eighteen *praenomina* were employed by the patrician families: A., Aulus; D., Decimus; C., Gaius; CN., Gnaeus; K., Kaeso; L., Lucius; M'., Manius; M., Marcus; P., Publius; Q., Quintus; SER., Servius; SEX., Sextus; S., Spurius; TI., Tiberius; T., Titus; AP., Appius; MAM., Mamercus; N., Numerius. Certain of these were selected by the individual patrician families; thus, the Cornelii used A., CN., L., M., P., SER., TI.; but the Cornelii Scipiones, CN., L., P. (see table given by Momm. *Röm. Forschungen*, p. 15). Other *praenomina* were employed, some of which fell into disuse at an early period, and are known from the *fasti* or from statements of authors, while others were of foreign origin and rare occurrence. Varro, in *De Praenom.* § 3, names fourteen ancient *praenomina* not used at his time: Agrippa, Ancus, Caesar, Faustus, Hostus, Lar, Opiter, Postumus, Proculus, Sertor, Statius, Tullus, Volero, Vopiscus.

Cognomina were used at times as *praenomina*, particularly in Gallia Cisalpina — e. g. Maximus, Rufus; also in the imperial family in the employment of such names as Cossus, Drusus, and Germanicus. The word *imperator* in the time of Augustus became a *praenomen* in the imperial name. *Nomina* also served as *praenomina*—e. g. Aelius, Aurelius—after the middle of the second century, and even suffered abbreviation.

Nomen.—The second determinative in the early Roman name belonged to all members of the same family, and was at first identified with a certain locality. The *nomina* of the old Roman families ended in *-ius* and the closely related terminations *-aius, -eius, -eus, -aeus*. *Nomina* with other terminations may be assigned to the localities to which they originally belonged—e. g. *-arna, -erna, -enna, -ina, -inna* show Etruscan origin, while *-as, -anas, -enas, -inas* testify to Umbrian derivation. Other *nomina* are directly derived from names of places —e. g. Acerranus (*Acerrae*); Verres, of Roman origin, stands by itself, and may have been originally a *cognomen*.

Cognomen.—This last addition to the Roman name was first used as a strictly personal name employed as appropriate to the individual—e. g. Albus, Barbatus, Severus, Siculus. The position of the *cognomen* after the name of the tribe indicates a time of introduction subsequent to the Servian Constitution; and judging from its use in inscriptions the custom of writing *cognomina* dates back to the fifth century of the city, while its regular use may be assigned to the latter part of the seventh century. The *cognomen* afterwards served as an indication of the family of the *gens*, so of the *gens Cornelii* there were the Cethegi, Lentuli, Scipiones, while of the Scipiones there were the Nasicae; also as an indication of nobility, being employed by patrician families and certain of the plebeian. In the late republican period the *cognomen* was given to all free-born citizens and frequently to freedmen, and at this time served as an indication of freedom. The custom of using more than one *cognomen* became very common in the early days of the Empire, and prevailed generally in the second and third centuries. These additional *cognomina* were regarded by the grammarians after the fourth century as new elements, and were termed by them *agnomina*. Of this class were the *cognomina ex virtute*—e. g. Caudinus, Hispanus—and names, indicating the parentage of those adopted, made with the termination *-anus*—e. g. Aemilianus.

Names of Women.—The names of women in the early period consisted of an individual name, *praenomen*, followed by the *nomen* of the father and the genitive case of his *praenomen*, or by the *nomen* of the husband and the genitive case of his *praenomen*—e. g. Maior Anicia C. f(ilia). Subsequently the *praenomen* disappeared, and the female name consisted of merely the *nomen gentile* of the father or husband alone—e. g. Aemilia, or accompanied, when more formal, by the genitive of the *praenomen* of the father or husband—e. g. Acilia C. f(ilia); cf. also Curtia Rosci (uxor). At the close of the Republic *cognomina* were used with names of women —e. g. Caecilia Metella; and from the middle of the first century the custom prevailed generally —e. g. Furia Sabinia Tranquillina.

Names of Slaves.—The name of the slave originally consisted simply of the name of his master in combination with the word *puer;* as, Marcipor= *Marci puer*. In the republican period the slave was known by an individual name, often of foreign origin, followed by the *nomen* and afterwards the *praenomen* of his master, both in the genitive case. His servile condition was indicated by the word *servus*, abbreviated in the inscriptions S. or SER. Thus, Helenus Hosti Q. s. = Helenus, slave of Quintus Hostius. In the imperial period the name of the owner is given in full—as, Martialis C. Oli(i) Primi s(ervus). The transfer of a slave to a new master was indicated by the use of an additional name, made from the *cognomen* of his former master, with termination *-anus*—e. g. Epitynchanus Caes(aris) n(ostri) ser(vus) Candidian(us).

Names of Freedmen.—Originally the freedman received the *nomen* of his *patron*, and selected his *praenomen*, which might be his early servile name. His former state was indicated, as shown in the inscriptions, by the word *servus*, following the genitive case of his patron's *praenomen*—e. g. C. Sextius V(ibi) s(ervus). In the seventh century of the city a freedman received his patron's *nomen*, a Roman *praenomen* (regularly that of his master), and used his former slave name as a *cognomen*. His former state was indicated, as shown in the inscriptions, by the word *libertus*, abbreviated L. or LIB.—e. g. P. Helvidius P. l. Hermes. When freedmen were liberated by the emperor, the expression Aug(usti) l(ibertus) or Caes(aris) n(ostri) l(ibertus) took the place of the *praenomen* of the patron. Freedmen of women took the *nomen* of their patroness and the *praenomen* of her father—e. g. M. Livius Aug(ustae) l(ibertus) Menophilus. Freedmen of a *colonia* or *municipium* formed *nomina* out of the word *publicus*, since they had been *servi publici*, or from the name of the *colonia* or *municipium*.

Bibliography.—Ellendt, *De Cognomine et Agnomine Romano* (Königsberg, 1853); Th. Mommsen, *Römische Forschungen*, art. *Die römischen Eigennamen* (Berlin, 1864); J. Marquardt, *Das Privatleben der Römer*, 2d ed. (Leipzig, 1886); Cagnat, *Cours d'Épigraphie Latine*, 2d ed. (Paris, 1890); E. Hübner, *Handbuch der klassischen Altertumswissenschaft*, vol. i. 2d ed. art. *Römische Epigraphik* (Munich, 1892).

NICKNAMES.—Nicknames were freely given by both the Greeks and Romans, based upon any bodily or mental defect or peculiarity, or upon some well-known circumstance of the individual's career. Thus Demosthenes, from his childhood, was called Βάτταλος, because of his stuttering (Aesch. *C. Timarch.* 126, 141); and Aristophanes

gives several names of birds that were used as nicknames (*Av.* 1291). Dionysius of Heraclea was popularly styled Μεταθέμενος, or "turn-coat," from his abandonment of the Stoic philosophy; and Hegesias of Cyrené got the name of Πεισιθάνατος, or "Death's Advocate," from his gloomy view of life. Epicrates was styled Σακεσφορός, from his large beard; and one of the Ptolemies Φύσκων, from his paunch. Collections of Greek nicknames are given by Athenaeus (vi. p. 242); and cf. Xen. *Hellen.* ii. 2, 31; Lucian, *Symp.* 6; and Athen. x. p. 436).

As already shown, many of the Roman family names were originally nicknames; as, Naso, "big-nose"; Flaccus, "flop-ear"; Varus, "bandy-legs"; and Scaurus, "knock-kneed." The Rufi were named from a red-headed ancestor; and the name Cicero is said to have been due to a wart like a pea (*cicer*) on the face. Some of the nicknames were accepted by their subjects as formal names, and hence passed into history, as Cunctator ("slow-coach") and Caligula. The last emperor of the West, Romulus Augustus, was, because of his insignificance, styled Augustulus, just as Victor Hugo dubbed the Third Napoleon, *Napoléon le Petit*. Pompey was nicknamed "Sampsiceramus" by Cicero, after a petty prince of Emesa (Cic. *Ad Att.* ii. 14, 16). The bibulous tastes of Tiberius led the people to change his name from Tiberius Claudius Nero to Biberius Caldius Mero (from *bibo*, *calda*, and *merum*). Sometimes a whole phrase was applied as a nickname, as *Cedo alteram* (Tac. *Ann.* i. 23, 41) and *Manus ad ferrum* (Lamprid. *Aurel.* 6), much as in modern times "Cœur de Lion," "Rough and Ready," and "Me Too" have been so applied. The Latin term for a nickname is *signum* or *vocabulum* (Capitol. *Gord.* iv. 8; Tac. *Ann.* i. 41).

Nomenclātor (*nomenculator*). A sort of usher; a slave kept by great personages, whose business it was to make himself acquainted with the names and persons of every one who was in the habit of attending his master's levees, so that when the great man met any of them out of doors, the nomenclator, who accompanied him, announced their names, and enabled him to address them personally, or pay them some little appropriate compliment; for to pass a client without notice, even inadvertently, might be regarded as an affront, and possibly be resented at the next elections (Cic. *Ad Att.* iv. 1; Hor. *Epist.* i. 6, 50–52). In great houses, where the acquaintances and hangers-on were very numerous, the nomenclator arranged the order of precedence among the guests, announced the name of each dish as it was served up, and enumerated its peculiar excellences (Pet. *Sat.* 47, 8; Sen. *Ep.* 19; Pliny, *H. N.* xxxii. 21). The name is properly written *nomenculator*, as is shown on the evidence of glosses and MSS. See Mart. x. 30, 30; Suet. *Aug.* 19; *Calig.* 41; *Claud.* 34.

Nomentum. Now Mentana; a Latin town founded by Alba, but subsequently a Sabine town, fourteen (Roman) miles from Rome. Its neighbourhood was celebrated for its wine (Mart. x. 48).

Nomia (τὰ Νόμια). A mountain in Arcadia on the frontiers of Laconia.

Nominatio. The first stage of the appointment of a person to the office of augur. Under the law of Labienus (B.C. 63), when a vacancy occurred in the augural college, each of the augurs nominated a candidate for the post, and the choice between these was made by seventeen tribes chosen by lot. The word is also used of the approval by the emperor of any candidate for office.

Nomius (Νόμιος). "The Pasturer;" a name given to divinities protecting the pastures and shepherds, such as Apollo, Pan, Hermes, and Aristaeus.

Nomophylăces (*νομοφύλακες*, "Guardians of the Laws"). A board found in different States of Greece, which had to see to the observance of the requirements of the law, especially in the deliberative assemblies. At Athens, after the abolition of the Areopagus as a board of supervision (about B.C. 461), a body of seven nomophylaces was introduced as a check upon the Senate, the public assembly, and the magistrates. They also provide for the safe custody of the laws and public archives (*C. I. G.* 3794). At Sparta the number of monophylaces was five. See Gilbert, *Greek Constitutional Antiquities*, pp. 155, 160 (Eng. trans. London, 1895); and Paranomon Graphé.

Nomos (*νόμος*). (1) Originally an ancient kind of solo in epic form in praise of some divinity. It was either "aulodic" or "citharodic"—that is, it was sung to the accompaniment of the flute or the cithara. The citharodic nomos was from ancient times used at the festivals of Apollo, whom the Dorians especially worshipped. It received its artistic form from Terpander (about B.C. 675) principally by a systematic distribution into five or seven parts, of which three were the essential portions, the middle one forming the cardinal point of the whole. It formed an important element in the Delphian festival of the Pythian Apollo. On the other hand, the aulodic nomos, which Clonas of Tegea had introduced in imitation of the nomos of Terpander, was early excluded from this festival. By the side of the ancient nomoi, in which the words were sung to an instrumental accompaniment, there arose another variety formed on the same model. In this the song was dramatically recited to the tune of the flute or cithara, according as the nomos was "aulodic" or "citharodic." Of the former kind was the nomos introduced by the flute-player Sacadas of Argos (about B.C. 580) at the Pythian Games, and hence called the *Pythian nomos*, a musical representation of the destruction of the dragon Pytho by Apollo. At a later period the province of the nomos was more and more extended and secularized, until it became the most important part of the musician's profession. See Plut. *De Mus.* cap. iii.–x.; and the article Musica. (2) A general term for a law. See Ecclesia.

Nomothĕtae (*νομοθέται*). At Athens a commission for the examination of proposed laws. Their number was fixed by the popular assembly and they were chosen by lot from among the Heliasts. (See Heliaea.) This number was often a very large one (e. g. a thousand, Poll. viii. 101), but varied according to the importance of the laws under consideration. See Schöll, *Ueber attische Gesetzebung* (Munich, 1886); and Gilbert, *Greek Constitutional Antiquities*, p. 255. See Ecclesia.

Nonăcris (Νώνακρις). A town in the north of Arcadia, surrounded by lofty mountains, in which the river Styx took its origin. From this town Evander is called *Nonacrius*, Atalanta *Nonacria*, Callisto *Nonacrina virgo*, and Hermes *Nonacriates*, in the general sense of Arcadian (Pausan. viii. 18; Pliny, ii. § 104; Ovid, *Fasti*, v. 97).

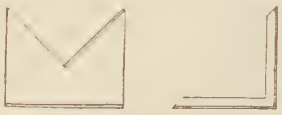
Nonae. The Roman name for the fifth day of the month, or in the months of March, May, July, and October the seventh day. See CALENDARIUM.

Nonius Marcellus. A Latin grammarian, born at Thubursicum Numidarum in Africa (*C. I. L.* viii. 4878), who composed, in the beginning of the fourth century A.D., a manual of miscellaneous information on points of lexicography, grammar, and antiquities, bearing the title of *De Compendiosa Doctrina*. It consisted originally of twenty books, of which the sixteenth is lost. It is evidently founded on the works of earlier scholars, and in some parts exhibits verbal coincidences with Aulus Gellius. Though not showing the least genius or critical acumen, the work is of considerable importance, owing to its numerous quotations from lost authors, especially of the archaic period. The chief editions are those of Mercier (Paris, 1583; reprinted, Leipzig, 1825); Quicherat (Paris, 1871); and L. Müller (Leipzig, 1888). See Nettleship's *Lectures and Essays*, pp. 277–331 (London, 1885).

Nonius Sufēnas. See SUFENAS.

Nonnus (Νόννος). A Greek poet of Panopolis, in Egypt, belonging to the fifth century A.D. As a pagan, he wrote, with poetic talent and in a spirited though highly rhetorical style, a vast epic, called the *Dionysiaca* (Διονυσιακά) or *Bassarica* (Βασσαρικά), in forty-eight books, one of the chief sources of our knowledge of the Dionysiac cycle of legends. After becoming a Christian, he composed a paraphrase of the gospel of St. John in Greek hexameters. A good edition of the *Dionysiaca* is that of Graefe (Leipzig, 1819–26), in 2 vols., and Köchly (Leipzig, 1858). The paraphrase has been edited by Passow (Leipzig, 1834).

Nora (τὰ Νῶρα). (1) A city of Sardinia, on the coast of the Sinus Caralitanus. (2) A mountain fortress of Cappadocia, on the borders of Lycaonia, noted for the siege sustained in it by Eumenes against Antigonus (Plut. *Eum.* 10).



Norba. (1) A town in Latium, now Norma, on the slope of the Volscian Mountains and near the sources of the Nymphaeus, originally belonging to the Latin, and subsequently to the Volscian, League. As early as B.C. 492 the Romans founded a colony at Norba. (2) Named CAESARĒA (Cacere), a Roman colony in Lusitania, on the left bank of the Tagus. The bridge, 600 feet in length, built by order of Trajan over the Tagus at this place is still extant.

Norbānus, GĀIUS. One of the leaders of the Marian party in the war with Sulla, and consul B.C. 83, in which year he was defeated by Sulla at Capua. In the following year he joined forces with the consul Carbo in Cisalpine Gaul, but was again routed by Metellus Pius. He then escaped from Italy, and fled to Rhodes, where he committed suicide (Appian, *B. C.* i. 82–91; Plut. *Sulla*, 27).

Norēia. Now Neumarkt, in Styria; the ancient capital of the Taurisci or Norici, in Noricum, from which the whole country derived its name. It is celebrated as the place where Carbo was defeated by the Cimbri, B.C. 113.

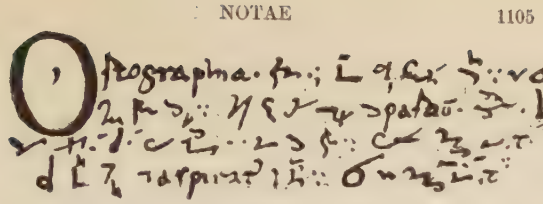
Norĭcum. A Roman province south of the Danube, bounded on the north by the Danube, on the west by Rhaetia and Vindelicia, on the east by Pannonia, and on the south by Pannonia and Italy. It thus corresponds to the greater part of Styria and Carinthia, and to a part of Austria, Bavaria, and Salzburg. One of the main branches of the Alps, the Alpes Noricae (in the neighbourhood of Salzburg), extended through the province. In those mountains a large quantity of excellent iron was found; and the Noric swords were celebrated in antiquity. The inhabitants of the country were Kelts, divided into several tribes, of which the Taurisci, also called Norici, after their capital Noreia, were the most important. They were conquered by the Romans in the reign of Augustus, after the subjugation of Rhaetia by Tiberius and Drusus, and their country was formed into a Roman province. The chief towns were Virunum (Mariasaal), Ovilava, and Iuvavum (Salzburg).

Norma (κανών, γωνία). A square for measuring right angles; employed by carpenters, masons, builders, etc., to prove that the angles are true (Vitruv. vii. 3; Pliny, xxxvi. 51). It was formed in two ways, either by two rules (*regulae*) joined together at right angles, or by a flat piece of board with a right angle cut out of it; both of which are exhibited in the illustration, from sepulchral marbles. See AMUSSIS; RUBRICA.

Normae. (Rich.)

North Wind. See BOREAS.

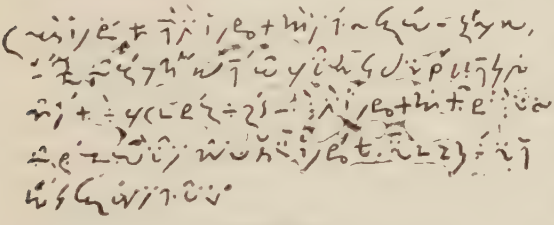
Nortia or **Nurtia**. An Etruscan goddess of Fortune worshipped at Volsinii (Livy, vii. 3). See CLAVUS ANNALIS.



Nossis (Νοσσίς). A Greek poetess of Locri in Italy who lived in the fourth century B.C., and wrote twelve epigrams preserved in the Greek Anthology.

Nota Censoria. The punishment inflicted by the Roman censors who by a mark of disapproval branded dishonourable or discreditable acts, such as unjustifiable divorce, ill treatment of one's family, excessive luxury and extravagance of life, the pursuit of disgraceful gain, legacy hunting, etc. The terms NOTATIO and ANIMADVERSIO CENSORIA are also used. See CENSOR; CENSUS.

Notae (σημεῖα). A word used technically of signs and abbreviations, as (1) for secret writing, cipher; (2) for rapid writing, short-hand, stenography; and (3) for critical purposes in texts (σημεῖα κριτικά).



I. There is no mention of cryptography, properly so called, among the Greeks of the classical period, though they had various devices for concealing a written message and making it unintelligible except to the person for whose eyes it was intended. Among such devices was the σκυτάλη, mentioned by Plutarch as in use among the Spartans, and of which an account is given in the article SCYTALÉ. At Rome towards the end of the Republican period we find mention of cipher writing, though it was of a simple sort and one that would not long baffle the scrutiny of an ingenious investigator. Thus, we are told of Caesar's private correspondence, that he had an agreement with the persons to whom he was writing by which the letters of the words were to be interchanged. Suetonius says that this system consisted in making D stand for A, E for B, and so on through the alphabet, and that Augustus used a similar system (Suet. *Iul.* 56; *Aug.* 88; Becker-Göll, *Gallus*, i. 62).

II. Whether the use of short-hand arose first

Specimen of Roman Notae. (From MS. in the Vatican Library.)

among the Greeks or among the Romans there is no definite information. A passage in Diogenes Laertius (ii. 48) seems to imply that Xenophon took down lectures by some stenographic process, but there is no direct mention of it earlier than the time of Cicero, who employed it frequently, as we learn from Plutarch (*Cat. Min.* 23) and others. Thus, at the trial of the Catilinarian conspirators, Cato's speech was taken down by writers whom Cicero had instructed "to use certain signs which in small and brief characters comprehended the force of many letters. . . . For the Romans at that time were not accustomed to employ and did not possess what are known as short-hand writers, but it is said that it was on this occasion that they first conceived the idea." Dio Cassius (lv. 7) ascribes the invention of the art to Maecenas, but this probably means that Maecenas made some improvements in the existing system. An explanation is given by Isidorus, who ascribes the invention of short-hand to one Ennius (not the poet), who is said to have used 1100 signs. He also says that Tiro, the confidential freedman and secretary of Cicero, was the first person to use these signs at Rome, but implies that this short-hand consisted of abbreviations or arbitrary signs only for particles of frequent occurrence, and that additional signs were added successively by Vipsa-

Greek Notae.

nius, Philargyrus, and Aquila, the freedmen of Maecenas, until finally Seneca reduced the whole to a regular system and increased the number of signs to about 5000. It is probable, however, from what Cicero says (*Ad Fam.* xvi. 4), that the main structure of the system is due to Tiro, and in fact the traditional name for short-hand signs (*notae Tironianae*) seems to justify this belief (cf. Gell. vi. 3, 8). However this may be, from the time of Cicero and his immediate successors the use of stenography spread among the Romans. It was used both for taking down public speeches and for the use of students in the lecture-room, and many Romans kept slaves who were trained as short-hand writers (*notarii*). The emperor Titus was a skilful stenographer, and often instituted contests in rapid writing with his secretaries (Suet. *Tit.* 3). After the Christian era began, short-hand was much used among the Christians for taking down sermons and ecclesiastical speeches, and St. Augustine (*Epist.* 141) speaks of an episcopal assemblage held at Carthage at which eight stenographers were employed in relays of two. Such ancient manuscripts as are written in the Tironian short-hand remained undecipherable until 1747, when the French scholar Charpentier succeeded in reading them and published an account of them.

The ancient system consisted first of an alphabet more cursive than the ordinary Roman alphabet and especially modified so as to facilitate the juncture of letters. In the second place, it represented terminations by arbitrary characters used in conjunction with a point—thus, B. stood for *bam* and .B for *bant*. In the third place, all sorts of abbreviations (*sigla*) independently of the character used were employed. Finally, as in modern stenography, a number of arbitrary signs were employed for words in common use.

III. The Alexandrian grammarians appear to have originated the use of critical signs by which to indicate certain judgments in their recension and study of texts. Aristophanes of Byzantium (B.C. 257–180) published an edition of Homer with such signs, and these were developed by his successors, especially Aristarchus. The most important of these were the *obelus*, —, used to denote a spurious passage; the *diplé* (διπλῆ), ⊱, used to call attention to something special; the *dotted diplé* (διπλῆ περιεστιγμένη), ⁘, to denote variant readings; the *asterisk*, ⁂, to mark genuine verses if repeated; the *antisigma*, ↄ, and the *stigmé*, ▪, both used to denote repetitions of the same idea; the *ceraunion* (κεραύνιον), used when a large number of lines were to be rejected. Other signs and symbols of a different character, such as marks of punctuation, accents, breathings, etc., will be found treated under PALAEOGRAPHY; and TEXTUAL CRITICISM.

For ancient short-hand, see Kopp, *Palaeographia Critica*, vol. i. (Mannheim, 1817); and Anderson, *History of Short-hand* (London, 1882). On the *notae criticae*, see Reifferscheid's *Suetonii Reliquiae*, pp. 137–144 (Leipzig, 1890); Schrader, *De Notatione Critica*, etc. (Bonn, 1863); and Römer, *Die Notation der alexandr. Philol.* etc. in the *Bayr. Acad. Cl. I.*, vol. xix. (1892).

Notarii. Short-hand writers. See NOTAE.

Notation. See NUMERI.

Notitia Dignitātum. A Byzantine official handbook, containing a list of court appointments, civil and military, with statistics, etc.—a sort of statesman's year-book—compiled about A.D. 410. It is edited by Seeck (Berlin, 1876). See Jullian in the *Mélanges d'Archéologie*, i. 284; iii. 80.

Notitia Regiōnum. A survey of the fourteen *regiones* into which Augustus divided Rome. It was made in the time of Constantine (A.D. 315?), and specifies the principal buildings in the quarters. It is contained in two lists, the first being called *Notitia* and the second *Curiosum Urbis Romae Regionum XIV.* See Jordan, *Topographie der Stadt Rom*, vol. ii. (Berlin, 1871), and id., *Forma Urbis Romae Regionum XIIII.* (Berlin, 1874).

Notus (Νότος), called AUSTER by the Romans, the south wind, or strictly the southwest wind, bringing with it fogs and rain.

Notus. (Temple of the Winds, Athens.)

Nouns. See GRAMMATICA.

Novacŭla (*ξυρόν*). A knife with a very sharp edge, employed for shaving the hair of the head or beard, like our razor (Petron. 103, 1; Mart. ii. 66; Suet. *Cal.* 23; Alciph. *Ep.* iii. 66, 9; cf. CULTELLUS; CULTER; and especially TONSOR). Martial (vii. 61) applies the same name to the assassin's knife (*sica*).

Novaria. Now Novara; a town in Gallia Transpadana, situated on a river of the same name (Gogna), and on the road from Mediolanum (Milan) to Vercellae.

Novatio. A renewed bond. See OBLIGATIONES.

Novellae. See CORPUS IURIS CIVILIS.

Novelli Poetae. See POETAE NOVELLI.

Novels and Romances. Fiction in its origin is with difficulty separated from myth — myth, however, being unconscious and due to a desire to give concrete form to various beliefs that spring up in the primitive mind; while fiction, as a literary motive, originates in a desire to amuse and occasionally to instruct. Hence, the earliest form of fiction is the Beast Fable, which is found in every quarter of the earth and at every period of history. A papyrus dating from B.C. 1200 gives an Egyptian version of the Aesopic fable of the Lion and Mouse; the inscribed Babylonian bricks afford examples of the same thing, and the Hindus probably originated most of the fables which Aesop, Babrius, and Phaedrus made popular in Europe. Akin to conscious fiction and at the same time allied to myth are the folk-tales of nymphs, satyrs, ghosts, fairies, demons, and vampires which Greeks and Romans alike propagated, but which have nearly all been lost to us because they seemed to the ancients unworthy of preservation in formal literature; so that we have now only here and there tantalizing half-glimpses and vanishing suggestions of the curious and fascinating legends told by the common people. Such bits as remain, however, are quite sufficient to prove the existence of a great unwritten literature, and examples of these may still be found, though no longer preserved in their original simplicity, in the stories of the love of Echo for Narcissus, the legend of Hylas and the Naiads, of Cupid and Psyché, and in the various allusions to the monsters known as the Lamiae, Mormolycé, Incubus, and Empusa, the spectre with the brazen leg and the ass's hoof. Ghosts figure in Greek literature as early as Homer, and are introduced with striking effect in the *Odyssey*, as also by the Romans Attius and Vergil, and in the famous story preserved by Pliny the Younger. To this informal fiction belong also the tales of the Lares and the Larvae.

The earliest form of literary prose fiction, however, is to be found in the short stories collected by Herodotus, most of which have their origin in the East, the home of story-telling. Such are the famous anecdotes of Candaules (i. 8–12), of Arion and the Dolphin (i. 24), of Rhampsinitus and the Robber (ii. 121), and of Polycrates and the Ring (iii. 39), all being admirable instances of the short story in its earliest form — brief, simple, and embodying a single incident.

Of a more formal type are the so-called Milesian Tales (*Μιλησιακά*), a generic term for the short anecdotes which were produced in great numbers in the luxurious cities of Asia Minor prior to the second century B.C., and first ascribed to one Aristides, who is said to have written six books of them. No actual examples are known to exist, though their nature may be judged of by the short stories found in later writers, especially Petronius, from which it would appear that they were very much like the stories told in the *Decameron* of Boccaccio and the *Cent Nouvelles Nouvelles* of Louis XI. of France — brief, witty, and indecent. The choice of subjects in these early novelettes is seen in the existing collection of Parthenius of Nicaea, who taught Vergil Greek. From him have come down thirty-six skeleton stories, or rather hints for stories gathered by Parthenius for the use of Cornelius Gallus, and intended to be treated by him poetically. They can be found in both Greek and Latin versions in the Didot Collection (Paris, 1856). Other stories of this sort, written in other cities than Miletus, were produced by a host of story-writers who gave to their collections the titles Ephesian, Babylonian, Cyprian, Egyptian, Sybaritic, Naxian, Lydian, Trojan, and Bithynian Tales, though these do not seem to have differed, except in name, from those of Miletus. Some of them are preserved in epitome by Photius (q. v.). One of the most important writers of them after Aristides was Conon, from whom Cervantes borrowed an episode in his *Don Quixote*. While the short story was reaching its full development, it was used philosophically by Plato in the story of Er, and by Prodicus in his epilogue on the Choice of Heracles.

At about this time fiction underwent a further development as a result of the contact of the Greeks with the East at the time of the Persian Wars and of the spirit of adventure resulting from the conquests of Alexander. We now have instances of the historical romance in the *Atlantis* of Plato and the *Cyropaedia* of Xenophon, which find their echo in modern times in the Utopia of Sir Thomas More and the *New Atlantis* of Francis Bacon. The *Cyropaedia* contains the first romantic love-story in Greek fiction. These works, however, are partly political, and are of less literary consequence than the romance of adventure which was afterwards introduced, and which finds an illustration in the novel entitled *Τὰ Ὑπὲρ Θούλην Ἄπιστα* (Marvels Beyond Thulé), by one Antonius Diogenes, the Munchausen of antiquity. It relates to the love-adventures of an Arcadian youth, Dinias,

with a Tyrian girl, Dercyllis, and abounds with most extraordinary incidents. It is, in reality, nothing more than a collection of short stories or episodes strung together by a very slender plot. More homogeneous and artistic are the later romances of Lucius of Patrae of uncertain date called *Metamorphoses*, drawn upon by Lucian and Apuleius; of Iamblichus of Syria, who wrote Βαβυλωνικά, the adventures of a married pair, Sinonis and Rhodanes, with a double plot; of Xenophon of Ephesus, author of Ἐφησιακά, the loves of Abrocomas and Anthia, the ultimate source of *Romeo and Juliet;* and especially of Heliodorus of Emesa, in the fourth century A.D., whose Αἰθιοπικά is still in existence, and is regarded as the best of the novels of adventure produced by the Greeks. It is in ten books, and relates the adventures of two lovers, Theagenes and Chariclea. It has some quite interesting episodes, is regularly developed, and contains one curious passage on the influence of pre-natal conditions upon the unborn child. It was much read in its day, and again in the seventeenth century, when it was the favourite novel of the French poet, Racine. See HELIODORUS.

Other instances of the romantic novel are those of Achilles Tatius of Alexandria, entitled Τὰ κατὰ Λευκίππην καὶ Κλειτοφῶντα (The Loves of Leucippe and Clitophon) in eight books; the *Chaereas and Callirrhoë* of Chariton of Aphrodisias; and the novelette called *Apollonius Tyrius*, of unknown authorship, preserved only in a Latin version, in which it was much read in the Middle Ages, and suggested a part of Gower's *Confessio Amantis* (iii. 284 foll.), and probably Shakespeare's *Pericles, Prince of Tyre.* Of very late origin are the trashy Greek novels by Theodorus Prodromus of Constantinople, and the imitation of this by Nicetas Eugenianus (both in doggerel verse), and last of all the eleven books on the adventures of Hysminé and Hysminias, perhaps the original source of the story of Don Juan.

Early in the Christian era, fiction was written in the form of letters by Alciphron, a Greek sophist, of whose imaginary epistles 118 are still preserved and give valuable pictures of low life in Athens during the second century A.D. They are very lively and entertaining, and are the best character sketches that Greek fiction can show us. Other writers of the same class are Aristaenetus of Nicaea (?), the author of two books of erotic letters written in a cynical spirit; and Theophilus of Simocatta (A.D. 610), from whom we have 85 letters, rhetorical and epigrammatic, but of no literary merit.

The prose pastoral was created by Longus (perhaps not the author's name), whose romance Ποιμενικὰ τὰ κατὰ Δάφνιν καὶ Χλόην, usually called *Daphnis and Chloë*, is one of the most original and pleasing things in ancient literature. Its theme is the growth of the sexual instinct in two children, a boy and a girl, who have been brought up together in a state of perfect innocence. Its physico-psychological motive makes it unique in the history of early fiction, and the warmth and beauty of its descriptions of nature are also very striking. It has been many times translated into all the modern languages, and is the original of Bernardin de St. Pierre's *Paul et Virginie*, of Allan Ramsay's *Gentle Shepherd*, and of many other less important works.

The Romans have left us only two specimens of true prose fiction—the *Satiricon* of Petronius Arbiter and the *Metamorphoses* of Apuleius; but these are in many ways superior to anything of their kind in Greek. The *Satiricon*, in fact, though incomplete, is one of the first great novels of our time, and is remarkable for its modern tone, its subtle touches of character, its wit, its vivid pictures of life in the Roman provincial towns, and for the grace and elegance of its style. It also gives us some of the best existing specimens of the *sermo plebeius*, the colloquial Latinity of uneducated men. (See PETRONIUS; SERMO PLEBEIUS.) The *Metamorphoses* of Apuleius is based upon the *Metamorphoses* of Lucius of Patrae, and possibly upon the Λούκιος ἢ Ὄνος of Lucian, the contemporary of Apuleius; but it is more likely that both Apuleius and Lucian drew independently from the earlier writer. The novel of Apuleius, which is in eleven books, tells the story of one Lucius, who, by a mistake, swallowed a magic potion which turned him into an ass, in which form he passed through a maze of curious and amusing adventures, until at last he regained his natural shape. The novel is highly diverting and is told with much cleverness, though often with a disregard for even an elemental sense of propriety. Among its episodes is the very famous one giving the story of Cupid and Psyché, one of the most exquisite things in literature and one that has inspired innumerable works of art. See APULEIUS; PSYCHÉ.

In the Middle Ages, when the knowledge of ancient literature and history became lost to Western Europe, confused recollections of them still existed in the minds of men, and, together with many Teutonic folk-tales, became blended into a curious collection of stories known as the *Gesta Romanorum*, which were told and retold in many forms by the mediævals. They mingle together the characters of antiquity in a most remarkable way, having no chronological or historical accuracy, but reproducing the legends of the past in a sort of literary mirage. Vergil, Homer, Alexander the Great, the Roman emperors, and Hercules, Romulus, and Remus, appear and reappear side by side with knights and wizards and dragons; but the tales have a certain value in literary history as forming the connecting link between the fiction of Greece and Rome and the fiction of modern times, which took its early themes largely from those monkish legends.

The ancient novel is far inferior to the modern, because (1) it was developed only after literature had entered upon its decline; (2) because of the difference in the social spirit of antiquity which made impossible the modern romantic treatment of the relations of men and women; and (3) because the true fiction of the Greeks was to be found, not in prose, but in the great epics which more perfectly represented the highest manifestation of the Hellenic imagination.

BIBLIOGRAPHY.—For the general subject of the origin of pure fiction, see Clauston's *Popular Tales and Fictions* (London, 1887); Rutherford's introduction to his edition of Babrius (1883); Rhys-Davids, *Buddhist Birth-Stories* (1880); Benfey's introduction to the *Panchatantra* (1859); Bedier, *Les Fabliaux* (1893); and Lang, *Custom and Myth* (1885). On the Greek and Roman novels, see Dunlop, *History of the Novel* (last ed. London, 1887); Salverte, *Le Roman dans la Grèce Ancienne* (Paris, 1893); Chauvin, *Les*

Romanciers Grecs et Latins (Paris, 1862); Chassang, *Histoire du Roman dans l'Antiquité Grecque et Latine* (Paris, 1862); Rohde, *Der Griechische Roman* (Leipzig, 1876); Warren, *History of the Novel* (N. Y. 1895). The principal Greek romances are printed in the *Erotici Graeci* of the Didot Collection (Paris, 1856); and the epistolographers in the *Epistolographi Graeci* of the same collection. For special texts, translations, etc., see the separate articles in this Dictionary on the writers named above. The *Gesta Romanorum* will be found edited by Oesterley (Berlin, 1872); and translated into English by Swan, revised by Hooper (London, 1877).

November. See CALENDARIUM.

Novensĭles or **Novensĭdes Dii** (from *novus* + *insideo*, "the newly-settled gods"). A name used by the Romans in contrast to *dii indigetes* or native gods, to denote those deities introduced from non-Roman sources and of late introduction (Livy, viii. 9). Such were, for example, Apollo, Mercury, and in later times Cybelé; while the *dii patrii* or *indigetes* were of a less poetic and magnificent character, and are in general the deities presiding over special functions — e. g. Parca, presiding at birth; Rumina, who watched the suckling of the child; Levana, who saw it adopted by the father; Cuba and Cunina, who protected it in the cradle, etc. In solemn formulae, the *dii indigetes* and the *dii novensiles* are invoked together (Livy, *l. c.*).

Novesium. The modern Neuss; a fortified town of the Ubii on the Rhine, and on the road leading from Colonia Agrippina (Cologne) to Castra Vetera (Xanten) (Ammian. Marcell. xxvii.).

Novi Homĭnes. See NOBILES.

Noviodūnum. A name given to many Celtic places from their being situated on a hill (*dun*). (1) Nouan; a town of the Bituriges Cubi in Gallia Aquitanica. (2) Nevers; a town of the Aedui in Gallia Lugdunensis, at the confluence of the Niveris and the Liger, afterwards called Nevirnum. (3) A town of the Suessones in Gallia Belgica, probably the same as Augusta Suessonum (Soissons). (4) Nion; a town of the Helvetii in Gallia Belgica, on the north bank of the Lacus Lemanus (Lake of Geneva).

Noviomāgus or **Neomāgus** or **Noviomāgum.** (1) A city of the Batavi, now Nymegen. In the Peutinger Table it is called Niumaga. (2) The capital of the Lexubii or Lixovii, in Gallia Lugdunensis. According to Mannert, it corresponds to the modern Caen; others, however, are in favour of the modern Lisieux. (3) Or Augusta Nemetum, the capital of the Nemetes, now Spires. (4) A city of the Bituriges Vivisci, in Gallia Aquitanica. According to Mannert, it is now Castillon, not far from the mouth of the Gironde. Reichard, however, decides in favour of Castelnau de Médoc. (5) A city of Britain, the capital of Regni, the remains of which may be traced at Woodcote, near Croydon. (6) A city of the Treveri, on the Mosella, now Numagen or Neumagen. (7) A city of the Veromandui, in Belgica Secunda, now Noyon. It is also called Novionum or Noviomum.

Novĭtas. See NOBILES.

Novius, QUINTUS (?). A celebrated writer of Atellan plays, a contemporary of the dictator Sulla (Macrob. i. 10, 3).

Novum Comum. A name at one time given to Comum, when Iulius Caesar settled there 6000 colonists. See COMUM.

Novus Homo. See NOBILES.

Nox. See NYX.

Noxa. See NOXALIS ACTIO.

Noxālis Actio. A "noxal action" was a suit brought by one who had been injured by a son or slave of another citizen. He could bring no action directly against the person who had been guilty of the *noxa*, as he was not *sui iuris* (see IUS), but, instead, sued the father of the youth or the owner of the slave. The father or the owner, as the case might be, could either pay damages to the plaintiff or could give up the offender (*noxae dare*) to him. If the father or owner made no defence to the suit, the offender was given up to the injured person by decree of the praetor. Justinian abolished the *noxae datio* in the case of children. See Gaius, iv. 74–79; and cf. Ihering, *Geist des römischen Rechts*, i. p. 131.

Nubae (Νοῦβαι) or **Nubaei** (Νουβαῖοι). An African people, south of Egypt, in modern Nubia, south of Meroë (Ptol. iv. 7, 30).

Nubilarium. A large shed or barn, open on one side, and situated close to the threshing-floor (*area*), which was in the open air, in order to house grain until it was threshed out, and shelter it from sudden or partial showers (Varro, *R. R.* i. 13, 5; Columell. ii. 21, 3).

Nuceria. (1) Styled ALFATERNA (Nocera), a town in Campania on the Sarnus (Sarno), and nine Roman miles from the coast. (2) Styled CAMELLARIA (Nocera), a town in the interior of Umbria on the Via Flaminia. (3) The modern Luzzara, a small town in Gallia Cispadana on the Po, northeast of Brixellum. (4) A town in Apulia, more correctly called Luceria.

Nuces. Nuts. Several games of skill were played by the Greeks and Romans with nuts. So identified with childhood and its sports were nuts that *nuces relinquere* was the conventional phrase used for "putting away childish things." The games in question were as follows:

(1) Pitching nuts into a hole, from a given distance—a game possibly called in Latin *orca*, from the jar which was often used as the receptacle of the nuts thrown (Pers. iii. 50). The Greeks also pitched the nuts into a circle drawn on the ground (ὤμιλλα), or into a hole (βόθρος) dug in the ground (Poll. ix. 102 and 103). The nuts that fell outside the jar, circle, or hole were forfeited.

(2) A second game was called *castellum*, which was somewhat as follows: three nuts were placed on the ground, with a fourth resting on them,

Roman Boys playing Castellum. (Relief in the Blundell Collection.)

making a sort of pyramid. Then the player aimed his nut so as to scatter the pyramid (*dilaminare*), and, having done this, he had one or two

more shots, the object of which was to cannon on the nuts, as boys do in playing marbles. The first shot was taken standing (*rectus*), the next kneeling (*pronus*), the next being flipped, as in the "knuckle-down tight" of modern boys. Sometimes, however, the nuts were rolled down a board (*tabula*), as in the accompanying illustration, where the kneeling boy is probably arranging the *castellum*, or pyramid.

(3) A third game with nuts was called *delta*. In this a triangle (*delta*) was chalked on the ground, and marked across with lines and bars (*virgae*) drawn parallel to the base. The player then flipped nuts into the triangle, and won as many nuts as he crossed bars, provided that he did not roll them out of the triangle, in which case they were forfeited. The best play was, therefore, that which drove the nut exactly to the apex of the delta.

(4) For various games of chance, odd or even, played with nuts, see PAR IMPAR and on the general subject of the games briefly described above, see Becq de Fouquières, *Les Jeux des Anciens*.

Nudipedalia. A name given to a procession of barefooted matrons, as an *obsecratio*, in time of great drought (Tertull. *De Ieiun.* 16; *Apol.* 40; Petron. *Sat.* 44). The magistrates laid aside their insignia, the fasces were reversed, and a sacrifice was offered at the Temple of Iupiter, the pontifices bearing at the head of the procession a sacred stone called the *lapis manalis*, from the Temple of Mars outside the Porta Capena (Non. p. 547; Fest. pp. 2. 128; Marquardt, *Staatsverw.* iii. 261).

Nudus (*γυμνός*). Unclad; in the ordinary sense, denoting absolute nakedness; thence, in common language, scantily or imperfectly clad, denoting a person of either sex who is divested of

Nudi. (Rich.)

all clothing except that which is worn next the skin—the Roman of his *toga*, the Greek of his *pallium*—as we say "in undress," "negligé," of a man without his coat, or of a woman without her gown. But the Latin *nudus*, as well as the Greek *γυμνός*, appear to have indicated something more precise than the mere absence of an outer garment (*amictus*) over the tunic; for both words are particularly used in describing the hard-working population, agricultural labourers, ploughmen, etc. (Hesiod, *Op.* 391; Verg. *Georg.* ii. 299). See EXOMIS.

Nuithōnes. A people of Germany dwelling on the right bank of the Albis (Elbe), in the modern Mecklenburg-Schwerin (Tac. *Germ.* 40).

Numa, MARCIUS. (1) An intimate friend of Numa Pompilius, whom he is said to have accompanied to Rome, where Numa made him the first Pontifex Maximus. Marcius aspired to the kingly dignity on the death of Pompilius, and starved himself to death on the election of Tullus Hostilius. (2) Son of the preceding. He is said to have married Pompilia, the daughter of Numa Pompilius, and to have become by her the father of Ancus Marcius. Numa Marcius was appointed by Tullus Hostilius *praefectus urbi*.

Numa Pompilius. The second king of Rome, whose name belongs to legend rather than to history. He was a native of Cures, in the Sabine country, and was elected king one year after the death of Romulus, when the people became tired of the interregnum of the Senate. He was renowned for his wisdom and his piety; and it was generally believed that he had derived his knowledge from Pythagoras. His reign was long and peaceful, and he devoted his chief care to the establishment of religion among his rude subjects. He was instructed by the Camena Egeria, who visited him in a grove near Rome, and who honoured him with her love. He was revered by the Romans as the author of their whole religious worship. It was he who first appointed the pontiffs, the augurs, the flamens, the virgins of Vesta, and the Salii. He founded the Temple of Ianus, which remained always shut during his reign. The length of his reign is stated differently. Livy makes it forty-three years; Polybius and Cicero, thirty-nine years. The sacred books of Numa, in which he prescribed all the religious rites and ceremonies, were said to have been buried near him in a separate tomb, and to have been discovered by accident, 500 years afterwards, in B.C. 181. They were carried to the city-praetor Petilius, and were found to consist of twelve or seven books in Latin on ecclesiastical law and the same number of books in Greek on philosophy; the latter were burned by the command of the Senate, but the former were carefully preserved. The story of the discovery of these books is evidently a forgery; and the books, which were ascribed to Numa, and which were extant at a later time, were evidently nothing more than works containing an account of the ceremonial of the Roman religion. See Plutarch, *Numa*; Dionys. ii. 58.

Numantia. The capital of the Arevacae or Arevaci, in Hispania Tarraconensis, and the most important town in all Celtiberia. It was situated near the sources of the Durius (Douro), on a precipitous hill. It was taken by Scipio Africanus the Younger after a long siege (B.C. 133) (Flor. ii. 18).

Numasios Inscription. See PRAENESTINE BROOCH.

Numbers. See NUMERI.

Numenius (*Νουμήνιος*). (1) A Greek philosopher of the Platonic School, who is supposed to have flourished about the end of the second century of our era. He was born at Apamea, in Syria, and was regarded as an oracle of wisdom. He was the author of a treatise, entitled *Περὶ τῆς τῶν Ἀκαδημαϊκῶν περὶ Πλάτωνα διαστάσεως* ("Of the Disagreement among the Academic Philosophers respecting Plato"). Eusebius has preserved some fragments of this work. (2) A Greek rhetorician, who flourished in the time of the Antonines. He wrote two works, which have been printed in the Aldine Rhetorical Collection. (3) An epigrammatic poet; a native of Tarsus.

Numĕri (*ἀριθμοί*). Numbers; numerals. The use of signs to denote numbers is older than writ-

ing; yet most of the existing numerical signs in Greek and Latin are alphabetic modifications; because very primitive peoples, being able to count no higher than ten or so, need few symbols of number, so that the characters for large numbers are of late origin. The earliest visible signs were probably the extended fingers. The early system was in fact one based upon five, the number of fingers on one hand, traces of which survive in the Greek words *πεμπάζειν*, *πεμπαστής* from *πέντε*, "five" (cf. Hom. *Odyss.* iv. 412–415); and our denary system is due to the fact that the total number of our fingers is ten (cf. our English "-teen" as a termination). Finger-counting was very highly developed by the ancients, and many fairly complicated arithmetical operations could be denoted by finger-signs, as is still done in the Oriental bazaars, where the venders can reckon on their ten digits sums involving five places of figures. This system is fully described by Nicolaüs Smyrnaeus, a Greek of the thirteenth century A.D., in a treatise entitled *Ἔκφασις τοῦ Δακτυλικοῦ Μέτρου*, which was printed at Paris in 1636. Units and tens were represented by the fingers of the left hand, and hundreds or thousands by the fingers of the right. The thumb and forefinger of the left hand were devoted to tens, those of the right to hundreds; the remaining fingers of the left hand belonged to the units, those of the right to thousands. The fingers might be straight (*ἐκτεινόμενοι*), bent (*συστελλόμενοι*), or closed (*κλινόμενοι*). In the left hand, bending the fourth finger marked 1; bending the third and fourth, 2; the middle, third, and fourth, 3; the middle and third only, 4; the middle only, 5; the third only, 6. Closing the fourth finger gave 7; the fourth and third fingers, 8; the middle, third, and fourth, 9. The same motions on the right hand indicated thousands, from 1000 to 9000. The motions of the forefinger and thumb, in representing tens and hundreds, on the left and right hands respectively, are more difficult to describe. Various combinations were also indicated by placing the hands upon the breast, the hips, etc. This system was taught in the Greek and Roman schools. (See Plut. *Apophth.* 1746; Dio Cass. lxxi. 32; *Anth. Pal.* xi. 72; and the works cited below.) Reckoning was also performed by pebbles or counters arranged in sets of ten — a system which was developed into the calculating-instrument known as the *abacus*, and still used by the Chinese, who call it *swan-pwn.* See Abacus.

For recording numbers, a system of single strokes was first used as the most obvious; but this, of course, would be too cumbrous when applied to large numbers. Hence, additional symbols came into use for 5, 10, 100, and 1000; and after alphabetical writing was invented these signs were employed as numerals, either following the order of the letters, or taking the initial letter of the word for its symbol. Thus, in Greek, the inscriptions give I for "one," Π (*πέντε*) for "five," Δ (*δέκα*) for "ten," H (old sign for rough breathing, *ἕκατον*) for "one hundred," X (*χίλιοι*) for "one thousand," and M (*μύριοι*) for "ten thousand." (See the articles on each letter of the alphabet in this Dictionary.) Then, a Π with a Δ inscribed in it stood for $5 \times 10 = 50$, or with H inscribed in it for 500, etc. The twenty-five letters of the Ionic alphabet were used also for the simple numbers, 1 to 24. In the third century B.C. a new system called the Herodian or Alexandrian was introduced, by which the cursive alphabet was divided into three groups, of which the first did duty for the units, the second for the tens, and the third for the hundreds. This required 27 instead of 24 letters; so the old characters *digamma* (q. v.), *koppa* (q. v.), and the old sibilant *sampi* (ϡ) were revived, the first representing 6, the second 90, and the third 900. Intermediate numbers like 11 were represented by the sum of 10 and 1, etc., as *ια*. This gave a notation for all numbers up to 999, and by a system of suffixes and indices the system was extended to represent numbers as high as 100,000,000. Until a comparatively late period these signs were used only to record results got by the use of the abacus; but at last they were employed in actual operations like our own. Long lists of multiples were learned by heart, and various operations of multiplication and division were obtained by repeated addition (*σύνθεσις*) and subtraction (*ἀφαίρεσις*). As late as the year 944 we find a scholar multiplying 400 by 5 by means of addition. A few skilled mathematicians like Hero of Alexandria and Theon multiplied as we do. Thus, to multiply 18 by 13 the operation was as follows:

$\iota\gamma \times \iota\eta = (\iota + \gamma)(\iota + \eta)$	$13 \times 18 = (10+3)(10+8)$
$= \iota(\iota + \eta) + \gamma(\iota + \eta)$	$= 10(10+8) + 3(10+8)$
$= \rho + \pi + \lambda + \kappa\delta$	$= 100 + 80 + 30 + 24$
$= \sigma\lambda\delta$	$= 234$

In the Alexandrian system thousands could be made by subscribing an *ι* beneath the units; thus, $_{,}\alpha = 1000$; $_{,}\alpha\omega\theta\alpha = 1891$. A sort of algebraic method was also used for very large numbers—e. g. $\beta\text{M} = (2 \times 10{,}000) = 20{,}000$.

The Roman system is, in its ordinary use, familiar to all readers. It is thought that V denotes the opening between the thumb and the forefinger; X is two V's with the angles together; C is possibly for *centum*, but probably an original ⊖ assimilated to C; M (ↀ) may be for *mille*, but probably for ⏨ modified; L is from an old Chalcidian form of X, inscribed for lapidary purposes as ⊥, and then simplified. Others believe M to be from a circle with a vertical stroke, and the C from a circle with a cross ⊕, from which last V, X, and L would also be derived. The Romans, like the Greeks, used the system of finger-signs, and did arithmetical operations by aid of the *abacus*. (See Abacus.) Their arrangement of the latter was more complete than the Greek, and allowed very elaborate calculations; and, in fact, the Romans were, in general, better arithmeticians than the Greeks. There is a book by one Victorius of the fifth century B.C. entitled *Calculus*, which is a sort of "ready-reckoner" of sums, differences, products, quotients, reductions, etc.

Fractions (*λεπτά*) are variously represented in MS., but the most common way is to write the denominator over the numerator (the reverse of our method), or to write the numerator once with one accent and the denominator twice with two accents. Thus, $\frac{\iota\zeta}{\kappa\alpha}$, or *ιζ′ κα″ κα‴*. The Romans treated fractions as did the Greeks, and attempted quite difficult operations, which were often very inexactly performed (Pliny, *H. N.* vi. 38).

On ancient numerals and arithmetic, see Delambre, *Die Arithmetik der Griechen*, rev. by Hoffmann (Mainz, 1817); Benloew, *Sur l'Origine des Noms de Nombre* (Giessen, 1861); Hoefer, *Histoire des Mathématiques*, 3d ed. (Paris, 1886); Martin, *Les Signes*

Numéraux, etc. (Rome, 1864); Friedlein, *Die Zahlzeichen*, etc. (Erlangen, 1869); Taylor, *The Alphabet*, ii. pp. 263–268 (London, 1883); and Treutlein, *Geschichte unserer Zahlzeichen* (1875).

As to the history of mathematics among the Greeks and Romans, it may be said that the earliest Greek school of mathematics was that founded by Thales of Miletus (B.C. 640–550), who studied astronomy and geometry in Egypt, and, after returning to Miletus, taught them to his disciples. (See THALES.) His geometrical teaching was largely deductive, and the following theorems of Euclid are ascribed to him: i. 5; i. 15; i. 26; vi. 4 (vi. 2?); iii. 31. He also wrote a treatise on astronomy. His philosophical follower, Anaximander, wrote a treatise on spherical geometry and constructional globes. This school, known as the Ionian School, flourished till about B.C. 400. It really gave more attention to astronomy than to geometry, which as an actual part of a liberal education, dates from Pythagoras (B.C. 569–500), whose philosophy and even whose ethics rested on a mathematical basis. He first arranged the leading problems of geometry in logical order, and carried arithmetic beyond the mere needs of the trader. (See Hoffmann, *Der pythagorische Lehrsatz* [Mainz, 1821].) Archytas, a follower of Pythagoras (about B.C. 400) and head of the school, applied mathematics to mechanics, and also worked in astronomy, teaching that the earth is a sphere revolving on its axis once in twenty-four hours. He attacked one of the most famous problems in antiquity—to find the side of a cube whose volume should be double that of a given cube. Two other well-known mathematical schools were the Eleatic, whose great name was Zeno's (B.C. 495–435), and the Atomistic School of Democritus of Abdera (B.C. 460–370). In the fourth century Athens became a great centre for mathematical study, and the scholars Anaxagoras (B.C. 500–428), Hippocrates of Chios, Eudoxus, Plato, and Theaetetus are among its greatest names. Hippocrates wrote the first text-book on geometry, and attempted the quadrature of the circle. Eudoxus founded the School of Cyzicus, to which Menaechmus and Aristaeus also gave distinction. Aristotle (B.C. 384–322) did much to stimulate the study of mathematics, and especially of mechanics. The establishment of a great university in Alexandria (see ALEXANDRIAN SCHOOL) made that city an intellectual centre; and there three of the greatest mathematicians of antiquity flourished—Euclid (B.C. 330?–275), Archimedes (B.C. 287–212), and Apollonius (B.C. 260–200). (See APOLLONIUS; ARCHIMEDES; EUCLIDES.) After these came Hipparchus, the most eminent of Greek astronomers (B.C. 160), whose work is preserved in Ptolemy's great treatise known as the *Almagest*. He determined the true length of the year, and placed the study of astronomy on a truly scientific basis. Hero of Alexandria (about B.C. 125) did the same for land-surveying and engineering. The Roman occupation of Egypt seriously interrupted the studies of the Alexandrian School; and no mathematicians of equal eminence with those already mentioned are afterwards found. The most original works subsequently published are the treatise by Serenus (A.D. 70) on the plane sections of the cone and cylinder, and that by Menelaüs on spherical trigonometry. About A.D. 100 the Jewish scholar Nicomachus wrote an arithmetic which, in a Latin version, remained the standard treatise on the subject for a thousand years. Ptolemy of Alexandria, who died in the year A.D. 168, was the author of a great work on astronomy; Pappus, in the third century, published a useful synopsis of Greek mathematics. In the fourth century geometrical studies decline, and algebra begins to be pursued, though possibly not unknown. It was probably at first what is called "rhetorical algebra"—i. e. the problems were solved by a process of reasoning expressed in words rather than in symbols. Diophantus of Alexandria (probably a non-Greek) introduced a system of signs and abbreviations. He lived in the fourth century A.D. (See Heath, *Diophantos of Alexandria* [Cambridge, 1885].) His work is called *Arithmetica*, but is really an algebra. The last of the Alexandrian mathematicians are the famous Hypatia (q.v.) and Theon, her father. In the fifth century there were some Athenian geometricians of repute, such as Proclus, Damascius, and Eutocius; and in the sixth century the Roman Boëtius forms the link between the mathematical studies of antiquity and those of the Middle Ages. He wrote a geometry which contained the problems of the first book of Euclid and a few other selected propositions, and an arithmetic founded on that of Nicomachus. Cassiodorus (A.D. 470–566), and Isidorus of Seville (A.D. 570–636), also wrote in an elementary way of the various mathematical sciences.

See Hankel, *Zur Geschichte der Mathematik* (Leipzig, 1874); Hoefer, *Histoire des Mathématiques*, 3d ed. (Paris, 1886); Gow, *A Short History of Greek Mathematics* (Cambridge, 1884); and Ball, *A Short History of Mathematics* (London and New York, 1888).

Numerianus, MARCUS AURELIUS. A Roman who succeeded to the imperial throne conjointly with his elder brother Carinus, after the death of their father Carus, at the beginning of A.D. 284. Numerianus was with the army in Mesopotamia at the death of Probus; but, instead of following up the advantage which his father had gained over the Persians, he was compelled by the army to abandon the conquests which had been already made, and to retreat to Syria. During the retreat, a weakness of the eyes obliged him to confine himself to a litter, which was guarded by the praetorians. The administration of all affairs, civil as well as military, devolved on Arrius Aper, the praetorian prefect, his father-in-law. The army was eight months on its march from the banks of the Tigris to the Thracian Bosporus, and during all that time the imperial authority was exercised in the name of the emperor, who never appeared to his soldiers. Reports at length spread among them that their emperor was no longer living; and when they had reached the city of Chalcedon they could not be prevented from breaking into the imperial tent, where they found only his corpse. Suspicion naturally fell upon Arrius; and an assembly of the army was accordingly held, for the purpose of avenging the death of Numerianus and electing a new emperor. Their choice fell upon Diocletian, who, immediately after his election, put Arrius to death with his own hands, without giving him an opportunity of justifying himself, which might, perhaps, have proved dangerous to the new emperor. The virtues of Numerianus are mentioned by most of his biographers. His manners were mild and affable; and he was celebrated among his contemporaries for eloquence and poetic

talent. The Senate voted him a statue, with the inscription, "To Numerianus Caesar, the most powerful orator of his times" (Vopisc. *Numerian.*; Aurel. Vict. *De Caes.* 38; Eutrop. ix. 12).

Numĕrus. (1) See NUMERI. (2) The name of a body-guard of the later Roman emperors.

Numĕrus Italĭcus. See SATURNIUS VERSUS.

Numicia Via. See VIAE.

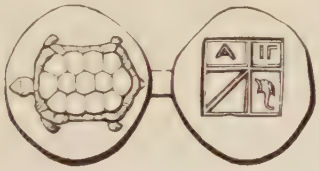
Numicius or **Numīcus.** Now Numico or Rio Torto; a small river in Latium flowing into the Tyrrhenian Sea near Ardea, on the banks of which was the tomb of Aeneas.

Numidia (Νουμιδία, Νομαδία, and Νομαδική). A country of Africa, bounded on the east by Africa Propria, on the north by the Mediterranean, on the south by Gaetulia, and on the west by Mauretania. The Roman province of Numidia was, however, of somewhat smaller extent. Intersected by a chain of the Lesser Atlas, and watered by the streams running down from it, it abounded in fine pastures, which were early taken possession of by wandering tribes of Asiatic origin, who from their occupation as herdsmen were called by the Greeks, here as elsewhere, Νομάδες, and this name was perpetuated in that of the country. A sufficient account of these tribes, and of their connection with their neighbours in the west, is given under MAURETANIA. The fertility of the country, inviting to agriculture, gradually gave a somewhat more settled character to the people; and, at their first appearance in Roman history, we find their two great tribes, the Massylians and the Massaesylians, forming two monarchies, which were united into one under Masinissa, B.C. 201. (See MASINISSA.) On Masinissa's death in 148, his kingdom was divided, by his dying directions, between his three sons, Micipsa, Mastanabal, and Gulussa; but it was soon reunited under Micipsa, in consequence of the death of both his brothers. His death, in 118, was speedily followed by the usurpation of Iugurtha, an account of which and of the ensuing war with the Romans is given under IUGURTHA. On the defeat of Iugurtha in 106, the country became virtually subject to the Romans, but they permitted the family of Masinissa to govern it, with the royal title (see HIEMPSAL; IUBA), until B.C. 46, when Iuba, who had espoused the cause of Pompey in the Civil Wars, was defeated and dethroned by Iulius Caesar, and Numidia was made a Roman province. It seems to have been about the same time or a little later, under Augustus, that the western part of the country was taken from Numidia, and added to Mauretania, as far east as Saldae. In B.C. 30 Augustus restored Iuba II. to his father's kingdom of Numidia; but in B.C. 25 he exchanged it for Mauretania, and Numidia—that is, the country between Saldae on the west and the Tusca on the east—became a Roman province. It was again diminished by near a half under Claudius; and henceforth, until the Arab conquest, the senatorial province of Numidia denoted the district between the river Ampsaga on the west and the Tusca on the east; its capital was Cirta (Constantin). The country, in its later restricted limits, is often distinguished by the name of New Numidia or Numidia Proper. The Numidians are known to military history as furnishing the best light cavalry in the Carthaginian and Roman armies.

Numidĭcus Sinus (Νουμιδικὸς κόλπος). A great gulf on the north of Numidia.

Numismatics (from νόμισμα, *numus* or *nummus*, "a coin"). The science which has to do with the study of coins and, in its widest acceptance, of medals also. The value of the science is not only historical and chronological, but artistic and archaeological in the broadest sense of the word. Coins furnish very valuable clues to the names, governments, etc., of many obscure cities and peoples of whom other remains are often unknown. They also give information concerning the development of the alphabet and writing; and they record the progress of art through all its stages of development and decline.

The ancient names for money are various. The Greeks use χρήματα of wealth in general, not merely coined money; ἀργύριον denotes money of any kind (originally silver money only); νομίσματα (from νόμος, "law"), legal-tender money (Herod. i. 94). The Romans employ *nummus* in various ways, but when not qualified it usually refers to the *sestertius*, which was the standard coin. In Late Latin *moneta* is the generic term for money, whence the modern word; but in the earlier usage *pecunia* is the word employed.



The principal materials for money were gold, silver, bronze; sometimes *electrum* (gold alloyed with silver), iron (at Sparta and some of the other Peloponnesian cities), nickel (used by the Greek kings in India), and rarely pure copper. We also read that Polycrates made coins of lead (Herod. iii. 56), Dionysius of tin (Pollux, ix. 79), and the Laconians of leather (Sen. *De Benef.* v. 14). See AES; ARGENTUM; AURUM; ELECTRUM; METALLUM; MONETA.

Greek coins are variously inscribed, having the name of the city or ruler issuing them; that of the monetary official or officials, and sometimes that of the artist who cut the die. The earliest of all bear no legend. Later, the names of cities appear, or of the people of the city in the genitive case—e. g. Συρακοσίων; or else the genitive adjective is used—e. g. Ἀρκαδικόν (sc. νόμισμα.) Names of kings are usually in the genitive. When magistrates' names are given they are sometimes in the nominative case and sometimes in the genitive preceded by ἐπί. At Athens, during the later days of her independence, every coin bears the names of three distinct magistrates. Other Greek coins (e. g. the later coins of Rhodes and Ephesus, and the copper money of the Achaean League) exhibit the name of only one magistrate. Artists' signatures occasionally occur, oftenest upon Sicilian coins. See Von Sallat, *Künstlerinschriften auf griech. Münzen* (1871); and Lenormant, *La Monnaie dans l'Antiquité*, iii. p. 255.

The earliest gold and silver money of the Romans bears only the word ROMA or ROMANO, with the mark of value; and by the time of Sulla the name of the city and the indication of value both disappear as unnecessary. There are used the names of the *triumvir monetalis* (this as early as B.C. 190), and from B.C. 100 legends explanatory of the "types" of the coins—e. g. P. P. (*Penates Publici*); or, fully written, SALVS beside the head of their deity. Under the Empire, coins regularly show the effigy of the emperor with his name and title, and the other side a date or an inscription referring to some historical event, or to a "type" with a like allusion

—e. g. FECVNDITATI AVGVSTAE, when the empress had just borne a child; FIDES MILITVM, when the soldiers had just presented a loyal address, etc. A word of explanation as to the terms "type" and "symbol" in their technical sense is necessary. "Type" is used of the principal device or subject on either obverse or reverse; "symbol" is applied to a minor figure. Thus the "type" belongs to the city or State; the "symbol" to the monetary magistrate.

GREEK COINS.—In Homer's time, cattle served as a medium of exchange and a standard of value (*Il.* xi. 211; xxi. 385); but metals were also used in the same way, and their value was decided by weight. The balance in which they were weighed was called *τάλαντον*, and the same name was given to the weight. The gold *τάλαντον* or talent of Homer was probably equivalent to the value of an ox, and in weight = 2 drachmae. At an early date the idea arose of giving the metal so used a special form, but just when money was first coined with an official stamp is not known. As early as the fifth century B.C. a highly elaborated and artistic system of coinage was in existence. Various Greek standards of value were developed —in several gradations, it is true—from the gold and silver standard of Asia Minor. It was not until a later time that the standard of the Persian gold money was in some cities transferred to the silver coinage. The proportion of gold to silver was commonly reckoned among the Greeks as 10:1, so that a gold piece weighing 2 drachmae

Aeginetan Drachma, actual size. (British Museum.)

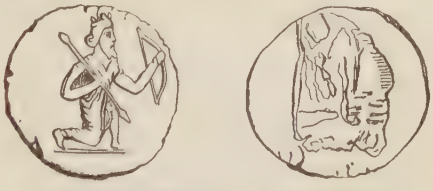
was = 20 silver drachmae. But in commerce the proportion assumed was 12:1, and this was the average generally observed in the Roman Empire. The measure of weight most commonly current was the talent, which contained 60 minae. Like the talent, the mina was not a real coin, but a standard of measurement. The unit of coinage

Attic Drachma, actual size. (British Museum.)

was the drachma, 100 drachmae being reckoned to the mina. The drachma, again, contained 6 obols. In ancient times the commonly accepted standard was that of Aegina. The coins of the island of Aegina were stamped on one side with the figure of a tortoise, on the other side with a roughly executed incuse square. The largest silver coin was the *στατήρ* or *didrachmon* (=about $0.52, the Aeginetan drachma being = $0.26). Solon abolished this standard in Attica, and introduced a lighter drachma equal to about $0.16. The Attic talent (=6000 drachmae) was thus worth about $1000, the mina about $16. The silver coins of Attica bore on the front the head of Pallas, and on the reverse the figure of an owl. The principal coin was the *τετράδραχμον* or 4 drachmae, the largest (which was

Tetradrachmon of Athens.

(Time of the Persian Wars.)



only issued occasionally) the *δεκάδραχμον* or 10 drachmae. The *δίδραχμον* (2 drachmae) was in like manner issued rarely. The *τριώβολον* (3 obols), the *ὀβολός*, and the *ἡμιωβόλον* ($\frac{1}{2}$ obol) were small silver coins; the *τεταρτημόριον* ($\frac{1}{4}$ obol) the smallest of all.

The Greek States always adopted a silver currency, gold being rarely issued. The largest gold piece was the *didrachmon* or golden *στατήρ* (=20 silver drachmae). Besides this we find drachmas, triobols, obols, half-obols, quarter-obols, and even eighth-obols in gold. The gold money most com-

Gold Daric, actual size. (British Museum.)

monly current in Greece was, down to the Macedonian age, the royal Persian coin called *δαρεικός*, or daric. It was stamped on one side with a crowned archer, on the other with an oblong incuse. This corresponded with the gold stater of Attica and of the cities of Asia Minor. Among these should be especially mentioned the stater of Cyzicus or the *Cyzicenus* = 28 silver drachmae. The earliest copper coin issued at Athens was the *χαλκοῦς* = $\frac{1}{8}$ of a silver obol (B.C. 440). In the time of Alexander the Great the silver coinage stopped at the triobolus, and it therefore became necessary to represent the smaller fractions in copper. The silver money of Attica was in very general use, but the Attic standard was not adopted in Greece Proper. It spread westward, however, in quite early times. In the greater part of Sicily, and in Tarentum and Etruria, the coinage was from the

Silver Daric, actual size. (British Museum.)

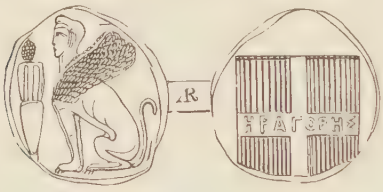
first regulated in accordance with the Attic standard. But the wide diffusion of this standard was mainly due to the action of Philip II. of Macedon and Alexander the Great. The former adopted it when introducing his gold coinage (*Φίλιππος*), the

latter for his silver money (see illustration); and even after Alexander's death this standard held its ground in the kingdoms of the Macedonian Empire, except in Egypt, where the Ptolemies maintained the old coinage of the country. Macedonian influence extended the Attic currency into many other States—e. g. Epirus, the coasts of the

Head of Apollo. Victorious *biga*.

Gold Stater of Philip II. of Macedon.

Black Sea, and even Parthia. The largest Greek gold coin is the twenty-stater piece of the Graeco-Bactrian king Eucratides, now preserved in Paris;



Head of Heracles. Zeus.

Tetradrachmon of Alexander the Great.

the largest silver coins are the ten-drachma pieces of Athens, Syracuse, and Alexander the Great.

Hellenic coins are important as giving an admirable idea of the development of the plastic art among the Greeks. In the Greek cities of Italy and Sicily, in particular, the art of stamping coins had attained considerable importance as early as

Coin of Chios.

the fifth century B.C., and in the fourth century, with its lifelike characterizations, and with the rich variety and noble perfection of its forms, it reached the highest degree of finish.

Coin of Carthage.

Roman Coins.—As in Greece, so at Rome, oxen and sheep were originally the medium of exchange. The oldest pecuniary fines were exacted in cattle, and the Latin word for money (*pecunia*), is derived from *pecus*. In later times unwrought copper (*aes rude*), given in pieces according to weight, took the place of oxen. Bars of cast copper marked on both sides with some figure (as of an ox, pig, or fowl) are said to have been introduced by King Servius Tullius when he took in hand the regulation of weights and measures. The first demonstrable example of a coin is from the age of the decemvirs (about B.C. 450). The unit of coinage was the *as* of cast copper, carrying the nominal weight of the Roman pound (*libra* = 12 *unciae*).

Roman *As* of Cast Copper.

The *as* (*aes grave*) bore the image of Ianus; the coins representing its fractions were all stamped on the reverse side with the figure of a ship's prow. These were *semis*, with the head of Iupiter = $\frac{1}{2}$ *as* or 6 *unciae*; *triens*, with the head of Minerva, $\frac{1}{3}$ of an *as* = 4 *unciae*; *quadrans*, with the head of Heracles, $\frac{1}{4}$ *as* = 3 *unciae*; *sextans*, with the head of Mercury, $\frac{1}{6}$ *as* = 2 *unciae*; *uncia*, with the head of Roma, $\frac{1}{12}$ *as*. As in the course of time the copper money became lighter, the smaller fractional coins were first struck, and afterwards all the fractions. This copper currency was intended exclusively for the home trade, so that it was easily allowed to suffer a continuous depreciation, at first to 4, then to 2, after B.C. 217 to 1 ounce, after B.C. 89 to $\frac{1}{2}$ an ounce, and under the Empire even to $\frac{1}{4}$ an ounce. In B.C. 269 a silver currency was intro-

Denarii, actual size. (British Museum.)

duced, and a mint for it set up on the Capitoline Hill in the temple of Iuno Moneta. The silver fractional coins struck according to the Athenian and Sicilian standard were the *denarius* (about \$0.19) = 10 *asses* of 4 ounces; the *quinarius* = 5 *asses*; and the *sestertius* = 2$\frac{1}{2}$ *asses*. These coins were denoted by the characters X, V, and HS (II.S [*semis*] respectively. There is displayed on the obverse the head of Roma personified, wearing a winged helmet, and on the reverse the Dioscuri on horseback. Later we find Diana Victoria in a

biga or two-horse chariot, or Iupiter in a quadriga, but from the middle of the first century there is no fixed device for the reverse. The *sestertius* was the equivalent of the old *as*. Payments were made in *denarii*, but calculated in *sestertii*, whence, as stated above, the word *nummus* (coin) is generally synonymous with *sestertius*.

Sestertius.

The reduction of the copper *as* to 1 *uncia* in B.C. 217 degraded the copper money to the position of small coin, and silver currency drove out the copper. The *denarius* sank at the same time to the value of about $0.15, which it maintained till the time of Nero. The *denarius* was reckoned as = 16 *asses*, the *quinarius* as 8, and the *sestertius* (nearly $0.03) = 4. At about the same period a temporary effort was made to introduce gold coinage. This movement was not taken up again till towards the end of the Republic, when Caesar struck a large number of gold coins (*aurei*) equal in weight to $\frac{1}{40}$ of the Roman pound, and in value 25 *denarii* or 100 *sestertii* (a little over $5). No regular coinage was carried on in the time of the Republic, but the necessary money was minted as occasion required. This was done in Rome at the commission of the Senate under the superintendence of certain officials intrusted with the duty. A permanent board of three persons (*tres viri monetales*) was at last appointed for the purpose. In the provinces money was coined by the Roman generals and governors. From the time of Augustus the emperor retained the exclusive privilege of coining gold and silver money, the copper coinage being left to the Senate. The standard of the imperial coinage was the *aureus* of Caesar, the weight of which sank with many variations lower and lower, until Constantine (A.D. 312) fixed it at $\frac{1}{72}$ of a pound (about $3). The *aureus* now got the name of *solidus*, and was stamped, first with the Roman numeral LXXII, and later with the Greek numeral OB = 72. It remained in use down to the fall of the Eastern Empire, the name surviving in modern times in the Italian *soldo*. Of the silver pieces of the Republic, the *denarius* and the *quinarius* alone remained in use under the Empire, all the rest being stamped in copper. The *denarius* remained of the value of $0.17, as fixed in B.C. 217, until Nero's time, when it was reduced in weight and fineness until it was worth only about $0.12. During the second century it fell to $0.06, and the silver coinage in consequence was changed to small money. Diocletian, about A.D. 292, reformed the currency, issuing a new silver coin, the *argenteus*, equal in weight to Nero's *denarius*. This was in use until A.D. 360, when a new system of silver coinage on the basis of the gold *solidus* was instituted.

Aureus of Marcus Aurelius.

The copper coins, as issued by the authority of the Senate, bore the letters S. C. (*senatus consulto*). The following small coins were issued under the Empire: *sestertius* = 4 *asses*; *dupondius* = 2 *asses*; *semis* = $\frac{1}{2}$ *as*; and the *quadrans* = $\frac{1}{4}$ *as*. The *sestertius* and the *dupondius* were of brass; the *semis* and *quadrans* of copper. The *quadrans* was disused under Trajan; the *dupondius*, *as*, *semis*, and *sestertius* under Diocletian.

Gold Solidus.

Paris, 1880–88); and Stephenson, *Dictionary of Roman Coins* (London, 1889). For Byzantine and mediæval coins, see Sabatier, *Monnaies Byzantines* (Paris, 1862); and Serrure, *Traité de Numismatique du Moyen Âge* (Paris, 1891). On the mintage, see MONETA.

Numĭtor. See ROMULUS.

Nummularii. See TRAPEZITAE.

Nummus or **Numus.** A special name for the commonest coin at Rome, which generally served as the unit of reckoning—the *sestertius*. See NUMISMATICS (Roman); SESTERTIUS.

Nuncupatio. See TESTAMENTUM.

Nundĭnae (Old Lat. *noundinae*). The Roman term for the market day held on the last day of the week of eight days, on which countrymen rested from labour and came to Rome to buy and sell, as well as to do other business. Accordingly the Nundinae were used for public announcements especially concerning public assemblies and the business to be conducted in them. The actual holding of the assemblies on these days was avoided, so as not to prevent the people from attending to the business of the market. Originally, too, no legal business was conducted on them, and it was not till the beginning of the third century B.C. that it was introduced. The Nundinae, though not a regular feast-day, were nevertheless celebrated in private life by inviting strangers to one's table and exempting children from going to school. The form *nundinum* (sc. *tempus*) or *inter nundinum* means the whole period of eight days. In late Latin, *nundinium* means the period of the consulship (Mommsen, *Staatsrecht*, ii. 84; iii. 375). See DIES.

Nupta (*νύμφη*). A bride. See MATRIMONIUM.

Nuptiae. See MATRIMONIUM.

Nursia. A town of the Sabines, situated near the sources of the Nar and amid the Apennines, whence it is called by Vergil *frigida Nursia* (*Aen.* vii. 716). It was the birthplace of Sertorius and of the mother of Vespasian.

Nuts, Games Played with. See Nuces.

Nux. The title of an elegiac poem in 182 lines often ascribed to Ovid, and probably of a date not much later than that poet. It voices the complaint of a nut-tree concerning ill-treatment and the degeneracy of the times. It is based upon a poem in the Greek anthology (*Anthol. Palat.* ix. 3), and is written in an ornate but graceful style. It is edited with a commentary by Lindemann (Zittau, 1844); critical text in Bährens, *Poetae Lat. Minores*, i. 90 (Leipzig, 1886).

Nyctēis (Νυκτηΐς). See Nycteus.

Nycteus (Νυκτεύς). Son of Hyrieus and Clonia and father of Antiopé, who is hence called Nycteïs. Antiopé was carried off by Epopeus, king of Sicyon; whereupon Nycteus, who governed Thebes, as the guardian of Labdacus, invaded Sicyon with a Theban army. Nycteus was defeated, and died of his wounds, leaving his brother Lycus guardian of Labdacus. See Hyg. *Fab.* 7, and Lycus.

Nyctiměné. Daughter of Epopeus, king of Lesbos. Having been dishonoured by her father, she concealed herself in the shade of forests, where she was metamorphosed by Athené into an owl (Ovid, *Met.* ii. 590; Hyg. *Fab.* 204).

Nymphae (Νύμφαι, properly "the young maidens"). Inferior divinities of nature dwelling in groves, forests, and caves, beside springs, streams, and rivers; in some cases, too, on lonely islands, like Calypso and Circé. The nymphs of the hills, the forests, the meadows, and the springs (called in Homer daughters of Zeus, while Hesiod makes the nymphs of the hills and the forests, together with the hills and the forests, children of earth) appear as the benevolent spirits of these spots, and lead a life of liberty, sometimes weaving in grottoes, sometimes dancing and singing, sometimes hunting with Artemis, or revelling with Dionysus. Besides these divinities it is especially Apollo, Hermes, and Pan who are devoted to them and seek after their love; while the wanton satyrs are also continually lying in wait for them. They are well disposed towards mortals, and ready to help them; they even wed with them. According to the various provinces of nature were distinguished various kinds of nymphs: nymphs of rivers (Ποταμηΐδες) and springs, the Naiads (Νηΐδες), to whom the Oceanids (Ὠκεανίδες) and Nereïds (Νηρηΐδες) are closely related; nymphs of the hills, Oreads (Ὀρειάδες); nymphs of the forests and trees, Dryads (Δρυάδες) or Hamadryads (Ἁμαδρυάδες); besides this they often received special names after certain places, hills, springs, and grottoes. The Naiads, as the goddesses of the nourishing and fructifying water, were especially rich in favours, giving increase and fruitfulness to plants, herds, and mortals. Hence, they were also considered as the guardian goddesses of marriage, and the besprinkling of the bride with spring-water was one of the indispensable rites of the marriage ceremony. On the same principle, legendary lore represents them as nursing and bringing up the children of the gods, as, for instance, Zeus and Dionysus. Further, owing to the healing and inspiring power of many springs, they belong to the divinities of healing and prophesying, and can even drive men into a transport of prophetic and poetic inspiration. The Muses themselves are, in their origin, fountain-nymphs. Popular belief assigned to the nymphs in general an exceedingly long life, without actual immortality. The existence of Dryads, it was supposed, was closely bound up with the origin and decay of the tree in which they dwelt. They enjoyed divine honours from the earliest times, originally in the spots where they had power, at fountains, and in groves and grottoes. In later times shrines of their own, hence called Nymphaea, were built to them, even in cities. These eventually became very magnificent buildings, in which it was customary to celebrate marriages. Goats, lambs, milk, and oil were offered to them. Works of art represented them in the form of charming maidens, lightly clothed or naked, with flowers and garlands; the Naiads drawing water, or carrying it in an urn. They appear as the attendants of Hermes, the deity of herdsmen; of Pan, of Artemis, and of Apollo—this last in the prophetic character.

Nymphaeum (Νυμφαῖον). (1) A mountain, with perhaps a village, by the river Aoüs, near Apollonia, in Illyricum. (2) A port and promontory on the coast of Illyricum. (3) The southwestern promontory of Acté or Athos, in Chalcidicé. (4) A seaport town of the Tauric Chersonese (Crimea), on the Bosporus. (5) A place on the coast of Bithynia. (6) A place in Cilicia.

Nymphaeum (*νυμφαῖον*). A room forming a part of the Flavian Palace at Rome. (See Palatium, p. 1159.) The name in general designates a grand and lofty chamber, decorated with columns, statues, and pictures, and having a stream of spring-water, gushing from a fountain, in its centre, so as to form a cool and agreeable retreat for the resort of a luxurious population (Philostr. iv. 8). Many edifices of this description are enumerated by P. Victor (*Urb. Rom.*) in the city of Rome; and other writers generally speak of them in connection with the public baths (Ammian. xv. 7, 3; Capitol. *Gord.* 32).

Nymphaeus (Νύμφαιος). (1) A small river of Latium (now the Ninfa) falling into the sea above Astura, and contributing to the formation of the Pomtine marshes. (2) A small river of Armenia, a tributary of the Upper Tigris.

Nymphis (Νύμφις). The son of Xenagoras of Heraclea, who flourished about B.C. 250. He wrote a work on Alexander the Great and his successors in twenty-four books (Suid. s. v.).

Nymphodōrus (Νυμφόδωρος). A Syracusan of the time of Alexander the Great. He wrote a *Periplus* of Asia and a work on Sicily.

Nysa (Νύσα). The legendary scene of the nurture of Dionysus (Bacchus), who was therefore called Nysaeus, Nysius, Nyseïus, Nyseus, Nysigena, etc. Hence the name was applied to several places sacred to that god: as (1) in India, at the northwest corner of the Punjab, near the confluence of the rivers Cophen and Choaspes. (2) Nyssa, a city of Caria, on the southern slope of Mount Messogis, famous for its wine. (3) A city of Cappadocia, near the Halys, the bishopric of St. Gregory of Nyssa. (4) A town in Aethiopia near Meroë (He-

rod. iii. 97, 111). (5) A village on the slopes of Helicon, in Boeotia.

Nysaeus. See NYSA.

Nyseĭdes or **Nysiădes.** The Nymphs of Nysa, who are said to have reared Dionysus, and whose names are Cisseïs, Nysa, Erato, Eriphia, Bromia, and Polyhymno (Apollod. iii. 4, 3).

Nyx (Νύξ), by the Romans called **Nox.** One of the most ancient deities, daughter of Chaos. From her union with her brother Erebus, she gave birth to the Day and the Light. She was also the mother of the Moerae, Hesperides, Hypnos, Nemesis, Discord, Thanatos, Momus, Fraus, etc. She is called by some of the poets the mother of all things, of gods as well as of men, and was worshipped with great solemnity. A black sheep and a cock, the latter as announcing the approach of day, were sacrificed to her.

Night was represented under various forms: as riding in a chariot preceded by the constellations, with wings, to denote the rapidity of her course; as traversing the firmament seated in her car, and covered with a black veil studded with stars. Sometimes her veil seems to be floating on the wind, while she approaches the earth to extinguish a flaming torch which she carries in her hand. She has often been confounded with Artemis, or the moon; and her statue was placed in the temple of that goddess at Ephesus (Hyg. *Praef.*; Serv. *ad* Verg. *Aen.* vi. 250; Tibull. iii. 4, 17; Verg. *Aen.* v. 721, etc.).

O

O, as a symbol.

IN GREEK.—

O = *ὀβολός*. OO = 2 *ὀβολοί*, etc.

As a numeral, o = 15 (old system) or 70 (Ō), ,o = 70,000.

IN LATIN.—

O = optio, horae, ovum, obiit.

O·B·Q·T = ossa bene quiescant tibi.

O·C = opus constat.

O·C·S = ob cives servatos.

O·H·F = omnibus honoribus functus.

O·M = ob memoriam.

O·M·C·P·F·V·C·C·T = oppidum municipium colonia praefectura forum vicus conciliabulum castellum territorium.

O·N·F = omnium nomine faciundum.

O·O·D = ornatus ornamentis decurionalibus.

O·S = ossa sita.

O·S·T·T·L = opto sit tibi terra levis.

O·T(V)·B·C(Q) = ossa tibi (volo), bene cubent (quiescant).

O·V = oro vos, ornatus vir.

O·V·F·D·R·P·O·V·F = oro vos faciatis, dignum re publica, oro vos faciatis.

Oănus (*Ὦανος*). The modern Frascolari; a river in Sicily near Camarina.

Oars. See NAVIS; REMUS.

Oărus (*Ὄαρος*). A river of Sarmatia, rising in the country of the Thyssagetae, and falling into the Palus Maeotis (Herod. iv. 123). This river has not yet been satisfactorily identified.

Oăsis (*Ὄασις* and *Ἄδασις*). The Greek form of the Egyptian word *Uah*, which was used to denote an island in the sea of sand of the great Libyan Desert. These oases are preserved from the shifting sands by steep hills of limestone round them, and watered by springs, which make them fertile and habitable. The name is applied especially to two of these oases on the west of Egypt, which were taken possession of by the Egyptians at an early period. (1) OĂSIS MAIOR (*Ὄασις μεγάλη*), the Greater Oasis, was situated seven days' journey west of Abydos, and belonged to Upper Egypt. This oasis contains numerous ruins of the ancient Egyptian and Roman periods. (2) OASIS MINOR (*Ὄασις μικρά*), the Lesser or Second Oasis, was a good day's journey from the southwestern end of Lake Moeris, and belonged to the Heptanomis, or Middle Egypt. (3) A still more celebrated oasis than either of these was that called AMMON, HAMMON, AMMONIUM, HAMMŌNIS ORACŬLUM, from its being a chief seat of the worship and oracle of the god Ammon. It is now called Siwah. Its distance from Cairo is twelve days, and from the northern coast about 160 English miles. The Ammonians do not appear to have been subject to the old Egyptian monarchy. Cambyses, after conquering Egypt in B.C. 525, sent an army against them, which was overwhelmed by the sands of the desert. In B.C. 331, Alexander the Great visited the oracle, which hailed him as the son of Zeus Ammon (Q. Curt. iv. 33). Cato the Younger also made a journey to the place. Ruins of the temple of Ammon still exist.

Oath. See IUSIURANDUM; SACRAMENTUM.

Oaxes. See OAXUS.

Oaxus (*Ὄαξος*), called **Axus** (*Ἄξος*) by Herodotus. A town in the interior of Crete on the river Oaxes (Herod. iv. 154).

Obae. See TRIBUS.

Obba (*ἄμβιξ*). A drinking-cup made of earthenware or wood (Pers. v. 148; Varro *ap.* Non. p. 545 Müll.), and of uncertain shape. The epithet *sessilis* applied to it by Persius (Conington's "squab noggin") suggests a vessel with a broad bottom.

Obeliscus (*ὀβελίσκος*). Literally, a small spit, diminutive of *ὀβελός*; whence applied to other things which possess a sharp or pointed extremity, like a spit; and especially to the tall, slender, rectangular columns, upon a narrow base, and terminating in a point at the top, which were originally invented by the Egyptians, and retain their ancient name with us (Pliny, *H. N.* xxxvi. 13; Ammian. xvii. 4, 6). The obelisk served in Egyptian art the same purpose as the *στήλη* of the Greeks and the *columna* of the Romans, marking the triumphs or the honours of some prince. They are monoliths, cut in four faces, and are broader at the base than at the top, near which the sides form the base of a pyramid in which the obelisk terminates. The sides are very slightly concave, in order to increase the impression of height, which varies from 25½ inches to a hundred feet. Upon them are usually cut inscriptions in hieroglyphics and pictures recording the names and titles of kings. They were

transported in rafts from their quarries at the time of the inundation of the Nile, and raised by means of inclined planes aided by machinery. Some of the obelisks give evidences of having originally had their tips covered with gilded bronze or gold. The use of obelisks antedates history, and has continued to modern times. Most of the Egyptian obelisks date from the eighteenth and nineteenth dynasties (B.C. 1800–1300). The most famous two once stood at Heliopolis, whence they were brought by Rameses II. to Alexandria. These are the ones

Ancient Obelisk.

popularly known as "Cleopatra's Needles," of which one was taken to London in 1878 and set up on the Thames Embankment, and the other to New York in 1881, where it is now one of the ornaments of Central Park. There are several at Rome—in the Piazza della Trinità, the Piazza di Monte Citorio, the Piazza del Quirinale, the Piazza dell' Esquilino, the Piazza della Minerva, the Circo Agonale (Piazza Navona), the Piazza di San Giovanni in Laterano, the Piazza del Popolo, and the Piazza di San Pietro, and others of no historical importance. The last named was brought from Heliopolis by Caligula, and is the only one at Rome that has never been broken. Its height is 132 feet. There are also ancient obelisks at Florence, Constantinople, Arles, Catana, and Paris, and one (Lepsius's) at Berlin, this being at once the oldest and the smallest of all, having a height of only 2 feet $1\frac{1}{2}$ inches. Of these small obelisks other specimens are to be seen in various European museums. No ancient obelisk ever attained the height of the modern American obelisk at Washington, though this, of course, is not a monolith. See Birch, *Notes upon Obelisks* (London, 1853); and Gorringe, *Egyptian Obelisks* (New York, 1885).

Obĕlus. See NOTAE.

Obex. A generic Latin term for a door-fastening, applicable alike to bolt, bar, lock, and latch (Ovid, *Met.* xiv. 780; Tac. *Hist.* iii. 30). See IANUA.

Obligatio. A legal bond by which one is bound to the performance of some act at the behest and for the benefit of another person (*Inst.* iii. 13). It may, however, be of a negative character, in which case the persons bound must abstain from some specified act. Obligationes to be binding must satisfy their creditors: (1) they must be lawful in nature and form; (2) they must have a money value to the person in whose favour they are assumed; and (3) they must be definite and specific. See Savigny's *Obligationenrecht* (2 vols. 1851–53).

Obligatio Litterārum. One of the four modes of incurring contractive obligations was "by letters" (*litteris*, Gaius, iii. 137). The contract was made by the creditor's entry in his account-book (*codex accepti et expensi*) under the head of *expensum* to the debtor. To this entry the debtor's assent was necessary (Val. Max. viii. 2, 2), but he need not actually have received the money. The items of receipt and expenditure appear to have been entered without distinction, in the order of their occurrence, in a day-book (*adversaria*), and transcribed at the end of each month into a ledger (*tabulae, codex accepti et expensi*), the precise form and character of which is much disputed, though most probably it was arranged in two sides or columns after the fashion of an ordinary banker's pass-book. The entry in this ledger (*nomen facere*) made the contract, and bound the debtor to repay the specified sum: it was not merely evidence, admitting of the possibility of rebuttal. We are told by Gaius (iii. 131) that if an entry were made in the codex of an actual money loan, the obligation to repay it arose *re*, not *litteris*, and the debt was called specifically *nomen arcarium*, the written record serving merely as evidence. It follows that wherever a genuine money debt was created *litteris* it must have been under the fiction of a loan, as appears to have been the case in two instances of debts originally incurred in this manner of which we have a record (Cic. *Ad Att.* iv. 18; Val. Max. viii. 2, 2).

Obliviōnis Flumen. See LIMAEA.

Obŏlus (ὀβολός). A piece of money (Greek) originally of silver, but in later times (after B.C. 400) of bronze. The Attic obolus was worth about three cents American; and the Aeginetan obolus, about five cents. There were also *tetroboli, triboli*, and *dioboli;* and fractional denominations, such as the *hemiobolus, tetartimorion*, etc. The Attic

obolus = 8 *chalci*. See CHALCUS; NUMISMATICS (Greek).

Obrĭmas. An eastern tributary of the Maeander in Phrygia (Livy, xxxviii. 15).

Obringa (Ὄβρίγκας). A western tributary of the Rhine, identified by modern geographers with the Ahr, which joins the Rhine between Bonn and Andernach (Ptol. ii. 10, 17).

Obsĕquens, Iulius. The author of a work entitled *De Prodigiis* or *Prodigiorum Libellus*, of which a portion is extant. Of the writer nothing is known save that he flourished about the year A.D. 369. He gives us a record of the prodigies and portents in Roman history, arranged in chronological order from B.C. 190 to B.C. 11. The writer borrows largely from Livy. It is edited by O. Jahn (Leipzig, 1863); and in Weissenborn-Müller's Livy, vol. x. (2d ed. Berlin, 1881).

Crepida with Obstragulum.

Obsidionālis Corōna. See CORONA.

Obsonium. See VICTUS.

Obstragŭlum. The flat leather strap used in fastening on the shoe known as the *crepida* (q. v.).

Obturaculum and **Obturamentum**. A stopper for closing the mouth of a jar or bottle. It was sometimes of cork and sometimes of glass (Marcell. Empir. 35; Pliny, *H. N.* xvi. § 13).

Glass Bottle with Obturaculum. (Found at Pompeii.)

Ocalea (Ὠκαλέα). An ancient town in Boeotia, situated on a river of the same name falling into Lake Copaïs (Strabo, p. 410).

Occatio (βωλοκοπία). Harrowing. It was effected by drawing a hurdle (*crates*) over the land, or a wooden frame set with teeth (*dentata*), similar to our harrow, often weighted by the driver standing upon it; and in very stiff soils the clods were broken and levelled by hand, with a heavy pronged instrument (*rastrum*), possessing the properties of a rake and hoe (Verg. *Georg.* i. 94, 95).

Occult Sciences. See ASTROLOGIA: MAGUS.

Occupatio. The taking possession of a thing which belongs to no one (*res nullius*), with the intention of appropriating it: the property in it is thereby *ipso facto* vested in him who takes possession (Cic. *De Off.* i. 7, 21). Among the things of which one can become owner in this fashion are wild animals, birds, bees, and fishes (Just. *Inst.* ii. 1, 12-16), enemies' property on Roman soil (*ib.* 17), stones and pebbles found on the sea-shore (*ib.* 18), islands which rise in the sea (*ib.* 22), treasure-trove (*ib.* 39), and *res derelictae*, property abandoned by its former owner (*ib.* 47).

Oceanĭdes. See NYMPHAE.

Oceănus (Ὠκεανός). (1) The god of the stream Oceanus, earlier than Poseidon. He was the first-born of the Titans, the offspring of Uranus and Gaea, or Heaven and Earth. Oceanus espoused his sister Tethys, and their children were the rivers of the earth and the three thousand Oceanides or Nymphs of Ocean (Hesiod, *Theog.* 337 foll.). This is all the account of Oceanus that is given in the *Theogony*. Homer speaks of him and Tethys as the father even of the gods (*Il.* xiv. 201, 246, 302). When Zeus placed his sire in Tartarus, Rhea committed her daughter Heré to the charge of Oceanus and Tethys, by whom she was carefully nurtured. The abode of Oceanus was in the West (*Il.* xiv. 200, 301). He dwelt, according to Aeschylus, in a grotto palace, beneath his stream, as it would appear (*Prom. Vinct.* 300). In the *Prometheus Vinctus* of this poet, Oceanus comes borne through the air on a hippogriff, to console and advise the heroic sufferer; and from the account given of his journey, it is manifest that he came from the West. When Heracles was crossing his stream in the cup of the Sun-god to procure the oxen of Geryon, Oceanus rose, and, by agitating his waters, tried to terrify him; but, on the hero's bending a bow at him, he retired.

(2) Besides being the name of a deity, the term Oceanus (Ὠκεανός) occurs in Homer in another sense also. It is made to signify an immense stream, which, according to the rude ideas of that early age, circulated around the terraqueous plain, and from which the different seas ran out in the manner of bays. This opinion, which is also that of Eratosthenes, was prevalent even in the time of Herodotus (iv. 36). Homer terms the ocean ἀψόρροος, because it thus flowed back into itself. This same river Oceanus was supposed to ebb and flow thrice in the course of a single day, and the heavenly bodies were believed to descend into it at their setting and emerge from it at their rising. Hence the term ὠκεανός is sometimes put for the horizon. In Homer, therefore, ὠκεανός and θάλασσα always mean different things, the latter merely denoting the sea in the more modern acceptation of the term. On the shield of Achilles the poet represents Oceanus as encircling the rim or extreme border of the shield, in full accordance with the popular belief of the day, whereas in Vergil's time, when this primitive meaning of the term was obsolete, and more correct geographical views had come in, we find the sea (the idea being borrowed, probably, from the position of the Mediterraneau) occupying in the poet's description the *centre* of the shield of Aeneas. Herodotus (ii. 23; iv. 8) rejects the notion that Oceanus is a stream. See GEOGRAPHIA.

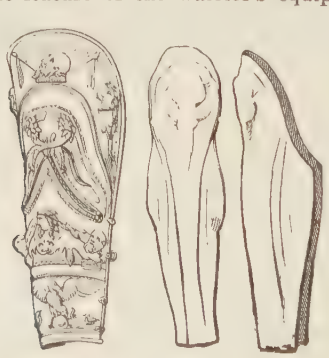
It is remarkable that one of the oldest names of the Nile among the Greeks was ὠκεανός.

Ocēlis (Ὀκηλις). Now Ghela; a harbour and mart in Arabia Felix, at the entrance of the Red Sea (Ptol. i. 7, 4).

Ocellāta. A sort of marble used in play by the Roman children (Suet. *Aug.* 83), and probably so called from *oculus*, either because of their shape or colour, or both—the "allies" of our school-boys. See NUCES.

Ocellus (Ὄκελλος). An Italian Greek of Lucania, who wrote a work on the nature of the Whole (Περὶ τῆς τοῦ Παντὸς Φύσεως). His date is uncertain. There is an edition of the work by Mullach (1846).

Ocĕlum. (1) A town in the Cottian Alps, now Oulx. It was the last place in Cisalpine Gaul before entering the territories of King Cottius. (2) A town in the northeastern part of Lusitania. (3) A promontory of Britain, perhaps Spurn Head (Ptol. ii. 3, 6).



Ocha (Ὄχη). The highest mountain in Euboea in the south of the island near Carystus. The name Ocha was once applied to the whole island (Strabo, pp. 445, 446).

Ochlocratia (ὀχλοκρατία). The dominion of the rabble, or "mobocracy." It is a name of later origin than the time of Aristotle, and applied to that perversion of a democracy which extends the idea far beyond that of a State where all have equal legal rights and equal franchise, so that the natural and wholesome inequalities of society were removed or counteracted by the introduction of devices, such as paying citizens for attendance in the popular assembly, or increasing the number and restricting the duration and authority of public offices. Hence the exercise of all the highest functions of government came to be practically in the hands of a mere faction, consisting of the lowest and poorest, though most numerous, class of citizens, who were thus tempted to adopt as their vocation that which they would formerly have delegated to others; and the State came to be regarded as a *property* of which each citizen was entitled to an equal share. In some respects, therefore, it most nearly represents the modern idea of a socialistic State (Aristot. *Pol.* iv. 5).

Ochus. A surname of Artaxerxes III., king of Persia, who reigned B.C. 359–338. In order to secure his throne, he began his reign with a merciless extirpation of the members of his family. He himself was a cowardly and reckless despot; and the great advantages which the Persian arms gained during his reign were owing only to his Greek generals and mercenaries. These advantages consisted in the conquest of the revolted satrap Artabazus and in the reduction of Phœnicia, of several revolted towns in Cyprus, and of Egypt, B.C. 350. The reins of government were entirely in the hands of the eunuch Bagoas and of Mentor the Rhodian. At last he was poisoned by Bagoas, and was succeeded by his youngest son, Arses. See PERSIA.

Ochus (Ὦχος). A great river of Central Asia, supposed by some to be the same as the Oxus (Pliny, *H. N.* vi. 48).

Ocrea (κνημίς). A greave; a piece of defensive armour covering the shin from the ankle to a little above the knee, and fastened by buckles or straps at the back of the leg which was left uncovered (Varro, *L. L.* v. 116). It was made of metal (tin or bronze), and often ornamented, embossed, or chased with various designs. That the greaves were an important feature of the warrior's equipment is seen by the epithet εὐκνημίδες continually applied by Homer to the Greeks, and from the minuteness with which he describes their various parts, especially the ankle-rings (ἐπισφύρια), which were often of silver (*Il.* iii. 331). Several species of bronze greaves have been found at Pompeii, probably belonging to the gladiators.

Bronze Greaves found at Pompeii.

Greek Warrior wearing Greaves. (Hope.)

Ocricŭlum. See OTRICULUM.

Ocrisia. The mother of Servius Tullius (q. v.).

Octastȳlus (ὀκτάστυλος). A term applied to a temple having a row of eight columns in front of the *pronaos* (Vitruv. iii. 3, 7).

Octāvae. See VECTIGALIA.

Octavia. (1) A daughter of Gaius Octavius and Accia, and sister to the emperor Augustus. All the historians praise the beauty and virtues of this celebrated woman. She was first married to Marcus Marcellus, a man of consular rank, and every way worthy of her; and after his death she became the wife of M. Antonius, this latter union being deemed essential to the public welfare, as a means of healing existing differences between Antonius and Octavianus. It was with this view that the Senate abridged the period of her widowhood and of her mourning for her first husband, who had been dead little more than five months. Antonius, however, was incapable of appreciating the excellence of her character. After her marriage she followed him to Athens, where she passed the winter with him (B.C. 39), though keeping far aloof from the dissolute pleasures to which he abandoned himself. Without her interposition, civil war would even then have broken out between Octavianus and Antonius. By urgent prayers she appeased her husband, who was incensed against her brother for his suspicions, and then, disregarding the difficulties of the journey and her own pregnancy, she went with his consent from Greece to Rome, and induced her brother to consent to an interview with Antonius, and to come to a reconciliation with him. When Antonius went to make

war against the Parthians, she accompanied him to Corcyra, and at his order returned thence to remain with her brother. New quarrels arose between Octavianus and Antonius. To have a pretext for a rupture, the former ordered his sister to go to her husband, in the expectation that he would send her back. This actually happened. Antonius was leading a life of pleasure with Cleopatra at Leucopolis, when letters from Octavia at Athens informed him that she would soon join him with money and troops. The prospect of this visit was so unwelcome to Cleopatra that she persisted in her entreaties until Antonius sent his wife an order to return. Even now, however, she endeavoured to pacify the rivals. Octavianus commanded her to leave the house of a husband who had treated her so insultingly; but, feeling her duties as a wife and a Roman, she begged him not, for the sake of a single woman, to destroy the peace of the world, and of two persons so dear to her, by the horrors of war. Octavianus granted her wish; she remained in the house of Antonius, and occupied herself with educating, with equal care and tenderness, the children she had borne him and those of his first wife Fulvia. This noble behaviour of hers increased the indignation of the Romans against Antonius. At last, when war broke out between Antonius and Octavianus, he divorced her, and ordered her to leave his mansion at Rome. She obeyed without complaint, and after his death reared the children he had had by Fulvia and Cleopatra. She died in B.C. 11. Her children numbered five—three by Marcellus and two by Antonius, the last being daughters. Her son, M. Marcellus, was adopted by Augustus, and was intended by him for his successor; but he died in B.C. 23. (See MARCELLUS.) Her elder daughter by Antonius was the grandmother of the emperor Nero, and the younger was the mother of the emperor Claudius and grandmother of Caligula.

Octavia. (Porphyry Bust in the Louvre.)

(2) The daughter of the emperor Claudius, born A.D. 42. She was first betrothed by Claudius to L. Silanus, who put an end to his life, as Agrippina had destined Octavia to be the wife of her son, afterwards the emperor Nero. She was married to Nero in A.D. 53, but was soon deserted by her young and profligate husband for Poppaea Sabina. After living with the latter as his mistress for some time, he resolved to recognize her as his legal wife; and accordingly he divorced Octavia on the alleged ground of sterility, and then married Poppaea, A.D. 62. Shortly afterwards Octavia was falsely accused of adultery, and was banished to the little island of Pandataria, where she was put to death. Her untimely end excited general commiseration. Octavia is the heroine of a tragedy, found among the works of Seneca, but the author of which was more probably Curiatius Maternus.

Octaviānus. See AUGUSTUS.

Octavius. (1) NEPOS, CN., Roman praetor B.C. 168, and appointed to the command of the fleet against Perseus. He pursued this monarch, after his defeat by Aemilius Paulus, to the island of Samothrace, and there obtained his surrender. For this he was rewarded with a naval triumph. In B.C. 165 he was consul with M. Torquatus. Having been sent, three years after this, into Syria, at the head of a deputation to act as guardians to the young king, Antiochus Eupator, he was assassinated by order, as was supposed, of Lysias, a relative of the previous monarch, who claimed the regency during the minority of Antiochus. The arrogant and haughty conduct of Octavius appears to have hastened his fate. The Senate, however, erected a statue to his memory. (2) CN., was consul B.C. 87, along with Cinna. Being himself attached to the party of Sulla, and having the support of the Senate, he drove his colleague out of the city. Marius, however, having returned this same year and re-entered Rome with Cinna, Octavius was put to death. (3) GAIUS, the father of Augustus, was praetor B.C. 61, and distinguished himself by the correctness and justice of his decisions. After his praetorship he was appointed governor of Macedonia, and defeated the Ressi and other Thracian tribes, for which he received from his soldiers the title of Imperator. He died at Nola, on his return from his province. Octavius married Atia, the niece of Iulius Caesar, and had by this union Octavius (afterwards Augustus) and Octavia, the wife of Antonius. (4) The name of the emperor AUGUSTUS before his adoption by Iulius Caesar. See AUGUSTUS.

Octōber. See CALENDARIUM.

Octōber Equus. A Roman rite originally held in honour of Mars. On the Ides of October in each year there was held a race of two-horse chariots (*bigae*) in the Campus Martius, after which the off-horse of the winning chariot was sacrificed by the Flamen Martialis. The tail was cut off (Arnob. vii. 24), and taken to the Regia, while the blood from it was sprinkled on the hearth of Vesta. The inhabitants of the Via Sacra and the Subura had a rough-and-tumble fight for the possession of the head. This contest was symbolical of the rivalry between the two halves of the older city. See Mommsen, *Hist. of Rome*, i. 53; Burn, *Rome and the Campagna*, p. 38; and Marquardt, *Staatsverwaltung*, iii. 334 foll.

Octodūrus. Now Martigny; a town of the Veragri in the country of the Helvetii. Here Galba, Caesar's officer, was attacked by the Gauls and forced to retreat (Caes. *B. G.* iii. 1).

Octogēsa. A town of the Ilergetes in Hispania Tarraconensis, near the Iberus, probably south of the Sicoris (Caes. *B. C.* i. 61).

Octolŏphus. A town of Macedonia.

Octophŏron. A litter (*lectica*) carried by eight slaves. See LECTICA.

Ocularĭarius. A dealer in artificial eyes. These were made of glass, silver, and even of precious stones; but were inserted not in human heads, but in the heads of statues (*Inscr. Grut.* 645, 1; Fabretti, *Inscr.* p. 641, no. 357).

Ocularius. An oculist; a medical specialist who devoted himself to the treatment of the eyes (Scrib. *Comp.* 37; Cels. vi. 6, 8). At Rome these practitioners were generally Greek, and appear not to have been numerous before the first century A.D. A number of seals belonging to these physicians have been found, and are described by Villefosse Thédenat, *Les Cachets d'Oculistes Romains* (Paris, 1882). See also Grotefend, *Die Stempel der Augenärzte* (Hanover, 1867); and Fröhner in the *Phil. Suppl.* v. 87.

Ocypětē (Ὠκυπέτη). "The swift-footed." One of the Harpies. See HARPYIAE.

Ocyrhoë (Ὠκυρόη). (1) A daughter of the Centaur Chiron, who possessed the gift of prophecy. She is said to have been changed into a mare. (2) A daughter of Oceanus and Tethys.

Ode. See CARMEN.

Odenathus. The ruler of Palmyra who checked the victorious career of the Persians after the defeat and capture of Valerian, A.D. 260 (Procop. *Pers.* ii. 5). In return for these services, Gallienus bestowed upon Odenathus the title of Augustus. He was soon afterwards murdered, and was succeeded by his wife Zenobia, A.D. 266. See PALMYRA; ZENOBIA.

Odessus (Ὀδησσός). (1) Now Varna; a Greek town in Thracia (in the later Moesia Inferior), on the Pontus Euxinus. It was founded by the Milesians, and carried on an extensive commerce. (2) A seaport in European Sarmatia, northeast of the modern Russian city of Odessa.

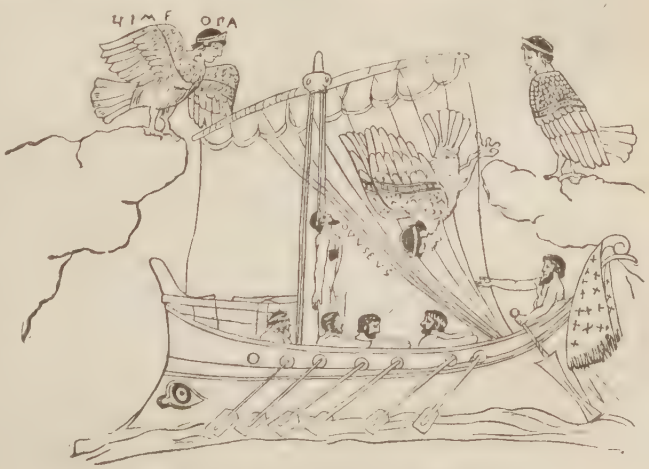
Odēum. See THEATRUM.

Odoācer, usually styled king of the Heruli, was the leader of the barbarians, who overthrew the Western Empire, A.D. 476. He took the title of King of Italy, and reigned till his power was overthrown by Theodoric, king of the Goths. Odoacer was defeated in three decisive battles by Theodoric (489–490), and then took refuge in Ravenna, where he was besieged for three years. He at last capitulated on condition that he and Theodoric should be joint kings of Italy; but Odoacer was soon afterwards murdered by his rival. See Procop. *B. G.* i. 1; Iornand. *De Reb. Goth.* pp. 128–141; and Hodgkin, *Italy and her Invaders* (1880–95).

Odrȳsae (Ὀδρύσαι). The most powerful people in Thrace, dwelling in the plain of the Hebrus, whose king, Sitalces, in the time of the Peloponnesian War, exercised dominion over almost the whole of Thrace. (See THRACIA.) The poets often use the adjective *Odrysius* in the general sense of *Thracicus*.

Odyssēa (Ὀδύσσεια). A town of Hispania Baetica, north of Abdera, and reported to have been founded by Odysseus (Strabo, pp. 149, 157).

Odysseia (Ὀδύσσεια). The *Odyssey*. See ODYSSEUS; HOMERUS.



Odysseus (Ὀδυσσεύς; the Latin equivalent being ULIXES; erroneously written ULYSSES). King of Ithaca, son of Laërtes and Anticlea, the daughter of Autolycus. In post-Homeric legends he is called a son of Sisyphus, conceived by Anticlea before her marriage with Laërtes. According to Homer, his name ("the hater," from ὀδύσσομαι) was given him by his grandfather Autolycus, because he himself had so often cherished feelings of hatred during his life (*Od.* xix. 402). His wife Penelopé (or Penelopea), daughter of Icarius (see PENELOPÉ), is said by later legends to have been obtained for him by her uncle Tyndareos in gratitude for counsel given by him. (See TYNDAREOS.) When his son Telemachus was still an infant, Agamemnon and Menelaüs, as Homer tells us, prevailed on him to take part in the expedition against Troy. Their task was hard, as it had been predicted to him that it would be twenty years before he saw his wife and child again. Later writers relate that he was bound, as one of Helen's suitors, to take part in the scheme, but tried to escape his obligation by feigning madness, and among other acts yoked a horse and an ox to his plough and so ploughed a field. When, however, Palamedes, who, with Nestor and Menelaüs, was desirous of taking him to Troy, proceeded to place Telemachus in the furrow, he betrayed himself, and had to accompany them to the war. Odysseus led the troops of Ithaca and the surrounding islands to Troy in twelve vessels. In contrast to the later legend, which represents him as a cowardly, deceitful, and intriguing personage, he always appears in Homer among the noblest and most respected of the heroes, and, on account of his good qualities, he is the declared favourite of Athené. He combines in his person courage and determined perseverance with prudence, ingenuity, cunning, and eloquence. Accordingly, he is employed by preference as a negotiator and a spy. Thus, after the disembarkation, he goes with Menelaüs into the enemy's city to demand the surrender of Helen. Again, he is among those who are despatched by the Greeks to reconcile with Agamemnon the enraged Achilles. With Diomedes, who delights in his company, he captures the spy Dolon and surprises Rhesus; with the same hero he is said by later legend to have stolen the Palladium from Troy. When Agamemnon faint-heartedly thinks of flight, he opposes this idea with the utmost decision. Everywhere he avails himself of the right time and the right place, and, where courage and cunning are needed, is ever the foremost. After Achilles' death, in the contest with Aiax, the son of Telamon, he received the hero's arms as a recognition of his services, and by his ingenuity brought about the fall of Troy. Shortly before it, he stole into the city in the garb of a beggar, in order to reconnoitre everything there; he then climbed with the others into the wooden horse, and contrived to control the impatient and the timid alike until the decisive moment. See TROJAN WAR.

His adventures during the return from Troy and on his arrival in his native country form the contents of the *Odyssey* of Homer. Immediately after the departure Odysseus was driven to the Thracian Ismarus, the city of the Cicones, and, though he plundered it, he lost in a surprise seventy-two of his companions. When he was desirous of rounding the promontory of Malea, the southeast point of the Peloponnesus, he was caught by the storm and carried in nine days to the coast of North Africa, on to the land of the Lotophagi (lotus-eaters), whence he had to drag his companions by force to prevent their forgetting their homes for love of the lotus-food. Thence the voyage passed into the legendary world of the Western Sea, then little known to the Greeks. Odysseus came first to the country of the Cyclopes (q. v.), where, with twelve of his comrades, he was

Odysseus offering wine to the Cyclops. (Vatican Museum, Rome.)

shut up in a cavern by Polyphemus. The monster had already devoured half of Odysseus's companions before the latter intoxicated him, deprived him of his one eye, and by his cunning escaped with his comrades. From this time the anger of Poseidon, on whom Polyphemus called for revenge, pursued him and kept him far from his country. On the island of Aeolus, the Keeper of the Winds (q. v.), he found hospitable entertainment, and received on his departure a leathern bag, in which were enclosed all the winds except the western. The latter would have carried him in nine days to the coast of Ithaca; but, while Odysseus was resting, his comrades opened the bag, which they imagined to contain treasure, and the winds thus released carried them back to Aeolus. He ordered them off from his island, regarding them as enemies of the gods. On coming to Telepylus, the city of Lamus, King Antiphates and his Laestrygones, cannibals of immense stature, shattered eleven of their vessels, and the twelfth was saved only by Odysseus's wariness. On the island of Aeaea the sorceress Circé turned part of his crew into swine, but with the help of Hermes, who gave him an antidote against her charms, he compelled her to restore them to their human shape, and spent a whole year with her in pleasure and enjoyment. When his companions urged him to return home, Circé bade him first sail towards the farthest west, to the entrance into the lower world on the farther bank of Oceanus, and there question the shade of the seer Tiresias concerning his return. (See HADES.) From the latter he learned that it was the malice of Poseidon that prevented his return, but that nevertheless he would attain his object if his comrades spared the cattle of Helios on the island of Thrinacia; otherwise, it would be only after a long time, deprived of all his comrades and on a foreign ship, that he would reach his home. Odysseus next returned to the isle of Circé and set out on his homeward voyage, supplied by her with valuable directions and a favouring wind. Passing the isles of the Sirens, who tried to lure his vessel upon the rocks by their sweet songs, but whom Odysseus resisted by filling his sailors' ears with wax and lashing himself to the mast, and sailing through Scylla and Charybdis (q. v.), he reached the island of Thrinacia, where he was compelled to land by his comrades. They were there detained for a month by contrary winds; at length his comrades, overcome by hunger, in spite of the oath they had sworn to him, slaughtered, during his absence, the finest of the cattle of Helios. Scarcely were they once more at sea, when a terrible storm broke forth, and Zeus split the ship in twain with a flash of lightning, as a penalty for the offence. All perished except Odysseus, who clung to the mast and keel, and was carried back by the waves to Scylla and Charybdis, and after nine days reached the island of Ogygia, the abode of the nymph Calypso, daughter of Atlas. For seven years he dwelt here with the nymph, who promised him immortality and eternal youth, if he would consent to remain with her and be her husband. But the yearning for his wife and home made him proof against her snares. All the day long he sat on the shore gazing through his tears across the broad sea; anxious to catch a glimpse, were it only of the rising smoke of his home, and thereafter die. So his protectress, Athené, during Poseidon's absence, prevailed on Zeus, in an assembly of the gods, to decree his return, and to send Hermes to order Calypso to release him. Borne on a raft of his own building, he came in eighteen days near to Scheria, the island of the Phaeacians, when Poseidon caught sight of him and shattered his raft in pieces. However, with the aid of the veil of Ino Leucothea (q. v.), he reached land in safety, and met with Nausicaa, the king's daughter, who conducted him into the Phaeacian city before her parents Alcinoüs (q. v.) and Areté. He received the most hospitable treatment, and was then brought by the Phaeacians loaded with presents on board one of their marvellous vessels to his own country, which he reached after twenty years' absence, while asleep. He arrived just in time to ward off

Odysseus and the Sirens. (Vase in British Museum.)

the disaster that was threatening his house. After his mother Anticlea had died of grief for her son, and old Laërtes had retired to his country estate in mourning, more than a hundred noble youths of Ithaca and the surrounding isles had appeared as suitors for the hand of the fair and chaste Penelopé, had persecuted Telemachus, who was now growing up to manhood, and were wasting the substance of the absent Odysseus. Penelopé had demanded a respite from making her decision until she had finished weaving a shroud intended for her father-in-law, and every night unravelled the work of the day. In the fourth year one of her attendants betrayed the secret; she had to complete the garment, and when urged to make her decision promised to choose the man who should win in a shooting-match with Odysseus's bow, hoping that none of the wooers would be able even so much as to bend it. Just before the day of trial, Odysseus landed on the island disguised by Athené as a beggar. He betook himself to the honest swineherd Eumaeus, one of the few retainers who had remained true to him, who received his master, whom he failed to recognize, in an hospitable manner. To the same spot Athené brought Telemachus, who had returned in safety, in spite of the plots of the suitors, from a journey to Nestor at Pylus, and to Menelaüs and Helen in Sparta. Hereupon Odysseus made himself known, and, together with his son and retainer, concerted his plan of revenge. In the shape of a beggar he betook himself to the house, where he manfully controlled his anger at the arrogance of the suitors which was displayed towards himself, and his emotion on meeting Penelopé. Next day the shooting-match took place. This involved shooting through the handles of twelve axes with the bow of Eurytus (q. v.), which the latter's son Iphitus had once presented to the young Odysseus. None of the suitors could bend the bow, and so Odysseus took hold of it, and bent it in an instant, thus achieving the master-shot. Supported by Telemachus, Eumaeus, and the herdsman Philoetius, and with the aiding presence of Athené, he shot first the insolent Antinoüs, and then the other suitors. He next made himself known to Penelopé, who had meanwhile fallen into a deep sleep, and visited his aged father. In the meantime the relatives of the murdered suitors had taken up arms, but Athené, in the form of Mentor (q. v.), brought about a reconciliation. The only hint of Odysseus's end in Homer is in the prophecy of Tiresias—that in a calm old age a peaceful death will come upon him from the sea.

Odysseus and Penelopé. (Pompeian Painting.)

In later poetry Telegonus, the son of Odysseus by Circé, is sent forth by his mother to seek out his father. He lands at Ithaca, and plunders the island. Odysseus proceeds to meet him, is wounded by him with a poisonous sting-ray, given by Circé to her son as a spear-point, and dies a painful death, which thus comes "from the sea." On Telegonus discovering that he had killed his father, he carried the dead body home with him, together with Penelopé and Telemachus, and there the latter lived a life of immortality, Telemachus becoming husband of Circé, and Telegonus of Penelopé. Besides Telegonus, the legend told of two sons of Odysseus by Circé, named Agrius and Latinus, who were said to have reigned over the Etruscans. Telegonus, in particular, was regarded by the Romans as the founder of Tusculum (Ovid, *Fasti*, iii. 92) and Praeneste (Hor. *Od.* iii. 29, 8). In later times the adventures of Odysseus were transferred, as a whole, to the coast of Italy: the promontory of Circeii was regarded as the abode of Circé, and Formiae as the city of the Laestrygones. Near Surrentum was found the island of the Sirens; near Cape Lacinium that of Calypso, while near to Sicily were the isle of Aeolus, Scylla, and Charybdis, and, on the Sicilian shore, the Cyclopes. Odysseus is generally represented as a bearded man, wearing a semi-oval cap like that of a Greek sailor, as in the first illustration. See HOMERUS.

Oea. (1) (Ἐώα). A city on the northern coast of Africa with a mixed population of Libyans and Sicilians. Under the Romans it was a colony with the name Aelia Augusta Felix (Tac. *Hist.* iv. 50). It is perhaps the same as the modern Tripoli. (2) (Οἴα). A town in the island of Aegina.

Oeăgrus or **Oeăger** (Οἴαγρος). King of Thrace and father of Orpheus and Linus. Hence *Oeagrius* is used by the poets as equivalent to *Thracius*.

Oeanthé (Οἰάνθη) or **Oeanthīa** (Οἰανθεία). A town of the Locri Ozolae, near the entrance of the Crissaean Gulf.

Oeax (Οἴαξ). A son of Nauplius and Clymené, and brother of Palamedes and Nausimedon (Apollod. ii. 1). See PALAMEDES.

Oebălus (Οἴβαλος). (1) King of Sparta and father of Tyndareos. The patronymics Oebalides, Oebalis, and the adjective Oebalius are not only applied to his descendants, but to the Spartans generally. Hence Tarentum is termed *Oebalia arx*, because it was founded by the Lacedaemonians; and since the Sabines were, according to one tradition, a Lacedaemonian colony, we find the Sabine king Titus Tatius called Oebalius Titus, and the Sabine women, *Oebalides matres*. (2) Son of Telon by a nymph of the stream Sebethus, near Naples. He ruled in Campania.

Oechalia (Οἰχαλία). (1) A town in Thessaly, on the Peneus, near Tricca. (2) A town in Messenia, on the frontier of Arcadia. (3) A town of Euboea, in the district Eretria. The ancients were divided in opinion as to which of these places was the residence of Eurytus, whom Heracles defeated and slew. The original legend probably belonged to the Thessalian Oechalia, and was thence transferred to the other towns.

Oecus (οἶκος). (1) A house. (See DOMUS.) (2) A special apartment in a house resembling the *atrium*, but having no *compluvium*, being wholly roofed over. It was frequently used as a dining-hall, and was of four kinds: (*a*) the *oecus tetrastylus* with four columns; (*b*) *oecus Corinthius* with a vaulted roof, supported upon columns at a certain distance from the side-walls; (*c*) *oecus Aegyptius*, a more magnificent apartment than the last, having its roof supported by a double row of columns like a *basilica* (q. v.); (*d*) *oecus Cyzicenus*, on which see DOMUS, p. 546.

Oedĭpus (Οἰδίπους). The son of Laïus, king of Thebes, and of Iocasta (called in the *Odyssey* Epicasté), the daughter of Menoeceus. An oracle had warned Laïus against having children, declaring that he would meet his death by means of his offspring; and the monarch accordingly practised continence until, after some lapse of time, having indulged in festivity, he forgot the injunction of the god, and Iocasta gave birth to a son. The father immediately delivered the child to his herdsman to expose on Mount Cithaeron. The herdsman, moved to compassion, according to one account (Soph. *Oed. Tyr.* 1038), gave the babe to a neat-herd belonging to Polybus, king of Corinth; or, as others say (Eurip. *Phoeniss.* 28), the neat-herds of Polybus found the infant after it had been exposed, and brought it to Periboea, the wife of Polybus, who, being childless, reared it as her own, and named it Oedipus, on account of its swollen feet (from οἰδέω, "to swell," and πούς, "a foot"); for Laïus, previous to its exposure, had pierced its ankles, and had inserted through the wound a leathern thong. The foundling Oedipus was brought up by Polybus as his heir. Happening to be reproached by some one at a banquet with being a supposititious child, he besought Periboea to inform him of the truth; but, unable to get any satisfaction from her, he went to Delphi and consulted the oracle. The god directed him to shun his native country, or else he would be the slayer of his father and the sharer of his mother's bed. He therefore resolved never to return to Corinth, where so much crime, as he thought, awaited him, and he took his road through Phocis. Now it happened that Laïus, at this same time, was on his way to Delphi, for the purpose of ascertaining whether the child which had been exposed had perished or not. He was in a chariot, accompanied by his herald Polyphontes; a few attendants came after. The father and son, total strangers to each other, met in a narrow road in Phocis. Oedipus was ordered to make way, and, on his disregarding the command, the charioteer endeavoured to crowd him out of the path. A contest thereupon ensued, and both Laïus and the charioteer, together with all the attendants except one, who fled, were slain by the hand of Oedipus.

Immediately after the death of Laïus, Heré, always hostile to the city of Bacchus, sent a monster named the Sphinx to ravage the territory of Thebes. It had the face of a woman, the breast, feet, and tail of a lion, and the wings of a bird. This monster had been taught riddles by the Muses, and she sat on the Phicean Hill, and propounded one to the Thebans. It was this: "What is that which has one voice, is four-footed, two-footed, and at last three-footed?" or, as others give it, "What animal is that which goes on four feet in the morning, on two at noon, and on three at evening?" The oracle told the Thebans that they would not be delivered from her until they had solved her riddle. They often met to try their skill; and when they had failed, the Sphinx always carried off and devoured one of their number. At length Haemon, son of Creon, having become her victim, the father offered by public proclamation the throne, to which he had succeeded on the death of Laïus, and the hand of his sister Iocasta, to whoever should solve the riddle of the Sphinx. Oedipus, who was then at Thebes, hearing this, came forward and answered the Sphinx that it was Man, who, when an infant, creeps on all fours; when he has attained to manhood, goes on two feet; and when old, uses a staff, a third foot. The Sphinx thereupon flung herself down to the earth and perished; and Oedipus now unknowingly accomplished the remainder of the oracle. He had by his mother two sons, Eteocles and Polynices, and two daughters, Antigoné and Ismené.

After some years Thebes was afflicted with famine and pestilence; and the oracle being consulted, ordered the land to be purified of the blood which defiled it. Inquiry was set on foot after the murder of Laïus, and a variety of concurring circumstances brought the guilt home to Oedipus. Iocasta, on the discovery being made, hung herself, and her unhappy son and husband, in his grief and despair, put out his eyes. He was banished from Thebes; and, accompanied by his

Oedipus and the Sphinx. (Fragment of an archaic Greek Vase found at Daphnae.)

daughters, who faithfully adhered to him, he came, after a tedious period of miserable wandering, to the grove of the Eumenides at Colonus, a village not far from Athens, and there found the termination of his wretched life, having mysteriously disappeared from mortal view, and been received into the bosom of the earth, the secret of his death and burial being known to Theseus only. The history of his sons will be found under the articles ETEOCLES; POLYNICES.

Such is the form in which the history of Oedipus has been transmitted to us by the Attic dramatists. We will now consider its most ancient shape. The hero of the *Odyssey* says: "I saw (in Erebus) the mother of Oedipodes, the fair Epicasta, who, in her ignorance, did an awful deed, marrying her own son; and he married, having slain his own father, and immediately the gods made this known unto men. Now he ruled over the Cadmaeans in desirable Thebes, suffering woes through the pernicious councils of the gods; but she, oppressed with grief, went to the abode of Aïdes, the strong gate-keeper, having fastened a long halter to the lofty roof, and left to him many woes, such as the avenging furies of a mother produce" (*Od.* xi. 271 foll.). In the *Iliad* (xxiii. 679) the funeral games are mentioned which were celebrated at Thebes in honour of the "fallen Oedipodes." Hesiod (*Op. et D.* 162) speaks of the heroes who fell fighting at the seven-gated Thebes, on account of the sheep of Oedipodes. It would also seem that, according to the above passage of the *Odyssey* and to the epic poem, the *Oedipodea* (Pausan. ix. 5, 11), Epicasta had not any children by her son; Eurygenia, the daughter of Hyperphas, being the mother of his well-known offspring. According to the cyclic *Thebaïs*, the fatal curse of Oedipus on his sons had the following origin: Polynices placed before his father a silver table which had belonged to Cadmus, and filled a golden cup with wine for him; but when Oedipus perceived the heir-looms of his family thus set before him, he raised his hands and prayed that his sons might never divide their inheritance peaceably, but ever be at strife. Elsewhere (*ap.* Schol. *ad* Soph. *Oed. Col.* 1440) the *Thebaïs* said that his sons, having sent him the loin, instead of the shoulder, of the victim, he flung it to the ground, and prayed that they might fall by each other's hands.

The story of Oedipus forms the subject of two plays of Sophocles, the *Oedipus Tyrannus* and the *Oedipus Coleneus;* and was also taken by Aeschylus as the subject of a trilogy, of which only the third play, the *Seven against Thebes*, remains. Seneca also wrote a Latin tragedy, the *Oedipus*, following the first play of Sophocles with considerable fidelity. In French, Corneille and Voltaire, and in English, Dryden, have also treated the same theme dramatically. See ANTIGONÉ, CREON; SEVEN AGAINST THEBES; and also AESCHYLUS; SOPHOCLES.

Oeneus (Οἰνεύς). A king of Calydon in Aetolia, son of Portheus or of Porthaon. He married Althaea, the daughter of Thestius, by whom he had, among other children, Meleager and Deïanira. After Althaea's death, he married Periboea or Melanippé, the daughter of Hipponoüs, by whom he became the father of Tydeus, though others made Tydeus his son by his own daughter Gorgé. In a sacrifice which Oeneus made to all the gods, upon reaping the rich produce of his fields, he forgot Artemis, and the goddess, to revenge this neglect, sent a wild boar to lay waste the territory of Calydon. The animal was at last killed, by Meleager and the neighbouring princes of Greece, in a celebrated chase known by the name of the chase of the Calydonian boar. (See MELEAGER.) After the death of Meleager, Oeneus was dethroned and imprisoned by the sons of his brother Agrius. Diomedes, having come secretly from the city of Argos, slew all the sons of Agrius but two, who escaped to the Peloponnesus; and then, giving the throne of Calydon to Andraemon, son-in-law of Oeneus, who was himself now too old to reign, led the latter with him to Argolis. Oeneus was afterwards slain by the two sons of Agrius, who had fled into the Peloponnesus. Diomedes buried him in Argolis, on the spot where the city of Oenoë, called after Oeneus, was subsequently erected. Oeneus is said to have been the first that received the vine from Bacchus. The god taught him how to cultivate it, and the juice of the grape was called after his name (οἶνος, "wine") (Apollod. i. 8; Hyg. *Fab.* 129).

Oeniădae (Οἰνιάδαι). A town of Acarnania, near the mouth of the Acheloüs, and surrounded by marshes. The fortress Nesus or Nasus, belonging to the territory of Oeniadae, was situated in a small lake near Oeniadae. (Diod. xviii. 8).

Oenīdes. A patronymic from Oeneus, and hence given to Meleager, son of Oeneus, and Diomedes, grandson of Oeneus.

Oenochoë (οἰνοχόη). (1) A vessel or ladle for distributing wine from the bowl to the cups (Eurip. *Tro.* 820). (2) A wine-jug. See VAS.

Oenochoë (Schliemann.)

Oenochoë (οἰνοχόη). A female cup-bearer.

Oenoë (Οἰνόη). (1) A deme of Attica belonging to the tribe Hippothoöntis, near the frontier of Boeotia (Herod. v. 74). (2) A deme of Attica, near Marathon, belonging to the tribe Acantis. (3) A town of Argolis, west of Argos. Here the Argives and Athenians defeated the Lacedaemonians, B.C. 388. (4) A town of Elis. (5) A town in the island of Icaria. (6) A fortress of the Corinthians on the Gulf of Corinth.

Oenomaüs (Οἰνόμαος). (1) King of Pisa in Elis, son of Ares and father of Hippodamia. An oracle had warned him that he should perish by the hands of his son-in-law; and as his horses were swifter than those of any other mortal, he declared that all who came forward as suitors for Hippodamia's hand should contend with him in a chariot-race, that whoever conquered should receive her, and that whoever was conquered should suffer death. The race-course extended from Pisa to the altar of Poseidon, on the Corinthian Isthmus. The suitor

started with Hippodamia in a chariot, and Oenomaüs then hastened with his swift horses after the lovers. He had overtaken and slain many a suitor, when Pelops, the son of Tantalus, came to Pisa. Pelops bribed Myrtilus, the charioteer of Oenomaüs, to take out the linch-pins from the wheels of his master's chariot, and Pelops received from Poseidon a golden chariot and horses of great swiftness. In the race which followed, the chariot of Oenomaüs broke down, and he fell out and was killed. Thus Pelops obtained Hippodamia and the kingdom of Pisa.

There are some variations in this story, such as that Oenomaüs was himself in love with his own daughter, and for this reason slew her lovers. Myrtilus also is said to have loved Hippodamia, and as she favoured the suit of Pelops, she persuaded Myrtilus to take the linch-pins out of the wheels of her father's chariot. As Oenomaüs was breathing his last, he pronounced a curse upon Myrtilus. This curse had its desired effect, for as Pelops refused to give to Myrtilus the reward he had promised, or else because Myrtilus had attempted to dishonour Hippodamia, Pelops thrust him down from Cape Geraestus. Myrtilus, while dying, likewise pronounced a curse upon Pelops, which was the cause of all the calamities that afterwards befell his house. (See PELOPS.) The tomb of Oenomaüs was shown on the river Cladeus, in Elis. His house was destroyed by lightning, and only one pillar of it remained standing. (2) Of Gadara, a Cynic philosopher, who flourished in the reign of Hadrian, or somewhat later. He wrote a work to expose the oracles, of which considerable fragments are preserved by Eusebius (*Praep. Ev.* v. 18; vi. 7).

Oenōné (*Οἰνώνη*). A nymph of Mount Ida, daughter of the river Cebrenus in Phrygia. Paris, when a shepherd on Mount Ida, and before he was discovered to be a son of Priam, had united himself in marriage with Oenoné; and as she had received from Apollo the gift of prophecy, she warned her husband against the consequences of his voyage to Greece. She at the same time told him to come to her if ever he was wounded, as she alone could cure him. Paris came to her, accordingly, when he had been wounded by one of the arrows of Philoctetes, but Oenoné, offended at his desertion of her, refused to aid him, and he died on his return to Ilium. Repenting of her cruelty, Oenoné hastened to his relief; but, coming too late, she threw herself on his funeral pile and perished (Apollod. iii. 12, 6). The story of Oenoné is the subject of an exquisite poem by Lord Tennyson. See PARIS.

Oenōné or **Oenopia**. The early name of the island of Aegina (q. v.).

Oenophŏrum (*οἰνόφορον*). A vessel for holding wine. It had two handles, and was larger than a mere drinking-cup (Juv. vi. 425).

Oenophўta (*τὰ Οἰνόφυτα*). A town in Boeotia, on the left bank of the Asopus, memorable for the victory gained here by the Athenians over the Boeotians, B.C. 456 (Thuc. i. 108; iv. 95).

Oenopia. The ancient name of Aegina (q. v.).

Oenopĭdes (*Οἰνοπίδης*). An astronomer and mathematician of Chios, who obtained from the Egyptian priests a knowledge of the obliquity of the ecliptic, of which he subsequently claimed to be the discoverer. He fixed the length of the solar year at 365 days, less nine hours. To him are ascribed the demonstrations of the twelfth and twenty-third propositions in Euclid, and the quadrature of the meniscus. He flourished in the fifth century B.C. (Diod. i. 98; Ael. *V. H.* x. 7).

Oenopion (*Οἰνοπίων*). Son of Dionysus and husband of the nymph Helicé, and father of Meropé, with whom the giant Orion fell in love. See ORION.

Oenopolium (*οἰνοπώλιον*). A wine-shop. See CAUPONA; POPINA.

Oenōtri (*Οἰνωτροί*). See OENOTRIA.

Oenotria (*Οἰνωτρία*). A name derived from the ancient race of the Oenotri, and in early use among the Greeks, to designate a portion of the south-eastern coast of Italy. The name is derived by some from *οἶνος*, "wine," and they maintain that the early Greeks called the country Oenotria, or "the wine-land," from the number of vines they found growing there when they first became acquainted with the region. With the poets of a later age it is a general appellation for all Italy. The Oenotri, as they were called, appear to have been spread over a large portion of Southern Italy. See ITALIA.

Oenotrĭdes (*Οἰνωτρίδες νῆσοι*). Two small islands in the Tyrrhenian Sea, off the coast of Lucania, and opposite the town of Elea or Velia and the mouth of the Helos (Pliny, *H. N.* iii. 85).

Oenōtrus (*Οἴνωτρος*). A son of Lycaon. He was fabled to have passed with a body of followers from Arcadia into Southern Italy, and to have given the name of Oenotria to that part of the country where he settled (Verg. *Aen.* i. 532). But see OENOTRIA.

Oenus (*Οἰνοῦς*). (1) A town of Laconia, supposed to have been situated on the river of the same name flowing near Sellasia (Livy, xxxiv. 28). (2) Or AENUS, a river of Germany, separating Noricum from Vindelicia, and falling into the Danube at Boiodurum (Passau). It is now the Inn.

Oenūsae (*Οἰνοῦσαι*) or **Oenussae** (*Οἰνοῦσσαι*). (1) Small islands in the Aegean Sea, between Chios and the mainland, now Egonuses (Herod. i. 165). (2) Small islands off the coast of Messenia, and nearly facing the city of Methoné. They are two in number, and are now called Sapienza and Cabrera.

Oeōnus (*Οἰωνός*). The son of Licymnius of Midea in Argolis, the first victor at Olympia in the foot-race. He was killed at Sparta by Hippocoön, and avenged by his kinsman Heracles (Pausan. iii. 15).

Oestrus. (*οἶστρος*). A gad-fly; especially the one that tormented Io. See Io.

Oeta or **Oeté** (*Οἴτη*). Now Katavothra; a rugged pile of mountains in the south of Thessaly, an eastern branch of Mount Pindus, extending along the southern bank of the Sperchius to the Maliac Gulf at Thermopylae, thus forming the northern barrier of Greece proper. Respecting the pass of Mount Oeta, see THERMOPYLAE. Oeta was celebrated in mythology as the mountain on which Heracles burned himself to death. From this range, the southern part of Thessaly was called OETAEA (*Οἰταία*).

Oetўlus (*Οἴτυλος*), also **Tylus** (*Τύλος*). An ancient town in Laconia on the Messenian Gulf.

Ofella, Q. Lucretius. A Roman who originally belonged to the Marian party, but deserted to Sulla, who appointed him to the command of the army employed in the blockade of Praenesté, B.C. 82. Ofella became a candidate for the consulship in the following year, although he had not yet been either quaestor or praetor, thus acting in defiance of one of Sulla's laws. He was in consequence put to death by Sulla's orders (Plut. *Sulla*, 29, 33; Vell. Pat. ii. 27).

Offendix. The string used in fastening the *apex*, or priestly cap. See Apex.

Officīna (*ἐργαστήριον*). A manufactory or workshop where things were made, as contrasted with *taberna*, the place where they were sold; and with *apotheca*, where they were stored.

Ofilius. A Roman jurist and friend of Caesar and Cicero. His works are often cited in the *Digest*.

Oglasa. Now Monte Cristo; a small island off the coast of Etruria (Pliny, *H. N.* iii. 80).

Ogȳges (*Ὠγύγης*) or **Ogȳgus.** Son of Boeotus, and the first ruler of Thebes, which was called after him Ogygia. In his reign a great deluge is said to have occurred. The name of Ogyges is also connected with Attic story, for in Attica an Ogygian flood is likewise mentioned. He was said to be the father of the Athenian hero Eleusis. From Ogyges the Thebans are called by the poets *Ogygidae*, and *Ogygius* is used in the sense of Theban.

Ogygia (*Ὠγυγία*). The mythical island inhabited by the enchantress Calypso (q. v.), placed by Homer as lying in the very centre of the sea, away from all lands (*Od.* i. 50; v. 55, etc.).

Ogȳgus. See Ogyges.

Oïcles (*Οἰκλῆς*) or **Oïcleus** (*Οἰκλεύς*). The son of Antiphates, grandson of Melampus and father of Amphiaraüs, of Argos. He is also called a son of Amphiaraüs, or a son of Mantius, the brother of Antiphates. Oïcles accompanied Heracles on his expedition against Laomedon of Troy, and was there slain in battle. According to other traditions, he returned home from the expedition, and dwelt in Arcadia, where he was visited by his grandson Alcmaeon, and where his tomb was shown.

Oikias Dikē (*οἰκίας δίκη*). An action to recover a house (Att. *Proc.* ed. Lips. p. 674).

Oil. See Oleum.

Oïleus (*Οἰλεύς*). The son of Hodoedocus and Laonomé, grandson of Cynus, and great-grandson of Opus, was a king of the Locrians, and married to Eriopis, by whom he became the father of Aiax, who is hence called Oïlides, Oïliades, and Aiax Oïlei. Oïleus was also the father of Medon by Rhené. He is mentioned among the Argonauts.

Oinos (*οἶνος*). See Vinum.

Ointment. See Unguentum.

Olba or **Olbé** (*Ὄλβη*). A city of Cilicia said to be founded by Aiax, son of Teucer. In later times it was called Orōpi.

Olbia (*Ὄλβία*). (1) Now Eoubes near Hyères; a colony of Massilia (Marseilles), on a hill called Olbianus, east of Telo Martius (Toulon). (2) A city near the northern end of the eastern side of the island of Sardinia, with the only good harbour on this coast; and therefore the usual landing-place for persons coming from Rome. It is now Terra Nuova. (3) See Borysthenes.

Olcădes. A people in Hispania Tarraconensis, near the sources of the Anas, in a part of the country afterwards inhabited by the Oretani. Their chief town was Althaea (Livy, xxi. 5).

Olcinium. Now Dulcigno; a town on the coast of Illyria.

Olea. See Oleum.

Oleārus. See Oliarus.

Olen (*Ὠλήν*). A mythical poet of Lycia belonging to early Greek times, standing in connection with the worship of Apollo in Delos and represented as having composed the first hymns for the Delians. The legend which was especially attributed to him was that of Apollo's sojourn among the Hyperboreans (Herod. iv. 35; Pausan. i. 18, 5; ii. 13, 3).

Olĕnus (*Ὦλενος*). The husband of Lethaea, and changed with her into a stone. He was the father of the nymphs Aegé and Helicé, who reared the youthful Zeus.

Olĕnus (*Ὦλενος*). (1) A town in Aetolia, near New Pleuron, destroyed by the Aetolians at an early period. (2) A town in Achaia, between Patrae and Dyme. The goat Amalthaea, which suckled the infant Zeus, is called *Olenia capella* by the poets, either because the goat was supposed to have been born near the town of Olenus, and to have been subsequently transferred to Crete, or because the nymph Amalthaea, to whom the goat belonged, was the daughter of Olenus.

Oleum (*ἔλαιον*). Oil; a substance very extensively used in ancient times. Apart from its employment as an article of food and for burning in lamps, it served to anoint the body after the bath and in the *palaestra*. The oil most used was that obtained by means of olive-presses from the olive-tree (*ἐλάα*, *ἐλαία*), which seems to have been transplanted from Syria to Greece and thence to Italy. The best olive-oil produced among the Greek States was that of Attica; here the olive-tree was considered a gift of the national goddess Athené, who, by means of it, had obtained the victory in her contest with Poseidon for the possession of the country. Here, also, the olive-tree was under the special protection of the State; no one was allowed to cut down olive-trees on his own plot of land, except for specified purposes, and then only a specified number. Moreover, many olive-trees standing on private ground were regarded as the property of the goddess of the State, and it was therefore forbidden, on pain of death, to cut them down. They were under the special control of the Areopagus, which had them inspected from time to time by certain officials, and they were farmed out by the State (Lysias, *Or.* ix.). Part of the oil thus obtained had to be sold by the farmer to the State at a fixed price; this was only used for festive purposes, especially to be distributed in prizes to the victors in the Panathenaic contests (Pindar, *Nem.* x. 35).

In Italy the olive-tree, which spread thence to France and Spain, grew so well that the Italian oil, especially from the neighbourhood of the South Italian cities Venafrum and Tarentum, and that from the Sabine country (hence *baca Sabella*), was considered the finest in the world, and so met

with a ready sale abroad. The best kind was considered to be oil from unripe olives, especially the first from the press (Pliny, *H. N.* xv. 1–34). See Blümner, *Technologie*, i. 348 foll.

For the preparation and use of fragrant oils and perfumes, see UNGUENTUM.

Oliărus (Ὠλίαρος) or **Oleărus** (Ὠλέαρος). A small island in the Aegaean Sea; one of the Cyclades west of Paros.

Oligarchia (ὀλιγαρχία, "the rule of the few"). A name given in Greek writers to that form of constitution where a portion of the community, privileged either by reason of nobility of birth or by wealth, are exclusively, or at least in preference to others, in possession of power. The former case is an example of an absolute despotism; the latter resulted where the magistracies, though filled exclusively from the privileged classes, nevertheless depended on popular election; or where the mass of the people possessed a share in deliberation or in the drawing up of decrees, while to the privileged body was reserved the right of making proposals, convoking and presiding over the assemblies, and ratifying the decrees. See Polyb. vi. 4; Aristot. *Pol.* iv. 4; Wachsmuth, *Hellenische Alterthumskunde;* and Whibley, *Greek Oligarchies* (N. Y. 1896).

Olisĭpo. Now Lisbon. A town in Lusitania, near the mouth of the Tagus. It was famous in antiquity for its fine horses. The name is sometimes written ULYSSĬPO (Mela, iii. 1, 6), from a belief that it was founded by Ulysses.

Olīva (ἐλαία). The olive. See OLEUM.

Olla, and (anciently) **Aula** (χύτρα). A jar or pot of earthenware (rarely of metal) with a flat bottom, a wide mouth, with a lid, used by the ancients for a variety of purposes: (1) for cooking and preserving fruits; and (2) for preserving the bones (*olla ossuaria*) and ashes (*olla cineraria*) of the dead (see CINERARIA; COLUMBARIUM; FUNUS; OLLARIUM); and (3) for exposing infants —this last in Greece (Aristoph. *Ran.* 1188, with scholia).

Olla. (British Museum.)

Ollarium. A niche in a burial-vault, in which the cinerary urns (*ollae*) were deposited. See COLUMBARIUM.

Olŏrus (Ὄλορος). A king of Thrace whose daughter married Miltiades (q. v.).

Olpae (Ὅλπαι) or **Olpé** (Ὁλπή). (1) A town of the Amphilochae in Acarnania on the Ambracian Gulf. (2) A town of the Locri Ozolae.

Olybrius, ANICIUS. A Roman emperor placed on the imperial throne by Ricimer, the Suebian, in succession to Anthemius (A.D. 472). He reigned only three months and thirteen days, when he died, and was succeeded by Glycerius.

Olympia (τὰ Ὀλύμπια). The Olympian Games; the chief national festival of the Greeks, celebrated in honour of Zeus at Olympia, in the Peloponnesian district Pisatis, belonging to the Eleans, at the point where the Cladeus runs into the Alpheus. The institution of this ancient festival is sometimes referred to Pisus, the mythical founder of the city Pisa, which was afterwards destroyed by the Eleans, and before whose gates lay the sanctuary of Zeus; sometimes to Pelops, in whose honour funeral games were held at this point on the banks of the Alpheus.

These were restored, it is said, by Heracles, who instituted the regular order of the festival. This opinion did not become current until the Dorian States, established after the immigration of the Heraclidae into the Peloponnesus, had been admitted to a share in the festival, which was originally frequented only by the Pisitaus and their immediate neighbours. This admission dates from Lycurgus of Sparta and Iphitus of Elis, who, at the direction of the Delphic oracle, restored the festival of Zeus, now fallen into oblivion, and established the sacred Truce of God (see EKECHEIRIA), which insured a safe conduct at the time of the festival for all strangers resorting thither, even through hostile territory. In course of time the membership extended itself further, over all the Hellenic States in and out of Greece; and the festival was not only visited by private individuals, but also received sacred envoys from the several states. Through all the assaults of time it lasted on, even during the Roman rule, and was not abolished until A.D. 394, under the reign of Theodosius.

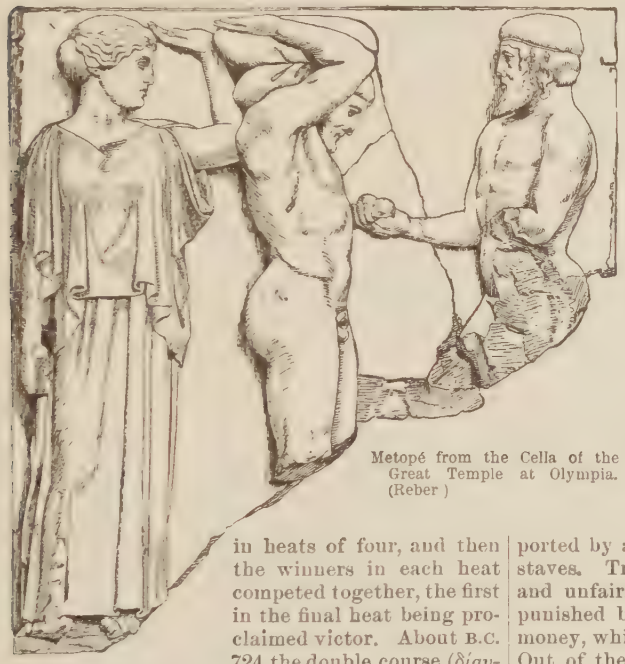
From the time of the above-mentioned restoration by Iphitus and Lycurgus it was a quinquennial celebration—that is, it was held once in every four years, in midsummer (July to August), about the beginning or end of the Greek year. A regular and continuous list of the victors was kept from B.C. 776, when Coroebus won the race in the Stadium, and with this year begins the Olympiad reckoning prevalent among the historians from the time of Timaeus (q. v.). The duration of the festival was in course of time extended to at least five days.

The place where the festival was celebrated was the Altis (see plan), a sacred precinct at the foot of the hill of Cronus (Κρόνος), 403 feet high. The precinct, which was about 750 feet long by 570 feet broad, was surrounded by a wall ascribed to Heracles, having entrances at the northwest and southwest. The centre, both by position and by religious association, was formed by the great sacrificial altar of Zeus, which rose on an elliptical base 128 feet in circumference to a height of 32 feet, and was composed of the ashes of the victims mingled with the water of the Alpheus. Round it were grouped the four most important sanctuaries—the temples of Zeus, Hera (Ἡραῖον), the Mother of the Gods (Μητρῷον), and the holy enclosure of Pelops (Πελόπιον)—besides a multitude of altars consecrated some to gods and some to heroes, and a countless host of dedicatory offerings and statues of every kind, among them, southeast of the temple of Zeus, the Niké of Paeonius (q. v.).

The temple of Zeus, which was begun about B.C. 572 by the Elean Libo, was not completed in its main outline until about 450. It was a Doric hypaethral building, having no roof over the *cella* or temple proper; and it was also peripteral—that is, it was surrounded by a single row of columns. It was built of the local conchyliferous limestone (called πῶρος by Pausanias, v. 10, § 2). In its more finished parts it was overlaid with fine stucco, giving the appearance of marble, and was also richly decorated with colour. It was 210 feet in

Plan of Olympia (after Dörpfeld).

length, 91 in breadth, and 65 in height. The outer hall had 6 columns along its breadth and 13 along its length (each 34 feet high), while the inner hall had a double row of nine columns. The eastern pediment was occupied by a representation of the contest between Pelops and Oenomaüs, with Zeus as the centre (fig. 1); the western, by one of the battle between the Centaurs and Lapithae, with Apollo as centre (fig. 2). The former was designed by the already-mentioned Paeonius; the latter, by Alcamenes of Athens.

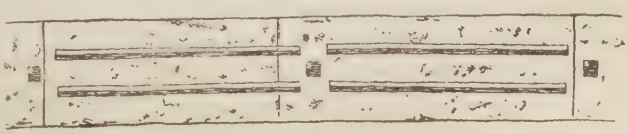


The accompanying illustrations indicate the figures belonging to the two pediments, so far as their fragmentary portions were recovered in the excavations begun by the German archaeologists in 1875. While the outer metopes beneath these pediments had no ornament except a large plain boss on each, twelve other metopes sculptured with reliefs adorned the outer walls at each end of the *cella* or temple proper, six over the door of the *πρόναος*, and six over that of the *ὀπισθόδομος*. All these have been discovered—four by the French in 1829, and eight by the Germans in 1875–79. Their subjects are the labours of Heracles. The best preserved of the series, and one of them which, as compared with the rest, is apparently the work of a mature and well-trained school of sculpture, is that representing Heracles bearing the heavens. Atlas stands by, offering to Heracles the apples of the Hesperides, and on the other side one of the daughters of Atlas is touching the hero's burden with her arm, as though endeavouring to aid him in sustaining it. In the chamber at the western end of the *cella* stood the greatest work of Greek art, the statue of Zeus, wrought in gold and ivory by Phidias (q. v.). Outside the sacred enclosure, though still in direct connection with it, were, to the west, the Gymnasium, and to the east the Hippodrome and the Stadium. The Hippodrome has been washed away by the encroachments of the Alpheus. The Stadium, which was 600 Olympic feet in length, has been excavated to an extent sufficient to determine the length of the single course, between the starting-place and the goal,

Pediments of the Temple of Zeus at Olympia.

to be 192.27 metres = 630.81845073 English feet. The Olympic foot therefore measured .3204 of a metre = 1.05120036 feet. The parallel grooves in the slabs of stone at each end of the Stadium still show the spot where the feet of the competitors in the foot-race were planted at the moment immediately preceding the start. There is room for twenty at either end, separated from one another by posts at intervals of four Olympic feet from one another.

The festival consisted of two parts—(1) the presentation of offerings, chiefly, of course, to Zeus, but also to the other gods and heroes, on the part of the Eleans, the sacred embassies, and other visitors to the feast; and (2) the contests. In the first Olympiad the contest consisted of a simple match in the Stadium (race-course), which had a length of a trifle more than 210 yards. The runners ran



Metopé from the Cella of the Great Temple at Olympia. (Reber)

in heats of four, and then the winners in each heat competed together, the first in the final heat being proclaimed victor. About B.C. 724 the double course (*δίαυλος*) was introduced, in which the runners had to make a circuit of the goal and return to the starting-point; about 720 came the *δόλιχος* or long race, where the distance of the Stadium had to be covered either 6, 7, 8, 12, 20, or 29 times (Schol. on Soph. *Electra*, 691); in 708, the *πένταθλον*, or five-fold contest, consisting of leaping, running, quoit (*δίσκος*) and spear throwing, and wrestling (the last being also practised by itself); in 688, boxing. In 680 chariot-racing on the Hippodrome was introduced, and, though this was twice as long as the Stadium, it had to be traversed from eight to twelve times in both directions (at first with four horses, after 500 with mules, and after 408 with two horses). From 648 there were races in which the horsemen, towards the end of the race, had to leap from their horses and run beside them with the bridle in their hands. With the same year began the practice of the *παγκράτιον* (a combination of wrestling and boxing); with 520, the race in armour, with helmet, greaves, and shield, though afterwards the shield alone was carried. Competitions between heralds and trumpeters also found a place here. Originally it was only men who took part in the contests; but after 632, boys also shared in them.

The contests were open only to freemen of pure Hellenic descent, provided that no personal disgrace had in any way attached to them; but after the Romans came into closer relationship with Greece they were opened to them also, and indeed (as is well known) the Romans were not officially considered barbarians. Even to barbarians, however, and to slaves, permission was given to view them, while it was refused to all married women (Pausan. vi. 20, § 9), or more probably all women whatsoever, except the priestess of Demeter, who even received a place of honour among the spectators. Those who took part in the competitions had to take a solemn oath at the altar of Zeus to the effect that they had spent at least ten months in preparation for the games, and that they would not resort to any unfair trick in the course of their contest: this oath was taken for boy competitors by an older relative. Special practice for thirty days at Elis was also usual, but probably only for those who were coming forward for the first time. The duties of heralds and judges were discharged by the Hellanodicae (Ἑλλανοδίκαι), appointed by popular election from among the Eleans themselves. Their number rose in course of time from 1 to 2, 9, 10, and 12, but after 348 it was always 10. Distinguished by purple robes, wreaths of bay-leaves, and a seat of honour opposite the Stadium, they kept guard over the strict observance of all the minute regulations for the contests, and in general maintained order. In these duties they were supported by a number of attendants provided with staves. Transgressions of the laws of the games, and unfairness on the part of competitors, were punished by forfeiture of the prize or by fines of money, which went to the revenue of the temple. Out of the money from penalties of this kind, a whole row of bronze images of Zeus (called *Ζανές*) was erected in front of the eleven treasure-houses along the eastern end of the northern wall of the Altis.

The games were opened with the sound of trumpets and the proclamation of heralds, the marshalling of the various competitors in the Stadium, accompanied by the announcement of their name and country by the herald, and the appointment by lot of the pairs of combatants. The victors in the several pairs of competitors had then apparently to contend in couples with each other until one couple alone remained, and the winner in this was declared victor. If the number of combatants had been uneven, so that one of them

Starting-place in the Stadium. (Seyffert.)

had remained without an opponent, he had finally to meet this rival. The contests were accompanied by the music of flutes. The name of the victor (and one whom no adversary had come forward to meet counted for victor) as well as his home were proclaimed aloud by the herald, and a palm-branch presented to him by the Hellanodicae. The actual prize he only received at the general and solemn distribution on the last day of the festival. This was originally some article of value; but at the command of the Delphic Oracle this custom was dropped, and the victors were graced by a wreath of the leaves of the sacred wild-olive, said to have been originally planted by Heracles, which had been cut with a golden knife by a boy of noble family with both parents living. After about 540 the victors also possessed the right to put up statues of themselves in the Altis.

The festival ended with a sacrifice made by the victors wearing their crowns at the six double altars of the hill of Cronus, and with a banquet in the Prytaneum of the Altis. Brilliant distinctions awaited the victor on his return home, for his victory was deemed to have reflected honour on his native land at large. He made his entry, clad in purple, upon a chariot drawn by four white horses, amid the joyous shouts of all the people, and then rode amid an exultant escort to the temple of the highest god, and there deposited his wreath as a votive offering. During the ride, as also at the banquet which followed thereupon, the song of victory, often composed by the most celebrated poets, was chanted by choral bands. There was no lack of other rewards: at Athens the Olympian victor received 500 drachmae, the right to a place of honour at all public games, and board in the Prytaneum for the rest of his life. The opportunity afforded by the assembling of so vast a crowd from all parts of Greece at Olympia was utilized, from about the middle of the fifth century before Christ, by authors, orators, poets, and artists to make themselves known in the widest circles by the recital or exhibition of their works. When the compliment of a crown was offered by one State to another, the distinction was made generally known by being proclaimed by the heralds at the Olympian Games.

The buildings that formerly stood upon the Olympian plain are described by Pausanias in the sixth book of his work; and since the German archaeologists began in 1875 their explorations and excavations on its site, the ground-plans of nearly all these structures have been traced from existing remains. A good account of these excavations and of their discoveries will be found in the article by Flasch in Baumeister's *Denkmäler*, cited below. In 1895 preparations were begun in Athens under the patronage of the king of Greece for a celebration of the ancient games to be held in 1896.

For more elaborate details regarding the Games, see Krause, *Olympia* (1836); Böttticher, *Olympia* (1883); Baumeister, *Denkmäler des klassischen Alterthums* (1888); Laloux and Monceaux, *Restauration de l'Olympie* (1889); and Curtius and Adler, *Olympia, die Ergebnisse der Ausgrabungen* (1891).

Olympia (Ὀλυμπία). A small plain in Elis where the Olympian Games were held. It was surrounded on the north by the hill Cronus or Cronius, on the south by the river Alpheus, and on the west by the river Cladeus. Within its limits was the sacred precinct of Zeus called Ἄλτις (a dialectic form of ἄλσος, "grove"). For particulars regarding the Games, see the preceding article.

Olympias (Ὀλυμπιάς). A period of four years from one celebration of the Olympian Games (see OLYMPIA) to another. The Olympiads were counted from the victory of Coroebus (B.C. 776); the last, the 283d, ended A.D. 394, with the abolition of the Olympian Games. This method of reckoning never passed into everyday life, but is of importance, inasmuch as, through the historian Timaeus, about B.C. 240, it became the one generally used by the Greek historians.

Subjoined for the use of the student is a list of the Olympiads with the years of the Christian era corresponding to them from the beginning of the Olympiads to A.D. 301. To save space the separate years of each Olympiad, with the corresponding years B.C., are only given from the 47th to the 126th Olympiad, as this is the most important period of Grecian history; in the other Olympiads the first year only is given. In consulting the following table it must be borne in mind that the Olympic Games were celebrated about midsummer, and that the Attic year commenced at about the same time. If, therefore, an event happened in the second half of the Attic year, the year B.C. must be reduced by 1. Thus Socrates was put to death in the first year of the 95th Olympiad, which corresponds in the following table to B.C. 400; but as his death happened in Thargelion, the 11th month of the Attic year, the year B.C. must be reduced by 1, which gives us B.C. 399, the true date of his death.

See CALENDARIUM.

Olympias (Ὀλυμπιάς). Daughter of Neoptolemus, king of Epirus, and wife of Philip, king of Macedon, by whom she had Alexander the Great. The conduct of Olympias had given rise to the suspicion that Alexander was not the son of Philip; and the brilliant career of the Macedonian conqueror made his flatterers assign to him for a parent the Father of the Gods. Olympias herself, in the intoxication of female vanity, sanctioned the story, and Zeus was said to have approached her under the form of a serpent. The haughtiness of Olympias, or, more probably, her infidelity, led Philip to repudiate her, and contract a second marriage with Cleopatra, the niece of King Attalus. The murder of Philip, which happened not long after, has been attributed by some to her intrigues, though with no great degree of probability. Alexander, after his accession to the throne, treated her with great respect, but did not allow her to take part in the government. At a subsequent period, after the death of Antipater (B.C. 319), Polysperchon, in order to confirm his power, recalled Olympias from Epirus, whither she had fled, and confided to her the guardianship of the young son of Alexander. She now cruelly put to death Arridaeus, son of Philip, with his wife Eurydicé, as also Nicanor, the brother of Cassander, together with many leading men of Macedonia who were inimical to her interests. Her cruelties, however, did not remain long unpunished. Cassander besieged her in Pydna, and she was obliged to surrender after an obstinate siege, and was put to death (B.C. 316). See Diod. xix. 11–51; Just. xiv. 5, 6; Pausan. ix. 7, 2; and the article CASSANDER.

Olympiēum (Ὀλυμπιεῖον). The temple of Olympian Zeus at Athens, in the southern part of the city, between the Acropolis and the Ilissus. It was built on the site of an ancient temple of Zeus, said to have been erected by Deucalion. The architects were Antistates, Callaeschrus, Antimachides, and Porinus. It was begun by Pisistratus about B.C. 535, continued by the Syrian king Antiochus Epiphanes (B.C. 175–164), and completed by the Roman emperor Hadrian (A.D. 125–130). See Pausan. i. 18, 6–8, and the monograph by Bevier in the *Papers of the American Classical School at Athens*, i. 183–222 (1885). Illustrations of its ruins are given on pp. 152 and 155 of this Dictionary.

Olympiodōrus (Ὀλυμπιόδωρος). A name common to many individuals. The most deserving of notice are the following: (1) A native of Thebes, in Egypt, who flourished in the beginning of the fifth century of our era. He continued the history of Eunapius from A.D. 407 to 425. His work, entitled Ὕλη Ἱστορίας ("Materials for History"), or Ἱστορικοὶ Λόγοι ("Historical Narratives"), consisted of twenty-two books. Only a fragment of it has been preserved by Photius. The work began with the seventh consulship of the emperor Honorius, and was brought down to the accession of Valentinian. It was dedicated to the younger Theodosius. (2) An Alexandrian philosopher, who flourished about the year B.C. 430. He is celebrated for his knowledge of the Aristotelian doctrines, and was the master of Proclus, who attended upon his school before he was twenty years of age. (3) A Platonic philosopher, who flourished towards the close of the sixth century. He was the author of commentaries on four of Plato's dialogues—the *First Alcibiades*, the *Phaedon*, *Gorgias*, and *Philebus*. The first of these contains a life of Plato, in which we meet with certain particulars relative to the philosopher not to be found elsewhere. This Olympiodorus was a native of Alexandria. The title which his commentaries bear appears to indicate by the words ἀπὸ φωνῆς ("from the mouth" of Olympiodorus) that they were copied down by the hearers of the philosopher. (4) A native of Alexandria, a Peripatetic, who flourished during the latter half of the sixth century A.D. He was the author of a commentary on the meteorology of Aristotle, still extant.

Olympius (Ολύμπιος). A name applied especially to Zeus as the chief of the gods who lived upon Olympus. See OLYMPUS; ZEUS.

Olympius Nemesiānus. See NEMESIANUS.

Olympus (Ὄλυμπος). (1) A mountain situated in Thessaly, the summit of which (nearly 10,000 feet above the sea) rises from the region of the earth's atmosphere into the sky, and was, according to the earliest popular belief of the Greeks, the abode of the higher (hence named Olympian) gods. Below the summit, which, according to Homer's description, is never ruffled by winds or drenched with rain, but is always radiant in cloudless splendour (*Od.* vi. 42–45), comes the region of clouds, which Zeus at one time gathers together and at another dispels; it forms the boundary between the celestial region and that of the earth, and, accordingly, Homer elsewhere implies that the clouds are the gates of heaven, which are guarded by the Horae (*Il.* v. 749). On the highest peak Zeus has his throne, and it is there that he summons the assemblies of the gods. The abodes of the other gods were imagined to be placed on the precipices and in the ravines of the mountain. When the height of the vault of heaven came to be regarded as the abode of the gods, the name Olympus was transferred to the sky. See Henzey, *Le Mont Olympe* (Paris, 1860); and Tozer, *The Highlands of Turkey*, vol. ii. (London, 1869). (2) A chain of mountains in Mysia, Bithynia, Galatia, Paphlagonia, and Pontus. (3) A volcano on the eastern coast of Lycia. (4) A mountain in Cyprus. (5) A mountain in Lesbos.

Olympus (Ὄλυμπος). One of the mythic poets and musicians belonging to Phrygian mythology, pupil of Marsyas. The art of flute-playing, invented by Marsyas, was supposed to have been perfected by Olympus. A Phrygian family, in which the art of flute-playing was hereditary, traced their descent from him. The Phrygian Olympus, who lived about the seventh century before Christ, invented the auletic *νόμος*, and brought it into esteem among the Asiatic Greeks, was said to be descended from the mythical Olympus (Plut. *De Mus.* p. 1133).

Olynthiacs. See DEMOSTHENES; OLYNTHUS.

Olynthus (Ὄλυνθος). A town of Chalcidicé, at the head of the Toronaic Gulf, and the most important of the Greek cities on the coast of Macedonia. It was at the head of a confederacy of all the Greek towns in its neighbourhood, and maintained its independence, except for a short interval, when it was subject to Sparta (379–375), till it was taken and destroyed by Philip, B.C. 347. The Olynthiac orations of Demosthenes were delivered by the orator to urge the Athenians to send assistance to the city when it was attacked by Philip. When the supremacy of Sparta was destroyed by the Thebans, Olynthus recovered its independence, and even received an accession of power from Philip, who was anxious to make Olynthus a counterpoise to the influence of Athens in the north of the Aegean. With this view Philip gave Olynthus the territory of Potidaea, after he had wrested this town from the Athenians in 356. But when he had sufficiently consolidated his power to be able to set at defiance both Olynthus and Athens, he threw off the mask, and laid siege to the former city. The Olynthians earnestly besought Athens for assistance, and were warmly supported by Demosthenes in his Olynthiac orations; but as the Athenians did not render the city any effectual assistance, it was taken and destroyed by Philip, and all its inhabitants sold as slaves (347). Olynthus was never restored. Olynthus used the town of Mecyberna as its port. See DEMOSTHENES; PHILIPPUS.

Omăna (Ὄμανα) and **Omănum** (Ὄμανον). (1) A seaport of Arabia Felix, on a gulf of the same name. (2) A seaport in the eastern part of the Persian province of Carmania. It was a great mart for the Indian, Persian, and Arabian trade (Pliny, *H. N.* vi. 149).

Ombi (Ὄμβοι). The last great city of Upper Egypt, except Syené. It stood on the eastern bank of the Nile, in the Ombites Nomos, and was celebrated as one of the chief seats of the worship of the crocodile. Juvenal's Fifteenth Satire is founded on a religious war between the people of Ombi and those of Tentyra, who hated the crocodile (Ptol. iv. 5, 73; Aelian, *H. A.* x. 21).

Omen (for *osmen*, *ausmen*, from the root of *audio*, "something heard"). The Roman term for a favourable or unfavourable sign, especially a word spoken by chance, so far as it drew the attention of the hearers to itself and appeared to be a prognostic. An omen could be accepted or repudiated, and even taken in an arbitrary sense, except in the case of words which already had in themselves a favourable or unfavourable signification. For example, when Crassus was embarking on his unfortunate expedition against the Parthians, and a man in the harbour was selling dry figs from Caunus with the cry *Cauneas*, which sounded like *cave ne eas*, "beware of going," this was an evil omen (Cic. *De Div.* ii. 84). Men often changed an apparently evil omen into one more favourable. Thus when Caesar landed in Africa, he stumbled and fell, whereupon he embraced the earth, exclaiming, "Thus do I take possession of thee, Africa." On festal occasions care was taken to protect oneself from evil omens; for example, when sacrifice was being made, by veiling the head, by commanding silence, and by music that drowned any word spoken. People were particularly careful at solemn addresses, Near Year greetings, and the like. On the other hand, for the sake of the good omen, it was usual to open levies and censuses by calling out those names that were of good import, such as Valerius (from *valere*), Salvius, from *salvere*, etc. (Cic. *Pro Scauro*, 30). On one occasion the Roman soldiers refused to be led by an officer named Atrius Umber, whose name De Quincey well styles "a pleonasm of darkness." People also made New Year's presents (*strenae*) to one another, so that the year might begin with a good omen. The Greeks also paid a good deal of attention to omens; and Socrates criticises this superstition (Xen. *Mem.* i.).

Omphălé (Ὀμφάλη). The daughter of the Lydian king Iardanus, and wife of Tmolus, on whose death she governed the kingdom herself. When Heracles was cursed with a dangerous disease as a punishment for the slaying of Iphitus, the oracle informed him that he could only be cured by serving for hire for a period of three years. To effect the cure, Hermes sold him to Omphalé, with whom he fell in love, and to please

her put on her garments and spun wool, while she wore his lion skin. By him she had several children (Diod. iv. 31; Apollod. ii. 6, 3; Ovid, *Fasti*, ii. 305; *Her* ix. 53).

Heracles and Omphalé. (Naples Museum.)

Omphălus (*ὀμφαλός*). Literally "the navel" (*umbilicus*), and applied to anything like the navel, round—e. g. the knobs or bosses on a shield (see CLIPEUS), a knob on the yoke of a horse for fastening the reins, and, figuratively, the centre of anything. Thus Ogygia, the island of Calypso, is called *ὀμφαλὸς θαλάσσης*, and Delphi (q. v.) was also called *ὀμφαλός*, as being the supposed centre of the earth, from which, according to the myth, Zeus once despatched two eagles, one flying eastward and the other westward, with the result that they met again at Delphi. A marble boss marked the exact spot where they met.

On. The Hebrew name of the Egyptian Heliopolis (q. v.).

Onăger A catapult for hurling stones. See TORMENTUM.

Onātas (*Ὀνάτας*). A Greek artist, the chief representative of the Aeginetan school of sculpture in bronze, about B.C. 460. Besides statues of the gods, such as an Apollo at Pergamon, admired for its size and execution (Pausan. viii. 42, § 7), we hear of groups of his, rich in figures, drawn either from the heroic epoch—as, for example, the ten Greek heroes casting lots as to who should undertake the battle with Hector—or from contemporary history, such as the votive offering of the Tarentines, containing equestrian and pedestrian combatants, and consecrated at Delphi for their victory over the barbarian Peucetians. He also executed a group representing Hiero of Syracuse with the chariot in which he had been victorious at Olympia. His most remarkable work was the bronze figure of the black Demeter, in a cavern thirty stadia from Phigalea, in the southeast corner of Elis (Pausan. viii. 42, 1).

Oncae (*Ὄγκαι*). A Boeotian village near Thebes. One of the city gates of Thebes was named from it (*Ὀγκαῖαι*).

Oncēum (*Ὄγκειον*). A town in Arcadia on the river Ludon (Pausan. viii. 25, 4).

Onchesmus (*Ὄγχησμος*) or **Onchismus** (*Ὄγχισμος*). A seaport town of Epirus, opposite Corcyra.

Onchestus (*Ὄγχηστος*). (1) An ancient town of Boeotia, situated a little south of Lake Copaïs, near Haliartus, said to have been founded by Onchestus, son of Poseidon. (2) A river in Thessaly, flowing by Cynoscephalae, and falling into Lake Boebeïs.

Oneraria Navis. See NAVIS.

Onesander (*Ὀνήσανδρος*, wrongly ONOSANDER). A Greek philosopher, the author of a work dedicated to Q. Veranius, consul in A.D. 49, and dealing with the duty of a general (*Στρατηγικὸς Λόγος*), in which he treats the subject in philosophical commonplaces, without any practical acquaintance with it, and simply from an ethical point of view. The work is edited by Köchly (Leipzig, 1860).

Onesicrĭtus (*Ὀνησίκριτος*). A Greek historian, of the island of Astypalaea or of Aegina. In mature years he was a pupil of the Cynic Diogenes, and then accompanied Alexander the Great upon his expedition. By order of Alexander he investigated, with Nearchus, the route by sea from India to the mouths of the Euphrates and Tigris. He afterwards lived at the court of Lysimachus, king of Thrace. During Alexander's life he began a comprehensive history of that personage, which fell into disrepute, owing to its exaggerations and its false accounts of distant lands (Strabo, p. 628). Only scanty fragments of it are preserved.

Oningis. See ORINGIS.

Onirocritĭcé (*Ὀνειροκριτική*, sc. *τέχνη*). The art of interpreting dreams. See MANTIKÉ.

Onīros (*Ὄνειρος*). The god of dreams. Dreams dwelt on the shores of the Western Ocean, false dreams coming out of an ivory gate and true dreams from a gate of horn (*Odyss.* xix. 562; xxiv. 12). Dreams were controlled by Hermes, the god of messages. Ovid calls them the children of Sleep, and names three of them—Morpheus, Icelus (or Phobetor), and Phantasus (Met. xi. 633). For dream-oracles, see ORACULA.

Onomacrĭtus (*Ὀνομάκριτος*). An Athenian, who lived at the court of Pisistratus and his sons (about B.C. 520–485). At the request of Pisistratus, he is said to have prepared an edition of the Homeric poems. He was an industrious collector, and also a forger of old oracles and poems. Those which go under the name of Orpheus are regarded as, for the most part, concocted by Onomacritus. He was detected in forging an oracle of Musaeus, and banished from Athens by the Pisistratidae; but he was afterwards reconciled to them, and in their interest induced Xerxes, by alleged oracular responses, to decide upon his war with Greece (Herod. vii. 6).

Onomarchus (*Ὀνόμαρχος*). A general of the Phocians in the Sacred War, succeeded his brother Philomelus in this command, B.C. 353. In the following year he was defeated in Thessaly by Philip, and perished in attempting to reach by swimming the Athenian ships, which were lying off the shore. His body fell into the hands of Philip, who caused it to be crucified, as a punishment for his sacrilege (Diod. xvi. 41–61).

Onomatopoeia (*ὀνοματοποιΐα*) and **Onomatopoeēsis** (*ὀνοματοποίησις*), called by the Roman linguists FICTIO NOMĪNIS (Quint. viii. 6, 31). Literally, "word-making"; (1) the coining of a word to imi-

tate some natural sound; and (2) a word so made. Both Greek and Latin possess many imitative words, the greater part of which mimic the sounds made by animals, birds, and insects. Such are the Greek *βῆ βῆ* (the English "baa"), *κρώζω* ("to croak"), *γρῦ* ("a grunt"), *πιπίζω* ("to peep," of birds), *κοάξ* (the sound made by frogs), *κοΐ, κοΐζω* (of swine, "queek"), *ὠρύω* ("to roar"), *τιτίζω* ("to twitter"), *ὑλάω* ("to howl"). Other excellent imitative words are *βαβάζω* ("to babble"), *βόμβος* ("a booming"), *κρόταλον* ("a rattle"), *χάω* ("to yawn"), *πτύω* ("to spit"), *χρέμπτομαι* ("to hawk"), *πτάρνυμαι* ("to sneeze"), *ῥοφέω* ("to suck"). In Latin, though Quintilian (l. c.) regards the language as poor in onomatopoeias, the number is really very large. Good examples are *baubor* ("bow-wow"), *bee* ("baa"), *bubo* ("owl"), *cachinno* ("to cackle"), *cocococo* ("cluck"), *crocio* ("croak"), *flo* ("to blow"), *glut-glut* ("gurgle"), *hinnio* ("whinny"), *minurrio* ("to coo"), *raucus* ("hoarse"), *stloppus* ("a slap"), *susurrus* ("a whisper"), *zinzala* ("a mosquito").

Onomatopoeia of a higher type than mere word-making is found in literature, where the poets, especially, often make the sound of their lines harmonize with the sense most effectively. Homer is rich in such verses. Thus, the falling of the sea has been much admired (*Il.* i. 34):

βῆ δ' ἀκέων παρὰ θῖνα πολυφλοισβοῖο θαλάσσης

and this of the galloping of horses (*Il.* x. 535):

ἵππων μ' ὠκυπόδων ἀμφὶ κτύπος οὖατα βάλλει.

The latter is imitated and surpassed by Vergil (*Aen.* viii. 596):

Quadrupedante putrem sonitu quatit ungula campum.

The following (*Georg.* iv. 174) is written of the Cyclopes at the forge, and is the Anvil Chorus of antiquity:

Illi inter sese magna vi bracchia tollunt.

Again, Vergil writes of the flight of a dove (*Aen.* v. 217):

Radit iter liquidum celeres neque commovet alas;

where the dactylic movement and the recurrent liquids give the exact effect desired.

A late Latin poem, called *De Philomela*, collects all the words used in imitation of the sounds made by animals; and Suetonius, in his *Pratum*, made an even longer list, which is preserved in a fragment edited by Reifferscheid (Leipzig, 1890).

On the mimetic vocabulary of the Greeks and Romans, see Lenormant, *Comment. sur le Cratyle de Platon* (Athens, 1861); Nodier, *Dictionnaire des Onomatopées* (Paris, 1828); Wackernagel, *Voces Variae Animantium* (Basel, 1869); and H. T. Peck, *Onomatopoetic Words in Latin* (in *Classical Studies in Honour of Henry Drisler*) (N. Y. 1894). On the theory which makes onomatopoeia the original principle of language-making (the so-called "bow-wow theory"), see Voigtman, *Die Bau-wau Theorie* (Leipzig, 1865); Steinthal, *Der Ursprung der Sprache* (Berlin, 1858); id. *Philologie, Geschichte und Psychologie* (Berlin, 1864); and Strong, Logeman, and Wheeler, *Principles of Language* (New York, 1893).

Onosander. See ONESANDER.

Onyx. See GEMMA.

Opa (*ὀπή*). The Greek equivalent of *columbarium* (q. v.).

Opalia and **Opeconsīva.** Feasts of the Roman goddess Ops (q. v.).

Opals. See GEMMA.

Opercŭlum (*πῶμα*). A lid or cover of a jar (Cato, *R. R.* 104).

Ophelion (*Ὀφελίων*). An Athenian comic poet, probably of the Middle Comedy, B.C. 380.

Ophellas (*Ὀφέλλας*). A native of Pella, in Macedonia. He was one of the generals of Alexander the Great, after whose death he followed the fortunes of Ptolemy. In B.C. 322 he conquered Cyrené for Ptolemy, of which city he held the government on behalf of the Egyptian king for some years. But soon after 313 he threw off his allegiance to Ptolemy, and continued to govern Cyrené as an independent state for nearly five years. In 308 he formed an alliance with Agathocles, and marched against Carthage; but he was treacherously attacked by Agathocles near this city, and was slain (Diod. xx. 40–42).

Opheltes (*Ὀφέλτης*). The son of Lycurgus, king of Nemea. Hypsipylé, the Lemnian princess, whom her countrywomen had sold into slavery, was nurse to the infant Opheltes, when the army of Adrastus marched to Nemea, on its way to Thebes. She undertook to guide the new-comers to a spring; and, for that purpose, left the child lying on the grass, where a serpent found and killed it. The Argive leaders slew the serpent and buried the child. Amphiaraüs, the famous soothsayer and warrior, augured ill-luck from this event, and called the child ARCHEMŌRUS ("Fate-beginner"), as indicative of the evils that were to befall the chieftains. His other name, Opheltes, was derived, according to the mythologists, from *ὄφις*, as he died by the bite of a serpent.

Ophīon (*Ὀφίων*). (1) One of the Titans. (2) One of the companions of Cadmus. (3) Father of the centaur Amycus, who is hence called Ophionides.

Ophiūsa (*Ὀφιόισσα*) or **Ophiussa** (*Ὀφιοῦσσα*). A name given to many ancient places from their abounding in snakes. It was an ancient name of both Rhodes and Cyprus, whence Ovid speaks of *Ophiusia arva*.

Opĭci. See OSCI.

Opilio (*οἰοπόλος*). A shepherd.

Opilius, AURELIUS. The freedman of an Epicurean, taught at Rome, first philosophy, then rhetoric, and, finally, grammar. He gave up his school upon the condemnation of Rutilius Rufus (B.C. 92), whom he accompanied to Smyrna, and there the two friends grew old together in the enjoyment of each other's society. He composed several learned works, one of which, named *Musae*, is referred to by A. Gellius (i. 25).

Opilius Macrīnus. See MACRINUS.

Opīma Spolia. Spoils taken by a Roman general from a general of the enemy whom he had slain in battle. They were dedicated to Jupiter Feretrius and suspended in his temple. These spoils were obtained only thrice before the fall of the Republic. The first by Romulus, who slew Acron, king of the Caeninenses; the next by A. Cornelius Cossus, who slew Lars Tolumnius, king of the Veientes, B.C. 436; and the third by M. Claudius Marcellus, who slew Viridomarus, a king of the Gauls, B.C. 224.

Opimius. (1) QUINTUS, consul B.C. 154, when he subdued some of the Ligurian tribes north of the

Alps, who had attacked Massilia. He was notorious in his youth for his riotous living. (2) Lucius, son of the preceding, was praetor in B.C. 125, in which year he took Fregellae, which had revolted against the Romans. He belonged to the high aristocratic party, and was a violent opponent of C. Gracchus. He was consul in 121, and took the leading part in the proceedings which ended in the murder of Gracchus. Opimius and his party abused their victory most savagely, and are said to have killed more than 300 persons. (For details, see Gracchus.) In the following year (120) he was accused of having put Roman citizens to death without trial; but he was defended by the consul C. Papirius Carbo, and was acquitted. In 112 he was at the head of the commission which was sent into Africa in order to divide the dominions of Micipsa between Iugurtha and Adherbal, and was bribed by Iugurtha, to assign to him the better part of the country (Sall. *Iug.* 16, 40). Three years after he was condemned under the law of the tribune C. Mamilius Limetanus, by which an inquiry was made into the conduct of all those who had received bribes from Iugurtha. Opimius went into exile to Dyrrhachium in Epirus, where he lived for some years, hated and insulted by the people, and where he eventually died in great poverty. He richly deserved his punishment, and met with a due recompense for his cruel and ferocious conduct towards C. Gracchus and his party. Cicero, on the contrary, who, after his consulship, had identified himself with the aristocratic party, frequently laments the fate of Opimius. The year in which Opimius was consul (121) was remarkable for the extraordinary heat of the autumn, and thus the vintage of this year was of an unprecedented quality. This wine long remained celebrated as the *vinum Opimianum* (Cic. Brut. 83, 287).

Opinatōres. Officers under the Roman emperors who were sent to demand arrears of the *annona militaris*. The regular collector was termed *exactor;* the opinator was an extraordinary official sent to coerce overdue supplies, and was for the army what the *compulsor* was for other tribute. The name is probably derived from *opinari*, in the sense of *aestimare*, because they assessed what the due amounted to (Cod. 12, tit. 38, s. 11).

Opis (Ὦπις). A city of Assyria, in the district Apolloniatis, where the Physcus River joined the Tigris (Herod. i. 189).

Opisthodŏmus (ὀπισθόδομος). A chamber built at the back of a temple, like a modern sacristy (Fronto, *ad* M. Caes. i. 8, Mai's ed.). See Templum.

Opisthogrăphus (ὀπισθόγραφος). Written on both sides of the paper, a practice not usual with the ancients, but sometimes practised for motives of economy. See Pliny, *Epist.* iii. 5, 17; and the article Liber.

Opitergium. Now Oderzo; a Roman colony in Venetia, in the north of Italy, on the river Liquentia.

Oppiānus (Ὀππιανός). (1) A Greek didactic poet of Anazarbus, in Cilicia. In the second half of the second century A.D., under the emperor Marcus Aurelius, he composed a didactic poem *Halieutica* (Ἁλιευτικά), in five books, on the habits of fishes and the method of capturing them. It is written in an ornate, though often bombastic, style. He was formerly confounded with (2) Oppianus, the author of a didactic poem on the chase, consisting of four books, and entitled *Cynegetica* (Κυνηγετικά), written in a harsh, dry style and in halting verse. The author of the *Cynegetica* lived under Caracalla about the end of the second century, and came from Apamea, in Syria. A poem on bird-catching, *Ixeutica* (Ἰξευτικά), preserved to us only in a paraphrase by Eutechnius, was also wrongly ascribed to the author of the *Halieutica*. Both the *Halieutica* and *Cynegetica* are edited together by Lehrs (1846).

Oppĭdum. (1) Originally, the stronghold, commonly overlooking the plain (*ob pedum*), which served as a refuge in times of danger for the inhabitants of the surrounding district; and later, the town which grew up about the stronghold. (2) In a special sense the mass of buildings occupying the straight end of a Circus, which included the stalls for the horses and chariots (*carceres*), the row of seats above, where the musicians and spectators sat, the gate between them, through which the Circensian procession entered the course (*porta pompae*), and the towers which flanked the whole on either side, all which together presented the appearance of a town.

Restoration of the Oppidum in the Circus of Maxentius. (Rich.)

Oppius. (1) C. Oppius, a tribune of the plebs B.C. 213, who carried a law to curtail the expenses and luxuries of Roman women. (See Sumptuariae Leges.) (2) C. Oppius, an intimate friend of C. Iulius Caesar, whose private affairs he managed in conjunction with Cornelius Balbus, and whose biography he wrote. He has by some been regarded as the author of the pseudo-Caesarian treatises *De Bello Alexandrino*, *De Bello Africano*, and *De Bello Hispaniensi*. As to the first of these, his authorship is possible but not probable; as to the other two it is impossible. See Nipperdey, *De Supplementis Commentariorum Caesaris* (Berlin, 1846); and Teuffel, *Rom. Lit.* i. pp. 338–341 (Eng. trans. 1891).

Ops. The wife of Saturnus. She was the Roman goddess of plenty and fertility, as is indicated by her name, which is connected with *opimus*, *opulentus*, *inops*, and *copia*. She was especially the protectress of agriculture; and was also the goddess of the world below, so that in worshipping her, persons stooped and touched the ground (Macrob. *Sat.* i. 10, 12; iii. 9, 12). She was honoured by the Fratres Arvales (q. v.) in the three days' festival held by them in summer, and in the Opalia, December 17, at the time of the Saturnalia. She was regarded as the wife of Saturnus, and her worship was closely connected with his and also with that of Ceres. As the goddess of seed-time, she was styled Ops Consĭva, and was also called by the name Dea Dia.

Optatiānus. See PORPHYRIUS.

Optimātes ("those belonging to the best or noblest"). At Rome, in the last century of the Republic, a title borne by the adherents of the "best" men, in a political sense (i. e. the conservatives), working in the interests of the Senate and the aristocracy of office (*nobiles*) and in opposition to the democrats (*populares*). See NOBILES.

Optostrōtum. A flooring of bricks (*Not. Tires.* p. 164).

Opūs (Ὀπούς). A town of Locris, from which the Opuntian Locrians derived their name. It was the birthplace of Patroclus. The bay of the Euboean Sea, near Opus, was called OPUNTIUS SINUS.

Ora. A hawser or cable (Livy, xxii. 19).

Oracŭla (*μαντεία*, "oracular responses," or the "seats of oracles"; *χρηστήρια* is used in the same senses, and also of victims offered by persons consulting an oracle). The seats of the worship of some special divinity, where prophecies were imparted with the sanction of the divinity, either by the priests themselves or with their co-operation. There were many such places in all Greek countries, and these may be divided, according to the method in which the prophecy was made known, into four main divisions: (1) oral oracles, (2) oracles by signs, (3) oracles by dreams, and (4) oracles of the dead.

(1) The most revered oracles were those of the first class, where the divinity, almost invariably the god Apollo, orally revealed his will through the lips of inspired prophets or prophetesses. The condition of frenzy was produced, for the most part, by physical influences: the breathing of earthy vapours or drinking of the water of oracular fountains. The words spoken while in this state were generally fashioned by the priests into a reply to the questions proposed to them. The most famous oracle of this kind was that of Delphi (see further below). Besides this there existed in Greece Proper a large number of oracles of Apollo, as at Abae in Phocis, in different places of Boeotia, in Euboea, and at Argos, where the priestess derived her inspiration from drinking the blood of a lamb, one being killed every month. Not less numerous were the oracles of Apollo in Asia Minor. Among these that of the Didymaean Apollo at Miletus traced its origin to the old family of the Branchidae, the descendants of Apollo's son Branchus. Before its destruction by Xerxes, it came nearest to the reputation of the Delphian. Here it was a priestess who prophesied, seated on a wheel-shaped disc, after she had bathed the hem of her robe and her feet in a spring, and had breathed the steam arising from it. The oracle at Clarus, near Colophon (see MANTO), was also very ancient. Here a priest, after simply hearing the names and the number of those consulting the oracle, drank of the water of a spring, and then gave answer in verse.

(2) The most venerated among the oracles where prophecy was given by signs was that of Zeus of Dodona (q. v.), mentioned as early as Homer (*Od.* xiv. 327–xix. 296), where predictions were made from the rustling of the sacred oak, and at a later time from the sound of a brazen cymbal. Another mode of interpreting by signs, as practised especially at the temple of Zeus at Olympia by the Iamidae, or descendants of Iamus, a son of Apollo, was that derived from the entrails of victims and the burning of the sacrifices on the altar. There were also oracles connected with the lot or dice, one especially at the temple of Heracles at Bura, in Achaia; and prophecies were also delivered at Delphi by means of lots, probably only at times when the Pythia was not giving responses. The temple of the Egyptian Ammon, who was identified with Zeus, also gave oracles by means of signs.

(3) Oracles given in dreams were generally connected with the temples of Asclepius. After certain preliminary rites, sick persons had to sleep in these temples; the priests interpreted their dreams, and dictated, accordingly, the means to be taken to insure recovery. The most famous of these oracular shrines of the healing god was the temple at Epidaurus, and next to this the temple founded thence at Pergamum, in Asia Minor. Equally famous were the similar oracles of the seer Amphiaraüs at Oropus, of Trophonius at Lebadea, in Boeotia, and of the seers Mopsus and Amphilochus at Mallus, in Cilicia (q. v.). In later times such oracles were connected with all sanctuaries of Isis and Serapis.

(4) At oracles of the dead (*ψυχομαντεῖα*) the souls of deceased persons were evoked in order to give the information desired. Thus, in Homer (*Od.* xi), Odysseus betakes himself to the entrance of the lower world to question the spirit of the seer Tiresias. Oracles of this kind were especially common in places where it was supposed there was an entrance to the lower world; as at the city of Cichyrus in Epirus (where there was an Acherusian lake as well as the rivers of Acheron and Cocytus, bearing the same names as those of the world below), at the promontory of Taenarum in Laconia, at Heraclea in Pontus, and at Lake Avernus, near Cumae, in Italy. At most of them oracles were also given in dreams; but there were some in which the inquirer was in a waking condition when he conjured up the spirits whom he wished to question.

While oracles derived either from dreams or from the dead were chosen in preference by superstitious people, the most important among oral oracles and those given by means of signs had a political significance. On all serious occasions they were questioned on behalf of the State in order to ascertain the divine will: this was especially the case with the oracle of Delphi. In consequence of the avarice and partisanship of the priests, as well as the increasing decline of belief in the gods, the oracles gradually fell into abeyance, to revive again everywhere under the Roman emperors, though they never regained the political importance they had once had in ancient Greece.

Such investigation of the divine will was originally quite foreign to the Romans. Even the mode of prophesying by means of lots (see SORTES), practised in isolated regions of Italy, and even in the immediate neighbourhood of Rome, as at Caeré, and especially at Praenesté, did not come into use, at all events for State purposes, and was generally regarded with contempt. The Romans did not consult even the Sibylline verses in order to forecast the future. On the other hand, the growth of superstition in the imperial period not only brought the native oracles into repute, but caused a general resort to foreign oracles besides. The inclination to this kind of

prophecy seems never to have been more generally spread among the masses of the people than at this time. Apart from the Greek oracular deities, there were the oriental deities, whose worship was nearly everywhere combined with predictions. In most of the famous sanctuaries the most various forms of prophecy were represented, and the stranger they were the better they were liked. In the case of the oral oracles, the responses in earlier times were, for the most part, composed in verse; on the decay of poetic productiveness, they began to take the form of prose, or of passages from the poets, the Greeks generally adopting lines of Homer or Euripides; the Italians, lines of Vergil. The public declaration of oracles ended with the official extermination of paganism under Theodosius at the end of the fourth century.

The following is a list of the most celebrated oracles:

(1) Of Zeus: at Dodona, in Epirus, the most ancient of all; at Olympia, with the Iamidae and Clytiades as its priests; and of Zeus Ammon in a Libyan oasis in the northwest of Egypt.

(2) Of Apollo: at Delphi (see below); at Abae, in Phocis; at Tegyraia, in Boeotia; at Mount Ptoön, near Acraephia; of Apollo Ismenius, near Thebes, the national oracle of the Thebans; of Hysiae, at the base of Mount Cithaeron; at Eutresis, near Leuctra; of Apollo Didymaeus, in the territory of Miletus, with the Branchidae as its ministers; at Claros, north of Miletus; at Patara, in Lycia; at Cyaneae, in Lycia; of Apollo Sarpedonius at Seleucia, in Cilicia; at Hybla, in Magnesia; at Grynea or Grynium, in Asia Minor; at Methymna, in Lesbos; at Chalcedon; at Delos; at Argos; at Daphne, in Syria (in later times).

(3) Of Gaea (the Earth): at Aegira, in Achaia, and at Patrae; of Pluto and Persephoné at Acharaca, in Asia Minor, near Tralles; of Bacchus, at Amphiclea, in Phocis, and at Satrae, in Thrace; of Hermes, at Pharae, in Achaia; and of the Nymphs on Mount Cithaeron.

(4) There were also oracles of heroes—e. g. of Asclepius, at Epidaurus and Pergamus; of Trophonius, at Lebadea; of Tiresias, at Orchomenus; of Amphiaraüs, near Thebes and near Oropus; of Mopsus, at Mallos, in Cilicia; of Calchas and Podalirius, on Mount Dion, in Southern Italy; of Protesilaüs, at Elaeus, in the Thracian Chersonesus; of Autolycus, the Argonaut, at Sinopé; and of Odysseus, in Aetolia.

(5) There were Italian oracles of Faunus at Albunea and of Fortuna at Praeneste and Antium (Cic. *De Div.* ii. 41, 85). At Caeré and at Falerii there were "lots" (*sortes*), from which oracles or perhaps omens were inferred (Livy, xxii. 1).

As the Delphic oracle is by far the most famous and the one to which allusion is oftenest made in literature, a somewhat more detailed account of it may be of interest. Its seat was on the southwestern spur of Parnassus in a valley of Phocis. In historical times the oracle appears in possession of Apollo; but the original possessor, according to the story, was Gaea (Aesch. *Eumen.* 1, 2). Then it was shared by her with Poseidon (Eurip. *Ion*, 446), who gave up his part in it to Apollo in exchange for the island of Calauria, Themis, the daughter and successor of Gaea, having already given Apollo her share. According to the Homeric hymn to the Pythian Apollo, the god took forcible possession of the oracle soon after his birth, slaying with his earliest bow-shot the serpent Pytho, the son of Gaea, who guarded the spot. To atone for his murder, Apollo was forced to fly and spend eight years in menial service before he could return forgiven. A festival, the Septeria, was held every year, at which the whole story was represented: the slaying of the serpent, and the flight, atonement, and return of the god. Apollo was represented by a boy, both of whose parents were living. The dragon was symbolically slain, and his house, decked out in costly fashion, was burned. Then the boy's followers hastily dispersed, and the boy was taken in procession to Tempé, along the road formerly followed by the god. Here he was purified and brought back by the same road, accompanied by a chorus of maidens singing songs of joy. The oracle proper was a cleft in the ground in the innermost sanctuary, from which arose cold vapours, which had the power of inducing ecstasy. Over the cleft stood a lofty gilded tripod of wood. On this was a circular slab, upon which the seat of the prophetess was placed. The prophetess, called Pythia, was a maiden of honourable birth; in earlier times a young girl, but in a later age a woman of over fifty, still wearing a girl's dress, in memory of the earlier custom. In the prosperous times of the oracle two Pythias acted alternately, with a third to assist them. In the earliest times the Pythia ascended the tripod only once a year, on the birthday of Apollo, the seventh of the Delphian spring month Bysius. But in later years she prophesied every day, if the day itself and the sacrifices were not unfavourable. These sacrifices were offered by the supplicants, adorned with laurel crowns and fillets of wool. Having prepared herself by washing and purification, the Pythia entered the sanctuary, with gold ornaments in her hair and flowing robes upon her; she drank of the water of the fountain Cassotis, which flowed into the shrine, tasted the fruit of the old bay-tree standing in the chamber, and took her seat. No one was present but a priest, called the *προφήτης* (and *προφῆτις*), who explained the words she uttered in her ecstasy, and put them into metrical form, generally hexameters. In later times the votaries were contented with answers in prose. The responses were often obscure and enigmatical, and couched in ambiguous and metaphorical expressions, which themselves needed explanation. The order in which the applicants approached the oracle was determined by lot, but certain cities, as Sparta, had the right of priority.

The reputation of the oracle stood very high throughout Greece until the time of the Persian Wars, especially among the Dorian tribes, and among them pre-eminently the Spartans, who had stood from of old in intimate relation with it. On all important occasions, as the sending out of colonies, the framing of internal legislation or religious ordinances, the god of Delphi was consulted, and that not only by Greeks, but by foreigners, especially the people of Asia and Italy. After the Persian Wars the influence of the oracle declined, partly in consequence of the growth of unbelief, partly from the mistrust excited by the partiality and venality of the priesthood, who sometimes were bribed into giving oracles favourable to the inquirer, and in the case of Philip of Macedon, when Demosthenes said, *ἡ πυθία φιλιππίζει*. But it never fell completely into discredit,

and from time to time its position rose again. In the first half of the second century A.D. it had a revival, the result of the newly awakened interest in the old region. It was abolished at the end of the fourth century A.D. by Theodosius the Great.

The oldest stone temple of Apollo was attributed to the mythical architects, Trophonius and Agamedes. It was burned down in B.C. 548, when the Alcmaeonidae, at that time in exile from Athens, undertook to rebuild it for the sum of 300 talents, partly taken from the treasure of the temple, and partly contributed by all countries inhabited by Greeks and standing in connection with the oracle. They put the restoration into the hands of the Corinthian architect Spintharus, who carried it out in a more splendid style than was originally agreed upon, building the front of Parian marble instead of limestone. The groups of sculpture in the pediments represented, on the eastern side, Apollo with Artemis, Leto, and the Muses; on the western side, Dionysus with the Thyiades and the setting sun; for Dionysus was worshipped here in winter during the imagined absence of Apollo. These were all the work of Praxias and Androsthenes, and were finished about B.C. 430. The temple was, on account of its vast extent, a hypaethral building — that is, there was no roof over the space occupied by the temple proper. The architecture of the exterior was Doric, of the interior Ionic, as may still be observed in the surviving ruins. On the walls of the entrance-hall were short texts written in gold, attributed to the Seven Sages. One of these was the celebrated "Know Thyself" (*γνῶθι σεαυτόν*, Pausan. x. 24, 1). In the temple proper stood the golden statue of Apollo, and in front of it the sacrificial hearth with the eternal fire. Near this was a globe of marble covered with fillets, the *Ὀμφαλός*, or centre of the earth. In earlier times two eagles stood at its side, representing the two eagles which fable said had been sent out by Zeus at the same moment from the eastern and western ends of the world. These eagles were carried off in the Phocian War, and their place filled by two eagles in mosaic on the floor. Behind this space was the inner shrine, lying lower, in the form of a cavern over the cleft in the earth. Within the spacious precincts (*περίβολος*) stood a great number of chapels, statues, votive offerings, and treasure-houses of the various Greek states, in which they deposited their gifts to the sanctuary, especially the tithes of the booty taken in war. Here, too, was the council-chamber of the Delphians. Before the entrance to the temple was the great altar for burnt-offerings, and the golden tripod, dedicated by the Greeks after the battle of Plataea, on a pedestal of brass, representing a snake in three coils, and of which the greater part now stands in the Hippodrome at Constantinople. Besides the treasures accumulated in the course of time, the temple had considerable property in land, with a population consisting mainly of slaves (*ἱερόδουλοι*), bound to pay contributions and to render service to the sanctuary. The management of the property was in the hands of priests chosen from the noble Delphian families, at their head the five *ὅσιοι* or consecrated ones. Since the first spoliation of the temple by the Phocians in B.C. 355, it was several times plundered on a grand scale. Nero, for instance, is said to have carried off 500 bronze statues. Yet some 3000 statues were to be seen there in the time of the elder Pliny.

On the oracles in general, see Bouché-Leclercq, *Hist. de la Divination dans l'Antiquité* (Paris, 1879–1882); Maury, *Histoire des Religions de la Grèce Antique* (Paris, 1857); E. Curtius, *Die hellenische Mantik* (Göttingen, 1864); Fontaine, *De Divinitatis Origine et Progressu* (Rostock, 1867); Stengel, *Griechische Sacralalterthümer*, §§ 44–50 (1890); Hartung, *Die Religion der Römer*, vol. i. pp. 96 foll. (1836); and Hoffmann, *Das Orakelwesen im Alterthume* (1877). The oracles that have descended to us are collected by Henders, *Oracula Graeca Quae Exstant* (1877).

On particular oracles, see A. Mommsen, *Delphika* (Leipzig, 1878); Hüllmann, *Würdigung des delphischen Orakels* (Bonn, 1837); Kayser, *Delphi* (Darmstadt, 1855); Götte, *Das delphische Orakel* (Leipzig, 1839); Carapanos, *Dodone et des Ruines* (Paris, 1878); id. *Mémoire sur Dodone* (1877); Von Lassaulx, *Das pelasgische Orakel des Zeus zu Dodona* (Würzburg, 1840); Arneth, *Ueber das Taubenorakel von Dodona* (Vienna, 1840); Von Gerlach, *Dodona* (Basel, 1859); and Perthes, *Die Peleiaden zu Dodona* (Merseburg 1869). On the temple at Delphi, see a paper by Prof. Middleton in the *Journal of Hellenic Studies*, vol. ix. pp. 282 foll.

Orae. See ORITAE.

Orarium. See SUDARIUM.

Oratiōnes Principum. (1) Messages to the Senate sent to announce any important event—e.g. a victory. (2) Memoranda sent by the emperor suggesting the adoption of laws (Gaius, ii. 285). (3) Such a suggestion, embodied in a letter (*epistola*) or book (*libellus*), and having the form of law. This was the final development of the *oratio principis*, and was due to the unwillingness of the obsequious Senate even to discuss a measure proposed by the emperor. See Dirksen in the *Rhein. Museum für Jurisprudenz*, vol. ii.

Orātor. The word *orator* (also *patronus*), of one who pleads the case of a client (*cliens*), is not at all identical in meaning with *iuris consultus* (q. v.), or even *advocatus* (q. v.). He need not be skilled in legal lore, which the jurisconsults possessed, but depended largely for his success upon voice, gesture, and the eloquence of his language. The earliest orators at Rome got their knowledge practically by observing the pleadings of the older men and by advice, experience, and trial of themselves. Under the Empire the principal speakers were trained in the schools of the rhetoricians (see RHETORICA), and thus gradually lost the power and form of the earlier style of speaking (Petron. i). In the republican period oratory was the noblest of the professions, awarding the key to political power and influence; but when freedom was lost, the art declined, and became a mere plaything for the young. See Cicero, *Brut.* 91 foll.; the *Dialogus* of Tacitus; and Westermann, *Geschichte d. röm. Beredsamkeit* (Leipzig, 1835); also Berger and Cucheval, *Histoire de l'Eloquence Latine jusqu' à Cicéron*, 2 vols. (Paris, 1872).

Orātor. A treatise of Cicero's fully styled *Orator ad M. Brutum*, giving his ideal of a perfect orator. Edited by Sandys (London, 1885).

Orbiculus. A roller or pulley worked by a rope (Vitruv. x. 2).

Orbilius Pupillus. A Roman grammarian and schoolmaster, best known to us from his having been the teacher of Horace, who gives him the epithet of *plagosus*, from the severe floggings which his pupils received from him (Hor. *Epist.* ii. 1, 71). He was a native of Beneventum, and after serving as an *apparitor* of the magistrates, and also as a soldier in the army, he settled at Rome in the fiftieth year of his age, in the consulship of Cicero, B.C. 63. He lived to be nearly 100 years of age (Suet. *Gram.* 9).

Orbis. A circular table. See MENSA.

Orbōna. An ancient goddess of the Italians who slew children and thus made parents childless (*orbi*). She was invoked and propitiated in the Indigitamenta (q. v.). See Cic. *N. D.* iii. 25, 63.

Orca (ὅρχη and ὕρχα). A vessel of earthenware shaped like an *amphora* (q. v.), but somewhat smaller, used for holding pickles, oil, wine, or figs. It was also employed by children in playing a game of skill (τρόπα; Anglicé, "cherry-pit," "pitch-in-the-hole"), in which the player tried to pitch nuts or cherry-pits into the narrow opening from a distance. See Persius, iii. 50, with Gildersleeve's note, and Shakspeare, *Twelfth Night*, iii. 4.

Orca. (Rich.)

Orcădes Insŭlae. Now the Orkney and Shetland Isles. A group of several small islands off the north coast of Britain, with which the Romans first became acquainted when Agricola sailed round the northern extremity of Britain (Tac. *Agric.* 10).

Orchēsis (ὄρχησις). See SALTATIO.

Orchestic. See SALTATIO.

Orchestra (ὀρχήστρα). Literally "the dancing place," from ὀρχέομαι. The space of the Greek theatre situated in front of the stage, in which the chorus went through its evolutions. In the Roman theatre it was absorbed in the area occupied by the audience. See CHORUS; THEATRUM.

Orchoměnus (Ὀρχόμενος). (1) An ancient, wealthy, and powerful city of Boeotia, the capital of the Minyans in the ante-historical ages of Greece, and hence called by Homer the Minyan Orchomenos. It was situated northwest of the lake Copaïs, on the river Cephissus. Sixty years after the Trojan War it was taken by the Boeotians, and became a member of the Boeotian League. It continued to exist as an independent town till B.C. 367, when it was taken and destroyed by the Thebans; and though subsequently rebuilt by the Phocians, the Thebans again demolished it. Philip of Macedon once more restored it (B.C. 338), but it never recovered its former prosperity. It was famous for its musical festival in honour of the Charites, who were worshipped here (Theoc. xvi. 104). In the vicinity of Orchomenos Sulla defeated Archelaüs, the general of Mithridates, in B.C. 85. In 1880, 1881, and 1886 extensive excavations were made here by Dr. Schliemann, who exhumed an ancient "treasury" or mausoleum larger even than the famous one discovered by him at Mycenae (q. v.). See K. O. Müller, *Orchomenos und die Minyer* (1844); Schliemann, *Orchomenos* (1881); and Schuchhardt, *Schliemann's Excavations* (Eng. tr. London, 1891). (2) An ancient town of Arcadia, situated northwest of Mantinea.

Orcīnus Libertus. A slave set free by the death of his owner. See MANUMISSIO.

Orcīnus Senātor. See SENATUS.

Orcus. See HADES.

Ordessus (Ὀρδησσός). A tributary of the Danube of uncertain identity (Herod. iv. 48).

Ordinarius Iudex. See IUDEX.

Ordo. In a general sense, a row or series of objects. Hence (1), in naval language, a row or tier of oars in a ship, as to which, see NAVIS. (2) In Roman political language, the word is applied to any body of men forming a distinct and separate class in the community, either as possessing special privileges, or as pursuing some special occupation. Thus, the senators are spoken of collectively as the *ordo senatorius*, the knights as the *ordo equester;* the priests (*sacerdotes*) as *ordo sacerdotalis*. The plebeians, however, are now spoken of as an ordo. The Senate, being the august body, is sometimes called *amplissimus ordo* at Rome, and in colonies and *municipia* the local Senate is *ordo decurionum*. (See DECURIONES.) The *libertini* formed a separate ordo, and so did the *scribae*, the *tribuni aerarii*, and the *publicani*. At Rome the Senate and equestrians are often styled *uterque ordo*, as being *the* orders *par excellence*. (3) In military language, the word is applied to a company or troop of soldiers, and is used as equivalent to *centuria*, as the first centuries in a legion are sometimes called *primi ordines*. See LEGIO.

Ordovīces. A people of Britain, occupying what would correspond at the present day to the northern portion of Wales, together with the island of Anglesey (Tac. *Hist.* xii. 33). It was probably owing to the nature of their country and to the vicinity of Deva, now Chester, where a whole Roman legion was quartered, that the Romans had so few towns and stations among the Ordovices. Mediomanium was their capital, and was probably situated at Maywood or Meifad, in Montgomeryshire.

Ore. See AES; AURUM; METALLUM.

Oreădes (Ὀρειάδες). See NYMPHAE.

Oreae (χαλινός). A snaffle-bit (Fest. s. h. v.). Its nature is seen in the following example from a bronze original, which is jointed:

Oreae. (Rich.)

Orelli, JOHANN KASPAR. A classical scholar born at Zürich, Switzerland, February 13, 1787. After entering the Church and preaching for some time at Bergamo, he became a teacher in a school at Coire, and in 1819 at Zürich. When the university in his native city was founded, Orelli was called to the chair of classical philology (1833). He died at Zürich January 6, 1849. Orelli is best known as an editor of classical texts, especially of Cicero in 8 vols. (1826–31), Horace (1837–38, 4th ed. 1892, with a lexicon), and Tacitus (1746–47, last ed. completed in 1894). He also compiled an *Onomasticon Tullianum* to Cicero (ed. by Halm and Baiter, 1851), and a collection of Latin inscriptions, entitled *Inscriptionum Latinarum Selectarum Collectio* (3 vols. 1856; revised by Henzen, with indexes).

See Adert, *Essai sur la Vie et les Travaux de J. G. Orelli* (Geneva, 1849).

Orestae (Ὀρέσται). A people of northern Epirus, originally independent of the Macedonian kings, though afterwards subjected to their dominion. At a later period, having revolted under the protection of a Roman force, they were declared free on the conclusion of peace between Philip and the Romans (Livy, xxxiii. 34). Their country apparently contained but few towns. Among these Orestia is named by Stephanus Byzantinus, who declares it to have been the birthplace of Ptolemy, the son of Lagus. Its foundation was ascribed by tradition to Orestes.

Orestēa (Ὀρεστεία). A collective name given to the Orestean trilogy by Aeschylus. See AESCHYLUS; ORESTES.

Orestes (Ὀρέστης). (1) The son of Agamemnon and Clytaemnestra. On the assassination of Agamemnon, Orestes, then quite young, was saved from his father's fate by his sister Electra, who had him removed to the court of their uncle Strophius, king of Phocis. There he formed an intimate friendship with Pylades, the son of Strophius, and with him concerted the means, which he successfully adopted, of avenging his father's death by slaying his mother and Aegisthus. (See AEGISTHUS; CLYTAEMNESTRA.) After the murder of Clytaemnestra, the Furies drove Orestes into insanity; and when the oracle at Delphi was consulted respecting the duration of his malady, an answer was given that Orestes would not be restored to a sane mind until he went to the Tauric Chersonesus, and brought away

Orestes and Aegisthus. (From a vase.)

from that quarter the statue of Artemis to Argos. It was the custom in Taurica to sacrifice all strangers to this goddess, and Orestes and Pylades, having made the journey together, and having both been taken captive, were brought as victims to the altar of Artemis. Iphigenia, the sister of Orestes, who had been carried off by Artemis from Aulis when on the point of being immolated (see AULIS; IPHIGENIA), was the priestess of the goddess among the Tauri. Perceiving the strangers to be Greeks, she offered to spare the life of one of them, provided he would carry a letter from her to Greece. This occasioned a memorable contest of friendship between them, which should sacrifice himself for the other, and it ended in Pylades' yielding to Orestes and agreeing to be the bearer of the letter. The letter was for Orestes, and a discovery was the consequence. Iphigenia, thereupon, on learning the object of their visit, contrived to aid them in carrying off the statue of Artemis, and all three arrived safe in Greece with the statue. After his return to the Peloponnesus, Orestes took possession of his father's kingdom at Mycenae, which had been usurped by Aletes or Menelaüs. When Cylarabes of Argos died without leaving any heir, Orestes also became king of Argos. The Lacedaemonians likewise made him their king of their own accord, because they preferred him, the grandson of Tyndareus, to Nicostratus and Megapenthes, the sons of Menelaüs by a slave. The Arcadians and Phocians increased his power by allying themselves with him. He married Hermioné, the daughter of Menelaüs, and became by her the father of Tisamenus. The story of his marriage with Hermioné, who had previously been married to Neoptolemus, is related elsewhere. (See HERMIONÉ; NEOPTOLEMUS.) He died of the bite of a snake in Arcadia, and his body, in accordance with an oracle, was afterwards carried from Tega to Sparta, and there buried. His bones are said to have been found at a later time in a war between the Lacedaemonians and Tegaetans, and to have been conveyed to Sparta (Herod. i. 67). According to one story, Orestes spent the time of his madness in Arcadia, where, in his frenzy, he gnawed off one of his fingers (Pausan. viii. 34, 2). The story of Orestes is the subject of an existing trilogy by Aeschylus (the *Agamemnon*, *Choephoroe*, and *Eumenides*), and is treated by Sophocles in his *Electra* and by Euripides in the remaining plays *Electra*, *Orestes*, and *Iphigenia in Tauris*. See Becker, *Die Orestessage der Griechen* (Wittenberg, 1858). See PYRRHUS.

Such is the ordinary form of the legend of Orestes. The tragic writers, of course, introduced many variations. Thus it is said that when the Furies of his mother persecuted him, he fled to Delphi, whose god had urged him to commit the deed, and thence went to Athens, where he was acquitted by the court of Areopagus. Orestes had by Hermioné two sons, Tisamenus and Penthilus, who were driven from their country by the Heraclidae. (2) A Pannonian who acted as regent of Italy during the short reign of his infant son Romulus Augustulus, in favour of whom he had deposed the emperor Iulius Nepos (A.D. 475). In the following year he was defeated and put to death by Odoacer, king of the Heruli. See AUGUSTULUS; ODOACER.

Orestēum (Ὀρέστειον) or **Oresthēum** (Ὀρέσθειον), also called ORESTHASIUM (Ὀρεσθάσιον) by Pausanias (viii. 3). A town of Arcadia, southeast of Megalopolis, in the district of Oresthis. Its ruins, according to Pausanias, were to be seen to the right of the road leading from Megalopolis to Tegaea (viii. 44). Orestes died here.

Orestheus (Ὀρεσθεύς). A legendary king of the Locri, whose dog brought forth a log of wood. This he buried, but from it came forth shoots (ὄζοι) of vine, whence the people got the name of Ozolae (Pausan. x. 31, 1).

Orestia. The country of the Orestae (q. v.) and also one of their towns.

Orestias. The primitive name of Adrianopolis (q. v.) in Thrace, and which the Byzantine authors frequently employ in speaking of that city. The name is derived from the circumstance of Orestes having purified himself on this spot after the murder of his mother.

Orestilla, Aurelia. The wife of Catiline. As she objected to marrying him because he had a grown son, he is said to have killed the young man in order to secure her favour.

Oretāni. A powerful people in the southwestern part of Hispania Tarraconensis. Their chief town was Castulo. See Pliny, *H. N.* iii. 25.

Oreus (Ὠρεός). A town in the north of Euboea, originally called Hestiaea or Histiaea. After the Persian Wars it became subject to Athens, but having revolted from the Athenians in B.C. 445, it was taken by Pericles, its inhabitants expelled, and their place supplied by 2000 Athenians (Thuc. i. 114). It was an important place down to the dissolution of the Achaean League.

Orgănum (ὄργανον). A generic term for any machine or implement for saving labour, but differing from *machina* in that it always implies skill as well as strength in its use. It frequently denotes a musical instrument (Quint. ix. 4, 10), on which see the article Hydraulus.

Orgeōnes (ὀργεῶνες). The Athenian term for the members of a society for the observance of a cult not belonging to the State religion, especially those who, without belonging to the old families (see Gennetae), nevertheless like them formed a family union originating in descent from the same ancestors, and possessing a special family worship. The adoption of the children of families belonging to such a religious society occurred, as with the Gennetae, at the same time as their enrolment into the phratries at the feast of the Apaturia (q. v.).

Orgetŏrix. A noble Helvetian, the most conspicuous for rank and riches of any of his countrymen. He attempted to possess himself of the chief power in his native State (B.C. 61), and was, in consequence, summoned to trial. His retainers, however, assembled in great numbers, and prevented the case from being heard. He died not long after, having fallen, as was supposed, by his own hands (Caes. *B. G.* i. 2, 26; Dio Cass. xxxviii. 31).

Orgia (τὰ ὄργια). The ordinary Greek term for ceremonies, generally connected with the worship of a divinity, but especially secret religious customs to which only the initiated were admitted, and equivalent in meaning to "mysteries." It was customary to designate as orgies the mysteries of the worship of Dionysus in particular. These were sometimes celebrated with wild and extravagant rites. See Dionysia; Mysteria.

Oribasius (Ὀρειβάσιος and Ὀριβάσιος). A native of Pergamus, born about A.D. 325, the physician and adviser of the emperor Julian the Apostate, after whose death (A.D. 363) he was banished by the emperors Valens and Valentinianus, and lived among the barbarians. He was afterwards recalled. He seems not to have died before the beginning of the fifth century. At the suggestion of Julian he composed, on the plan of abstracts from earlier works, a medical treatise (Συναγωγαὶ Ἰατρικαί) in seventy-two books, of which some twenty-two are preserved, partly in the Greek original and partly in a Latin rendering. He himself prepared for his son Eustathius a conspectus (Σύνοψις) of the larger work in nine books, only part of which has been published. Another manual of Oribasius is the Εὐπόριστα, also a medical treatise, in four books. The best edition of Oribasius is that by Daremberg, in 6 vols. (Paris, 1851–76).

Orichalcum (ὀρείχαλκος). Brass (i. e. an alloy of copper and zinc). Existing specimens of brass are chiefly coins (*sestertii* and *dupondii*) of Augustus and his successors, though the alloy was probably made as early as the second century B.C. (Pliny, *H. N.* xxxiv. 2, 4; and cf. Cic. *De Off.* iii. 23, 92). The word ὀρείχαλκος ("mountain copper") occurs first in the Homeric Hymns (*In Ven.* 9), and in the early writers it probably designated any bright metal that had the appearance of gold. See Rossignol, *Les Métaux dans l'Antiquité* (Paris, 1863); and Blümner, *Technologie*, iv. pp. 91, 192 (note), and 193 foll.

Orĭcum (Ὦρικον) or **Orĭcus** (Ὦρικος). An important Greek town on the coast of Illyria, near the Ceraunian Mountains and the frontiers of Epirus. It was said to have been founded by the Euboeans who were here cast ashore on their return from the Trojan War.

Origĕnes, usually called Orĭgen. A learned Christian Father, born at Alexandria in A.D. 185. He was converted to Christianity by Clement of Alexandria, and after the martyrdom of his father, Leonides, Origen opened a school in which at first he taught Greek literature only, but soon after Christian doctrine also. Being made head of the catechetical school of Alexandria, he became distinguished for his severe asceticism as for his profound learning, not only in theology, but also in Greek philosophy and Hebrew, which he learned at Rome. In A.D. 228, during a visit to Palestine, he was ordained presbyter, but Bishop Demetrius of Alexandria refused his assent to this both as not being given by himself as diocesan bishop and because Origen, through a fanatical interpretation of Matt. xix. 12, had castrated himself. Later, the controversy which began over this decision led to a close investigation of Origen's theological views, and these were condemned by a synod in A.D. 231. Many Eastern bishops, however, supported him, and he reopened his school at Caesarea. During the later persecutions of the Christians by Maximinus and Decius he suffered greatly, so that, his health breaking down, he died at Tyre in A.D. 254. His most controverted teachings were those on the subject of the ultimate salvation of all, as he taught that even the devils would finally be redeemed—a doctrine known as Restorationism. His writings in all numbered some 6000, of which comparatively few have been preserved. An important one (the *De Principiis*) survives only in a Latin version by Rufinus. There are also a treatise on martyrdom and a defence of Christianity against Celsus; and of his *Hexapla*—an edition of the Old Testament in six parallel columns in Hebrew, Hebrew transliterated in Greek letters, and the four versions by Aquila, Symmachus, the Septuagint, and Theodotion—a number of fragments remain. Editions of Origen by Migne (vols. xi.–xvii.), and Lommatzsch in 25 vols. (Berlin, 1831–48). Separate editions of the *De Principiis* by Redepenning (Leipzig, 1836); of the *Hexapla* by Field (Oxford, 1875). Translations of some of the works in Clark's Ante-Nicene Library. See Freppel, *Origène* (Paris, 1868); and Farrar's *Lives of the Fathers* (1889).

Originarii. A name given to children in a colony whose parents were both *coloni* (*Cod. Th.* 10, 38).

Origĭnes. See Cato, p. 300; and Isidorus.

Oringis or **Oningis** or **Aurinx.** A town of Hispania Baetica with silver-mines (Pliny, *H. N.* iii. 3).

Orīon (Ὠρίων). A celebrated giant, said by one legend to have been the son of Poseidon and Euryalé. His father, according to this same account, gave him the power of wading through the depths of the sea, or, as others say, of walking on its surface. He married Sidé, whom Heré cast into Erebus for contending with her in beauty (Apollod. i. 4, 3). Another and more common account makes Hyria, a town of Boeotia, to have been the birthplace of Orion, and the story of his origin is told as follows: As Zeus, Poseidon, and Hermes were taking a ramble upon earth, they came, late in the evening, to the house of a farmer named Hyrieus. Seeing the wayfarers, Hyrieus, who was standing at his door, invited them to enter, and pass the night in his humble abode. The gods accepted the kind invitation, and were hospitably entertained. Pleased with their host, they inquired if he had any wish which he desired to have gratified. Hyrieus replied that he once had a wife whom he tenderly loved, and that he had sworn never to marry another. She was dead; he was childless; his vow was binding; and yet he was desirous of being a father. The gods took the hide of his only ox, which he, on discovering their true nature, had sacrificed in their honour: they buried it in the earth; and ten months afterwards a boy came to light, whom Hyrieus named Urion or Orion (*ἀπὸ τοῦ οὐρεῖν*, Ovid, *Fasti*, v. 495 foll.; Hyg. *Fab.* 195). This legend owes its origin to the name Orion, and was the invention of the Athenians (Müller, *Orchom.* p. 99). In Hyginus, Hyrieus is Byrseus, from the hide (*βύρσα*).

When Orion grew up, he went, according to this same account, to the island of Chios, where he became enamoured of Aero or Meropé, the daughter of Oenopion, son of Dionysus and Ariadné. He sought her in marriage; but, while wooing, seized a favourable opportunity and offered her violence. Her father, incensed at this conduct, and having made Orion drunk, blinded him, and cast him on the seashore. The blinded hero contrived to reach Lemnos, and came to the forge of Hephaestus, who, taking pity on him, gave him Cedalion (Guardian), one of his men, to be his guide to the abode of the Sun. Placing Cedalion on his shoulder, Orion proceeded to the East; and there, meeting the sun-god, was restored to vision by his beams. Anxious for revenge on Oenopion, he returned to Chios; but the Chians, aware of his intention, concealed the object of his search under the ground, and Orion, unable to find him, returned to Crete. The death of Orion is variously related. As all the legends relating to him are evidently later than the time of Homer, none ventures to assign any other cause to it than the goddess Artemis, whose wrath (though Homer rather says the contrary) he drew on himself. Some said that he attempted to offer violence to the goddess herself; others to Opis, one of her Hyperborean maidens, and that Artemis slew him with her arrows; others, again, that it was for presuming to challenge the goddess at the discus. It was also said that, when he came to Crete, he boasted to Leto and Artemis that he was able to kill anything that would come from the earth. Indignant at his boast, they sent a scorpion, which stung him, and he died. It was said, finally, that Artemis loved Orion, and was even about to marry him. Her brother was highly displeased, and often reproached her, but to no purpose. At length, observing one day Orion wading through the sea with his head just above the waters, he pointed it out to his sister, and maintained that she could not hit that black thing on the water. To show her skill she took aim and hit it, thus slaying Orion (Hyg. *Astr.* ii. 34). Asclepius attempted to restore him to life, but was slain by Zeus with a thunderbolt.

Orīon (Ὠρίων). A Greek scholar, a native of the Egyptian Thebes, who flourished in the fifth century A.D., and wrote at Alexandria or Constantinople an etymological lexicon and an anthology of gnomes or maxims from the Greek poets. The lexicon is edited by Sturz (Leipzig, 1820).

Orītae (Ὠρεῖται) or **Orae** (Ὦραι). A people of Gedrosia, in what is now Beluchistan (Q. Curt. ix. 10, 6).

Orithyia (Ὠρείθυια). Daughter of Erechtheus, king of Athens, and of Praxithea, who was seized by Boreas, and carried off to Thrace, where she became the mother of Cleopatra, Chioné, Zetes, and Calaïs. See BOREAS.

Orměnus (Ὄρμενος). Son of Cercaphus and father of Amyntor. Hence Amyntor is called Ormenides, and Astydamia, his granddaughter, Ormenis. He was said to have founded the town of Ormenium in Thessaly.

Ornamenta Triumphalia. See TRIUMPHUS.

Ornātrix. A hair-dresser. See COMA.

Orneae (Ὄρνεαί). An ancient town of Argolis, near the frontier of the territory of Phlius, subdued by the Argives in the Peloponnesian War, B.C. 418 (Thuc. vi. 7).

Ornīthon (ὀρνιθών). A chicken-house (Columel. viii. 3). See GALLINA.

Oroanda (Ὀρόανδα). A city of Pisidia, from which the tract of country known as OROANDĪCUS TRACTUS derived its name (Livy, xxxviii. 18).

Orobiae (Ὀροβίαι). A town on the coast of Euboea near Aegae. It had an oracle of Apollo.

Orōdes (Ὀρώδης). The names of two kings of Parthia. See ARSACES.

Oroetes (Ὀροίτης). A Persian who, under Cyrus and Cambyses, was satrap of Sardis. In B.C. 522 he decoyed Polycrates (q. v.) into his power, and put him to death (Herod. i. 69, iii. 39; Thuc. i. 18). He was himself executed by order of Darius, who suspected his loyalty (Herod. iii. 120).

Orontes (Ὀρόντης). The largest river of Syria, rising in the Anti-Libanus, flowing past Antioch, and falling into the sea at the foot of Mount Pieria. Its earlier name was TYPHON (Strabo, p. 750).

Orōpi. See OLBA.

Orōpus (Ὠρωπός). A town on the eastern frontiers of Boeotia and Attica; was long an object of contention between the Boeotians and Athenians. It finally remained permanently in the hands of the Athenians. Its seaport was Delphinium.

Orosius, PAULUS. A Spanish presbyter in Lusitania who, about A.D. 417, and at the wish of St. Augustine, whom he had sought out in Africa, composed a history against the heathen (*Historiae contra Paganos*) in seven books, the first attempt at a Christian universal history, from Adam to the year A.D. 417. The theory of his work is that the whole history of mankind is directed by the one God who created them, and it aims at refuting the

charges brought against Christianity by showing that it was not to Christianity and the abolition of the heathen religion that the calamities of the time were due, but that such calamities had always existed, and to a still greater degree before Christian times. His chief authority is Justin, besides whom he mainly used Livy, Tacitus, Suetonius, and Eutropius. His view of the four kingdoms of the world—Babylon, Macedon, Carthage, and Rome—prevailed throughout the whole of the Middle Ages; and Alfred the Great caused it to be translated into Anglo-Saxon. The history is edited by Zangemeister (Vienna, 1882), with a commentary; and translated into English by Sweet (1883). See Méjean, *Orose et son Apologétique* (Strassburg, 1862). Besides the *Historiae*, Orosius also wrote two polemical treatises against the theology of the Pelagians and Priscillianists.

Orpheus (Ὀρφεύς). A mythical personage, regarded by the Greeks as the most celebrated of the early poets, who lived before the time of Homer. His name does not occur in the Homeric or Hesiodic poems; but it had already attained to great celebrity in the lyric period. There were numerous legends about Orpheus, but the common story ran as follows: Orpheus, the son of Oeagrus and Calliopé, lived in Thrace at the period of the Argonauts, whom he accompanied in their expedition. Presented with the lyre by Apollo and instructed by the Muses in its use, he enchanted with its music not only the wild beasts, but the trees and rocks upon Olympus, so that they moved from their places to follow the sound of his golden harp. The power of his music caused the Argonauts to seek his aid, which contributed materially to the success of their expedition; at the sound of his lyre the Argo glided down into the sea; the Argonauts tore themselves away from the pleasures of Lemnos; the Symplegades, or moving rocks, which threatened to crush the ship between them, were fixed in their places; and the Colchian dragon, which guarded the Golden Fleece, was lulled to sleep; other legends of the same kind may be read in the *Argonautica*, which bears the name of Orpheus. After his return from the Argonautic expedition he took up his abode in a cave in Thrace, and employed himself in the civilization of its wild inhabitants. There is also a legend of his having visited Egypt. The legends respecting the loss and recovery of his wife, and his own death, are very various. His wife was a nymph named Agriopé or Eurydicé. In the older accounts the cause of her death is not referred to. The legend followed in the well-known passages of Vergil and Ovid, which ascribes the death of Eurydicé to the bite of a serpent, is no doubt of high antiquity; but the introduction of Aristaeus into the legend cannot be traced to any writer older than Vergil himself. He followed his lost wife into the abodes of Hades, where the charms of his lyre suspended the torments of the damned, and won back his wife from the most inexorable of all deities; but his prayer was only granted upon this condition: that he should not look back upon his restored wife till they arrived in the upper world; at the very moment when they were about to pass the fatal bounds, the anxiety of love overcame the poet; he looked round to see that Eurydicé was following him; and he beheld her caught back into the infernal regions. (See illustration, p. 643.) His grief for the loss of Eurydicé led him to treat with contempt the Thracian women, who, in revenge, tore him to pieces under the excitement of their Bacchanalian orgies. After his death the Muses collected the fragments of his body, and buried them at Libethra at the foot of Olympus, where the nightingale sang sweetly over his grave. His head was thrown into the Hebrus, down which it rolled to the sea, and was borne across to Lesbos, where the grave in which it was interred was shown at Antissa. His lyre was also said to have been carried to Lesbos; and both traditions are simply poetical expressions of the historical fact that Lesbos was the first great seat of the music of the lyre; indeed, Antissa itself was the birthplace of Terpander, the earliest historical musician. The astronomers taught that the lyre of Orpheus was placed by Zeus among the stars at the intercession of Apollo and the Muses. Orpheus is spoken of as the first diviner, the first to employ the rites of expiation, the inventor of letters and of the heroic metre—in fact, as the first civilizer of early Thracia and Greece. In these legends there are some points which are sufficiently clear. The invention of music, in connection with the services of Apollo and the Muses, its first great application to the worship of the gods, which Orpheus is therefore said to have introduced, its power over the passions, and the importance which the Greeks attached to the knowledge of it, as intimately allied with the very existence of all social order, are probably the chief elementary ideas of the whole legend. But here comes in one of the dark features of the Greek religion, in which the gods envy the advancement of man in knowledge and civilization, and severely punish any one who transgresses the bounds assigned to humanity. In a later age the conflict was no longer viewed as between the gods and man, but between the worshippers of different divinities; and especially between Apollo, the symbol of pure intellect, and Dionysus, the deity of the senses; hence Orpheus, the servant of Apollo, falls a victim to the jealousy of Dionysus and the fury of his worshippers. The story of Orpheus and Eurydicé is found in a reversed form in the ancient Keltic tale of the three daughters of King O'Hara. (See Curtin, *Myths and Folk-lore of Ireland* [Boston, 1890].) It has been the theme of many works of modern literature, of which (in English) may be mentioned the following poems: Wordsworth, *The Power of Music;* Browning, *Orpheus and Eurydicé;* W. Morris, *Orpheus and the Sirens;* J. R. Lowell, *Eurydicé;* Dowden, *Eurydicé;* Gosse, *The Waking of Eurydicé;* and R. Buchanan, *Orpheus the Musician.* The story of Orpheus is the subject of a series of ten fine paintings by Burne-Jones. For the so-called Orphic sect, see ORPHICA.

Orphĭca (*τὰ Ὀρφικά*). Orpheus (q. v.) gave his name to a kind of monastic order which sprang up in later times in Greece calling themselves *οἱ Ὀρφικοί*, who, under the pretended guidance of Orpheus, dedicated themselves to the worship of Dionysus. They performed the rites of a mystical worship; but instead of confining their notions to the initiated, they published them to others, and committed them to literary works. The Dionysus with whose worship the Orphic rites were connected was Dionysus Zagreus, closely connected with Demeter and Cora (Persephoné). The Orphic legends and poems related in great part to this

Dionysus, who was combined, as an infernal deity, with Hades; and upon whom the Orphic theologians founded their hopes of the purification and ultimate immortality of the soul. But their mode of celebrating this worship was very different from the popular rites of Bacchus. The Orphic worshippers of Bacchus did not indulge in unrestrained pleasures and frantic enthusiasm, but rather aimed at an ascetic purity of life and manners, abstaining from meat, though not from wine, dressing in white, practising frequent purifications, expiations, and incantations, and professing a creed, in which the doctrine of the transmigration of souls (metempsychosis) held an important place. This sect degenerated by the time of the early Roman Empire into a mere fraternity of jugglers, and died out finally amid general contempt.

All the part of the mythology of Orpheus which connects him with Dionysus must be considered as a later invention, quite irreconcilable with the original legend, in which he is the servant of Apollo and the Muses; but it is almost hopeless to explain the transition.

Connected with the Orphic cult is the so-called Orphic literature. Many poems ascribed to Orpheus were current as early as the time of the Pisistratidae. (See ONOMACRITUS.) They are often quoted by Plato, and the allusions to them in later writers are very frequent. The extant poems, which bear the name of Orpheus, are the forgeries of grammarians and philosophers of the Alexandrian School; but among the fragments, which form a part of the collection, are some genuine remains of that Orphic poetry which was known to Plato, and which must be assigned to the period of Onomacritus, or perhaps a little earlier. To the original portions, which grew under the hands of the Orphici into a vast literature, were added also interpretations and liturgies by the Pythagoreans, some of whose doctrines were akin to those of the Orphic brotherhood. Aristotle and even Herodotus attacked the pretended antiquity of the Orphic works, yet the myths and songs retained their acceptance as antiques down to the third and fourth centuries A.D., when we find them quoted by the Fathers. The Orphic literature, which, in this sense, may be called genuine, seems to have included hymns, a theogony, oracles, etc. The principal productions which have come down to us are: (1) *Argonautica*, an epic poem in 1394 hexameters, giving an account of the expedition of the Argonauts; (2) *Hymns*, eighty-seven or eighty-eight in number, in hexameters, evidently the productions of the Neo-Platonic School; (3) *Lithica* (Λιθικά) treating of properties of stones, both precious and common, and their uses in divination; (4) fragments, chiefly of the *Theogony* (Θεογονία), which show the influence of Hesiod. It is in this class that we find the genuine remains of the literature of the early Orphic theology, but intermingled with others of a much later date. There are also a number of other poems, of which a list is given in Christ's *Griechische Litteraturgeschichte* (pp. 658, 659).

On the Orphic brotherhood, see especially Lobeck's *Aglaophamus* (1829); Gruppe, *Die Griechischen Kulte und Mythen*, i. 612–674 (1887); Maury, *Les Religions de la Grèce Antique*, iii. 300–337 (1859); Lenormant in the *Gazette Archéologique* for 1879, pp. 18–37; and Gerhard, *Orpheus und die Orphiker* (1861). On the Orphic literature, see Hermann's *Orphica* (1805); Tyrwhitt's *Lithica* (1781); Abel's *Orphei Lithica* (1881); id. *Orphica* (1886); Kern, *De Orphei, Epimenidis, Pherecydis, Theogoniis* (1888); Buresch, *Klaros* (1890); and Rohde in *Psyche*, ii. 395 foll. See also the article MYSTERIA.

Orphĭci (Ὀρφικοί). See ORPHICA.

Orsilochia. See IPHIGENIA.

Orthia (Ὀρθία). A name given to Artemis, as worshipped at Limnaeum, in Laconia, where boys were severely scourged at her altar (Pausan. iii. 16, 7). See DIAMASTIGOSIS.

Orthosia (Ὀρθωσία). A city of Caria, on the Maeander, where the Rhodians defeated the Carians, B.C. 167 (Livy, xlv. 25).

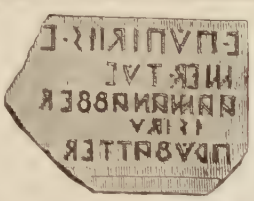
Orthrus (Ὄρθρος). The two-headed dog of Geryones (q. v.), begotten by Typhon and Echidna, and slain by Heracles.

Ortygia (Ὀρτυγία). (1) The ancient name of Delos. Since Artemis and Apollo were born at Delos, the poets sometimes call the goddess Ortygia, and give the name of *Ortygiae boves* to the oxen of Apollo. The ancients connected the name with ὄρτυξ, a quail. (2) An island near Syracuse. (See SYRACUSAE.) (3) A grove near Ephesus, in which the Ephesians pretended that Apollo and Artemis were born. Hence the Caÿster, which flowed near Ephesus, is called Ortygius Caÿster. See EPHESUS.

Orus. See HORUS; ORION.

Osca. Now Huesca, in Arragonia. An important town of the Ilergetes, and a Roman colony in Hispania Tarraconensis, on the road from Tarraco to Ilerda, with silver mines.

Oscan Plays. See ATELLANAE; COMOEDIA; DRAMA.

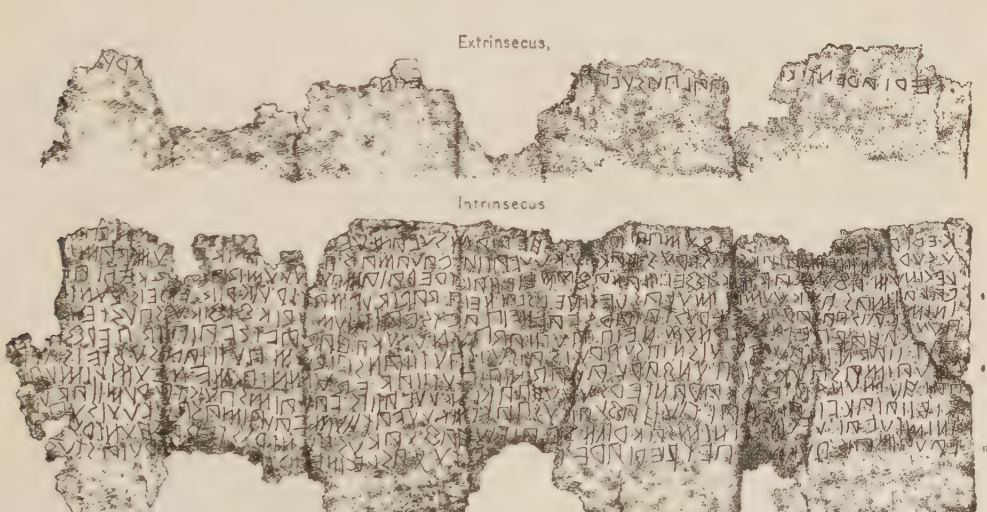


Oschophŏria (τὰ ὀσχοφόρια). At Athens a festival in honour of Dionysus. See, further, DIONYSIA.

Osci or **Opĭci.** The name Opiscan or Oscan, properly Opscian language (φωνὴ Ὀπικῶν; τῶν Ὄσκων ἡ διάλεκτος), was first applied by the Greek colonists of the coast of Campania to the dialect of the Italic race of Ὀπικοί (*Opici*) or Ὄσκοι (*Opsci*, prop. *Opisci*) whom they found to be the chief inhabitants of that region. The Opici have been occasionally identified with the Ausones, also inhabiting Campania, and certainly closely related to them, and to the Aurunci, living on the neighbouring coast of Latium, and probably also to the Sidicini, who settled the middle valley of the Volturnus. The association of the Aurunci, on the other hand, with the aborigines, once living farther north in Southern Sabini, about Reaté, appears to be more than doubtful. The Oscans were not unsusceptible to Greek civilization; they constructed an excellent alphabet of twenty-one characters from the Greek: *a, b, g, d, e, v, z, h, i, k, l, m, n, p, r, s, t, w, f, í* (sound between *i* and *e*), and *ú* (sound between *w* and *o*). The signs for *d* and *r* are interchangeable, according to pronunciation indicating either letter; the peculiar Italic spirant *f* takes the place of the aspirates; the *z* is vocal *s* as well as sibilant-dental (=*ts, ds*); rewritten in Greek and Latin, *ú* is regularly represented by *o* (ω), *í* occasionally by ε (ει), *e*.

The Etruscan supremacy in Campania from about B.C. 800 to 400 appears, as in Rome, to have been exercised by a small military aristocracy, and therefore very superficial. We have no writ-

ten traces of them other than a number of inscriptions on vases, partly in a mixed language mainly Oscan, so that it may be inferred that the Etruscan supremacy, even if it broke the national power of the Oscans, yet rather advanced than suppressed their language and culture.



But when the Romans reached the region, about B.C. 380, the Oscan race, as well as the Ausones, had disappeared, absorbed by the Campanians, closely related to the Samnites, who had rushed down from the mountains, and made a sudden end of the Etruscan rule. From that time the Romans designated by the name *lingua Opsca* or *Osca* (also *Obsca*, by a leaning to *obscaenus*) not only the language of these Campanians, but that of the whole Samnite race, which then spread extensively over Southern Italy. And, in fact, the monuments of the language that have come down to us, and which are recognizable as Oscan, are found in an area of about 1000 square miles, almost as extensive as the Samnite territory—i. e. in Samnium proper (the land of the Caraceni, the Pentri, and Caudini), in the provinces of their descendants the Frentrani in the east, the Hirpini in the south, as well as the adjacent parts of Apulia and Lucania, which they subdued, and above all, most numerously in Campania, whence the Mamertini carried the language to Bruttium (Vibo) and Sicily (Messana). The Oscan inscription of Nesce (Nersae) farther north, in the territory of the Aequicoli, is isolated. Finally, the coins of the Aurunci, who were perhaps conquered long before, have Oscan words and characters. The entire number of Oscan remains is about 200, and of these only four are important—the so-called municipal laws of Bantia (*tabula Bantina*); the treaty of temple-boundary between Nola and Abella (*cippus Abellanus*); the votive inscription (more properly an "inventory of temenos") of Agnoné; and the lead plate of Capua with the Curse of Vibia.

Oscan Inscription from Pompeii.

Chronologically these remains extend from about B.C. 400 to the early Empire. Only the inscriptions found north of the Aufidus and Silarus show the Oscan alphabet; the southern have Greek or, as in the case of the Tabula Bantina, Latin characters. However, as their name shows and tradition confirms, the Samnite tribes were derived from the Sabines: *Samnium=Sab(i)nium, Saf(i)nium;* on the coins of the Social War, *Safinum* (not gen. pl.); cf. the softening in Greek Σαυνῖται, Σαυνῖτις χώρα. According to an old tradition, the Sabines in a war with the Umbrians sent out their finest young soldiers as *ver sacrum* (q. v.), who formed the stock of the Samnite race, and who again continued its extension in Southern Italy by like means. This Samnite people must therefore have originally used a Sabellian dialect; but the language of none of the Oscan remains can pass as such. If this difficulty be solved, nothing remains but to assume that after the Campanians the other Samnites appropriated the language of the more civilized Oscans and kindred tribes whom they had conquered, so that they both used and propagated it.

The Oscan language, with a well-developed phonetic system and series of forms, held its own uncorrupted till its latest days. In Campania, where Capua once dared to dispute with Rome the sovereignty of Italy, arose an extensive and diversified literature, as shown by the example of the *ludi Atellani*, a kind of popular farce, which the Romans eagerly adopted, and to which they gave a peculiar form of their own.

Oscan Inscription known as "The Curse of Vibia." (Leaden plate found at Capua in 1876.)

As an example of the Oscan dialect the following from the Tabula Bantina may be cited:

PON CENSTVR BANSAE TOVTAM CENSAZET, PIS CEVS BANTINS FVST, CENSAMVR ESVF IN EITVAM, POIZAD LIGVD IOSC CENSTVR CENSAVM ANGETVZET.

In Latin:

Cum censores Bantiae populum censebunt quis civis Ban-

tinus erit censetor ipse et pecuniam quoia lege ii censores censere proposuerint (?)

These few lines afford instances of the principal peculiarities of Oscan, some of which are found also in the Old Latin. Such are the *p* for *c* (*q*), the use of *s* for the future sign, the ending *-d* in the ablative, the ending *-s* in the nominative plural of the second declension, the infinitive in *-m*, etc. Other characteristic features of the language are the retention of the diphthongs in all positions (whereas the Umbrian regularly loses them), the dative and ablative plural in *-ais* (Gk. *-αις*) and *-ois* (Gk. *-οις*), the locative singular in *ei* (Gk. *-ει*, as in *οἴκει*), and the genitive singular of *u*-stems in *-ous* (*us*). The vowel-system of the Oscan is the most elaborate of any of the European languages except the Greek, and the weakening of the vowels in unaccented syllables (so characteristic of the Latin) is almost unknown to it.

On the Oscan language see the chapter in Gröber's *Grundriss der romanischen Philologie*, vol. i. (Strassburg, 1893); Mommsen, *Die unteritalischen Dialekte* (Leipzig, 1850); Buck, *Vocalismus der oskischen Sprache* (Leipzig, 1892); Bronisch, *Die oskischen I und E Vocale* (Leipzig, 1892); Von Planta, *Grammatik der oskisch-umbrischen Dialekte* (Strassburg, 1892); and Conway, *The Italic Dialects* (announced in 1895). The Oscan inscriptions are edited by Zvetaieff in his *Sylloge Inscriptionum Oscarum*, with plates and a vocabulary (St. Petersburg, 1878), and cf. his *Inscriptiones Italiae Mediae Dialecticae* (Leipzig, 1884); and *Inscriptiones Italiae Inferioris Dialecticae* (Moscow, 1886). See also the articles ITALIA; TABULA BANTINA.

Oscillatio. A swing. See AEORA.

Oscillum. A dimunitive of *os*, and applied to the small mask or image (usually of Bacchus) suspended by the country people in their vineyards, so that the wind might turn it around in different

Oscilla. (Left-hand figure from marble in British Museum; right-hand figure from Maffei, *Gemmae Ant.* iii. 64.)

directions. The belief which led to this practice was that the spot upon which the god looked would become fruitful (Macrob. *Sat.* i. 7).

Oscĭnes. See AUGUR.

Osīris (Ὄσιρις). An Egyptian god, who, with his sister and wife Isis (q. v.), enjoyed in Egypt the most general worship of all the gods (Herod. ii. 42). He is the male god of the fructification of the land. From him comes every blessing and all life; he gives light and health; he causes the Nile to overflow with its fertilizing waters, and all things to continue in their established order. He is always represented in human shape and with a human head, as in the annexed illustration. His hue, as that of a god who bestows life, is green; his sacred tree is the ever-green tamarisk. The Greeks identified him with Dionysus. Originally he ruled as king over Egypt, where he introduced agriculture, morality, and the worship of the gods, until his brother Typhon (Set) contrived by deceit to shut him up in a chest and put him to death by pouring in molten lead. The murderer cast the chest into the Nile, which carried it into the sea. After long search the mourning Isis found the chest on the coast of Phœnicia at Byblus, and carefully concealed it. Nevertheless Typhon discovered it in the night, and cut the corpse into fourteen pieces, which he scattered in all directions. Isis, however, collected them again, and buried them in Philae or Abydus, in Upper Egypt. When Horus, the son of Osiris and Isis, grew up, he took vengeance upon Typhon when, after a most obstinate struggle, he had defeated him in battle. Although Osiris lived no longer upon the earth, he was ever regarded as the source of life. In the upper world he continues to live and work by the fresh power of his youthful son Horus, and in the lower world, of which he is king, the spirits of those who are found to be just are awakened by him to new life. His hue as ruler of the lower world is black, his robes white, and his symbol an eye opened wide as a sign of his restoration to the light of day.

Osiris.

Osiris, by his ever-renewed incarnation in the form of the black bull Apis, the symbol of generative power, assured for the Egyptians the endurance of his favour, and the consequent continuance of their life in this world and the next. In this incarnation he was called *Osarhapi* (Osiris-Apis), the origin of the Greek Serapis (q. v.) or Sarapis. The fortunes of Osiris were celebrated in magnificent annual festivals connected with mourning ceremonies, in which the Egyptians, as is observed by the ancients (e. g. Plutarch, *De Isiide et Osiride*, 32, and Aelian, *De Nat. Animalium*, 10, 46), lamented in Osiris the subsidence of the Nile, the cessation of the cool north wind (whose place was taken for a time by the hot wind Typhon), the decay of vegetation, and the shortening of the length of the day. The rites of Osiris find their counterpart in those of Dionysus-Zagreus held in Crete. See Wiedemann, *Die Religion der alten Aegypter* (1890); AEGYPTUS; HORUS; ISIS; TYPHON; ZAGREUS.

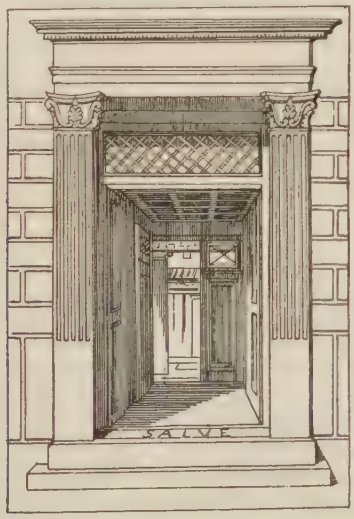
Osroēné (Ὀσροηνή). A district in the north of Mesopotamia, separated by the Chaboras from Mygdonia on the east, and from the rest of Mesopotamia on the south. Its capital was Edessa.

Ossa (Ὄσσα). A celebrated mountain in the north of Thessaly, connected with Pelion on the

southeast, and divided from Olympus on the northwest by the vale of Tempé. It is mentioned in the legend of the war of the Giants, respecting which see GIGANTES; TITANES.

Ossarium and **Ossuarium.** A receptacle of stone or other material which held the vase containing the bones and ashes of the dead, when deposited in sepulchral chambers. See COLUMBARIUM.

Ossarium of Agrippina. (Capitoline Museum.)



Ostia. A town at the mouth of the river Tiber, and the harbour of Rome, from which it was distant sixteen miles by land, situated on the left bank of the left arm of the river. It was founded by Ancus Martius, the fourth king of Rome, who is said to have established salt-works there, was a Roman colony, and became an important and flourishing town. The emperor Claudius constructed a new and better harbour on the right arm of the Tiber, which was enlarged and improved by Trajan. This new harbour was called simply Portus Romanus or Portus Augusti, and around it there sprang up a flourishing town, also called Portus. The old town of Ostia, whose harbour had been already partly filled up by sand, now sank into insignificance, and only continued to exist through its salt-works (*salinae*), which had been established by Ancus Martius. The modern town bears the same name as the old.

Ostia Nili. See NILUS.

Ostiarium. A tax called by Cicero (*Ad Fam.* iii. 8, 5) *exactio ostiorum*, and imposed in Cilicia, Syria, and probably other provinces. It was laid upon the doors of a house as indicating by their number the value of the property. The window-tax in England and France is a like impost in modern times.

Ostiarius. A janitor. See DOMUS.

Ostium. (1) The entrance-hall in the Roman dwelling-house. (See DOMUS.) (2) (*θύρα*). The inner door as opposed to the street door (*ianua*) on which cf. Vitruv. vi. 3; and Plaut. *Pers.* v. 1, 6. (See IANUA.) (3) The door which closed the front of the stalls in which the horses and chariots were stationed in the Circus. See illustration in article CIRCUS, pp. 352, 353.

Restoration of Entrance to Pompeian House, showing outer and inner Doors. (Rich.)

Ostorius Scapŭla. See SCAPULA.

Ostra. A town of Umbria (Ptol. iii. 1, 51).

Ostracismus (*ὀστρακισμός*, i. e. vote by potsherd, *ὄστρακον*). A mode of judgment by the people practised in various Greek States (Argos, Megara, Miletus), and especially at Athens, by which persons whose presence appeared dangerous to liberty were banished for a certain period, without, however, thereby suffering any loss in reputation or property. Ostracism was introduced at Athens in B.C. 509. It was applied (among others) to Themistocles, Aristides, Cimon, and Alcibiades, and was last exercised in 417 against a demagogue, one Hyberbolus, whose insignificance made the measure ridiculous, and so brought about its abolition (Thuc. viii. 73; Plut. *Nicias*, 11, *Alcibiades*, 13). Every year the question was put to the people, whether the measure appeared necessary: if they so decided (and it was only exceptionally that there was occasion for it), the citizens who possessed the franchise assembled in the market-place, and each wrote upon a sherd (*ὄστρακον*) the name of the person whose banishment he deemed desirable. The man whose name was found upon not less than 6000 sherds had to leave the country in ten days at latest, for ten or (later) five years. He could, however, at any time be recalled by a decree of the people; and the question, as before, was decided by not less than 6000 votes. (See Arist. *Pol.* iii. 13 § 15, 17 § 7, v. 3 § 3; Plut. *Arist.* 7; cf. Grote's *History of Greece*, chap. xxxi.).

Ostrakinda (*ὀστρακίνδα*) A game played by children in Greece, as follows: Two sets of boys stand facing one another, divided by a line drawn on the ground; a boy throws up a shell or a dish, white on one side and coloured black on the other, and each set of boys has one or other of these colours allotted to it. As he throws the shell, he calls *νὺξ ἡμέρα*: and if the white (i. e. day) side falls uppermost, the set which represents the day pursues, and the other set runs away; if the "night" side falls uppermost, the fugitives and pursuers are reversed. As soon as any boy is caught he is called *ὄνος*, and is out of the game (Plato, *Theaet.* p. 146 A). It is not precisely stated whether the game went on until all the fugitives were caught, nor whether there was a point of safety to be reckoned, but it is very likely that the game was played with varying rules at different times and places. The expression *ὀστράκου περιστροφή* seems to have become proverbial for a turn of fortune (Plato, *Rep.* vii. p. 521 C). See Pollux, ix. 111; Eustath. *ad Il.* xviii. 543; Plato, Com. in Meineke, *Fr. Com.* ii. 2, 664; see also Becq de Fouquières, *Les Jeux des Anciens*, p. 79; Grasberger, *Erziehung*, p. 57; and Becker-Göll, *Charikles*, ii. 37.

Otacilius. See VOLTACILIUS.

Otacilius Crassus. (1) A Roman who as consul in B.C. 263 besieged Syracuse and forced Hiero into a treaty with Rome. He was again consul in B.C. 246 (Ptol. i. 16). (2) A Roman general who in B.C. 215, at the time of the Second Punic War, ravaged the Carthaginian coast. He died in B.C. 211. (3) OTACILIUS PILUTUS. See VOLTACILIUS.

Otānes (*Ὀτάνης*). (1) A Persian who was the

first to suspect the imposture of Smerdis (q. v.), the Magian, and organized a conspiracy against him in B.C. 521. Later he invaded Samos for the purpose of placing Syloson, brother of Polycrates, at the head of the Samian government (Herod. iii. 68 and 141). (2) A Persian, the son of Sisamnes, who in B.C. 506 took command of the forces on the coast in place of Megabyzus. He captured Byzantium, Chalcedon, Lamponium, Antandros, and the islands of Lemnos and Imbros (Herod. v. 102; vi. 6).

Otho, L. ROSCIUS. A tribune of the plebs in B.C. 67, when he carried the law (*lex Roscia*) which gave to the *equites* a special place at the public spectacles, in fourteen rows or seats (*in quattuordecim gradibus sive ordinibus*), next to the place of the senators, which was in the orchestra. This law was very unpopular; and in Cicero's consulship (B.C. 63) there was such a riot occasioned by the obnoxious measure that it required all his eloquence to allay the agitation (Vell. Paterc. ii. 32; Cic. *Ad Att.* ii. 1).

Otho, M. SALVIUS. A Roman emperor from Jan. 15 to April 16, A.D. 69, who was born in 32. He was one of the companions of Nero in his debaucheries; but when the emperor took possession of his wife, the beautiful but profligate Poppaea Sabina, Otho was sent as governor to Lusitania, which he administered with credit during the last ten years of Nero's life. Otho attached himself to Galba, when he revolted against Nero, in the hope of being adopted by him, and succeeding to the Empire. But when Galba adopted L.

Otho. (Bust in British Museum.)

Piso, on the tenth of January, 69, Otho formed a conspiracy against Galba, and was proclaimed emperor by the soldiers at Rome, who put Galba to death. Meantime, Vitellius had been proclaimed emperor at Cologne by the German troops on the third of January. When this news reached Otho, he marched into the north of Italy to oppose the generals of Vitellius. He at first won several victories over Caecina, the general of Vitellius, but his army was defeated by Caecina and Valens in a decisive battle near Bedriacum, whereupon he put an end to his own life at Brixellum, in the thirty-seventh year of his age. His life is given by Suetonius and Plutarch.

Othryădes (Ὀθρυάδης). (1) A patronymic given to Panthoüs or Panthus, the Trojan priest of Apollo, as the son of Othrys. (2) The survivor of the 300 Spartan champions who fought with the 300 Argives for the possession of Thyrea. Being left on the field as dead, he was afterwards ashamed to return to Sparta as the only survivor, and slew himself on the spot (Herod. i. 82).

Othrys (Ὄθρυς). A lofty range of mountains in the south of Thessaly, extending from Mount Tymphrestus, or the most southerly part of Pindus, to the eastern coast. It shut in the great Thessalian plain on the south.

Otricoli, ZEUS OF. See OTRICULUM.

Otricŭlum. Now Otricoli; a town in Umbria, situated on the Tiber, near its confluence with the Nar, and six miles from Horta (Orte). Many interesting remains of antiquity have been excavated here, the most famous being the bust of Zeus, known as the Zeus of Otricoli, now in the Vatican Museum at Rome, and of which a representation will be found in the article ZEUS.

Otus (Ὦτος). One of the two Aloadae. See ALOADAE.

Oudendorp, FRANZ VON, a famous Dutch classical scholar, was born July 31, 1696, at Leyden, in the University of which place he received his training. In 1724 he was made Rector of the school at Nymegen, and in 1726 of the more important school at Haarlem, leaving the latter to accept a chair at Leyden as Professor of Eloquence and History (1740). He died Feb. 14, 1761.

Oudendorp was the last of the old school of Latinists which had flourished at Leyden from the time of Gronovius (q. v.), and his commentaries follow the stereotyped methods of his predecessors. He published an *Oratio de Litterariis C. Iulii Caesaris Studiis* (inaugural address, Leyden, 1740), and editions of the following classics: Iulius Obsequens (Leyden, 1720); Lucan (Leyden, 1728); Frontinus (Leyden, 1731; 2d ed. 1779); Caesar (Leyden, 1737); and Suetonius (2 vols. Leyden, 1751). After his death appeared his edition of Apuleius in 3 vols. (1785–1823).

Ounce. See UNCIA.

Ousias Dikē (οὐσίας δίκη). The same as ENOIKIOU DIKÉ (q. v.).

Ovatio. See TRIUMPHUS.

Oven. See FURNUS.

Overcoat. See AMICTUS; PAENULA.

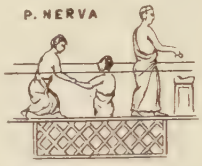
Ovidius Iuventĭnus, ALBIUS. See PHILOMELA.

Ovidius Naso, PUBLIUS. A very popular Roman poet, born March 21, B.C. 43, at Sulmo (now Solmona), in the country of the Paeligni, son of a wealthy Roman of an old equestrian family. He came at an early age to Rome, to be educated as a pleader, and enjoyed the tuition of the most famous rhetoricians of the time—Porcius Latro and Arellius Fuscus. It was not long before the instinct for poetry awoke in him with such power that it needed all his father's resolution to keep

him to his legal studies; his oratorical exercises were simply poems in prose, as is testified by one of his fellow-students—the elder Seneca (*Controv.* ii. 10, 8). After he had visited Greece and Asia to complete his education, he entered into political life at his father's desire, and filled several subordinate offices. But he soon withdrew again from public business, partly from an inclination to idleness, and lived only for poetry, in the society of the poets of his day, among whom he was especially intimate with Propertius. He came into note as a poet by a tragedy called the *Medea*, which is now lost, but is much praised by ancient literary critics; and about the same time he produced a series of amatory, and in some parts extremely licentious, poems.

When little more than a mere boy, as he says himself (*Tristia*, iv. 10, 69), he had a wife given him by his father; but this marriage, like a second one, ended in a divorce. He derived more satisfaction, as well as the advantage of contact with the court and with men of the highest distinction, from a third marriage, with a widow of noble family and high connections. To her influence, perhaps, should be referred the fact that he turned his attention to more important and more serious works. He had almost completed his best known work, the *Metamorphoses*, when suddenly, in A.D. 8, he was banished for life by Augustus to Tomi (Kustindje), on the Black Sea, near the mouths of the Danube. The cause for this severity on the part of the emperor is unknown; Ovid himself admits that there was a fault on his side, but only an error, not a crime (*Tristia*, i. 3, 37). At all events, the matter directly affected Augustus; and as Ovid describes his eyes as the cause of his misfortune, it is conjectured that he had been an unintentional eye-witness of some offence on the part of the frivolous granddaughter of the prince, the younger Iulia, and had neglected to inform the emperor of the matter. His indecent amatory poems, to which he also points as the source of the emperor's displeasure, can at most only have been used as a plausible excuse in the eyes of the public, as they had been published more than ten years before. See Deville, *Sur l'Exil d'Ovide* (Paris, 1859); Appal, *Quibus de Causis Ovidius Relegatus Sit* (Leipzig, 1872); Körber, *De Ovidii Relegationis Causis* (St. Petersburg, 1883); and Thomas in the *Revue de Philologie*, xiii. 47.

After a perilous voyage Ovid reached the place of his exile in the winter of A.D. 10–11; and there, far from his beloved wife and his daughter Perilla, who had inherited the poetic talent of her father, far from his friends and all intercourse with men of genius, he had to pass the last years of his life in desolation among the barbarous Getae. Even in his exile his poetic talent did not fail him. It was then that he composed his poems of lamentation, entitled the *Tristia*, and his letters from Pontus, which afford touching proofs of his grief, though also of his failing powers. His ceaseless prayers and complaints had succeeded in softening Augustus, when the latter died. All his efforts to gain forgiveness or some alleviation of his condition met with no response from Tiberius, and he was compelled to close his life, broken-hearted and in exile, A.D. 17 or 18.



His extant works are: (1) Erotic poems (*Amores*), published about B.C. 14, in five books, and again about B.C. 2, in three books. The latter edition is the one we possess; some of its forty-nine elegies depict, in a very sensual way, the poet's life, the centre of which is the unknown Corinna, who by later writers was identified with Iulia, the daughter of Augustus (Sid. Apoll. xxiii. 159), but with no probability. (2) Letters (*Epistulae*), also called *Heroïdes*, rhetorical declamations in the form of love-letters sent by heroines to their husbands or lovers, twenty-one in number; the last six of these, however, and the fourteenth, are considered spurious. (3) Methods for beautifying the face (*Medicamina Faciei*), advice to women respecting the art of the toilette; this poem has come down to us in an incomplete form. (4) The Art of Love (*Ars Amandi* or *Amatoria*), in three books, published about B.C. 2, advice to men (books i. and ii.) and women (book iii.) as to the methods of contracting a love-affair and insuring its continuance—a work as licentious as it is original and elaborate. (5) Cures for Love (*Remedia Amoris*), the pendant to the previous work, and no less offensive in substance and tone. (6) The fifteen books of the Transformations (*Metamorphoses*), his most important work. It is composed in hexameter verse; the material is borrowed from Greek and (to a less extent) from Roman sources, being a collection of legends of transformations, very skilfully combining jest and earnest in rapid alternations, and extending from chaos to the apotheosis of Caesar. When it was completed and had received the last touches, the work was cast into the flames by Ovid in his first despair at banishment, but was afterwards rewritten from other copies. (7) A Calendar of Roman Festivals (*Fasti*), begun in the last years before his banishment, and originally in twelve books, corresponding to the number of the months. Of these only six are preserved, probably because Ovid had not quite completed them at Rome, and had not the means to do so at Tomi. It was originally intended for dedication to Augustus. After Augustus's death the poet began to revise it, with a view to its dedication to Germanicus; he did not, however, proceed with his revision beyond the first book. It contains, in elegiac metre, the most important celestial phenomena and the festivals of each month, with a description of their celebration and an account of their origin according to the Italian legends. (8) Poems of Lament (*Tristia*), to his family, to his friends, and to Augustus, belonging to the years A.D. 9–13, in five books; the first of these was written while he was still on his journey to Tomi. (9) Letters from Pontus (*Epistulae ex Ponto*), in four books, only distinguished from the previous poems by their epistolary form. (10) *Ibis*, an imitation of the poem of the same name by Callimachus, who had attacked, under this name, Apollonius of Rhodes, consisting of imprecations on a faithless friend at Rome, written in the learned and obscure style of the Alexandrian poets. (11) A short fragment of a didactic poem on the fish in the Black Sea (*Halieutica*), written in hexameters. Besides these Ovid wrote, during his exile, numerous poems which have been lost, among them a eulogy of the deceased Augustus in the Getic tongue—a sufficient proof of the strength of his irrepressible love for poetry. In fact, in this respect he is distinguished above all other Roman poets. Perhaps no one ever composed with less exertion; yet at the same time no one ever used so important a faculty for so trivial a purpose. His poetry is for the

most part simply entertaining; in this kind of writing he proves his mastery by his readiness in language and metre, by his unwearied powers of invention, by his ever-ready wit, elegance, and charm, though, on the other hand, he is completely wanting in deep feeling and moral earnestness. By his talent, Ovid as well as Vergil has had great influence on the further development of Roman poetry, especially with regard to metre. Many imitated his style so closely that their poems were actually attributed to himself. Among these, besides a number of *Heroïdes* (see above), we have the *Nux*, the nut-tree's complaint of the ill-treatment it met with, a poem in elegiac verse, which was at all events written about the time of Ovid; a poem on cosmetics, *De Medicamine Faciei*, the *Consolatio ad Liviam* on the death of Drusus; and a number of jointed skits such as the *De Pulice*, *De Vetula*, various Priapeia, etc.

Bibliography.—Of the MSS. of Ovid the best are the Codex Petavianus of the eighth century (Vatican); the Codex B (Arundelianus) of the ninth century (British Museum); two at Munich (D and E) and one (G) at Göttingen of the twelfth century; the Codex Puteaneus of the tenth century (Paris), which is said to be one of the best classical MSS. in existence; the Codex Marcianus of the eleventh century (Florence). For an elaborate account of the MSS. and a vast collection of variant readings, see the edition of N. Heinsius cited below.

Editions of the whole of Ovid are those by D. Heinsius, 3 vols. (Leipzig, Leyden, 1629); N. Heinsius, 3 vols. (Amsterdam, 1652; revised 1661); Burmann, 4 vols. (Amsterdam, 1727); Merkel and Ehwald (Leipzig, 1888 foll.); Reise, last ed. 3 vols. (Leipzig, 1889 foll.); and by Zingerle and others (Prague, 1883 foll.). Separate editions of the different works, with notes, are as follows: of the *Amores* by L. Müller (Leipzig, 1867); of the *Heroïdes* by Palmer (London, 1874) and Shuckburgh (London, 1879); of the *Ars Amatoria* by Herzberg (with translation, Stuttgart, 1854) and Williams (London, 1884); of the *Metamorphoses* by Zingerle (Prague, 1885); of the *Fasti* by Merkel (Berlin, 1841), Peter (Leipzig, 1879), Keightley (London, 1848), and Paley, 3d ed. (London, 1888); of the *Tristia* by Owen (London, 1889); of the *Epistolae ex Ponto* by Korn, critical notes (Leipzig, 1868), and bk. i. by Keene (London, 1887); of the *Halieutica* by Haupt (Leipzig, 1838); of the *Ibis* by R. Ellis (Oxford, 1881); of the *Nux* by Lindemann (Zittau, 1844). The spurious Ovidiana were collected and printed in Goldast's *Catalecta Ovidii* (Frankfort, 1610), some of them being of mediæval origin. On Ovid's life see Nageotte, *Ovide* (Dijon, 1872), and especially Leutsch in Ersch and Gruber's *Encyclopädie* (1836). No authentic portraits of the poet are known to exist. On Ovid's verse see L. Müller, *De Re Metrica*, xci. 408; and Schmidt, *De Ovidii Hexametris* (Cleves, 1856).

Ovīlé. Literally "sheep-fold." An enclosure in the Campus Martius at Rome in which the tribes and centuries were separately assembled before giving their votes at the Comitia (Livy, xxvi. 22). It was partitioned off with a railing, and from it the voters passed out over a bridge or gangway (*pons suffragiorum*) to throw their ballots (*tabellae*) into the voting basket (*cista*). See Comitia.

Voters passing out from the *Ovilé*. (Coin of Nerva.)

Ovum. An egg. See Circus, p. 353. For eggs as an article of diet, see Victus. They formed the first course at a dinner; hence the phrase *ab ovo usque ad mala*, "from beginning to end" (Hor. *Sat.* i. 3).

Oxia Palus or **Oxiānus Lacus.** Now the Sea of Aral; a lake or sea formed by the rivers Iaxartes and Oxus (Ammian. Marc. xxiii. 6, 59).

Oxus (Ὦξος). The Jihoun or Amou. A great river of Central Asia, forming the boundary between Sogdiana on the north and Bactria and Margiana on the south, and falling into the Caspian. The Jihoun now flows into the southwestern corner of the Sea of Aral; but there are still distinct traces of a channel in a southwesterly direction from the Sea of Aral to the Caspian, by which at least a portion, and probably the whole, of the waters of the Oxus found their way into the Caspian. The Oxus occupies an important place in history, having been in nearly all ages the extreme boundary between the great monarchies of southwestern Asia and the hordes which wander over the central steppes. Herodotus does not mention the Oxus by name, but it is supposed to be the river which he calls Araxes.

Oxybăphum (*ὀξυβάφον*). A liquid measure of the Greeks containing about fifteen drams. It was the same as the Roman *acetabulum* (q. v.).

Oysters. See Victus.

Ozŏlae (Ὀζόλαι). See Locri.

P

P, as a symbol.

In Greek.—Π = Πούβλιος, *πρεσβύτερος* (*Arch. Zeit.* 1876, p. 57).

[illegible] = ποδῶν.

[illegible] = Πάναμος. ΠΒ = Πάναμος δεύτερος.

[illegible] Π = Ποπιλίου.

ΠΠ = Πριμιπιλάριος (Waddington, *Le Bas*, 1963), *πραιπώσιτος* (*Rev. Arch.* ii. 263, 1884).

ΠΠ = *πατρὶ πατρίδος*.

As a numeral = 16 (old system), *π′* = 80, *,π* = 80,000, [illegible], [illegible] = *πεντάκις δέκα*, *π. ἕκατον*, *π. χίλιοι*, *π. μύριοι*.

In Latin.—P = pagina, pagus, pars, patria, Parthica, per, periit, posteri, praefectus, praetor, prima, princeps, pro, probum, proconsul, procurator, provincia, Publius, pagani, pater, patronus.

Ꝑ = puella, Publia.

P·A = pondo argenti, provincia Africa.

P·B·M = parentes (patrono) bene merenti.

P·C = patres conscripti, patronus civitatis (coloniae, collegii, corporis), pia constans (legio), pietatis causa, post consulatum, potestate censoria.

P·D·D = posuit dedicavitque, publice decreto decurionum.

P·D·D·E = populo dare damnas esto.
P·D·D·P·P = posuerunt decreto decurionum pecunia publica.
P·F = pater filio, pia fidelis, pius felix.
P·F·K·F = pater filio carissimo fecit.
P·G·S = provincia Germania superior.
P·H·O·ADQ·E·R·P·V = placere huic ordini atque e re publica videri.
P·I = pons iussit.
P·K = praetor candidatus.
P·L·L = posuit laetus libens, pro ludis luminibus.
P·M = patronus municipii, plus minus, pontifex maximus, (et) post mortem (nihil), pro meritis.
P·N = patrimonii nostri, praeses noster, provincia Numidia.
P·O = post obitum, praetorio, princeps optimus.
P·P = pater patriae, pater posuit, parentes prissimae, patronus perpetuus, pecunia publica, populo postulante, portorium publicum.
P·P·C = prentissimo ponendum curavit.
P·P·K = praepositus castris.
P·P·L = Publiorum duorum liberti.
P·P·P = pater pius posuit, proconsul pater patriae, pro pretate posuit, propria pecunia posuerunt, praepositus praeses provinciae, primipilaris pro parte, proprio publice positus.
P·P·P·C = primipilaris patronus coloniae.
P·P·P·F = patri pro pietate fuerunt.
P·Q = pedes quadrati, populusque.
P·Q·Q·V = pedes quoquoversus.
P·Q·S = posterisque suis.
P·R = populus Romanus, post reditum, provincia Raetia, publice restituit.
P·S = pater sacrorum, proprio sumptu, proxumis suis.
P·S·P·D = pecunia sua posuit dedicavit.
P·S·R = pecunia sua restituit, procurator summarum rationum.
P·T·M = posuit titulum memoriae.
P·V = praefectissimus vir, pia vindex (legio), portus uterque, praefectus urbi.
P·V·A = pius vixit annos.

Pacăris. See Hypacyris.

Pacatiāna. See Phrygia.

Pacātus, Latīnus Drepanius. A Roman rhetorician of Burdigala (Bordeaux), a younger contemporary and friend of the poet Ausonius. We possess from his pen a panegyric on the emperor Theodosius the Great, delivered before the Senate at Rome in B.C. 389. It is distinguished beyond the other speeches of this class by a certain vigour of thought resembling Tacitus, and is also of value as an historical authority. It is edited, with notes, by Arntzen (Amsterdam, 1753), and by Bährens (Leipzig, 1874).

Paccius Antiŏchus. A physician of the first century A.D., who made a fortune from a prescription which he used very successfully and the secret of which he bequeathed to the emperor Tiberius, who ordered it to be placed in all the public libraries (Scribon. Larg. *De Compos. Medicam.* ch. xxiii. p. 97).

Paches (Πάχης). An Athenian commander who, in the Peloponnesian War, took Mitylené and Lesbos (B.C. 427). On his return home an accusation was brought against him, the purport of which is not now known. Perceiving his condemnation to be certain, he stabbed himself in the presence of his judges (Thuc. iii. 18–49; Plut. *Nic.* 6).

Pachymĕres, Georgius. A Byzantine historian, born about A.D. 1242 at Nicaea. He wrote an account of the emperors Michael Palaeologus and Andronicus Palaeologus the Elder, in thirteen books, which have been edited by Bekker (Bonn, 1835).

Pachȳnus (Πάχυνος) or **Pachȳnum** (Πάχυνον). A promontory at the southeastern extremity of Sicily. Its modern name is Capo Passaro. See Sicilia.

Pacŏrus. (1) A son of Orodes I., king of Parthia. His history is given under Arsaces XIV. (2) A king of Parthia. See Arsaces XXIV.

Pactōlus (Πακτωλός). A small but celebrated river of Lydia, rising on Mount Tmolus, and flowing past Sardis into the Hermus. The golden sands of Pactolus have passed into a proverb, and were one of the sources of the wealth of ancient Lydia (Herod. v. 101; Verg. *Aen.* x. 142). For the fabulous origin of the gold, see Midas.

Pactyé (Πακτύη). A town in the Thracian Chersonesus, on the Propontis, to which Alcibiades retired when he was banished by the Athenians, B.C. 407 (Herod. vi. 36).

Pacuvius, Marcus. A Roman tragedian, born about B.C. 220 at Brundisium. He is described as being the son of Ennius's sister, and pupil of the poet (Euseb. *Chron.* 156, 3; Cic. *Brut.* 64). He spent most of his life at Rome, where he gained his livelihood as a dramatic poet and as a painter. In his old age he returned to Lower Italy, and died there, at the age of ninety, about B.C. 130 (Gell. i. 24). He is the first Roman dramatist who confined himself to the composition of tragedies. Titles and fragments of some thirteen of his imitations of Greek plays are preserved, as well as fragments of a *fabula praetexta* entitled *Paulus*, whose hero was probably the victor of Pydna, Aemilius Paulus. If this small number justifies any opinion on his poetical activity, he was far less productive than his predecessor Ennius and his successor Attius. Nevertheless, he and Attius were considered the most important tragedians of Rome. In the judgment of literary critics, who followed the traditions of the Ciceronian Age, he was preferred to Attius for finish and learning, but Attius excelled him in fire and natural power (Hor. *Epist.* ii. 1, 55, 56; Quint. x. 1, 97). His style was praised for its copiousness, dignity, and stateliness, though Cicero (*Brutus*, 258) declines to give him credit for pure and genuine Latinity. Even in Cicero's time, however, the revival of his plays was often welcomed by Roman audiences, and for his dignity and command of language he was often styled *doctus*. Pacuvius was also successful in his painting, and one of his works in the temple of Hercules in the Forum Boarium was greatly admired (Gell. xiii. 2, 2).

The dramatic fragments of Pacuvius are edited by Ribbeck (Leipzig, 1871). See a paper by Prof. Nettleship in the (English) *Journal of Philology*, xviii. 263 foll.; and Mommsen, *Hist. of Rome*, iii. p. 536 (American ed.).

Padus. Now the Po; the chief river of Italy, identified by the Roman poets with the fabulous Eridănus, from which amber was obtained. This notion appears to have arisen from the Phœnician vessels receiving at the mouths of the Padus the amber which had been transported by land from the coasts of the Baltic to those of the Adriatic.

The name is said to be derived from the Keltic *padi*, "pine-tree" (Pliny, *H. N.* iii. 122). By the Ligurians it was called BODENCUS. The Padus rises on Mount Vesula (Monte Viso), in the Alps, and flows in an easterly direction through the great plain of Cisalpine Gaul, which it divides into two parts, Gallia Cispadana and Gallia Transpadana. It receives numerous affluents, which drain the whole of this vast plain, descending from the Alps on the north and the Apennines on the south. These affluents, increased in the summer by the melting of the snow on the mountains, frequently bring down such a large body of water as to cause the Padus to overflow its banks. The whole course of the river, including its windings, is about 450 miles. About twenty miles from the sea the river divides itself into two main branches, and falls into the Adriatic Sea by several mouths (the ancients enumerated seven), between Ravenna and Altinum. Strabo believed the Padus to be the largest river in Europe after the Danube, and Vergil calls it *fluviorum rex* (*Georg.* i. 482).

Padūsa. A canal running from the Padus to Ravenna, and now called the Canal of St. Alberti (Verg. *Aen.* xi. 457).

Paean (Παιάν, Παιήων, Παιών, "the healer," "helper"). In Homer (*Il.* v. 401, 899) the physician of the Olympian gods; then an epithet of gods who grant recovery and deliverance, especially of Apollo. The paean, which appears in Homer (*Il.* i. 473; xxii. 391), was connected originally with Apollo and his sister Artemis. It was a solemn song for several voices, either praying for the averting of evil and for rescue, or giving thanks for help vouchsafed. The name was, however, also used in an extended sense for invocations to other gods. The paean was struck up by the generals before the battle and by armies on the march against the enemy as well as after the victory. Similarly it was sounded when the fleet sailed out of a harbour. Paeans were sung at entertainments between the meal and the carousal, and eventually also at public funerals.

Paeania (Παιανία). A deme of Attica belonging to the tribe Pandionis. It was the deme of Demosthenes, the orator.

Paedagōgus (παιδαγωγός, "boy-leader"). The name among the Greeks for the slave who had the duty of looking after the son of his master while in boyhood, instructing him in certain rules of good manners, and attending him whenever he went out, especially to school and to the palaestra and gymnasium. With the Romans in earlier times it was an old slave or freedman who had a similar duty as *custos;* but after it became the custom to have even children taught to speak Greek, his place was filled by a Greek slave, who bore the Greek name and had the special duty of instructing his pupils in Greek. See EDUCATION; LUDUS LITTERARIUS.

Paedonŏmus (παιδονόμος). At Sparta, the overseer of the education of the young. See EDUCATION.

Paedotrĭbes (παιδοτρίβης). In Greece, the master who imparted gymnastic instruction in the palaestra. See ATHLETAE; EDUCATION; GYMNASIUM; PALAESTRA.

Paemāni. A Germanic people in Gallia Belgica (Caes. *B. G.* ii. 4).

Paenŭla (φαινόλης). The Roman name for a mantle of shaggy frieze or leather, thick and dark-coloured, without sleeves, buttoned or stitched up in front, in the direction of its length. A hood (*cucullus*) was generally fastened on to it, and drawn over the head (Plĭny, *H. N.* xxiv. 88). It was chiefly worn by people of low rank and slaves, but also by the higher classes, and even by ladies, in bad weather, on a journey, and in the country.

Paenula. (Statuette in the British Museum.)

Paeŏnes (Παίονες). A powerful Thracian people who, in historical times, inhabited the whole of the north of Macedonia from the frontiers of Illyria to some little distance east of the river Strymon. Their country was called PAEONIA (Παιονία). They were troublesome neighbours to the Macedonians, whose territories they frequently raided; but Philip, the father of Alexander the Great, at last subdued them (Diod. xix. 2, etc.).

Paeonius (Παιώνιος). (1) A Greek sculptor of Mendé in Thrace. About B.C. 436 he was employed in the decoration of the temple of Zeus in Olympia. According to Pausanias (v. 10 § 6), he was the sculptor of the marble groups in the front, or eastern, pediment of the temple, representing the preparations for the chariot-race between Pelops and Oenomaüs. (See OLYMPIA.) Important portions of these have been brought to light by German excavators. He was also the sculptor of the figure of Niké, more than life-size, dedicated by the Messenians (Pausan. v. 26 § 1), which has been restored to us by the same means. With the exception of the head, it is in fairly good preservation. (2) See EUTROPIUS. (3) An architect of Ephesus who, with Demetrius, completed the great temple of Artemis in that city. With Daphnis, a Milesian, he began the so-called Didymaeum or temple of Apollo Didymus at Miletus—a structure, however, which was never finished (Herod. vi. 19; Pausan. vii. 5, 4). See EPHESUS.

Paeŏplae (Παιόπλαι). A people of Paeonia on the Strymon (Herod. v. 15; vii. 113).

Paerisădes (Παιρισάδης) or **Parisădes** (Παρισάδης). The name of two kings of Bosporus, the first of whom ruled in the fourth century B.C. and the second in the first century B.C. The latter ceded his kingdom to Mithridates the Great (Strabo, p. 310).

Paestānus Sinus. See PAESTUM.

Paestum, called **Posidonia** (Ποσειδωνία) by the Greeks. A city in Lucania, situated four or five miles south of the Silarus, and near the bay, which derived its name from the town (Paestanus Sinus: Gulf of Salerno). It was colonized by the Sybarites about B.C. 524, and soon became a powerful and flourishing city. It was captured by the Lucanians about B.C. 430 and gradually lost its Greek characteristics. Under the Romans it gradually sank in importance, and in the time of Augustus it is mentioned only on account of the beautiful roses grown in its neighbourhood. The ruins of

Ruined Temple at Paestum.

two Doric temples at Paestum are among the most remarkable remains of antiquity. See Labrouste, *Les Temples de Paestum* (1877), and TEMPLUM.

Paetus. A cognomen in many Roman gentes; it signified a person who had a slight cast in the eye. This was regarded by the Romans as giving piquancy to beauty, and was ascribed by them to Venus, as in the line from the *Priapea:*

"Minerva flavo lumine est, Venus paeto"

which explains the passage in Horace (*Sat.* i. 3, 45), where the fond father calls his squinting son *paetus*, i. e. "Venus-eyed."

Paetus Thrasea. See THRASEA.

Paganalia. In Italy, a movable festival of the old village communities (see PAGUS), celebrated after the winter-sowing in January, on two days separated by an interval of a week. On this occasion a pregnant sow was sacrificed to Tellus or to Ceres, who, at a later period, was worshipped together with Tellus.

Paganĭca, sc. PILA. A ball stuffed with down and covered with leather. See PILA.

Pagānus. See PAGUS.

Pagăsae (Παγασαί) or **Pagăsa.** A town of Thessaly, on the coast of Magnesia, and on the bay called after it SINUS PAGASAEUS or PAGASĬCUS. It was the port of Iolcos, and afterwards of Pherae, and is celebrated in mythology as the place where Iason built the ship Argo. Hence the adjective *Pagasaeus* is applied to Iason, and is also used in the general sense of Thessalian. Apollo is called Pagasaeus from having a temple at the place.

Pagĭna. See PAPYRUS.

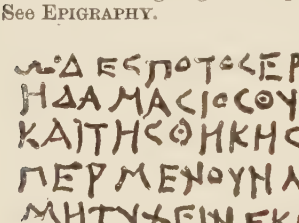
Pagus (πάγος). In Italy, in ancient times, the pagus was a country district with scattered hamlets (*vici*). The same name was given to its fortified centre, which protected the sanctuaries of the district and served as a refuge in time of war. The separate districts were members of a larger community. After cities had developed out of the places where the people of these districts assembled, the pagi were either completely merged in their territorium or continued to exist merely as geographical districts, without importance for administration, or as subordinate village communities. In Rome the earliest population consisted of the *montani*, the inhabitants of the seven hills of the city, and the *pagani*, the inhabitants of the level ground of the city. Out of the two Servius Tullius made the four city tribes. The country tribes doubtless arose similarly out of pagi, the names of which were in some cases transferred to them. Like the old division into *pagani* and *montani*, the old districts under the authority of *magistri* long continued to exist for sacred purposes. They had their special guardian deities, temples, and rites, which survived even the introduction of Christianity. To the district festivals belonged especially the Paganalia (q. v.), the Ambarvalia (q. v.), at which the festal procession carefully traversed the old boundaries of the district; and, lastly, the Terminalia (see TERMINUS). The word *paganus* is sometimes used as equivalent to *armatus* or *sagatus* = *miles*, and hence opposed to *togatus*. Cf. Pliny, *Epist.* x. 86, 2; *Hist.* iii. 24; and see further Peck's note on Suet. *Aug.* xxvii. On the pagus in general, see Mommsen, *Hist. of Rome*, i. pp. 63 foll. (Amer. ed.).

Pagus (Πάγος). A conical hill some 500 to 600 feet high, a little to the north of Smyrna. Here was a shrine of Nemesis and a celebrated spring.

Pail. See SITULA.

Painting. See PICTURA.

Pala. (1) A spade with an iron blade used for gardening and digging in the earth (Colum. x. 45). (2) A modern shovel of the same form, used for winnowing grain (Cato, *R. R.* 11). The shape of the pala is shown in the accompanying illustration. (3) The bezel of a ring (Cic. *De Off.* iii. 9).

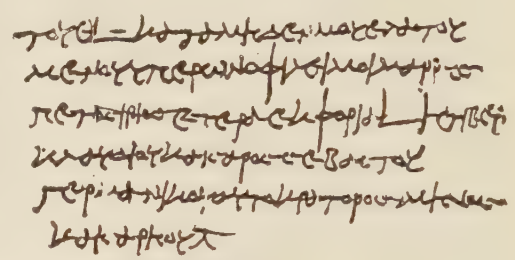


Pala. (Fabretti, *Inscr. Ant.* p. 574.)

Palace of the Caesars. See PALATIUM.

Palaemon (Παλαίμων). A Greek sea-god. See MELICERTES.

Palaemon (Παλαίμων), QUINTUS REMMIUS. A Latin grammarian of Vicetia (Vicenza), the son of a female slave. He acquired a learned education while accompanying his master's son to school, and, after he had been set free, taught at Rome in the first half of the first century after Christ, under Tiberius and Claudius, with extraordinary success in spite of his thoroughly disreputable character. The earlier scholars, and especially Varro, had made the older literature the centre of their linguistic studies. Palaemon, as head of a new school, devoted himself especially to Vergil, just as Greek literary criticism had concentrated itself on Homer. He seems to have treated grammar in the practical spirit of a clever schoolmaster, and to have done his best to deride the scientific labours of Varro. His grammar (*ars*, Juv. vii. 251) was doubtless much consulted by later grammarians. It is now lost. The grammar that bears his name is wrongly attributed to him. (See Prof. Nettleship in the [English] *Journal of Philology*, xv. 192). Palaemon is to be remembered for having first introduced Vergil as a text-book into the Roman schools.



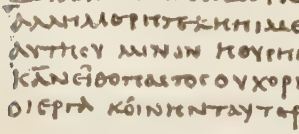
Palaeography (from παλαιός + γράφειν). The science which has to do with the study of ancient manuscripts, comprising their decipherment, and the determination of their date, genuineness, and origin. Strictly speaking, palaeography deals only with the external characteristics of a codex, while the study and criticism of its internal characteristics fall under the general department of Textual Criticism. (See TEXTUAL CRITICISM.) Palaeography also differs from epigraphy in being concerned with writings upon leather, papyrus, vellum, and other soft substances, while epigraphy treats of writing engraved upon stone, metal, etc. See EPIGRAPHY.

Papyrus of Artemisia (Third Century, B.C.)

The oldest existing manuscripts are the papyri found in the Egyptian tombs, the most ancient of all being the so-called Papyrus Prisse, which is the oldest book in the world, dating from the eleventh dynasty, and therefore earlier than the date at which the Book of Exodus was composed. The oldest classical manuscript is the papyrus containing the Greek text of the *Antiope* of Euripides, which dates from about the second century B.C. See PAPYRUS, p. 1173.

The subject matter of palaeography is the substance on which the writing was done and the instruments which the writers used. The writing materials were papyrus (πάπυρος), early used in Egypt; skins of animals, used by the Egyptians as early as the fourth dynasty and by the Greeks (Herod. v. 58); parchment and vellum (διφθέραι, *membrana Pergamena*), used by both Greeks and Romans (Boissonade, *Anecd.* i. 420; Cic. *Ad Att.* xiii. 24; Martial, xiv. 184 and 186); and paper made of the cotton-plant (ξυλοχάρτιον,

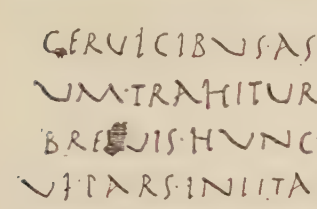
Receipt in Greek Cursive. (A.D. 20.)



ξυλότευκτον, *charta bombycina, gossypina, Damascena*), first imported from the East by the Greeks, but hardly used before the twelfth century A.D. (Theoph. *Sched. Divers. Artium*, i. 24, ed. Hendrie). The implements used for writing on these substances were the reed-pen (κάλαμος, δόναξ γραφεύς, σχοῖνος, *calamus, canna*), the use of which survived in Italy to the thirteenth century; the brush (κονδίλιον, *peniculus, penicillus*), used for writing in gold; and the quill-pen (*penna*), not mentioned before the fourth century (Ammian. Marcell. *Excerp.* ed. Gronovius, p. 512, 1693; Isid. *Orig.* vi. 13).

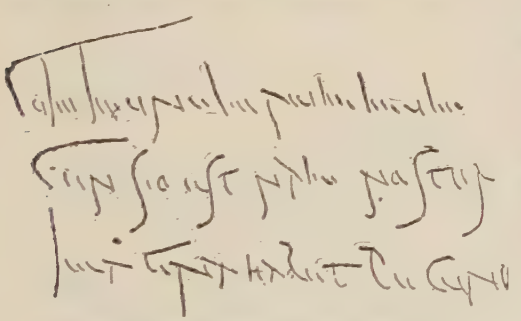
Ink, usually black, but sometimes brown, red, and purple, and in the Middle Ages green, yellow, etc., was called μέλαν or γραφικὸν μέλαν, μελάνιον, *atramentum* (*librarium*), and *incaustum*. Red ink was μελάνιον κόκκινον, *minium, rubrica*. Gold writing-fluid and (rarely) silver ink were used in ornamentation. Other collateral implements were the ruler (κυκλοτερὴς μόλιβδος, *regula*), the knife-eraser (*rasorium, novacula*), the pen-knife (σμίλη, *scalprum librarium*), and pricker or compass (διαβάτης, *circinus*). For the removal of recent writing, a sponge was used (Martial, iv. 10). A pointed piece of lead (μόλυβδος, *plumbum*) performed the office of the modern *lead*-pencil. See CIRCINUS; CODEX; PAPYRUS; WRITING AND WRITING MATERIALS.

The earliest form of manuscript was the roll. For full details, see LIBER. From the manuscript, the writing was often erased to make room for new matter. In this case it was called a palimpsest (παλιμψηστος). See PALIMPSESTUS.



The copyists of the manuscripts (γραμματεῖς, *scribae*) were in classical times usually slaves especially trained; in the Middle Ages, monks. For short-hand writers (*notarii*), see NOTAE.

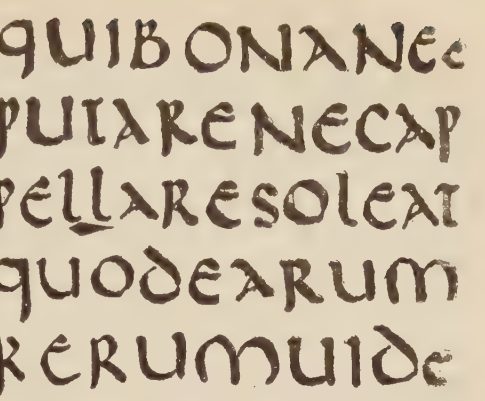
There are four sorts of Greek writing: capitals, uncials, cursives, and minuscules. The capitals are found chiefly in manuscripts, in letters and initial letters. The uncials are the most common form of letters in ancient books, and resemble the modern capital. The breathings and accents are generally omitted, and the iota subscript is written by the side of its vowel—at the right. The cursive was gradually developed out of the uncial,



Herondas. (Uncials of the Third Century, B.C.)

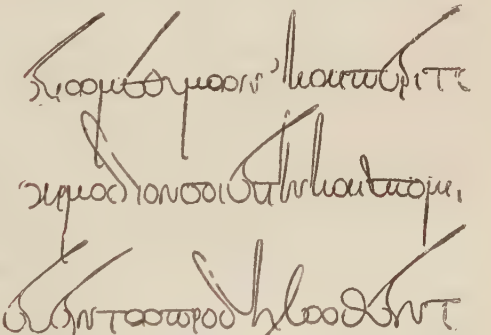
from which it differed more and more. It is found in manuscripts of the second century B.C. and as late as the seventh century A.D. Minuscules prevail after the ninth century A.D.

Latin Poem on the Battle of Actium. (Before A.D. 79.)



There are also the same four varieties of writing in Latin manuscripts. The capitals appear in a poem by Rabirius (?) on the battle of Actium found at Herculaneum, in the Vatican and Florence Vergils, and in the Paris Prudentius. The uncials, which are distinguished by the rounded forms of the letters (especially U), were perfected in the fourth century A.D. and lasted till the ninth. The Veronese palimpsest of Livy is in uncials. There are many specimens of the Roman cursive in the *graffiti* of Pompeii (see vol. iv. of the *Corp. Inscrip. Lat.*) and elsewhere. It varied at different periods, and gave rise to different mediæval forms of writing — e. g. the Lombardic, Visigothic, etc. The Roman minuscules were not developed until the end of the eighth century A.D.

Pompeian Wall Inscription. (First Century, A.D.)



in the school of Alcuin, and reached their perfection in the twelfth century. They are the source of the earliest Italic characters. If a Latin manuscript is wholly in capitals, it is earlier than the eighth century; and when the words are not spaced it is earlier than the seventh. Stiff, upright characters denote a late date. The uncial writings are usually earlier than the eighth century; the minuscule prevails after the ninth; a great number of abbreviations indicates the eleventh century. If a text is written in cursive that has great facility in its ligatures, it is presumably antique. See ALPHABET.

The greatest difficulty in deciphering manuscripts comes from the contractions, abbreviations, and ligatures which they contain. Thus, the copyists in mediæval France used more than 5000 forms of contraction. The following are a few that are common, and hence may serve as illustrations: *qm̄* = *quum* or *quoniam*; *qūō* = *quomodo*; *.n.* = *enim*; ÷ = *est*; *oms̄* = *omnes*; *hōiñ* = *hominum*; *āūt* = *autem*; *ā* = *annos*; p = *prae*; pp. = *prope*. Some of the mediæval abbreviations we still find in common use, as *e. g.* for *exempli gratia*; *i. e.* for *id est*; *viz.* for *videlicet*.

Cicero, De Republica. (Roman Uncials of the Fourth Century, A.D.)

Imperial Letter in Greek Cursive (A.D. 756.)

Palaeopŏlis (Παλαιόπολις). See NEAPOLIS.

Palaephătus (Παλαίφατος). (1) A Greek author who followed the Peripatetic philosophy. He com-

posed in the fourth century B.C. an historical and allegorical explanation of Greek myths in several books. Of this work we possess only a short abstract, probably composed in the Byzantine Age, under the title *On Incredible Tales* (Περὶ Ἀπίστων). In former times it was a favourite school-book. It has been edited by Westermann in his *Mythographi* (Brunswick, 1843). (2) An Egyptian or Athenian Greek, a rhetorician, whose best-known work called *Troica* (Τρωϊκά) is frequently mentioned by the ancient grammarians.

Palaerus (Παλαιρός). A town on the coast of Acarnania near Leucas (Thuc. ii. 30).

Palaesté (Παλαίστη). A town on the coast of Epirus, and a little south of the Acroceraunian Mountains, where Caesar landed when he crossed over to Greece to carry on the war against Pompey (Lucan, v. 460).

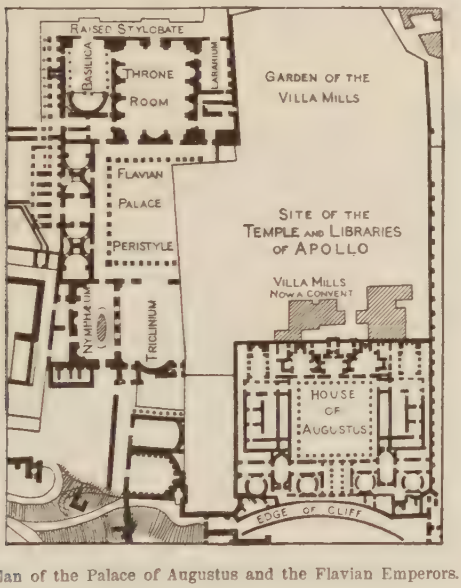
Palaestina (Παλαιστίνη, ἡ Παλαιστίνη Συρία). The Greek and Roman form of the Hebrew word which was used to denote the country of the Philistines, and which was extended to the whole country. The Romans called it IUDAEA, extending to the whole country the name of its southern part. It was regarded by the Greeks and Romans as a part of Syria. It was bounded by the Mediterranean on the west, by the mountains of Lebanon on the north, by the Jordan and its lakes on the east, and by the deserts which separated it from Egypt on the south. The Romans did not come into contact with the country till B.C. 63, when Pompey took Jerusalem. From this time the country was really subject to the Romans. At the death of Herod his kingdom was divided between his sons as tetrarchs; but the different parts of Palestine were eventually annexed to the Roman province of Syria, and were governed by a procurator. The Jews were by no means well disposed, however, to the rule of the Romans, and in the first century A.D. broke out with a general rebellion which was crushed out by Vespasian and Titus with merciless severity. The latter general took Jerusalem and destroyed it in A.D. 70. Under Constantine, Palestine was divided into three provinces—Palaestina Prima in the centre, Palaestina Secunda in the north, and Palaestina Tertia in the south. See Tristram, *Land of Israel* (3d ed. 1876); Thomson, *The Land and the Book* (2d ed. 1880–85); Merrill, *Galilee in the Time of Christ* (1881); Darenbourg, *Essai sur l'Histoire, etc., de la Palestine* (Paris, 1867); and the articles HERODES; HIEROSOLYMA; IUDAEI.

Palaestra (*παλαίστρα*). A private training-school where boys received regular instruction in gymnastics and physical culture, and thus differing from gymnasia, which were public establishments for the training of men (Becker-Göll, *Charikles*, ii. 239; Grasberger, *Erziehung und Unterricht*, i. 252; and Iwan Müller, *Handbuch*, iv. 451 c). The training-master (*παιδοτρίβης*) was paid by the parents of the boys whom he taught, and he trained all who did not intend either to enter the games in competition or to become professional athletes. The latter were trained by the *γυμναστής*, whose work was of a more special and scientific character. The exercises practised in the palaestra were running, jumping, wrestling, throwing the discus, and spear-throwing (i. e. the *pentathlon*), and in a mild way boxing and the *pancration*. Boys were also taught to walk properly and to have a graceful carriage. The Romans did not support the institution of the palaestra to any great extent (Plut. *Quaest. Rom.* 40; Sen. *Epist.* 88, 18; Pliny, *Epist.* x. 40, 2). Among them, as among the later Greeks, the word is often used of the part of a gymnasium especially devoted to wrestling and often as a synonym for gymnasium (Vitruv. v. 11). The details of the institution are not known with certainty, but it may be assumed that they differed from those of the gymnasium only in being milder and less exacting. See ATHLETAE; GYMNASIUM.

Palamēdes (Παλαμήδης). (1) The son of Nauplius and brother of Oeax, a hero of the post-Homeric cycle of Trojan legend. Odysseus envied his wisdom and ingenuity, and was bent on avenging himself on Palamedes for detecting his feigned madness. Accordingly he is said to have conspired with Diomedes and drowned him while engaged in fishing; or (according to another account) they persuaded him to enter a well, in which treasure was said to be concealed, and then overwhelmed him with stones. According to others, Agamemnon also hated him as head of the peace party among the Greeks. He accordingly got Odysseus and Diomedes to conceal in his tent a letter purporting to be written by Priam, as well as some money, and then accuse him as a traitor; whereupon he was stoned to death by the people. His brother Oeax informed his father of the sad event by writing the news on an oar and throwing it into the sea, upon which he took a terrible vengeance on the returning Greeks. (See NAUPLIUS.) Palamedes was considered by the Greeks as the inventor of the alphabet and of lighthouses; also of measures and weights, and of dice and draughts and the discus. (2) A Greek grammarian mentioned by Athenaeus, who makes him one of the speakers in his book.

Palatīnus Mons. See ROMA.

Palatium. A name originally applied to one of the seven hills of Rome, the Mons Palatinus, upon which the earliest city was built (see ROMA); but from the time when Augustus made his permanent residence there the word came to mean "a palace," and *par excellence* the imperial palace of the Caesars.



The house of Augustus (*domus Augustana*) was built upon the southwestern edge of the Palatine Hill and overlooked the Circus Maximus. He had at first purchased the house of the orator Hortensius, also on the Palatine, and when it was struck by lightning he consecrated the spot to a temple of Apollo, and bought some neighbouring buildings, where he built a house for himself (Vell. Pat. ii. 81; Dio Cass. xlix. 15; Suet. *Aug.* 29, 72).

The house of Tiberius (*domus Tiberiana*) on the Palatine is mentioned as distinct from that of Augustus, though it adjoined it, the palace of Augustus being more conspicuous towards the Forum, while that of Tiberius formed the back front. Its situation is indicated by the statements of the ancient writers that Otho descended through the back of the palace of Tiberius into the Velabrum (Tac. *Hist.* i. 27; Suet. *Otho*, 6), and that Vitellius surveyed from it the conflagration of the Capitol (Suet. *Vitell.* 6). During the reign of Augustus, Tiberius lived first in the house of Pompey in the Carinae, and afterwards in that of Maecenas on the Esquiline, but when he became emperor he probably resided in this house on the Palatine till he withdrew to Capreae. In later

times this palace was the residence of Antoninus Pius and Marcus Aurelius, and a library was established there (Gell. xiii. 19). The palaces of Augustus and Tiberius were destroyed in the fire of Nero; but they were rebuilt, as they are mentioned as separate buildings in the *Notitia;* and Josephus tells us that the different parts of the complex of buildings forming the imperial palace were named after their respective founders (*Ant.* xix. 1, § 15).

The palace of Augustus was excavated in 1775, and drawings made of it by Guattani (*Monumenti Antichi di Roma*, 1785); the whole was soon covered in again, and no part is now visible. That part of the plan shown here, which represents the palace of Augustus, is taken from Guattani's plan.

This palace, which was of very modest size, had a number of small rooms in two stories grouped round one peristyle: its comparative simplicity must have formed a striking contrast to the stately splendour of the public halls, libraries, and temples in the adjoining Area Apollinis, all built by Augustus, and adorned by him with countless works of art of every kind. Nevertheless, though the palace

Plan of the Palace of Augustus and the Flavian Emperors.

of Augustus was small, yet it appears to have been designed with great taste, and decorated with considerable richness in its mixture of white and coloured marbles. That it was a very carefully designed architectural affair is shown by the base plan with its domed and vaulted halls and small apse-like recesses arranged with some complications and much ingenuity.

The Flavian Palace, which is shown on the same plan, was built by Domitian, adjoining the Area of Apollo and the Palace of Augustus on the north-west side (Plut. *Popl.* 15; Mart. viii. 36; Stat. *Silv.* iii. 4, 47; iv. 2). Extensive remains of this building still exist, and are among the most conspicuous of the imperial palaces on the Palatine. It was a very different building from that of Augustus, being not so much a place of residence as a magnificent series of State apartments intended for public use. Hence Nerva had the words *aedes publicae* inscribed on it (Pliny, *Panegyr.* 47). At one end is a very splendid throne-room, with a *lararium* or imperial chapel on one side and a *basilica* for judicial business on the other. At the other end of the peristyle is the *triclinium* for State banquets, and beyond it a series of stately halls, which may possibly be libraries (*bibliothecae*), and an *Academia* for recitations and other literary purposes. A sort of *Nymphaeum*, or room containing a fountain, with flowers, plants, and statues of nymphs and river-gods, was placed at one side of the *triclinium*, if not on both, so that the murmur and coolness of the water and the scent of the flowers might refresh the wine-heated guests. The whole of this magnificent palace was adorned with the greatest richness, both of design and materials, with floors, wall-linings, and columns of Oriental marbles, alabaster, and red and green porphyry. Even the rows of colossal statues which decorated the throne-room were made of the very refractory basalts and porphyry from the quarries of Egypt, at a cost of an almost incredible amount of labour: remains of these were found early in the last century. The position of the Flavian palace is remarkable; it is built on an immense artificial platform which bridges over a deep valley or depression in the summit of the Palatine.

Remains of a lofty building of Republican date still exist deep below the floor-level of the so-called libraries; and a small house of early imperial date, richly decorated with marbles and paintings, can still be seen buried under the great peristyle. In many parts of the palace traces are distinctly visible of restorations made by Severus after the great fire in the reign of Commodus (A.D. 191), which devastated a large portion of the imperial palaces. The cracked and partly calcined marbles which suffered in the fire were broken up, and used to make concrete for the new walls of Severus; and thus, in many places, the somewhat curious sight is to be seen of concrete made of the most costly Oriental marbles and porphyries.

The enormous palace of Caligula occupied the northern corner of the Palatine Hill and the adjoining slopes as far as the Forum, covering the ground once occupied by the houses of Clodius, Cicero, and other wealthy Romans (Dio Cass. lix. 28; Suet. *Cal.* 22; Pliny, *H. N.* xxxvi. § 111). The equally large palace of Severus occupied the opposite end of the Palatine. They are both remarkable for the gigantic substructures on which they stand, constructed so as to form at the foot of the hill a basement for State rooms on a level with the highest part of the ground, or, in other words, at both places the Palatine itself was enlarged by the construction of an artificial hill of massive concrete walls and vaults. On one side Severus used the stately palace of Hadrian as a sort of platform on which to extend his new palace at the higher level; and so we see the rough concrete walls of Severus's substructure cutting through and rendering useless the richly ornamented halls of Hadrian. The enormous height of the palace of Severus must have made it one of the most imposing of all the buildings of Rome: its southern part, which stood at the foot of the Palatine Hill, not only equalled the hill in height, but towered high above its summit. In costliness of material, though not in delicacy of design, this palace more than equalled the buildings of the earlier emperors, with the exception of that which Nero built. Some additions and improvements were made to the palace of Sep-

Palace of the Caesars. (Restoration by Benvenuti.)

timius Severus by Elagabalus and Alexander Severus (Lamprid. *El.* iii. 3, 8, 24; *Alex. Sev.* 24, 25).

The Golden House (*domus aurea*) of Nero, which covered part of the Palatine and Esquiline hills and the great valley between them, must have been a building of the most marvellous splendour and extent. It was nearly a mile in length, and included large gardens and parks for wild animals, all surrounded by a triple *porticus* or colonnade of marble. The interior was decorated in the most lavish way with gold, ivory, and jewels (Tac. *Ann.* xv. 42; Suet. *Nero*, 31; Mart. *Spect.* 2). Some rooms, according to Suetonius, were entirely plated with gold and studded with precious stones and pearls. The supper-rooms were vaulted with ivory panels (*lacunaria*), from openings in which flowers and perfumes were scattered on the guests. An enormous number of works of art of every class collected from Greek cities were brought to adorn the palace, and others were made by Nero's orders, such as the bronze colossal statue of himself, 120 feet high, the work of the Greek sculptor Zenodorus, and a painted portrait on canvas of the same ridiculous size. See COLOSSUS.

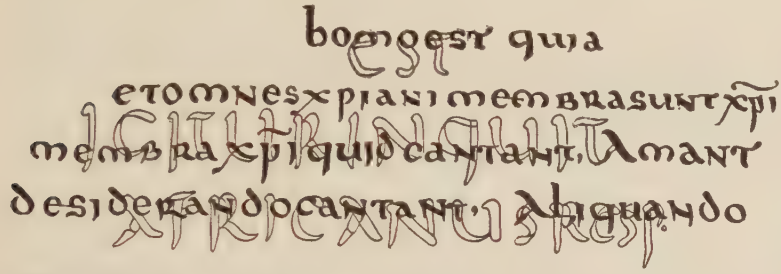
The destruction of the Golden House and the restoration of most of its site to public uses were among the most popular acts of the Flavian emperors. Both the Colosseum and the great Thermae of Titus stand on part of the site of Nero's palace, of which a small portion was used, after being stripped of its rich marble linings, to form the substructures of part of the Thermae of Titus. This is almost the only part which now exists: remains of a large peristyle and the lofty rooms round it are still fairly well preserved; the vaults are richly decorated with stucco reliefs and paintings, which are rapidly perishing. It was the discovery of these elaborate ornaments early in the sixteenth century which gave so great an impulse to the growing love for classical methods of decoration. Raphael and his pupils with great skill copied the stucco-work, and painted arabesques in the Vatican palace, in the Villa Madama, and in a large number of other buildings. Owing to these magnificent rooms having been used as the substructures of the baths of Titus, most writers on the subject have described the paintings as being part of the work of Titus. But, though the walls of these two structures are mixed in a somewhat complicated way, it is very easy to distinguish one from the other. Titus's walls are of plain brick-faced concrete, without any stucco covering, while Nero's are in all cases either coated with painted stucco or with the cement backing of the missing marble lining. Even where the stucco has in some places fallen off Nero's walls, clear evidence as to its former existence is given by the marble plugs with which the wall-surface was studded to form a key for the plastering.

See Lanciani, *Ancient Rome*, pp. 106–133 (Boston, 1888); and Middleton, *Remains of Ancient Rome*, vol. i. pp. 158–219 (London and Edinburgh, 1892).

Palé (Πάλη). A city of Cephallenia opposite Zacynthus (Polyb. v. 3).

Pales. The Italian goddess of shepherds and pastoral life. Her festival, the Palilia or Parilia, held on April 21st, was properly a herdsmen's festival to promote the fruitfulness of the flocks and to purify the sacred groves and fountains from all unintentional injury or pollution caused by the herds. It was deemed the anniversary of the founding of Rome, the former abode of shepherds. Accordingly, it was celebrated at Rome, as in the villages, by the whole of the inhabitants, with the ancient rites of a shepherds' festival. It was customary to purify house, steading, and sheep with sulphur, and, as a special means of expiation, to offer incense, together with a mixture of the blood of the *October equus* (q. v.), the ashes of the unborn calf which was burned at the feast of Tellus, and bean-straw which was obtained from the Vestals. When these solemn purifications were over, the cheerful part of the festival began. Bonfires were made of straw and hay; the shepherds leaped across them thrice; cakes of millet were also offered to the goddess; and the festival was concluded by a feast in the open air. After the second century of our era the festival was combined with that of Dea Roma, and was celebrated as her birthday with festal processions and Circensian games, which continued till the fifth century A.D.

There seems to have been at one time a male deity of the name Pales (Arnob. iii. 40), but the masculine form had fallen into disuse in classical times. The word contains the root of the verb *pasco*, and hence means "the Feeder" or "Pasturer."



Palīcé (Παλική). A town in Sicily founded by Ducetius (q. v.) near the sulphurous lake of the Palici, west of Leontini. It was destroyed soon after the death of the founder (Diod. xi. 88, 90).

Palīci (Παλικοί). Two spirits worshipped in the neighbourhood of Mount Aetna in Sicily, as benevolent deities and protectors of agriculture. They are sometimes described as sons of Adranus, a native hero honoured through the whole of Sicily; sometimes, of Hephaestus and the nymph Aetna; sometimes, of Zeus and Thalia, a daughter of Hephaestus, who concealed herself in the earth from fear of Here's jealousy, whereupon two hot sulphur springs burst out of the ground (Aesch. *ap.* Macrob. v. 19). Beside these springs solemn oaths were taken, especially in legal proceedings, the swearer, who must have previously kept himself from all defilement, touching the brink; if the oath were false, blinding or instantaneous death followed. According to another account, a tablet inscribed with the oath was thrown into the water, and swam on the surface if the oath were true, but sank in the contrary case, while flames devoured the perjurer. The neighbouring sanctuary of the

Palici served as an oracle and also as a shelter for fugitive slaves. See Diod. xi. 79; Cic. *N. D.* iii. 22; Verg. *Aen.* ix. 585.

Palilia. A feast among the Romans, held in honour of the goddess Pales on the 21st of April. See PALES.

Palimpsest (from $\pi\acute{\alpha}\lambda\iota\nu + \psi\acute{\alpha}\omega$). The name given to a manuscript from which the original writing has been rubbed off, in order that the leaves may be used again for fresh writing. This process is occasionally repeated, so that the leaves receive a third text. The MS. is then called a double palimpsest. The word *palimpsestus* is found in Catullus (22. 5) and Cicero (*Ad Fam.*

Palimpsest with St. Augustine's Commentary on the Psalms, written over Cicero's Treatise *De Republica*. (Codex in the Vatican.)

vii. 18, 2), and the Greek form $\pi\alpha\lambda\acute{\iota}\mu\psi\eta\sigma\tau\sigma\varsigma$ in Plutarch (*Cum Princip. Philosoph.* ad fin.). From vellum and strong substances the writing was removed by scraping or rubbing, but from the delicate papyrus leaves by washing, usually with a sponge (Mart. iv. 10; Suet. *Aug.* 85). These erasures were often so carelessly done that the original text can usually be restored and read, at least in part, especially when chemicals are used to intensify the traces that remain. Of these chemicals, the one oftenest employed is the hydrosulphuret of ammonia. Many important texts, both classical and biblical, have been recovered from palimpsests when they have been erased for the purpose of writing less valuable matter. Among these are portions of the *De Republica* of Cicero of the fourth century, hidden under a work of St. Augustine on the Psalms (Vatican); the *Commentarii* of the jurist Gaius under St. Jerome (Verona); fragments of Plautus, written in rustic capitals in the fourth (?) century (Milan); and part of the first decade of Livy (from bks. iii.–vi.), under the *Moralia* of Gregory the Great (Verona). No work as a whole, however, has ever been recovered from a palimpsest. Many fac-similes of these palimpsest MSS. are given by Zangemeister in his *Exempla Codicum Latinorum* (Heidelberg, 1876, 1879 foll.) and by Wattenbach. See also Thompson, *Handbook of Greek and Latin Palaeography*, pp. 75–77 (1893); and the article PALAEOGRAPHY.

Palindrome. The name given to a verse which is the same when read either backwards or forwards. Such verses were written in the decadence of Greek and Latin literature, and similar compositions amused the readers of the Middle Ages. The following is an elaborate example:

Si bene te tua laus taxat sua laute tenebis
Et necat eger (i. e. *aeger*) amor non Roma rege tacente
Roma reges una non anus eger amor.

A Roman lawyer is said to have produced the following:

Si nummi immunis.
"Give me your fee, and go scot-free."

For further examples, see ECHOÏCI VERSUS; and the work by Clark entitled *Palindromes* (Glasgow, 1887).

Palinūrus. Now Cape Palinuro; a promontory on the west coast of Lucania, said to have derived its name from Palinurus, pilot of the ship of Aeneas, who fell into the sea, and was murdered on the coast by the natives (*Aen.* v. 833, vi. 337).

Palla ($\xi\upsilon\sigma\tau\acute{\iota}\varsigma$, $\pi\acute{\epsilon}\pi\lambda\sigma\varsigma$). A Roman mantle worn by women, consisting of a square piece of cloth, which matrons wore over the *stola*, in the same way as the men wore the toga. They let one third fall down in front over the left shoulder, but drew the rest away over the back, and then either brought it forward over the right shoulder, or drew it under the right arm, but in either case threw the end back over the left arm or shoulder. The palla could also be drawn over the head, just like the toga. Other women, who were not privileged to wear the stola, wore the palla over the tunic, folded together about the body, fastened together on the shoulders with buckles, and open on the right side, or held together in the same way with buckles. It then lay double over the breast and back, but fell down in one thickness to the feet.

Livia, wearing the Palla.

Pallacŏpas ($\Pi\alpha\lambda\lambda\alpha\kappa\acute{\sigma}\pi\alpha\varsigma$). A canal running through Babylonia from the Euphrates to a point some eighty miles distant, on the edge of the Ara-

bian desert, where it lost itself amid marshland (Arrian, vii. 21, 1).

Pallădas (*Παλλάδας*). A writer of epigrams in the fifth century A.D.

Palladium (*Παλλάδιον*). A name generally applied to any image of Pallas Athené, but specifically to the one which was kept secretly hidden as insuring the safety of the town possessing it. The most famous effigy of this sort was the carved image preserved jealously in the citadel of Troy. It is described as of three cubits in height, the feet placed close together, holding a spear in its right hand, and either a distaff or a shield in its left. It was traditionally said to have been given by the goddess herself to Chrysé, the bride of Dardanus, who brought it to Dardania, whence Ilus carried it to Troy. Another legend makes Zeus to have sent it to Ilus from heaven. It was believed that Troy could not be taken so long as the image remained in the city; whereupon Odysseus and Diomedes stole it away and carried it to Argos (Conon, *Narrat.* 34; Verg. *Aen.* ii. 164). Later tradition makes Troy to have had two Palladia, one being stolen by Diomedes and one to have been carried by Aeneas into Italy; so that a number of cities in Italy afterwards claimed to possess it. These were Rome, Lavinium, Siris, and Luceria. (See Plut. *Camill.* 120; Tac. *Ann.* xv. 41; Serv. *ad Aen.* ii. 166; Strabo, p. 264.) The Roman Palladium was preserved in the temple of Vesta. See VESTA.

Palladius, Rutilius Taurus Aemiliānus. A Latin author of the fourth century A.D., who, by borrowing from the writings of his predecessors and from his own experience, composed a work upon husbandry in fourteen books. Of these the first contains general precepts; books ii.–xiii. give the operations of agriculture in each of the successive months, while the fourteenth treats of the grafting of trees, in eighty-five elegiac couplets. His book, though written in dry and feeble language, was much used in the Middle Ages on account of its practical arrangement. There is a modern edition of bk. i. by Schmitt (Würzburg, 1876), and of bk. xiv. also by Schmitt (Münnerstadt, 1877). Text of the whole in Schneider's *Script. Rei Rusticae* (Leipzig, 1794–97).

Palla Gallĭca is the name given to a short, close-fitting jerkin slit up before and behind (Mart. i. 93). It was also called *caracalla* (q. v.).

Pallantia. Now Palencia. The chief town of the Vaccaei, in the north of Hispania Tarraconensis, and on a tributary of the Durius (Douro).

Pallantias and Pallantis. Patronymics given to Aurora, the daughter of the giant Pallas. See Eos.

Pallantium (*Παλλάντιον*). An ancient town of Arcadia, near Tegea, said to have been founded by Pallas, son of Lycaon. Evander is said to have come from this place, and to have called the town which he founded on the banks of the Tiber Pallantēum (afterwards Palantium and Palatium), after the Arcadian town (Pausan. viii. 43, 44). Hence Evander is called *Pallantius heros.*

Pallas (*Παλλάς*). (1) Pallas Athené. (See ATHENÉ.) (2) Son of the Titan Crius, husband of Styx, father of Niké. (3) Son of Pandion, who robbed his brother of the dominion of Athens, but was, together with his fifty gigantic sons, slain by the youthful Theseus. (4) A giant who, according to some traditions, was the father of the goddess Athené, who is said to have slain him when he attempted to violate her (Cic. *N. D.* iii. 23, 59).

Pallas. A favourite freedman of the emperor Claudius, under whom, in conjunction with Narcissus, he administered the affairs of the Empire. It was Pallas who persuaded Claudius to marry Agrippina, and to adopt Domitius, afterwards the emperor Nero. By Nero he was deprived of his offices in A.D. 56, and owing to his immense wealth, which excited the jealousy of the emperor, he was destroyed by poison in the year 63 (Tac. *Ann.* xi. 29; xii. 2, 25, 65; xiii. 23). His riches were so great as to become proverbial, as can be seen by the line in Juvenal (i. 107).

Pallas Lacus. See TRITON.

Pallēné (*Παλλήνη*). (1) The most westerly of the three peninsulas running out from Chalcidicé in Macedonia. (2) A deme of Attica belonging to the tribe Antiochis.

Palliastrum. A by-form of *pallium*, denoting a *pallium* of coarse material worn by the poorer classes and by such philosophers as affected simplicity of dress (Apul. *Flor.* ii. 14).

Palliāta (sc. *fabula*). A branch of Roman comedy. See COMOEDIA.

Palliŏlum. The diminutive of *pallium* (q. v.).

Pallium (*ἱμάτιον, φᾶρος*). The Roman name for a large Grecian cloak or blanket of wool, which was also worn by Romans among the Greeks. It was especially the garb of the philosophers. In Rome it was also worn by courtesans. In a general sense the word also denotes any large rectangular cloth used for a covering as a pall (Apul. *Flor.* i. 4); a counterpane for a bed (Juv. vi. 236); a curtain (Prudent. *ad Symm.* ii. 726), etc. See Studniczka, *Beiträge zur Geschichte der altgriechischen Tracht* (Vienna, 1886); Baumeister, *Denkmäler*, s. v. "Himation."

Lady in Out-door Dress. (From a terra-cotta in the British Museum.)

Pallor and **Pavor** ("Paleness" and "Fright"). The Roman personifications of terror, and companions of the war-god Mars. As early as the time of King Tullus Hostilius sanctuaries are said to have been erected in their honour. On coins Pallor was represented as a boy with dishevelled hair and perturbed bearing, and Pavor as a man with an expression of horror and with bristling hair.

Palma. The palm branch bestowed by both Greeks and Romans upon victorious athletes and drivers in the race-course (Livy, x. 49; Cic. *Brut.* 47). In works of art, therefore, it symbolizes victory.

Palmăta Tunĭca. See TUNICA.

Palmŭla (*ταρσός*). The blade of a small oar (Catull. 4. 4).

Palmus and **Palma**. A Roman measure properly the breadth of the four fingers, reckoned in classical times as three inches. See MENSURA.

Palmȳra (*Πάλμυρα*; the O. T. Tadmor). A celebrated city of Syria, standing in an oasis of the great Syrian Desert, which from its position was a halting-place for the caravans between Syria and Mesopotamia. Here Solomon built a city, which was called in Hebrew Tadmor—that is, "a city of palm-trees." Of this name the Greek Palmyra is a translation. Under Hadrian and the Antonines it was highly favoured, and reached its greatest splendour. The history of its temporary elevation to the rank of a capital, in the third century of the Christian era, is related under ODENATHUS and ZENOBIA. After its capture by Aurelian in A.D. 270 it was partly destroyed, but was made a frontier fortress, and under Justinian was strongly fortified. When the Arabs overran the country it was taken by them, and in the year 1400 was plundered by the Tartars under Tamerlane. Its splendid ruins, which form a most striking object in the midst of the desert, are of the Roman period. They resemble those of Heliopolis (q. v.), though less fine. Among them are the remains of a temple of the Sun (or Baal), a great colonnade which originally consisted of some 1500 columns of the Corinthian order, and was nearly a mile in length. There are also a number of square sepulchral towers of much interest; and the streets can still be traced. Several inscriptions in Greek, Latin, Hebrew, and the Palmyrean dialect are still extant. See Wood, Bouverie, and Dawkins, *The Ruins of Palmyra* (1753); Seiff, *Reisen in der asiatischen Türkei* (1875); and Wright, *An Account of Palmyra and Zenobia* (London, 1895).

Palmyrēné (*Παλμυρήνη*). The district of Syria comprising the Syrian Desert from the eastern border of Coele-syria to the Euphrates.

Palton (*παλτόν*). The lance of the Greek cavalry. (See ARMA.) Also a light spear used by the Persian cavalry (Xen. *Cyrop.* iv. 3, 9; vi. 2, 16).

Paludamentum. The short, red mantle of Roman generals, fastened on the left shoulder and worn over the armour. They assumed it on the Capitol on their departure to the war, but on their return exchanged it for the toga, the garb of peace, before entering into the city (Pliny, *Paneg.* 56, 4). Under the Empire, when the emperor was the commander-in-chief, the purple paludamentum became exclusively a token of imperial power. It became the usual attire of the emperors in the first century after Christ (Suet. *Claud.* 31). Accordingly after that time entrance on imperial power was termed "assuming the purple" (Eutrop. ix. 8).

Roman Emperor in Paludamentum. (Maffei.)

Palus (*πάσσαλος*). A pole or stake used by the Romans in their military exercises. It was thrust into the ground and then attacked by the raw recruit (*tiro*), who was equipped with a heavy wicker shield and wooden sword (Vegetius, *Mil.* i. 11).

Pamboeotia (*Παμβοιώτια*). A festival of all the Boeotians, as the Panathenaea was a festival of all the Attic Greeks and the Panionia of all the Ionians. It was held near Coronea and had for its object the worship of Athenè Itonia (Pausan. ix. 34, 1; Gilbert, *Staatsalterthümer*, ii. 53).

Pambōtis Lacus (*Παμβῶτις λίμνη*). A lake in Epirus not far from Dodona.

Pamīsus (*Πάμισος*). (1) A river flowing into the Peneus in Thessaly. (2) The chief river of Messenia emptying into the Messenian Gulf. (3) A river of Laconia also emptying into the Messenian Gulf near Leuctra.

Pammachium (*παμμάχιον*). The same as *pancratium* (q. v.).

Pammĕnes (*Παμμένης*). A Theban, the lieutenant of Epaminondas, who intrusted him with the defence of Megalopolis (B.C. 371), and again in B.C. 352 (Pausan. viii. 27; Diod. xv. 14; Plut. *Pelop.* 26).

Pamphĭla (*Παμφίλη*). A woman writer of history. She lived in the time of Nero and wrote an historical miscellany (*Συμμίκτων Ἱστορικῶν Ὑπομνημάτων λόγοι*). She is variously described as a Greek and as an Egyptian. See Aulus Gellius, xv. 23, where he cites her eleventh book.

Pamphĭlus (*Πάμφιλος*). (1) A Greek painter of Amphipolis in Macedonia, who lived in the first half of the fourth century B.C., chiefly at Sicyon, as head of the school there founded by his master Eupompus. He is the originator of the scientific teaching of art: he traced back all practice of art to scientific principles. He maintained that painting could not be brought to perfection without arithmetic and geometry. In spite of the fact that his fee for instruction was one talent ($1180), the number of his pupils was considerable, the greatest among them being Apelles. Through his influence instruction in drawing was introduced among the subjects of Greek education (Pliny, *H. N.* xxxv. 74, 76). The only work of this artist now known to us by name is his picture of the "Suppliant Heraclidae," to which Aristophanes alludes in the *Plutus*, 385. (2) A disciple of Plato whose lectures Epicurus attended as a young man (Cic. *N. D.* i. 26, 70). (3) An Alexandrian grammarian who wrote a lexical treatise in ninety-five books, epitomized by Vestinus and Diogenianus in five books, and supposed to have been the basis of the lexicon of Hesychius (q. v.) See Weber, *Philol. Suppl.* iii. 467 foll.

Pamphlets. See LIBELLUS.

Pamphȳli. (1) See DORIS. (2) See PAMPHYLIA.

Pamphylia (*Παμφυλία*). A narrow strip of the southern coast of Asia Minor, extending in a sort of arch along the Sinus Pamphylius (Gulf of Adalia), between Lycia on the west and Cilicia on the east, and on the north bordering on Pisidia. The inhabitants were a mixture of races, whence their name Pamphyli (*Πάμφυλοι*), "of all races." There were Greek settlements in the land, the foundation

of which was ascribed to Mopsus. It was successively a part of the Persian, Macedonian, Greco-Syrian, and Pergamene kingdoms, and passed by the will of Attalus III. to the Romans (B.C. 130), under whom it was made a province; but this province of Pamphylia included also Pisidia and Isauria, and afterwards a part of Lycia. Under Constantine Pisidia was again separated from Pamphylia.

Pamphylia was in early times called MOPSOPIA, as its early settlements were ascribed to Mopsus (q. v.), the famous seer (Pliny, *H. N.* v. 96), as stated above.

Pamphylium Maré or **Pamphylius Sĭnus** (*τὸ Παμφύλιον πέλαγος*). See PAMPHYLIA.

Pan. See PATINA; SARTAGO.

Pan (*Πάν*). The Greek god of flocks and shepherds, described as the son of the Arcadian shepherd deity Hermes and Dryops, by others as the son of Hermes and Penelopé (Herod. ii. 145), and by still others as the offspring of Penelopé by all the suitors. (See PENELOPÉ.) The Homeric hymn describes him as delighting *all* the gods, and thus getting his name. He was perfectly developed from his birth; and when his mother saw him she ran away through fear; but Hermes carried him to Olympus, where all the gods were delighted with him, especially Dionysus. He was originally only an Arcadian god; and Arcadia was always the principal seat of his worship. From this country his name and worship afterwards spread over other parts of Greece; but at Athens his worship was not introduced until the time of the battle of Marathon. In Arcadia he was the god of forests, pastures, flocks, and shepherds, and dwelt in grottoes, wandered on the summits of mountains and rocks, and in valleys, either amusing himself with the chase, or leading the dances of the nymphs. As the god of flocks, both of wild and tame animals, it was his province to increase and guard them; but he was also a hunter, and hunters owed their success or failure to him. The Arcadian hunters used to scourge the statue of the god if they had been disappointed in the chase (Theocr. vii. 107). During the heat of midday he used to slumber, and was very indignant when any one disturbed him. As the god of flocks, bees also were under his protection, as well as the coast where fishermen carried on their pursuit. As the god of everything connected with pastoral life, he was fond of music, and the inventor of the syrinx or shepherd's flute, which he himself played in a masterly manner, and in which he instructed others also, such as Daphnis. He is thus said to have loved the poet Pindar, and to have sung and danced his lyric songs, in return for which Pindar erected a sanctuary to him in front of his house.

Pan, like other gods who dwelt in forests, was dreaded by travellers, to whom he sometimes appeared, and whom he startled with sudden awe or terror. Thus, when Phidippides, the Athenian, was sent to Sparta to solicit its aid against the Persians, Pan accosted him, and promised to terrify the barbarians if the Athenians would worship him. Hence, sudden fright without any visible cause was ascribed to Pan, and was called a Panic fear (*πανικὸν δεῖμα*). He is further said to have had a terrible voice, and by it to have frightened the Titans in their fight with the gods. It seems that this feature—namely, his fondness of noise and riot—was the cause of his being considered the minister and companion of Cybelé and Dionysus. He was at the same time believed to be possessed of prophetic powers, and to have even instructed Apollo in this art. While roaming in the forests, he fell in love with the nymph Echo, by whom, or by Pitho, he became the father of Iynx. His love of Syrinx, after whom he named his flute, is well known from Ovid (*Met.* i. 691 foll.). Fir-trees (*πίτυες*) were sacred to him, since the nymph Pitys, whom

Pan and the Nymph Echo. (Baumeister.)

he loved, had been metamorphosed into that tree; and the sacrifices offered to him consisted of cows, rams, lambs, milk, and honey. Sacrifices were also offered to him in common with Dionysus and the nymphs. The various epithets which are given him by the poets refer either to his singular appearance, or are derived from the names of the places in which he was worshipped. The Romans identified with Pan their own god Inuus, and also Faunus, which name is merely another form of Pan. In works of art Pan is represented as a voluptuous and sensual being, with horns, snub-nose, and goat's feet, sometimes in the act of dancing, and sometimes playing on the syrinx. His attendant deities or demons were known as PANES or PANISCI (*Πανίσκοι*). Famous representations of Pan in sculpture are the so-called Barberini Faun at Munich, the Dancing Pan at Naples, and the Pan (or Faun) of Praxiteles at Rome, which suggested to Hawthorne his famous romance, *The Marble Faun*. In English literature, besides this romance, Pan is the subject of Landor's *Pan and Pitys* (see above), *Cupid and Pan*, Buchanan's *Pan*, Browning's *Pan and Luna*, and Swinburne's *Pan and Thalassius*. See SATYRI.

Panăca. A drinking-cup. The name is only given as a title of one of Martial's epigrams (xiv. 100).

Panacēa (*Πανάκεια*, "the all-healing"). A daughter of Asclepius, who had a temple at Oropus (Pausan. i. 34, 2).

Panachaĭcus Mons (*τὸ Παναχαϊκὸν ὄρος*). A mountain in Achaia, 6300 feet high, immediately behind Patrae.

Panacra (Πάνακρα). A mountain in Crete; a branch of Mount Ida.

Panactum (Πάνακτον). A town on the frontiers of Attica and Boeotia, originally belonged to Boeotia, and after being a frequent object of contention between the Athenians and Boeotians, at length became permanently annexed to Attica (Pausan. i. 25, 6).

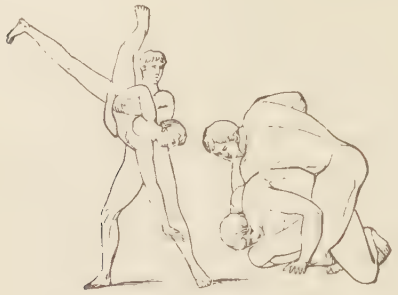
Panaenus (Πάναινος). A distinguished Athenian painter, who flourished B.C. 448. He was the nephew of Phidias, whom he assisted in decorating the Temple of Zeus at Olympia. He was also the author of a series of paintings, of the battle of Marathon, in the Stoa Poecilé at Athens (Pausan. v. 11, 5).

Panaetius (Παναίτιος). A Greek philosopher of Rhodes, born about B.C. 180; the most important representative of Stoicism in his time. From Athens, where he had received his education, he went to Rome, about B.C. 156. Being there received into the circle of the younger Scipio and of Laelius, he was able to gain numerous adherents among the Roman nobles by his skill in softening the harshness and subtlety of the Stoic teaching, and in representing it in a refined and polished form. After Scipio's death (129) he returned to Athens, where he died, as the head of the Stoic school, about 111. Only unimportant fragments of his writings remain. The most important of them, the *Treatise on Duty* (Περὶ τοῦ Καθήκοντος), in three books, supplied the groundwork of the *De Officiis* of Cicero. See Thiancourt, *Essai sur les Traités Philosophiques de Cicéron et leurs Sources Grecques* (Paris, 1885).

Panaetolium (Παναιτώλιον). A mountain in Aetolia, near Thermon, in which town the panegyric festival of the Aetolians was held. See AETOLIA; PANEGYRIS.

Panariŏlum. A basket for bread (Mart. v. 105).

Panarium (ἀρτοθήκη). A closet for storing bread. A pantry (Varro, *L. L.* v. 105).



Panathenaea (τὰ Παναθήναια). The most ancient and most important of Athenian festivals. It was celebrated in honour of Athené, the patron deity of Athens. Related to have been founded in early times by Erichthonius, it is said to have been originally named only Athenaea, and to have first received the name of Panathenaea at the time when Theseus united all the inhabitants of Attica into one body. In memory of the union itself was kept the festival of the συνοικία, or συνοίκησις, on the 16th of Hecatombaeon (July–August), which may be regarded as a kind of preparatory solemnity to the Panathenaea. There was a festival of the ordinary or lesser Panathenaea celebrated every year, and from the time of Pisistratus, the great Panathenaea held every fifth year, and in the third year of every Olympiad, from the 24th to the 29th of Hecatombaeon. Pisistratus, in the year B.C. 566, added to the original chariot and horse-races athletic contests in each of the traditional forms of competition. He, or his son Hipparchus, instituted the regulation that the collected Homeric poems should be recited at the Feast of Rhapsodes. In 446 Pericles introduced musical contests, which took place on the first day of the festival, in the Odeum, which he had built. Competitions of cyclic choruses and other kinds of dances, torch-races and trireme-races added to the splendour of the festival. The care and direction of all these contests were committed to ten stewards (ἀθλοθέται), who were elected by the people for four years, from one great Panathenaic festival to the next (Pollux, viii. 93). In the musical contests the first prize was a golden crown; in the athletic, the prize was a garland of leaves from the sacred olive-trees of Athené, together with large and beautiful vases filled with oil from the same trees. Many specimens of these Panathenaic vases have been found in Italy, Sicily, Greece, and at Cyrené. They have the figure of Athené on one side and a design indicating the contest for which they are awarded on the other. Most of them belong to the fourth century B.C., 367–318; the so-called "Burgon Vase," in the British Museum, to the sixth century. The tribe whose ships had been victorious received a sum of money, part of which was expended upon a sacrifice to Poseidon.

The culminating-point of the festival was the 28th day of the month, the birthday of the goddess, when the grand procession carried through the city the costly, embroidered, saffron-coloured garment, the *peplus* (πέπλος). This had been woven in the preceding nine months by Attic maidens and matrons, and was embroidered with representations from the battle of the gods and giants. It was carried through the city, first of all, as a sail for a ship moving on wheels, and was then taken to the Acropolis, where it adorned one of the statues of Athené Polias. The procession is represented in a vivid manner in the well-known frieze of the Parthenon. It included the priests and their attendants, leading a long train of animals festally adorned for sacrifice; matrons and maidens bearing in baskets the various sacrificial implements (see CANEPHORI); old men in festal attire, with olive-branches in their hands, whence came their name, θαλλοφόροι; warriors, with spear and shield, in splendid array; young men in armour; the cavalry under the command of both the ἵππαρχοι; the victors in the immediately preceding contests; the festal embassies of other States, especially of the colonies; and, lastly, the aliens resident in Athens. Of these last the men bore behind the citizens trays with sacrificial cakes, the women water-pots, and the maidens sunshades and stools for the citizens' wives; while on the freedmen was laid the duty of adorning with oak-leaves the market-places and streets through which the procession moved. The feast ended with the great festal sacrifice of a hecatomb of oxen, and with the general banqueting which accompanied it. At the yearly minor Panathenaea, on the 28th and 29th of Hecatombaeon, contests, sacrifices, and a procession took place, but all in a more simple style, under the direction of the ἱεροποιοί. (See HIEROPOEI.) In later times the festival was removed to the spring, perhaps in consequence of Roman influence, in order to make it correspond to the Quinquatrus (q. v.) of Minerva. All the ancient authorities are collected by Michaelis in his work, *Der Parthenon*, pp. 318–333 (1875); see also Mommsen, *Heortologie der Athener*, pp. 116–205 (1875); and H. A. Müller, *Panathenaica* (1837); with the articles LAMPADEDROMIA; PYRRHICA; SKIADAPHORIA.

Pancratiastae. See PANCRATIUM.

Pancratium (παγκράτιον). The combination of boxing and wrestling in Greek gymnastics, getting

its name from the fact that it called into play all the powers (πᾶν+κράτος) of the fighter. At Sparta the name was applied to any rough, irregular fighting that was not conducted according to any

Wrestlers in the Pancratium. (Krause, *Gymnastik.*)

rules, but in which even biting and scratching were not uncommon. The Greeks ascribed the invention of the pancratium to Theseus, who thus fought against the Minotaur. (See the Schol. on Pind. *Nem.* v. 49; and THESEUS.) It made its way into the four great games of Greece, and there was a pancratium for boys as well as for men (Pausan. v. 8 *fin.*). It was fought partly standing and partly on the ground, and the boxing was the chief feature of it (Pind. *Nem.* iii. 17; Lucian, *Anach.* 8, 24). The *caestus* (q. v.) was not used, however, and the blows were given, not with the closed fist, but with the hands curved, as in the second illustration. When two παγκρατιασταί began to fight, they stood with outstretched arms, feeling for an opening, and each tried to get the other into such a position as to have the sun shine in his eyes. With the clinch the real fight began. Biting and butting were against the rules (Lucian, *Demon.* 47). The victory was not decided until one of the combatants was killed, or held up a finger in token of defeat (Philostr. *Imag.* ii. 6).

Pancratium. (Krause, *Gymnastik.*)

At Rome the pancratium is first mentioned in the time of Caligula (Dio Cass. lix. 13), and it soon became very popular.

For the training of the fighters, see ATHLETAE. The chief works are those of H. Mercurialis, *De Arte Gymnastica*, and Krause, *Die Gymnastik und Agonistik der Hellenen*, i. pp. 534–556.

Panda. A river of Sarmatica Asiatica (Tac. *Ann.* xii. 16).

Pandareōs (Πανδάρεως). A native of Miletus, the son of Merops, who stole from Minos of Crete a living dog made of gold, the work of Hephaestus, which was the guardian of the temple of Zeus, and gave it to Tantalus to keep it safely. When Zeus demanded the dog back, Pandareos fled with his wife Harmothoë to Sicily, where both were turned into stones. (For his daughter Aëdon, see AËDON.) Of his two other daughters (Meropé and Cleodora, or Camira and Clytea), Homer (*Od.* xx. 66–78) relates that they were brought up by Aphrodité after their early bereavement, and were endowed by Heré with beauty and wisdom, by Artemis with lofty stature, and by Athené with skill in handiwork; but while their foster-mother went to Olympus to implore Zeus to grant the maidens happy marriages, they were carried off by the Harpies, and delivered to the Erinyes as servants, and thus expiated their father's guilt (*Odyss.* xx. 65–78; Pausan. x. 30, 1).

Pandărus (Πάνδαρος). (1) A Lycian hero, son of Lycaon. He led the troops of Zelea (on Mount Ida) in the Trojan War, and was distinguished as an archer, having received his bow from Apollo. He was slain by Diomedes (*Il.* ii. 824, v. 290). (2) A companion of Aeneas slain by Turnus (Vĕrg. *Aen.* ix. 672, 758).

Pandataria. Now Vendutené; a small island off the coast of Campania, to which Iulia (q. v.), the daughter of Augustus, was banished.

Pandectae. See CORPUS IURIS CIVILIS.

Pandēmos. See APHRODITÉ, p. 96.

Pandīa (τὰ Πανδία). A festival held at Athens in the middle of the month Elaphebolion. It is doubtful whom it originally commemorated, and the ancients themselves disputed this question—whether it was in honour of Pandion (q. v.), Pandia, the moon-goddess, or Zeus, the all-divine. Hermann regards it as the feast of the old tribe Dias: Welcker inclines to the Zeus hypothesis; and Mommsen and Preller think it originated in the worship of Pandia=Selené. (See SELENÉ.) Cf. Mommsen, *Heort.* pp. 61, 389, 396; and Preller, *Griech. Mythologie*, i. 347.

Pandīon (Πανδίων). (1) The son of Erichthonius, father of Procné, Philomela, Butes, and Erechtheus (q. v.). (2) Son of Cecrops and Metiadusa, grandson of Erechtheus, king of Athens. Driven into exile by the sons of his brother Metion, he went to Megara, where he married Pylia, the daughter of King Pylas, and inherited the kingdom. His sons, Aegeus, Lycus, Pallas, and Nisus (known as the PANDIONĬDAE), regained Attica from the Metionidae, and the first three shared it among themselves, while Nisus (q. v.) received Megara.

Pandokeion (πανδοκεῖον). See CAUPONA, p. 304.

Pandōra (Πανδώρα). The Greek Eve; the first woman on earth. After Prometheus (q. v.) had stolen the heavenly fire, Zeus in revenge caused Hephaestus to make a woman of exquisite beauty who should bring sorrow upon the human race. From her perfection of loveliness and intellect she was called Pandora, "the All-gifted." She became the wife of Epimetheus, brother of Prometheus, though Epimetheus had been advised to accept nothing that came from Zeus. In the house of Epimetheus stood a closed box or jar containing all the evils possible for man; and this box Pandora out of curiosity opened. The evils poured out when the lid was raised, and though she closed it hastily, she only succeeded in preventing the escape of Hope, which was also in the box (Hesiod. *Theog.* 571; *Op.* 50). In later times the story was differently told. The box was then said to contain blessings which were thus secured to the human race; but by opening it, Pandora lost them all except Hope (Hyg. *Fab.* 142).

Pandosia (Πανδοσία). (1) A town of Epirus, in the district Thesprotia, on the river Acheron. (2) A town in Bruttium, near the frontiers of Lucania, situated on the river Acheron. It was here that Alexander of Epirus fell, B.C. 326, in accordance with an oracle (Livy, viii. 25; Iustin. xii. 2). (3) A town of Lucania near Heraclea.

Pandrŏsos (Πάνδροσος). "All bedewing." A daughter of Cecrops of Athens, first priestess of Athenê, honoured together with her in a sanctuary of her own, the Pandroseion, on the Acropolis of Athens. See CECROPS.

Pandūra (πανδοῦρα). A stringed instrument with three chords (Pollux, iv. 60).

Panēas. See CAESAREA (4).

Panegyrĭcus (πανηγυρικός). The name given among the Greeks to a speech delivered before a πανήγυρις — that is, an assembly of the whole nation on the occasion of the celebration of a festival, such as the Panathenaea and the four great national games. This oration had reference to the feast itself, or was intended to inspire the assembled multitude with emulation by praising the great deeds of their ancestors, and also to urge them to unanimous co-operation against their common foes. The most famous compositions of this kind which have been preserved are the *Panegyricus* and *Panathenaïcus* of Isocrates, neither of which, however, was actually delivered in public. In later times eulogies upon individuals were so named. This kind of composition was especially cultivated under the Roman Empire by Greeks and Romans. In Roman literature the most ancient example of this kind which remains is the eulogy of the emperor Trajan, delivered by the younger Pliny in the Senate, A.D. 100, thanking the emperor for conferring on him the consulate —a model which subsequent ages vainly endeavoured to imitate. It forms, together with eleven orations of Mamertinus, Eumenius, Nazarius, Pacatus Drepanius, and other unknown representatives of the Gallic school of rhetoric from the end of the third and the whole of the fourth centuries A.D., the extant collection of the *Panegyrici Latini*. Besides these we possess similar orations by Symmachus, Ausonius, and Ennodius. There are also a considerable number of poetical panegyrics—e. g. one upon Messala, composed in the year B.C. 31, and wrongly attributed to Tibullus; one by an unknown author of the Neronian time upon Calpurnius Piso; and others by Claudian, Sidonius Apollinaris, Merobaudes, Corippus, Priscian, and Venantius Fortunatus (q. v.).

There are editions of the panegyrici by Beatus Rhenanus (Basle, 1520), Livineius (Antwerp, 1599), Rittershusius, with notes (Frankfort, 1607), Schwarz (Altdorf, 1739–48), Arntzen (Utrecht, 1790–95), and Bährens (Leipzig, 1874). See Rühl, *De Panegyricis Duodecim Latinis* (Greifswald, 1868).

Panegўris (Πανήγυρις). A name applied by the Greeks to any gathering of the whole people at a fixed period. Examples are the Panionia (q. v.), the great national meetings on the occasion of the Olympian, Pythian, Nemean, and Isthmian Games; and in later times, the popular fairs, etc. On these occasions, besides other features, formal orations (λόγοι πανηγυρικοί) were delivered. See PANEGYRICUS.

Panēum or **Panium** (Πάνειον, Πάνιον). "Pan's home"; a cave in the southern extremity of the range of Antilibanus, out of which the river Jordan flows (Ioseph. *Ant. Iud.* xv. 10).

Pangaeum (Παγγαῖον) or **Pangaeus** (Πάγγαιος). A mountain range in Macedonia between the Strymon and the Nestus. It was famous for its mines of gold and silver, and for its roses (Herod. v. 16; Pliny, *H. N.* iv. 42).

Panhellenia (Πανελλήνια). A gathering (πανήγυρις) of all the Hellenes instituted by the Roman emperor Hadrian (Philostr. *Vit. Soph.* ii. 1, 5).

Panhellenius. See ZEUS.

Panionia (Πανιώνια). A great gathering (πανήγυρις) of the Ionian peoples, held on Mount Mycalé near Priené, and between Ephesus and Miletus. At this feast the national god Poseidon Heliconius, whose sanctuary at this place was called Panionium, was worshipped with magnificent sacrifices (Herod. i. 148; Pausan. vii. 24; Diod. xv. 49). The meetings had also a political colour, as when the assembled Ionians discussed dangers threatening their country and passed resolutions of general political importance (Herod. i. 141, 170). See Grote, *Hist. of Greece*, iii. pp. 229 foll.

Panionium. A spot on the north of the promontory of Mycalé, with a temple to Poseidon, which was the place of meeting for the cities of Ionia. See MYCALÉ.

Panis. (1) Bread. See PISTOR. (2) PANIS GRADĬLIS. Bread distributed gratuitously to the populace at Rome from the top of a flight of steps (*gradus*), near the bakers' shops (Prudent. *In Symm.* i. 584; ii. 984).

Panisci. See PAN.

Panium (Πάνιον). A town on the coast of Thrace.

Pannonia. A Roman province between the Danube and the Alps, separated on the west from Noricum by the Mons Cetius, and from Upper Italy by the Alpes Iuliae, on the south from Illyria by the Savus, on the east from Dacia by the Danube, and on the north from Germany by the same river. It corresponded, therefore, to the eastern part of Austria, Carinthia, Styria, Carniola, and Hungary with Slavonia and part of Croatia and Bosnia.

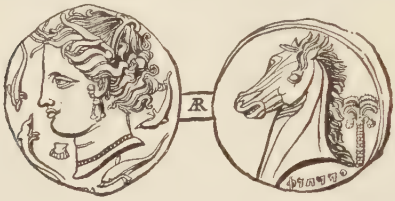
The Pannonians (Pannonii) were probably of Illyrian origin. They were a brave and warlike people, and were conquered by the Romans in the time of Augustus (about B.C. 33). In A.D. 7 the Pannonians joined the Dalmatians and the other Illyrian tribes in their revolt from Rome, but were conquered by Tiberius after a struggle which lasted three years (A.D. 7–9). Pannonia was originally only one province, but was afterwards divided into two provinces, called Pannonia Superior and Pannonia Inferior. The principal towns were Carnuntum, Siscia (Sissek), Poetovio (Pettau), Sopianae (Fünfkirchen), and Aquincum (Altofen).

Panomphaeus (Πανομφαῖος). The author of all signs and omens; a surname of Zeus (*Il.* viii. 250).

Panŏpé (Πανόπη). A sea-nymph, daughter of Nereus and Doris.

Panŏpeus (Πανοπεύς). The son of Phocus and Asteropaea, who accompanied Amphitryon on his expedition against the Taphians or Teleboans, and took an oath not to embezzle any part of the booty; but having broken his oath, he was punished by his son Epeus becoming unwarlike. He is also

mentioned among the Calydonian hunters (*Il.* xxiii. 665). Cf. Pausan. ii. 29, 4; Ovid, *Met.* viii. 312.



Panŏpeus (Πανοπεύς), **Panopeae** (Πανοπέαι), or **Panŏpé** (Πανόπη). An ancient town in Phocis on the Cephissus and near the frontiers of Boeotia, twenty stadia west of Chaeronea, said to have been founded by Panopeus, son of Phocus (Herod. viii. 34).

Panoplia (*πανοπλία*). The full armour of a hoplite. See ARMA.

Panopŏlis. See CHEMMIS.

Panoptes. See ARGUS.

Panormus (Πάνορμος). (1) Now Palermo; an important town on the north coast of Sicily, founded by the Phœnicians, and which at a later time

Coin of Panormus in Sicily.

received its Greek name from its excellent harbour. From the Phœnicians it passed into the hands of the Carthaginians, and was taken by the Romans in the First Punic War, B.C. 254. Cicero speaks of it as a place of considerable commercial importance (*Verr.* ii. 26). See Schubring, *Historische Topographie von Panormos* (1870). (2) A harbour on the east coast of Attica. (3) A harbour in Achaia. (4) A harbour on the northern coast of Crete. (5) A harbour in Epirus. (6) The outer harbour of Ephesus.

Pansa, HOUSE OF. See DOMUS, p. 549; POMPEII.

Pan's Pipe. See PAN; SYRINX.

Pantagias, Pantacȳas (Παντακύας), or **Pantagies.** A small river on the eastern coast of Sicily, flowing into the sea between Megara and Syracuse.

Pantaleon (Παντελέων). (1) A king of Pisa in Elis, son of Omphalion. In B.C. 644 he seized upon Olympia by force, and being supported by his troops declared himself sole umpire of the Olympian Games. Hence, the Eleans afterwards refused to reckon this Olympiad (the thirty-fourth) in the regular calendar. Pantaleon also aided the Messenians in the Second Messenian War (Pausan. vi. 21, 22; Strabo, p. 362). (2) A Bactrian king who ruled in the second century B.C.

Panthēa. The heroine of the first Greek love-story in prose, embodied in Xenophon's historical romance, the *Cyropaedia*. See ABRADATAS; NOVELS AND ROMANCES.

Panthēon (Πάνθειον, "all divine") or **Panthēum.** The Pantheon, the only ancient edifice at Rome whose walls and vaulting have been perfectly preserved. The original statues that adorned it have long ago been removed, but the mighty dome-like building with its vast colonnade attests better than any existing work the massive strength and splendour of the architecture of imperial Rome. The purpose for which the temple was first built is not known, but we learn from an inscription on the porch that it was erected by M. Vipsanius Agrippa in B.C. 27. (M. AGRIPPA L. F. COS. TERTIVM FECIT.) At a later time the name Pantheon was thought to mean "the temple of all the gods," a notion which led Pope Boniface IV. to dedicate the building, in A.D. 609, as a Christian church to the memory of all the martyrs, under the name of *S. Maria ad Martyres* (now S. Maria Rotonda, or simply La

The Pantheon. (From a photograph.)

Pansa, GAIUS VIBIUS. A friend of Caesar's, tribune of the plebs in B.C. 51 and governor of Gaul in 46, in which office he was the successor of Marcus Brutus. He was consul with Hirtius in 43, and fell before Mutina in that year. See HIRTIUS.

Rotonda). The building had been already repeatedly enlarged in ancient times by Domitian, Hadrian, and last of all, in A.D. 202, by Septimius Severus and Caracalla. It consists of a circular structure, 140 feet 6 inches in height and inner diameter, with

a portico 103 feet long formed by sixteen Corinthian columns 39 feet high. Eight of these in front supported a massive pediment, behind which rose another pediment of still higher elevation, resting against the square projection which connects the portico with the dome. The other columns divide the portico into three parallel portions, originally vaulted over. In the interior of the portico on each side of the entrance are two niches, which formerly contained colossal statues of Augustus and Agrippa. The massive walls of the great rotunda, which is completely circular in form, are divided by ring-cornices into two stories, an upper and a lower. Above these springs a cupola of concrete, of vaster dimensions than any that had been attempted in previous times. The diameter of this lofty cupola corresponds to that of the vast cylindrical building on which it rests. The walls of the latter are 19 feet thick. The interior of the cupola is divided into five rows of deeply sunk panels (*lacunaria*), 28 in each row. At its vertex an opening about 30 feet in diameter lights the whole of the interior. The gilt-bronze tiles of the roof were taken by the emperor Constans II. to Constantinople in A.D. 655. The remains of the costly marble wall-linings of the interior, which dated from the last restoration, and consisted of 56 compartments, divided by 112 Corinthian columns, and covered with white marble, porphyry, serpentine, and pavonazetto, were not carried off until 1747. In 1632 the great bronze tubes which supported the roof of the portico were melted down by Pope Urban VIII. (Barberini) to be cast into pillars for the *baldacchino* in St. Peter's and into cannon for the castle of S. Angelo—which led to Pasquin's famous epigram, *Quod non fecerunt barbari fecerunt Barberini*. The Pantheon now contains the tomb of King Victor Emmanuel. See an article by Lanciani in the *Atlantic Monthly* for June, 1893.

Panthoüs (Πάνθοος) and **Panthūs** (Πάνθους). One of the Trojan elders. By his wife, Phrontis, he was the father of Euphorbus, Polydamas, and Hyperenor, who are therefore called Panthoides. Panthoüs was originally a priest of Apollo at Delphi, and was brought to Troy by Antenor, who was captivated by his beauty (*Iliad*, iii. 146; xiv. 450; xvii. 24, 40, 81; Verg. *Aen.* ii. 319).

Panticapaeum (Παντικάπαιον). A town in the Tauric Chersonesus, situated on a hill on the Cimmerian Bosporus, was founded by the Milesians about B.C. 541, and became the residence of the Greek kings of the Bosporus, and was hence itself sometimes called Bospŏrus (Procop. *Aed.* iii. 7). A number of interesting remains of Greek art are found here, and preserved in the museum at St. Petersburg. See the *Comtes Rendus de la Commission Archéologique de St. Pétersbourg*.

Panticăpes (Παντικάπης). A river of European Sarmatia, perhaps the same as the Samara. Cf. Herod. iv. 18, 47, 54.

Pantomīmus (παντόμιμος). The representation of a dramatic subject by dancing and rhythmic gesticulation alone, as practised by the Romans. It originated in the custom of the ancient Roman drama, of allowing one actor on the stage to make only the necessary movements of dancing and gesticulation, while another actor sang the recitative to the accompaniment of the flute. This recitative was called *canticum*, and was a monologue composed in rhythmical form. The illustrative dance was raised to a separate, independent branch of art by Pylades and Bathyllus under Augustus, B.C. 22. There were comic and tragic pantomimes, but the latter variety prevailed on the stage of the Empire. The subjects were chiefly taken from tragedies founded on mythological love stories (e. g. those of Iupiter and Leda, of Mars and Venus, of Cinyras and Myrrha, etc.), and treated so that the chief situations were included in a series of *cantica*. All of these were represented by a single pantomimus, the dancer as well as the performer being designated by that name. He thus had to represent several characters, male and female, in succession, while a chorus, accompanied by flutes and other instruments, sang the corresponding song. The pauses necessary for the change of mask and costume for each successive part were apparently filled up with the recital of music by the chorus, which served to connect the chief scenes with each other. Because of the prominence given to dancing in them the pantomimes were known as *fabulae salticae*. In imperial times the best poets wrote them—e. g., Lucan and Statius (Juv. vii. 92).

It was only in the latest times of the Empire that women were employed in pantomime. Pantomime, aiming at sensual charm alone, went beyond all bounds of decorum in the representation of delicate subjects. As an understanding of the subtleties of the art required a cultivated taste, pantomime was specially favoured by the higher classes, while the *mimus*, with his buffoonery, was more pleasing to the multitude. On the true dramatic ballet of imperial times, see Pyrrhica; and on the whole subject, Friedländer, *Sittengeschichte*, ii. 427–442.

Panyasis (Πανύασις, the quantity of the penult is doubtful) and **Panyassis**. A Greek poet of Halicarnassus, uncle of Herodotus, the historian. He was put to death by the tyrant Lygdamis about B.C. 454 for being the leader of the aristocratic party. He composed a poem in fourteen books and 9000 verses, entitled *Heraclea* (exploits of Heracles), which was reckoned by later writers among the best epics. The few fragments preserved are in an elegant and graceful style. Another poem of his, the *Ionica* (Ἰωνικά), contained 7000 lines, and relates the history of Neleus, Codrus, and the Ionian colonies. Panyasis was ranked by the Alexandrian School (q. v.) with the great epic poets. The fragments of Panyasis are edited by Gaisford (1823) and Dübner (1840). There was another person of the same name, possibly the grandson of the poet, who wrote a work in two books on dreams (Suid. s. v.).

Paper. See Papyrus; Pergamentum; Writing and Writing Materials.

Paphlagonia (Παφλαγονία). A country of Asia Minor, bounded by Bithynia on the west, by Pontus on the east, by Phrygia and afterwards by Galatia on the south, and by the Euxine on the north. In the Trojan War the Paphlagonians are said to have come to the assistance of the Trojans, from the land of the Heneti, under the command of Pylaemenes. The Paphlagonians were subdued by Croesus, and afterwards formed part of the Persian Empire. Under the Romans, Paphlagonia formed part of the province of Galatia, but it was made a separate province by Constantine. The principal rivers were the Halys, the Sesamus, the

Ochosbaues, the Evarchus, the Zalecus, and the Amnius. The principal cities (mostly on the coast) were Amastris, Cromna, Aegealius, Abonitichos, Cimolis, Stephané, Potami, Sinopé, Pompeiopolis, and Gangra.

Paphus (Πάφος). Son of Pygmalion, and founder of the city of the same name.

Paphus (Πάφος). The name of two towns on the west coast of Cyprus, called "Old Paphos" (Παλαίπαφος) and "New Paphos" (Πάφος Νέα), the former near the promontory of Zephyrium, ten stadia from the coast; the latter more inland, sixty stadia from the former. Old Paphos was the chief seat of the worship of Aphrodité, who is said to have landed at this place after her birth among the waves, and who is hence frequently called the Paphian goddess (Paphia). Here she had a celebrated temple, the high-priest of which exercised a kind of religious superintendence over the whole island. The priests were supposed to be descendants of Cinyras (q. v.). The image of the goddess was a conical stone (Serv. *ad Aen.* i. 724), which was anointed with oil at the time of worship, and this, with other testimony derived from excavations made since 1887 by English explorers, makes it evident that the cult of the Paphian Aphrodité was Semitic rather than Hellenic. The very temple, with its large open courts and small chambers, had the characteristics of a Phœnician structure. New Paphos, on the other hand, was of Greek foundation, and the traditions ascribed it to Agapenor (Pausan. viii. 5, 2).

In the reign of Augustus Old Paphos was destroyed by an earthquake, and when rebuilt by order of the emperor received the name of Augusta (Dio Cass. lxiv. 23).

Papias (Παπίας). A bishop of Hierapolis in Phrygia, who flourished in the first half of the second century A.D., and suffered martyrdom at Pergamus in the year 163 (or 156). He wrote a work entitled Λογίων Κυριακῶν Ἐξήγησις, of which only fragments remain, preserved in the writings of Irenaeus, Eusebius, and others who quote them. They are collected and edited by Routh in vol. i. of his *Reliq. Sacr.* (1846).

Papilio. Literally, "a butterfly;" a name applied by the Romans to a tent whose curtains, when opened and fastened in front, resembled a butterfly's wings (Veget. *Mil.* i. 3).

Papiniānus, Aemilius. The most important among the Roman jurists; born about A.D. 140, a contemporary and friend of the emperor Septimius Severus, whom he accompanied on his expedition to Britain in the capacity of *praefectus praetorio*. Severus, on his death-bed at York, left to him the guardianship of his sons Geta and Caracalla; yet the latter caused Papinianus to be put to death in the next year, 212, on the day after the murder of his brother Geta (Spart. *Sev.* 21, 8). Of all his works, the thirty-seven books of *Quaestiones* (legal questions) and the nineteen books of *Responsa* (legal decisions) were considered the most important. Till the time of Justinian these formed the nucleus of that part of jurisprudence which was connected with the explanation of the original authorities on Roman law. We possess only fragments of them, in the form of numerous excerpts in the *Digest;* and lately a few have been discovered belonging to the fifth and ninth books of the *Responsa*, on a few leaves of a MS. written in uncials in the fifth (?) century. See Brinz, *Die Berlin. Frag. vorjustinianischer Rechtsquellen* (Munich, 1884), and the article Corpus Iuris Civilis.

Papinius Statius. See Statius.

Papiria Gens. A gens divided between patricians and plebeians. The families of Crassus, Cursor, Maso, and Mugillanus were patrician; those of Carbo, Paetus, and Turdus were plebeian.

Papirius. See Iurisprudentia.

Papirius Carbo. See Carbo.

Papirius Cursor, Lucius. (1) A Roman general who in the Second Samnite War frequently defeated the enemy. He was five times consul (B.C. 333, 320, 319, 315, 313), and twice dictator (B.C. 325, 309). He was a very severe disciplinarian, so that in spite of his victories he was not liked by his troops (Livy, viii. and ix.). (2) The son of the preceding, who was twice consul, and in his second consulate (B.C. 272) brought the Third Samnite War to a successful end (Livy, x. 31–47).

Papius Mutilus, Gaius. A Samnite general in the Marsic War (B.C. 90–89).

Papposilēnus. See Silenus.

Pappūa (Παππούα). A high mountain in Numidia near the city of Melitené.

Pappus (Πάππος). A geometrician of Alexandria who flourished in the fourth century A.D. A treatise of his on mathematical collections (Μαθηματικῶν Συναγωγῶν βιβλία) is still in existence, and has been edited by Hultsch (Berlin, 1875–78). It was originally in eight books, but the first and part of the second are lost. The work was intended to be a synopsis of Greek mathematics. See Ball's *Short History of Mathematics*, pp. 92–93 (London, 1888).

Pappus (πάππος). A name given to a stock character of the Atellan plays (*Atellanae fabulae*). Pappus is the prototype of the Pantaloon of modern pantomime—a foolish, credulous old man, who is always gulled and tricked by Dossennus, the sharper. See Munk, *De Fabulis Atellanis* (Breslau, 1840); and Friedländer, *Sittengeschichte*, ii. 435 (6th ed. Leipzig, 1889).

Paprēmis (Πάπρημις). A city of Lower Egypt in the Nomos Papremites. It was sacred to a god whom the Greeks identified with Ares (Herod. ii. 71).

Papȳrus (πάπυρος). Information as to the papyrus reed, celebrated in antiquity as providing material for writing, is obtained from the study of existing plants believed to belong to the same genus, and also from the statements of ancient writers.

There are two species of the papyrus plant (*Cyperus Papyrus*, cf. κύπειρος, "a reed") recognized to-day. One, the *Cyperus Syriacus*, mentioned by Theophrastus as growing with the sweet-scented calamus on the borders of a Syrian lake, was transplanted to Sicily by the Arabs in the tenth century, and is found at the present time in various parts of that island. The other species is found in Nubia and Abyssinia. This is the descendant of the old Egyptian papyrus which was cultivated in antiquity in the delta of the Nile. Herodotus (ii. 92, 96) and Strabo (799 foll.) speak of papyrus as belonging to lower Egypt. Since, however, it has disappeared from what was anciently believed to be its home, it is proba-

ble that its presence there was originally due to transplanting and assiduous cultivation. These two species differ from each other mainly in the length of the stalk—that of the former growing much higher than that of the latter. Other minor differences are also noticeable.

The most valuable description given by ancient writers is that of Theophrastus, the successor of Aristotle in charge of the Lyceum, in his *Historia Plantarum* (Περὶ Φυτῶν Ἱστορία, iv. 8, 3). He describes the papyrus as growing along the Nile in water of about two cubits (three feet) in depth, with a root as thick as a man's arm and of ten cubits (fifteen feet) or more in length. This root, rising somewhat above the soil, sends forth slen-

Papyrus Plant.

der shoots into the mud. The stalks (*πάπυροι*) are about four cubits (six feet) in height, and are of triangular shape. These bear no fruit, but produce a soft, hair-like tuft as a head. The roots are used for firewood and for making various articles of furniture. The papyrus itself (Theophrastus refers to the stalk) is put to many uses. Boats are made from it, and from the *βίβλος* (the substance within the stalk) sails, mats, clothing, coverings, and ropes. The *βιβλία* (*chartae*, or sheets made of *βίβλος*) are most familiar to people of other lands. Above all, this plant is useful as a means of subsistence, since the inhabitants chew it either raw, boiled, or roasted, drawing the juice and rejecting the fibre.

Pliny (*H. N.* xiii. 12, 77 foll.) repeats the statements of Theophrastus, but enlarges his mere reference to *βιβλία* into an extended account of the manufacture of paper from the papyrus plant. The following description is based upon the statements of Pliny; but that author's general and unscientific treatment of his subject and the inaccuracies in the text have caused much uncertainty concerning various points.

Paper was made from the pith or cellular tissue within the stalk. It was once believed that the material was the outer rind of the plant. The word *liber*, which refers to bark (once used for writing material), and Pliny's use of *philyrae*, in his description of the thin strips of web-like material, are misleading. Pliny elsewhere describes *philyra* as the inner bark of the lime-tree. Ulpian, of the third century A.D. (*Dig.* 32, 52), sets apart *philyrae* as of different material from *chartae*. Cassiodorus (sixth century), in his *Variae*, uses the following expressions, which show that the pith or inner tissue is designated: *viscera nivea viventium herbarum mollities in medullis; bibula teneritudine spongeum lignum*. This tissue was cut into strips (*schidae*, *σχίζειν*) or *inae* (Fest. p. 104: *ina quae pars chartae est tenuissima;* p. 81, 4: a *tenuitate inarum quas Graeci in chartis ita appellant*), which were made as broad and thin as possible. Those taken from the centre of the stalk were the best, while the quality became poorer the nearer the rind was approached. The strips (*schidae*) were arranged in parallel lines upon a board (*tabula*) wet with Nile water. They were then moistened with paste and overlaid with strips placed at right angles. Thus *texitur* is used of the process and *plagula* first of the unfinished page opposed to *pagina* the completed page, although both words afterwards were used for the page (*σελίς*) of the roll. These two layers of strips were pressed closely together until they formed one sheet. The remainder of the process consisted in drying in the sunlight and polishing with a shell (Mart. xiv. 209) or some instrument of ivory. While the *paginae* (*σελίδες*) might be used separately, they were regularly joined with others to form a roll (*volumen*, *τόμος*). The chief defects which were to be avoided were roughness (*scabritia*), dampness (*humor*), spots (*lentigines*), and streaks (*taeniae*), running down the middle of the *pagina* and rendering the paper spongy. The paste used was made of flour and boiling water, with the addition of a little vinegar. Ordinary glue, or workman's paste (*glutinum fabrile*), was not useful for this purpose, as it made the paper brittle. Pliny states that the separation of the pith into strips was accomplished by the use of the needle (*acu*). It is a question whether broad and thin strips could be obtained by the use of a needle. Birt (*Antike Buchwesen*, p. 231) suggests that *acu* may be a translation of some Greek expression, as, perhaps, *ὀξεῖ τινι ὀργάνῳ*. The language of Pliny, as commonly interpreted, indicates that the water of the Nile, when muddy, served as glue (*turbidus liquor vim glutinis praebet*). This is correct if *glutinis* is a genitive, but Birt shows that Pliny knew only *glutinum-i*, and *glutinis* is then a dative; and the inference is that paste was used, and water served to make it effective in uniting the strips. Pliny also states that in making the roll the best sheets were placed first, while those of poorer quality were at the end of the roll. Such an arrangement was most natural, as the most durable sheets would be on the outside; and if a portion of the roll alone was used the best would come first.

The manufacture of paper from papyrus belonged almost exclusively to Egypt and in particular to the city of Alexandria. One kind of paper, the Fanniana, was made in Rome, but the process was merely additional treatment of a paper manufactured in Egypt. Papyrus *chartae* differed in form, quality, and the care bestowed in preparation. The essential difference was that of form, as it will be seen that difference in form implied a difference in quality and care in manufacture. This form was determined by the breadth of the single sheet before it became part of a roll,

and not by the height of the page, as was once believed. The height varied from eight to thirteen inches (Birt, *Antike Buchwesen*, pp. 252–253). The breadth depended upon the number of *schidae* which were placed side by side to form the lower layer of the *plagula*. The broader the page the greater the advantage both to writer and reader, as there was less interruption to the continuity of the writing. In bound books the strain comes upon the binding; in the rolls, however, the individual page must stand the strain. Hence, the poorer the quality the narrower the page, as the liability to tear was greater in the large sheets than in the small. The great object in manufacturing paper was the attainment of the greatest breadth (*latitudo*) and thinness (*tenuitas*) consistent with toughness (*densitas*) and strength. Whiteness (*candor*) and smoothness of surface (*levitas*) were also desirable in papyrus paper. Pliny mentions nine varieties of paper. (*a*) The Augusta. This was the best quality known in Pliny's days, though previously the best quality had been called Hieratica. It was thirteen *digiti* (nine and one-half inches) wide. (*b*) The Livia. This was of the same breadth as the former, though the quality was somewhat inferior to it. (*c*) The Hieratica. This name was given to the third quality in the time of the Empire, probably after the death of Augustus. It was eleven *digiti* (eight inches) broad. (*d*) The Amphitheatrica. This was so called because of its being manufactured near the Amphitheatre of Alexandria. It was nine *digiti* (six and one-half inches) broad. (*e*) The Fanniana. This was the Amphitheatrica remade in Rome into a finer and broader paper. It was ten *digiti* (seven inches) broad. (*f*) The Saïtica, from Saïs, in Egypt, was eight *digiti* (five to six inches) broad. (*g*) The Taeniotica, named from a tongue (*ταινία*) of land near Alexandria. It was sold by weight and not by quality. (*h*) The Emporetica, which had a rough surface, and was used as wrapping-paper. It was six *digiti* (four and three-eighths inches) wide. (*i*) The Claudia. The emperor Claudius made a combination of the first two qualities by placing strips (*schidae*) of the first over those of the second, producing, thus, a new paper—better, in certain respects, than the Augusta. Claudius also increased the width until it reached a full Roman foot (eleven and one-half inches). The Claudia was preferred to all others, though the Augusta was still used for correspondence. The Claudia was of such a quality that both sides of the paper could be used (*opisthographa*). The usual custom was to write only on one side of the page (cf. Juv. i. 5; Mart. viii. 62; Pliny, *Epist.* iii. 5, 17).

For letters and documents single pages (*paginae*), termed *schidae* or *schidulae* (Mart. iv. 89), were used. However, even for these purposes, but particularly for books, a number of sheets were joined to form a roll (*volumen*). The length of these rolls varied from a few pages to a large number. The reading *vicenae* in Pliny (*H. N.* xiii. 77: *numquam plures scapo quam vicenae*) is corrupt. Birt suggests *ducenae*. Egyptian papyri have been found to vary in length from 70 to 140 feet. Birt considers 39 feet the average length of a classical book-roll. A roll containing the entire history of Thucydides, which required 578 pages, or a length of 265 feet, has been mentioned by the scholiast. In like manner a roll containing the *Iliad* and *Odyssey* of Homer, and another, the *Odyssey* of Livius Andronicus, are said to have existed. On the other hand, one literary work might be separated into smaller rolls. The fourth book of the *Rhetoric* of Philodemus was arranged in two rolls, and the Homeric papyrus of Elephantiné contained only the twenty-fourth book of the *Iliad*. The size of the volume corresponded to the character of the contents. Letters and poetry were written on small rolls; history, on rolls of larger size (Isidor. *Orig.* vi. 12, 1).

The first page of the roll was termed *πρωτόκολλον* (*protocollum*); the last, *ἐσχατόκολλιον* (Mart. 2, 6, 3). The term *macrocollum*, employed by Cicero in designating the paper used by himself (Cic. *Ad Att.* xiii. 25, xvi. 3), was applied in his time to the Hieratica and the finer grades of papyrus. Pliny's statement (*H. N.* xiii. 80, *Erat et cubitalis macrocollis*) means that the *macrocolla* might reach the breadth of a cubit (eighteen inches). To Pliny all kinds of paper superior in quality to the Saïtica were *macrocolla*. The writing was as a rule in columns, so that each page represented a column. The term *σελίδες*, originally of the rowing-benches of a galley, then of the columns of writing, finally was used as equivalent to *paginae*. The portion of the roll which marked the joining of the sheets was not used. However, in public documents before Caesar, the writing ran across the combined sheets, not in *paginis*, but *transversa charta* (cf. Suet. Caes. 56). Among the Ravenna diplomata of the fifth to the tenth centuries there are papyri written *transversa charta* (Marini, *Pap. Dipl.*).

The standard of measurement in a roll was the page (*σελίς*, *pagina*), as this was closely related to the size of the roll. The number of pages was regularly marked at the end of the book, but in some cases each page was numbered. In other rolls the number of pages is found on the *titulus*. In estimating the contents of a roll, it was customary to use lines as a standard of reckoning, not chapters or pages. This method of reckoning is the so-called stichometry. The number of lines (*στίχοι* and *ἔπη*, *versus*) in prose-writing and of verses in poetry was given at the close of the writing. This *στίχος* was the normal hexameter line of thirty-five letters on the average (Birt, p. 197), or sixteen syllables (Diels, *Herm.* xvii. p. 377 foll.). The normal hexameter verse required the broad papyrus, so that the lines of narrow pages were estimated only as parts of the normal line. Theopompus states the length of his orations as 20,000 *ἔπη*, and of his historical works as of 150,000 *ἔπη*; so the emperor Iustinian calculates 150,000 *versus* in his *De Confirmatione Digestorum*.

In making the rolls the last sheet was folded upon a strip of wood termed *umbilicus*, *ὀμφαλός* (cf. *ad umbilicum adducere*, "to finish a work," Hor. *Epod.* 14, 8; Mart. iv. 89). The ends of the *umbilicus* were gilded (Mart. iii. 2, 9), and the edges (*frons*) of the cylinder were polished (Ovid, *Trist.* iii. 1, 13; Mart. i. 67, 10; Catull. 22, 8) and coloured (*nigra frons*) (Ovid, *Trist.* i. 1, 8). The roll was stained with cedar-oil, as a protection against moths (Vitruv. ii. 9, 13; Mart. iii. 2); in consequence, the roll had a yellow colour (Ovid, *Trist.* iii. 1, 13). There was fastened to the roll a strip of parchment, which contained the title of the book. This was termed *titulus* or *index* (*σίττυβος* = a strip of leather, or *σίλλυβος* = an index). The

roll was usually enveloped in a parchment cover (*membrana*, *διφθέρα*), outside of which the *titulus* hung. In the case of the papyri of Herculaneum the envelope itself was of papyrus. If several rolls belonged to the same work, it was customary to bind these in a bundle (*fasces*). In reading, the roll was held with both hands.

There are in existence to-day Egyptian papyri of great age. (See illustration, p. 28.) The oldest, the Prisse papyrus, which is kept in Paris, is estimated as dating from 1800 to 2000 years B.C. The earliest Greek papyri in existence, containing the fragments of the *Antiope* of Euripides, date about the second century B.C. Others dating from the last century B.C. contain orations of Lycophron and Euxenippus.

The earliest Latin papyri are those of Herculaneum, which certainly date from the early part of the first century A.D. After these come the deeds of Ravenna dating fifth–tenth century and papal documents of the eighth–tenth century. In 1752 there were discovered in the Villa Suburbana at Herculaneum a large number of blackened rolls which, though at first disregarded, were finally recognized as literary works. It was not until 1754 that any success was attained in opening the rolls. In that year a monk, Piaggio, unrolled what proved to be a portion of a work of Philodemus. (See De Jorio, *Officina de' Papiri, Real Museo Borbonico*, Naples, 1825.)

In the forty-eight years following only seventeen rolls were opened. The authorities of Naples took little interest in the matter, and the first publication did not appear until 1793. In 1800, George IV., then Prince of Wales, sent Bishop Hayter to Italy to copy the papyri. Bishop Hayter was driven from Italy in the French war of 1806, but managed to save one hundred lead-pencil fac-similes and an engraving of the *Carmen Latinum*. These are preserved in the Bodleian Library at Oxford. The British Museum possesses several opened and unopened rolls. This library on papyrus was found to contain the works of Epicurean philosophers — Epicurus, Demetrius, Polystratus, Colotes, and particularly of Philodemus; also notes on Chrysippus, the Stoic. There were found twenty-four Latin rolls all in one *capsa* (book-box). Of these Latin rolls only one, No. 817 (*Carmen Latinum de Bello Actiaco*), has been opened. (See page 1157.) As the larger number of the rolls appear to have been written by Philodemus, and as no rolls save the Latin are of later date than Philodemus, it is possible that the library originally belonged to him. The Latin rolls were probably a chance addition in the time of the early Empire to a library of an earlier date. Various opinions have been expressed as to the authorship of the *Carmen Latinum*. Varius or Rabirius, or a little-known Albinius, has at different times been mentioned as the author. It was, at any rate, the work of some insignificant poet of the early Empire. The following works contain the poem: Kreyssig, *Commentatio de Sallustii Historiae Fragmentis*, vol. iii. (1835); Riese, *Anthol. Lat.* vol. i. (1870); Baehrens, *Poetae Latini Minores*, vol. i. pp. 212 foll. (Leipzig, 1819): Baehrens used the Oxford plates loaned him by the Bodleian librarian; Comparetti, *Relazione sui Papiri Ercolanesi: Reale Acad. dei Lincei*, 1879; Spengel, *Die Hercul. Rollen* (*Philologus*, 1863, sup. vol.); Gompertz, *Hercul. Studien* (Leipzig, 1865–66); *Herculanensium Voluminum quae Supersunt* (Naples, 1793–1809, 2 vols. *Collectio altera*, 1862–76); Scott, *Fragmenta Herculanensia* (Oxford, 1885).

Parabăsis (*παράβασις*). A characteristic, though not indispensable, part of the chorus in the Old Attic comedy. About the middle of the piece, when the action of the play had been developed up to a certain point, the chorus, which had up to this time turned towards the actors on the stage, now turned to the audience. This stepping forward towards the audience is itself also termed *parabasis*. In this position they made an appeal to the public on behalf of the poet, who could thus give expression to his personal views and wishes, and offer advice, as well as explain the purport of his play, etc. This address stood wholly outside the action of the play. When the *parabasis* was complete, which was seldom the case, it consisted of seven parts, partly spoken by the leader of the chorus, partly sung by the chorus. One of these parts was called the *parabasis* in a narrower sense, and consisted chiefly of anapaestic tetrameters. One feature of the parabasis was the introduction of lines relating to topics of the day, which Professor Mahaffy has compared with the "topical songs" of the modern burlesque. See Müller, *Hist. of the Lit. of Ancient Greece*, Eng. trans. i. p. 401, and Professor Brander Matthews in *Classical Studies in Honour of Henry Drisler*, pp. 177–178 (N. Y. 1894).

Parabŏlon (*παράβολον*). A fee paid by the appellant on an appeal (*ἔφεσις*) from an arbitrator or magistrate to the dicasts, or from the Senate to the Assembly, or from the Assembly to the Heliasts (Pollux, viii. 62 foll.).

Paracatabŏlé (*παρακαταβολή*). A deposit required from a plaintiff or petitioner in certain cases as security that the complaint or demand was not a frivolous one. See *Att. Process*, ed. Lipsius, pp. 800, 814–822.

Paracatathēké (*παρακαταθήκη*) and **Parathēké** (*παραθήκη*). A deposit made with a friend or other person for the benefit of the owner of the deposit; as when money is deposited at the banker's on interest. An action brought to recover such property from the person holding it was called *παρακαταθήκης δίκη*. See *Att. Process*, ed. Lipsius, pp. 700 foll.

Parachelōïtis (*Παραχελωΐτις*). The plain in Acarnania and Aetolia traversed by the river Acheloüs. See ACHELOÜS.

Parachoāthras (*Παραχοάθρας*). (1) A part of the mountain chain forming the boundary between

Susiana and Media. (2) Another part of the same range, forming the boundary between Parthia and the Desert of Carmania (Ptol. vi. 2, 3).

Paradīsus (*παράδεισος*). A word obtained by the Greeks from the Persians (Pollux, ix. 13), and applied by them to any park or plaisance which surrounded the country-houses of the Persian nobles. They were often of very great extent, and were usually stocked with wild animals for the chase, beautified by trees and streams, and enclosed by a wall. (Cf. Xen. *Anab.* i. 4, § 10; ii. 4, § 16; Gell. ii. 10). They were introduced into Greece at the time of the successes of Alexander. (See I. Müller's *Handbuch*, iv. p. 468.) For similar enclosures among the Romans, see VIVARIUM.

Paradoxa. A philosophical treatise of Cicero setting forth six striking theorems of the Stoic system. It was composed in B.C. 46. Edited by Orelli (with the Tusculans) (Zürich, 1829); and by Möser (Göttingen, 1846).

Paraetacēnē (*Παραιτακηνή*). (1) A mountainous region on the borders of Media and Persis (Arrian, iii. 19). (2) A district on the borders of Bactria and Sogdiana (Q. Curt. viii. 14).

Paraetonium (*Παραιτόνιον*) or **Ammonia** (*Ἀμμωνία*). An important city on the northern coast of Africa, belonging politically to Egypt: hence this city on the west and Pelusium on the east are called *cornua Aegypti*. The adjective *Paraetonius* is used by the poets in the general sense of Egyptian.

Paragrăphē (*παραγραφή*). An Attic law-term that may be approximately rendered "a plea"; an objection raised by the defendant to the admissibility of the plaintiff's action—not quite a "demurrer," which is an objection arising from the plaintiff's own statement of his case, but rather a "special plea" depending on facts set forth by the defendant himself. It was given in writing; and if it went further than a mere denial of the plaintiff's allegations, the issue raised by it was tried as a proceeding preliminary to the principal cause. It was, therefore, a means of delaying the case. See *Attische Process*, ed. Lipsius, pp. 849–854, 948.

Parăli (*πάραλοι*). "The people of the coast-land." See ATTICA; SOLON.

Paralia. See ATTICA.

Parălus. See THEORIS.

Parălus (*Πάραλος*). The younger of the two legitimate sons of Pericles. He and his brother Xanthippus died in the great plague which afflicted Athens B.C. 429. The Athenians gave each brother the name of *βλιττομάμμας* or "booby." See Plutarch, *Pericles*, 24, 36.

Paranoias Diké (*παρανοίας δίκη*). A suit brought at Athens by a son or relation acting for a son against a person who had become mentally incapable of managing his own affairs. It therefore resembled our writ *de lunatico inquirendo*. If the suit was successful, the person against whom it was brought was inhibited from the further care of his property. Such a suit is said to have been instituted against the dramatic poet Sophocles; but see SOPHOCLES.

Paranŏmon Graphé (*παρανόμων γραφή*). An indictment brought against any person who proposed or carried an unconstitutional *ψήφισμα*, or law, whether its unconstitutionality consisted in form, contents, or both together. Such was the proposal of Androtion to award a crown to the outgoing senators, though they had failed to build the required number of triremes. This was improper as not having first been submitted to the Senate (Demosth. *C. Androt.* p. 594, § 5). A law was also unconstitutional if it contravened an existing law (Andoc. *De Myst.* § 87). The indictment could also be brought against one who proposed laws that were generally inexpedient or contrary to public policy (Poll. viii. 87). Any citizen might prefer the indictment, and if he declared on oath his intention of doing so this acted as a means of suspending the vote upon a proposed law; or if it had already been adopted, as a temporary suspension of its operation. If the indictment was sustained, the person proceeded against might suffer death or a fine, and his law was repealed; but if the person bringing the indictment failed to secure a fifth of the votes at the trial (as Aeschines did in his famous prosecution of Ctesiphon), he incurred a fine of 1000 drachmae and lost the right of instituting a similar prosecution in the future.

Paranymphus. The "best man" at a wedding. See MATRIMONIUM, p. 1013.

Parapetasma (*παραπέτασμα*). See VELUM.

Parapherna (*τὰ παράφερνα*). A term applied to whatever property a bride brought with her over and above her dower. See PHERNÉ; PROÏX

Parapotamii (*Παραποτάμιοι*). A town of Phocis, on the left bank of the river Cephissus. It was destroyed by Xerxes in the Persian War, but later rebuilt, only to be again destroyed in the Sacred War (Herod. viii. 33; Pausan. x. 3, 1).

Parapresbeia (*παραπρεσβεία*). A Greek term used of any corrupt conduct or neglect of duty on the part of an ambassador (*πρέσβυς, πρεσβυτής*). For such misfeasance he was liable to be recalled and prosecuted (Demosth. *De Falsa Leg.* p. 430, § 278 foll.). Ambassadors who acted contrary to their instructions were liable to such a charge, but on their recall first made a report to the Senate and then to the Assembly, where, if their defence seemed satisfactory, they received a vote of thanks and an invitation to dinner in the Prytaneum. See Aeschin. *De Falsa Leg.* §§ 45, 53.

Parasanga (*παρασάγγης*). A parasang; a Persian measure of distance equal to thirty stadia (Herod. vi. 42) or some 3½ or 4 English miles. The length of the parasang varied in later times (Pliny, *H. N.* vi. 30), but the name survives in the modern Persian *farsang*, in which distances are still reckoned in Asia, and which is approximately the same as that of the time of Herodotus.

Parascenium (*παρασκήνιον*) and **Parascenia** (*παρασκήνια*). The space at the sides of the stage. See THEATRUM.

Parasēmon (*παράσημον*). See INSIGNÉ.

Parasītus (*παράσιτος*, "table companion"). A word which among the Greeks denoted originally the priest's assistant, who, like the priest, received his support from the offerings made to the temple, in return for certain services. These services included the collection and care of supplies of corn due to the temple, assistance at certain sacrifices, and the preparation of the banquets connected with

certain festivals. The assistants of civil officials, who were maintained at the expense of the State, were also called parasites in many places. The word received another meaning in the Middle and New Greek comedy, where it means the hanger on, who plays the flatterer and buffoon, with a view to getting invited to dinner. The parasite was transferred as a standing character to the Roman imitations of Greek comedy, and figures largely in the plays of Plautus. Good examples of the stage parasite will be found in his *Captivi* and *Menaechmi* and in the *Phormio* of Terence. See Know, *Die Parasiten bei den Griechen* (1876).

Parăstas (*παραστάς*). See ANTAE.

Parastătae (*παραστάται*). Officials who served under the Eleven at Athens, as jailers, executioners, or torturers. See HENDEKA.

Paravaei (*Παραύαιοι*). A tribe of Epirus on the Aoüs (Thuc. ii. 80).

Parazonium. See ZONA.

Parcae. See MOERAE.

Parechēsis. See RHYME.

Parĕdri (*πάρεδροι*). "Assessors"; officers at Athens attached to the three chief archons, the euthyni and the Hellenotamiae. Each of the three archons had the right to two assessors, whom he chose himself as advisers and general assistants; and they were usually his personal friends. Before entering upon their duties, the paredri had to pass an examination (*δοκιμασία*) in the Senate and also before a commission of judges. Besides acting as advisers of the archons, etc., the paredri had authority to keep order in the theatres and at the public festivals, and could punish the disorderly with fines (Demosth. *C. Mid.* p. 572, § 179). Paredri might be dismissed by their principals for cause. See Gilbert, *Greek Constit. Antiq.*, Eng. trans. pp. 225, 228, 252, 254, 255; and EUTHYNA; HELLENOTAMIAE.

Parengrapti (*παρέγγραπτοι*) and **Parengrăphi** (*παρέγγραφοι*). A term given at Athens to those whose names were enrolled among the citizens without their being such by birth (*φύσει*) or special grant (*δωρεᾷ*). Such a person might be prosecuted by any Athenian citizen, the prosecution being called *ξενίας γραφή*, and if condemned his person and property were forfeited to the State, and he was sold as a slave (Demosth. *Epist.* iii. p. 1481, § 28). The *δημόται* had authority to strike from the rolls any such person who, if he acquiesced in their action, was merely relegated to the position of an alien; but if he appealed to the dicasts, and they refused to sustain his appeal, the heavier penalty was enforced.

Parentalia. The general festival in honour of deceased relatives, celebrated by the Romans from February 13th to 21st. See FUNUS; MANES; SEPULCRUM.

Parian Chronicle (*Χρονικὸν Παριανόν*, or MARMOR PARIUM). A marble tablet found at Paros in 1627, now placed among the Arundel Marbles in the University Galleries at Oxford. It is written chiefly in the Attic, but partly in the Ionian dialect, and consists of ninety-three lines, some of which are no longer complete. It originally contained a number of dates of the political, but chiefly of the religious and literary, history of the Greeks, from the Athenian king Cecrops to the Athenian archon Diognetus, B.C. 264; in its present condition, however, it only goes down to B.C. 354. All the dates are given according to Attic kings and archons, and the historical authorities on which it depends must have been Attic authors. The origin and aim of the tablet are unknown. It was first published by Selden in 1628; it has since been printed by Boeckh (*C. I. G* ii. 2374), who considers the leading authority followed to be Phanias of Eresus.

Paries (*τοῖχος*). A wall belonging to a roofed building and thus distinguished from *murus* (q. v.). PARIES SOLĬDUS is a wall unpierced by doors or windows. PARIES COMMŪNIS is a party-wall common to two houses. PARIES DIRECTUS is a cross wall between rooms. PARIES FORNICĀTUS is a wall pierced by arches.

Parietarian Inscriptions. See GRAFFITI.

Parilia. See PALILIA.

Par Impar Ludĕre (*ἀρτιασμός, ἄρτια ἢ περιττὰ παίζειν, ζυγὰ ἢ ἀζυγὰ παίζειν, ζυγὰ μόνα παίζειν*, or *ποσίνδα*). The game of "odd or even," much played by both Greeks and Romans. A person held in his hand a number of dice, nuts, coins, or other objects, and his opponent guessed whether the number of them was odd or even. The amount won or lost was either the objects themselves or a sum of money staked upon the guess (Pollux, ix. 101; Apollon. iii. 115; Aristoph. *Plut.* 816; Becker-Göll, *Gallus*, iii. 477).

Paris (*Πάρις*), also called **Alexander** (*Ἀλέξανδρος*). The second son of Priam, king of Troy, by his wife Hecuba. When his mother, being about to give birth to a son, had dreamed that she brought forth a torch which set all Ilium in flames, the soothsayer Aesacus declared that the child would prove the ruin of his country, and recommended its exposure (Eurip. *Andr.* 298; Cic. *Div.* i. 21). As soon as born, the child was given to a servant to be left on Ida to perish. He obeyed, but, on returning at the end of five days, he found that a bear had been nursing the infant. Struck with this strange event, he took home the infant, reared him as his own son, and named him Paris. When Paris grew up he distinguished himself by his strength and courage in repelling robbers from the flocks, and the shepherds, in consequence, named him Alexander ("Man-protector"), or, according to the Greek form, *Ἀλέξανδρος* (*ἀπὸ τοῦ ἀλέξειν τοὺς ἄνδρας*). In this state of seclusion, too, he united himself to the nymph Oenoné, whose fate is elsewhere related. (See OENONÉ.) Their happiness was soon disturbed. At the marriage of Peleus and Thetis, the goddess of Discord, who had not been invited to partake of the entertainment, showed her displeasure by throwing into the assembly of the gods who were at the wedding celebration a golden apple, on which were written the words *Ἡ καλὴ λαβέτω*, "Let the beauty (among you) take me." Heré, Athené, and Aphrodité laying claim to it, and Zeus being unwilling to decide, the god commanded Hermes to lead the three deities to Mount Ida, and to intrust the decision of the affair to the shepherd Alexander, whose judgment was to be final. The goddesses appeared before him, and each, to influence his decision, made him an alluring offer of future advantage, Heré by the promise of a kingdom, Athené by the gift of intellectual superiority and martial renown, and Aphrodité by offering him the fairest woman in the world for his wife. To Aphrodité he assigned the prize, and brought upon

Paris. (Aeginetan Marbles.)

himself, in consequence, the unrelenting enmity of her two disappointed rivals, which was extended also to his whole family and the entire Trojan race.

Soon after this event, Priam proposed a contest among his sons and other princes, and promised to reward the conqueror with one of the finest bulls on Mount Ida. Persons were sent to procure the animal, and it was found in the possession of Paris, who reluctantly yielded it up. The shepherd, desirous of obtaining again this favourite animal, went to Troy, and entered the lists of the combatants. Having proved successful against every competitor, and having gained an advantage over Hector himself, that prince, irritated at seeing himself conquered by an unknown stranger, pursued him closely, and Paris must have fallen a victim to his brother's resentment had he not fled to the altar of Zeus. This place of refuge preserved his life; and Cassandra, the daughter of Priam, struck with the similarity of the features of Paris to those of her brothers, inquired his birth and his age. From these circumstances she soon discovered that he was her brother, and as such she introduced him to her father and to his children. Priam, thereupon, forgetful of the alarming predictions of Aesacus, acknowledged Paris as his son, and all enmity instantly ceased between the newcomer and Hector. Not long after this, at the instigation of Aphrodité, who had not forgotten her promise to him, Paris proceeded on a voyage to Greece, from which the soothsaying Helenus and Cassandra had in vain endeavoured to deter him. The ostensible object of the voyage was to procure information respecting his father's sister Hesioné, who had been given in marriage by Hercules to his follower Telamon, the monarch of Salamis. The real motive, however, which prompted the enterprise, was a wish to obtain, in the person of Helen, then the fairest woman of her time, a fulfilment of what Aphrodité had offered him when he was deciding the contest of beauty. Arriving at Sparta, where Menelaüs, the husband of Helen, was reigning, he met with a hospitable reception; but, Menelaüs soon after having sailed away to Crete, the Trojan prince availed himself of his absence, seduced Helen, and bore her away to his native city, together with a large portion of the wealth of her husband. Hence ensued the war of Troy, which ended in the total destruction of that ill-fated city. See TROJAN WAR.

Paris, though represented in general as effeminate and vain of his personal appearance, yet distinguished himself during the siege of Troy by wounding Diomedes, Machaon, Antilochus, and Palamedes, and subsequently by discharging the dart which proved fatal to Achilles. Aphrodité took him under her special protection, and, in the single combat with Menelaüs, rescued him from the vengeance of the latter. On the capture of Troy, Paris was wounded by Philoctetes with one of the arrows of Heracles, and, falling ill, returned to Oenoné, whom he had so long before abandoned. Resenting her wrongs she refused to heal him, and he returned to Troy, where he died.

Paris. (1) A pantomimic actor in the reign of Nero, who greatly liked him and issued a special edict declaring him free-born (*ingenuus*), though in reality he had been the slave of the emperor's aunt, Domitia, and had purchased his freedom with a large sum of money. Later, when Nero himself began acting in pantomimes, he became jealous of the superior art of Paris and put him to death (Tac. *Ann.* xiii. 19–27; Suet. *Nero*, 54). (2) An actor at Rome in the reign of Domitian, whose favourite he was until detected in an intrigue with the empress Domitia, when he was put to death (Dio Cass. lxvii. 3; Suet. *Domit.* 3, 10).

Parisii. Paris. See LUTETIA PARISIORUM.

Parium (Πάριον). A city of Mysia, on the Propontis, founded by a colony from Miletus, Paros, and Erythrae. It was known for its local worship of Apollo, Dionysus, and Eros. Under Augustus it was made a Roman colony.

Parma. Now Parma. A town in Gallia Cispadana, situated on a river of the same name, between Placentia and Mutina, on the Via Aemilia; originally a town of the Boii, but made a Roman colony B.C. 183. It was celebrated for its wool (Mart. xiv. 155).

Parma. The circular leathern shield of the Roman light infantry. See CLIPEUS.

Parmenĭdes (Παρμενίδης). A Greek philosopher and poet, born of an illustrious family about B.C. 510, at Elea in Lower Italy. He was held in high esteem by his fellow-citizens on account of his excellent legislation, to which they ascribed the prosperity and wealth of the town; and also on account of his exemplary life. A "Parmenidean life" was proverbial among the Greeks (Cebes, *Tabula*, 2). Little more is known of his biography than that he stopped at Athens on a journey in his sixty-fifth year, and there became acquainted with the youthful Socrates. He is the chief representative of the Eleatic philosophy. Like his great teacher, Xenophanes, he also formulated his philosophical views in a didactic poem, *On Nature* (Περὶ Φύσεως), the form of which was considered inartistic (Cic. *Acad.* ii. 74). According to the proëm, which has been preserved (while we only possess fragments of the rest), the work consisted of two divisions. The first treated of the truth, the second of the world of illusion; that is, the world of the senses and the erroneous opinions of mankind founded upon them. In his opinion truth lies in the perception that existence is, and error in the idea that non-existence also can be. Nothing can have real existence but what is conceivable; therefore to be imagined and to be able to exist are the same thing, and there is no development; the essence of what is conceivable is incapable of development, imperishable, immutable, unbounded,

and indivisible; what is various and mutable, all development, is a delusive phantom; perception is thought directed to the pure essence of being; the phenomenal world is a delusion, and the opinions formed concerning it can only be improbable. The best edition of the fragments is that in Karsten's *Philosophorum Graecorum Reliquiae* (Amsterdam, 1835). They have been rendered into English hexameter by T. Davidson (*Journal of Speculative Philosophy*, St. Louis, 1870), and paraphrased in prose by Courtney in his *Studies in Philosophy* (1882). See PHILOSOPHIA.

Parmenion (Παρμενίων). (1) The son of Philotas, a distinguished Macedonian general in the service of Philip of Macedon and Alexander the Great. Philip held him in high esteem, and used to say of him that he had never been able to find more than one general, and that was Parmenion. In Alexander's invasion of Asia, Parmenion was regarded as second in command. At the three great battles of the Granicus, Issus, and Arbela, while the king commanded the right wing of the army, Parmenion was placed at the head of the left, and contributed essentially to the victory on all those memorable occasions. The confidence reposed in him by Alexander appears to have been unbounded, and he is continually spoken of as the most attached of the king's friends, and as holding, beyond all question, the second place in the State. But when Philotas, the only surviving son of Parmenion, was accused in Drangiana (B.C. 330) of being privy to the plot against the king's life, he not only confessed his own guilt, when put to the torture, but involved his father also in the plot. Whether the king really believed in the guilt of Parmenion, or deemed his life a necessary sacrifice to policy after the execution of his son, he caused his aged friend to be assassinated in Media before the latter could receive the tidings of his son's death. The death of Parmenion, at the age of seventy years, will ever remain one of the darkest stains upon the character of Alexander. It is questionable whether even Philotas was really concerned in the conspiracy, and we may safely pronounce that Parmenion had no connection with it. (2) Of Macedonia, an epigrammatic poet, whose verses were included in the collection of Philip of Thessalonica; whence it is probable that he flourished in, or shortly before, the time of Augustus.

Parmularius. A gladiator who carried the small shield known as the *parma* (Suet. *Domit.* 10).

Parnassus (Παρνασσός). A name applied (1) to a range of mountains extending from Oeta and Corax southeast through Doris and Phocis, and terminating at the Corinthian Gulf between Cirrha and Anticyra where it was called Cirphis (Κίρφις); and (2) to the highest part of the range a little north of Delphi (q. v.), where it attains an elevation of some 8000 English feet. Its twin peaks are called Tithorea (Τιθορέα) and Lycorea (Λυκώρεια). Here the mountain forms a crescent-shaped curve of cliffs, known as Φαιδριάδες or "the resplendent," since they face south and receive the full rays of the sun during the heat of the day. On the southern slope of Parnassus lay Delphi. The modern name is Liákoura.

On the sides of Parnassus were many caves, romantic grottoes, and ravines, and it was regarded as a principal abode of Apollo and the Muses. On Mount Lycorea was the Corycian cave of the latter, and just above Delphi lay the famous Castalian spring flowing from between the two cliffs known as Nauplia and Hyamplia. Between Parnassus proper and Mount Cirphis was the valley of the Plistus, with the sacred road which ran from Delphi to Daulis and Stiris. At the branch of this road where the two ways parted, Oedipus slew his father Laïus. See OEDIPUS.

(3) A town in northwestern Cappadocia, between Ancyra and Archelaïs.

Parnes (Πάρνης). A mountain in the northeastern part of Attica, was a continuation of Mount Cithaeron, and formed part of the boundary between Boeotia and Attica. It was well wooded, abounded in game, and on its lower slopes produced excellent wine. On the summit were altars and a statue of Zeus (Pausan. i. 32, 1).

Parnon (Πάρνων). A mountain which separated Laconia from the Arcadian district Tegeatis. Its height is about 6500 feet.

Parŏchi. Commissaries employed by the Roman State to furnish all necessary supplies to officials who were travelling on public business. They were distributed among the chief posting-stations throughout Italy and the provinces. (See CURSUS PUBLICUS; MANSIO.) A law passed in B.C. 59 by Iulius Caesar defined the supplies which these persons were compelled to furnish, and limited them to the barest necessaries, such as firewood, shelter, beds, etc. See Hor. *Sat.* i. 5, 46; Cic. *Ad Att.* v. 16; xiii. 2; Marquardt, *Privatleben der Römer*, 199.

Parodia (παρῳδία). Parody, burlesque. Parody among the Greeks is ascribed by Aristotle to Hegemon of Thasos (*Poët.* ii. 5; Athen. 698 B), who flourished at the time of the Peloponnesian War, and is frequently cited by Athenaeus, who mentions his nickname of Φακῆ or "Lentil." His parodies are based upon the Greek epics which he burlesqued. Mention is especially made of his parody of the *Gigantomachia*. (See Athen. i. p. 5; iii. p. 108; ix. pp. 406–407; and Meineke, *Hist. Crit. Com. Graec.* pp. 214–215.) Another Greek, Matron of Pitana, wrote burlesques of Homer, from one of which Athenaeus has preserved a long fragment which parodies the beginning of the *Odyssey*. He flourished in the fourth century B.C. (See Athen. iv. pp. 134–137; Eustath. *ad* Hom. pp. 1067, 1571, etc., and the monograph by Moser, *Ueber Matron den Parodiker* in Daub and Kreuzer's *Studien*, vi. pp. 293 foll.). Matron gave a gastronomical turn to his fun, as the first line of the passage mentioned above plainly shows:

Δεῖπνα μοι ἔννεπε, Μοῦσα, πολύτροφα καὶ μάλα πολλά.

In this he was followed by Archestratus of Gela, whose Ἡδυπάθεια was afterwards translated into Latin by Ennius. Another famous Homeric parody is the *Batrachomyomachia* or "Battle of the Frogs and Mice," commonly ascribed to Pigres. See BATRACHOMYOMACHIA; HOMERUS.

The philosophical writers were parodied first by Timon of Phlius, a skeptic of the school of Pyrrho (about B.C. 280), who was a writer of very great ability. His parodies were known as *Silli* (Σίλλοι), a word of uncertain derivation, and were in three books, partly in dialogue, and written in hexameters in the epic style. They ridiculed the dogmatic philosophers, but also parodied the Ho-

meric language, as in the following line in imitation of *Iliad*, ii. 484:

"Εσπετε νῦν μοι ὅσοι πολυπράγμονές ἐστε σοφισταί.

Some have ascribed the *Silli* to Xenophanes of Colophon as the originator whom Timon introduces in his dialogue, but of this there is no definite proof. These compositions by Timon were regarded by the Greeks as so important that commentaries were afterwards written on him, notably by Apollonides of Nicaea; and were imitated by various writers, such as Sotades, Blaesus, Saleras, and Sopater of Paphos. See Diog. Laërt. ix. ch. 12; Brunck, *Analecta*, ii. pp. 67 foll.; Langenreich, *Dissertationes Tres de Timone Sillographo* (Leipzig, 1720–21); Wölcke, *De Graecorum Sillis* (Berlin, 1820); and F. Paul, *De Sillis* (Berlin, 1821).

Burlesques of the dramatic writers were apparently first written by Rhinthon (q. v.) of Tarentum (or Syracuse), whose thirty-eight dramas parodied the classic tragedy and gave rise to the so-called ἱλαροτραγῳδία, which became very popular among the Greeks of Southern Italy. Rhinthon belongs to the Ptolemaic period, and therefore lies beyond the domain of classic Greek literature; but the comedies of Aristophanes contain many scenes that are evidently written in mockery of the tragedians and that contain many touches of subtle banter.

Among the Romans parody was early written, the most complete specimen that we have being the *Amphitruo* of Plautus, which is the only remaining model that we have of the Rhinthonic play. The burlesque epic is well represented in the pseudo-Vergilian *Culex* (q. v.). Bucolic poetry was ridiculed in the *Antibucolica* of one Numitorius, who in them poked fun at Vergil's *Eclogues* (Serv. *ad Ecl.* vi. 43). A line or two of these have been preserved—e. g. the following in ridicule of *Ecl.* i. 1:

Tityre si toga calda tibi, quo tegmine fagi?

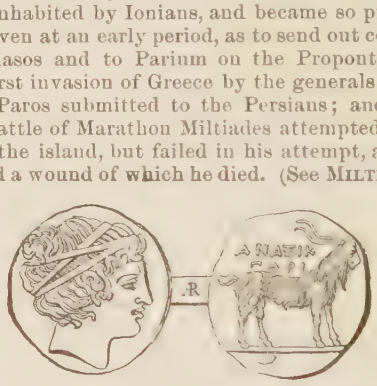
Parody flourished most, however, in the period of the decline. The first satire of Persius parodies a number of lines from the popular poetry of the day; and Juvenal occasionally amuses himself by burlesquing a Vergilian line, as in i. 25, which recalls Verg. *Ecl.* i. 28; and he often falls into the mock-heroic vein, as did Horace at times. (Cf. Hor. *Sat.* i. 5, 9–10; 53; Juv. iv. 58.) Petronius burlesqued the *improvvisatori*. Legal forms are ridiculed in the *Testamentum Porcelli* ("Last Will and Testament of a Little Pig"); and in the *Lex Tappula* of the strange humorist Valerius Valentinus. See Fest. 363; Bücheler, *Bonner Ind. Lect.* (1877); Ribbeck, *Römische Dichter*, i. 232.

In modern times burlesques of classical subjects were made popular by Scarron in his *Virgile Travestié*, which was the first of a number of such works, most of them, however, being very dreary.

See Moser in *Heidelb. Studien*, vi. 2, pp. 267 foll., and Delapierre, *La Parodie chez les Grecs, les Romains, et les Modernes* (London, 1871).

Parodos (*πάροδος*). A technical term of the Greek drama, used to denote (1) the entrance of the chorus upon the orchestra; (2) the song which they sang while entering; (3) the passage by which they entered. See CHORUS; THEATRUM.

Paronomasia. See PUNS.



Paropamīsus (*Παροπάμισος*). The part of the great chain of mountains in Central Asia lying between the Sariphi Mountains (Mountains of Kohistan) on the west and Mount Imaus (Himalaya) on the east, or from about the sources of the river Margus on the west to the point where the Indus breaks through the chain on the east. The Greeks sometimes called them the Indian Caucasus (*Caucasus Indicus*), a name which has come down to our times in the native form of Hindu Kush. Its inhabitants were called Paromisadae or Paropamisii, the former name being also given to their territory, which was approximately the eastern part of Afghanistan and part of the Punjab west of the Indus.

Paropsis. See CATINUS.

Parorēa (*Παρώρεια*). (1) A town in Thrace on the frontiers of Macedonia. (2) A town in Southern Arcadia, founded by Parorеus, the grandson of Lycaon (Pausan. viii. 27, 3; 35, 6).

Parorios. See PHRYGIA.

Paros (*Πάρος*). An island in the Aegaean Sea, one of the larger of the Cyclades, was situated south of Delos and west of Naxos, being separated from the latter by a channel five or six miles wide. It is about thirty-six miles in circumference. It was inhabited by Ionians, and became so prosperous, even at an early period, as to send out colonies to Thasos and to Parium on the Propontis. In the first invasion of Greece by the generals of Darius, Paros submitted to the Persians; and after the battle of Marathon Miltiades attempted to reduce the island, but failed in his attempt, and received a wound of which he died. (See MILTIADES.)

Coin of Paros.

After the defeat of Xerxes, Paros came under the supremacy of Athens, and shared the fate of the other Cyclades. The most celebrated production of Paros was its marble, which was extensively used by the ancient sculptors. It was chiefly obtained from a mountain called Marpessa. Paros was the birthplace of the poet Archilochus.

In Paros was discovered the celebrated inscription called the Parian Chronicle (q. v.). The modern name of the island is Paro. See Becker, *De Paro Insula* (1868).

Parrhasia (*Παρρασία*). A district in the south of Arcadia. The adjective *Parrhasius* is frequently used by the poets as equivalent to Arcadian.

Parrhasius (*Παρράσιος*). A famous Greek painter of Ephesus, who with Zeuxis was the chief representative of the Ionic school. He lived about B.C. 400 at Athens, where he seems to have received the citizenship. According to the accounts of ancient writers, he first introduced into painting the theory of human proportions, gave to the face delicate shades of expression, and was a master in the careful drawing of contours (Pliny, *H. N.* xxxv. 67, 68). His skill in indicating varieties of psychological expression could be appreciated in the pict-

ure representing the Athenian State or Δῆμος, in which, according to ancient authors, he distinctly portrayed all the conflicting qualities of the Athenian national character. Another of his pictures represented two boys, one of whom seemed to personify the pertness, and the other the simplicity, of boyhood. His inclination to represent excited states of mind is attested by the choice of subjects like the feigned madness of Odysseus, and the anguish of Philoctetes in Lemnos. His supposed contest with Zeuxis is well known. The grapes painted by Zeuxis deceived the birds, which flew to peck at them; while the curtain painted by Parrhasius deceived Zeuxis himself (Pliny, ib. 65). See PICTURA; ZEUXIS.

Parricidium. (According to the usual, but very doubtful explanation derived from *patricidium*, "murder of a father," but better from *par*+*caedo*, the murder of a peer, i. e. a citizen). A term used among the Romans for the murder of any relative with whom one is united by bonds of blood or duty, but sometimes also for treason and rebellion against one's country. In earlier times the examination in trials for homicide was conducted by two *quaestores parricidii*, on whom it was also incumbent to bring the accusation before the comitia for trial. Sulla transferred the decision in all cases of parricide to a standing tribunal (see QUAESTIO PERPETUA), which had also to try cases of assassination and poisoning. The punishment for parricide was drowning in a leathern sack (*culleus*), into which were sewn, besides the criminal, a dog, a cock, a viper, and an ape (Cic. *Rosc. Am.* 70; Juv. viii. 214). The murder of relations in other degrees of relationship was punished by exile (*interdictio aquae et ignis*). See EXSILIUM; INTERDICTIO.

Parsii. One of the tribes comprising the Pampamisadae. See PARAPAMISUS.

Parthēni. See PATHINI.

Partheniae (*παρθενίαι*). A word meaning literally "children of unmarried women," but usually applied to a distinct class of citizens at Sparta after the First Messenian War. The tradition goes that after the Messenian War had lasted a number of years, the Spartan women sent an embassy to the camp to the effect that they were weary of so long an abstention from the pleasures of married life, and representing also that the State would suffer if the increase of population should cease. Their husbands, who had taken an oath not to return home until the Messenians were conquered, sent back all the young men who were in camp with permission to cohabit with the maidens at Sparta. The children thus begotten were called *παρθενίαι*; and after the return of the army from the war, these were not treated as citizens, and therefore joined the Helots for a war against the ruling class. This, however, appearing impracticable, they migrated to Italy, where they founded the colony of Tarentum. (See Ephorus *ap.* Strabo, vi. p. 279, and cf. the article EPEUNACTI.) Hesychius, on the other hand, says that the Partheniae were the children of Spartan citizens and female slaves; and Antiochus that they were the sons of those Spartans who took no part in the Messenian War, and who were in consequence degraded to the position of Helots. See Grote, *Hist. of Greece*, i. p. 332; iii. p. 519.

Parthenium (Παρθένιον). (1) A town in Mysia, south of Pergamum. (2) A promontory in the Chersonesus Taurica, on which stood a temple of the Tauric Artemis, from whom it derived its name. It was in this temple that human sacrifices were offered to the goddess. See TAURI.

Parthenium Maré (*τὸ Παρθενικὸν πέλαγος*). The southeastern part of the Mediterranean Sea between Egypt and Cyprus (Ammian. Marc. xiv. 8, 10).

Parthenius (Παρθένιος). A Greek grammarian and poet, of Nicaea in Bithynia, who was brought captive to Rome during the war with Mithridates. After his release, he lived there till the time of Tiberius, esteemed as a scholar and poet, especially as a writer of elegiac verse. He was acquainted with Vergil, whom he taught Greek, and one of his poems is said to have been the model for the *Moretum* (q. v.); but he was more closely connected with the elegiac poet, Cornelius Gallus. For Gallus he composed the only work of his which has survived, under the title, *Erotic Experiences* (Περὶ Ἐρωτικῶν Παθημάτων). This is a collection of thirty-six prose stories of unhappy lovers, compiled from ancient poets, especially from those of the Alexandrian school. They are in reality only sketches and were intended to be developed by Gallus into poems of passion. Apart from the light which the work throws on the Alexandrine poets, of whose productions it contains fragments, it has a special interest as a precursor of the Greek novel. Edited by Hirschig in the Didot collection (Paris, 1856). See NOVELS AND ROMANCES.

Parthĕnon (Παρθενών, "the maiden's chamber"), particularly a temple of Athené Parthenos (the virgin goddess), especially that on the Acropolis of Athens, distinguished by the grandeur of its dimensions, the beauty of its execution, and the splendour of its artistic adornment; so that it is usually regarded as the most perfect specimen of Grecian architecture. There was an earlier temple of Athené immediately to the south of the Erechtheum (see plan under ACROPOLIS), and the foundations of a new temple were laid after the Persian War, probably in the time of Cimon. This temple was never completed; on the same site there was built a temple of less length, but greater breadth, which is usually called the Parthenon. It was built at the command of Pericles by the architects Ictinus and Callicrates. It took about five years in building, and was finished in B.C. 438. Its further adornment with sculptures in the pediments, and with metopes and frieze was completed under the direction of Phidias, who himself took part in the work. The temple, built wholly of Pentelic marble, is 65 feet high. The *στυλοβάτης*, or platform, on which the columns stand, is 228 feet in length, and 101 feet in breadth ($=225\times100$ in Attic feet, giving 9 : 4 as the ratio of length to breadth). Under the stylobate is the *κρηπίδωμα*, or basis proper, formed of three steps resting on a massive substructure, 250 feet long and 105 feet broad, and founded on the rock at the highest part of the plateau of the Acropolis. The temple is peripteral, its walls being entirely surrounded by a colonnade of forty-six Doric columns, about 35 feet high, eight at each end, and fifteen on each side. The architrave from the first was adorned with ninety-two metopes sculptured in high relief. Shields and votive inscriptions were subsequently placed there by Alexander the Great, in B.C. 338 (Plut. *Alex.* 16). The subjects were: on the east,

The Parthenon in 1892. (From a Photograph.)

the battle of the gods and giants; on the south, that of the Centaurs and Lapithae; on the west, the victory of the Athenians over the Amazons; and on the north, the destruction of Troy. The sculptures of the eastern pediment represented the birth of the goddess, those of the western the strife of Athené with Poseidon for the possession of Attica. These pediments are 93 feet long, and 11 feet 4 inches high. The *cella*, or temple proper, is 194 feet long, and 69½ feet wide, with six columns at each end, 33 feet in height. Opposite the outermost columns at each end are *antae*, formed by the prolongation of the side walls of the *cella* (see plan under ACROPOLIS). Along the top of the outer wall of the *cella* ran a continuous frieze, 524 feet in length, with representations of the Panathenaic procession carved in very low relief. At the east end of the *cella*, the *pronaos*, or portico, led into the eastern chamber, which was 100 Greek feet in length, and was therefore called the ἑκατόμπεδος. It was divided longitudinally into three parts by two rows of nine columns each, and above these was a second row of columns forming an upper story. The central space was open to the sky (hypaethral). At its western end, under a protecting canopy, stood the statue of the goddess, wrought in gold and ivory, the masterpiece of Phidias (see ATHENÉ, near the end). The western chamber of the *cella* was fronted by a portico, and was called by the special name of the Parthenon. Within this smaller chamber were kept vessels for use in the sacred processions, with various small articles of gold or silver. Modern writers have hitherto generally identified this small chamber with the ὀπισθόδομος (lit. back-chamber), which was used as the treasury, or State bank, of Athens; but it is held by Dörpfeld that this term should be confined to the corresponding chamber of the early temple south of the Erechtheum.

In the Middle Ages the temple was converted into a church, dedicated to the Virgin Mary, and then into a mosque, and remained in good preser-

From the Frieze of the Parthenon.

vation till 1687. In that year, during the siege of Athens by the Venetians, the building was blown up by a bomb which fell into a powder magazine that the Turks had stored there, and, with the exception of the two pediments, it was almost completely destroyed. Most of the sculptures preserved from the pediments and metopes, and from the frieze of the temple chamber, are now among the Elgin Marbles (q. v.) in the British Museum. See Michaelis, *Der Parthenon*, with plates (1875); and the Dilettanti Society's *Athenian Architecture* (2d ed. 1889). See ATHENAE.

Parthenopaeus (*Παρθενοπαῖος*). One of the Seven against Thebes (q. v.). He was the son of Ares (or Milanion) and Atalanta, or of Talaüs and Lysimaché. His son, variously styled Promachus, Stratolaüs, Thesimenes, or Tlesimenes, was one of the Epigoni (q. v.).

Parthenŏpé (*Παρθενοπή*). See NEAPOLIS.

Parthia (*Παρθία*), **Parthyaea** (*Παρθυαία*), and **Parthyēné** (*Παρθυηνή*). A country, southeast of the Caspian Sea, in Asia. Its extent varied greatly at different times, and the name is often used indefinitely by the ancient writers; but it may be regarded as bordering upon Hyrcania, Asia, Carmania, Persis, Susiana, and Media. It was largely a mountainous and semi-desert country, whose people were noted warriors, celebrated especially for their skill in archery and horsemanship. Their tactics, of which the Romans had fatal experience in their first wars with them, became so celebrated as to pass into a proverb. Their mail-clad horsemen spread like a cloud around the hostile army, and poured in a shower of darts; and then evaded any closer conflict by a rapid flight, during which they still shot their arrows backward upon the enemy.

Under the Persian Empire, the Parthians, with the Chorasmii, Sogdii, and Arii, formed the sixteenth satrapy: under Alexander and the Greek kings of Syria, Parthia and Hyrcania together formed a satrapy. About B.C. 250 they revolted

Parthians. (From a Roman Coin.)

from the Seleucidae, under a chieftain named Arsaces, who founded an independent monarchy, the history of which is given under ARSACES. During the period of the downfall of the Syrian kingdom, the Parthians overran the provinces east of the Euphrates, and about B.C. 130 they overthrew the kingdom of Bactria, so that their empire extended over Asia from the Euphrates to the Indus, and from the Indian Ocean to the Paropamisus, or even to the Oxus; but on this northern frontier they had to maintain a continual conflict with the nomad tribes of Central Asia. On the west their progress was checked by Mithridates and Tigranes, till those kings fell successively before the Romans, who were thus brought into collision with the Parthians. After the memorable destruction of Crassus and his army, B.C. 53 (see CRASSUS, p. 424), the Parthians threatened Syria and Asia Minor; but their progress was stopped by two signal defeats, which they suffered from Antony's legate Ventidius, in 39 and 38. The preparations for renewing the war with Rome were rendered fruitless by the contest for the Parthian throne between Phraates IV. and Tiridates, which led to an appeal to Augustus, and to the restoration of the standards of Crassus, B.C. 20; an event to which the Roman poets often allude in terms of flattery to Augustus, almost as if he had conquered the Parthian Empire. It is to be observed that the poets of the Augustan Age use the names Parthi, Persae, and Medi indifferently.

Coin of Arsaces.

The Parthian Empire had now begun to decline, owing to civil contests and the defection of the governors of provinces, and had ceased to be formidable to the Romans. There were, however, continual disputes between the two empires for the protectorate of the kingdom of Armenia. In consequence of one of these disputes Trajan invaded the Parthian Empire (A.D. 115–117), and obtained possession for a short time of Mesopotamia; but his conquests were surrendered under Hadrian, and the Euphrates again became the boundary of the two empires. There were other wars at later periods, which resulted in favour of the Romans, who took Seleucia and Ctesiphon, and made the district of Osroëné a Roman province. The exhaustion which was the effect of these wars at length gave the Persians the opportunity of throwing off the Parthian yoke. Led by Artaxerxes (Ardshir), they put an end to the Parthian kingdom of the Arsacidae, after it had lasted 476 years, and established the Persian dynasty of the Sassanidae, A.D. 226. See ARSACES; SASSANIDAE.

The Parthians were of Scythic origin, but during the more flourishing period of the Empire adopted many of the usages of Greek civilization, including the Greek language (as the official form of speech) and to some extent the Greek religion. As the Empire declined, however, this superficial cultivation wore off, and by the second century A.D. even the Greek language fell into total disuse.

See the histories of Parthia by Schneiderwirth (1874), Spiegel (1887), and G. Rawlinson (1893).

Parthīni. See PATHINI.

Paryadres (*Παρυάδρης*). A mountain chain of Asia, connecting the Taurus and the mountains of Armenia, and considered as the boundary between Cappadocia and Armenia.

Paryēti Montes (*τὰ Παρυητῶν ὄρη*). From the Indian *paruta*, "mountain." A great mountain-chain running north and south on the western side of the valley of the Indus. It now divides

Beluchistan and Afghanistan from Scinde and the Punjab.

Parysătis (*Παρύσατις* or *Παρυσάτις*). The daughter of Artaxerxes I. Longimanus, king of Persia. She was given by her father in marriage to her own brother Darius, surnamed Ochus, who, in B.C. 424, succeeded Xerxes II. on the throne of Persia. The feeble character of Darius threw the chief power into the hands of Parysatis, whose administration was little else than a series of murders. Four of the sons grew up to manhood. The eldest of these, Artaxerxes Mnemon, was born before Darius had obtained the sovereign power, and on this pretext Parysatis sought to set aside his claims to the throne in favour of her second son Cyrus. Failing in this attempt, she nevertheless interfered after the death of Darius, in B.C. 405, to prevent Artaxerxes from putting Cyrus to death, and prevailed upon the king to allow him to return to his satrapy in Asia Minor. After the death of Cyrus at the battle of Cunaxa (B.C. 401), she did not hesitate to display her grief for the death of her favourite son by bestowing funeral honours on his mutilated remains; and she subsequently succeeded in getting into her power all the authors of the death of Cyrus, whom she put to death by the most cruel tortures. She afterwards poisoned Statira, the wife of Artaxerxes. The feeble and indolent king was content to banish her to Babylon; and it was not long before he recalled her to his court, where she soon recovered all her former influence. Of this she availed herself to turn his suspicions against Tissaphernes, whom she had long hated as having been the first to discover the designs of Cyrus to his brother, and who was now put to death by Artaxerxes at her instigation (B.C. 396). She appears to have died soon afterwards. See Xen. *Anab.* i. 1; Ctes. *Pers.* 57; Plut. *Artax.*, and Diod. xiv. 80.

Pasargădа (*Πασαργάδα*). The older of the two capitals of Persis (the other and later being Persepolis), is said to have been founded by Cyrus the Great on the spot where he gained his great victory over Astyages. The tomb of Cyrus stood here in the midst of a beautiful park. The exact site is doubtful. Most modern geographers identify it with Murghab, northeast of Persepolis, where there are the remains of a great sepulchral monument of the ancient Persians. See PERSIA, p. 1212.

Pasargădae (*Πασαργάδαι*). The noblest of the three chief tribes of ancient Persia, the other two being the Maraphii and the Maspii (Herod. i. 125).

Pasceŏlus (*φάσκωλος*). A leathern bag for carrying money, clothes, etc. (Plaut. *Rud.* v. 2, 27).

Pasion (*Πασίων*). A rich Athenian banker, originally a slave, but manumitted as a reward for his fidelity. He also manufactured shields. Being accused of fraudulently withholding a sum of money intrusted to him by a foreigner from the Euxine, he was prosecuted, and accused in an oration by Isocrates, which is still extant. Pasion showed much public spirit in the use of his money, and was, in consequence, rewarded with the freedom of the city, and was enrolled in the deme of Acharnae. He died in B.C. 370, when his elder son Apollodorus squandered a large part of his fortune. See the oration of Demosthenes for Phormion.

Pasiphaë (*Πασιφάη*). A daughter of Helios (the Sun) and Perseïs, and a sister of Circé and Aeëtes. She was the wife of Minos, by whom she became the mother of Androgeos, Catreus, Deucalion, Glaucus, Acallé, Xenodicé, Ariadné, and Phaedra. Hence Phaedra is called *Pasiphëïa* (Ovid, *Met.* xv. 500). As a punishment for Minos who had failed to carry out a vow that he had made, Pasiphaë was inspired by Poseidon with a violent passion for a bull. By a device of the artisan Daedalus, who enclosed her in a wooden cow, Pasiphaë was enabled to gratify her desires, and became by the bull the mother of the monster Minotaurus, a creature half man and half bull. (See MINOS; THESEUS.) There is a poem *De Pasiphaë* of twenty-two lines in the Latin Anthology, ascribed to Rufinus Antiochensis (Bährens, *Poet. Lat. Min.* v. 108).

Pasitĕles (*Πασιτέλης*). A Greek artist of the first century B.C., a native of southern Italy. He was actively engaged at Rome on important works in marble, ivory, silver, and bronze, and was also an author. He originated a new school, which was not immediately connected with any of the existing tendencies of art, but was founded on a careful study of nature and the masterpieces of earlier sculptors. It aimed above all things at correctness of form, combined with elegance of representation and a mastery of technique. Pasiteles chased in silver a representation of the infant Roscius (Cic. *De Div.* i. 79), and executed an ivory statue of Iupiter for the temple dedicated by Metellus (Pliny, *H. N.* xxxvi. 40). According to his contemporary Varro, he never executed any work without modelling it first (ib. xxxv. 156). Among his pupils was Stephanus, who in his turn was the master of Menelaüs.

Pasithea (*Πασιθέα*). One of the Charites, or Graces, also called AGLAIA. See GRATIAE.

Pasitigris (*Πασίτιγρις*). A river rising on the confines of Media and Persis, and flowing through Susiana into the head of the Persian Gulf, after receiving the Eulaeus on its western side. Some geographers make the Pasitigris a tributary of the Tigris.

Passăron (*Πασσάρων*). A town of Epirus in Molossia, and the ancient capital of the Molossian kings.

Passiēnus. (1) CRISPUS, the husband of Agrippina and step-father of the emperor Nero (Quint. x. i, 24). (2) See PAULUS.

Passus. The pace, or double step, a Roman measure of length = 5 Roman feet (*pes*) or 1.479 metres (= 4 English feet 10¼ inches). 1000 *passus* formed a Roman mile, 1478.70 metres (or 1616 yards, 2 feet, 2 inches, or about 143 yards less than an English mile. The *passus* is sometimes estimated as 1.48 metre; 1000 *passus* being then 1480 metres or 1618 yards—i. e. 142 yards less than an English mile).

Pastillus (*τροχίσκος*). A small round ball of flour or paste, or of perfumed and aromatic ingredients used to impart an agreeable odour to the breath, like our "cachous" and similar preparations (Pliny, *H. N.* xiii. 43).

Pastinatio. The preparation of the soil of vineyards by digging and ditching for the purpose of planting young vines (Columel. iii. 13, 12).

Pastīnum. A species of dibble or instrument for planting young vines. It was a stick with two

prongs at the end between which the plum was held and pressed into the ground (Columel. iii. 18, 1).

Pastophŏri (*παστοφόροι*). Egyptian priests who carried in processions small shrines (*παστοί*) of their god (Apul. *Met.* xi. 17).

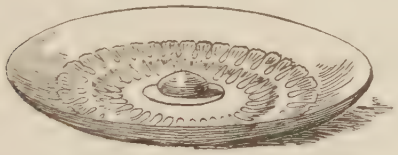
Pataeci (*Πάταικοι*). Phœnician deities whose figures were attached to the Phœnician ships either in the prows or stems (Herod. iii. 37).

Patagium (*παταγεῖον*). A broad stripe of purple or gold on the front of a woman's tunic, like the *clavus* (q. v.) worn by men (Fest. s. v.).

Patăla, Patalēné. See PATTALA, PATTALENÉ.

Patăra (*τὰ Πάταρα*). One of the chief cities of Lycia, situated on the coast a few miles east of the mouth of the Xanthus. It was early colonized by Dorians from Crete, and became a chief seat of the worship of Apollo, who had here a very celebrated oracle, which uttered responses in the winter only. Hence Apollo is called by Horace *Delius et Patareus Apollo* (*Carm.* iii. 4, 64).

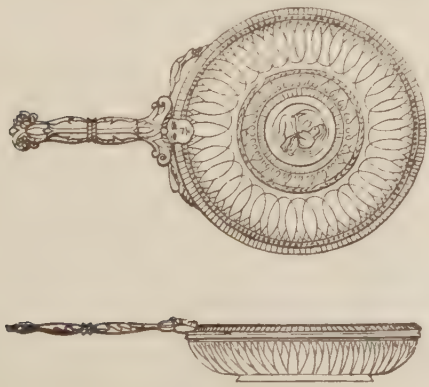
Patavinĭtas. See LIVIUS, p. 963.



Patavium. Now Padova or Padua. An ancient town of the Veneti in the north of Italy, on the Medoacus Minor, and on the road from Mutina to Altinum, said to have been founded by the Trojan Antenor. Under the Romans it was the most important city in the north of Italy, and by its commerce and manufactures (of which its woollen stuffs were the most celebrated) it attained great opulence. It is celebrated as the birthplace of the historian Livy. Near Patavium were the Aquae Patavinae, on which see APONI FONS.

Patchwork. See CENTO.

Patella. See PATINA.



Patēna. A manger for horses (Veget. *Vet.* ii. 28, 3).

Patĕra (*φιάλη*.) The broad, flat dish or saucer used by the ancients for drinking and for offering

Greek *Φιάλη*. (British Museum.)

libations. It had no foot or stem, and thus resembled a large saucer. Among the Romans, one form of patera had a handle, as shown in the second

Roman Patera. (Pompeii.)

illustration. The post-Homeric *φιάλη* seems to have had a small knob in the centre like an acorn, and was hence called *βαλανωτή* and *καρυωτή* (Athen. xi. 502 b). The patera was made of earthenware or metal (gold, silver, bronze). See CALIX; SACRIFICIUM; VAS.

Paterculus, GAIUS VELLÉIUS. A Roman historian born about B.C. 19 of a distinguished Campanian family. Entering the army, he accompanied Gaius Caesar, the grandson of Augustus, on an expedition to the East (A.D. 2). Two years later he served with Tiberius in Germany, attaining the rank of military tribune and *praefectus equitum*. With Tiberius he remained for some eight years and became *legatus* (*C. I. L.* viii. 10311) and quaestor (A.D. 7). In A.D. 12 he returned to Rome and took part in the triumph of Tiberius. In A.D. 15 he and his brother, Magius Celer, were praetors.

In the year 30, he wrote his history at the request of the consul M. Vinicius, and probably died in the following year. It is believed that he was executed because of his connection with Seianus (q. v.). The history is in two books, of which a portion is lost after the eighth section of the first book, and also the opening. The title of the work is *Historiae Romanae ad M. Vinicium Consulem Libri Duo*. It is a succinct compendium of universal history (with especial reference to the history of Rome), beginning with the settlement of Magna Graecia and extending to his own times. The latter portion of the narrative is more diffuse than the first part. His method is to seize upon the striking points of his subject and to dwell upon them, leaving less important events in abeyance. His treatment is therefore rather that of an annalist than an historian, and his style is unfinished. His facts are in the main trustworthy, but his fulsome praise of Tiberius detracts from the value of the narrative of his own times. The text is in a very unsatisfactory condition. Only one MS. survived to modern times, and was lost in the seventeenth century, after being copied by Beatus Rhenanus at Amerbach. There are editions of the text by Orelli (Leipzig, 1835); Kritz (annotated) (Leipzig, 1840); Haase (2d ed. Leipzig, 1858); Halm (Leip. 1876); Rockwood (Eng. notes) (Boston, 1893).

Pater Familias. The master of a house among the Romans. (See FAMILIA.) PATER PATRĀTUS, the spokesman of the *fetiales* (q. v.). PATER MATUTĪNUS, a special name of Ianus (q. v.).

Paternus, TARRUTĒNIUS. A Roman jurist, probably the person who as praetorian praefector was put to death by Commodus for alleged treason (Lamprid. *Comm.* 4). He wrote a treatise in four books called *Militarium*, or *De Re Militari*, quoted in the Digest. See Dirksen in his *Hinterlassen Schriften*, ii. 412.

Pathīni (*Παθινοί*) or **Parthēni** (*Παρθηνοί*). An Illyrian people in the neighbourhood of Dyrrhachium.

Patibŭlum. A sort of wooden fork used for the punishment of criminals. It was placed upon the neck so that the prongs should project in front, and to these the hands of the culprit were tied fast. In that condition he was beaten through the city (Plaut. *Mil.* ii. 4, 7). It was probably often a straight piece of wood, the arms then being stretched over from the sides. The word is often roughly used as equivalent to *crux*. See CRUX; FURCA.

Patĭna (λεκάνη, τρύβλιον, λοπάς), dimin. **Patella**. A deep dish used both for cooking and for serving food at table; sometimes covered. When used for cooking it was generally of earthenware, but for table-service it was often of silver, sometimes with delicate chasing, so that the actor Aesopus had one valued at 100,000 sesterces, or $4000 (Pliny, *H. N.* xxxv. 163). Vitellius had one of earthenware so large that the special oven built to contain it cost 1,000,000 sesterces, or $40,000 (Pliny, l. c.; Suet. *Vitell.* 13).

Patmos (Πάτμος). One of the islands called Sporades, in the Icarian Sea, celebrated as the place to which the Apostle John was banished, and in which he wrote the Apocalypse (Pliny, *H. N.* iv. 69). See Tozer, *Islands of the Aegean* (1890).

Patrae (Πάτραι). Now Patras. One of the twelve cities of Achaea, and situated west of Rhium, near the opening of the Corinthian Gulf. It was the only Achaean city that sided with Athens in the Peloponnesian War (Thuc. v. 52). Augustus made it the chief city of Achaia.

Patres. See Patricii; Senatus.

Patria Potestas. See Familia; Mancipium; Manus.

Patricii (literally the relatives of the *patres*, or heads of families of the old tribes. [See Gens.]). In the oldest times of Rome the actual citizens who constituted the *populus Romanus*. They were divided into three tribes—*Ramnes*, *Tities*, and *Luceres*, each consisting of ten *curiae*. (See Curia.) The union of these latter formed the national assembly, the Comitia Curiata. (See Comitia.) Besides these there were originally only *clientes*, settlers enjoying no legal rights, with the citizens for their protectors (or *patroni*). Afterwards, when a new element of the population, endowed with partial citizenship, called the plebs (q. v.), sprang up from the settlement of subjugated Latin tribes, the *patricii* stood in contrast to them as old citizens possessing full rights. Later, the plebeians received a fuller citizenship through the centurial constitution framed by Servius Tullius (see Centuria), while they gained at the same time the right of voting in the Comitia Centuriata, composed of patricians and plebeians, together with the obligation of serving in the field and paying taxes, hitherto obligatory on the patricians alone. In contrast to the plebeians, the patricians thus formed a hereditary aristocracy, with the exclusive right to hold public offices, whether civil or religious. Nothing short of a decision by the Comitia Curiata could either remove any one from the patrician body or (on rare occasions) enrol a plebeian among the patricians. The contraction of marriages between patricians and plebeians was not allowed till B.C. 445. A violent struggle arose between the two parties, after the establishment of the Republic in B.C. 510, on the subject of the admission of the plebeians to State offices. This struggle lasted till B.C. 300, and the patricians were, step by step, forced to give up their exclusive right to one office after another. First of all, they had to give up the quaestorship (B.C. 409), then the consulate (367), the dictatorship (356), the censorship (351), the praetorship (338), and finally the most important priestly offices, the pontificate and the augurship (300). Only politically unimportant offices were left reserved for them, the temporal office of *interrex*, and the priestly offices of *rex sacrorum* and the three *flamines maiores*. The political importance which the patrician Comitia Curiata possessed, through its right to confirm the decisions of the Comitia Centuriata, was lost in B.C. 286. The Comitia Tributi, in which the *plebs* had the preponderance, thus became the most important organ of the democracy.

An aristocracy of holders of public offices was thus formed, consisting of the patricians together with the more important plebeian families. The members of such families, whether patrician or plebeian, were called *nobiles*. The number of patrician families dwindled greatly owing to the Civil Wars (on their number towards the end of the Republic, see Gens). Caesar and Augustus increased them by introducing plebeian families, and subsequent emperors gave the patriciate as a distinction. Under Constantine the Great *patricius* became a personal title, which conferred a rank immediately below the consuls. The external distinctive marks of a patrician were the *tunica laticlavia* (see Tunica) and a peculiar sort of shoe (see Calceus) adorned with an ivory crescent (*lunula*).

Patrīmi et Matrīmi (ἀμφιθαλεῖς). Children whose parents were both alive (Festus, s. h. v.); though the name is also applied to children whose parents had been married by the ceremony called *confarreatio*, and were still alive (Serv. *ad* Verg. *Georg.* i. 32). For the religious functions, at which the services of *patrimi et matrimi* were required, see Arvales; Camillus; Matrimonium.

Patrŏcles (Πατροκλῆς). A Macedonian general in the service of Seleucus I. and Antiochus I., kings of Syria. Patrocles held, both under Seleucus and Antiochus, an important government over some of the eastern provinces of the Syrian Empire. During the period of his holding this position, he collected accurate geographical information, which he afterwards published to the world; but though he is frequently cited by Strabo, who placed the utmost reliance on his accuracy, neither the title nor exact subject of his work is mentioned. It seems clear, however, that it included a general account of India as well as of the countries on the banks of the Oxus and the Caspian Sea. Patrocles regarded the Caspian Sea as a gulf or inlet of the ocean, and maintained the possibility of sailing thither by sea from the Indian Ocean (Strabo, ii. p. 69).

Patrŏcli Insŭla (Πατρόκλου νῆσος). A small island off the southwestern coast of Attica, near Sunium.

Patroclus (Πάτροκλος) and **Patrocles** (Πατροκλῆς). The penult is almost always long in the *Iliad*, Patrōclus once only in vocative (*Il.* xix. 287). Son of Menoetius and Sthenelé, the bosom friend of Achilles. While still a boy Patroclus involuntarily slew Clysonymus, son of Amphidamas. In consequence of this accident he was taken by his father to Peleus at Phthia, where he was educated together with Achilles. He is said to have taken part in the expedition against Troy on account of his attachment to Achilles. He fought bravely against the Trojans until his friend withdrew from the scene of action, when Patroclus followed his example. But when the Greeks were hard pressed, he begged Achilles to allow him to put on his armour, and with his men to hasten to

the assistance of the Greeks. Achilles granted the request, and Patroclus succeeded in driving back the Trojans and extinguishing the fire which was raging among the ships. He slew many enemies, and thrice made an assault upon the walls of Troy; but he was suddenly struck by Apollo, and became senseless. In this state Euphorbus ran him through with his lance from behind, and Hector gave him the last and fatal blow. Hector also took possession of his armour. A long struggle now ensued between the Greeks and Trojans for the body of Patroclus; but the former obtained possession of it, and brought it to Achilles, who was deeply grieved, and vowed to avenge the death of his friend. Thetis protected the body with ambrosia against decomposition until Achilles had leisure solemnly to burn it with funeral sacrifices. His ashes were collected in a golden urn which Dionysus had once given to Thetis, and were deposited under a mound, where the remains of Achilles were subsequently buried. Funeral games were celebrated in his honour. Achilles and Patroclus met again in the lower world; or, according to others, they continued after their death to live together in the island of Leucé. See ACHILLES; HECTOR; TROJAN WAR.

Patrol. See VIGILES.

Patron. An Epicurean philosopher, who lived for some time in Rome, where he became acquainted with Cicero and others. From Rome he removed to Athens, and there succeeded Phaedrus as head of the Epicurean school, B.C. 52.

Patrōnus. The Roman term for the protector of a single client, or of a whole community (see CLIENTES); the emancipator in relation to his freedman (see LIBERTUS); and the judicial representative of accuser or accused. (See ORATOR.) For the distinction between *patronus* and *advocatus*, see the articles ADVOCATUS; JUDICIAL PROCEDURE.

Pattăla. See PATTALENÉ.

Pattalēné (*Πατταληνή*) or **Patalēnē** (*Παταληνή*). The name of the great delta formed by the two principal arms by which the Indus falls into the sea. At the apex of the delta stood the city Pattala or Patala, the Sanskrit *patâla*, which means "the western country," and is applied to the western part of northern India about the Indus, in contradistinction to the eastern part about the Ganges.

Patulcius. A name applied to Ianus (q. v.).

Patūmus (*Πάτουμος*). The Egyptian Pa-Thmu; O. T. Pithom. A town in the Egyptian Delta between Bubastis and Succoth, built by the Jews in their captivity (Exod. i. 11; cf. Herod. ii. 158).

Paulīna or **Paullina.** (1) See LOLLIA. (2) POMPĒIA, the wife of the philosopher Seneca. When her husband was condemned to death by Nero, she severed her veins, but Nero ordered them to be bound up, so that she lived for several years longer. See Tac. *Ann.* XV. 63, 64; and the article SENECA.

Paulīnus or **Paullīnus.** (1) POMPĒIUS, commanded in Germany with L. Antistius Vetus in A.D. 58, and completed the dam to restrain the inundations of the Rhine, which Drusus had commenced sixty-three years before. Seneca dedicated to him his treatise *De Brevitate Vitae;* and the Pompeia Paullina, whom the philosopher married, was probably the daughter of this Paullinus. (2) C. SUETONIUS, propraetor in Mauretania, in the reign of the emperor Claudius, A.D. 42, when he conquered the Moors who had revolted, and advanced as far as Mount Atlas. He had the command of Britain in the reign of Nero from A.D. 59 to 62. For the first two years all his undertakings were successful; but during his absence on an expedition against the island of Mona (Anglesey), the Britons rose in rebellion under Boadicea (A.D. 61). They at first met with great success, but were conquered by Suetonius on his return from Mona. (See BOADICEA.) In A.D. 66 he was consul; and after the death of Nero in 68 he was one of Otho's generals in the war against Vitellius. It was against his advice that Otho fought the battle of Bedriacum. He was pardoned by Vitellius after Nero's death. (3) Of MILAN (*Mediolanensis*), the secretary of St. Ambrose, after whose death he became a deacon, and repaired to Africa, where, at the request of St. Augustine, he composed a biography of his former patron. This biography, and two other small works by Paullinus, are still extant. (4) MEROPIUS PONTIUS ANICIUS PAULLĪNUS, bishop of Nola, and hence generally designated Paullinus Nolanus, was born at Bordeaux, or at a neighbouring town, which he calls Embromagum, about A.D. 353. His parents were wealthy and illustrious, and he received a careful education, enjoying in particular the instruction of the poet Ausonius. After many years spent in worldly honours he withdrew from the world, and was eventually chosen Bishop of Nola in A.D. 409. He died in 431. The works of Paullinus are still extant, and consist of prose *Epistolae* (51 in number), *Carmina* (36 in number, composed in a great variety of metres), and a short tract entitled *Passio S. Genesii Arelatensis.* The works of Paullinus are edited by Migne (Paris, 1847.)

Paulus (*Παῦλος*). The name of several Greek writers. (1) AEGINĒTA, a celebrated medical writer, of whose personal history nothing is known except that he was born in Aegina, and that he travelled a good deal, visiting, among other places, Alexandria. He probably lived in the latter half of the seventh century after Christ. He wrote several medical works in Greek, of which the principal one is still extant, with no exact title, but commonly called *De Re Medica Libri Septem.* This work is chiefly a compilation from former writers. The Greek text has been edited by Brian (Paris, 1855). There is an English translation by Adams (London, 1834 foll.). (2) Of ALEXANDRIA, wrote, in A.D. 278, an introduction to Astrology (*Εἰσαγωγὴ εἰς τὴν ἀποτελεσματικήν*), which has come down to us, edited by Schatus or Schato (Wittenberg, 1586). (3) Of SAMOSATA, a celebrated heresiarch of the third century, was made bishop of Antioch, about A.D. 260. He was condemned and deposed by a council held in 269. Paulus denied the distinct personality of the Son of God, and maintained that the Word came and dwelt in the man Jesus. (4) SILENTIARIUS, so called, because he was chief of the *silentiarii*, or secretaries of the emperor Justinian. He wrote various poems, of which the following are extant: (*a*) A Description of the Church of St. Sophia (*Ἔκφρασις τοῦ ναοῦ τῆς ἁγίας Σοφίας*), consisting of 1029 verses, of which the first 134 are iambic, the rest hexameter. This poem gives a clear and graphic description of the superb structure which forms its subject, and was recited by its author at the second dedication of the church (A.D. 562), after the restoration of the dome, which had

fallen in. Edited by Graefe (Leipzig, 1822) and by Bekker (Bonn, 1837), in the Bonn edition of the Byzantine historians. (*b*) A Description of the Pulpit (Ἔκφρασις τοῦ ἄμβωνος), consisting of 304 verses, a supplement to the former poem. It is printed in the editions mentioned above. (*c*) Epigrams, 83 in all, given in the *Anthologia*. Among these is a poem on the Pythian Baths (Εἰς τὰ ἐν Πυθίοις θέρμα).

Paulus or **Paullus**, AEMILIUS. (1) MARCUS, consul B.C. 302, and *magister equitum* to the dictator Q. Fabius Maximus Rullianus in 301. (2) MARCUS, consul 255 with Ser. Fulvius Paetinus Nobilior, about the middle of the First Punic War. (3) LUCIUS, son of No. 2, consul B.C. 219, when he conquered Demetrius off the island of Pharos in the Adriatic, and compelled him to fly for refuge to Philip, king of Macedonia. He was consul a second time in 216 with C. Terentius Varro. This was the year of the memorable defeat at Cannae. (See HANNIBAL.) The battle was fought against the advice of Paulus; and he was one of the many distinguished Romans who perished in the engagement, refusing to fly from the field when a tribune of the soldiers offered him his horse. Hence we find in Horace (*Carm.* i. 12) *animaeque magnae prodigum Paulum, superante Poeno.* Paulus was a stanch adherent of the aristocracy, and was raised to the consulship by the latter party to counterbalance the influence of the plebeian Terentius Varro. (4) LUCIUS, afterwards surnamed MACEDONĬCUS, son of the last, was born about 230 or 229, since at the time of his second consulship (168) he was upwards of sixty years of age. He was one of the best specimens of the high Roman nobles. He would not condescend to flatter the people for the offices of the State, maintained with strictness severe discipline in the army, was deeply skilled in the law of the augurs, to whose college he belonged, and maintained throughout life a pure and unspotted character. He was elected curule aedile in B.C. 192; was praetor in 191, and obtained Further Spain as his province, where he carried on war with the Lusitani; and was consul in 181, when he conquered the Ingauni, a Ligurian people. For the next thirteen years he lived quietly at Rome, devoting most of his time to the education of his children. He was consul a second time in 168, and brought the war against Perseus to a conclusion by the defeat of the Macedonian monarch, near Pydna, on the 22d of June. Perseus shortly afterwards surrendered himself to Paulus. (See PERSEUS.) Paulus remained in Macedonia during the greater part of the following year as proconsul, and arranged the affairs of Macedonia in conjunction with ten Roman commissioners, whom the Senate had despatched for the purpose. Before leaving Greece he marched into Epirus, where, in accordance with a cruel command of the Senate, he gave to his soldiers seventy towns to be pillaged because they had been in alliance with Perseus. The triumph of Paulus, which was celebrated at the end of November, 167, was the most splendid that Rome had yet seen. It lasted three days. Before the triumphal car of Aemilius walked the captive monarch of Macedonia and his children, and behind it were his two illustrious sons, Q. Fabius Maximus and P. Scipio Africanus the younger, both of whom had been adopted into other families. But the glory of the conqueror was clouded by family misfortune. At this very time he lost his two younger sons; one, twelve years of age, died only five days before his triumph, and the other, fourteen years of age, only three days after his triumph. The loss was all the severer, since he had no son left to carry his name down to posterity. In 164 Paulus was censor with Q. Marcius Philippus, and died in 160, after a long and tedious illness. The fortune he left behind him was so small as scarcely to be sufficient to pay his wife's dowry. The *Adelphi* of Terence was brought out at the funeral games exhibited in his honour. Aemilius Paulus was married twice. By his first wife, Papiria, the daughter of C. Papirius Maso, consul 231, he had four children—two sons, one of whom was adopted by Fabius Maximus and the other by P. Scipio, and two daughters, one of whom was married to Q. Aelius Tubero, and the other to M. Cato, son of Cato the censor. He afterwards divorced Papiria; and by his second wife, whose name is not mentioned, he had two sons, whose death has been recorded above, and a daughter, who was a child at the time that her father was elected to his second consulship. (5) IULIUS. A Roman jurist of high repute in the beginning of the third century A.D., contemporary with Papinianus and Ulpian. With the former he was legal assessor to the emperor Septimius Severus. With the latter he was *praefectus praetorio* under Alexander Severus, after he had been sent into exile by Elagabalus. He was most productive as a legal author, but in literary skill and finish stood far below his two contemporaries. The extracts from his numerous monographs or more comprehensive works form a sixth part of the *Digest*. Besides these extracts, his *Sententiae*, a very popular compendium of undisputed principles on the most frequent points of law, has been preserved in a shortened form. (6) PAULUS DIACŎNUS. The Latin name of Paul Warnifrid, a Lombard who became a monk at Monte Casino about A.D. 775. He wrote a history of the Lombards; compiled a Roman history largely from Eutropius; and abridged the glossary of Festus which was itself epitomized from the lexicon of Verrius Flaccus. He also wrote ecclesiastical works. His Roman history was in sixteen books, but was subsequently (about A.D. 1000) enlarged by Landolfus Sagax, who drew upon various sources for his additions, especially upon Orosius and St. Jerome. This enlarged work got the name *Historia Miscella*, by which it is now known. On the abridgment of Festus, see FESTUS; VERRIUS FLACCUS.

Pausanias (Παυσανίας). (1) A Spartan of the Agid branch of the royal family, the son of Cleombrotus and nephew of Leonidas. Several writers incorrectly call him king; but he only succeeded his father Cleombrotus in the guardianship of his cousin Plistarchus, the son of Leonidas, for whom he exercised the functions of royalty from B.C. 479 to the period of his death. In 479, when the Athenians called upon the Lacedaemonians for aid against the Persians, the Spartans sent a body of 5000 Spartans, each attended by seven Helots, under the command of Pausanias. At the Isthmus, Pausanias was joined by the other Peloponnesian allies, and at Eleusis by the Athenians when he took command of the united armies, the other Greek generals forming his council. The allied forces numbered 110,000 men. Near Plataeae in Boeotia Pausanias defeated the Persians under Mardonius,

and thus assured the independence of Greece. For his own reward, Pausanias received one tenth of the spoils (Herod. ix. 10–85; Diod. xi. 29–33).

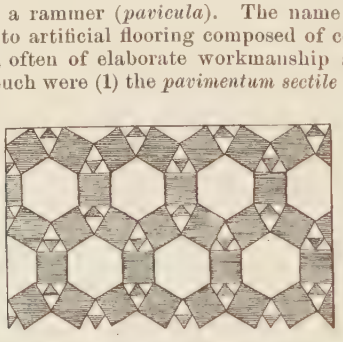
In the year 477 the Greeks sent out a fleet under Pausanias to drive the Persians from the islands. He attacked Cyprus and subdued the greater part, and then sailed to Byzantium, which he succeeded in taking. After this victory Pausanias began to aim at personal dominion for himself rather than success for his country, being evidently dazzled by his unbroken and brilliant successes. His ambition seems to have looked for a tyranny over the whole of Greece, and to have conceived the plan of securing the aid of the Persian king in the accomplishment of this design. Among the prisoners taken at Byzantium were some Persians connected with the royal family. These he sent to the king, with a letter, in which he offered to bring Sparta and the rest of Greece under his power, and proposed to marry his daughter. His offers were gladly accepted, and whatever amount of troops and money he required for accomplishing his designs. Pausanias now set no bounds to his arrogant and domineering temper. The allies were so disgusted by his conduct that they all, except the Peloponnesians and Aeginetans, voluntarily offered to transfer to the Athenians that pre-eminence of rank which Sparta had hitherto enjoyed. In this way the Athenian confederacy first took its rise. Reports of the conduct and designs of Pausanias reached Sparta, and he was recalled and put upon his trial; but the evidence respecting his meditated treachery was not yet thought sufficiently strong. Shortly afterwards he returned to Byzantium, without the orders of the ephors, and renewed his treasonable intrigues. He was again recalled to Sparta, was again put on his trial, and again acquitted. But even after this second escape he still continued to carry on his intrigues with Persia. At length a man, who was charged with a letter to Persia, having his suspicions awakened by noticing that none of those sent previously on similar errands had returned, counterfeited the seal of Pausanias and opened the letter, in which he found directions for his own death. He carried the letter to the ephors, who prepared to arrest Pausanias; but he took refuge in the temple of Athené Chalcioecus. The ephors stripped off the roof of the temple and built up the door; the aged mother of Pausanias is said to have been among the first who laid a stone for this purpose. When he was on the point of expiring, the ephors took him out lest his death should pollute the sanctuary. He died as soon as he got outside, B.C. 470. He left three sons behind him, Plistoanax, afterwards king, Cleomenes, and Aristocles. See Bulwer's unfinished novel, *Pausanias the Spartan*. (2) Son of Plistoanax, and grandson of the preceding, was king of Sparta from B.C. 408 to 394. In 403 he was sent with an army into Attica, and secretly favoured the cause of Thrasybulus and the Athenian exiles, in order to counteract the plans of Lysander. In 395 Pausanias was sent with an army against the Thebans; but in consequence of the death of Lysander, who was slain under the walls of Haliartus, on the day before Pausanias reached the spot, the king agreed to withdraw his forces from Boeotia. On his return to Sparta he was impeached, and seeing that a fair trial was not to be hoped for, went into voluntary exile, and was condemned to death. He was living at Tegea in 385, when Mantinea was besieged by his son Agesipolis, who succeeded him on the throne. (3) King of Macedonia, the son and successor of Aeropus. He was assassinated in the year of his accession by Amyntas II., 394. (4) A pretender to the throne of Macedonia, made his appearance in 367, after Alexander II. had been assassinated by Ptolemaeus. Eurydicé, the mother of Alexander, sent to request the aid of the Athenian general, Iphicrates, who expelled Pausanias from the kingdom. (5) A Macedonian youth of distinguished family, from the province of Orestis. Having been shamefully treated by Attalus, he complained of the outrage to Philip; but as Philip took no notice of his complaints, he directed his vengeance against the king himself. He shortly afterwards murdered Philip at the festival held at Aegae, 336, but was slain on the spot by some officers of the king's guard. Suspicion rested on Olympias and Alexander of having been privy to the deed; but with regard to Alexander, at any rate, the suspicion is probably totally unfounded. There is a story that Pausanias, while meditating revenge, having asked the sophist Hermocrates which was the shortest way to fame, the latter replied, that it was by killing the man who had performed the greatest achievements. (6) A celebrated Greek traveller and geographer, a native of Lydia. He explored Greece, Macedonia, Asia, and Africa; and then, in the second half of the second century A.D., settled in Rome, where he composed a *Periegesis* (Περιήγησις) or Itinerary of Greece in ten books. Book I. includes Attica and Megaris; II., Corinth with Sicyon, Phlius, Argolis, Aegina, and the other neighbouring islands; III., Laconia; IV., Messenia; V., VI., Elis and Olympia; VII., Achaea; VIII., Arcadia; IX., Boeotia; X., Phocis and Locris. The work is founded on notes, taken on the spot, from his own observation and inquiry from the natives of the country, on the subject of the religious cults and the monuments of art and architecture. Together with these there are topographical and historical notices, in working up which Pausanias took into consideration the accounts of other authors, especially of Polemon (A.D. 150), poets as well as prose writers. Although his account is not without numerous inaccuracies, omissions, and mistakes, it is yet of inestimable value for our knowledge of ancient Greece, especially with regard to its mythology, folk-lore, and religious cults, but above all for the history of Greek art. The composition of his work, especially in the earlier books, shows little skill in plan, execution, or style, and, while accurate, shows that he did not grasp the distinction between legend and history.

The best editions of Pausanias are those of Siebelis, 5 vols. (Leipzig, 1822–28); and Schubart and Walz, 3 vols. (1838–40; reprint by Teubner, Leipzig, 1862 and 1881). English translations by Taylor (1793–94); Shilleto (2 vols. 1886). See Kalkmann, *Pausanias der Perieget* (Berlin, 1886); Gurlitt, *Pausanias* (Gratz, 1890); and Miss Verrall's *Mythology and Monuments of Ancient Athens* (1890).

Pausarius. The officer in a ship who led at the song and beat the time for the rowers (Sen. *Epist.* 56). He was also styled *hortator*.

Pausias (Παυσίας). A Greek painter, a pupil of Pamphilus and a follower of the Sicyonian school. He lived about 360–330 B.C. at Sicyon, and in-

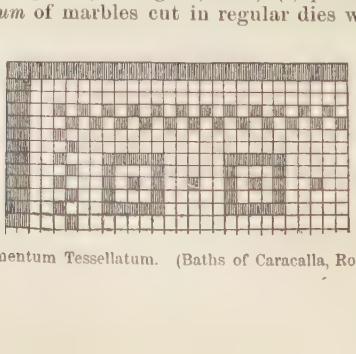
vented the art of painting vaulted ceilings, and also of foreshortening; he brought encaustic painting with the *cestrum* to perfection. He painted chiefly children and flowers. One of his most famous pictures was the Flower Girl (Στεφανοπλόκος), representing the flower girl Glycera, of whom he was enamoured in his youth (Pliny, *H. N.* xxxv. 123–127). See PICTURA.



Pausilўpum (Παυσίλυπον, "grief-assuaging"). The name of a villa near Neapolis (Naples) which Vedius Pollio left by will to Augustus (Dio Cass. liv. 23; Pliny, *H. N.* ix. 167). The name has been given in modern times under the corrupted form Posilipo to the grotto between Naples and Pozzuoli, cut through the rock by the engineer Cocceius at the desire of Agrippa. See NEAPOLIS.

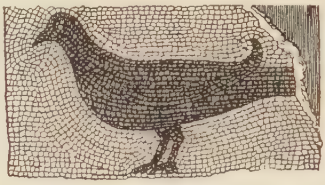
Pausilўpus Mons. Now Posilipo; a ridge in the rear of Naples, forming a barrier between Neapolis and Puteoli. It was pierced by a tunnel called the Crypta Neapolitana, now the Grotta di Posilipo, 2244 feet in length, 21 feet broad, and with a maximum height of 70 feet.

Pauson (Παύσων). A Greek painter whom Aristotle contrasts with Polygnotus in terms implying that the former was a caricaturist (*Poët.* 2, § 2). Elsewhere Aristotle says that young people should not look at the pictures of Pauson, but rather at those of Polygnotus or of any other "ethical" artist (*Polit.* viii. 5, § 7). He is probably identified with the Pauson who is mentioned with contempt by Aristophanes (*Ach.* 854, *Thesm.* 948, and *Plutus*, 602). See PICTURA.



Pavicŭla. A rammer for beating down the earthen flooring of a room or other place (Cato, *R. R.* 91).

Pavimentum (ἔδαφος, δάπεδον). A flooring composed of small pieces of brick, tiling, stone, and shells, placed in a bed of cement and beaten down solid by a rammer (*pavicula*). The name is also applied to artificial flooring composed of coloured marbles, often of elaborate workmanship and design. Such were (1) the *pavimentum sectile* of mar-



Pavimentum Sectile. (Ancient Floor in the Church of S. Croce, Rome.)

bles cut (*secta*) into sets of regular form and size, such as squares, hexagons, etc.; (2) *pavimentum tessellatum* of marbles cut in regular dies without the admixture of other forms; (3) *pavimentum vermiculatum*, a mosaic flooring representing nat-

Pavimentum Tessellatum. (Baths of Caracalla, Rome.)

Pavimentum Vermiculatum. (Rich.)

ural objects, animate or inanimate; and (4) *pavimentum scalpturatum*, on which designs were produced by engraving or inlaying. Another kind of flooring (*pavimentum testaceum*) was made of broken pieces of pottery (*testae*).

Pavor. See PALLOR.

Pax. See IRENÉ.

Pax Iulia or **Pax Augusta.** Now Beja; a Roman colony in Lusitania (Pliny, *H. N.* iv. 117).

Paxi. The name of two small islands, now Paxo and Antipaxo, between Corcyra and Leucas, on the western coast of Greece.

Pearls. See GEMMA.

Peck. See MODIUS.

Pecten (κτείς). A comb for the hair made of boxwood (Mart. xiv. 25) or ivory. A comb with large teeth was called *rarus pecten*. For an illustration of an ancient comb, see the article DENS.

Pectorālé. The front plate of a cuirass. See LORICA.

Peculātus. The Roman term for misappropriation of public property, whether by officials (e. g. in the delivery of booty) or by private persons. Such offences, which seldom occurred in the more ancient times of the Republic, were then judged by the national tribunal. In later times they must have become more frequent, since various laws were issued against them, and a special court of justice (see QUAESTIO) was appointed to try them. Besides the payment of compensation, the condemned person suffered disgrace and banishment (*interdictio aquae et ignis*, see EXSILIUM), and, in the time of the Empire, transportation. See DEPORTATIO.

Peculium. The Romans considered the master of the house (*pater familias*) the lawful owner of all the earnings of the members of the family under his control, whether bond or free. (See FAMILIA; SERVUS.) Whatever sum of money he gave to a grown-up son or to a slave for his own use was called the *peculium* of the latter. This gift could be revoked at pleasure, and could not be disposed of by will. Augustus first granted this right to soldiers, in the case of property won in war (*peculium castrense*, cf. Juv. xvi. *fin.*), and Constantine extended it to that gained in a civil office (*peculium quasi castrense*). See SERVUS.

Pecunia. See AS; NUMISMATICS; PONDERA.

Pecuniae Repetundae. See REPETUNDAE.

Pedalium (Πηδάλιον). (1) A promontory of Caria, called also ARTEMISIUM. (2) A promontory on the eastern coast of Cyprus.

Pedaneus Iudex. See IUDEX.

Pedarii. Those members of the Roman Senate who had occupied no office of State, and hence took a lower rank. They might share in the voting, but did not enjoy the right of expressing individual opinions. See SENATUS.

Pedăsa (*τὰ Πήδασα*). A very ancient city of Caria, originally a chief abode of the Leleges. The district about it was called PEDĂSIS.

Pedăsus (*Πήδασος*). A town of Mysia, on the Satnioïs, mentioned several times by Homer.

Pediaeus (*Πεδιαῖος*). A river of Cyprus, near Salamis.

Pediānus, ASCONIUS. See ASCONIUS.

Pedĭca (*πέδη*). (1) A trap or snare for animals (Verg. *Georg.* i. 307). (2) A fetter for men (Plaut. *Poen.* iii. 1, 11).

Pedieis. See SOLON.

Pedigree. See IMAGINES; STEMMA.

Pedisĕqui. Slaves whose duty it was to follow their master on foot. The slave who preceded him was called *anteambulo*. A similar class of female slaves had the name *pedisequae* (Cic. *Ad Att.* ii. 16; Plaut. *Asin.* i. 3, 31).

Pedius. (1) QUINTUS, the great-nephew of the dictator C. Iulius Caesar, being the grandson of Iulia, Caesar's eldest sister. He served under Caesar in Gaul as his legatus, B.C. 57. In 55 he was a candidate for the curule aedileship with Cn. Plancius and others, but he lost his election. In the Civil War he fought on Caesar's side. He was praetor in 48, and in that year he defeated and slew Milo in the neighbourhood of Thurii. In 45 he served against the Pompeian party in Spain. In Caesar's will Pedius was named as one of his heirs along with his two other great-nephews, C. Octavius and L. Pinarius, Octavius obtaining three fourths of the property, and the remaining one fourth being divided between Pinarius and Pedius: the latter resigned his share of the inheritance to Octavius. After the fall of the consuls, Hirtius and Pansa, at the battle of Mutina in April, 43, Octavius marched upon Rome at the head of an army, and in the month of August he was elected consul along with Pedius. The latter forthwith proposed a law, known by the name of the *Lex Pedia*, by which all the murderers of Iulius Caesar were punished with *aquae et ignis interdictio*. Pedius was left in charge of the city while Octavius marched into the north of Italy. He died towards the end of the year shortly after the news of the proscription had reached Rome. (2) SEXTUS, a Roman jurist, living just before the reign of Hadrian in the second century A.D. His works and opinions are frequently cited by the later writers, such as Paulus and Ulpian.

Pednelissus (*Πεδνηλισσός*). A city in the interior of Pisidia.

Pedo, ALBINOVĀNUS. See ALBINOVANUS.

Pedum. An ancient town of Latium, on the Via Labicana, which fell into decay at an early period.

Pedum (*κορύνη*). A shepherd's crook. It is the usual attribute of Thalia as the Muse of Pastoral Poetry, and is sometimes ascribed to Pan (Verg. *Ecl.* v. 88).

Roman Shepherdess with Pedum. (*Antich. d'Ercolano*, iii. tav. 53.)

Pegae. See PAGAE.

Pegasĭdes (*Πηγασίδες*). The Muses. See PEGASIS.

Pegăsis (*Πηγασίς*). A name applied to the fountain Hippocrené (the *fons caballinus* of Persius), as having been made by the hoof of Pegasus. From this fountain the Muses got their name Pegasides. See HIPPOCRENÉ; PEGASUS.

Pegăsus (*Πήγασος*). The celebrated winged horse, whose origin is thus related: When Perseus struck off the head of Medusa, with whom Poseidon had had intercourse in the form of a horse or a bird, there sprang from her Chrysaor and the horse Pegasus. The latter received this name because he was believed to have made his appearance near the sources (*πηγαί*) of Oceanus. He ascended to the seats of the immortals, and afterwards lived in the palace of Zeus, for whom he carried thunder and lightning. According to this view, which is apparently the most ancient, Pegasus was the thundering horse of Zeus; but later writers describe him as the horse of Eos, and place him among the stars. Pegasus also acts a prominent part in the combat of Bellerophon against the Chimaera. In order to kill the Chimaera, it was necessary for Bellerophon to obtain possession of Pegasus. For this purpose the soothsayer Polyidus at Corinth advised him to spend a night in the temple of Athené. As Bellerophon was asleep in the temple, the goddess appeared to him in a dream commanding him to sacrifice to Poseidon, and gave him a golden bridle. When he awoke he found the bridle, offered the sacrifice, and caught Pegasus while he was drinking at the well Pirené. According to some, Athené herself tamed and bridled Pegasus, and surrendered him to Bellerophon. After he had conquered the Chimaera he endeavoured to rise up to heaven upon his winged horse, but fell down upon the earth. (See BELLEROPHON.) Pegasus was also regarded as the horse of the Muses, and in this connection is more celebrated in modern times than in antiquity; for with the ancients he had no connection with the Muses, except producing with his hoof the inspiring fountain Hippocrené.

The story about this fountain runs as follows: When the nine Muses engaged in a contest with the nine daughters of Pierus on Mount Helicon, all became darkness when the daughters of Pierus began to sing; whereas, during the song of the

Muses; heaven, the sea, and all the rivers stood still to listen, and Helicon rose heavenward with delight, until Pegasus, on the advice of Poseidon, stopped its ascent by kicking it with his hoof. From this kick there arose Hippocrené, the inspiring well of the Muses, on Mount Helicon, which, for this reason, Persius calls *fons caballinus*. Others, again, relate that Pegasus caused the well to gush forth because he was thirsty. Pegasus is often seen represented in ancient works of art with Athené and Bellerophon.

Pegăsus. A Roman jurist, one of the followers or pupils of Proculus, and *praefectus urbi* under Domitian (Juv. iv. 76).

Pegma (*πῆγμα*). (1) Planks joined to make shelves—e. g. in the atrium of a house for the *imagines* or for book-shelves (Auson. *Epigr.* 26, 10; Cic. *Ad. Att.* iv. 8). (2) A wooden structure of several stages (four are sometimes mentioned) which could be raised or lowered by weights and pulleys (Sen. *Epist.* 89). The pegmata were used in the Roman amphitheatres and spectaculas in various ways; for effecting sudden transformation, like the double stage of the old Madison Square Theatre in New York City; and sometimes for letting off fireworks (Vopisc. *Carin.* 15).

Pegmāres. Gladiators introduced by means of a *pegma* (Suet. *Calig.* 26).

Peiraeĭcus. See PIRAEICUS.

Peiso Lacus. See PELSO LACUS.

Peitho (*Πειθώ*). See PITHO.

Pelagius. Probably a native of Britain, who was celebrated as the propagator of those heretical opinions which have derived their name from him, and which were opposed with great energy by his contemporaries Augustine and Jerome. He first appears in history about the beginning of the fifth century A.D., when we find him residing at Rome. In the year 409 or 410, when Alaric was threatening Rome, Pelagius, accompanied by his disciple and ardent admirer Caelestius, passed over to Sicily, from thence proceeded to Africa, and leaving Caelestius at Carthage, sailed for Palestine. The fame of his sanctity had preceded him, for upon his arrival he was received with great warmth by St. Jerome and many other distinguished fathers of the Church. Soon afterwards the opinions of Pelagius were denounced as heretical; and in A.D. 417 Pelagius and Caelestus were anathematized by Pope Innocentius. Their doctrines included a denial of the tenet of original sin; a belief in the possibility of a sinless life on earth; and a rejection of the teaching of the Church with regard to grace. Pelagius also believed in the freedom of the human will. The date and circumstances of his death are not known. A very few only of the numerous treatises of Pelagius have descended to us. They are printed with the works of St. Jerome. There are special monographs on Pelagius by Wiggers (Eng. tr. Andover, 1840); Jacobi (1842); Wörter (1866); and Klasen (1882).

Pelagonia (*Πελαγονία*). (1) A district and city in Macedonia, inhabited by the Pelagones, and situated south of Paeonia, upon the Erigon. (2) A district in Thessaly, situated west of Olympus, and belonging to Perrhaebia.

Pelănor (*πέλανορ*). A Spartan coin of iron of about twenty Troy ounces in weight (Plut. *Apophtheg. Lacon.* p. 903); and worth four *chalci* or half an Attic obol (i. e. from two to four cents).

Pelasgi (*Πελασγοί*). A name given to the earliest (prehistoric) inhabitants of Greece. In Homer the name applied now to a people in Asia Minor dwelling near Ilium (*Il.* ii. 840), and now to people inhabiting various parts of Greece. Thus, Argos is called Pelasgian (id. ii. 681), and the god worshipped at Dodona is the "Pelasgian" Zeus (id. xvi. 233). Pelasgians are also spoken of as dwelling in Crete (*Odyss.* xix. 177). Herodotus tells us that the earliest name that Greece bore was *Πελασγία*, and ascribes a Pelasgic origin to some of the Greek peoples, as the Arcadians, Athenians, Aeolians, etc. (cf. Herod. i. 146; vii. 94, 95; viii. 44). He draws a definite distinction between the Pelasgi and the Hellenes proper, as being different in both race and language (i. 56, 58). Thucydides agrees with Herodotus, and goes a step further in identifying them with the Tyrrheni. He also mentions them as found in the island of Lemnos, on which see the article ETRURIA, p. 625.

Modern scholars, in general, regard the Pelasgi as a prehistoric people, probably non-Aryan in their racial affinities, and possibly to be identified with the same branch as the Etruscans, who came to Greece from Asia at a period earlier than that of the Indo-European migration. Still others use the name as designating the Indo-Europeans before the time of their separation into Greeks and Italians. To them are usually ascribed certain religious cults, which are in their origin non-Hellenic, such as that of the Cabeiri (q. v.) and of Zeus at Dodona; and also the architectural remains popularly called Cyclopean. The ancient authorities on the subject of the Pelasgi are collected by Bruck in his monograph *Quae Veteres de Pelasgis Tradiderunt* (1884). See also Eissner, *Die Alten Pelasger* (Leipzig, 1825); Hesselmeyer, *Die Pelasgerfrage;* Flor, *Zur Geschichte der Pelasger* (1859); and the articles CYCLOPES; HELLAS; INDO-EUROPEAN LANGUAGES; MYCENAE.

Pelasgia (*Πελασγία*). See PELASGI.

Pelasgiōtis (*Πελασγιῶτις*). A district in Thessaly, between Hestiaeotis and Magnesia. See THESSALIA.

Pelasgus (*Πέλασγος*). The mythical ancestor of the Pelasgi, by some regarded as sprung from the earth, but by others described as the son of Zeus (Pausan. ii. 14, 3; Apollod. ii. 1, 1); or of Phoroneus (Pausan. i. 14, 2), or of Poseidon and Larissa (Dionys. i. 17). See PELASGI.

Pelătae (*πελάται*). Free labourers working for hire like the *θῆτες*. The word is used by some of the later Greek writers to describe the Roman *clientes*, who had, however, a very different position. See CLIENTES.

Peleiădes. Priestesses at Dodona (q. v.).

Pelendŏnes. A people in Hispania Tarraconensis between the sources of the Durius and the Iberus (Ptol. ii. 6, 54).

Pelethronium (*Πελεθρόνιον*). A mountainous district in Thessaly, part of Mount Pelion, where the Lapithae dwelt (Verg. *Georg.* iii. 115).

Peleus (*Πηλεύς*). A king of Thessaly, son of Aeacus, monarch of Aegina, and the nymph Endeïs, the daughter of Chiron. Having been ac-

cessory, along with Telamon, to the death of their brother Phocus, he was banished from his native island, but found an asylum at the court of Eurytus, son of Actor, king of Phthia in Thessaly. He married Antigoné, the daughter of Eurytus, and received with her, as a marriage portion, the third part of the kingdom. Peleus was present with Eurytus at the chase of the Calydonian boar; but having unfortunately killed his father-in-law with the javelin which he had hurled against the animal, he was again doomed to be a wanderer. His second benefactor was Acastus, king of Iolcos; but here again he was involved in trouble through a false charge brought against him by Astydamia, or, as Horace calls her, Hippolyte, the queen of Acastus. (See ACASTUS.) To reward the virtue of Peleus, as fully shown by his resisting the blandishments of Astydamia, the gods resolved to give him a goddess in marriage. The spouse selected for him was the sea-nymph Thetis, who had been wooed by Zeus himself and his brother Poseidon; but Themis having declared that her child would be greater than his sire, the gods withdrew (Pind. *Isth.* viii. 58 foll.). Others say that she was courted by Zeus alone till he was informed by Prometheus that, if he had a son by her, that son would dethrone him. Others, again, maintain that Thetis, who was reared by Heré, would not assent to the wishes of Zeus, and that the god, in his anger, condemned her to espouse a mortal; or that Heré herself selected Peleus for her spouse (*Il.* xxiv. 59). Chiron, being made aware of the will of the gods, advised Peleus to aspire to the favour of the nymph of the sea, and instructed him how to win her. He therefore lay in wait, and seized and held her fast, though she changed herself into every variety of form, becoming fire, water, a serpent, and a lioness. The wedding was solemnized on Mount Pelion; the gods all honoured it with their presence, and bestowed armour on the bridegroom. Chiron gave him the famous ashen spear afterwards wielded by his son; and Poseidon bestowed on him the immortal Harpy-born steeds Balius and Xanthus. The offspring of this union was the celebrated Achilles. According to one account, Peleus was deserted by his goddess-wife for not allowing her to cast the infant Achilles into a caldron of boiling water, to try if he were mortal. (See ACHILLES.) This, however, is a post-Homeric fiction, since Homer represents Peleus and Thetis as dwelling together all the lifetime of their son. Of Peleus it is farther related that he survived his son and even grandson (*Od.* xi. 493), and died in misery in the island of Cos. It was at the wedding of Peleus and Thetis that the goddess of Discord threw the apple of gold into the middle of the assembled deities, with which was connected so much misfortune for both the Trojans and the Greeks. See HELENÉ; PARIS.

Peliades (Πελιάδες). The daughters of Pelias (q. v.).

Pelias (Πελίας). A son of Poseidon and Tyro, a daughter of Salmoneus. Poseidon once visited Tyro in the form of the river-god Enipeus, with whom she was in love, and she became by him the mother of Pelias and Neleus. To conceal her shame, their mother exposed the two boys, but they were found and reared by some countrymen. They subsequently learned their parentage; and after the death of Cretheus, king of Iolcus, who had married their mother, they seized the throne of Iolcus, to the exclusion of Aeson, the son of Cretheus and Tyro. Pelias soon afterwards expelled his own brother Neleus, and thus became sole ruler of Iolcus. After Pelias had long reigned over Iolcus, Iason, the son of Aeson, came to Iolcus and claimed the kingdom as his right. In order to get rid of him, Pelias sent him to Colchis to fetch the golden fleece. Hence arose the celebrated expedition of the Argonauts. After the return of Iason, Pelias was cut to pieces and boiled by his own daughters (the Peliades), who had been told by Medea that in this manner they might restore their father to vigour and youth. His son Acastus held funeral games in his honour at Iolcus, and expelled Iason and Medea from the country. (See ARGONAUTAE; IASON; MEDEA.) The names of several of the daughters of Pelias are four, the best known of which is that of Alcestis (q. v.).

Pelīdes (Πηλείδης). "Son of Peleus," a patronymic which usually designates Achilles, but sometimes the son of Achilles, Neoptolemus.

Peligni or **Paeligni**. A brave and warlike people, of Sabine origin, in Central Italy, bounded by the Marsi, the Marrucini, the Samnites, and the Frentani. They took an active part in the Social War (B.C. 90–89), and their chief town, Corfinium, was destined by the allies to be the new capital of Italy in place of Rome. See ITALIA.

Pelinaeus Mons (τὸ Πελιναῖον ὄρος). The highest mountain in Chios, near the city of Chios. It had a celebrated temple of Zeus.

Pelinna (Πελίννα) and **Pelinnaeum** (Πελιννα῀ον). A town of Hestiaeotis in Thessaly (Livy, xxxvi. 10, 14).

Pelion (τὸ Πήλιον ὄρος), more rarely **Pelios** (Πήλιος). A lofty range of mountains in Thessaly, in the district of Magnesia, situated between the lake Boebeïs and the Pagasaean Gulf. Its sides were covered with wood, and on its summit was a temple of Zeus Actaeus. Mount Pelion was celebrated in mythology. Near its summit was the cave of the Centaur Chiron. The Giants, in their war with the gods, are said to have attempted to heap Ossa and Olympus on Pelion, or Pelion and Ossa on Olympus, in order to scale heaven. (See GIGANTES.) On Pelion the timber was felled with which the ship Argo was built. See ARGONAUTAE.

Pella (Πέλλα). (1) An ancient town in Macedonia, in the district Bottiaea, situated upon a lake formed by the river Lydias. Philip the Great made it his residence and the capital of the Macedonian monarchy. It was the birthplace of Alexander the Great. Hence the poets give the surname of Pellaea to Alexandria in Egypt, because it was founded by Alexander the Great, and also use the adjective in a general sense as equivalent to Egyptian. See MACEDONIA. (2) A city of Palestine, east of the Jordan, in Peraea. It was the place of refuge of the Christians who fled from Jerusalem before its capture by the Romans. (3) A city of Syria on the Orontes, afterwards called Apamea (q. v.). (4) A city of Phrygia. See PELTAE.

Pellāna. See PELLENÉ (2).

Pellēné (Πελλήνη). (1) The most easterly of the twelve cities of Achaia, near the frontiers of Sicyonia, and situated on a hill sixty stadia from the city. The inhabitants of the peninsula of Pal-

lené, in Macedonia, professed to be descended from the Pellenaeans in Achaia, who were shipwrecked on the Macedonian coast on their return from Troy. (2) Often called PELLANA, a town in Lucania on the Eurotas, northwest of Sparta.

Pellex or **Paelex** (*παλλακή*). A mistress kept by a married man. See CONCUBINA, p. 399.

Pellis. A skin. For skins as clothing, see VESTIS.

Pelluvia (*ποδανιπτήρ*). A basin for washing the feet, and hence opposed in meaning to *malluvia* (q. v.).

Pelopia. See AEGISTHUS; THYESTES.

Pelopĭdae. See PELOPS.

Pelopĭdas (*Πελοπίδας*). A Theban general and statesman, son of Hippoclus. He was descended from a noble family, and inherited a large estate, of which he made a liberal use. He lived always in the closest friendship with Epaminondas, to whose simple frugality, as he could not persuade him to share his riches, he is said to have conformed his own mode of life. He took a leading part in expelling the Spartans from Thebes, B.C. 379; and from this time until his death there was not a year in which he was not intrusted with some important command. In 371 he was one of the Theban commanders at the battle of Leuctra, so fatal to the Lacedaemonians, and joined Epaminondas in urging the expediency of immediate action. In 369 he was also one of the generals in the first invasion of the Peloponnesus by the Thebans. (See EPAMINONDAS.) In 368 Pelopidas was sent again into Thessaly, on two separate occasions, in consequence of complaints against Alexander of Pherae. On his first expedition Alexander of Pherae sought safety in flight, and Pelopidas advanced into Macedonia to arbitrate between Alexander II. and Ptolemy of Alorus. Among the hostages whom he took with him from Macedonia was the famous Philip, the father of Alexander the Great. On his second visit to Thessaly, Pelopidas went simply as an ambassador, not expecting any opposition, and unprovided with a military force. He was seized by Alexander of Pherae, and was kept in confinement at Pherae till his liberation in 367 by a Theban force under Epaminondas. In the same year in which he was released he was sent as ambassador to Susa to counteract the Lacedaemonian and Athenian negotiations at the Persian court. In 364 the Thessalian towns again applied to Thebes for protection against Alexander, and Pelopidas was appointed to aid them. His forces, however, were dismayed by an eclipse of the sun (June 13), and, therefore, leaving them behind, he took with him into Thessaly only three hundred horse. On his arrival at Pharsalus he collected a force which he deemed sufficient, and marched against Alexander, treating lightly the great disparity of numbers, and remarking that it was better as it was, since there would be more for him to conquer. At Cynoscephalae a battle ensued, in which Pelopidas drove the enemy from their ground, but he himself was slain as, burning with resentment, he pressed rashly forward to attack Alexander in person. The Thebans and Thessalians made great lamentations for his death, and the latter, having earnestly requested leave to bury him, celebrated his funeral with extraordinary splendour.

Peloponnesian War. A name given to the great contest between Athens and her allies on the one side, and the Peloponnesian confederacy, headed by Sparta, on the other, which lasted from B.C. 431 to 404. The war, which is one of the most memorable and epoch-making in the history of Europe, was a consequence of the jealousy with which Sparta and Athens regarded each other, as States each of which was aiming at supremacy in Greece, as the heads respectively of the Dorian and Ionian races, and as patrons of the two opposite forms of civil government, oligarchy and democracy. The war was eagerly desired by a strong party in each of those States, but it was necessary to find an occasion for commencing hostilities, especially as a truce for thirty years had been concluded between Athens and Sparta in the year B.C. 445. Such an occasion was presented by the affairs of Corcyra and Potidaea. In a quarrel, which soon became a war, between Corinth and Corcyra, respecting Epidamnus, a colony of the latter State (B.C. 436), the Corcyreans applied to Athens for assistance. Their request was granted, as far as the conclusion of a defensive alliance between Athens and Corcyra, and an Athenian fleet was sent to their aid, which, however, soon engaged in active hostilities against the Corinthians. Potidaea, on the isthmus of Pallené, was a Corinthian colony, and, even after its subjection to Athens, continued to receive every year from Corinth certain functionaries or officers (*ἐπιδημιουργοί*). The Athenians, suspecting that the Potidaeans were inclined to join in a revolt, to which Perdiccas, king of Macedon, was instigating the towns of Chalcidicé, required them to dismiss the Corinthian functionaries, and to give other pledges of their fidelity. The Potidaeans refused, and, with most of the other Chalcidian towns, revolted from Athens and received aid from Corinth. The Athenians sent an expedition against them, and, after defeating them in battle, laid siege to Potidaea (B.C. 432). The Corinthians now obtained a meeting of the Peloponnesian confederacy at Sparta, in which they complained of the conduct of Athens with regard to Corcyra and Potidaea. After others of the allies had brought their charges against Athens, and after some of the Athenian envoys, who happened to be in the city, had defended the conduct of their State, the Spartans first, and afterwards all the allies, decided that Athens had broken the truce, and they resolved upon immediate war; King Archidamus alone recommended some delay.

In the interval necessary for preparation, an attempt was made to throw the blame of commencing hostilities upon the Athenians by sending three several embassies to Athens with demands of such a nature as could not be accepted. In the assembly which was held at Athens to give a final answer to these demands, Pericles, who was now at the height of his power, urged the people to engage in the war, and laid down a plan for the conduct of it. He advised the people to bring all their movable property from the country into the city, to abandon Attica to the ravages of the enemy, and not to suffer themselves to be provoked to give them battle with inferior numbers, but to expend all their strength upon their navy, which might be employed in carrying the war into the enemy's territory, and in collecting supplies from subject States; and further, not to attempt any new con-

quest while the war lasted. His advice was adopted, and the Spartan envoys were sent home with a refusal of their demands, but with an offer to refer the matters in difference to an impartial tribunal, an offer which the Lacedaemonians had no intention of accepting. After this the usual peaceful intercourse between the rival States was discontinued. Thucydides (ii. 1) dates the beginning of the war from the early spring of the year B.C. 431, the fifteenth of the thirty years' truce, when a party of Thebans made an attempt, which at first succeeded, but was ultimately defeated, to surprise Plataea.

The truce being thus openly broken, both parties addressed themselves to the war. The Peloponnesian confederacy included all the States of Peloponnesus except Achaia (which joined them afterwards) and Argos, and without the Peloponnesus, Megaris, Phocis, Locris, Boeotia, the island of Leucas, and the cities of Ambracia and Anactorium. The allies of the Athenians were Chios and Lesbos, besides Samos and the other islands of the Aegaean which had been reduced to subjection (Thera and Melos, which were still independent, remained neutral), Plataea, the Messenian colony in Naupactus, the majority of the Acarnanians, Corcyra, Zacynthus, and the Greek colonies in Asia Minor, in Thrace and Macedonia, and on the Hellespont. The resources of Sparta lay chiefly in her land forces, which, however, consisted of contingents from the allies, whose period of service was limited; the Spartans were also deficient in money. The Athenian strength lay in the fleet, which was manned chiefly by foreign sailors, whom the wealth collected from the allies enabled them to pay. Thucydides informs us that the cause of the Lacedaemonians was the more popular, as they professed to be deliverers of Greece, while the Athenians were fighting in defence of a dominion which had become odious through their tyranny, and to which the States which yet retained their independence feared to be brought into subjection.

In the summer of the year B.C. 431 the Peloponnesians invaded Attica under the command of Archidamus, king of Sparta. Their progress was slow, as Archidamus appears to have been still anxious to try what could be done by intimidating the Athenians before proceeding to extremities. Yet their presence was found to be a greater calamity than the people had anticipated; and when Archidamus made his appearance at Acharnae, they began loudly to demand to be led out to battle. Pericles firmly adhered to his plan of defence, and the Peloponnesians returned home. Before their departure the Athenians had sent out a fleet of a hundred sail, which was joined by fifty Corcyrean ships, to waste the coasts of Peloponnesus; and towards the autumn Pericles led the whole disposable force of the city into Megaris, which he laid waste. In the same summer the Athenians expelled the inhabitants of Aegina from their island, which they colonized with Athenian settlers. In the winter there was a public funeral at Athens for those who had fallen in the war, and Pericles pronounced over them an oration, the substance of which is preserved by Thucydides (ii. 35–46). In the following summer (B.C. 430) the Peloponnesians again invaded Attica under Archidamus, who now entirely laid aside the forbearance which he had shown the year before, and left scarcely a corner of the land unravaged. This invasion lasted forty days. In the meantime, a grievous pestilence broke out in Athens, and raged with the more virulence on account of the crowded state of the city. Of this terrible visitation Thucydides, who was himself a sufferer, has left a minute and apparently faithful description (ii. 46 foll.). The murmurs of the people against Pericles were renewed, and he was compelled to call an assembly to defend his policy. He succeeded so far as to prevent any overtures for peace being made to the Lacedaemonians, but he himself was fined, though immediately afterwards he was reëlected general. While the Peloponnesians were in Attica, Pericles led a fleet to ravage the coasts of Peloponnesus. In the winter of this year Potidaea surrendered to the Athenians on favourable terms (Thuc. ii. 70). The next year (B.C. 429), instead of invading Attica, the Peloponnesians laid siege to Plataea. The brave resistance of the inhabitants forced their enemies to convert the siege into a blockade. In the same summer, an invasion of Acarnania by the Ambracians and a body of Peloponnesian troops was repulsed; and a large Peloponnesian fleet, which was to have joined in the attack on Acarnania, was twice defeated by Phormion in the mouth of the Corinthian Gulf. An expedition sent by the Athenians against the revolted Chalcidian towns was defeated with great loss.

In the preceding year (B.C. 430) the Athenians had concluded an alliance with Sitalces, king of the Odrysae in Thrace, and Perdiccas, king of Macedon, on which occasion Sitalces had promised to aid the Athenians to subdue their revolted subjects in Chalcidicé. He now collected an army of 150,000 men, with which he first invaded Macedonia, to revenge the breach of certain promises which Perdiccas had made to him the year before, and afterwards laid waste the territory of the Chalcidians and Bottiaeans, but he did not attempt to reduce any of the Greek cities. About the middle of this year Pericles died. The invasion of Attica was repeated in the next summer (B.C. 428), and immediately afterwards all Lesbos except Methymné revolted from the Athenians, who laid siege to Mitylené. The Mitylenaeans begged aid from Sparta, which was promised, and they were admitted into the Spartan alliance. In the same winter a body of Plataeans, amounting to 220, made their escape from the besieged city in the night, and took refuge in Athens. In the summer of B.C. 427 the Peloponnesians again invaded Attica, while they sent a fleet of forty-two galleys, under Alcidas, to the relief of Mitylené. Before the fleet arrived Mitylené had surrendered, and Alcidas, after a little delay, sailed home. In an assembly which was held at Athens to decide on the fate of the Mitylenaeans, it was resolved, at the instigation of Cleon, that all the adult citizens should be put to death, and the women and children made slaves; but this barbarous decree was repealed the next day. The land of the Lesbians (except Methymné) was seized and divided among Athenian citizens, to whom the inhabitants paid a rent for the occupation of their former property. In the same summer the Plataeans surrendered; they were massacred, and their city was given up to the Thebans, who razed it to the ground. In the year B.C. 426 the Lacedaemonians were deterred from invading Attica by earthquakes. An expedition against Aetolia, under the

Athenian general Demosthenes, completely failed; but afterwards Demosthenes and the Acarnanians routed the Ambracians, who nearly all perished. In the winter (B.C. 426–425) the Athenians purified the island of Delos, as an acknowledgment to Apollo for the cessation of the plague.

At the beginning of the summer of B.C. 425 the Peloponnesians invaded Attica for the fifth time. At the same time the Athenians, who had long directed their thoughts towards Sicily, sent a fleet to aid the Leontini in a war with Syracuse. Demosthenes accompanied this fleet, in order to act, as occasion might offer, on the coast of Peloponnesus. He fortified Pylus on the coast of Messenia, the northern headland of the modern Bay of Navarino. In the course of the operations which were undertaken to dislodge him, a body of Lacedaemonians, including several noble Spartans, got blockaded in the island of Sphacteria, at the mouth of the bay, and were ultimately taken prisoners by Cleon and Demosthenes. Pylus was garrisoned by a colony of Messenians, in order to annoy the Spartans. After this event the Athenians engaged in vigorous offensive operations, of which the most important was the capture of the island of Cythera by Nicias early in B.C. 424. This summer, however, the Athenians suffered some reverses in Boeotia, where they lost the battle of Delium, and on the coasts of Macedonia and Thrace, where Brasidas, among other exploits, took Amphipolis. The Athenian expedition to Sicily was abandoned, after some operations of no great importance, in consequence of a general pacification of the island, which was effected through the influence of Hermocrates, a citizen of Syracuse. In the year B.C. 423 a year's truce was concluded between Sparta and Athens, with a view to a lasting peace. Hostilities were renewed in B.C. 422, and Cleon was sent to cope with Brasidas, who had continued his operations even during the truce. A battle was fought between these generals at Amphipolis, in which the defeat of the Athenians was amply compensated by the double deliverance which they experienced in the death both of Cleon and Brasidas. In the following year (B.C. 421) Nicias succeeded in negotiating a peace with Sparta for fifty years, the terms of which were a mutual restitution of conquests made during the war and the release of the prisoners taken at Sphacteria. This treaty was ratified by all the allies of Sparta except the Boeotians, Corinthians, Eleans, and Megarians. This peace never rested on any firm basis. It was no sooner concluded than it was discovered that Sparta had not the power to fulfil her promises, and Athens insisted on their performance. The jealousy of the other States was excited by a treaty of alliance which was concluded between Sparta and Athens immediately after the peace, and intrigues were commenced for the formation of a new confederacy, with Argos at the head. An attempt was made to draw Sparta into alliance with Argos, but it failed. A similar overture subsequently made to Athens met with better success, chiefly through an artifice of Alcibiades, who was at the head of a large party hostile to the peace, and the Athenians concluded a treaty offensive and defensive with Argos, Elis, and Mantinea for one hundred years (B.C. 420). In the year B.C. 418 the Argive confederacy was broken up by their defeat at the battle of Mantinea, and a peace, and soon after an alliance, was made between Sparta and Argos. In the year B.C. 416 an expedition was undertaken by the Athenians against Melos, which had hitherto remained neutral. The Melians surrendered at discretion; all the males who had attained manhood were put to death; the women and children were made slaves; and subsequently five hundred Athenian colonists were sent to occupy the island (Thuc. v. 116).

The fifty years' peace was not considered at an end, though its terms had been broken on both sides, till the year B.C. 415, when the Athenians undertook their daring and tragic expedition to Sicily. (See SYRACUSAE.) Sicily proved a rock against which their resources and efforts were fruitlessly expended. And Sparta, which furnished but a commander and a handful of men for the defence of Syracuse, soon beheld her antagonist reduced, by a series of unparalleled misfortunes, to a state of the utmost distress and weakness. The accustomed procrastination of the Spartans, and the timid policy to which they ever adhered, alone preserved Athens in this critical moment, or at least retarded her downfall. Time was allowed for her citizens to recover from the panic and consternation occasioned by the news of the Sicilian disaster; and instead of viewing hostile fleets, as they had anticipated, ravaging their coasts and blockading the Piraeus, they were enabled still to dispute the empire of the sea and to preserve the most valuable of their dependencies. Alcibiades, whose exile had proved so injurious to his country, since it was to his counsels alone that the successes of her enemies are to be attributed, now interposed in her behalf, and by his intrigues prevented the Persian satrap, Tissaphernes, from placing at the disposal of the Spartan admiral that superiority of force which must at once have terminated the war by the complete overthrow of the Athenian Republic (Thuc. viii.). The temporary revolution which was effected at Athens by his contrivance also, and which placed the State at variance with the fleet and army stationed at Samos, afforded him another opportunity of rendering a real service to his country by moderating the violence and animosity of the latter. The victory of Cynossema and the subsequent successes of Alcibiades, now elected to the chief command of the forces of his country, once more restored Athens to the command of the sea, and, had she reposed that confidence in the talents of her generals which they deserved and her necessities required, the efforts of Sparta and the gold of Persia might have proved unavailing. But the second exile of Alcibiades, and, still more, the iniquitous sentence which condemned to death the generals who fought and conquered at Arginusae, sealed the fate of Athens; and the battle of Aegos Potamos at length terminated a contest which had been carried on, with scarcely any intermission, during a period of twenty-seven years, with a spirit and animosity unparalleled in the annals of warfare. Lysander now sailed to Athens, receiving as he went the submission of the allies, and blockaded the city, which surrendered after a few months (B.C. 404) on terms dictated by Sparta, with a view of making Athens a useful ally by giving the ascendency in the State to the oligarchical party.

The history of the Peloponnesian War was written by Thucydides, upon whose accuracy and impartiality, as far as his narrative goes, we may place the fullest dependence. His history ends

abruptly in the year B.C. 411. For the rest of the war we have to follow Xenophon and Diodorus. The value of Xenophon's history is impaired by his prejudice, and that of Diodorus by his carelessness.

Peloponnēsus (Πελοπόννησος). Now the Morea; the southern part of Greece, or the peninsula, which was connected with Hellas proper by the isthmus of Corinth. It is said to have derived its name—Peloponnesus, or the "island of Pelops"—from the mythical Pelops. (See PELOPS.) This name does not occur in Homer. In his time the peninsula was sometimes called Apia, from Apis, son of Phoroneus, king of Argos, and sometimes Argos, which names were given to it on account of Argos being the chief power in Peloponnesus at that period. On the east and south there are three great gulfs—the Argolic, Laconian, and Messenian. The ancients compared the shape of the country to the leaf of a plane-tree; and its modern name, the Morea, which first occurs in the twelfth century of the Christian era, was given to it on account of its resemblance to a mulberry-leaf. Peloponnesus was divided into various provinces, all of which were bounded on one side by the sea, with the exception of Arcadia, which was in the centre of the country. These provinces were Achaia in the north, Elis in the west, Messenia in the west and south, Laconia in the south and east, and Corinthia in the east and north. An account of the geography of the peninsula is given under these names. The area of Peloponnesus is computed to be 7779 English square miles, and it probably contained a population of upwards of a million in the flourishing period of Greek history.

The Peloponnesus was originally inhabited by Pelasgians. Subsequently the Achaeans, who belonged to the Aeolic race, settled in the eastern and southern parts of the peninsula, in Argolis, Laconia, and Messenia; and the Ionians in the northern part, in Achaia; while the remains of the original inhabitants of the country, the Pelasgians, collected chiefly in the central part, in Arcadia. Eighty years after the Trojan War, according to mythical chronology, the Dorians, under the conduct of the Heraclidae, invaded and conquered Peloponnesus, and established Doric States in Argolis, Laconia, and Messenia, whence they extended their power over Corinth, Sicyon, and Megara. Part of the Achaean population remained in these provinces as tributary subjects to the Dorians, under the name of Perioeci; while others of the Achaeans passed over to the north of the Peloponnesus, expelled the Ionians, and settled in this part of the country, which was called after them Achaia. The Aetolians, who had invaded the Peloponnesus along with the Dorians, settled in Elis, and became intermingled with the original inhabitants. The peninsula remained under Doric influence during the most important period of Greek history, and opposed to the great Ionic city of Athens. After the conquest of Messenia by the Spartans it was under the supremacy of Sparta till the overthrow of the power of the latter by the Thebans at the battle of Leuctra, B.C. 371. See Curtius, *Peloponnesos* (Gotha, 1851–52); Clark, *Peloponnesus* (London, 1858); Gell, *Itinerary of the Morea* (London, 1827); Beulé, *Études sur le Péloponèse* (Paris, 1875); Leake, *Peloponnesiaca* (London, 1846); Wyse, *Excursion in the Peloponnesus* (London, 1865); Bursian, *Geographie von Griechenland*, ii. pp. 1–343 (Leipzig, 1872); and the articles DORIS; HERACLIDAE; and HELLAS.

Pelops (Πέλοψ, "Black-face"). A grandson of Zeus and son of Tantalus and Dioné, the daughter of Atlas. Some writers call his mother Eurynassa or Clytia. He was married to Hippodamia, by whom he became the father of Atreus, Thyestes, Dias, Cynosurus, Corinthius, Hippalmus (Hippalcmus or Hippalcimus), Hippasus, Cleon, Argius, Alcathoüs, Aelius, Pittheus, Troezen, Nicippé, and Lysidicé, known collectively as the Pelopidae. By Axioché or the nymph Danaïs he is said to have been the father of Chrysippus. Pelops was king of Pisa in Elis, and from him the great southern peninsula of Greece was believed to have derived its name Peloponnesus. According to a tradition which became very general in later times, Pelops was a Phrygian, who was expelled by Ilus from Phrygia (Ovid, *Met.* viii. 622), and thereupon migrated with his great wealth to Pisa. Others describe him as a Paphlagonian, and call the Paphlagonians themselves Πελοπήϊοι. Others again represent him as a native of Greece; and there can be little doubt that in the earliest traditions Pelops was described as a native of Greece and not as a foreign immigrant; in them, also, he is called the tamer of horses and the favourite of Poseidon. The legends about Pelops consist mainly of (*a*) the story of his being cut to pieces and boiled; (*b*) of his contest with Oenomaüs and Hippodamia; and (*c*) of his relation to his sons, to which may be added the honours paid to his remains.

(*a*) The first tells how Tantalus, the favourite of the gods, once invited them to a repast, and on that occasion killed his own son, and having boiled him set the flesh before them that they might eat it. But the immortal gods, knowing what it was, did not touch it; Demeter alone, being absorbed by grief for her lost daughter, consumed the shoulder of Pelops. Hereupon the gods ordered Hermes to put the limbs of Pelops into a caldron, and thereby restore him to life. When the process was over, Clotho took him out of the caldron, and as the shoulder consumed by Demeter was wanting, the goddess supplied its place by one made of ivory; his descendants (the Pelopidae), as a mark of their origin, were believed to have one shoulder as white as ivory.

(*b*) As an oracle had declared to Oenomaüs that he should be killed by his son-in-law, he refused giving his daughter Hippodamia in marriage to any one. But since many suitors appeared, Oenomaüs declared that he would bestow her hand upon the man who should conquer him in the chariot-race, but that he should kill all who were defeated by him. Among other suitors Pelops also presented himself; but when he saw the heads of his conquered predecessors stuck up above the door of Oenomaüs he was seized with fear, and endeavoured to gain the favour of Myrtilus, the charioteer of Oenomaüs, promising him half the kingdom if he would assist him in conquering his master. Myrtilus agreed, and drew out the linchpins of the chariot of Oenomaüs. In the race the chariot of Oenomaüs broke down, and he was thrown out and killed. Thus Hippodamia became the wife of Pelops. But as Pelops had now gained his object, he was unwilling to keep faith with Myrtilus; and accordingly, as they were driving along a cliff, he threw Myrtilus into the sea. As Myrtilus sank he cursed Pelops and

his whole race. Pelops returned with Hippodamia to Pisa in Elis, and soon also made himself master of Olympia, where he restored the Olympian Games with greater splendour than they had ever been celebrated before.

(*c*) Chrysippus was the favourite of his father, and was, in consequence, envied by his brothers. The eldest two among them, Atreus and Thyestes, with the connivance of Hippodamia, accordingly murdered Chrysippus, and threw his body into a well. Pelops, who suspected his sons of the murder, expelled them from the country. Hippodamia, dreading the anger of her husband, fled to Midea in Argolis, whence her remains were afterwards conveyed by Pelops to Olympia.

Pelops, after his death, was honoured at Olympia above all other heroes. His tomb, with an iron sarcophagus, existed on the banks of the Alpheus, not far from the temple of Artemis, near Pisa. The spot on which his sanctuary (Πελόπιον) stood in the Altis was said to have been dedicated by Heracles, who also offered to him the first sacrifices. The magistrates of the Eleans likewise offered to him there an annual sacrifice, consisting of a black ram, with special ceremonies. The name of Pelops was so celebrated that it was constantly used by the poets in connection with his descendants and the cities they inhabited. Hence we find Atreus, the son of Pelops, called *Pelopëius Atreus*, and Agamemnon, the grandson or great-grandson of Atreus, called *Pelopëius Agamemnon*. In the same way Iphigenia, the daughter of Agamemnon, and Hermioné, the wife of Menelaüs, are each called by Ovid *Pelopëia virgo*. Vergil (*Aen.* ii. 193) uses the phrase *Pelopea moenia* to signify the cities in Peloponnesus which Pelops and his descendants ruled over; and in like manner Mycenae is called by Ovid *Pelopëiades Mycenae*.

Peloria (Πελώρια). A Thessalian festival resembling the Roman Saturnalia (q. v.). In it sacrifices were offered to Zeus Pelorius; banquets open even to strangers were given; and slaves enjoyed the utmost freedom, being waited upon by their masters. See Athen. xiv. p. 639.

Pelōris (Πελωρίς), **Pelorias** (Πελωριάς), or **Pelorus** (Πελωρός). Now Cape Faro. The northeast point of Sicily and one of the three promontories which formed the triangular figure of the island. According to the usual story, it derived its name from Pelorus, the pilot of Hannibal's ship (Val. Max. ix. 8, 1); but the name was more ancient than Hannibal's time, being mentioned by Thucydides (iv. 25).

Pelso or **Peiso**. Now the Plattensee; a great lake in Pannonia which the emperor Galerius connected with the Danube (Aurel. Vict. *Caes.* 40).

Pelta (πέλτη). A small, round shield made of wicker-work or wood, covered with hide or leather (Xen. *Anab.* ii. 1, 6). The name is also given to the Thracian shield, which was rectangular in shape (Schol. *in* Thuc. ii. 29). See Cetra; Clipeus.

Amazons with Peltae. (Rich.)

Peltae (Πέλται). An ancient and flourishing city in the north of Phrygia (Xen. *Anab.* i. 2, 10).

Peltastae (πελτασταί). The Greek light-armed foot-soldiers, forming an arm intermediate between the heavily equipped hoplites and the sharp-shooters (γυμνῆτες). The name is taken from the πέλτη, a light shield of Thracian origin. (See Clipeus.) For attack they had a javelin, or ἀκόντιον, and a long sword. These troops originated in Thrace and North Greece, and the peltastae serving in the Peloponnesian War and in the armies of the younger Cyrus and Agesilaüs belonged to those countries. Iphicrates equipped his mercenaries with this kind of armament, introducing at the same time linen doublets and, instead of greaves, what were called after him ἰφικρατίδες, something between boots and leggings (Diod. xv. 44). In the Macedonian army their place was taken by the ὑπασπισταί. See Exercitus.

Pelusium (Πηλούσιον, Old Test. Sin; both names are derived from nouns meaning "mud"). A celebrated city of Lower Egypt, standing on the east side of the easternmost mouth of the Nile, which was called after it the Pelusiac mouth, twenty stadia (about two miles) from the sea, in the midst of morasses, from which it obtained its name. As the key to Egypt on the northeast, and the frontier city towards Syria and Arabia, it was strongly fortified, and was the scene of many battles and sieges. It was the birthplace of the geographer Ptolemaeus.

Pelvis (ποδανιπτήρ). A vessel for washing the feet (Varro, *L. L.* v 19). It was of pottery, bronze, or even silver. Other names applied to it are pelluvia and pelluvium. The pollubrum was used for either hands or feet. See Malluvium.

Pelvis. (Pompeian painting.)

Pen. See Palaeography; Stilus.

Penātes. With Vesta and Lar, the household gods of the Romans; strictly the guardians of the store-room (*penus*), which in old Roman houses stood next the atrium; in later times, near the back of the building (*penetralia*). They were two in number, and presided over the well-being of the house, their blessing being shown in the fulness of the store-room. This chamber, therefore, as being sacred to them, was holy, and not to be entered except by chaste and undefiled persons. The hearth of the house was their altar, and on it were sculptured the figures of the two Penates beside that of the Lar. Often they were represented dancing and raising a drinking-horn to symbolize a joyful and prosperous life. The offerings to them were made jointly with those to the Lar. (See Lares.) There were also Penates belonging to the State. These at first had their temple in the Velian Quarter, where their statues stood below those of the Dioscuri. Afterwards it was supposed that the original Penates, brought from Samo-

thrace to Troy, and thence conveyed by Aeneas to Lavinium, were identical with certain symbols kept with the Palladium in a secret part of the temple of Vesta. The Penates of the Latin League, which were at first regarded as the Trojan Penates, were enshrined in the sanctuary at Lavinium. Annual offerings were brought to them by the Roman priests, and also by consuls, praetors, and dictators on assuming or laying down office, and by generals on their departure for their provinces.

Peneleōs (Πηνέλεως). One of the Argonauts, son of Hippalcmus and Asteropé. He was numbered among the suitors of Helen and was the father of Opheltes. He led the Boeotians in the Trojan War, slaying Ilioneus and Lycon; and was himself wounded by Polydamus and killed by Eurypylus, son of Telephus. See Pausan. ix. 5, 8; Apollod. i. 9, 16; *Il.* ii. 494; xix. 487.

Penelŏpé (Πηνελόπη and Πενελόπη). A princess of Greece, daughter of Icarius, brother of Tyndarus, king of Sparta, and of Polycasté or Periboea. She became the wife of Odysseus (q. v.), monarch of Ithaca, and her marriage was celebrated about the same time with that of Menelaüs and Helen. Penel-

Penelopé. (*Ant. Denkm.* i. 3, p. 17.)

opé became by Odysseus the mother of Telemachus, and was obliged soon after to part with her husband, whom the Greeks compelled to go to the Trojan War. Twenty years passed away, and Odysseus did not return to his home. Meanwhile his palace at Ithaca was crowded with numerous and importunate suitors, aspiring to the hand of the queen. Her relatives also urged her to abandon all thoughts of the probability of her husband's return, and not to disregard, as she had, the solicitations of the rival aspirants to her favour. Penelopé, however, exerted every resource which her ingenuity could suggest to protract the period of her decision: among others she declared that she would make choice of one of them as soon as she should have completed a web that she was weaving (intended as a funeral ornament for the aged Laërtes); but she baffled their expectations by undoing at night what she had accomplished during the day. This artifice has given rise to the proverb of "Penelopé's web," or "to unweave the web of Penelopé" (*Penelopes telam retexere*), applied to whatever labour appears to be endless. For three years this artifice succeeded, but on the beginning of a fourth a disclosure was made by one of her female attendants; and the faithful and unhappy Penelopé, constrained at length by the renewed importunities of her persecutors, agreed, at their instigation, to bestow her hand on him who should shoot an arrow from the bow of Odysseus through a given number of axe-eyes placed in succession. An individual disguised as a beggar was the successful archer. This was no other than Odysseus, who had just returned to Ithaca. The hero then directed his shafts at the suitors, and slew them all. The character of Penelopé has been variously represented, some writers saying that she was unfaithful to Odysseus with all the suitors, and that from this intercourse was born Pan; but it is the more general version that she is to be considered as a model of conjugal and domestic virtue.

Penestae (Πενέσται). In Thessaly the descendants of the older population subdued by the Thessalians and occupying a position analogous to that of the Helots of Laconia. They managed the property of the owners as serfs bound to the soil, paying a moderate tax, and being also liable to be called out for military service; but their lords could not remove them from the land nor put them to death. See Grote, *Hist. of Greece*, ii. pp. 373–376.

Penēus (Πηνειός). (1) Now the Salambria; the principal river in Thessaly, rising in Mount Lacmon; after receiving the waters of the Enipeus, Lethaeus, and Titaresius rivers, it passes through the Vale of Tempé between Mounts Ossa and Olympus, and empties into the sea. (See Tempé.) The river-god Peneus was the son of Oceanus and Tethys (Hes. *Theog.* 343). By the Naiad Creüsa he became the father of Hypseus, Stilbé, and Daphné. He was also the father (by some called the husband) of Cyrené. (2) Now the Gastuni, a river of Elis.

Penicillus (*ῥαβδίον*). A painter's brush, some being made with hair (Pliny, *H. N.* xxviii. 71) and some with sponge (id. ix. 69). See Pictura.

Penicŭlus. (1) The same as *penicillus* (q. v.). (2) A brush for dusting (Plaut. *Men.* i. 1, 1).

Penius. A little river of Pontus, falling into the Euxine (Ovid, *Epist. ex Ponto*, iv. 10).

Penna. (1) A quill; used for various purposes, as for toothpicks (Mart. xiv. 22). (2) A pen; so only after the fourth century A.D. See Isidor. *Orig.* xiv. 3; Beckmann, *Hist. of Inventions*, i. p. 408 (London, 1846); and Writing and Writing Materials.

Pennīnae Alpes. See Alpes.

Pensum (from *pendo*) That which is weighed out as a task, especially of a portion of wool given to female slaves to spin (Iustin. i. 3).

Pentacosiomedimni (*πεντακοσιομέδιμνοι*). The first of the four classes of citizens instituted at Athens by Solon. See Eisphora; Solon.

Pentapŏlis (Πεντάπολις). The name for any association of five cities, but applied specifically to the five chief cities of Cyrenaïca in North Africa —Cyrené, Berenicé, Arsinoë, Ptolemaïs, and Apollonia.

Pentathlon (*πένταθλον*). In Greek gymnastics a contest compounded of the five events (running, jumping, wrestling, throwing the discus, and the javelin). After each separate event the defeated stood out, till finally two contested the victory in the wrestling. See ATHLETAE; DISCUS; GYMNASIUM; QUINQUERTIUM.

Pentecontŏrus (*πεντηκόντορος*). A kind of Greek ship in which there were fifty oarsmen arranged in a single row. See NAVIS.

Pentecosté (*πεντηκοστή*). A custom duty of one fiftieth (two per cent.) levied on imports and exports at Athens (Harpocr. s. h. v.) On imports the duty was paid upon unloading (Demosth. *Lacrit.* p. 932, § 29), and on exports probably at the time when the goods were shipped. The collection of the customs was farmed out, probably from year to year, by the *πωληταί* to the highest bidder. The persons so receiving the right to receive them were called *τελῶναι* (see TELONAE), whose chief officer was called *ἀρχώνης* (Andoc. 17). The collectors of the duty were called *πεντηκοστολόγοι*. Two other taxes of a like nature were paid by merchants—the *ἑλλιμένιον*, probably a harbour-due, and the *ἑκατοστή*, a tax of one per cent., as to which no details are known. Smuggling was practised to some extent (Demosth. l. c. § 28). Nothing is said by the ancient writers of customs duties imposed on articles brought by land. See Boeckh, *Staatshaushaltung*, i. pp. 384–387, 390; ii. p. 77 (3d edition).

Pentecostys (*πεντηκοστύς*). In the Spartan army a division of the *λόχος*. See LOCHUS.

Pentelĭcus (*τὸ Πεντελικὸν ὄρος*). A mountain in Attica, celebrated for its marble; a branch of Mount Parnes, from which it runs in a southeasterly direction between Athens and Marathon to the coast. It was also called BRILESSUS (*Βριλησσός*, Thuc. ii. 23). See ATHENAE.

Pentēres (*πεντήρης*). A quinquereme, i. e. the form of Greek ship in which there were five rows of oarsmen one above the other. See NAVIS.

Penthesilēa (*Πενθεσίλεια*). A celebrated queen of the Amazons, daughter of Ares, who came to the aid of Priam in the last year of the Trojan War, and was slain by Achilles after having displayed great acts of valour. Achilles, after he had slain Penthesilea, admiring the prowess which she had exhibited, and struck by the beauty of the corpse, wished the Greeks to erect a tomb to her. Thersites (q. v.) thereupon both ridiculed the grief which the hero testified at her fall and indulged in other remarks so grossly offensive that Achilles slew him on the spot. Diomedes, the relative of Thersites, in revenge for his death, dragged the dead body of the Amazon out of the camp, and threw it into the Scamander. Other accounts say that Achilles buried it on the banks of the Xanthus (Tzetz. *ad* Lyc. 997).

Pentheus (*Πενθεύς*). The son of Echion by Agavé, daughter of Cadmus. He was the successor of Cadmus as king of Thebes, and on the introduction of the Bacchic worship resisted it. It is said that Pentheus concealed himself in a tree in order to witness secretly the orgies of the Bacchanals, and on being discovered by them was taken for a wild beast, and torn in pieces by his own mother and his two sisters, Ino and Autonoë, in their Bacchic frenzy. The scene of this occurrence was said to be Mount Cithaeron or Mount Parnassus. The story forms the subject of the *Bacchae* of Euripides. (See EURIPIDES.) The Corinthians had a tradition that the tree in which Pentheus hid was afterwards carved into images of the god Dionysus and worshipped (Pausan. ii. 6, 6). Hence some have tried to connect the story of Pentheus with the primitive tree-worship.

Pentri. One of the most important of the tribes in Samnium. Their chief town was Bovianum. They were the only Samnites who remained loyal to the Romans in the Second Punic War (Livy, ix. 31; xxii. 61).

Peos Artemĭdos (*Πέος Αρτεμίδος*). Now Beni Hassan. A city of Middle Egypt on the east bank of the Nile, nearly opposite Hermopolis. It is the site of some remarkable catacombs, hewn out of the solid rock, and having walls covered with paintings and sculptures.

Peparēthus (*Πεπάρηθος*). A small island in the Aegaean Sea, off the coast of Thessaly, and east of Halonesus. It produced a considerable quantity of wine.

Pephrēdo (*Πεφρηδώ*). One of the Graiae (q. v.).

Peplus (*πέπλος*). (1) A Greek woman's garment, large, broad, hanging in folds, and usually richly embroidered. It was thrown over the rest of the clothing, and wrapped round the whole of the body. (2) In particular, the State robe of Athené, which was a work of art, embroidered with groups from the battle of the Giants, representations of the exploits of heroes under Athené's guidance, scenes of Attic history, and portraits of celebrated men. It was woven by the wives and maidens of Attica for the statue of Athené as goddess of the State, and presented at the Panathenaic festival. See PANATHENAEA.

Pera (*πήρα*). A wallet or bag slung over the shoulder and hanging under the arm at the side. It was carried by beggars and peasants. See BULGA.

Peraea (*Περαία*, i. e. "the country on the opposite side"). A general name for any district belonging to or closely connected with a country, from the main part of which it was separated by a sea or river. (1) The part of Palestine east of the Jordan. (2) PERAEA RHODIORUM, a district in the south of Caria, opposite to the island of Rhodes, and subject to the Rhodians, extending from Mount Phoenix on the west to the frontier of Lycia on the east. (3) PERAEA TENEDĬORUM, a strip of the western coast of Mysia, near Adramyttium, one of the colonies of the Mitylenaeans.

Percentage. See FENUS.

Percōté (*Περκώτη*). A very ancient city of Mysia, between Abydos and Lampsacus, near the Hellespont.

Perdiccas (*Περδίκκας*). (1) The founder of the Macedonian monarchy according to Herodotus (viii. 137). He and his two brothers Gauanes and Aëropus were Argives who settled near Mount Bermius, whence they gradually conquered a part of the territory that was later known as Macedonia. Other writers, however, make Caranus the founder of the kingdom and Perdiccas only the fourth among the early kings. (See CARANUS.) Perdiccas was succeeded by his son Argaeus. See MACEDONIA. (2) The son and successor of Alexander I. of Macedonia, reigning from B.C. 454 to 413. Shortly before the Peloponnesian War, Per-

diccas was at war with the Athenians, who sent a force to support his brother Philip, and Derdas, a Macedonian chieftain, against the king, while the latter espoused the cause of Potidaea, which had shaken off the Athenian yoke, B.C. 432 (Diod. Sic. xii. 34). In the following year peace was concluded between Perdiccas and the Athenians, but it did not last long, and he was during the greater part of his reign on hostile terms with the Athenians. In B.C. 429 his dominions were invaded by Sitalces, king of the powerful Thracian tribe of the Odrysians, but the enemy was compelled, by want of provisions, to return home (Diod. Sic. xii. 50). It was in great part at his instigation that Brasidas in B.C. 424 set out on his celebrated expedition to Macedonia and Thrace. In the following year (B.C. 423), however, a misunderstanding arose between him and Brasidas; in consequence of which he abandoned the Spartan alliance, and concluded peace with Athens (Thuc. iv. 82). Subsequently we find him at one time in alliance with the Spartans and at another time with the Athenians; and it is evident that he joined one or other of the belligerent parties according to the dictates of his own interest at the moment. (3) PERDICCAS III., king of Macedonia, B.C. 364–359, was the second son of Amyntas II., by his wife Eurydicé. On the assassination of his brother Alexander II., by Ptolemy of Alorus, B.C. 367, the crown of Macedonia devolved upon him by hereditary right, but Ptolemy virtually enjoyed the sovereign power as guardian of Perdiccas till B.C. 364, when the latter caused Ptolemy to be put to death, and took the government into his own hands (Just. vii. 4). Of the reign of Perdiccas we have very little information. We learn only that he was at one time engaged in hostilities with Athens on account of Amphipolis, and that he was distinguished for his patronage of men of letters. He fell in battle against the Illyrians in B.C. 359. (4) Son of Orontes, a Macedonian of the province of Orestis, was one of the most distinguished of the generals of Alexander the Great. He accompanied Alexander throughout his campaign in Asia; and the king, on his death-bed, is said to have taken the royal signet ring from his finger and given it to Perdiccas (Q. Curt. x. 5, 4). After the death of the king (B.C. 323), Perdiccas had the chief authority intrusted to him under the command of the new king Arrhidaeus, who was a mere puppet in his hands, and he still further strengthened his power by the assassination of his rival Meleager. (See MELEAGER.) The other generals of Alexander regarded him with fear and suspicion; and at length his ambitious schemes induced Antipater, Craterus, and Ptolemy to unite in a league and declare open war against Perdiccas. Thus assailed on all sides, Perdiccas determined to leave Eumenes in Asia Minor, to make head against their common enemies in that quarter, while he himself marched into Egypt against Ptolemy. He advanced without opposition as far as Pelusium, but found the banks of the Nile strongly fortified and guarded by Ptolemy, and was repulsed in repeated attempts to force the passage of the river; in the last of which, near Memphis, he lost great numbers of men. Thereupon his troops, who had long been discontented with Perdiccas, rose in mutiny and put him to death in his own tent (Diod. xviii. 14–36).

Perdix (Πέρδιξ). The sister of Daedalus, and mother of Talos, or, according to others, the sister's son of Daedalus, figures in the mythological period of Greek art as the inventor of various implements, chiefly for working in wood. Perdix is sometimes confounded with Talos or Calos, and it is best to regard the various legends respecting Perdix, Talos, and Calos as referring to one and the same person—namely, according to the mythographers, a nephew of Daedalus. The inventions ascribed to him are the saw, the idea of which is said to have been suggested to him by the back-bone of a fish, or the teeth of a serpent; the chisel; the compasses; the potter's wheel. His skill excited the jealousy of Daedalus, who threw him headlong from the temple of Athené on the Acropolis, but the goddess caught him in his fall, and changed him into the bird which was named after him, πέρδιξ, the partridge. See TALOS.

Perduellio. The Roman term for all acts whereby an individual within the State showed himself an enemy (*perduellis*) of the established constitution. It included attempts at despotic power, usurpation or abuse of magisterial powers (*e. g.* the execution of a citizen), violation of the sanctity of the *tribuni plebis*, etc. In the time of the kings, the king himself tried crimes of the kind, or handed over the decision to two deputies appointed in each instance by himself, *duoviri capitales* or *perduellionis*, from whom an appeal lay to the people; after Servius Tullius, to the Comitia Centuriata. Under the Republic, duoviri were still appointed as presiding judges, till this gradually fell into disuse, and trials of the kind came in general to be dealt with by the popular court. In earlier times the penalty was death by hanging on a tree, by throwing from the Tarpeian Rock, or by beheading; later, banishment, and after the tribunes brought cases of perduellio before the Comitia Tributa, fines as well. From the latter half of the second century B.C. the less important cases began to be treated as offences of *maiestas;* and by Caesar's Julian law, B.C. 46, all cases of *perduellio* were included under this name. See MAIESTAS, p. 999.

Peregrīnus. The description in Roman law of any foreigner or person other than a citizen sojourning or domiciled within Roman territory. Originally peregrini were entirely without rights, unless they obtained a *patronus*, except in cases where there was a treaty (*foedus*) with the State to which they belonged, regulating the legal position of the subjects of the two States respectively. But the increasing intercourse between Rome and other States, and the consequent growth in the number of peregrini in Rome, made it necessary to grant to all foreigners a definite competency to acquire property, enter into obligations, and the like; and for the decision of civil suits between foreigners and citizens, or of foreigners among themselves, a special praetor (q. v.) was appointed. From the public, private, and sacrificial law of Rome they were always excluded. See Morey, *Outlines of Roman Law* (N. Y. 1891), and the article CIVITAS.

Peregrīnus Proteus. A Cynic philosopher of Parium who flourished during the reign of the Antonines in the second century A.D. As a young man he was a notorious profligate, but afterwards turned Christian during a visit to Palestine. Later

he became a Cynic and travelled about from place to place seeking notoriety. He finally decided to burn himself to death in public at the Olympic Games, and executed this purpose in A.D. 165. An account of his life was written by Lucian, who was present at his death-scene. See Gell. xi. 13.

Perenna, Anna. See Anna Perenna.

Perennis. A praefect of the Praetorian Guard at Rome who succeeded Paternus as sole commander in A.D. 183. As the emperor Commodus was wholly given up to debauchery, Perennis was practically supreme in the State; but having incurred the hatred of his troops, he was massacred by them in A.D. 186 or 187. Opinions differ as to the character of Perennis—Dio Cassius eulogizing him and other historians accusing him of complicity in the evil actions of the emperor (Dio Cass. lxxii. 9; *Vit. Commod.* 5, 6).

Perfumes. See Unguentum.

Perga (Πέργη). An ancient and important city of Pamphylia, a little inland, northeast of Attalia, between the rivers Catarrhactes and Cestrus, sixty stadia (six geographical miles) from the mouth of the former. It was a celebrated seat of the worship of Artemis. It was the first place in Asia Minor visited by the Apostle Paul on his first missionary journey (Acts, xiii. 13).

Pergăma and Pergamia. See Pergamum.

Pergamēna. Parchment. See Palaeography; Writing and Writing Materials.

Pergamene Sculptures. A group of sculptures discovered by the architect Humann in 1871, and excavated by Conze, R. Bohn, and others in 1878 and the following years, with the aid of the German government. They belonged to the acropolis at Pergamum (q. v.). They comprise a piece representing a battle of the Giants, mentioned in Ampelius (*Liber Memorialis*). The piece is colossal, occupying the upper part of a marble altar which is nearly forty feet in height. The sculptures are now in the Museum at Berlin. See Ars; Statuaria.

Pergamēnum. See Writing and Writing Materials.

Pergămum (Πέργαμον) or **Pergămus** (Πέργαμος). The former by far the most usual form in the classical writers, though the latter is more common in English, probably because of its use in our version of the Bible (Rev. ii. 12). The word is significant, connected with πύργος, "a tower." (1) The citadel of Troy, and used poetically for Troy itself; the poets also use the forms Pergăma (τὰ Πέργαμα) and Pergamia (ἡ Περγαμία, sc. πόλις). (2) A celebrated city of Asia Minor, the capital of the kingdom of Pergamum, and afterwards of the Roman province of Asia, was situated in the district of South Mysia called Teuthrania, on the north bank of the river Caïcus, about twenty miles from the sea. The kingdom of Pergamum was founded about B.C. 280 by Philetaerus, who had been intrusted by Lysimachus with the command of the city. The successive kings of Pergamus were: Philetaerus, B.C. 280–263; Eumĕnes I., 263–241; Attălus I., 241–197; Eumĕnes II., 197–159; Attălus II. Philadelphus, 159–138; Attălus III. Philomĕtor, 138–133. The kingdom reached its greatest extent after the defeat of Antiochus the Great by the Romans, in B.C. 190, when the Romans bestowed upon Eumenes II. the whole of Mysia, Lydia, both Phrygias, Lycaonia, Pisidia, and Pamphylia. It was under the same king that the celebrated library was founded at Pergamus, which for a long time rivalled that of Alexandria, and the formation of which occasioned the invention of parchment, *charta Pergamena*. This library became the centre of a school of great importance in the history of ancient learning; among its leaders were such distinguished men as Crates of Mallos, who introduced philological studies into Rome. (See Philologia.) The Pergamene Library was afterwards presented by Antony to Cleopatra and united with the Alexandrian. On the death of Attalus III., in B.C. 133, the kingdom, by a bequest in his will, passed to the Romans. The city was an early seat of Christianity, and is one of the Seven Churches of Asia to which the Apocalyptic epistles are addressed. Among the celebrated natives of the city were the rhetorician Apollodorus and the physician Galen. The place is now called Bergama; and here were excavated in 1875–86, by Humann, Bohn, Conze, and others for the German government, many remains of magnificent buildings, such as temples, porticoes, theatres, baths, etc.

Pergé (Πέργη). See Perga.

Pergŭla (from *pergo*, hence something projecting). A name given to (1) a veranda, roofed over, but open at the sides, used for a teacher's lecture-room, a painter's studio, or a shop (Juv. xi. 137; Pliny, *H. N.* xxxv. 84; Auson. *Epist.* iv. 6); (2) a covered balcony projecting from the upper part of a house (Suet. *Aug.* 94); and (3) the *cella* of a prostitute (Plaut. *Pseud.* i. 2, 78).

Periactos. See Theatrum.

Periander (Περίανδρος). (1) Son of Cypselus, whom he succeeded as tyrant of Corinth in B.C. 625, and reigned forty years, to B.C. 585. His rule was mild and beneficent at first, but afterwards became oppressive. According to the common story, this change was owing to the advice of Thrasybulus, tyrant of Miletus, whom Periander had consulted on the best mode of maintaining his power, and who is said to have taken the messenger through a cornfield, cutting off as he went the tallest ears, and then to have dismissed him without committing himself to a verbal answer. The action, however, was rightly interpreted by Periander, who proceeded to rid himself of the most powerful nobles in the State. He made his power respected abroad as well as at home; and besides his conquest of Epidaurus, mentioned below, he kept Corcyra in subjection. He was, like many of the other Greek tyrants, a patron of literature and philosophy, and Arion and Anacharsis were in favor at his court. He was very commonly reckoned among the Seven Sages, though by some he was excluded from their number, and Myson of Chenae in Laconia was substituted in his place.

The private life of Periander was marked by misfortune and cruelty. He married Melissa, daughter of Procles, tyrant of Epidaurus. She bore him two sons, Cypselus and Lycophron, and was passionately beloved by him; but he is said to have killed her by a blow during her pregnancy, having been roused to a fit of anger by a false accusation brought against her. His wife's death embittered the remainder of his days, partly through the remorse which he felt for the deed, partly through

the alienation of his younger son Lycophron, inexorably exasperated by his mother's fate. The young man's anger had been chiefly excited by Procles, and Periander, in revenge, attacked Epidaurus, and, having reduced it, took his father-in-law prisoner. Periander sent Lycophron to Corcyra; but when he was himself advanced in years, he summoned Lycophron back to Corinth to succeed to the tyranny, seeing that Cypselus, his elder son, was unfit to hold it, from deficiency of understanding. Lycophron refused to return to Corinth as long as his father was there; thereupon Periander offered to withdraw to Corcyra if Lycophron would come home and take the government. To this he assented; but the Corcyraeans, not wishing to have Periander among them, put Lycophron to death. Periander shortly afterwards died of despondency, at the age of eighty, and after a reign of forty years, according to Diogenes Laërtius. He was succeeded by a relative, Psammetichus, son of Gordias. See Herod. iii. 48–53; v. 92; Aristot. *Pol.* v. 12. (2) Tyrant of Ambracia, and contemporary with his more famous namesake of Corinth, to whom he was also related, being the son of Gorgus, who was son or brother to Cypselus. Periander was deposed by the people about B.C. 585 (Ael. *V. H.* xii. 35).

Periboea (Περίβοια). (1) The wife of Icarius and mother of Penelopé. (2) The wife of Telamon and mother of Teucer and Aiax. She is also called ERIBOEA. (3) The daughter of Hipponoüs and wife of Oeneus, by whom she became the mother of Tydeus.

Peribŏlus (περίβολος). The court of a Greek temple. See TEMPLUM.

Peribolus in the Temple of Apollo at Pompeii. (Overbeck.)

Perĭcles (Περικλῆς). (1) The greatest of Athenian statesmen. He was the son of Xanthippus and Agaristé, both of whom belonged to the noblest families of Athens. The fortune of his parents procured for him a careful education, which his extraordinary abilities and diligence turned to the best account. He received instruction from Damon, Zeno of Elea, and Anaxagoras. With Anaxagoras he lived on terms of the most intimate friendship till the philosopher was compelled to retire from Athens. From this great and original thinker Pericles was believed to have derived not only the cast of his mind, but the character of his eloquence, which, in the elevation of its sentiments and the purity and loftiness of its style, was the fitting expression of the force and dignity of his character and the grandeur of his conceptions. Of the oratory of Pericles no specimens remain to us, but it is described by ancient writers as characterized by singular force and energy. He was described as thundering and lightening when he spoke, and as carrying the weapons of Zeus upon his tongue (Quint. x. 1, 82).

In B.C. 469 Pericles began to take part in public affairs, forty years before his death, and was soon regarded as the head of the more democratic part in the State in opposition to Cimon. He gained the favour of the people by the laws which he succeeded in passing for their benefit. Thus it was enacted through his means that the citizens should receive from the public treasury the price of their admittance to the theatre, amounting to two oboli apiece; that those who served in the courts of the Heliaea should be paid for their attendance; and that those citizens who served as soldiers should likewise be paid. It was at his instigation that his friend Ephialtes proposed, in 461, the measure by which the Areopagus was deprived of those functions which rendered it formidable as an antagonist to the popular party. This success was followed by the ostracism of Cimon, who was charged with Laconism, and Pericles was thus placed at the head of public affairs at Athens. Pericles was distinguished as a general as well as a statesman, and frequently commanded the Athenian armies in their wars with the neighbouring States. In 454 he commanded the Athenians in their campaigns against the Sicyonians and Acarnanians; in 448 he led the army which assisted the Phocians in the Sacred War; and in 445 he rendered the most signal service to the State by recovering the island of Euboea, which had revolted from Athens. Cimon had been previously recalled from exile without any opposition from Pericles, but had died in 449. On his death the aristocratic party was headed by Thucydides, the son of Melesias; but on the ostracism of the latter in 444 the organized opposition of the aristocratic party was broken up, and Pericles was left without a rival. Throughout the remainder of his political course

no one appeared to contest his supremacy; but the boundless influence which he possessed was never perverted by him to sinister or unworthy purposes. So far from being a mere selfish demagogue, he neither indulged nor courted the multitude. The next important event in which Pericles was engaged was the war against Samos, which had revolted from Athens, and which he subdued after an arduous campaign, 440. The poet Sophocles was one of the generals who fought with Pericles against Samos (Thuc. i. 115–117).

Pericles. (Vatican.)

For the next ten years, till the outbreak of the Peloponnesian War, the Athenians were not engaged in any considerable military operations. During this period Pericles devoted especial attention to the Athenian navy, as her supremacy rested on her maritime superiority, and he adopted various judicious means for consolidating and strengthening her empire over the islands of the Aegaean. The funds derived from the tribute of the allies and from other sources were, to a large extent, devoted by him to the erection of those magnificent temples and public buildings which rendered Athens the wonder and admiration of Greece. Under his administration the Propylaea and the Parthenon and the Odeum were erected as well as numerous other temples and public buildings. With the stimulus afforded by these works architecture and sculpture reached their highest perfection, and some of the greatest artists of antiquity were employed in erecting or adorning the buildings. The chief direction and oversight of the public edifices was intrusted to Phidias. (See PHIDIAS.) These works, calling into activity almost every branch of industry and commerce at Athens, diffused universal prosperity while they proceeded, and thus contributed in this, as well as in other ways, to maintain the popularity and influence of Pericles. But he still had many enemies, who were not slow to impute to him base and unworthy motives. From the comic poets Pericles had to sustain numerous attacks. They exaggerated his power, spoke of his party as Pisistratids, and called upon him to swear that he was not about to assume the tyranny. His high character and strict probity, however, rendered all these attacks harmless. But as his enemies were unable to ruin his reputation by these means, they attacked him through his friends. His friends Phidias and Anaxagoras, and his mistress Aspasia (q. v.), were all accused before the people. Phidias was condemned and cast into prison; Anaxagoras was also sentenced to pay a fine and leave Athens (see ANAXAGORAS); and Aspasia was only acquitted through the entreaties and tears of Pericles (Plut. *Per.* 24).

The Peloponnesian War has been falsely ascribed to the ambitious schemes of Pericles. It is true that he counselled the Athenians not to yield to the demands of the Lacedaemonians, and he pointed out the immense advantages which the Athenians possessed in carrying on the war; but he did this because he saw that war was inevitable; and that as long as Athens retained the great power which she then possessed, Sparta would never rest contented. On the outbreak of the war in 431 a Peloponnesian army under Archidamus invaded Attica; and upon his advice the Athenians conveyed their movable property into the city and their cattle and beasts of burden to Euboea, and allowed the Peloponnesians to desolate Attica without opposition. Next year (430), when the Peloponnesians again invaded Attica, Pericles pursued the same policy as before. In this summer a plague made its appearance in Athens. The Athenians, being exposed to the devastation of the war and the plague at the same time, began to turn their thoughts to peace, and looked upon Pericles as the author of all their distresses, inasmuch as he had persuaded them to go to war. Pericles attempted to calm the public ferment; but such was the irritation against him that he was sentenced to pay a fine (Thuc. ii. 64). The ill-feeling of the people having found this vent, Pericles soon resumed his accustomed sway, and was again elected one of the generals for the ensuing year (429). Meantime Pericles had suffered in common with his fellow-citizens. The plague carried off most of his near connections. His son Xanthippus, a profligate and undutiful youth, his sister, and most of his intimate friends died of it. Still he maintained unmoved his calm bearing and philosophic composure. At last his only surviving legitimate son, Paralus, a youth of greater promise than his brother, fell a victim. The firmness of Pericles then at last gave way; as he placed the funeral garland on the head of the lifeless youth, he burst into tears and sobbed aloud. He had one son remaining, his child by Aspasia; and he was allowed to enroll this son in his own tribe and give him his own name. In the autumn of 429 Pericles himself died of a lingering sickness. He survived the commencement of the war two years and six months. The name of the wife of Pericles is not mentioned. She had been the wife of Hipponicus, by whom she was the mother of Callias. She bore two sons to Pericles, Xanthippus and Paralus. She lived unhappily with Pericles, and a divorce took place by mutual consent, when Pericles connected himself with Aspasia. Of his strict probity he left the decisive proof in the fact that at his death he was found not to have added a single drachma to his hereditary property. His greatest fault as a statesman was his inability to see that personal government in the long run is injurious to a nation; for it impairs the capacity of the people for self-government, and on the death of the chief leaves them helpless and inexperienced. On his death-bed his friends were commenting on his victories and triumphs, when he interrupted them with the remark, "That which you have left unnoticed is that of which I am the proudest; no Athenian ever wore mourning through any act of mine." His life is sketched for us by Thucydides and Plutarch. See also the sketch by E. Abbott (London, 1891); and for a comprehensive account of his times, Lloyd, *The Age of Perikles* (London, 1875); Filleul, *Histoire du Siècle de Périclès* (Paris, 1873); also Frey, *Leben des Perikles* (Bern, 1889). (2) Son of the preceding, by Aspasia, was one of the generals at the battle of Arginusae, and was put to death by the Athenians with the other generals, B.C. 406.

Periclymĕnus (Περικλύμενος). (1) Son of Neleus and Chloris, brother of Nestor. He is the chief hero of the defence of Pylos against Heracles, to whom he gave much trouble by his prowess as well as by his power of transforming himself, like the sea-gods, into every possible shape. This power had been given him by Poseidon, who was reputed to be his father. Finally he succumbed to the arrows of Heracles, and by his death sealed the doom of Pylos. (2) A Theban, son of Poseidon and Chloris, daughter of the seer Tiresias. In the war of the Seven against Thebes he slew Parthenopaeus, and was in pursuit of Amphiaraüs at the moment when the latter sank into the earth. See SEVEN AGAINST THEBES.

Periegētae (περιηγηταί, "those who guide strangers about," and show them what is worth notice). A term applied by the Greeks to the authors of travellers' guide-books enumerating and describing what was worthy of note, especially buildings or monuments, in the several cities or countries. This kind of literature was especially in vogue from the third century B.C. onwards. Its chief representatives are Polemon of Troas (about 200), whose numerous works are now unfortunately preserved in fragments only; and after him the Athenian Heliodorus, author of a great work on the Acropolis, likewise lost. Larger fragments survive of a hand-book to Greece by a certain Heraclides, and of the interesting work on Alexandria by Callixenus of Rhodes. The only complete work of this kind remaining is the valuable description of Greece by Pausanias (q. v.) in the second century A.D.

Periēres (Περιήρης). A king of Messené, son of Aeolus and Enareté, and father of Aphareus and Leucoppus by Gorgophoné. Some accounts make him also the father of Tyndareos and Icarius (Pausan. iv. 2, 2).

Perilāus (Περίλαος). The son of Icarius and brother of Penelopé (Pausan. viii. 34, 2).

Perillus (Πέριλλος). An artist who is said to have made the great bronze bull for the tyrant Phalaris (see PHALARIS), and to have been himself the victim of his own invention (Ovid, *A. A.* i. 653).

Perimeridia (περιμηρίδια) and **Parameridia** (παραμηρίδια). Armour for covering the thighs. They were made of metal and resembled the *ocreae* or greaves. See OCREAE.

Perinthus (Πέρινθος). An important town of Thrace on the Propontis, founded by the Samians about B.C. 559, and situated twenty-two miles west of Selymbria on a small peninsula. At a later time it was called Heraclea, and sometimes Heraclea Thraciae or Heraclea Perinthus.

Periŏcha (περίοχη). Literally, "the contents," from περιέχω. A name given to any short summary or digest of the contents of a book, or of the plot of a play. An example of the first is found in the *Periochae T. Livii Omnium Librorum*, which is a short summary of Livy's history, including the books now lost, in their original form (except bks. cxxxvi. and cxxxvii., which have been accidentally lost). This was made in the fourth century A.D. from an earlier and fuller digest now lost. Of these there is an edition by Jahn (Leipzig, 1853). See also Wölfflin's paper in the *Commentationes in Honorem Th. Mommsenii* (Berlin, 1886). Of the dramatic periochae, a familiar example is the short metrical summary of the plot prefixed to the several plays of Terence, and written by Sidonius Apollinaris in the fifth century A.D.

Perioeci (περίοικοι, "those dwelling about," from περιοικέω). A name used by Greek writers of a subject population dwelling in the vicinity of some particular dominant city, or in the rural provinces under its control, personally free but devoid of political rights. The name is more properly applied to a class found in Laconia who were probably in their origin partly representatives of the original Achaian stock conquered by the Dorian invaders and partly a mixed race resulting from the marriage of the Dorians with the Achaians. (See E. Curtius, *History of Greece*, Eng. trans. ii. ch. i.) They possessed lands, and are stated to have been settled in a hundred towns (Strabo, viii. p. 557), among which were Gythium on the coast, Thyrca, and Amyelae. Clinton (*Fasti Hellenici*, App. ch. xxii.) estimates roughly their number at the time of the Persian Wars as between 60,000 and 70,000 souls.

The perioeci were engaged partly in farming, partly in manufacturing and in trade. They paid taxes to the State, and were bound to perform military service either as hoplites or as light-armed troops. The perioecic inhabitants of Sciritis formed a special body of light infantry. After the Peloponnesian War the perioeci constituted the bulk of the Spartan army, and they were eligible to the inferior commands. Having no civil rights, they were completely subject to the Spartans proper, and in case of insubordination they could be put to death by the ephors without trial. On rare occasions a perioecus is found in a high office, as in the case mentioned by Thucydides (viii. 22), where one of them was admiral of an allied Chian fleet; but they seem never to have been put over Spartans. The name περίοικοι is also used of other subject populations as a convenient term (cf. Herod. iv. 159), but these were not perioeci in the Laconian sense of the word.

See Arnold's *Thucydides*, i. App. ii.; Müller, *Dorier*, bk. iii.; Grote, *History of Greece*, pt. ii. ch. vi.; and Gilbert, *Constitutional Antiquities of Greece*, Eng. trans. (1895).

Peripatetĭci (περιπατητικοί, literally, "persons given to walking about"). The followers of Aristotle's philosophy. They derived their name from Aristotle's habit of walking with his disciples in the shady avenues of the Athenian Gymnasium, called the Lyceum, while he discussed the problems of philosophy. See also ARISTOTELES; PHILOSOPHIA.

Perĭphas (Περίφας). One of the autochthones of Attica, who was a priest of Apollo and also king of the country before the time of Cecrops. Zeus is said to have wished to destroy him, being jealous of his eminence; but at Apollo's request changed him into an eagle (Ovid, *Met.* vii. 400).

Periphētes (Περιφήτης). A son of Hephaestus; a monster at Epidaurus, who slew the passers-by with an iron club (whence he was called κορυνήτης, or "club-bearer") till he was himself slain by the young Theseus (q. v.).

Peripŏli (περίπολοι). Troops on patrol duty; a name given to the Athenian ἔφηβοι during two years of their ἐφηβεία (Plato, *De Leg.* vi. 760 C), so that this part of their service is called περιπολία.

See Philippi in the *Rheinisches Museum* (new series), xxxiv. 613; and the article EPHEBI.

Periptĕros (*περίπτερος*). An epithet describing a temple completely surrounded by a colonnade supporting the entablature. See TEMPLUM.

Periscĕlis (*περισκελίς*). An anklet worn by women among the Greeks and Romans. The plebeian women at Rome wore anklets of silver and the patricians anklets of gold (Pliny, *H. N.* xxxiii. 39). The purely Latin word is *compes* (Pliny, l. c.), and Tertullian uses the form *periscelium* (*De Cult. Fem.* ii. 13). See ARMILLA.

Peristȳlum (*περίστυλος*). A court surrounded by columns. See DOMUS; TEMPLUM.

Permessus (*Περμησσός*). A river in Boeotia, descending from Mount Helicon, and falling into Lake Copaïs near Haliartus.

Pero (*Πηρώ*). The daughter of Neleus and Chloris, famous for her beauty. She was married to Bias (Pausan. x. 31, 9).

Pero (*ἀρβύλη*). The shoe of the ordinary Roman citizen. See CALCEUS.

Perpendicŭlum (*κάθετος, μολυβδίς, στάθμη*). A plumb-line, or string with a piece of lead attached, used by carpenters, masons, and other artisans to test the correctness of their perpendicular lines (Vitruv. vii. 3, 5). The line used in measuring horizontally was called *linea* (*κανών*).

Perperēna (*Περπερήνα*). A small town of Mysia, south of Adramyttium.

Perperna or **Perpenna**. (1) MARCUS, a Roman consul in B.C. 130, who defeated Aristonicus in Asia, and took him prisoner. He died at Pergamum in the following year (Livy, *Epist.* 59; Vell. Paterc. ii. 4). (2) MARCUS, son of the preceding, consul in B.C. 92 and censor in 86. He lived to the age of ninety-eight years (Pliny, *H. N.* vii. 156). (3) M. PERPERNA VENTO, son of the preceding. He was a follower of Marius in the Civil War, and fled to Sicily when Sulla conquered Italy in B.C. 82. On the death of Sulla, in 78, Perperna joined the consul M. Lepidus in his attempt to overthrow the new aristocratical constitution, and retired with him to Sardinia on the failure of this attempt. Lepidus died in Sardinia in the following year (77), and Perperna with the remains of his army crossed over to Spain and joined Sertorius (q. v.). Perperna was jealous of the ascendency of Sertorius, and after serving under him some years he and his friends assassinated Sertorius at a banquet in B.C. 72. His death soon brought the war to a close. Perperna was defeated by Pompey, was taken prisoner, and was put to death (App. *B. C.* i. 107–115; Plut. *Pomp.* 10, 20).

Perpetua Actio. See ACTIO in the Appendix.

Perrhaebi (*Περραιβοί*) and **Peraebi** (*Περαιβοί*). A powerful and warlike Pelasgic people in the north of Thessaly. Homer places the Perrhaebi in the neighbourhood of the Thessalian Dodona and the river Titarosius; and at a later time the name of Perrheabia was applied to the district bounded by Macedonia and the Cambunian Mountains on the north, by Pindus on the west, by the Peneus on the south and southeast, and by the Peneus and Ossa on the east. The Perrhaebi were members of the Amphictyonic League.

Perrhĭdae (*Περρίδαι*). A deme of Attica belonging to the tribe Antiochis.

Persae (*Πέρσαι*). A play of Aeschylus first produced in B.C. 472, in a tetralogy of which the other three plays were the *Phineus, Glaucus Pontius*, and Prometheus *Πυρκαεύς*. The plot deals with the time of the Second Persian War, and the scene is laid at Susa. Separate edition by Prickard (1885).

Persé (*Πέρση*). The daughter of Oceanus and wife of Helios, by whom she became the mother of Aeëtes and Circé (*Odyss.* ix. 139; Hes. *Theog.* 356, 956). Others speak of her as also the mother of Perses and Pasiphaë.

Persēïs. See HECATÉ.

Persephŏné (*Περσεφόνη*), called **Proserpĭna** by the Romans; the daughter of Zeus and Demeter. In Homer she is called PERSEPHONĪA (*Περσεφόνεια*); the form Persephoné first occurs in Hesiod. But besides these forms of the name, we also find PERSEPHASSA, PHERSEPHASSA, PERSEPHATTA, PHERSEPHATTA, PHERREPHASSA, PHEREPHATTA, and PHERSEPHONĪA, for which various etymologies have been proposed. The Latin Proserpina is only a corruption of the Greek, though the Romans derive it from *proserpo*. In Attica she was worshipped under the name of CORA (*Κόρη*, Ion. *Κούρη*) —that is, "the Daughter," namely, of Demeter; and the two were frequently called "the Mother

Hades and Persephoné. (Etruscan painting, Dennis.)

and the Daughter" (ἡ Μητὴρ καὶ ἡ Κόρη). Being the infernal goddess of death, she is also called a daughter of Zeus and Styx. In Arcadia she was worshipped under the name of Despoena, and was called a daughter of Poseidon Hippius and Demeter, said to have been brought up by the Titan Anytus. Homer describes her as the wife of Hades, and the formidable, venerable, and majestic queen of the Shades, who rules over the souls of the dead, along with her husband. Hence she is called by later Roman writers Iuno Inferna, Averna, and Stygia; and the Erinyes are said to have been her daughters by Pluto. Groves sacred to her are placed by Homer in the western extremity of the earth, on the borders of the lower world, which is itself called the house of Persephoné. The story of her being carried off by Hades or Pluto against her will is not mentioned by Homer, who simply describes her as the wife and queen of Hades. Her abduction is first mentioned by Hesiod. The account of it, which is the most celebrated part of her story, and the wanderings of her mother in search of her, and the worship of the two goddesses in Attica at the festival of the Eleusinia, are related under DEMETER and ELEUSINIA. In the mystical theories of the Orphics, Persephoné is described as the all-pervading goddess of nature, who both produces and destroys everything; and she is therefore mentioned along, or identified with, other mystic divinities, such as Isis, Rhea, Gê, Hestia, Pandora, Artemis, and Hecaté. This mystic Persephoné is further said to have become by Zeus the mother of Dionysus, Iacchus, Zagreus, or Sabazius.

Persephoné frequently appears in works of art. She is represented either with the grave and severe character of an infernal Heré or as a mystical divinity with a sceptre and a little box, in the act of being carried off by Pluto. Her symbols are a torch or torches, a cornucopia, ears of corn, pomegranates, or a cock as heralding the dawn (i. e. a new life).

Persepŏlis (Περσέπολις, Περσαίπολις; in the Middle Ages, Istakhar; now Takhti-Jemshid, i. e. "Throne of Jemshid," or Chil-Minar, i. e. "Forty Pillars"). The Greek name, probably translated from the Persian name which is not recorded, of the great city which succeeded Pasargada as the capital of Persis and of the Persian Empire. From the circumstance, however, of the conquest of the Babylonian Empire taking place about the time when Persepolis attained this dignity, it appears to have been seldom used as the royal residence. Neither Herodotus, Xenophon, Ctesias, nor the sacred writers during the Persian period, mention it at all; though they often speak of Babylon, Susa, and Ecbatana as the capitals of the Empire. It is only from the Greek writers after the Macedonian conquest that we learn its rank in the Empire, which appears to have consisted chiefly in its being one of the two burial places of the Persian kings (the other being Pasargada), and also a royal treasury; for Alexander found in the palace immense riches, which were said to have accumulated from the time of Cyrus. Its foundation is sometimes ascribed to Cyrus the Great, but more generally to his son Cambyses. It was greatly enlarged and adorned by Darius I. and Xerxes, and preserved its splendour till after the Macedonian conquest, when it was burned; Alexander, as the story goes,

Ruins of Persepolis.

setting fire to the palace with his own hand at the end of a revel by the instigation of the courtesan Thaïs in B.C. 331. It was not, however, so entirely destroyed as some historians represent. It appears frequently in subsequent history, both ancient and mediæval. It is now deserted, but its ruins are considerable, though too dilapidated to give any good notion of Persian architecture, and they are rich in cuneiform inscriptions. In the days of its splendour a great plaza or species of platform was crowned with palaces, halls, and altars. Here were stored the treasures which Alexander rifled; and here was kept the copy of the Avesta (see ZOROASTER), written on 12,000 oxhides in letters of gold.

Among the ruins still existing three groups are distinguished by archaeologists: first, the Forty Pillars proper, with the so-called "Mountain of Tombs" or "Throne of Jamshid," after a fabulous king who is said to have founded the city; second, the Naksh-in-Rustam, a collection of tombs; and third, a building now called "the Haram of Jamshid." The first group is the most important, being the terrace already mentioned, built of cyclopean masonry, and extending 1500 feet in one

direction and 800 in another. It was once surrounded by triple walls of a height varying from about 48 to 100 feet. There are still to be distinguished on the central platform the so-called "Great Hall of Xerxes," the Palace of Xerxes, and the Palace of Darius. The stone used for these structures is dark grayish marble cut into enormous square blocks, and highly polished. The ascent to this platform is by two double flights of steps nearly 22 feet in width and only $3\frac{1}{2}$ inches high, so that they have been ascended in modern times on horseback. The portals still exhibit huge figures of animals, 15 feet high, and not unlike the Assyrian bulls of Nineveh. The cuneiform inscriptions are ascribed to Xerxes.

Persepolis was situated in the heart of Persis, in the part called Hollow Persis (*κοίλη Περσίς*), not far from the border of the Carmanian Desert, in a beautiful and healthy valley, through which runs the river Araxes. After Alexander's time the place was of secondary importance. It was plundered by Antiochus in B.C. 164, and later was the residence of a Persian viceroy. See Fergusson, *The Palaces of Nineveh and Persepolis Restored;* Vaux, *Nineveh and Persepolis;* Mme. Dieulafoy, *La Perse et la Susiane;* and especially Stölze and Nöldeke, *Persepolis*, with fine photographic views (Berlin, 1882).

Perseus and Andromeda. (Marble relief in the Naples Museum.)

Perses (*Πέρσης*). (1) The son of the Titan Crius. He became by Asteria the father of Hecaté (Hes. *Th.* 409). (2) The son of Perseus and Andromeda, and regarded by the Greeks as the founder of the Persian people (Herod. vii. 61). (3) The son of Helios and Persé, and brother of Aeëtes and Circé (Apollod. ii. 4, 5).

Perseus (*Περσεύς*). Son of Zeus and Danaë, the daughter of Acrisius. A sketch of his fabulous history has already been given under a previous article (see DANAË); and it remains here but to relate the particulars of his enterprise against the Gorgons. When Perseus had made his rash promise to Polydectes, by which he bound himself to bring the latter the Gorgon's head, he retired full of grief to the extremity of the island of Seyros, where Hermes came to him, promising that he and Athené would be his guides. Hermes brought him first to the Graiae (see PHORCYDES), whose eye and tooth he stole and would not restore until they had furnished him with directions to the abode of the nymphs who were possessed of the winged shoes, the magic wallet, and the helmet of Pluto which made the wearer invisible. Having obtained from the Graiae the requisite information, he came to the nymphs, who gave him their precious possessions: he then flung the wallet over his shoulder, placed the helmet on his head, and fitted the shoes to his feet. Thus equipped, and grasping the short curved sword (*ἅρπη*) which Hermes gave him, he mounted into the air, accompanied by the gods, and flew to the ocean, where he found the three Gorgons asleep. (See GORGONES.) Fearing to gaze on their faces, which changed the beholder to stone, he looked on the head of Medusa as it was reflected on his shield, and, Athené guiding his hand, he severed it from her body. The blood gushed forth, and with it the winged steed Pegasus and Chrysaor, the father of Geryon, for Medusa was at that time pregnant by Poseidon. Perseus took up the head, put it into his wallet, and set out on his return. The two sisters awoke, and pursued the fugitive; but, protected by the helmet of Pluto, he eluded their vision, and they were obliged to give over the bootless chase (Hes. *Scut.* 220–230; Pausan. v. 18, 1). Perseus pursued his aërial route, and after having, in the course of his journey, punished the inhospitality of Atlas (q. v.) by changing him into a rocky mountain (Ovid, *Met.* iv. 626 foll.), he came to the country of the Ethiopians. Here he liberated Andromeda (see ANDROMEDA), whom he married. He is also said to have come to the Hyperboreans, by whom he was hospitably received. On his return to Seriphos, he found his mother with Dictys in a temple, whither they had fled from the violence of Polydectes. Perseus then went to the palace of Polydectes, and metamorphosed him and all his guests, and, some say, the whole island, into stone (Pind. *Pyth.* xii. 10). He then presented the kingdom to Dictys. He gave the winged sandals and the helmet to Hermes, who restored them to the nymphs and to Pluto, and the head of Gorgon to Athené, who placed it in the middle of her shield or breast-plate. Perseus then went to Argos, accompanied by

Danaë and Andromeda. Acrisius, remembering the oracle, escaped to Larissa, in the country of the Pelasgians; but Perseus followed him, in order to persuade him to return. Some writers state that Perseus, on his return to Argos, found Proetus, who had expelled his brother Acrisius, in possession of the kingdom; and that Perseus slew Proetus, and was afterwards killed by Megapenthes, the son of Proetus. The more common tradition, however, relates that when Teutamidas, king of Larissa, celebrated games in honour of his guest Acrisius, Perseus, who took part in them, accidentally hit the foot of Acrisius with the discus, and thus killed him. Acrisius was buried outside the city of Larissa, and Perseus, leaving the kingdom of Argos to Megapenthes, the son of Proetus, received from him in exchange the government of Tiryns. According to others, Perseus remained in Argos, and successfully opposed the introduction of the Bacchic orgies. Perseus is said to have founded the towns of Midea and Mycenae. By Andromeda he became the father of Perses, Alcaeus, Sthenelus, Helenus, Mestor, Electryon, Gorgophoné, and Autochthé. Perseus was worshipped as a hero in several places in Greece and even in Egypt (Herod. ii. 91).

Perseus or **Perses** (Περσεύς). The last king of Macedonia, the eldest son of Philip V. He reigned eleven years, from B.C. 178 to 168. Before his accession he persuaded his father to put to death his younger brother Demetrius, whom he suspected that the Roman Senate intended to set up as a competitor for the throne on the death of Philip. Immediately after his accession he began to make preparations for war with the Romans, which he knew to be inevitable, though seven years elapsed before actual hostilities commenced. The war broke out in B.C. 171. The first year of the war was marked by no striking action. The consul P. Licinius Crassus first suffered a defeat in Thessaly in an engagement between the cavalry of the two armies, but subsequently gained a slight advantage over the king's troops. The second year of the war (B.C. 170), in which the consul A. Hostilius Mancinus commanded, also passed over without any important battle, but was, on the whole, favourable to Perseus. The third year (B.C. 169), in which the consul Q. Marcius Philippus commanded, again produced no important results. The length to which the war had been unexpectedly protracted, and the ill success of the Roman arms, had by this time excited a general feeling in favour of the Macedonian monarch; but the ill-timed avarice of Perseus, who refused to advance the sum of money which Eumenes, king of Pergamus, demanded, deprived him of this valuable ally; and the same unseasonable niggardliness likewise deprived him of the services of twenty thousand Gallic mercenaries, who had actually advanced into Macedonia to his support, but retired on failing to obtain their stipulated pay. He was left to carry on the contest against Rome single-handed.

The fourth year of the war (B.C. 168) was also the last. The new consul, L. Aemilius Paulus, defeated Perseus with great loss in a decisive battle fought near Pydna, on June 22, B.C. 168. Perseus took refuge in the island of Samothrace, where he shortly afterwards surrendered with his children to the praetor Cn. Octavius. When brought before Aemilius he is said to have degraded himself by the most abject supplications; but he was treated with kindness by the Roman general. The following year he was carried to Italy, where he was compelled to adorn the splendid triumph of his conqueror (November 30, B.C. 167), and afterwards cast into a dungeon, from whence, however, the intercession of Aemilius procured his release, and he was permitted to end his days in an honourable captivity at Alba. He survived his removal thither a few years, and died, according to some accounts, by voluntary starvation, while others, fortunately with less probability, represent him as falling a victim to the cruelty of his guards, who deprived him of sleep. Perseus had been twice married; the name of his first wife, whom he is said to have killed with his own hand in a fit of passion, is not recorded; his second, Laodicé, was the daughter of Seleucus IV. Philopator. He left two children —a son, Alexander, and a daughter, both apparently by his second marriage, as they were mere children when carried to Rome. Besides these, he had adopted his younger brother Philip, who appears to have been regarded by him as the heir to his throne, and who became the partner of his captivity. See Livy, bks. xl.–xliv.; and Polyb. bks. xxiv., xxvi., xxvii., xxix.

Coin of Perseus, King of Macedonia.

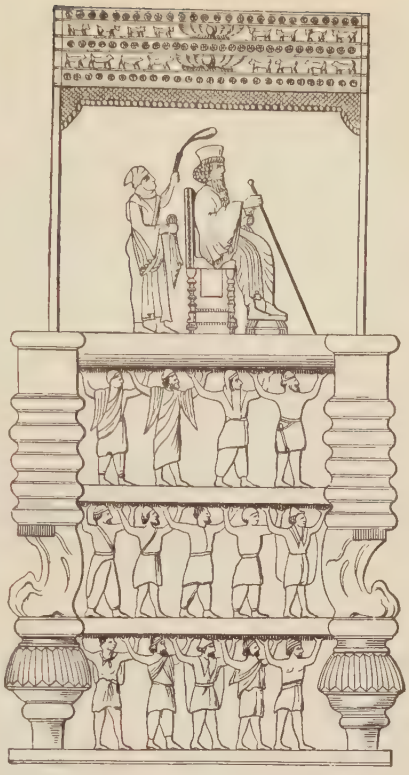
Persia (Περσική, sc. γῆ, Περσίς; Lat. PERSIS, more rarely PERSIA; old Pers. *Pārsa*). The original home of the ancient Persians, and later the chief province of the great Persian Empire, is the small territory in the southwestern corner of the Iranian tableland. In this limited and original sense, Persia corresponds exactly to the present Province of Fārs or Fārsistān with the capital Shīrāz. On the north it was bounded by Media, on the east by Karmania, on the southwest by the Persian Gulf, and on the northwest by the province of Susiana. The latter had from the time of Cyrus been closely united with Persia (Strabo, p. 727). Persis was separated from Media by the Parachoathras Mountains, the most southerly spur of the Taurus. Persia is a highland rising in terraces to a height of 5000 metres, intersected by many clefts, with approaches on most sides only by difficult rocky passes. In consequence of its isolated position, the oriental peoples, before the time of Alexander, had only a scanty knowledge of the land. The flat coast line was intolerably hot, sandy, and unfruitful; but in the interior the climate was everywhere favorable, temperate, and for the latitude almost raw, on account of the elevated position; the valleys and plains productive and well watered, with many clear rivers and lakes, where all kinds of waterfowl made their homes, covered with fertile meadows and gardens, and pasturage for horses and cattle, and, in parts, with forests and game. Wine and all fruits except olive oil were pro-

duced. The northern portion of Persia, on the other hand, is cold and snow is frequent. As a whole, Persia was intended by nature more for a grazing than for an agricultural country. The largest inland river is the Araxes (now Bundemir), which empties into a salt lake, with its tributary the Medos (now Pulvar). In the fruitful plain of the Medos in the centre of the country, sixty kilometres northeast of the present Shīrāz, over 1000 metres high, in a mild and healthful climate, lay the capital Persepolis (later Istakhr). Next to Susa, Persepolis was the largest and most beautiful city in the land. Here stood the costly and strong royal citadel (*τὰ βασίλεια*), the extensive ruins of whose walls, terraces, halls, and state apartments are still extant. Twelve kilometres down the river was the rock-hewn grave city of the Achaemenids (now Naksh-i-Rustem). Persepolis remained the nominal capital of the kingdom even after the kings had moved their residence to Susa and in mid-summer to Ecbatana. The original seat of the dynasty lay two days' journey northeast of Persepolis, in the so-called lower Persis, on the little river Cyrus, the present Murghāb. There stood the ancient royal city of Pasargadae with the palace and the still preserved tomb of Cyrus (Strabo, p. 727 ff.; Arrian, *Indica*, 40; Ptol. vi. 7, 8). In a wider sense the name Persia embraces the whole Persian nation of Iranian race, which should rather be called Irān. The broad highland of Irān, from the Tigris to the Indus, from the Indian Ocean to the Oxus and the Caspian Sea, is divided into halves by the great salt desert in its midst —western Irān with the States of Media and Persia, and northeastern Irān with Sogdiana, Chorasmia, Bactria, Areia, and Arachosia. These divisions are united only in the north by a narrow inhabitated strip, Hyrcania. The old geographers confined the term *Ἀριανή* to Eastern Irān. The feeling of national unity existed in all the tribes; their common name was once that of Aryan. Darius emphasizes first of all the fact that he is a Persian, the son of a Persian, and secondarily that he is an Aryan, of Aryan race. The Medes, too, according to Herodotus (vii. 62), anciently called themselves Aryans. The national unity of all Irān, a national dream even in the old heroic legends, was fully realized only once, under the Achaemenids. The empire of the Sassanids did not succeed in recovering the whole east of Irān. The present Persia fully includes only western Irān, and extends eastward not far beyond the eastern edge of the salt desert. The greater part of the ancient eastern Irān is occupied by Afghans and Turcomans.

Ethnology.—The inhabitants of Persis were originally a genuine mountain race of shepherds. Herodotus, Xenophon, and others describe the ancient Persians (old Pers. Pārsa, formerly, according to Herod. vii, 61, called Atrei) as an energetic, brave, contented race, of inordinate self-esteem, accustomed to hardships but not lacking in finer traits, fond of rude pleasures, of strict discipline, with a certain sense of justice, and of sound morals. The Persian sculptures show a noble profile, with long, straight nose, and carefully arranged beard. They ate only once a day, but then heartily, and drank wine freely. The life of men of station was consumed in hunting, travelling, archery, and war. The Persians served in the army from the twentieth to the fiftieth year. The soldiers wore the characteristic pointed felt hat (*τιάρα*), a coloured coat and breeches, and carried a light shield, a short spear, a long bow with thirty arrows, and the short dagger-sword (*ἀκινάκης*). Commerce was unknown among them, as were also rapine and thieving; lying, developed in the East to a virtue, they abhorred, at least in theory. Next to lying, incurring debt was considered the greatest disgrace. Polygamy and pæderasty were customary. Large families of children were esteemed honourable and the king offered yearly prizes for them. Education was undertaken by the State; the sons of nobles were brought up as pages at the court, where they were prepared for the high State offices. All kinds of bodily exercise and truthfulness were required of the youth, and they were early accustomed to hardship and watchfulness. They studied the sciences, traditions, natural history, and arboriculture (Herod. i. 133 ff.; Xen. *Anab.* i. 9; *Cyrop.* i. 2; viii. 8). Even Herodotus blames their fatal eagerness to imitate foreign customs. Thus in place of their ancient simple leather garments, they took from the more civilized Medes a more highly adorned dress (purple caftan, necklaces, and bracelets, *Cyrop.* i. 3, 2), false hair, and a blasé air of fashion, and wherever they heard of a new form of amusement they introduced it. With their growing dominion and under the influence of foreign customs the Persians rapidly deteriorated. Luxury, debauchery, and effeminacy destroyed their former discipline and bodily excellence. Cruelty and barbarity on the part of those in authority, extortion, crime, and injustice became the order of the day (Agathias, ii. 30; Xen. *Cyrop.* viii. 8, 6). The traditional origin of the Persian satraps is quite incredible.

The Persian nation was divided into various tribes, each possessing its own special portion of farming and pasture land. Of the ruling nobility, to which all other classes were subject, there were according to Herodotus three orders: the Pasargadae, Maraphii, and Maspii. Of these the Pasargadae were the highest; from them sprang the dynasty of the Achaemenids, who raised themselves from petty tribal chiefs and princes to national sovereigns. The king was permitted to select his wives only from the six highest families of the land, and the six "First of the Persians" had free access to the king.

The Iranian languages belong to the Indogermanic stock. In spite of strong dialectic differences, a specific Iranian type is unmistakably noticeable in all. Their common characteristic marks are the change of s to h, the preference for fricatives, and the great development of sibilants. Old-Pers. hanti ("they are")=Skt. santi, Lat. sunt; hindu (Indus)=Skt. Sindhu; fra=Skt. pra, *πρό*; thri (three)=mod. Pers. si=Skt. tri.



Old Persian stands on a very primitive stage, still very close to Sanskrit. The sentence from an inscription "Aüramazdā hya imām bumim adā hya avam asmānam adā hya martīyam adā" ("Ormuzd, who created this earth, who created that heaven, who created man"), would read in Sanskrit "Asuro medhasvi ya imām bhūmim adhād yo 'mum açmānam adhād yo martyam adhāt." Characteristic is the change of the Iranian z to d; adam (I)=Avestan azem; and f for Eastern Iranian hv: Vindafarnā (*Ἰνταφέρνης*) = Avestan Vindat-hvarenāo. The final syllable is greatly maimed: abara = Skt. abharat ("he bore").

The ancient Persians left no real literature. Remains of a lost heroic epic of Eastern Irān are to be found in the Avestā. But we have a fairly accurate knowledge of the language of the old Persians from the rock-inscriptions in which Darius I. and his successors perpetuated their deeds in plain, almost clumsy style. The most extensive of these inscriptions are those of Darius on the smoothed rock-face of Mount Behistān in Media, 426 lines, with a twofold translation. These Persian inscriptions are written in the simplest form of cuneiform, and, so far as they are not destroyed by the action of the weather or wantonly, they have been almost completely deciphered. (See CUNEIFORM.) Of the language of the Medes we know only a few words through the Greeks; it probably resembled Old Persian. The dog was called by the Medes spakō (Herod. i. 110), in the Avestā spā. The home of the very primitive language of the Avestā cannot be determined.

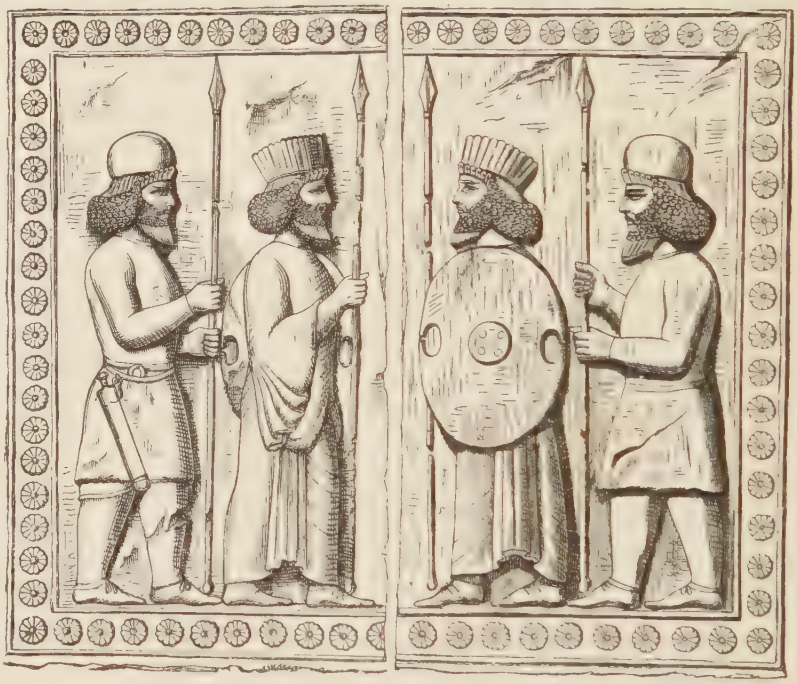
From the Old Persian was developed the Middle Persian or Pahlavī, the literary and official language under the Sassanids. A peculiar cryptographic system (with Semitic ideograms), and a very defective and ambiguous alphabet, make this language unnecessarily difficult. While the Old Persian is still rich in grammatical forms, the Pahlavī shows great poverty. Still further poverty is shown in the Modern Persian (from the tenth century A.D. the national language of modern Persia), the last stage of development in the local speech of the Persians. The purest Modern Persian is still spoken around Shīrāz.

Among the arts architecture and sculpture hold the first place. Monumental structures are confined exclusively to the numerous royal palaces, and of their former magnitude the ruins of Susa and the far more imposing remains of Persepolis are silent witnesses. Their luxury and extravagance were a source of amazement to the Greeks. Founded by Darius, most of them were enlarged and finished by his successors. According to the detailed description of Polybius (x. 27), the palace in Ecbatana at the time of the Achaemenids (whether during the period of the Medes is questionable) was covered with silver tiles, and a great part of the interior was coated with gold and silver plates. And so it may have been in Persepolis. But while the Median palace was a wooden structure, the material in Persepolis is a durable stone. The treatment of the stone shows a high degree of workmanship; walls and columns are ornamented with reliefs and inscriptions. The architectural style was drawn from the Babylonian and Assyrian, but was not a slavish imitation. The palace of Persepolis lay on a terrace of ten metres in height, with the rear towards a mountain. It was protected by an ingenious threefold wall and brazen doors. The interior contained the dwelling and reception rooms of the king and his highest officials, as well as the treasure-chambers. (Cf. the description of Diod. xvii. 71.) The slender columns are twenty metres high and end in lofty, delicate capitals. The whole produced an effect of towering and imposing elegance and gigantic dimensions.

The numerous sculptures excavated do not depict single episodes in the life of the king, but form a common symbolic picture-language, glorifying the splendour of the kingdom and its far-reaching might. The composition is in general stiff and monotonous, but is carefully elaborated in details; the faces expressionless, but the forms lifelike and natural, the dress, weapons, etc., reproduced with great fidelity.

Specimen of Persian Sculpture from Persepolis.

RELIGION.—The Perso-Iranian national religion has from the oldest times been the Zoroastrian, with its belief in a good and an evil spirit (Ormuzd, ahurō mazdāo; Ahriman, aŋro mainyush), worship of moral and natural powers (Asha, "law"; Rashnu, "justice"; Mithra, "sun"), purity of body and soul, after death a strict balancing of good and evil deeds, with the rewards of paradise or the punishments of hell, a last judgment, resurrection of the dead, marriage of relatives, etc. In all probability the teachings of Zoroaster (q. v.) originated in the East and spread westward into Media. The external and internal history of the Zoroastrian doctrine until it became a fully developed national church is still dark. In Media the Magi, one of the Median orders, became the privileged priestly class. The Magi, doubtless under the Median supremacy, carried the religious movement to Persis, and there also remained in exclusive and lasting possession of the priestly dignity. Without Magi no one could make a sacrifice (Herod. i. 132), for they alone possessed the priestly mysteries; they also were soothsayers and interpreters of dreams. They had great respect and influence in public and private affairs; they conducted the education of the princes from the seventh year and constantly surrounded the king's person. They dressed in white and wore a felt turban, the cheek-pieces of which concealed the mouth (Avesta, paitidāna).



Cyrus was undoubtedly an orthodox Zoroastrian; the belief in the resurrection arose under

Cambyses (Herod. iii. 62). Darius in his inscriptions constantly emphasizes the fact that he is ruler through the grace of Aüramazda; Ahriman is naturally not mentioned by name. The cult of the goddess Anaitis (Anāhita) and that of Mithra, which afterwards became almost international, was not officially introduced into Persia until the time of Artaxerxes II.

In their descriptions of Persian sacrificial rites, the details given by Western writers agree in all essentials with the ordinances of the Avesta (Herod. i. 131; Strabo, p. 732; Plut. *De Is.* 46). The Persians had neither images of the gods nor real temples. They offered a garlanded sacrificial animal under the open heavens, while the Magi, holding in their hands a bundle of tamarisk twigs (the barsom), chanted the sacred passages. They sacrificed to the highest god, Ormuzd; to the sun and moon, but especially to fire and water—to fire, by burning dry wood and dropping fat on it; they offered worship to water, by some lake, river, or spring. The dog and the birds were sacred creatures; the dog they held as inviolable as men. On the other hand, it was considered a righteous deed to kill as many harmful animals as possible.

The Perso-Iranian funeral rites are the strict consequence of the belief that all dead things were unclean and forfeited to the evil spirit. It was a mortal sin to defile the pure elements, fire and water. (Fire could not even be blown upon, under penalty of death.) The ecclesiastical prescriptions concerning burial, as later set down in the Avesta, seem for a long time to have been repugnant to the Persians, and only gradually to have supplanted the old customs. According to Xenophon (*Cyrop.* viii. 7, 25), Cyrus, when dying, ordered his body to be buried. Herodotus (i. 140) tells of the Magi that they do not bury their dead until dogs and birds have torn them. Whether the Persians did the same is not certain; at any rate they buried the corpse only after having covered it with wax. But the prescription of the Avesta indicates that the naked corpse was exposed to the vultures on an elevation (dakhma) outside the city, and that only subsequently the bones were buried in the open field. Not until the Sassanid period did this become the usual practice, as the description in Agathias, ii. 21, 22 proves. Procopius relates that a Persian who had buried his wife was sentenced to death (*Bell. Pers.* i. 7). When Damassius and his companions covered a body lying on the ground with earth, the latter had disappeared in the morning, and during the night a spirit appeared to them in a dream, warning them to bury the dead, because the earth, the mother of all, received no tribute (Agathias, ii. 31). Evidence is not wanting that the custom existed as early as the time of Alexander, at least in Bactria. Alexander's Grecian governor in Bactria was almost driven out because he wished to forbid the exposure of the dead (Porphyr. *De Abst.* iv. 21).

The Zoroastrian priesthood and sect fell into decay with the fall of the Achaemenid dynasty. Under the Sassanids it was restored, and under the royal protection reached a position of power as the organized State religion which it had never possessed before. It gradually succumbed to the advance of Islam, and in the Persia of to-day there are very few Zoroastrians. More numerous are the adherents of the old national religion, who have found refuge in and about Bombay—the Parsees.

Persian Soldiers (Relief from the Palace of Darius at Persepolis.)

HISTORY.—The history of Persia is lost in the little-known period of Median supremacy. The Persian kings are vassals of the Median kings, who, on their side, freed themselves from Assyrian dominion after long struggles. The founder of the Median dynasty is Deioces, who, in the first half of the seventh century B.C., raised the Median tribes from confusion and anarchy to an organized state under a central royal power (Herod. i. 96 foll.), for a time probably still a tributary vassal of the Assyrian king, but paving the way for the Median war of independence from the Assyrian yoke. He built the royal capital Ecbatana (old Pers. Hagmatāna, later Hamadān). His son Phraortes (646–625) was the real founder of the Median supremacy. He subdued Persis and portions of the rest of Irān ("all Asia, one

tribe after the other," Herod. i. 102), and finally entered into an attack on Assyria, for which, however, he paid with his life. His successor Cyaxares (624–585) was the most important king of Media, and raised the young nation to the highest power. He gave the country a firm organized military system. His expedition against Assyria, which brought him victorious before Nineveh, had to be broken off, as the Scythians were meantime invading and devastating all Irân. Cyaxares freed his land from this plague by stratagem (Herod. i. 106). Even then he made Armenia and Cappadocia as far as the Halys subject to himself, and is said to have pushed his dominion eastward over Hyrcania, Parthia, and Bactria. In alliance with Nabopolassar of Babylon, he destroyed Nineveh, and divided the Assyrian Empire among his allies. His son Astyages (584–550) was the last king of his race. Herodotus tells only of his fall, which was brought about by the son of his vassal in the small but energetic district of Persis.

Cyrus (Kûrush), 559–530, belonged to the highest order of Persian nobility — the Pasargadae. His family, which already occupied a leading position in Persis, traced its origin to Achaemenes (Hakhâmani). Xenophon (*Cyrop.* i. 2, 1), in opposition to Herodotus (i. 91–107), makes the father of Cyrus king of Persia. Babylonian inscriptions call his great-grandfather Teispes "king of the city of Anshan." According to this, the Achaemenids had long ruled as kings in Persis under the suzerainty of the great kings of Media.

Myths early gathered about the youth of Cyrus and his ascension to the throne. The romantic story in Herodotus (i. 107–130) is familiar. The Persians under Cyrus revolt against Astyages; he sends against them Harpagus, who, however, from private enmity, is favourable to Cyrus. A large part of the Median army goes over to Cyrus, and Astyages is conquered and taken alive. The *coup d'état* is told differently in Nicol. Damascenus, *Fragm.* 66 (after Ctesias). But Xenophon's account makes Cyrus gain the power most easily of all by marrying the daughter and heiress of the last Median king Cyaxares, a son of Astyages, receiving Media as a dowry (*Cyrop.* viii. 5, 19). But Herodotus and Xenophon agree that Cyrus, on his mother's side, was a grandson of Astyages. The account of Herodotus is corrected and in part confirmed by the Babylonian inscriptions (cf. Rawlinson in the *Journal of the Royal Asiatic Soc. XII.*, new series, p. 70; Th. Pinches, *Transactions of the Soc. of Bibl. Arch. VII.*, Ad. Bauer, *Sitzungsberichte der Wiener Akademie*, 1882, p. 497).

In these inscriptions it is related that Astyages took the field against Cyrus; but his soldiers revolted and surrendered him to Cyrus. Briefly, therefore, the circumstances were probably the following: In the year 559 Cyrus succeeds his father Cambyses as viceroy in Persis. He frees Persis and Susia, which was connected with it, from the Median suzerainty, and so becomes the first sovereign king of Persis and Susia. Astyages makes war upon him, and in the decisive battle at Pasargadae (Strabo, p. 730) loses his liberty and his Empire (550). After a short existence and rapid growth the Median sovereignty had given place to the Persian. In Media itself the acquirement of Ecbatana, which was shortly afterwards accomplished, seems to have completed the transfer of the powers without any long resistance; the Medes soon became reconciled to the new order. For them the change meant not a foreign domination, but only a change of dynasty; the political aim of the Median Empire—the conquest of Asia—remained undisturbed. Since all accounts agree that Astyages had no son, Cyrus was the natural pretender for the throne, and only anticipated his time somewhat. And with the new Persian sovereign the place of the unloved Astyages (cf. Herod. i. 123; Aristot. *Polit.* v 8, 15) was occupied by a man who combined daring energy with paternal kindness. The Persian nobles, indeed, played the first parts, and Persian soldiers formed the military nucleus of the Empire. On the other hand, the less civilized victors willingly submitted themselves to the higher culture of the conquered. The Persians adopted their dress, customs, and vices from the Medes, together with the whole system of court and State, as they had already adopted their religion. Although to foreign eyes the Median name long retained its lustre, the national wall of division between Persians and Medes seems gradually to have fallen away and both races to have been mingled in a national unity. The court resided for a portion of the year in Media. Medes occupied high State positions and commands. From this time Persia, Susia, and Media formed the powerful kernel of the nation.

Not so willingly did the other vassal States of the Median kingdom give their adherence to their new lords; their revolts caused Cyrus many wars (Herod. i. 177; Just. i. 7). Even before Cyrus was involved in the second great war, the former vassal countries westward to the Halys were subject to him. Here followed at once the collision with his powerful neighbour Lydia. Once already, under Cyaxares, a bloody war had broken out between the two rival Empires, which continued with varying results for five years, and was finally calmed through the diplomatic intervention of the kings of Babylon and Cilicia (Herod. i. 74). The fall of his brother-in-law and the rapid rise of the insatiable Cyrus forced the ruler of Sardis, Croesus, into war. After assuring himself of the alliance of Babylon, Egypt, and Sparta (Herod. i. 77 foll.), he crossed the Halys in the year 547, anticipating an attack of Cyrus, and carried devastation into Cappadocia, a Persian protectorate (Herod. i. 76). The first battle occurred at Pteria, but was not decisive (Herod. i. 76). There Croesus began the return march, to occupy winter-quarters in Lydia. Cyrus pursued with forced marches, gained a decisive victory over the Lydians at Sardis before the auxiliaries which had been requested arrived, and shut the king up in the capital, which, after a siege of two weeks, was stormed and plundered. Cyrus eventually showed mercy to the captured Croesus, and took him with him to court in Persia, leaving the complete subjection of Lydia to his Median governors Mazares and Harpagus (Herod. i. 162). Not alone all the Greek towns on the west coast of Asia Minor, which were tributary to Lydia, but also Miletus, Lycia, Caria, and Cilicia recognized the Persian authority either willingly or by force. Cyrus himself, immediately after the capture of Sardis, was summoned to the eastern part of the monarchy, to Bactria, by new

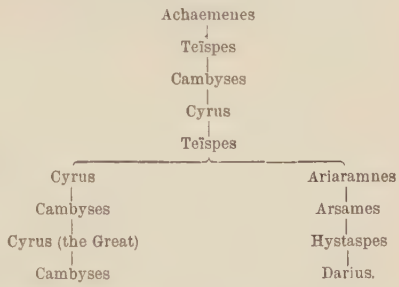
Tomb of Cyrus near Pasargadae.

revolts. All of Upper Asia to the eastern border of Irān is from this time on under his sway. Sardis became the firm centre of the western half of the Empire. Lydia was divided into two provinces, the governors of which resided at Sardis and Dascyleion (Herod. iii. 120).

Now, when his Empire reached from the Iaxartes to the west coast of Asia Minor, only Babylon stood between him and the supreme power in Asia. In the year 539 Cyrus made an incursion into Babylonian territory (Herod. i. 190 foll.; Berosus, *Fragm.* 14). In the very first battle the troops of the enemy mutinied. King Nabonidus of Babylon fled. The strong capital surrendered without resistance, and the whole Babylonian territory, together with the vassal States, of which Syria was the most important, yielded willingly to Cyrus (Herod. iii. 19), who, in this case also, showed himself not as a barbarous, oppressive conqueror, but as the new father of the country. He allowed the sanctuaries and palaces of Babylon to remain unharmed. It was quite in the character of the ancient Persians, who were not in the least religious fanatics, that he should tolerate and protect the old Babylonian religion. Cyrus was accustomed to treat the dispossessed princes with consideration, and to retain them in his service as governors. Through his wise policy, he was able to make moral conquests, and became the least sanguinary of the great conquerors of the Orient. His followers also, notably Darius, pursued this moderate policy in cases of conquest, not of rebellion.

The crown treasures of the conquered lands Cyrus took as spoils of war and stored up in his palaces, thus laying the foundation of the inexhaustible reserves of money of the later Persian Empire. These supplies indirectly benefited the Persians, for it is said that as often as Cyrus entered the territory of Persia he gave a piece of gold to every Persian man and woman (Xen. *Cyrop.* viii. 5, 19; Nicod. Damas. *Fragm.* 66). To his Persians he was always the national king; the heads of the nobility of Persis were nearest to the throne, and their counsel was of weight in important decisions.

Cyrus is said to have met his death in an expedition against a nomad race beyond the Iaxartes—the Massagetae, according to Herodotus, the Derbiccae, according to Ctesias. At all events, it was one of the wild Turanian tribes which, with their plundering inroads, had long been the scourge of Northern Irān. But the reports are conflicting. His military science probably failed in the inhospitable steppes of Central Asia before the crafty tactics of these rider hordes. His army was cut to pieces; Herodotus says that he himself fell in the battle, Ctesias that he died from the wounds received there. His body was entombed at Pasargadae, in the shade of the park, in a chamber upon a small stone pyramid. There Alexander saw his golden coffin (Strabo, p. 730). Cyrus had two sons, Cambyses and Smerdis, by his wife Cassandané, who died before him. Of his daughters, Atossa is best known.



He was succeeded by his eldest son, Cambyses (Kabujiya), B.C. 529–522, an imperious, passionate man, whose notorious intemperance (Herod. iii. 34) at times developed into delirium. While the Persians considered Cyrus as their father, they looked on the new sovereign as their master (Herod. iii. 89). Cambyses inherited the active disposition of his father. His first expedition against Egypt involved immense armies. The Phœnician ports, as well as Cyprus, which had recently revolted from Egypt and voluntarily submitted to Persia (Herod. iii. 19), were obliged to mobilize their fleets to afford naval support to the land attack. Samos also at the time entered into voluntary alliance with Persia (Herod. iii. 44). Cambyses first caused his younger brother Smerdis (Bardiya), whose loyalty he distrusted, to be mur-

dered secretly by Prexaspes. A Greek fugitive, Thanes, led the army through the Arabian Desert (Herod. iii. 4). At Pelusium Cambyses met the army of Psammetichus III., who had shortly before succeeded King Amasis. The Egyptian army was completely vanquished, Memphis was taken after a short siege, and Psammetichus made prisoner. In the year 525 the old kingdom of the Pharaohs was made a province of the Persian Empire. In general, Cambyses held to the policy of recognizing and respecting foreign nationality; no change was made in religion or government except that a satrap took the place of the Pharaohs. But the unbridled king personally outraged the people by brutal excesses, such as the desecration of the corpse of Amasis (Herod. iii. 16) and his private mockery of their sacred things.

From Egypt Cambyses planned great expeditions to the west and south. The naval expedition against Carthage was abandoned, because the Phœnicians refused to move against their own colony. A land force perished utterly in the sands of the Libyan Desert (Herod. iii. 26). The expedition under his own command against Aethiopia was not entirely fruitless, but entailed heavy losses (Herod. iii. 25). These failures increased his madness to a still higher point; he killed the bull Apis in rage (Herod. iii. 27), and by ill-treatment caused the death of his own sister, whom he had married according to Persian custom.

Cambyses remained in Egypt until the year 522, when suddenly disquieting reports came from Persia, which, in consequence of his long absence, seems for a long time to have been in a state of fermentation. A Magian, Gaumāta, whose brother was the steward of Cambyses, took advantage of the universal dissatisfaction, and, favoured by a certain resemblance to the murdered Smerdis (Herod. iii. 61 even gives him the same name), proclaimed himself to be the latter, and inflamed the land against the rightful king. Only a few initiated persons knew of the murder of Smerdis. Through great mildness and still greater promises the usurper quickly succeeded. Persia, Media, and the provinces gave him their allegiance, and Cambyses was practically a dethroned prince. From this point we can test the statements of Herodotus by the inscriptions of Darius. While on his homeward journey to punish the usurper, he met his death in Syria by his own hand, or through carelessness, as Herodotus (iii. 64) thinks. The position of the Achaemenid dynasty was precarious. The people considered the pretender the real Bardiya, who would now have been the legitimate successor to the throne, as Cambyses died childless. Certain expressions of doubt seem to have been checked by the new tyrant with great cruelty. He must have feared most of all being unmasked by the Persian grandees, and therefore he never received them, nor allowed himself to be seen publicly, which was quite contrary to etiquette. Herodotus makes him reside in Susa, but according to the inscriptions his fate overtook him in a Median fortress. Seven Persian nobles, with Darius at their head, who had secretly discovered the truth, formed a conspiracy, surprised the castle, and struck Gaumāta down.

It had been neither a Median revolt against Persian sovereignty (Herod. i. 130) nor a religious uprising of the Magi, but the game of chance of a political adventurer, whom fortune favoured for a short time through a rare combination of circumstances. But for the moment the whole wrath of the insulted Persian nobility was turned against the Magi, and it would have needed little to end the day with a night of St. Bartholomew for all the Magi (Herod. iii. 79). Darius, the head of the conspiracy, was proclaimed king. The story of Herodotus that the choice was to be made among the seven by lot or chance is a later addition. In fact Darius was the only rightful heir to the throne. He was descended from a collateral branch of the Achaemenids, which from the time of Teïspes had separated from the now extinct chief line. The genealogy of the family, according to Herodotus and the inscriptions, is the following:

When he ascended the throne as governor of Persis his father was still alive (Herod. iii. 70), but appears to have resigned all claim to the succession to the avenger of his order. The other conspirators were rewarded with hereditary privileges.

Persian Intaglio Cylinder. (Dieulafoy.)

The new king, Darius I. (Dārayavaüsh), (521–485), was in his thirtieth year. He entered into the inheritance of the Achaemenids at a critical period. The short interregnum had relaxed the empire of Cyrus in all its points. The provinces were everywhere uneasy—rebels and pretenders sprang up in every direction. The revolt first broke out in Susiana, but was quickly repressed. The uprising in Babylon was more serious, where a pretended son of Nabonidus placed himself at the head of the rebels; the fortress was taken only after a hard siege—according to Herodotus, through the craft of Zopyrus. While Darius was still fighting in Babylonia, Persia and Media revolted at the same

time. The rebellion spread eastward to Margiana, westward over Armenia and Assyria, only the outer provinces remaining quiet. It seemed that the end of the empire had come, but the young king remained unshaken through all the storms, and the Persian and Median armies stood faithful. Only a great man could meet this gigantic task. Through years of sharp fighting he forced the seceding countries to return, one after the other, and disarmed the rebels. Later on he set up a proud memorial of these deeds in the great rock-inscriptions of Behistan.

By the end of the year 519 the great rebellion had been crushed forever; the Empire, twenty-three countries from the Nile to the Iaxartes, was again under his undisputed sway. He proceeded at once to unite the Empire more closely by reorganizing the government, and in accordance with the traditions of his house to extend his boundaries. To the east the Empire was extended to the Indus after he had carefully explored the lands of the Indus by ship (Herod. iv. 44), and the same were annexed (Herod. iii. 139).

The great expedition to the Danube against the Scythians, on the other hand, was only partially successful. There were probably various reasons for this expedition. Perhaps those mysterious, restless savages, who, from the time of Cyaxares, had been held in hostile memory, again attracted attention; perhaps this far-seeing man intended to surround Greece from the north, and so wished to secure first the right flank. Darius is said to have placed 700,000 men in the field, while his Ionian subjects supplied 600 ships (Herod. iv. 87). From the latter the Samian engineer Mandrocles constructed the famous bridge of ships over the Bosporus, on which in 515 Darius crossed to Europe. While the land force travelled north over the Balkan, the Ionians received command to break up the bridge, to put into the Danube, and to construct another bridge there. On the Danube the Getae alone offered an obstinate resistance, and he proceeded across the river into a wholly unknown region, while the Ionians were to wait sixty days for his return, and hold the bridge during that period. Most of the operations in the present Bessarabia were brought to nothing by the skilful equestrian tactics of the enemy, who came and disappeared with the speed of lightning, and never allowed themselves to be grasped. The Persian army was thus led deeper and deeper into the inhospitable steppes, and at last forced by lack of supplies and exhaustion to return. After heavy losses Darius succeeded in getting back to the bridge over the Danube, which fortunately, thanks to the faithfulness of Histiaeus of Miletus, had not yet been broken up. The sole result was the subjugation of the Thracian cities by Megabazus (Herod. v. 10), followed by that of the Grecian ports Paeonia and Macedonica (Herod. v. 15, xxvi. 18).

Persia and Greece had thus come into dangerous proximity, and the inevitable collision from the Persian side must have been long foreseen. A slight cause set the stone rolling. Exiled Greeks from Naxos applied to Aristagoras, governor of Miletus, for Persian aid against their city, whose freedom they were willing to sacrifice to their private revenge. The Persian king gave them assistance through the satrap of Sardis. The command was, however, divided between Aristagoras and Megabates, and the rivalry of the two generals caused the failure of the undertaking. The offended Aristagoras revenged himself: in the year 500 he gave the signal for a general uprising of the Ionian cities, which he had for some time been planning with Histiaeus. In the freedom-loving Greek cities the tyrants introduced by Persia (cf. Herod. iv. 98) had long been found a burden, and the spirit of revolt found in them ample nourishment. First a republic was proclaimed in Miletus, and the fleet returning from Naxos was seized. At the same time aid was asked from the mother-country, but only Athens and Eretria responded with twenty-five ships, which were the beginning of all misfortune for Greeks and barbarians (Herod. v. 97). The forces of Aristagoras moved upon Sardis and burned the city. Next the Greek cities on the Hellespont and almost the whole of Cyprus and Caria joined the revolt. But soon the Persian army was in the field, operating in conjunction with the fleet provided by Phœnicia. Cyprus was first reconquered, and the revolt suppressed in Asia Minor by three Persian armies after battles of varying results. The decisive naval battle occurred at Ladé, where the Ionian fleet was completely overcome by the combined Phœnician, Cyprian, and Egyptian fleets. Miletus, the home of the revolt, was taken and destroyed, after holding out for six years, 500–494 (Herod. vi. 20). The vengeance of the victors was terrible; Milesian maidens were carried off to the Persian harems, the men banished, and the flourishing country of the Ionians devastated and depopulated. For the Athenians and Eretrians also the Persian monarch had planned a similar chastisement. In the spring of 492 the land forces under Mardonius set out, supported by an enormous fleet. But the army had little success in Thrace, and the fleet was shipwrecked at Athos. A second and larger expedition started in 490 under Datis and Artaphernes, this time by sea only. The course was laid past Naxos, which was conquered. Then Eretria was burned, and its inhabitants carried off to the interior of Asia. This expedition came to its end on the memorable Plain of Marathon (490). The Greek victory has evidently been greatly exaggerated. Probably the Greeks, after having avoided battle for a long time, fell upon the Persians as they were departing, when the greater part of the army, especially the powerful cavalry, had already embarked. The Persian generals contented themselves with the results in Naxos and Euboea and abandoned the campaign. If Darius had commanded in person, the result would probably have been a different one.

Another piece of bad news troubled the closing days of the king's life. Egypt, which up to this time had borne the easy yoke, now rose against Persia. Thus the unyielding monarch saw himself confronted with a twofold war, but in the midst of extensive preparations he was overtaken by death after a reign of thirty-six years (485). With him died the greatest ruler that Irān ever produced, the ideal of an enlightened despot, trained in a hard school, filled with his high calling, wise in his choice of means and persons, fitted by his energy and wariness for the greatest achievements.

Darius was not alone a conqueror like Cyrus, an augmenter of his Empire, which he raised from

twenty-three to thirty lands, but also a wise and practical organizer. His predecessors had appointed governors (satraps) as need arose; Darius divided the kingdom into fixed governmental districts (satrapies), and regulated the powers of the satraps (*khshathrapāvan*). They held a prince's court in the provincial capitals, and were the chief heads of the government, the law, and the military in their provinces. They were responsible immediately to the sovereign. In order to prevent any possible schemes of independence, Darius caused them to be watched by persons in whom he reposed special confidence. He himself made annual tours of inspection. The commanders of fortresses in the provinces were appointed directly by the king. Besides, he fixed definitely the tax to be imposed on each province, and so assured the Empire as well as the crown a definite revenue, whereas formerly the taxes had consisted in so-called presents (Herod. iii. 89)—i. e. voluntary tribute. Only the original Persia was untaxed. The rest of the provinces paid a land tax in proportion to the yield of the soil, Babylonia being taxed most heavily. There were, besides, indirect taxes, duties, taxes on products, etc. The direct taxes alone amounted annually to about twelve million dollars.

Intercourse and trade were fostered by Darius by means of military roads and canals. His courier post was renowned, by means of which he sent his commands through the whole Empire in the shortest possible time (Herod. viii. 98).

His descendants were quite numerous. Some of his sons were born when he was still a private citizen. The succession descended according to Persian custom to Xerxes, the first son born after his accession to the throne.

Xerxes (Khshayārsha) (485–465) was the eldest son of the imperious Atossa, the daughter of Cyrus, who had been successively the wife of Cambyses, Pseudo-Smerdis, and Darius. Soon after his accession Egypt was subdued (484). He was at first little disposed to continue the war against Greece, but finally followed the promptings of the war-party under the ambitious Mardonius, and for fully four years was actively employed in making preparations. The army was concentrated at Sardis. In the spring of 480 Xerxes marched with the land forces through Thrace and Macedonia, while the fleet sailed to Therma. The defeat of the Spartans at Thermopylae, where the Persians avenged Marathon, and the doubtful result of the sea-fight at Artemisium, were compensated by the brilliant victories of Salamis, Plataeae, and Mycalé. The chances of war were by no means so unfavourable to Greece as they had appeared in the momentary discouragement at first. The numerical advantage of the Persians was very great; but the patriotic legend has enormously exaggerated the number of actual combatants in making it reach the total of two and a half millions (Herod. vii. 185). It was, moreover, a contest between a people fighting for their country and a soldiery brought together from all quarters, partly by force, who had little to lose by defeat. The boastful Persian generals committed a mistake in wholly undervaluing their antagonists. In organization, tactics, and generalship the Greeks were far superior to the Asiatics, and the great masses of the Persian army could not be used to the best advantage in the Grecian territory. Even before Plataeae Xerxes had lost all courage and quickly removed his Persians to a place of safety, leaving Mardonius with the choicest Persian troops. He retired at once to his luxurious capitals in the interior, sinking into the inactive life of the harem, while the Greeks, especially under the leadership of Timon, made greater and greater progress in the liberation of their countrymen on the islands and the Asiatic coast. The European possessions of the Persians were lost forever.

In the year 465 Xerxes and his eldest son Darius were murdered in a revolt in the palace. Under Xerxes began the chain of misrule, seldom interrupted, which slowly undermined the existence of the nation. The fate of the dynasty was determined almost alone by palace revolts, court intrigues, and the rule of women and favourites. The inner history of the Empire, its growing decay, is hidden from our knowledge, as Herodotus, the fullest source of information, breaks off with the battle of Mycalé, and the Persian inscriptions after Xerxes become more and more scanty. In its external history the Greeks remain the chief factor; Persian money and intrigues play an important part in Greece.

Xerxes was succeeded by his youngest son Artaxerxes I. Longimanus (Artakhshathra) (464–425). In his long reign only two events are important—a revolt in Egypt, supported by Athens, but repressed by the battle of Memphis, and the conclusion of peace with Athens (449), through which the Aegean and the Greek colonies in Asia were taken from the Persian dominion.

Seal of Artaxerxes I. (Dieulafoy.)

His only legitimate son, Xerxes II., was murdered after a very short reign by his half-brother, Secydianus; but the murderer was himself put to death by another illegitimate son of Artaxerxes, Orthus, previously satrap of Hyrcania. Orthus himself ascended the throne as Darius II. (Nothus), (423–405). In his reign an opportunity was offered to Persia of regaining its lost power in the Aegean and the whole west coast. When in the Peloponnesian War the hegemony of Persia's hereditary enemy, Athens, was broken, the Persian court entered into relations with Sparta through the satraps Tissaphernes of Lydia and Pharnabazus of Phrygia. In return for subsidies Sparta was to give over to Persia all the coast region lost by the peace of 449. For a long time the alliance accepted by Sparta could not be put into effect, owing to the

rivalry of the two satraps and the perfidy of Tissaphernes, and the Athenians for a time had a decided advantage. A change came only when the Persian prince, Cyrus, an energetic and ambitious young man, received the chief command of the troops of Asia Minor. He sought a close alliance with Sparta; subsidies were freely given, and with this assistance Sparta was enabled to force Athens to a peace.

About this time Darius II. died, and his death occasioned the well-known contest for the throne. His wife Parysatis, an imperious, intriguing woman, had borne him two sons, the elder, Arsicas, before his accession, and younger, Cyrus, when queen. Her efforts to gain the succession for her younger and far more gifted favourite son Cyrus, as being the real king's son, had no result. Arsicas ascended the throne as Artaxerxes II. (Mnemon) in 405. He placed his younger brother as satrap over Asia Minor. But Tissaphernes, the professed friend of Cyrus, defamed him to his brother, and it was only through the protection of his mother that he escaped imprisonment. Returning to his satrapy, he assured himself of troops from every side in Greece, in order to gain forcible possession of the throne. In the spring of 401 he began an expedition with 13,000 Greek auxiliaries and his own army of Asiatics, ostensibly against rebels in his own satrapy. Again he was betrayed by Tissaphernes. At Cunaxa Cyrus met an enormous royal army. The mere appearance of the Greek soldiers put the Asiatics to terror and flight; but Cyrus ventured too far into the conflict, and fell. The sudden end of this knightly youth, who was entitled to great hopes, is tragic. The adventurous return of 10,000 Greeks is familiar from Xenophon's *Anabasis*.

Sparta had openly sided with Cyrus against the great king, and the relations between the two States were therefore strained. Tissaphernes, returned to his post of satrap in Asia Minor, demanded submission from all the Ionian cities which had gone over to Cyrus. They refused, and asked help of Sparta, which, in spite of the still existing alliance, forbade Tissaphernes to attack the cities; and, as Tissaphernes paid no attention to this prohibition, war broke out in 401 between Sparta and Persia. The war dragged along, and the Spartans gained no important results until Agesilaus received the chief command, when they invested the provinces of Asia Minor. In its difficulties the Persian court now made use of Athenian aid. The Athenian admiral Conon commanded the newly equipped Persian fleet, and conquered the Spartans at Cnidos (397). Mutual exhaustion ended the war with the peace of Antalcidas (387), which the Persian king practically dictated. In it Persia claimed the whole Asiatic sea-coast and some islands, such as Cyprus, as its property.

The last years of Artaxerxes were occupied with numerous revolts among the satraps. Personally he is said to have been mild and peace-loving (Thuc. *Artax.* 30). He showed fatal weakness towards the women of the court, and his life was a series of intrigues and quarrels. In his last days he named his oldest son Darius as his successor, but the latter became involved in a conspiracy against his father, and was beheaded. His ambitious son Ochus caused the murder of two older brothers who stood in his way, and after his father's death in 358 ascended the throne as Artaxerxes III. He was a thorough despot, pursuing his ends without scruple, shrinking at no cruelty. By his severity and by his wise policy he lifted the decaying kingdom once more to its former power. At his accession all the western part of the Empire was in turmoil. Hardly was the rebellious satrap of Phrygia conquered when Phœnicia and Cyprus revolted. His generals were unsuccessful in their operations against the rebelling king Tennes of Sidon and Mentor of Rhodes. The monarch placed himself at the head of a large army, which was strengthened by Greek soldiers supplied in accordance with the terms of the alliance. Sidon fell through the treachery of Tennes, and was fearfully punished. The fall of the capital soon reduced the rest of Phœnicia, and Cyprus was reconquered.

The most important task before Artaxerxes was to reconquer Egypt, which, for more than sixty years, had remained independent. His two generals Bagoas and Mentor, who had come over to his side, operated so skilfully under his command on the field, and not less with threats, that king Nectanebus of Egypt soon abandoned his cause as lost and fled to Aethiopia. The defenceless land, after a severe punishment, was again made part of the Persian Empire. Mentor became satrap of the sea-coast of Asia Minor; Bagoas remained near the king as minister, and appears to have been the originator of the plot to kill the king by poison, which was carried out in 338; Bagoas, who remained master of the situation, placed Arses, the youngest son of Artaxerxes, on the throne (338–336). But as the latter did not show himself pliant, he was removed in the third year of his reign.

Bagoas now placed on the throne a distant relative of the murdered king, Darius III. (Codomannus), a great-grandson of Darius II. (336–320). When Bagoas once more attempted his old manœuvre, he was himself forced to drink the poison. Darius was perhaps the most worthy of the Achaemenids at the time to fill the high station, but he was not man enough to ward off the threatening evils. Even at the time of his accession there was imminent danger of war from the uprisings in Macedonia. The *casus belli*, if, indeed, any was needed, dated from the time of Artaxerxes III. When, in the year 340, Philip was besieging the town of Perinthus, opposite the Persian territory, Persian auxiliaries, in union with Athens, had relieved the town. Philip himself had planned an expedition against the Persian king, ostensibly as the avenger of Greece. On the threshold of his undertaking Philip was assassinated, apparently not without instigation on the part of Persia (Arrian, *Anab.* ii. 14). The young Alexander, whom Darius at first wholly undervalued, at once took up the great plans of his father as soon as Greece was completely pacified. Darius in vain sought to counteract his extensive preparations. Darius's right-hand and first general was the Rhodian Memnon, a brother of Mentor, a man as skilful and energetic as his renowned brother. He alone planned earnestly for the safety of the Empire, when indecision, suspicion, and great egoism controlled the other Persian commanders.

In the spring of 334 Alexander crossed the Hellespont with not more than 30,000 infantry, 4500 horsemen, and 182 ships. At the Granicus, where,

against the advice of Memnon and with no plan of action, the Persian army offered battle, Alexander gained his first brilliant victory. Sardis capitulated without a blow. In Ephesus he was greeted as a liberator; Miletus and Halicarnassus alone defended themselves bravely. At the end of the year Alexander was in possession of Asia Minor as far as the Taurus. Only Memnon threatened him with danger. Memnon crossed to the sea unhindered, and was on the point of carrying the war into Europe behind Alexander's back when death overtook him. His death was the most severe blow to the Persian cause. Nothing now obstructed Alexander's victorious course. In an unfavourable position at Issus, Darius himself opposed him with an immense army, and was completely routed with great losses (333). The Persian army was scattered, and Darius fled across the Euphrates. In order to protect the rear, Alexander occupied Phœnicia and Egypt (332). In the spring of 331 he marched towards the heart of the Persian monarchy, after having rejected various overtures of peace from the Persian king. Darius had concentrated in Assyria another immense army from the inexhaustible resources of the Persian Empire. The decisive battle of Arbela and Gaugamela completely shattered the Persian colossus. Darius did not even await the issue of the day, but was among the first to flee to Media. Without a blow, Babylon and Susa opened their gates. In the middle of the winter Alexander stood before the passes of Persis, in which the satrap Ariobarzanes, with a small army, successfully opposed him. Alexander imitated the Persian manoeuvre of Thermopylae. Persepolis capitulated, and immense treasures fell into Alexander's hands. At his command the royal citadel was burned, and the town was given over to plunder. Persis was completely reduced to subjection. In the spring of 330 Alexander went to Ecbatana, and pressed hard in pursuit of the fleeing Darius. Meantime Bessus, satrap of Bactria, had gained possession of the government of all Ariana, and had been taken prisoner by Darius in his retreat. When Alexander was close at his heels Bessus struck Darius down. Alexander found only the corpse of the last of the Achaemenids. Bessus for a time maintained himself as King Artaxerxes IV. in the far east of Irān, and organized the defence of Bactria and Sogdiana with much skill. But beyond the Oxus he was surrendered by his own people, and later on was crucified in Ecbatana. Bactria quickly yielded, but Sogdiana for a long time offered stout resistance, and not until 327 did it, the last bulwark of Iranian independence, fall completely into the hands of the great Macedonian.

Persian history from this time is absorbed in the history of Alexander, the Diadochi, and the Parthian kingdom under the Arsacids. Not until the year A.D. 224 was a new Persian nation born, under the dynasty of the Sasanids.

Persĭca Māla. "Persian apples"; a name given by the Romans to peaches. The peach-tree was called *Persicus arbor*.

Persĭci Montes. See PARSICI MONTES.

Persĭcus Sinus (Περσικὸς κόλπος) or **Persĭcum Maré** (Περσικὴ θάλασσα). The name given by the later geographers to the great gulf of the Maré Erythraeum (Indian Ocean), extending between the coast of Arabia and the opposite coast of Susiana, Persis, and Carmania, now called the Persian Gulf.

Persĭdes (Περσείδης). A patronymic given to the descendants of Perses (q. v.).

Persis. See PERSIA.

Persius Flaccus, AULUS. A well-known Roman satirist, the third in order among the writers of that form of literature. He was born A.D. 34 at Volaterrae, in Etruria, of a good equestrian family. Losing his father when six years old, at the age of twelve he went to Rome, and enjoyed the instruction of the most eminent teachers, more especially of one for whom he had the greatest reverence, Annaeus Cornutus (q. v.), who initiated him in the Stoic philosophy and introduced him to the acquaintance of Lucan. After the first poetic attempts of his youth, which he himself burned, his energies were directed to satiric verse, under the influence of Lucilius and Horace. On his early death, in the year 62, the six satires which he left, after some slight revision by Cornutus, were published by his friend, the poet Caesius Bassus. A short introduction in fourteen scazonic trimeters is possibly spurious. In these Persius deals with the moral corruption of his age, from the standpoint of a Stoic preacher of ethics. Both in thought and expression a tendency to echo Horace is constantly apparent. (See Werther, *De Persio Horatii Imitatore* [Halle, 1883].) He composed slowly, and appears to be himself conscious that he has no true poetic faculty. His mode of expression is frequently difficult and involved to the verge of obscurity. The need of explanations was accordingly felt in comparatively early times; but the collection of scholia bearing the name of Cornutus shows hardly any traces of ancient learning. Many of the terse phrases and lines of Persius have passed into literature, the most famous being the *O quantum est in rebus inane* (i. 1); *pulchrum est digito monstrari* (i. 28); *rara avis* (i. 46); *tecum habita; noris quam sit tibi curta supellex* (iv. 52); and the striking lines in the Third Satire (35–38). In fact, many of the epigrammatic lines of Juvenal seem to have been suggested by the earlier satirist. (See Wilcke's monograph [Stendal, 1869].) The language of Persius is often tinged with the vocabulary and usage of the plebeian Latin, as he writes in the character of a plain, blunt man—the very opposite of his real self. See SERMO PLEBEIUS.

The best MSS. of Persius are the Codex Montepessulanus (of Montpellier) and a Codex Vaticanus, of the ninth or tenth centuries. Few classic authors are represented by so many codices, as the moral tone of Persius made him a favourite throughout the Middle Ages. Famous editions are those of Pithœus (Paris, 1585); Casaubon (Paris, 1605; ed. by Dübner with many additions, Leipzig, 1833); Orelli (Zürich, 1833); Hauthal (Leipzig, 1837); and

especially Jahn (Leipzig, 1843, and Berlin, 1886), the last ed. by Bücheler; Hermann (Leipzig, 1854); and Gildersleeve (New York, 1875). An excellent idiomatic (prose) translation is that of Conington, with commentary (London, 1874), ed. by Nettleship. On Persius as a philosopher, see Knickenberg, *De Ratione Stoica in Persio* (Münster, 1869), and Schlüter, *De Sat. Pers. Natura et Indole* (Andernach, 1886).

Persōna (*πρόσωπον* and *προσωπεῖον*). A mask; an artificial covering for the face worn among many peoples in all ages of history and for different purposes, but more frequently in Greece and Italy (1) for covering the faces of the dead and (2) by actors in theatrical performances.

Death-masks of gold have been found in tombs at Mycenae and elsewhere; at Carthage masks of clay were also similarly used. In Egypt they were placed upon the case containing the mummy. See also IMAGINES.

Mask from Mummy-case of Rameses II.

For theatrical purposes, masks were made of linen, of bark, of leather, and sometimes of wood. Their introduction in dramatic performances is ascribed to Choerilus (q. v.) of Samos about B.C. 500, and to Aeschylus (q. v.); but their use really goes back to the mummery in honour of Dionysus, at whose festivals in early Greece the face was painted with the lees of wine or covered with leaves. The opening for the eyes was not larger than the pupil of the actor's eyes behind the mask. The masks themselves sometimes merely covered the face, like masks in modern times; but sometimes, also, they covered the whole head down to the shoulders. The wig worn by the tragic actors was usually if not always a part of the mask. Phrynichus is said by Suidas (s. v.) to have first made comic masks. The varieties of masks were very numerous, representing every possible sort of character, age, sex, and condition. Pollux (iv. 133, etc.) enumerates twenty-eight typical kinds of mask, six for old men, eight for young men, eleven for women, and three for slaves. Gellius thinks that the mouth of the mask was arranged so as to intensify the sound of the actor's voice (v. 7); but this is doubtful.

Masks in British Museum.

At Rome masks were not used in early times, but only wigs. They were probably first introduced in B.C. 110 by Roscius, who was homely and had a squint. When the audiences hissed an actor he was obliged to remove his mask, except when acting in the *Atellanae fabulae* (Macrob. *Sat.* ii. 7).

See the articles DRAMA and SATYRICA FABULA.

Pertĭnax, Helvius. A Roman emperor who ruled from January 1 to March 28, A.D. 193, having been reluctantly persuaded to accept the Empire on the death of Commodus. But having attempted to check the license of the Praetorian Guards, he was slain by the latter, who then put up the Empire for sale. See Capitolin. *Pertinax;* and Krakauer, *Commodus und Pertinax* (Breslau, 1883).

Pertinax.

Perusia. Now Perugia; an ancient city in the eastern part of Etruria between the lake Trasimenus and the Tiber, and one of the twelve cities of the Etruscan confederacy. (See ETRURIA.) It was situated on a hill, and was strongly fortified by nature and by art. It is memorable in the Civil Wars as the place in which L. Antonius, the brother of the triumvir, took refuge when he was

Masks. (Pompeii.)

no longer able to oppose Octavianus (Augustus) in the field, and where he was kept closely blockaded by Octavianus from the end of B.C. 41 to the spring of 40. Famine compelled it to surrender; but one of its citizens having set fire to his own house, the flames spread, and the whole city was burned to the ground. It was rebuilt by Augustus. Portions of the ancient walls and several of the gates of Perusia still remain, the best preserved of the latter being the so-called Arco d'Augusta, which bears the inscription AUGUSTA PERUSINA over the arch. A number of tombs with Etruscan relics have been found near the city.

Pervigilium (lit. "a night-watch"). A nocturnal festival in honour of a divinity, especially that of the Bona Dea, at which originally only married women were allowed to be present. In imperial times, when the presence of men was permitted, a nocturnal festival to Venus was also instituted. Such a festival, extending over three nights in the spring, is referred to in an anonymous poem called the PERVIGILIUM VENĔRIS, of the second or third century A.D. It consists of ninety-three trochaic septenarii, separated into unequal strophae by the recurring refrain, *Cras amet qui nunquam amavit, quique amavit cras amet.* It celebrates in a lively strain the power of Venus, particularly as displayed in springtime, lauding her as the giver of life to all, and as the ancestress and patroness of Rome. The *editio princeps* is that of Pithoeus (Paris, 1577). An edition with notes and emendations is that of Bücheler (Leipzig, 1859); it is also given in Bährens's *Unedierte lat. Gedichte* (Leipzig, 1877); and there is an *édition de luxe* by Owen (1893).

Pes. See MENSURA.

Pescennius Niger. See NIGER.

Pessi (*πεσσοί*). See LATRUNCULI.

Pessĭnus (Πεσσινοῦς) or **Pesĭnus** (Πεσινοῦς). A city in the southwest corner of Galatia, on the southern slope of Mount Dindymus or Agdistis, was celebrated as a chief seat of the worship of Cybelé, under the surname of Agdistis, whose temple, crowded with riches, stood on a hill outside the city. In this temple was an image of the goddess, which was removed to Rome to satisfy an oracle in the Sibylline Books. See RHEA.

Pessŭlus. See IANUA.

Petăsus (*πέτασος*). A flat felt hat, with a broad and round brim, usually worn among the Thessalians. The brim is often parted into four bow-shaped indentations. It is said to have been introduced into Greece along with the chlamys as a distinguishing mark of the *ephebi*. Hermes is usually represented with the winged petasus. The Romans wore a similar hat in the country, and when travelling; in the city it was generally used only in the theatre, as a protection from the sun (Suet. *Aug.* 82). See PILLEUS.

Petasi. (Pompeian Painting.)

Petauristae. See PETAURUM.

Petaurum (*πέταυρον*). (1) A perch or roost for fowls (Pollux, x. 156). (2) A spring-board for acrobats (Juv. xiv. 265), who were called *petauristae*. From the petaurum the acrobats sometimes leaped through blazing hoops (Petron. 53, with Friedländer's note).

Petelia (Πετηλία) or **Petilia**. Now Strongoli; an ancient Greek town on the eastern coast of Bruttium, founded, according to tradition, by Philoctetes (Verg. *Aen.* iii. 402). It was taken by Hannibal after a desperate resistance, and by him colonized with Bruttians; but the Romans restored it to its own people (App. *Ann.* 29, 57).

Petilius Capitolīnus. See CAPITOLINUS.

Petitio Consulātus. See CICERO (3).

Petītor. See ACTOR.

Petorrĭtum or **Petorĭtum**. A four-wheeled carriage which, like the later form of the *essedum* (q. v.) and some other vehicles, the Romans adopted from the Gauls. The name itself is Keltic (*petvar*=*quattuor*, and *rit*=*rota*). It was strongly built and better adapted for rough roads than the *reda* (q. v.). On journeys the family usually rode in a *reda* and the servants in a petorritum. See the Schol. Cruq. *ad* Hor. *Epist.* ii. 1, 192; Ginzrot, *Die Wagen der alten Völker*, i. 224; and Marquardt, *Privatleben*, 734.

Petosīris (Πετόσιρις). An Egyptian priest said to be the founder of astrology. His name was often used as a generic term for an astrologist (Juv. vi. 580).

Petovio. See POETOVIO.

Petra (*ἡ Πέτρα*). The name of several cities built on rocks, or in rocky places, of which the most celebrated was in Arabia Petraea, the capital, first of the Idumaeans, and afterwards of the Nabathaeans. It lies in the midst of the mountains of Seir, just half way between the Dead Sea and the head of the Aelanitic Gulf of the Red Sea, in a valley or, rather, ravine, surrounded by almost inaccessible precipices, which is entered by a narrow gorge on the east, the rocky walls of which approach so closely as in some places hardly to permit two horsemen to ride abreast. On the banks of the river which runs through this ravine stood the city itself, and some fine ruins of its public buildings still remain. These ruins are chiefly of the Roman period, when Petra had become an important city as a centre of the caravan traffic of the Nabathaeans. It maintained its independence under the Romans till the time of Trajan, by whom it was taken. It was the chief city of Arabia Petraea; and under the later Empire the capital of Palaestina Tertia. The rocks about it were honeycombed with tombs.

Other cities of the name were situated in Sicily (Cic. *Verr.* iii. 39), Elis (Pausan. vi. 24, 5), Macedonia (Livy, xlv. 41), and Illyricum (Caes. *B. C.* iii. 42).

Petrēius, MARCUS. A person of great military experience, first mentioned in B.C. 62, when he served as legatus to the proconsul C. Antonius, and commanded the army in the battle in which Catiline perished. He belonged to the aristocratic party; and in 55 he was sent into Spain along with L. Afranius as legatus of Pompey, to whom the provinces of the two Spains had been granted. Soon after the commencement of the Civil War in 49, Caesar defeated Afranius and Petreius in Spain, whereupon the latter joined Pompey in Greece. After the loss of the battle of Pharsalia (48), Petreius crossed over to Africa, and took an active part in the campaign in 46, which was brought to an end by the decisive defeat of the Pompeian

army at the battle of Thapsus. Petreius then fled with Iuba, and, despairing of safety, they fell by each other's hands (Caes. *B. C.* i. 38, 63).

Petrīnus and **Petrīnum**. A mountain near Sinuessa, on the confines of Latium and Campania, on which good wine was grown (Hor. *Epist.* i. 5, 5).

Petrocorii. A people in Gallia Aquitanica, in the modern Perigord. Their chief town was Vesunna (Périgueux) (Caes. *B. G.* vii. 75).

Petronius, Gaius, or (possibly) Titus. A Roman novelist probably to be identified with an accomplished voluptuary at the court of Nero. He was one of the chosen companions of Nero, and was regarded as director-in-chief of the imperial pleasures, the judge whose decision upon the merits of any proposed scheme of enjoyment was held as final (*elegantiae arbiter*). The influence thus acquired excited the jealous suspicions of Tigellinus. Petronius was accused of treason; and believing that destruction was inevitable, he resolved to die as he had lived, and to excite admiration by the frivolous eccentricity of his end. Having caused his veins to be opened, he from time to time checked the flow of blood by the application of bandages. During the intervals he conversed with his friends, and even showed himself in the public streets of Cumae, where these events took place; so that at last, when he collapsed from exhaustion, his death (A.D. 66), although compulsory, appeared to be the result of natural and gradual decay. He is said to have despatched in his last moments a sealed document to the emperor, taunting him with his brutal excesses (Tac. *Ann.* xvi. 18, 19; Pliny, *H. N.* xxxvii. 20).

The remarkable work which is traditionally ascribed to this person and which has come down to modern times in an incomplete form, was originally written in at least 16 books, with the title *Satira* or *Satiricon*. It is in prose, with many passages in verse scattered through it as quotations, or as compositions of characters introduced in the novel. The book is a sort of comic romance, in which the adventures of a certain Encolpius and his companions in the south of Italy, chiefly in Puteoli or its environs (on the place see H. W. Hayley in *Harvard Studies in Class. Philology* for 1892), are made a vehicle for exposing the false taste and vices of the age. Unfortunately the vices of the personages introduced are depicted with such fidelity that we are perpetually disgusted by the obscenity of the descriptions. The longest section is generally known as the Dinner of Trimalchio (*Cena Trimalchionis*), presenting us with a caricatured account of a fantastic banquet, such as the gourmands of the Empire were wont to exhibit on their tables. Next in interest is the well-known tale of the Ephesian Matron, which is really older than the time of Petronius, and is found in various forms in the literature of many peoples, even in the Chinese; and which in English is introduced into one of the sermons of Jeremy Taylor. It is probably the best if not the only remaining specimen of a Milesian Tale. (See Novels and Romances.) The novel is also remarkable for its pictures of low life, and for the specimens which it gives of the Latin of the uneducated classes (*sermo plebeius*), of which it is the most important literary example. The dialogue is amusing, abounding in idiomatic expressions, popular maxims, ungrammatical language, and slang. See Sermo Plebeius.

A remarkable attempt at fraud by one François Nodot in the seventeenth century is associated with the history of the text of Petronius. Nodot professed to have got possession of a complete copy of Petronius with no *lacunae*, found, he said, at the sack of Belgrade. His text was printed at Rotterdam in 1693, but was at once seen to be a forgery; yet as it gives a continuous narrative instead of the fragmentary one of the genuine text its additions are sometimes printed (in different type) in editions of Petronius.

There are twenty-one existing manuscripts of Petronius, the most important being the Codex Traguriensis in the Bibliothèque Nationale at Paris. It was found at Trau in Dalmatia in 1663, and contains the *Cena Trimalchionis*. See Beck, *The Age of Petronius* (Cambridge, Mass., 1856), and the account of the MSS. in Bücheler's large edition.

The best editions are those of Burmann (2d ed. Amsterdam, 1743); Reiske (Leipzig, 1748); Bücheler, ed. maior (Berlin, 1862); and Bücheler, ed. minor, text only (Berlin, 1886; last ed. 1895); De Guerle, with translation into French (Paris, 1862); of the *Cena*, with German translation and notes (Leipzig, 1892); and Waters, with English notes (announced, 1895). On the language, see Ludwig, *De Petronii Sermone Plebeio* (Leipzig, 1870); von Guericke, *De Lingua Vulgari apud Petronium* (Königsberg, 1875); Cesareo, *De Petronii Sermone* (Rome, 1887); Schuchardt, *Der Vokalismus des Vulgärlateins* (Leipzig, 1866–68); and Cooper, *Word Formation in the Roman Sermo Plebeius* (N. Y. and Boston, 1895). For criticism, etc., see Pétrequin, *Récherches sur Pétrone* (Paris, 1869); Gaston Boissier in the *Revue des Deux Mondes* for November, 1874; Thomas, *La Société Romaine d'après Pétrone* (Paris, 1892); and H. W. Hayley, *Harvard Studies in Classical Philology*, iii. pp. 1–40 (1892).

Peucé (Πεύκη). An island in Moesia Inferior, formed by the two southern mouths of the Danube, inhabited by the Peucini, who were a tribe of the Bastarnae, and took their name from the island (Ptol. iii. 10, 2).

Peucestas (Πευκέστας). A Macedonian, who was a distinguished officer of Alexander the Great. He had the chief share in saving the life of Alexander in the assault on the city of the Malli in India, and was afterwards appointed by the king to the satrapy of Persia. In the division of the provinces after the death of Alexander (B.C. 323), he obtained the renewal of his government of Persia. He fought on the side of Eumenes against Antigonus (317–316), but displayed both arrogance and insubordination in these campaigns. Upon the surrender of Eumenes by the Argyraspids, Peucestas fell into the hands of Antigonus, who deprived him of his satrapy (Arrian, *Anab.* vi. 9–30; vii. 23).

Peucetia. See Apulia.

Peucīni. See Peucé.

Peutinger Tablet (*Tabŭla Peutingeriāna*). A chartographic representation of the Roman world now preserved at Vienna. See Itineraria.

Pezetaeri (πεζέταιροι). In the Macedonian army, the free but not noble class of the population, who formed the heavy infantry (ὁπλῖται). See Exercitus.

Phacium (*Φάκιον*). Now Alifaka; a mountain fortress of Thessaly on the right bank of the Peneus (Thuc. iv. 78; Livy, xxxii. 13).

Phacūsa. A town called Goshen in the Old Testament. It was sacred to the god Supt or Horus, and was hence called Pe-Supt.

Phacussa (*Φακοῦσσα*). Now Fecussa; an island in the Aegaean Sea, one of the Sporades.

Phaea (*Φαιά*). The sow of Crommyon, in Megaris, which ravaged the country till slain by Theseus. See Plut. *Thes.* 9; and THESEUS.

Phaeăces (*Φαίακες, Φαίηκες*). A fabulous people in Homer, to whom Odysseus came in his wanderings (*Od.* vi.–viii.). They were as like to the gods as the Giants and Cyclopes, seeing them face to face. Originally settled in Hyperia, they were compelled, by the violence of their neighbours, the Cyclopes, to migrate, under their king Nausithoüs, son of Poseidon and Periboea, daughter of Eurymedon, the last king of the Giants, to the happy island of Scheria, where they built a city. On the arrival of Odysseus, their ruler was Alcinoüs, the son of Nausithoüs; his wife was Areté, his brother's daughter, and besides many sons he was the father of the fair Nausicaa, Odysseus's preserver. Far from the turmoil of the world, the Phaeaces are described as leading a life of undisturbed happiness, in the enjoyment of the goods wherewith they are richly blessed; above all, Alcinoüs, who had the fairest of orchards and a most beautiful palace. Their business was solely with the sea, with shipping, and the provision of all that belongs to it. Their ships were of wondrous sort. Without steersman or rudder, divining of themselves the wishes and thoughts of all men, and knowing all lands, they traversed the sea swift as a bird or a thought, wrapped in mist and darkness, yet never suffered wreck or loss. When the ship, that brought the sleeping Odysseus in one night to Thrace, returned, Poseidon, of whose envious malice a prophecy had long ago bidden them beware, changed it to a rock in sight of harbour, and the Phaeaces were in fear that the rest of the saying would come true, and mountains rise up all round their city. Though it is obvious that the Phaeaces and their abodes, Hyperia and Scheria, are purely mythical, the kingdom of Alcinoüs was early identified as Corcyra (Corfu). He had a shrine there, and the harbour was named after him. Near the island was also shown the petrified ship. Hence the later Argonautic legends made even Iason and Medea touch at Corcyra on their flight from Aeëtes, and, like Odysseus, find protection and help from Alcinoüs. (See ARGONAUTAE.) The Phaeacian episode of the *Odyssey* has been edited separately by Prof. A. C. Merriam in his *Phaeacians of Homer* (New York, 1880).

Phaeax (*Φαίαξ*). An Athenian orator and statesman and a contemporary of Nicias and Alcibiades (Plut. *Alcib.* 13). Some critics maintain that the extant speech against Alcibiades, once commonly attributed to Andocides, was written by Phaeax; but it is now generally held to be the work of a later sophist.

Phaecasium (*φαικάσιον*). A white shoe worn by the Athenian gymnasiarchs, and also by the priests of Greece and Alexandria, which finally came to be used by other persons of both sexes (Petron. 67; Sen. *Epist.* 113).

Phaedon (*Φαίδων*). A Greek philosopher, was a native of Elis, and of high birth, but was taken prisoner, probably about B.C. 400, and was brought to Athens. It is said that he ran away from his master to Socrates, and was ransomed by one of the friends of the latter. Phaedon was present at the death of Socrates, while he was still quite a youth. He appears to have lived in Athens some time after the death of Socrates, and then returned to Elis, where he became the founder of a school of philosophy. He was succeeded by Plistanus, after whom the Elean School was merged in the Eretrian (Gell. ii. 18). The dialogue of Plato, which contains an account of the death of Socrates, bears the name of Phaedon. See SOCRATES.

Phaedra (*Φαίδρα*). The daughter of Minos by Pasiphaë or Crete, and the wife of Theseus. She was the step-mother of Hippolytus, the son of Theseus, with whom she fell in love; but having been repulsed by Hippolytus, she accused him to Theseus of having attempted her dishonour. After the death of Hippolytus his innocence became known to his father, and Phaedra made away with herself. The story forms the subject of plays by Euripides (the *Hippolytus*), Seneca (the *Phaedra*), and in French by Racine (the *Phèdre*). For details, see HIPPOLYTUS.

Phaedriădes. See PARNASSUS.

Phaedrus (*Φαῖδρος*). (1) An Epicurean philosopher, who was head of the Epicurean School at Athens while Cicero was a student there (B.C. 80). He died in the year 70, and was succeeded by Patron. He wrote a treatise on the gods (*Περὶ Θεῶν*), a fragment of which was found at Herculaneum in 1806. (Edition by Petersen [Hamburg, 1883].) From it Cicero largely drew his materials for the first book of the *De Natura Deorum*. See Schwenke in Jahn's *Neue Jahrbücher*, 119, 49; 129. (2) A Roman writer of poetical fables. By birth a Macedonian of the district of Pieria, he came early to Rome as a slave, and acquired a knowledge of Roman literature while still a boy. If the traditional title of his five books of fables after Aesop is to be trusted (*Phaedri, Augusti liberti, fabulae Aesopiae*), he was set free by Augustus. To Phaedrus belongs the credit of introducing fable-writing into Latin poetical literature—a fact of which he was fully conscious, but which secured him neither relief from his miserable position, nor recognition on the part of the educated public; his patrons seem to have been only freedmen like himself. In fact, he even drew upon himself, by his two first published books, the ill-will and persecution of the all-powerful favourite of Tiberius, Seianus, who suspected in them malicious reference to contemporary events. In consequence, he did not publish the remaining books till after the fall of Seianus in A.D. 31 and the death of Tiberius in 37.

The five books are preserved, though not in a complete form. Whether the further collection of thirty-two fables, transcribed from a MS. in the fifteenth century by Archbishop Nicolo Perotti (*Fabulae Perottianae*)—and published at Naples in 1809—are a genuine work of Phaedrus, is doubtful. The matter of the fables is only to a small extent borrowed from Aesop. Some include stories from history, partly referring to the present or immediate past. In relation to the Greek originals, the material is not always skilfully used,

especially in the "morals." The drawing of the characters is at first very cramped, but is afterwards more broadly treated; the language fluent and, in general, correct; the metre, too (iambic senarius), used with strictness, though wanting the purity which, in this kind of verse, became general from the time of Catullus. About the tenth century an author, calling himself Romulus, drew up a prose version of Phaedrus, which served as a model for the mediæval collections of fables.

The *editio princeps* of Phaedrus is that by Pithoeus (Autun, 1596). Other editions are those of Burmann (Amsterdam, 1698; re-edited with a commentary, Leyden, 1727); Bentley, with Terence (London, 1726); Schwabe, with commentary, 2 vols. (last ed. Brunswick, 1806); Orelli (Zürich, 1831); Dressler (Leipzig, 1850); Eyssenhardt (Berlin, 1867); Ramorius (Turin, 1884); L. Müller, with lexicon by Schaubach (Leipzig, 1888); Riese (Leipzig, 1885). Larger critical ed. by L. Müller (Leipzig, 1877). School edition, with English notes and vocabulary, by Schmitz; selections by Walford (London, 1873). See Hervieux, *Les Fabulistes Latins*, 2 vols. (Paris, 1884).

Phaenarēté. See SOCRATES.

Phaenias. See PHANIAS.

Phaestus (*Φαιστός*). (1) A town in the southern part of Crete, near Gortyna, twenty stadia from the sea, with a port-town Matala, said to have been built by Phaestus, son of Heracles (Pausan. ii. 6, 7). It was the birthplace of Epimenides. (2) A town of Thessaly.

Phaëthon (*Φαέθων*, "the shining"). A name that occurs in Homer as an epithet or surname of Helios (the Sun), and is used by later writers as a proper name for Helios; but it is more commonly known as the name of a son of Helios by the Oceanid Clymené, the wife of Merops. The genealogy of Phaëthon, however, is not the same in all writers, for some call him a son of Clymenus, the son of Helios by Meropé, or a son of Helios by Proté, or, lastly, a son of Helios by the nymph Rhodé or Rhodos. He received the significant name of Phaëthon from his father, and was afterwards presumptuous and ambitious enough to request his father to allow him, for one day, to drive the chariot of the sun across the heavens. Helios

Phaëthon. (Zannoni, *Gal. di Firenzi*, ser. 4. vol. ii.).

was induced, by the entreaties of his son and of Clymené, to yield; but the youth being too weak to check the horses, they rushed out of their usual track, and came so near the earth as almost to set it on fire. Thereupon Zeus killed him with a flash of lightning, and hurled him down into the river Eridanus. His sisters, the Heliades or Phaëthontiades, who had yoked the horses to the chariot, were metamorphosed into poplars, and their tears into amber. See Baugert, *De Fabula Phaëthontea* (Halle, 1885); and HELIADAE.

Phagres (*Φάγρης*). A town of the Pierians in Macedonia (Herod. vii. 112).

Phaininda (*φαινίνδα*). A Greek game of ball in which the players tried always to throw it to one who was not expecting it. It is described in Antiphon, *Incant.* 8.

Phalaecus (*Φάλαικος*). (1) A son of Onomarchus, succeeding his uncle Phaÿllus as leader of the Phocians in the Sacred War (B.C. 351). In order to secure his own safety, he concluded a treaty with Philip, by which he was allowed to withdraw into the Peloponnesus with a body of eight thousand mercenaries, leaving the unhappy Phocians to their fate, B.C. 346. Phalaecus now assumed the part of a mere leader of mercenary troops, in which character we find him engaging in various enterprises. He was slain at the siege of Cydonia in Crete. (2) A lyric and epigrammatic poet, from whom the hendecasyllabic metre, called *Phalaecian*, took its name. Five of his epigrams are preserved in the Greek Anthology. His date is uncertain, but he was probably one of the principal Alexandrian poets (Athen. p. 440).

Phalaesiae (*Φαλαισίαι*). A town in Arcadia, south of Megalopolis, on the road to Sparta, twenty stadia from the Laconian frontier.

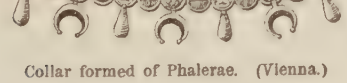
Phalanga (*φάλαγξ*). See PHALANGARII.

Phalangarii or **Palangarii**. Porters who carried burdens by means of a pole (*phalanga*) resting on their shoulders and supporting the load which was hung from it. Four, six, or eight phalangarii were often so employed for a single burden (Vitruv. x. 3, 7).

Phalangītes (*φαλαγγίτης*). A soldier of the Macedonian phalanx. See PHALANX.

Phalanna (*Φάλαννα*). A town of the Perrhaebi, in the Thessalian district of Hestiaeotis (Livy, xlii. 54).

Phalanthus (*Φάλανθος*). See TARENTUM.



Phalanx (*φάλαγξ*). The Greek term for the order of battle in which heavy infantry were drawn up, in an unbroken line, several ranks deep. (See EXERCITUS.) The most famous phalanx was that formed by King Philip, constituting the chief strength of the Macedonian army. It was first eight, afterwards twelve to sixteen deep. In the eight-rank formation, the lances (*σάρισσαι*) being eighteen feet long, those of all ranks could be presented to the enemy. They were grasped with the right hand at the butt, and, with the left, four feet from the butt end; hence, the lances of the first rank projected fourteen feet, while the spear-heads of the last rank were level with, or just in front of, the men in the front rank. In the deeper formation, and after the reduction of the length of the sarissa to fourteen feet, only the first five ranks presented their weapons to the front; the rest held them slanting over the shoulders of their comrades in front. The name phalanx, or *τάξις*,

was also applied to the separate regiments of the *φαλαγγῖται*. The line of each such phalanx was divided, from front to rear, into four chiliarchies (*χιλιαρχίαι*), each chiliarchy into four syntagmata (*συντάγματα*), each syntagma into four tetrarchies (*τετραρχίαι*). The importance of this formation lay in its power of resistance to hostile onset, and in the weight with which it fell, when impelled against the enemy's lines. Its weaknesses were want of mobility, the impossibility of changing front in face of the enemy, and unsuitability for close, hand-to-hand engagement. The Roman legions also fought in phalanx in the older times before Camillus. Under the emperors the phalanx was used, after about the second century A.D., in fighting against barbaric nations.

Phalăra (*τὰ Φάλαρα*). A town of Phthiotis in Thessaly; the harbour of Lamia.

Phalăris (*Φάλαρις*). The infamous tyrant of Agrigentum, notorious for his cruelty; he was killed in a popular revolt in B.C. 549. His reign probably commenced about B.C. 570, and is said to have lasted sixteen years. He was a native of Agrigentum, and appears to have been raised by his fellow-citizens to some high office in the State, of which he afterwards availed himself to assume a despotic authority. He was engaged in frequent wars with his neighbours, and extended his power and dominion on all sides, though more frequently by stratagem than open force. He perished by a sudden outbreak of the popular fury, in which it appears that Telemachus, the ancestor of Theron, must have borne a conspicuous part. No circumstance connected with Phalaris is more celebrated than the brazen bull in which he is said to have burned alive the victims of his cruelty, and of which we are told that he made the first experiment upon its inventor, Perillus. This latter story has much the air of an invention of later times, but it is mentioned as early as Pindar (*Pyth.* i. 185). His name is affixed to 148 Greek letters, in which he appears as a gentle ruler, and a patron of art and poetry; but, as proved in Bentley's *Dissertation* in 1699 (ed. Wagner, 1883), they are really a worthless forgery, probably by a sophist of the second century A.D. See BENTLEY, RICHARD.

Phalĕrae (*τὰ φάλαρα*). The terms for bosses of thin bronze or silver, or of gold-leaf impressed in relief. They were loaded at the back with pitch, and fitted to a plate of copper, being fastened to it with leather straps. They served sometimes as

Collar formed of Phalerae. (Vienna.)

decorations for the harness on the head or breast of horses (Livy, ix. 46), sometimes as signs of military rank, worn across the whole coat-of-mail (Juv. xvi. 60).

Phalērum (*Φάληρον*). The most easterly of the harbours of Athens, and the one chiefly used by the Athenians before the time of the Persian Wars. After the establishment by Themistocles of the harbours in the peninsula of Piraeus, Phalerum was not much used.

Phallus (*φαλλός*). The male organ of generation; but most often the figure of that organ used by both Greeks and Romans as symbolizing the generative and creative force of nature, and therefore displayed as a sort of charm to promote manly vigour, to prevent decay, and to avert the displeasure of those spirits on whom the fertility of men, animals, and plants was supposed to depend. It was especially the symbol of Priapus (q. v.), whose image was provided with an enormous phallus, and was set up in gardens both to drive away birds, like the modern scarecrow (Hor. *Sat.* i. 8), and to secure productiveness. The most primitive use of the phallus was devoid of any indecent suggestion, but was regarded as harmless and natural; yet this was not true in later times, when it was worshipped as a part of the obscene cults that sprang up, and was depicted with pornographic intention. Thus it was used as a sign for houses of prostitution (see MERETRIX), and decorated the walls of drinking-shops. By the lower classes, small images of the same kind were worn about the neck as amulets (see AMULETUM), to avert the evil eye, as is the case in Italy to-day, where the peasants carry them made of coral. Pastry was made in the same form, and also lamps. A similar superstitious custom obtains in some parts of India, and the ancient Egyptians associated the phallus with the worship of Osiris. Many specimens of the phallus of various materials are preserved in the National Museum at Naples. See Plut. *De Is. et Osir.*; Augustin. *De Civ. Dei*, vi. 7, 9; vii. 21, 24; and Dulaure, *Des Divinités Génératrices; ou du Culte du Phallus* (Paris, 1805).

Stone cut in Phallic Form. (Schliemann.)

Phalorīa (*Φαλώρεια*). A town of Histiaeotis in Thessaly (Livy, xxxii. 15).

Phanae (*Φάναι*). The southern point of the island of Chios, celebrated for its temple of Apollo and for its excellent wine (Strabo, p. 645).

Phanagorĭa (*Φαναγόρεια*). A Greek city on the Asiatic coast of the Cimmerian Bosporus, was chosen by the kings of Bosporus as their capital in Asia.

Phanaroea (*Φανάροια*). A very fertile plain in Pontus in Asia Minor, shut in by mountains (Strabo, p. 73).

Phanias (*Φανίας*) or **Phaenias** (*Φαινίας*). A native of Eresus in Lesbos, a pupil of Aristotle, and a countryman and friend of Theophrastus. He flourished about B.C. 336. He was a very prolific writer on philosophy, physics, and history. Only fragments of these works remain. He was also the author of a chronicle of his native city, en-

titled *Πρυτάνεις Ἐρέσιοι*. This is supposed to have been one of the principal authorities followed in the so-called Parian Chronicle (q. v.).

Phanŏcles (*Φανοκλῆς*). A Greek elegiac poet of the Alexandrine Period. He celebrated in erotic elegies (*Ἔρωτες ἢ Καλοί*) the loves of beautiful boys. A considerable fragment remaining describes the love of Orpheus for Calaïs, the beautiful son of Boreas, and his death ensuing therefrom at the hands of the Thracian women. The language is simple and spirited, and the versification melodious. The fragments have been edited by Bach (Halle, 1829), and also by Schneidewin in his *Delectus Poesis Graecae*, p. 158 foll.

Phanodēmus (*Φανόδημος*). The author of a work on the early legends of Attica (Dionys. i. 61). See ATTHIS.

Phantăsus. See SOMNIUM.

Phaon (*Φάων*). A boatman at Mitylené who is said to have been originally an ugly old man; but in consequence of his carrying Aphrodité across the sea without accepting payment, the goddess gave him youth and beauty. After this Sappho is said to have fallen in love with him, and to have leaped from the Leucadian rock, when he slighted her. See SAPPHO.

Pharae (*Φαραί* or *Φῆραι*). (1) One of the twelve Achaean cities in the western part of Achaea. See ACHAEAN LEAGUE. (2) A town of Messenia mentioned as early as Homer (*Il.* v. 543). (3) A town of Laconia in the valley of the Eurotas.

Pharĕtra (*φαρέτρα*). The quiver. See ARCUS.

Pharis (*Φᾶρις*). The same as PHARAE (3).

Pharmacōn Graphé (*φαρμάκων γραφή*). An indictment in Attic law for poisoning with criminal intent (*πρόνοια*), whether the poison was given to cause death or to aid in some felonious purpose. The punishment was death (Aelian, *V. H.* v. 18).

Pharmacopōla (*φαρμακοπώλης*). A vender of medicines (*φάρμακα*), described by Cato and Cicero as frequenting the market-places and haranguing the people on the merits of their nostrums like our modern travelling quacks. See Cato *ap.* Gell. i. 5, 3, and Cic. *Pro Cluent.* 14, with Hor. *Sat.* i. 2, 1.

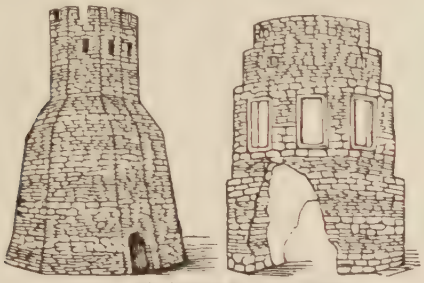
Pharmacūsa (*Φαρμακοῦσα*). An island off the coast of Miletus, where Iulius Caesar was taken prisoner by pirates. (See Plutarch, *Caes.* 1 and 2.) Here, too, King Attalus died.

Pharmacussae (*Φαρμακοῦσσαι*). Two small islands off the coast of Attica near Salamis. On one of them was shown the tomb of Circé.

Pharnabāzus (*Φαρνάβαζος*). The son of Pharnaces, succeeding his father as satrap of the Persian provinces near the Hellespont. In B.C. 411 and the following years he rendered active assistance to the Lacedaemonians in their war against the Athenians. When Dercyllidas and, subsequently, Agesilaüs passed over into Asia to protect Asiatic Greeks against the Persian power, we find Pharnabazus connecting himself with Conon to resist the Lacedaemonians. In 374 Pharnabazus invaded Egypt in conjunction with Iphicrates; but the expedition failed, chiefly through the dilatory proceedings and the excessive caution of Pharnabazus. The character of Pharnabazus is eminently distinguished by generosity and openness. He has been charged, it is true, with the murder of Alcibiades; but the latter probably fell by the hands of others. See ALCIBIADES.

Pharnăces (*Φαρνάκης*). (1) A king of Pontus, the son of Mithridates IV., whom he succeeded on the throne, about B.C. 190. He carried on war for some years with Eumenes, king of Pergamum, and Ariarathes, king of Cappadocia, but was obliged to conclude with them a disadvantageous peace in 179. The year of his death is uncertain; it is placed by conjecture in 156. (2) King of Pontus, or, more properly, of the Bosporus, was the son of Mithridates the Great, whom he compelled to put an end to his life in 63. (See MITHRIDATES VI.) After the death of his father Pharnaces hastened to make his submission to Pompey, who granted him the kingdom of the Bosporus with the titles of friend and ally of the Roman people. In the Civil War between Caesar and Pompey, Pharnaces seized the opportunity to reinstate himself in his father's dominions, and made himself master of the whole of Colchis and the lesser Armenia. He defeated Domitius Calvinus, the lieutenant of Caesar in Asia, but was shortly afterwards defeated by Caesar himself in a decisive action near Zela (B.C. 47). The battle was gained with such ease by Caesar that he informed the Senate of his victory by the words, *Veni, vedi, veci.* In the course of the same year Pharnaces was again defeated, and was slain by Asander, one of his generals, who hoped to obtain his master's kingdom. See ASANDER.

Pharnacia (*Φαρνακία*). A flourishing city of Asia Minor, on the coast of Pontus, built near or actually on the site of Cerasus, probably by Pharnaces, the grandfather of Mithridates the Great.



Pharsalia (*Φαρσαλία*). (1) See PHARSALUS. (2) The title of an epic poem by the Roman writer Lucan. See LUCANUS.

Pharsālus (*Φάρσαλος*). A town in Thessaly, in the district Thessaliotis, west of the river Enipeus. Near Pharsalus was fought the decisive battle between Caesar and Pompey, B.C. 48, which made Caesar master of the Roman world. It is frequently called the battle of Pharsalia, which was the name of the territory of the town.

Pharus (*Φάρος*). (1) A small island off the coast of Egypt. When Alexander the Great planned the city of Alexandria, on the coast opposite to Pharus, he caused the island to be united to the coast by a mole seven stadia in length, thus forming the two harbours of the city. (See ALEXANDRIA.) The island was chiefly famous for the lofty tower built upon it by Ptolemy II. for a light-house, whence the name of *pharus* was applied to all similar structures. (2) An island of the Adriatic, off the coast of Dalmatia, east of Issa.

Pharus (*φάρος*). The light-house on the eastern summit of the small island of the same name in front of the harbour of Alexandria. It was a tower of white marble, built for Ptolemy Philadelphus by Sostratus of Cnidus, in B.C. 270, at a cost of 800 silver talents ($940,000), and accounted by the ancients one of the wonders of the world. It rose pyramidally in a number of decreasing stories of different forms (the lowest square, the next octagonal, the third circular). It was adorned with galleries and pillars to a considerable height. It was still standing, in great part, about A.D. 1300 (Caes. *B. C.* iii. 112; Pliny, *H. N.* xxxvi. 83). In later times all the light-houses were called after

it, and large numbers of these were built by the Romans round Italy, and on all the coasts of the Empire, the best known being those at Brundisium, Capreae, Centum Cellae (Cività Vecchia), Ostia, and Ravenna. A Roman light-house still remains in England, and is now within the limits of Dover Castle. It is represented in the first figure given below. The tower at Ravenna approached the

Roman Light houses in Great Britain.

Alexandrian in magnificence. Light-ships were also used by the ancients.

Phasēlis (*Φασηλίς*). A town on the coast of Lycia, near the borders of Pamphylia, founded by Dorian colonists. It became afterwards the headquarters of the pirates who infested the southern coasts of Asia Minor, and was therefore destroyed by P. Servilius Isauricus (Eutrop. vi. 3). Phaselis is said to have been the place at which light, quick vessels called *phaseli* were first built (Juv. xv. 127).

Phasis (*Φᾶσις*). (1) A celebrated river of Colchis, flowing into the eastern end of the Pontus Euxinus (Black Sea). It was famous in connection with the story of the Argonautic expedition. Hence Medea is called *Phasias*, and the adjective *Phasiacus* is used in the sense of *Colchicus*. (See ARGONAUTAE.) It has given name to the pheasant (*phasianus*), which is said to have been first brought to Greece from its banks. (2) Near the mouth of the river, on its southern side, was a town of the same name, founded by the Milesians.

Phasis (*φάσις*). A Greek legal term used to denote any kind of information, or, more strictly, one of the various methods by which public offenders at Athens might be prosecuted. Its peculiarity was its purely public nature, this offence being regarded as wholly affecting the State. The prosecutor received half the penalty (*τίμημα*). The offences subject to phasis are enumerated by Pollux (viii. 47), and refer to the infraction of mining laws, customs regulations, etc.

Phavorīnus. See FAVORINUS.

Phaÿllus (*Φάϋλλος*). (1) A celebrated athlete of Crotona, who had thrice gained the victory at the Pythian Games. He fought at the battle of Salamis, B.C. 480, in a ship fitted out at his own expense (Herod. viii. 47). (2) A Phocian, brother of Onomarchus, whom he succeeded as general of the Phocians in the Sacred War, B.C. 352. He died in the following year, after a long and painful illness. Phaÿllus made use of the sacred treasures of Delphi with a far more lavish hand than either of his brothers, and he is accused of bestowing the consecrated ornaments upon his wife and mistresses (Diod. Sic. xvi. 35–38, 61).

Phazania. Now Fezzan. A district of Libya Interior. See GARAMANTES.

Phegeus (*Φηγεύς*). A king of Psophis in Arcadia. He was the father of Arsinoë, Pronoïs, Agenor, Temenus, and Axion. He purified Alcmaeon (q. v.) after he had slain his mother, and gave him Arsinoë (or Alphesiboea) in marriage. Alcmaeon presented her with the necklace and peplus of Harmonia; but wishing to get them back for his new wife, Callirrhoë, he was slain by the sons of Phegeus at their father's bidding. The sons of Alcmaeon then put Phegeus to death (Pausan. vi. 17, 4; viii. 24, 4; ix. 41, 2; Apollod. iii. 7, 6).

Phellus (*Φελλός*). A city of Lycia (Strabo, p. 666).

Phemius (*Φήμιος*). A celebrated minstrel of Ithaca (*Odyss.* i. 54).

Phemonoë (*Φημονόη*). A mythical Greek poet, said to antedate Homer (Pausan. x. 5, 7; Strabo, p. 419).

Phenăcé (*φενάκη*). See COMA.

Pheneus (*Φένεος*). An ancient town in the northeast of Arcadia, at the foot of Mount Cyllené.

Pherae (*Φεραί*). An ancient town of Thessaly in the Pelasgian plain, ninety stadia from its port-town Pagasae, on the Pagasaean Gulf. It is celebrated in mythology as the residence of Admetus, and in history on account of its tyrants, who extended their power over nearly the whole of Thessaly. Of these the most powerful was Iason, who was made Tagus, or military chief, of Thessaly about B.C. 374.

Pherecrātes (*Φερεκράτης*). A native of Athens. He was one of the best poets of the Old Comedy, contemporary with the comic poets Cratinus, Crates, Eupolis, Plato, and Aristophanes, being somewhat younger than the first two, and somewhat older than the others. He gained his first victory B.C. 438, and imitated the style of Crates, whose actor he had been. Crates and Pherecrates very much modified the coarse satire and vituperation of which this sort of poetry had previously been the vehicle, and constructed their comedies on the basis of a regular plot and with more dramatic action. Pherecrates did not, however, abstain altogether from personal satire, for we see by the fragments of his plays that he attacked Alcibiades, the tragic poet Melanthius, and others. He invented a new metre, which was named, after him, the *Pherecratean*. The system of the verse is $\overset{\prime}{-}\ -\ \overset{\prime}{-}\ \overset{\prime}{\smile}\ \smile\ \overset{\prime}{-}\ -$, which may be best explained as a choriambus, with a spondee for its base and a long syllable for its termination. The metre is very frequent in the choruses of the Greek tragedies and in Horace. The extant titles of the plays of Pherecrates are eighteen, and the fragments are preserved by Meineke, *Frag. Com. Graec.*

Pherecȳdes (*Φερεκύδης*). (1) A Greek philosopher, of the isle of Syros, about B.C. 600–550; said to have been the first writer of prose. He wrote in the Ionic dialect of the origin of the world and the gods (*Cosmogonia* and *Theogonia*). The poetic element seems to have held a predominant place in his prose. He is also said to have been the first to maintain the doctrine of the transmigration of souls, which his pupil Pythagoras borrowed from him. (2) One of the best known of the Greek logographi (q. v.), and a contemporary of Hella-

nicus and Herodotus. His chief work was a mythological history in ten books, beginning with the genealogy of the gods, and passing on to an account of the Heroic Age and of the origins of the great families of his own time. Fragments edited by Sturz (Leipzig, 1824), and Müller (Paris, 1850).

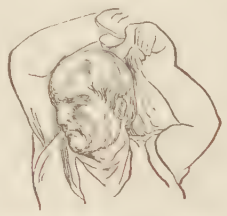
Pheres (*Φέρης*). (1) The son of Cretheus and Tyro and brother of Aeson and Amythaon; he was married to Periclymené, by whom he became the father of Admetus, Lycurgus, Idomené, and Periapis. He was believed to have founded the town of Pherae in Thessaly. (2) Son of Iason and Medea. (3) A follower of Pallas, who fought on the side of Aeneas against Turnus, and was slain by Halesus.

Pheretiädes (*Φερητιάδης*). A son of Pheres; especially used as the name of Admetus (*Il.* ii. 763).

Pheretima (*Φερετίμα*). The wife of Battus III. and mother of Arcesilaüs III., successive kings of Cyrené. After the murder of her son by the Barcaeans, Pheretima fled into Egypt to Aryandes, the viceroy of Darius Hystaspis; and representing that the death of Arcesilaüs had been the consequence of his submission to the Persians, she induced him to avenge it. On the capture of Barca by the Persian army, she caused those who had the principal share in her son's murder to be impaled, and ordered the breasts of their wives to be cut off. Pheretima then returned to Egypt, where she soon after died of a painful and loathsome disease (Herod. iv. 162, 200–205).

Pherné (*φερνή*). See MATRIMONIUM.

Pheron or **Pheros** (*Φέρων, Φερῶς*). A king of Egypt and son of Sesostris, Ramses II. He was visited with blindness, an hereditary complaint, though, according to the legend preserved in Herodotus, it was a punishment for his presumptuous impiety in throwing a spear into the waters of the Nile when it had overflowed the fields. By attending to the directions of an oracle he was cured; and he dedicated an obelisk at Heliopolis in gratitude for his recovery (Herod. ii. 111). Pliny tells us that this obelisk, together with another also made by him but broken in its removal, was to be seen at Rome in the Circus of Caligula and Nero at the foot of the Vatican Hill. Pliny (*H. N.* xxxvi. 74) calls the Pheron of Herodotus Nuncoreus or Nencoreus, a name corrupted, perhaps, from Menophtheus (Egyptian, Meneptah). Diodorus gives him his father's name, Sesoosis. Pheron is by some identified with the Pharaoh of the Book of Exodus.



Phiälé (*φιάλη*). The flat drinking-cup of the Greeks. See PATERA; VAS.

Phidias (*Φειδίας*). The greatest sculptor and statuary of Greece. Of his personal history we possess but few details. He was a native of Athens, was the son of Charmides, and was born about the time of the battle of Marathon, B.C. 490. He began to work as a statuary about 464, and one of his first great works was the statue of Athené Promachos, which may be assigned to about 460. This work must have established his reputation; but it was surpassed by the splendid productions of his own hand, and of others working under his direction, during the administration of Pericles. That statesman not only chose Phidias to execute the principal statues which were to be set up, but gave him the oversight of all the works of art which were to be erected.

Of these works the chief were the Propylaea (q. v.) of the Acropolis, and, above all, the temple of Athené on the Acropolis, called the Parthenon, on which, as the central point of the Athenian polity and religion, the highest efforts of the best of artists were employed. There can be no doubt that the sculptured ornaments of this temple, the remains of which form one of the glories of the British Museum (see ELGIN MARBLES), were executed under the immediate superintendence of Phidias; but the colossal statue of the divinity made of ivory and gold, which was enclosed within that magnificent shrine, was the work of the artist's own hand. The statue was dedicated in 438. Having finished his great work at Athens, he went to Elis and Olympia, which he was now invited to adorn. He was there engaged for about four or five years from 437 to 434 or 433, during which time he finished his statue of the Olympian Zeus, the greatest of all his works.

On his return to Athens he fell a victim to the jealousy against his great patron, Pericles, which was then at its height. The party opposed to Pericles, thinking him too powerful to be overthrown by a direct attack, aimed at him in the persons of his most cherished friends — Phidias, Anaxagoras, and Aspasia. (See PERICLES.) Phidias was first accused of peculation; but this charge was at once refuted, as, by the advice of Pericles, the gold had been affixed to the statue of Athené in such a manner that it could be removed and the weight of it examined. The accusers then charged Phidias with impiety, in having introduced into the battle of the Amazons, on the shield of the goddess, his own likeness and that of Pericles. On this latter charge Phidias was thrown into prison, where he died from disease, in 432.

Of the numerous works executed by Phidias for the Athenians the most celebrated was the statue of Athené in the Parthenon, to which reference has already been made. This statue was of that kind of work which the Greeks called "chryselephantine" — that is, the statue was formed of plates of ivory laid upon a core of wood or stone for the flesh parts, while the drapery and other ornaments were of solid gold. The statue stood in the foremost and larger chamber of the temple (*πρόδρομος*). It represented the goddess standing, clothed with a tunic reaching to the ankles, with her spear in her left hand and an image of Victory four cubits high in her right: she was girded with the aegis, and had a helmet on her head, and her shield rested on the ground by her side. The height of the statue was twenty-six cubits, or nearly forty feet, including the base. The eyes were of a kind of marble, nearly resembling ivory, perhaps painted to imitate the iris and pupil; there is no sufficient authority for the statement, which is frequently made, that they were of precious stones. The weight of the gold upon the

Head supposed to be that of Phidias. (From the Strangford Shield, British Museum.)

statue, which, as above stated, was removable at pleasure, is said by Thucydides to have been forty talents, or about $470,000 (ii. 13).

Still more celebrated than his statue of Athené was the colossal ivory and gold statue of Zeus, which Phidias made for the great temple of this god, in the Altis or sacred grove at Olympia. (See OLYMPIA.) This statue was regarded as the masterpiece not only of Phidias, but of the whole range of Grecian art, and was looked upon not so much as a statue, but rather as if it were the actual manifestation of the present deity. It was placed in the *πρόδρομος*, or front chamber, of the temple directly facing the entrance. It was only visible, however, on great festivals; at other times it was concealed by a magnificent curtain. The god was represented as seated on a throne of cedar-wood, adorned with gold, ivory, ebony, stones, and colours, crowned with a wreath of olive, holding in his right hand an ivory and gold statue of Victory, and in his left hand supporting a sceptre, which was ornamented with all sorts of metals, and surmounted by an eagle. The throne was brilliant both with gold and stones and with ebony and ivory, and was ornamented with figures both painted and sculptured. The statue almost reached to the roof, which was about sixty feet in height. The idea which Phidias essayed to embody in this, his greatest work, was that of the supreme deity of the Hellenic nation no longer engaged in conflicts with the Titans and the Giants, but having laid aside his thunderbolt, and enthroned as a conqueror, in perfect majesty and repose, ruling with a nod the subject world. It is related that when Phidias was asked what model he meant to follow in making his statue, he replied that of Homer (*Il.* i. 528–530). This passage has been imitated by Milton, whose paraphrase gives no small aid to the comprehension of the idea (*Paradise Lost*, iii. 135–137):

> "Thus while God spake, ambrosial fragrance fill'd
> All heaven, and in the blessed spirits elect
> Sense of new joy ineffable diffused."

The statue was removed by the emperor Theodosius I. to Constantinople, where it was destroyed by a fire in A.D. 475. In 1888 a red vase was exhumed at Tanagra, bearing a signature which archæologists believe to be that of Phidias.

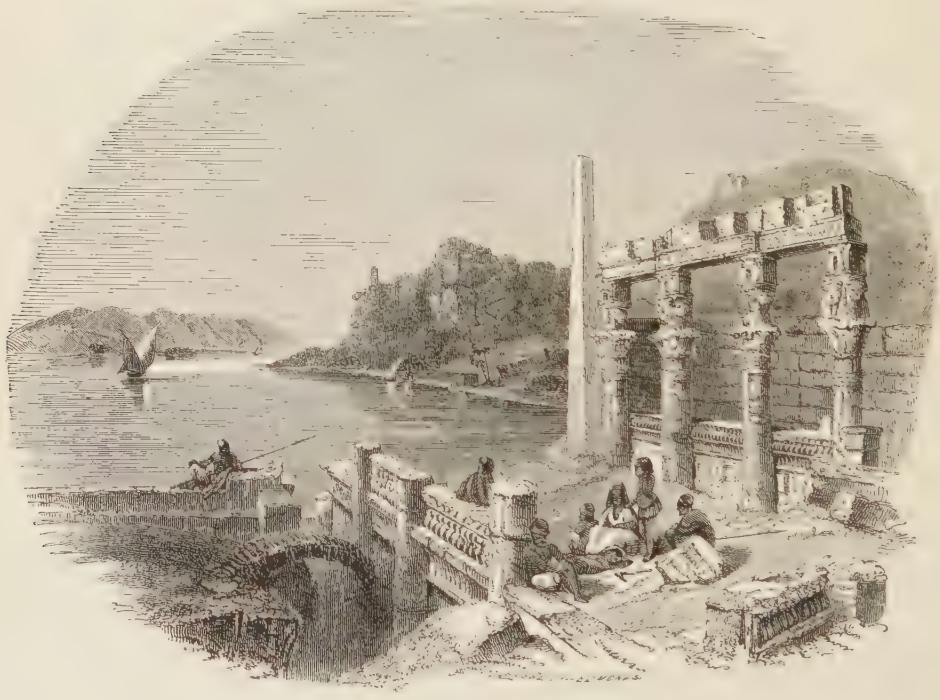
The distinguishing character of the art of Phidias was ideal sublimity, especially in the representation of divinities and of subjects connected with their worship. While on the one hand he freed himself from the stiff and unnatural forms which, by a sort of religious precedent, had fettered his predecessors of the archaic or hieratic school, he never, on the other hand, descended to the exact imitation of any human model, however beautiful; he never represented that distorted action, or expressed that vehement passion, which lie beyond the limits of repose; nor did he ever approach to that almost meretricious grace, by which some of his greatest followers, if they did not corrupt the art themselves, gave the occasion for its corruption in the hands of their less gifted and spiritual imitators. See Murray, *Greek Sculpture* (London, 1880); Waldstein, *The Art of Pheidias* (Cambridge, 1885); Collignon, *Phidias* (Paris, 1886); and the article STATUARIA ARS.

Phidippĭdes or **Philippĭdes** (*Φειδιππίδης*, *Φιλιππίδης*). A courier was sent by the Athenians to Sparta in B.C. 490 to ask for aid against the Persians, and arrived there on the second day from his leaving Athens. On his return to Athens he related that on his way to Sparta he had fallen in with Pan on Mount Parthenium, near Tegea, and that the god had bid him ask the Athenians why they paid him no worship, though he had been hitherto their friend, and ever would be so. In consequence of this revelation they dedicated a temple to Pan after the battle of Marathon, and honoured him thenceforth with annual sacrifices and a torch-race (Herod. vi. 105; Pausan. i. 28, 4).

Phiditia (*τὰ φειδίτια*). The Spartan name for the public meals. See SYSSITIA.

Phīdon (*Φείδων*). (1) The son of Aristodamidas, and king of Argos. He restored the supremacy of Argos over Cleonae, Phlius, Sicyon, Epidaurus, Troezen, and Aegina, and aimed at extending his dominions over the greater part of the Peloponnesus. The Pisans invited him (B.C. 748) to aid them in excluding the Eleans from their usurped presidency at the Olympic Games, and to celebrate them jointly with themselves. The invitation quite fell in with the ambitious pretensions of Phidon, who succeeded in dispossessing the Eleans and celebrating the games along with the Pisans; but the Eleans not long after defeated him, with the aid of Sparta, and recovered their privilege. Thus apparently fell the power of Phidon; but as to the details of the struggle we have no information. The most memorable act of Phidon was his introduction of copper and silver coinage, and a new scale of weights and measures, which, through his influence, became prevalent in the Peloponnesus, and ultimately throughout the greater portion of Greece. The scale in question was known by the name of the Aeginetan, and it is usually supposed that the coinage of Phidon was struck in Aegina; but there seems good reason for believing that what Phidon did was done in Argos, and nowhere else—that "Phidonian measures" probably did not come to bear the specific name of Aeginetan until there was another scale in vogue, the Euboic, from which to distinguish them—and that both the epithets were derived, not from the place where the scale first originated, but from the people whose commercial activity tended to make them most generally known—in the one case the Aeginetans, in the other case the inhabitants of Chalcis and Eretria. (2) An ancient Corinthian legislator of uncertain date.

Phigalia (*Φιγαλία*). A town in the southwest corner of Arcadia, on the frontiers of Messenia and Elis, which owes its celebrity in modern times to the remains of a splendid temple in its territory (i. e. at Bassae, some four miles distant), built in the time of Pericles. The sculptures, in alto-relievo, which ornamented the frieze in the interior, are now preserved in the British Museum. They represent the combat of the Centaurs and the Lapithae, and of the Greeks and the Amazons. The temple is, next to the Theseum at Athens, the most completely preserved architectural specimen of classic Greek art. It was built by Ictinus, one of the architects of the Parthenon, of gray stone and white marble. It was originally 125½ feet long and 48 feet wide. See Cockerell, *Temples of Aegina and Bassae* (1860).



Phila (*Φίλα*). The daughter of Antipater, regent of Macedonia, and celebrated as one of the noblest and most virtuous women of the age in which she

lived. She was married to Craterus in B.C. 322, and after the death of Craterus, who survived his marriage with her scarcely a year, she was again married to the young Demetrius, the son of Antigonus. She shared with her husband his various vicissitudes of fortune; but when he was expelled from Macedonia in B.C. 287, she put an end to her own life at Cassandrea, unable to bear this unexpected reverse. She left two children by Demetrius—Antigonus, surnamed Gonatas, who became king of Macedonia; and a daughter, Stratonicé, married first to Seleucus, and afterwards to his son Antiochus (Plut. *Demetr.* 14–45; Diod. xx. 93).

Philadelphia (*Φιλαδελφία*). (1) A city of Lydia, at the foot of Mount Tmolus, built by Attalus Philadelphus, king of Pergamum. It was an early seat of Christianity, and its Church is one of the seven to which the Apocalypse of St. John is addressed. (2) A city of Cilicia Aspera, on the Calycadnus, above Aphrodisias.

Philadelphus. See PTOLEMAEUS II.

Philae (*Φιλαί*; Egypt. *Pālek*). An island in the Nile, near Assouan, just below the first cataract, on the southern boundary of the country towards Aethiopia. It was inhabited by Egyptians and Ethiopians jointly, and was covered with magnificent temples, whose splendid ruins still remain,

View of Philae.

so that the natives style it Jesiret-el-Birbeh, or "Temple Island." The ancient Egyptians regarded it as the birthplace of Isis and Osiris.

Philae is a granite rock about 1200 feet in length and 460 feet in breadth, fringed with rich verdure. The temples mentioned above are in the main of the Graeco-Roman period. The great temple of Isis was built by Ptolemy Epiphanes and his successors, though the oldest part (the great propylaeum or gateway) bears the name of Nectanebes II. (about B.C. 360). To the east of the island is a roofless house, popularly called Pharaoh's Bed, 63 feet in length and 48 in breadth. It has fourteen columns with diversified capitals. See Bénédicte, *Descr. et Hist. de Philae* (Paris, 1893).

Philaeni (*Φίλαινοι*). Two Carthaginian brothers, of whom the following story is told: A contest had arisen between the Carthaginians and Cyreneans respecting the point where their respective territories met, and this was the more difficult to be determined, since the country on the borders of the two States was a sandy desert, and without anything that might serve as a common landmark. It was agreed at last that two individuals should set out at the same time from Carthage and Cyrené respectively, and that the spot where they might meet should be regarded as the common boundary of the two communities. The parties accordingly set out, the two Philaeni having been selected by the Carthaginians for this purpose; but the two Cyreneans travelled more slowly than their Carthaginian antagonists, and only met the Philaeni after the latter had advanced a considerable distance into the disputed territory. The Cyreneans thereupon accused the Philaeni of unfairness, and of having started before the appointed time. The Philaeni, on their part, offered to do anything to show that they had acted fairly, and the two Cyreneans then gave them their choice, either to be buried alive on the spot where they were standing, or else to allow them (the Cyreneans) to advance as far as they pleased into the disputed territory, and there be buried alive on their part. The Philaeni accepted the former part of the offer, and were accordingly entombed. The Carthaginians erected two altars on the spot, which were thence-

forth regarded as the limits of their territory in this direction (Sall. *Iug.* 19, 79; cf. Strabo, pp. 171, 836). These altars stood in the innermost bend of the Syrtis Maior, and not, as Sallust erroneously states, to the west of both the Syrtes. The story of the Philaeni, moreover, as given by the Roman historian, seems to wear a doubtful appearance, from the circumstance of Cyrenê's being so much nearer the point in question than Carthage.

Philammon (*Φιλάμμων*). A mythical poet and musician of the ante-Homeric period, was said to have been the son of Apollo and the nymph Chioné, or Philonis, or Leuconoë. By the nymph Agriopé, who dwelt on Parnassus, he became the father of Thamyris and Eumolpus. He is closely associated with the worship of Apollo at Delphi and with the music of the cithara. He is said to have established the choruses of girls, who, in the Delphian worship of Apollo, sang hymns in which they celebrated the births of Latona, Artemis, and Apollo. Pausanias relates that, in the most ancient musical contests at Delphi, the first who conquered was Chrysothemis of Crete, the second was Philammon, and the next after him his son Thamyris.

Philargyrius Iunius, or **Philargўrus**, or **Iunilius Flagrius**. An early commentator upon Vergil, who wrote upon the *Bucolics* and *Georgics*. His observations are less elaborate than those of Servius, and have descended to us in a mutilated condition. The period when he flourished is altogether uncertain. They are printed in the edition of Vergil by Burmann and in the edition of the commentaries of Servius by Lion (Göttingen, 1825–26).

Phileas (*Φιλέας*). (1) A Greek geographer of Athens, whose time cannot be determined with certainty, but who probably belonged to the older period of Athenian literature. He was the author of a *Periplus*, which was divided into two parts—one on Asia and the other on Europe. (2) Of Tarentum, having been sent as ambassador to Rome, he persuaded his countrymen, who were there detained as hostages, to make their escape, which they effected by his aid; but, having been overtaken at Terracina, they were brought back to Rome, scourged, and thrown from the Tarpeian Rock.

Philelphus. The Latinized name of Francesco Filelfo (1398–1481), an Italian scholar of the time of the Renaissance, known as an itinerant teacher and collector of manuscripts. See Symonds, *The Renaissance in Italy*, ii. pp. 267–289; and the article RENAISSANCE.

Philēmon (*Φιλήμων*) and **Baucis** (*Βαυκις*). An old married couple in Phrygia, the Darby and Joan of classical antiquity. When Zeus and Hermes were wandering through the country in human form, and found no shelter with the richer inhabitants, the aged pair received them hospitably. The gods therefore, while destroying all the rest of the neighbourhood by floods in punishment for the inhospitable treatment they had met with, changed their miserable cottage into a magnificent temple. Here the two held the priestly office for the rest of their life, and finally, on their prayer that they might not be separated by death, were both at the same moment changed into trees (Ovid, *Met.* viii. 611–724).

Philēmon (*Φιλήμων*). A Greek poet of the New Attic Comedy, of Soli in Cilicia, or of Syracuse, born about B.C. 362. He came early to Athens, and first appeared as an author in the year 330. He must have enjoyed remarkable popularity, for he repeatedly won victories over his younger contemporary and rival Menander, whose delicate wit was apparently less to the taste of the Athenians of the time than Philemon's more showy comedy. To later times his successes over Menander were so unintelligible as to be ascribed to the influence of malice and intrigue. Except a short sojourn in Egypt with King Ptolemy Philadelphus, he passed his life at Athens. He there died, nearly a hundred years old, but with mental vigour unimpaired, in the year 262, according to the story, at the moment of his being crowned on the stage. Of his ninety-seven works, fifty-seven are known to us by titles and fragments, and two are preserved in the Latin version of Plautus (*Mercator* and *Trinummus*). The remains of Philemon are published in Meineke's collection, and by Bach (Halle, 1829).

Philes, MANUEL (*Μανουὴλ ὁ Φιλῆς*). A Byzantine poet, and a native of Ephesus, was born about A.D. 1275, and died about 1340. His poem, *De Animalium Proprietate*, chiefly derived from Aelian, is edited with a revised text by Lehrs and Dübner in the *Bucolici Graeci*, forming part of Didot's *Bibliotheca Graeca* (Paris, 1846), and his other poems on various subjects by Wernsdorf (Leip. 1768).

Philetaerus (*Φιλέταιρος*). The founder of the kingdom of Pergamum, a native of Paphlagonia (Strabo, pp. 543, 623). He had served in the army of Antigonus and later in that of Lysimachus, who put him in charge of the treasure stored at Pergamum. Philetaerus, shifting for himself, declared in favour of Seleucus (q. v.), but after the death of the latter (B.C. 280) practically established his own independence, and on his death (B.C. 263) left the government to his nephew Eumenes (Lucian, *Macrob.* 12).

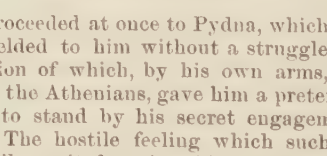
Philētas (*Φιλητᾶς*). A Greek grammarian and poet, son of Telephus, of the island of Cos. He lived in the second half of the fourth century, latterly as tutor to Ptolemy II. (Philadelphus) in Alexandria. Besides epics he composed elegies on his favourite Battis, which were highly prized at Alexandria and Rome, and were imitated by Propertius (iv. 1, 1). We possess only scanty fragments of these elegies, published by Bach, with those of Hermesianax and Phanocles (Halle, 1829). See Couat, *La Poésie Alexandrine* (Paris, 1882).

Phileus. See PYTHIUS.

Philīnus (*Φιλίνος*). (1) An Attic orator, the contemporary of Demosthenes and Lycurgus. (2) A Greek physician, the reputed founder of the Empirical School of medicine, in the third century B.C. See MEDICINA.

Philippēus (*Φιλίππειος*) and **Philippēum**. A gold stater struck by Philip II. of Macedonia between B.C. 359 and 336. Its value was 20 drachmae or about $4. It is represented on p. 1230.

Philippi (*Φίλιπποι*). A city of Macedonia, now Filibah. It was situated on the river Gangas or Gangites, and was founded by Philip on the site of an older town, Crenides (*Κρηνίδες*). In the vicinity were productive gold mines. Here Octavi-



anus and Antony won a decisive victory over Brutus and Cassius in B.C. 42, and here the Apostle Paul first preached in Europe, in A.D. 53. The seaport of Philippi was Datus or Datum on the Strymonic Gulf.

Philippĭdes (*Φιλιππίδης*). (1) See PHIDIPPIDES. (2) An Athenian, one of the six great poets of the New Comedy, though his personal satire recalled the freedom of the Old Comedy (Plut. *Demetr.* 12, 36). He wrote about B.C. 323. The number of his plays is said to have been forty-five (Suidas, s. h. v.). Gellius (iii. 15) says that he died of joy over the unexpected success of one of his comedies.

Philippopŏlis (*Φιλιππόπολις*). Now Philippopoli; an important town in Thrace, founded by Philip of Macedon, was situated in a large plain, southeast of the Hebrus, on a hill with three summits, whence it was sometimes called Trimontium. Under the Roman Empire it was the capital of the province of Thracia.

Philippus (*Φίλιππος*). I. MINOR HISTORICAL PERSONS. (1) The son of Alexander I. of Macedonia, and brother of Perdiccas II., against whom he rebelled in conjunction with Derdas. The rebels were aided by the Athenians, B.C. 432. (2) The son of Herod the Great, king of Judea, by his wife Cleopatra, was appointed by his father's will tetrarch of Ituraea and Trachonitis, the sovereignty of which was confirmed to him by the decision of Augustus. He continued to reign over the dominions thus intrusted to his charge for thirty-seven years (B.C. 4–A.D. 34). He founded the city of Caesarea, surnamed Paneas, but more commonly known as Caesarea Philippi, near the sources of the Jordan, which he named in honour of Augustus. (3) A son of Herod the Great, by Mariamné, whose proper name was Herodes Philippus. He must not be confounded with the preceding Philip. He was the first husband of Herodias, who afterwards divorced him, contrary to the Jewish law, and married his half-brother, Herod Antipas. It is Herod Philip, and not the preceding, who is meant by the Evangelists (Matt. xiv. 3; Mark, vi. 17; Luke, iii. 19), when they speak of Philip, the brother of Herod.

II. KINGS OF MACEDONIA. (1) PHILIPPUS I., son of Argaeus, was the third king, according to Herodotus and Thucydides, who, not reckoning Caranus and his two immediate successors (Cœnus and Thurimas or Turimmas), look upon Perdiccas I. as the founder of the monarchy. Philip left a son, named Aëropus, who succeeded him. (2) PHILIPPUS II., the youngest son of Amyntas II. and Eurydicé, reigned B.C. 359–336. He was born in 382, and was brought up at Thebes, whither he had been carried as a hostage by Pelopidas, and where he received a most careful education. Upon the death of his brother Perdiccas III., who was slain in battle against the Illyrians, Philip obtained the government of Macedonia, at first merely as regent and guardian to his infant nephew Amyntas; but at the end of a few months he was enabled to set aside the claims of the young prince, and to assume for himself the title of king. Macedonia was beset by dangers on every side. Its territory was ravaged by the Illyrians on the west, and the Paeonians on the north, while Pausanias and Argaeus took advantage of the crisis to put forward their pretensions to the throne. Philip was fully equal to the emergency. By his tact and eloquence he sustained the failing spirits of the Macedonians, while at the same time he introduced among them a stricter military discipline, and organized their army on the plan of the phalanx. He first turned his army against Argaeus, the most formidable of the pretenders, since he was supported by the Athenians. He defeated Argaeus in battle, and then concluded a peace with the Athenians. He next attacked the Paeonians, whom he reduced to subjection, and immediately afterwards defeated the Illyrians in a decisive battle, and compelled them to accept a peace, by which they lost a portion of their territory. Thus in the short period of one year, and at the age of twenty-four, had Philip delivered himself from his dangerous position, and provided for the security of his kingdom. But energy and talents such as his were not satisfied with mere security, and henceforth his views were directed not to defence, but to aggrandizement. His first efforts were directed to obtain possession of the various Greek cities upon the Macedonian coast. Soon after his accession he had withdrawn his garrison from Amphipolis, and had declared it a free city, because the Athenians had supported Argaeus with the hope of recovering Amphipolis, and his continuing to hold the place would have interposed difficulties in the way of a peace with Athens, which was at that time an object of great importance to him. But he had never meant seriously to abandon this important town; and accordingly, having obtained pretexts for war with the Amphipolitans, he laid siege to the town and gained possession of it in 358. The Athenians had sent no assistance to Amphipolis, because Philip, in a secret negotiation with the Athenians, led them to believe that he was willing to restore the city to them when he had taken it, and would do so on condition of their making him master of Pydna. After the capture of Amphipolis, he proceeded at once to Pydna, which seems to have yielded to him without a struggle, and the acquisition of which, by his own arms, and not through the Athenians, gave him a pretext for declining to stand by his secret engagement with them. The hostile feeling which such conduct necessarily excited against him at Athens made it most important for him to secure the good will of the powerful town of Olynthus, and to detach the Olynthians from the Athenians. Accordingly, he gave to the Olynthians the town of Potidaea, which he took from the Athenians in 356. Soon after this he attacked and took a settlement of the Thracians, called Crenides, and, having introduced into the place a number of new colonists, he named it Philippi after himself. One great advantage of this acquisition was, that it put him in possession of the gold mines of the district. From this point there is for some time a pause in the active operations of Philip. In 352 he took Methoné after a lengthened siege, in the course of which he himself

Gold Coin of Philip the Great.

lost an eye. The capture of this place was a necessary preliminary in any movement toward the south, lying as it did between him and the Thessalian border. He now marched into Thessaly to aid the Aleuadae against Lycophron, the tyrant of Pherae. The Phocians sent a force to support Lycophron, but they were defeated by Philip, and their general Onomarchus slain. This victory gave Philip the ascendency in Thessaly. He established at Pherae what he wished the Greeks to consider a free government, and then advanced southward to Thermopylae. The pass, however, he found guarded by a strong Athenian force, and he was compelled, or at least thought it expedient, to retire. He now turned his arms against Thrace, and succeeded in establishing his ascendency in that country also. Meanwhile Philip's movements in Thessaly had opened the eyes of Demosthenes to the real danger of Athens and Greece, and his first Philippic (delivered in 352) was his earliest attempt to rouse his countrymen to energetic efforts against their enemy; but he did not produce much effect upon the Athenians. In 349 Philip commenced his attacks on the Chalcidian cities. Olynthus, in alarm, applied to Athens for aid, and Demosthenes, in his three Olynthiac orations, roused the people to efforts against the common enemy, not very vigorous at first, and fruitless in the end. In the course of three years Philip gained possession of all the Chalcidian cities, and the war was brought to a conclusion by the capture of Olynthus itself in 347. In the following year (346) he concluded peace with the Athenians, and straightway marched into Phocis, and brought the Phocian War to an end. The Phocian cities were destroyed, and their place in the Amphictyonic council was made over to the king of Macedonia, who was appointed also, jointly with the Thebans and Thessalians, to the presidency of the Pythian Games. Ruling as he did over a barbaric nation, such a recognition of his Hellenic character was of the greatest value to him, especially as he looked forward to an invasion of the Persian empire in the name of Greece, united under him in a great national confederacy. During the next few years Philip steadily pursued his ambitious projects. From 342 to 340 he was engaged in an expedition in Thrace, and attempted to bring under his power all the Greek cities in that country. In the last of these years he laid siege to Perinthus and Byzantium; but the Athenians, who had long viewed Philip's aggrandizement with fear and alarm, now resolved to send assistance to these cities. Phocion was appointed to the command of the armament destined for this service, and succeeded in compelling Philip to raise the siege of both the cities (339). Philip now proceeded to carry on war against his northern neighbours, and seemed to give himself no further concern about the affairs of Greece. But meanwhile his hirelings were treacherously promoting his designs against the liberties of Greece. In 339 the Amphictyons declared war against the Locrians of Amphissa for having taken possession of a district of the sacred land; but as the general they had appointed to the command of the Amphictyonic army was unable to effect any thing against the enemy, the Amphictyons, at their next meeting in 337, conferred upon Philip the command of their army. Philip straightway marched through Thermopylae and seized Elatea. The Athenians heard of his approach with alarm; they succeeded, mainly through the influence of Demosthenes, in forming an alliance with the Thebans; but their united army was defeated by Philip in the month of August, 338, in the decisive battle of Chaeronea, which put an end to the independence of Greece. Thebes paid dear for her resistance, but Athens was treated with more favor than she could have expected. Philip now seemed to have within his reach the accomplishment of the great object of his ambition, the invasion and conquest of the Persian Empire. In a congress held at Corinth, which was attended by deputies from every Grecian State with the exception of Sparta, war with Persia was determined on, and the king of Macedonia was appointed to command the forces of the national confederacy. In 337, Philip's marriage with Cleopatra, the daughter of Attalus, one of his generals, led to the most serious disturbances in his family. Olympias and Alexander withdrew in great indignation from Macedonia; and though they returned home soon afterwards, they continued to be on hostile terms with Philip. Meanwhile, his preparations for his Asiatic expedition were not neglected, and early in 336 he sent forces into Asia, under Parmenion, to draw over the Greek cities to his cause. But in the summer of this year he was murdered at a grand festival which he held at Aegae, to solemnize the nuptials of his daughter with Alexander of Epirus. His murderer was a youth of noble blood, named Pausanias, who stabbed him as he was walking in the procession. The assassin was immediately pursued and slain by some of the royal guards. His motive for the deed is stated by Aristotle to have been private resentment against Philip, to whom he had complained in vain of a gross outrage offered to him by Attalus. Olympias and Alexander, however, were suspected of being implicated in the plot. (See OLYMPIAS.) Philip died in the forty-seventh year of his age and the twenty-fourth of his reign, and was succeeded by Alexander the Great. Philip had a great number of wives and concubines. Besides Olympias and Cleopatra, we may mention—(*a*) His first wife Audata, an Illyrian princess, and the mother of Cynané; (*b*) Phila, sister of Derdas and Machatas, a princess of Elymiotis; (*c*) Nicesipolis of Pherae, the mother of Thessalonica; (*d*) Philinna of Larissa, the mother of Arrhidaeus; (*e*) Meda, daughter of Cithelas, king of Thrace; (*f*) Arsinoë, the mother of Ptolemy I., king of Egypt, with whom she was pregnant when she married Lagus. To these numerous connections temperament as well as policy seems to have inclined him. He was strongly addicted, indeed, to sensual enjoyment of every kind; but his passions, however strong, were always kept in subjection to his interests and ambitious views. He was fond of science and literature, in the patronage of which he appears to have been liberal; and his appreciation of great minds is shown by his connection with Aristotle. In the pursuit of his political objects he was, as we have seen, unscrupulous, and ever ready to resort to duplicity and corruption; but when we consider his humanity and generous clemency, we may admit that he does not appear to disadvantage, even morally speaking, by the side of his fellow conquerors of mankind. See Curteis, *Rise of the Macedonian Empire* (New York, 1878). (3) The name of Philip was bestowed by the Macedonian army upon Arrhidaeus, the bastard son of Philip II., when he was raised to the throne

after the death of Alexander the Great. He accordingly appears in the list of Macedonian kings as Philip III. For his life and reign see ARRHIDAEUS. (4) Eldest son of Cassander, whom he succeeded on the throne, B.C. 296. He reigned only a few months, and was carried off by a consumptive disorder. (5) Son of Demetrius II., reigned B.C. 220–178. He was only eight years old at the death of his father Demetrius (229); and the sovereign power was consequently assumed by his uncle Antigonus Doson, who, though he certainly ruled as king rather than merely as guardian of his nephew, was faithful to the interests of Philip, to whom he transferred the sovereignty at his death in 220, to the exclusion of his own children. Philip was only seventeen years old at the time of his accession, but he soon showed that he possessed ability and wisdom superior to his years. In consequence of the defeat of the Achaeans and Aratus by the Aetolians, the former applied for aid to Philip. This was granted; and for the next three years Philip conducted with distinguished success the war against the Aetolians. This war, usually called the Social War, was brought to a conclusion in 217, and at once gained for Philip a distinguished reputation throughout Greece, while his clemency and moderation secured him an equal measure of popularity. But a change came over his character soon after the close of the Social War. He became suspicious and cruel; and having become jealous

Coin of Philip V.

of his former friend and counsellor Aratus, he caused him to be removed by a slow and secret poison in 213. Meantime he had become engaged in war with the Romans. In 215 he concluded an alliance with Hannibal; but he did not prosecute the war with any activity against the Romans, who on their part were too much engaged with their formidable adversary in Italy to send any powerful armament against the Macedonian king. In 211 the war assumed a new character in consequence of the alliance entered into by the Romans with the Aetolians. It was now carried on with greater vigour and alternate success; but as Philip gained several advantages over the Aetolians, the latter people made peace with Philip in 205. In the course of the same year the Romans likewise concluded a peace with Philip, as they were desirous to give their undivided attention to the war in Africa. It is probable that both parties looked upon this peace as little more than a suspension of hostilities. Such was clearly the view with which the Romans had accepted it; and Philip not only proceeded to carry out his views for his own aggrandizement in Greece, without any regard to the Roman alliances in that country, but he even sent a body of auxiliaries to the Carthaginians in Africa, who fought at Zama under Hannibal. As soon as the Romans had brought the Second Punic War to an end, they again declared war against Philip, in 200. This war lasted between three and four years, and was brought to an end by the defeat of Philip by the consul Flamininus at the battle of Cynoscephalae in the autumn of 197. (See FLAMININUS.) By the peace finally granted to Philip (196), the king was compelled to abandon all his conquests, both in Europe and Asia, surrender his whole fleet to the Romans, and limit his standing army to 5000 men, besides paying a sum of 1000 talents. Philip was now effectually humbled, and endeavoured to cultivate the friendship of the all-powerful Republic. But towards the end of his reign he determined to try once more the fortune of war, and began to make active preparations for this purpose. His declining years were embittered by disputes between his sons Perseus and Demetrius; and the former, by forged letters, persuaded the king that Demetrius was plotting against his life, and induced him to order his execution. Philip afterwards learned of the trick that had been played upon him and was struck with such remorse as probably led to his death, which took place in B.C. 179 (Livy, xl. 6, 21, 54; Polyb. xxiv. 7, 8).

III. ROMAN CITIZENS. (1) Q. MARCIUS PHILIPPUS, praetor B.C. 188, with Sicily as his province, and consul 186, when he carried on war in Liguria with his colleague Sp. Postumius Albinus. He was defeated by the enemy in the country of the Apuani, and the recollection of his defeat was preserved by the name of the Saltus Marcius. In 169 Philippus was consul a second time, and carried on the war in Macedonia against Perseus, but accomplished nothing of importance. (See PERSEUS.) In 164 Philippus was censor with L. Aemilius Paulus, and in his censorship he set up in the city a new sun-dial. (See HOROLOGIUM.) (2) L. MARCIUS PHILIPPUS was a tribune of the plebs 104, when he brought forward an agrarian law, and was consul in 91 with Sex. Iulius Caesar. In this year Philippus, who belonged to the popular party, opposed with the greatest vigour the measures of the tribune Drusus, who at first enjoyed the full confidence of the Senate. But his opposition was all in vain; the laws of the tribune were carried. Soon afterwards Drusus began to be regarded with mistrust and suspicion; Philippus became reconciled to the Senate, and on his proposition a senatus consultum was passed, declaring all the laws of Drusus to be null and void, as having been carried against the auspices. (See DRUSUS.) In the Civil Wars between Marius and Sulla, Philippus took no part. He survived the death of Sulla; and he is mentioned afterwards as one of those who advocated sending Pompey to conduct the war in Spain against Sertorius. Philippus was one of the most distinguished orators of his time (Hor. *Epist.* i. 7, 46). As an orator he was reckoned inferior only to Crassus and Antonius. He was a man of luxurious habits, which his wealth enabled him to gratify: his fish-ponds were particularly celebrated for their magnificence and extent, and are mentioned by the ancients along with those of Lucullus and Hortensius. Besides his son, L. Philippus, who is spoken of below, he had a step-son, Gellius Publicola. (See PUBLICOLA.) (3) L. MARCIUS PHILIPPUS, son of the preceding, was consul in 56. Upon the death of C. Octavius, the father of Augustus, Philippus married his widow Atia, and thus became the step-father of Augustus. Philippus was a timid man. Notwithstanding his close connection with Caesar's family, he remained neu-

tral in the Civil Wars; and after the assassination of Caesar, he endeavoured to dissuade his step-son, the young Octavianus, from accepting the inheritance which the dictator had left him. He lived till his step-son had acquired the supremacy of the Roman world. He restored the temple of Hercules and the Muses, and surrounded it with a colonnade, which is frequently mentioned under the name of Porticus Philippi (Ovid, *Fasti*, vi. 801).

IV. Roman Emperors. (1) M. Iulius Philippus I., Roman emperor A.D. 244–249, was an Arabian by birth, and entered the Roman army, in which he rose to high rank. He accompanied Gordianus III. in his expedition against the Persians; and upon the death of the excellent Misitheus (see Misitheus), he was promoted to the vacant office of praetorian praefect. He availed himself of the influence of his high office to excite discontent among the soldiers, who at length assassinated Gordian, and proclaimed Philippus emperor, 244. Philippus proclaimed his son Caesar, concluded a disgraceful peace with Sapor, founded the city of Philippopolis, and then returned to Rome. In 245 he was engaged in prosecuting a successful war against the Carpi on the Danube. In 248, rebellions, headed by Iotapinus and Marinus, broke out simultaneously in the East and in Moesia. Both pretenders speedily perished, but Decius, having been dispatched to recall the legions on the Danube to their duty, was himself forcibly invested with the purple by the troops, and compelled by them to march upon Italy. Philippus, having gone forth to encounter his rival, was slain near Verona either in battle or by his own soldiers. The great domestic event of the reign of Philippus was the exhibition of the Secular Games, which were celebrated with even more than the ordinary degree of splendour, since Rome had now, according to the received tradition, attained the thousandth year of her existence (A.D. 248). (2) M. Iulius Philippus II., son of the foregoing, was a boy of seven at the accession (244) of his father, by whom he was proclaimed Caesar, and three years afterwards (247) received the title of Augustus. In 249 he was slain, according to Zosimus, at the battle of Verona, or murdered, according to Victor, at Rome by the Praetorians, when intelligence arrived of the defeat and death of the emperor.

V. Writers. (1) Of Medma, in the south of Italy, a Greek astronomer, and a disciple of Plato. His observations, which were made in the Peloponnesus and in Locris, were used by the astronomers Hipparchus, Geminus the Rhodian, and Ptolemy. (2) Of Thessalonica, an epigrammatic poet, who, besides composing a large number of epigrams himself, compiled one of the ancient Greek Anthologies. The whole number of epigrams ascribed to him in the Greek Anthology is nearly ninety; but of these, six (xxxvi.–xli.) ought to be ascribed to Lucillius, and a few others are manifestly borrowed from earlier poets, while others are mere imitations. He probably wrote in the reign of Trajan.

Philiscus (*Φιλίσκος*). (1) A Greek tragedian of Corcyra, in the first half of the third century B.C.; he was priest of Dionysus in Alexandria, and, as such, stood at the head of the Dionysiac guild of actors in that city. He was one of the "Pleiad" of Alexandrian tragic poets. His portrait is preserved in a relief in the Lateran Museum. He wrote forty-two dramas. (2) A Rhodian sculptor of about B.C. 146 (Pliny, *H. N.* xxxvi. 34).

Philistīnae Fossae. A canal connecting the Padus with the Athesis (Pliny, *H. N.* iii. 120).

Philistion (*Φιλιστίων*). A physician of the fourth century B.C., who was tutor to the astronomer and physician Eudoxus (Gell. xvii. 11).

Philistus (*Φίλιστος*). A Greek historian of Syracuse, born about B.C. 435. He encouraged the elder Dionysius, by advice and assistance, in securing and maintaining the position of despot in his native State; but was himself banished by Dionysius in 386, and lived a long while at Adria in Epirus, busied with historical studies. Recalled by Dionysius the younger, he counteracted the salutary influence of Dion and Plato at that tyrant's court, and brought about the banishment of both. As commander of the fleet against Dion and the revolted Syracusans, he lost a naval battle, and in consequence either committed suicide or was cruelly murdered by the angry populace (356). He left an historical work, begun in his exile, called *Sicelica* (*Σικελικά*), a history of Sicily in thirteen books. Books i.–vii. dealt with the events of the earliest times to the capture of Agrigentum by the Carthaginians in 406; viii.–xi., with the rule of the elder Dionysius; xii. and xiii., with that of the younger. The last portion, which remained incomplete owing to his death, was finished by his countryman Athanas. Only unimportant fragments of this have survived. According to the judgment of the ancients, he imitated Thucydides somewhat unsuccessfully, and betrayed in his work the one-sided attitude natural to his political views (Plut. *Dion*, 36; Dionys. *Ad Cn. Pompeium*, 5). The fragments of Philistus are edited by C. Müller in his *Frag. Hist. Graec.* (Paris, 1841).

Philo (*Φίλων*). (1) A sculptor; the son of Antipater. He flourished in the time of Alexander the Great. Among his works was the statue of Hephaestion, and that of Zeus Ourios, at the entrance of the Bosporus (Cic. *Verr.* iv. 58, 129). The dedicatory verses inscribed on the pedestal of the latter are now in the British Museum (quoted on p. 40 of Demosth. *Adv. Leptinem*, ed. Sandys). Pliny (xxxiv. 91) mentions him as one of the sculptors who made *athletas et armatos et venatores sacrificantesque.*

(2) An Athenian architect who built for Demetrius Phalereus, about B.C. 318, the portico to the great temple at Eleusis. It had twelve Doric columns in front, and its dimensions were 183 feet by 37½ feet. Under the administration of Lycurgus, he constructed an *armamentarium* or arsenal at Zea in the Piraeus, containing tackle, etc., for 1000 ships (Pliny, *H. N.* vii. 125). It was destroyed by Sulla, but apparently rebuilt, since it is described by Valerius Maximus (viii. 12, 2) as still existing. An inscription in the *Corpus Inscriptionum Atticarum* (ii. 1054) contains the contract for the work, with full details of its structure and fittings.

(3) Of Byzantium; a celebrated mechanician. He wrote, in the second century B.C., a work on mechanics, of which only one book, on the construction of engines of war, and portions of two others, on siege-warfare, are extant. Edited by Köchly and Rüstow (1853). See Seven Wonders.

(4) Of Larissa; an Academic philosopher, a pupil of Clitomachus. He came to Rome in B.C. 88, being one of a number of eminent Greeks who fled

from Athens on the approach of its siege during the Mithridatic War. He was a man of versatile genius, and a perfect master of the theory and practice of oratory. Cicero had scarcely heard him before all inclination for Epicureanism was swept from his mind, and he surrendered himself wholly to the brilliant Academic (*Brutus*, § 306). One of his works, twice mentioned, though not by any definite title (*Acad.* i. 13, ii. 11), supplied Cicero with his historic account of the New Academy (*Academica*, ed. Reid, pp. 2, 52).

(5) Called Iudaeus, "the Jew." Born of a priestly family at Alexandria, about B.C. 25, he carefully studied the different branches of Greek culture, and, in particular, acquired a knowledge of the Platonic philosophy, while in no way abandoning the study of the Scriptures or the creed of his nation. In A.D. 39 he went to Rome as an emissary to the emperor Caligula in the interest of his fellow-countrymen, whose religious feelings were offended by a decree ordering them to place the statue of the deified emperor in their synagogues. This embassy, which led to no result, is described by him in a work which is still extant, though in an incomplete form. Philo is the chief representative of the Graeco-Judaic philosophy. He wrote numerous Greek works in a style modelled on that of Plato. These are remarkable for moral earnestness, passionate enthusiasm, and vigour of thought. They include allegorical expositions of portions of the Scriptures, as well as works of ethical, historical, or political purport. Several of his works only survive in Armenian versions. His philosophy, especially his theology, is an endeavour to reconcile Platonism with Judaism. Eng. trans. by Yonge, 4 vols. (1854–55).

(6) Philo Byblius or Herennius Byblius. A Roman grammarian, born at Byblus in Phœnicia. His life extended from about the time of Nero to that of Hadrian (A.D. 61–141). A considerable fragment of his translation of the alleged Phœnician writer Sanchuniathon (q. v.) is preserved in the first book of the *Praeparatio Evangelica* of Eusebius; and he also wrote a work Περὶ Πόλεων, much used by the later grammarians, especially Hesychius and Stephanus of Byzantium.

(7) Q. Publilius. A distinguished Roman general in the Samnite Wars, and the author of one of the great reforms in the Roman constitution. He was consul in B.C. 339, with Ti. Aemilius Mamercinus, and defeated the Latins, over whom he triumphed. In the same year he was appointed dictator by his colleague Aemilius Mamercinus, and, as such, proposed the celebrated *Publiliae Leges*, which abolished the power of the patrician assembly of the curiae, and elevated the plebeians to an equality with the patricians for all practical purposes. (See Publiliae Leges.) In 337 Philo was the first plebeian praetor, and in 332 he was censor with Sp. Postumius Albinus. In 327 he was consul a second time, and carried on war in the south of Italy. He was continued in the command for the following year with the title of proconsul, the first instance in Roman history in which a person was invested with proconsular power. He took Palaepolis in 326. In 320 he was consul a third time, with L. Papirius Cursor, and carried on the war with success against the Samnites (Livy, viii. 15–26; ix. 7–15).

(8) L. Veturius. (1) L., consul B.C. 220, with C. Lutatius Catulus; dictator 217 for the purpose of holding the Comitia; and censor 210 with P. Licinius Crassus Dives, and died while holding this office. (2) L., praetor B.C. 209, with Cisalpine Gaul as his province. In 207 he served under Claudius Nero and Livius Salinator in the campaign against Hasdrubal. In 206 he was consul with Q. Caecilius Metellus, and in conjunction with his colleague carried on the war against Hannibal in Bruttium. He accompanied Scipio to Africa, and after the battle of Zama (B.C. 202) was sent to Rome to announce the news of Hannibal's defeat (Livy, xxviii. 9–11; xxx. 38–40).

Philochăres (Φιλοχάρης). A painter, possibly the brother of Aeschines, of whom Demosthenes spoke so scornfully (*Fals. Leg.* p. 329).

Philochŏrus (Φιλόχορος). A Greek historian, living at Athens between 306 and 260. As an upholder of national liberty he was among the bitterest opponents of Demetrius Poliorcetes and of his son Antigonus Gonatas, who put him to death after the conquest of Athens. Of his works, the *Atthis* was a history of Athens from the earliest times to B.C. 262, in seventeen books. It was highly esteemed and often quoted for its wealth of facts and thoroughness of investigation, especially as regards chronology. We still possess a considerable number of fragments. Edited separately by Siebelis (Leipzig, 1811).

Philŏcles (Φιλοκλῆς). (1) A Greek tragedian, son of Aeschylus's sister. He wrote a hundred plays in the manner of Aeschylus, and won the prize against Sophocles' *Oedipus Tyrannus*. Only scanty fragments of his plays remain. The drama was also cultivated by his sons Morsimus and Melanthius, by Morsimus's son Astydamas (about B.C. 399), and again by the sons of the latter, Astydamas and Philocles. (2) The joint commander with Conon of the Athenian fleet at the battle of Arginusae, and put to death by Lysander for having treated his prisoners with cruelty (Plut. *Lys.* 13).

Philocrătes (Φιλοκράτης). An Athenian orator, a paid partisan of the Macedonians against the patriotic party of Demosthenes (Demosth. *De Corona*, p. 230.

Philoctētes (Φιλοκτήτης). The son of Poeas, king of the Malians in Oeta, by Demonassa. He inherited the bow and arrows of Heracles (q. v.). He was leader of seven ships in the expedition against Troy; but, on the way out, was bitten by a snake at Lemnos, or the small island of Chrysé near Lemnos, and, on account of the intolerable stench caused by the wound, was abandoned at Lemnos on the advice of Odysseus. Here in his sickness he dragged out a miserable life till the tenth year of the war. Then, however, on account of Helenus's prophecy that Troy could only be conquered by the arrows of Heracles, Odysseus and Diomedes went to fetch him, and he was healed by Machaon. After he had slain Paris, Troy was conquered. He was one of the heroes who came safe home again. The story of Philoctetes was dramatized by Aeschylus and Euripides (B.C. 431), as well as by Sophocles (409), the last being still extant (ed. by Graves [Boston and N. Y. 1894]). It is also the theme of numerous monuments of ancient art. See Prof. Jebb's introduction to Soph. *Phil.*, p. xxxvii.

Philodēmus (Φιλόδημος). A native of Gadara, in Palestine, an Epicurean philosopher and epi-

grammatic poet, contemporary with Cicero. The Greek Anthology contains thirty-four of his Epigrams, which are chiefly of a light and amatory character, and which quite bear out Cicero's statements concerning the licentiousness of his matter and the elegance of his manner (Cic. *In Pis.* 28, 29). Considerable remains of Philodemus have come to light at Herculaneum, and are edited by Sudhaus.

Philolāus (*Φιλόλαος*). A distinguished Pythagorean philosopher. He was a native of Croton or Tarentum, a contemporary of Socrates, and the instructor of Simmias and Cebes at Thebes, where he appears to have lived many years. Pythagoras and his earliest successors did not commit any of their doctrines to writing, and the first publication of the Pythagorean doctrines is pretty uniformly attributed to Philolaüs. He composed a work on the Pythagorean philosophy in three books, which Plato is said to have procured at the cost of 100 minae through Dion of Syracuse, who purchased it from Philolaüs, who was at the time in deep poverty (Gell. iii. 17). Other versions of the story represent Plato as purchasing it himself from Philolaüs or his relatives when in Sicily. Plato is said to have derived from this work the greater part of his *Timaeus*.

Philologia (*φιλολογία*). The terms "philology" and "philological" are so convenient as frequently to be used in various senses in modern times; and this diversity of application is found also in the corresponding words among the ancients. Plato is the first Greek writer to employ the terms *φιλολογία* and *φιλόλογος*. In the *Theaetetus* (146 A) *φιλολογία* denotes a fondness for argument; in the *Laws* (641 E) *φιλόλογος* means one who is given to talking as opposed to the *βραχύλογος* Spartan. He develops the meaning a little further in the *Laches* (188 C), where it is applied to a person fond of philosophical discussion as opposed to *μισόλογος*. In Aristotle *φιλολογία* means a love of learning, and Cicero quotes the word in the same sense in a letter to Atticus (ii. 17). In a passage of Pericles, cited by Stobaeus (428, 53), it is opposed to *ἀπαίδευτος*, and in Plutarch (*Lucull.* 42) it is contrasted with *πολιτικός*. In the Alexandrian period (280+ B.C.) it is often restricted to the sense of a "scholar" and "a learned man," and was so applied to Eratosthenes, who was not, first of all, a student of language or literature, but a mathematician and astronomer. In Plutarch it is oftenest, however, used of a linguist (Plut. ii. 645 C). See Gudeman, *Outlines of the Hist. of Class. Philology*, pp. 1–5 (2d ed. Boston, 1894).

At Rome the prevailing sense was that of "a scholar," and it was so applied to Aelius Stilo, the teacher of Varro (Suet. *De Grammat.* p. 108 Reiff.). This comprehensive sense is also seen in a remarkable passage of Seneca (*Epist.* 108, 29), in which he distinguishes the respective standpoints of the philologist, the grammarian, and the philosopher. Hence we find that the word philology has, at different times, been understood to mean "a love of speaking," "the study of language," and finally "learning" in a wider sense of the word.

Language-study among the Greeks originated as an adjunct to psychological research. In an attempt to answer the question as to the nature of thought and the expression of thought, an endeavour was made to discover just what the nature of language is in its relation to the thought which it expresses; and this led to an investigation of the original meaning of words. Language-study, therefore, did not begin as a distinct science, but only as an adjunct to another branch of learning, and therefore it took the form of etymology. The Greeks never thought of connecting their own language with that of any other people, though Plato once came near to such an idea in a passage of his *Cratylus* (410), where he notes the similarity between the Greek and Phrygian names for certain common objects.

Such etymologizing as was done by the Greeks and Romans was largely in the nature of guesswork; but in the dialogue of Plato just mentioned some suggestions of considerable acuteness are put forth. In fact, this treatise embodies all that was best and truest in ancient linguistic speculation, and to it not much was added by writers on language down to the beginning of the present century. Plato is the first to draw attention to the distinction between simple and compound words; and his classification of the letters of the alphabet is the first that we find in any of the ancient writings. He separates them into "voiced" letters (*φωνήεντα*) or vowels and "voiceless" letters or consonants (*ἄφωνα*); the latter he subdivides into semi-vowels (*ἡμίφωνα*—i. e. *λ*, *μ*, *ν*, *ρ*, *σ*) and true mutes (*ἄφθογγα*).

The discussion as to the original meaning of words in course of time led to a consideration of the origin of human speech, as to which two schools arose. One set of scholars (the Anomalists) held that language arose by mere convention (*θέσει*), that words were arbitrarily assigned to objects, and that there was no inherent appropriateness in giving any particular object its name. The other set of thinkers (the Analogists), who were of the Eleatic School of philosophers, held that words are essentially and necessarily expressive of the objects which they describe, that they are made by nature (*φύσει*), that thought was stamped on words in their genesis, and that words have the same relation to things as exists between sensation and that which causes the sensation. Heraclitus illustrated his meaning by saying that the names of objects are, as it were, their shadows, representing them just as images in water represent the objects which they reflect. The theory of language which was put forth to explain this inherent appropriateness was the so-called mimetic or onomatopoetic theory (see ONOMATOPOEIA), which is found expressed in a passage of Epicurus, cited by Diogenes Laërtius (ix. 75) and by Lucretius (v. 1028). The mimetic theory they did not push very far, but merely asserted that there is something in the sound of primitive words appropriate to the sense. This Plato illustrates in his *Cratylus* by saying that, in order to arrive at the earliest meaning of a word, the word must be resolved not merely into its simplest form, but into the very letters which compose it; for these, or rather the sounds which they denote, possess a meaning. This fact, he says, was well known to the first makers of language, who observed that the sound of *α* denotes vastness and the sound of *η* denotes length; that *ρ* expresses motion, as in *ῥέω*, *τρόμος*, *ῥύμβέω*, because, in uttering this letter, the tongue is most agitated and least at rest; that *φ*, *ψ*, *σ*, and *ζ* require a great expenditure of breath, and are therefore used in the expression of such notions as are contained in *ζέω*, *σεισμός*, etc.,

and, in general, wherever the thought of air is involved; that the limpid movement of λ, in whose pronunciation the tongue slips easily along, enables that letter to express smoothness, as in λεῖος, λίπαρον: that the sound of γ detains the slipping tongue, so that when it is prefixed to λ there is given an impression of what is glutinous and clammy, as in γλισχρός, γλυκύς, γλοιώδης: that ν, being sounded within, gives the notion of inwardness, while ο suggests roundness. Thus, Plato says, the first language-makers impressed thought on names by giving them an imitative quality. Gesture is the method which a deaf-and-dumb person would use to make his meaning plain; and language is only vocal gesture—the gesture of the tongue. Yet, he adds, though thought was stamped on words in their genesis, the original meaning has in most cases been lost; so that the use of a word may now be metaphorical, accidental, or conventional, and thus may have no real relation to the thought or feeling of the speaker who uses it. Language has, therefore, both a natural element and a conventional element. In another portion of the *Cratylus* Plato ridicules many of the popular etymologies, such as αἰθήρ as a contraction of ἀειθεήρ (ἀεί + θέειν), "always running"; τέχνη from ἐχονόη, "possession of mind," on which Socrates says ironically that "you have only to take away the τ, insert ο between the χ and the ν, and another ο between the ν and the π," and thus you have ἐχονόη! (See Jowett's introduction to his translation of the *Cratylus*.)

The Sophists were much given to etymologizing, and made a great use of the so-called principle of Antiphrasis, which in later times was taken up by the Romans, and prevailed also to some extent in the Middle Ages. Antiphrasis explains names as being suggested by what is opposed to them in meaning, as when *aridus* ("dry") is derived from ἀρδεύειν: *bellum* from *bellus* ("fine"), because it is not a fine thing; *caelum* from *celare* ("to conceal"), because it conceals nothing; and the very famous etymology, which has in modern times become proverbial, *lucus a non lucendo*. The philosophical principle on which this notion was based is of course a sound one—i. e. that of two antithetical ideas one is apt to suggest the other, as light suggests darkness, as truth suggests falsehood, etc.; but the application of it to etymology was absurd. It appears to have been suggested to the ancients by the existence of certain well-known euphemisms, such as that which calls the Furies *Eumenides* or "the well-wishers," the left hand "the well-named," and so forth. They also observed in irony a similar principle; and, therefore, putting the two together, inferred that there is something in the human mind that instinctively describes objects by recalling their opposites. Among the writers who treated of etymological subjects at this period were Gorgias (Περὶ Ὀνομάτων), Protagoras (Περὶ Ὀρθοεπείας), Prodicus (Περὶ Ὀνομάτων), and Licymnius (Περὶ Λέξεων), the last of whom, in the course of his teaching, noted and partly classified synonyms, root-words, compounds, and cognates.

In the Alexandrian Period language was studied on its strictly grammatical side, and formal grammar arose at Alexandria in the writings of men like Zenodotus, Aristophanes, Aristarchus, and Tryphon, and at Pergamum with Crates of Mallos, who introduced philological study to the Romans, though formal grammar was first carefully studied at Rome after the time of Dionysius Thrax. (See GRAMMATICA.) At the same time lexicography was developed in the form of special glossaries, on which see LEXICON.

During the later Middle Ages speculation as to the origin and nature of language was a favourite amusement of scholars; but no advance was made by them in linguistics, owing to the fact that Greek and Latin were both supposed to be derived from the Hebrew. Upon the proof of this thesis an enormous amount of labour was wasted by generations of scholars, of whom Guichard and Gebelin may be taken as types. It was not until 1786, when Sir William Jones initiated the study of Sanskrit, that philology began to be set upon a scientific basis by a recognition of the fact that Sanskrit, Avestan, Greek, Latin, Gothic, and Keltic belong to the same family of languages; and soon after Franz Bopp (q. v.) became the founder of the special science of COMPARATIVE PHILOLOGY, which deals with the study of each language in its relation to the other members of the same family. His monumental treatise on Comparative Grammar dealt with the phonetic laws of the several languages, and traced their general forms back to a common origin in an Indo-European or "Aryan" speech now lost. Bopp's work was carried on and developed by such men as Jakob Grimm, who first scientifically studied the Teutonic languages; by Pott and by Benfey, the accomplished Sanskritist. The new science was applied to Greek by Georg Curtius, and to Latin by the German, Wilhelm Corssen (q. v.), and the Frenchman, Michel Bréal.

It now began to be accepted as a truth that the change which is always going on in languages is regulated by law; that in each form of speech there is a regular sequence of sound, which is not due to chance or to the conscious desire of those who speak it, but which has a definite, ascertainable course; and that the science of language is a science because the knowledge of these sequences can be acquired and understood. The most famous laws of sound-change are those known as Grimm's Law and Verner's Law. See GRIMM'S LAW; VERNER'S LAW.

Until comparatively recent years students of language held that the operation of phonetic law did not always exclude the possibility of what they called "sporadic change"—that is to say, changes that are found in some words, though not in every word in which the sound so affected occurs. To this notion of sporadic change the so-called New School of philologists vigorously objects. Brugmann, Paul, Osthoff, Ascoli, Leskien, and Verner (to mention only a few distinguished names) hold that phonetic change, so far as it is due to physical causes, is absolutely uniform in any one language at the same time; that the new form, when produced by such a change, invariably drives out the old one; and that in consequence there is no such thing as "sporadic change"; for phonetic law is as exact and definite as the law of any physical science. The "New School" of philologists has devoted itself very largely to an investigation of language on its inner or psychical side, and has therefore brought psychology into a close relation with the study of language. In so doing they have recognized the immense im-

portance of the principle of analogy, which tends to reduce words of like function to a certain likeness of form, and thus conditions every new word that is made by the forms of like words that already exist. According to the New School, therefore, the two chief factors in word-formation are Phonetic Change due to the desire for euphony, and which is largely destructive, doing away with sounds or combinations which are inconvenient to pronounce; the other principle is Analogy, which comes from the imitative habit of the mind, and is rather restorative than destructive, constantly producing new forms on the analogy of old ones to supply each want that arises in the course of man's intellectual development.

At the present time the term "Linguistics" (Ger. *Linguistik*) is supplanting the word Philology in the sense of language-study pure and simple; while Philology, or rather CLASSICAL PHILOLOGY, is coming to be used as a comprehensive name for the general study of ancient life in all its various political, social, and intellectual phases, as handed down in the literary, epigraphic, and monumental remains of Greece and Rome. It embraces, then, not only Grammar, Lexicography, Text Criticism, and Hermeneutics, but Epigraphy, Numismatics, and Art; or as Karl Otfried Müller said: "Philology does not strive to establish isolated facts or to get an acquaintance with abstract forms, but to grasp the ancient spirit in its broadest meaning, in its works of reason, of feeling, and of imagination."

Philology. See PHILOLOGIA.

Philomēla (*Φιλομήλα*). The daughter of King Pandion in Attica, who, being dishonoured by her brother-in-law Tereus, was metamorphosed into a nightingale. The story is given under TEREUS.

Philomēla. The title of a Latin poem composed in the early Middle Ages, probably by a German monk, and giving in 66 elegiac lines the mimetic words used to imitate the sounds made by the different birds and beasts. The oldest MS. containing it dates from the eleventh century. It was ascribed by Goldast to a certain Albius Ovidius Iuventinus, who is probably an imaginary individual. The poem is printed with English notes in Peck and Arrowsmith's *Roman Life in Latin Prose and Verse* (New York, 1895). See an article by H. T. Peck on "Onomatopoetic Words in Latin" in *Classical Studies in Honour of Henry Drisler* (New York, 1894).

Philomelium or **Philomēlum** (*Φιλομήλιον*, or in the Pisidian dialect *Φιλομηδή*. A city of Phrygia Parorios, on the borders of Lycaonia and Pisidia, said to have been named from the numbers of nightingales in its neighbourhood. It is mentioned several times by Cicero. According to the division of the provinces under Constantine, it belonged to Pisidia. It is still found mentioned at the time of the Crusades by the name of Philomené (Strabo, p. 663).

Philomēlus (*Φιλόμηλος*). A general of the Phocians in the Phocian or Sacred War. He was the person who persuaded his countrymen to seize the temple of Delphi, and to apply the riches of the temple to the purpose of defending themselves against the Amphictyonic forces, B.C. 357. He commanded the Phocians during the early years of the war, but was slain in battle in 353. He was succeeded in the command by his brother Onomarchus (Diod. xvi. 22).

Philonĭdes (*Φιλωνίδης*). An Athenian poet of the Old Comedy, who is, however, best known on account of his connection with the literary history of Aristophanes. It is generally stated that Philonides was an actor of Aristophanes, who is said to have committed to him and to Callistratus his chief characters; but the best modern critics have shown that this is an erroneous statement, and that the true state of the case is that several of the plays of Aristophanes were brought out in the names of Callistratus and Philonides. We learn from Aristophanes himself not only the fact that he brought out his early plays in the names of other poets, but also his reasons for so doing. In the parabasis of the *Knights* (v. 514), he states that he had pursued this course not from want of thought, but from a sense of the difficulty of his profession, and from a fear that he might suffer from that fickleness of taste which the Athenians had shown towards other poets, as Magnes, Crates, and Cratinus. It appears that Aristophanes used the name of Philonides probably for the *Clouds*, and certainly for the *Wasps*, the *Proagon*, the *Amphiaraüs*, and the *Frogs*. The *Daetaleis*, the *Babylonians*, the *Acharnians*, the *Birds*, and the *Lysistrata* were brought out in the name of Callistratus. Of the extant plays of Aristophanes, the only ones which he is known to have brought out in his own name are the *Knights*, the *Peace*, and the *Plutus*.

Philonŏmé. See TENES.

Philopoemen (*Φιλοποίμην*). A native of Megalopolis in Arcadia, one of the few great men that Greece produced in the decline of her political independence. The great object of his life was to infuse among the Achaeans a military spirit, and thereby to establish their independence on a firm and lasting basis. He was the son of Craugis, a distinguished man at Megalopolis, and was born about B.C. 252. He lost his father at an early age, and was brought up by Cleander, an illustrious citizen of Mantinea, who had been obliged to leave his native city, and had taken refuge at Megalopolis. He received instruction from Ecdemus and Demophanes, both of whom had studied the Academic philosophy under Arcesilaüs. At an early

age he became distinguished by his love of arms and his bravery in war. His name, however, first occurs in history in B.C. 222, when Megalopolis was taken by Cleomenes, and in the following year (221) he fought with conspicuous valour at the battle of Sellasia, in which Cleomenes was completely defeated. In order to gain additional military experience, he soon afterwards sailed to Crete, and served for some years in the wars between the cities of that island. On his return to his native country, in 210, he was appointed commander of the Achaean cavalry; and in 208 he was elected *strategus*, or general of the Achaean League. In this year he defeated Machanidas, tyrant of Lacedaemon, and slew him in battle with his own hand. In 201 he was again elected general of the league, when he defeated Nabis, who had succeeded Machanidas as tyrant of Lacedaemon. Soon afterwards Philopoemen took another voyage to Crete, and assumed the command of the forces of Gortyna. He did not return to Peloponnesus till 194. He was made general of the League in 192, when he again defeated Nabis, who was slain in the course of the year by some Aetolian mercenaries. Philopoemen was reëlected general of the League several times afterwards; but the state of Greece did not afford him much further opportunity for the display of his military abilities. The Romans were now in fact the masters of Greece, and Philopoemen clearly saw that it would be an act of madness to offer open resistance to their authority. At the same time as the Romans still recognized in words the independence of the League, Philopoemen offered a resolute resistance to all their encroachments upon the liberties of his country, whenever he could do so without affording them any pretext for war. In 188, when he was general of the League, he took Sparta, and treated it with the greatest severity. He razed the walls and fortifications of the city, abolished the institutions of Lycurgus, and compelled the citizens to adopt the Achaean laws in their stead. In 183 the Messenians revolted from the Achaean League. Philopoemen, who was general of the League for the eighth time, hastily collected a body of cavalry, and pressed forward to Messené. He fell in with a large body of Messenian troops, by whom he was taken prisoner and carried to Messené. Here he was thrown into a dungeon, and was compelled by Dinocrates to drink poison. The news of his death filled the whole of Peloponnesus with grief and rage. An assembly was immediately held at Megalopolis; Lycortas was chosen general; and in the following year he invaded Messenia, which was laid waste far and wide; Dinocrates and the chiefs of his party were obliged to put an end to their lives. The remains of Philopoemen were conveyed to Megalopolis in solemn procession; and the urn which contained the ashes was carried by the historian Polybius. His remains were then interred at Megalopolis with heroic honours, and soon afterwards statues of him were erected in most of the towns belonging to the Achaean League. The life of Philopoemen is narrated by Plutarch. See also Pausan. viii. 49–52.

Philosophia (*φιλοσοφία*). I. Greek Philosophy.—The beginnings of philosophy in Greece came from the Ionians of Asia; and it is in agreement with the character of that people, naturally inclined to the physical or sensualist view, that what the Ionian philosophers sought was the material principle (*ἀρχή*) of things, and the mode of their origin and disappearance. Thales of Miletus (about B.C. 640) is reputed the father of Greek philosophy. He declared water to be the basis of all things. Next came Anaximander of Miletus (about B.C. 611–547), the first writer on philosophy. He assumed as the first principle an undefined substance (*τὸ ἄπειρον*) without qualities, out of which the primary antitheses, hot and cold, moist and dry, became differentiated. His countryman and younger contemporary, Anaximenes, took for his principle air, conceiving it as modified, by thickening and thinning, into fire, wind, clouds, water, and earth. Heraclitus of Ephesus (about B.C. 535–475) assumed as the principle of substance aetherial fire. From fire all things originate, and return to it again by a never-resting process of development. All things, therefore, are in a perpetual flux (*πάντα ῥεῖ*).

Philosophy was first brought into connection with practical life by Pythagoras of Samos (about 582–504), from whom it received its name ("the love of wisdom"). Regarding the world as a perfect harmony, dependent on number, he aimed at inducing mankind likewise to lead a harmonious life. His doctrine was adopted and extended by a large following, especially in Lower Italy.

That country was also the home of the Eleatic doctrine of the One, called after the town of Elea, the headquarters of the school. It was founded by Xenophanes of Colophon (born about 570), the father of pantheism, who declared God to be the eternal unity, permeating the universe, and governing it by his thought. His great disciple, Parmenides of Elea (born about 511), affirmed the one unchanging existence to be alone true and capable of being conceived, and multitude and change to be an appearance without reality. This doctrine was maintained dialectically by his younger countryman Zeno in a polemic against the vulgar opinion, which sees in things multitude, becoming, and change. Empedocles of Agrigentum (born 492) appears to have been partly in agreement with the Eleatic School, partly in opposition to it: on the one hand, maintaining the unchangeable nature of substance; while, on the other, he supposes a plurality of such substances—i. e. the four elements, earth, water, air, and fire. Of these the world is built up, by the agency of two ideal principles as motive forces—viz., love as the cause of union, hate as the cause of separation.

Anaxagoras of Clazomenae (born about B.C. 500) also maintained the existence of an ordering principle as well as a material substance, and while regarding the latter as an infinite multitude of imperishable primary elements, qualitatively distinguished, conceived divine reason as ordering them. He referred all generation and disappearance to mixture and resolution respectively. To him belongs the credit of first establishing philosophy at Athens, in which city it reached its highest development, and continued to have its home for one thousand years without intermission. The first explicitly materialistic system was formed by Democritus of Abdera (born about B.C. 460). This was the doctrine of atoms—small primary bodies infinite in number, indivisible and imperishable, qualitatively similar, but distinguished by their shapes. Falling eternally through the infinite void, they collide and unite, thus generating existence, and forming objects which differ in accord-

ance with the varieties, in number, size, shape, and arrangement, of the atoms which compose them.

The efforts of all these earlier philosophers had been directed somewhat exclusively to the investigation of the ultimate basis and essential nature of the external world. Hence their conceptions of human knowledge, arising out of their theories as to the constitution of things, had been no less various. The Eleatics, for example, had been compelled to deny the existence of any objective truth, since to the world of sense, with its multitude and change, they allowed only a phenomenal existence. This inconsistency led to the position taken up by the class of persons known as Sophists (see SOPHISTAE), that all thought rests solely on the apprehensions of the senses and on subjective impression, and that therefore we have no other standard of action than utility for the individual.

A new period of philosophy opens with the Athenian Socrates (469–399). Like the Sophists, he rejected entirely the physical speculations in which his predecessors had indulged, and made the subjective thoughts and opinions of men his starting-point; but whereas it was the thoughts and opinions of the individual that the Sophists took for the standard, Socrates endeavoured to extract from the common intelligence of mankind an objective rule of practical life. For this purpose he employed the two forms of philosophical inquiry of which he is the inventor, induction and definition. Such a standard he saw in knowledge, by which term he understood the cognition in thought of the true concept of an object, and identified it with virtue; that is to say, such action as proceeds from clear cognition of the concept appropriate to the circumstances. Thus, although Socrates did not himself succeed in establishing a genuine ethical principle, he is nevertheless the founder of ethics, as he is also of dialectic, the method of the highest speculative thought. Of Socrates' numerous disciples many either added nothing to his doctrine, or developed it in a one-sided manner, by confining themselves exclusively either to dialectic or to ethics. Thus while the Athenian Xenophon contented himself, in a series of writings, with exhibiting the portrait of his master to the best of his comprehension, and added nothing original, the Megarian School, founded by Euclides of Megara, devoted themselves almost entirely to dialectic investigation; whereas ethics preponderated both with the Cynics and Cyrenaics, although the position taken up by these two schools was in direct antithesis. For Antisthenes of Athens, the founder of the Cynics, conceived the highest good to be the virtue which spurns every enjoyment; while Aristippus of Cyrené, the founder of the Cyrenaics, considered pleasure to be the sole end in life, and regarded virtue as a good only in so far as it contributed to pleasure. See CYRENAÏCI.

Both aspects of the genius of Socrates were first united in Plato of Athens (428–348), who also combined with them all the principles established by earlier philosophers, in so far as they had been legitimate, and developed the whole of this material into the unity of a comprehensive system. The groundwork of Plato's scheme, though nowhere expressly stated by him, is the threefold division of philosophy into dialectic, ethics, and physics; its central point is the theory of ideas. This theory is a combination of the Eleatic doctrine of the One with Heraclitus's theory of a perpetual flux and with the Socratic method of concepts. The multitude of objects of sense, being involved in perpetual change, are thereby deprived of all genuine existence. The only true being in them is founded upon the ideas, the eternal, unchangeable (independent of all that is accidental, and therefore perfect) types, of which the particular objects of sense are imperfect copies. The number of the ideas is defined by the number of universal concepts which can be derived from the particular objects of sense. The highest idea is that of the Good, which is the ultimate basis of the rest, and the first cause of being and knowledge. Apprehensions derived from the impressions of sense can never give us the knowledge of true being—i. e. of the ideas. It can only be obtained by the soul's activity within itself, apart from the troubles and disturbances of sense; that is to say, by the exercise of reason. Dialectic, as the instrument in this process, leading us to knowledge of the ideas, and finally of the highest idea of the Good, is the first of sciences (*scientia scientiarum*). In physics, Plato adhered (though not without original modifications) to the views of the Pythagoreans, making Nature a harmonic unity in multiplicity. His ethics are founded throughout on the Socratic; with him, too, virtue is knowledge, the cognition of the supreme idea of the Good. And since in this cognition the three parts of the soul, cognitive, spirited, and appetitive, all have their share, we get the three virtues, Wisdom, Courage, and Temperance or Continence. The bond which unites the other virtues is the virtue of Justice, by which each several part of the soul is confined to the performance of its proper function. The school founded by Plato, called "the Academy," from the name of the grove of the Attic hero Academus, where he used to deliver his lectures, continued for long after. (See ACADEMIA.) In regard to the main tendencies of its members, it was divided into the three periods of the Old, Middle, and New Academy. The chief personages in the first of these were Speusippus (son of Plato's sister), who succeeded him as the head of the school (till 339), and Xenocrates of Chalcedon (till 314). Both of them sought to fuse Pythagorean speculations on number with Plato's theory of ideas. The two other Academies were still further removed from the specific doctrines of Plato. See PLATO.

The most important among Plato's disciples is Aristotle of Stagira (384–322), who shares with his master the title of the greatest philosopher of antiquity. But whereas Plato had sought to elucidate and explain things from the suprasensual standpoint of the ideas, his pupil preferred to start from the facts given us by experience. Philosophy to him meant science, and its aim was the recognition of the "wherefore" in all things. Hence he endeavours to attain to the ultimate grounds of things by induction—that is to say, by *a posteriori* conclusions from a number of facts to a universal. In the series of works collected under the name of *Organon*, Aristotle sets forth, almost in a final form, the laws by which the human understanding effects conclusions from the particular to the knowledge of the universal. Like Plato, he recognizes the true being of things in their concepts, but denies any separate existence of the concept apart from the particular objects of sense. They are inseparable as matter

and form. In this antithesis, matter and form, Aristotle sees the fundamental principles of being. Matter is the basis of all that exists; it comprises the potentiality of everything, but of itself is not actually anything. A determinate thing only comes into being when the potentiality in matter is converted into actuality. This is effected by form, the idea existent not as one outside the many, but as one in the many, the completion of the potentiality latent in the matter. Although it has no existence apart from the particulars, yet, in rank and estimation, form stands first; it is of its own nature the most knowable, the only true object of knowledge. For matter without any form cannot exist, but the essential definitions of a common form, in which are included the particular objects, may be separated from matter. Form and matter are relative terms, and the lower form constitutes the matter of a higher (e. g. body, soul, reason). This series culminates in pure, immaterial form, the Deity, the origin of all motion, and therefore of the generation of actual form out of potential matter. All motion takes place in space and time; for space is the potentiality, time the measure of the motion. Living beings are those which have in them a moving principle, or soul. In plants the function of soul is nutrition (including reproduction); in animals, nutrition and sensation; in men, nutrition, sensation, and intellectual activity. The perfect form of the human soul is reason separated from all connection with the body, hence fulfilling its activity without the help of any corporeal organ, and so imperishable. By reason the apprehensions, which are formed in the soul by external sense-impressions, and may be true or false, are converted into knowledge. For reason alone can attain to truth either in cognition or action. Impulse towards the good is a part of human nature, and on this is founded virtue; for Aristotle does not, with Plato, regard virtue as knowledge pure and simple, but as founded on nature, habit, and reason. Of the particular virtues (of which there are as many as there are contingencies in life), each is the apprehension, by means of reason, of the proper mean between two extremes which are not virtues—e. g. courage is the mean between cowardice and foolhardiness. The end of human activity, or the highest good, is happiness, or perfect and reasonable activity in a perfect life. To this, however, external goods are more or less necessary conditions. See ARISTOTELES.

The followers of Aristotle, known as Peripatetics (Theophrastus of Lesbos, Eudemus of Rhodes, Strato of Lampsacus, etc.), to a great extent abandoned metaphysical speculation, some in favour of natural science, others of a more popular treatment of ethics, introducing many changes into the Aristotelian doctrine in a naturalistic direction. A return to the views of the founder first appears among the later Peripatetics, who did good service as expositors of Aristotle's works. The tendency of the Peripatetic School, to make philosophy the exclusive property of the learned class, thereby depriving it of its power to benefit a wider circle, soon produced a reaction; and philosophers returned to the practical standpoint of Socratic ethics. The speculations of the learned were only admitted in philosophy where immediately serviceable for ethics. The chief consideration was how to popularize doctrines, and to provide the individual, in a time of general confusion and dissolution, with a fixed moral basis for practical life.

Such were the aims of Stoicism, founded at Athens about 310 by Zeno of Cittium, and brought to fuller systematic form by his successors as heads of the school, Cleanthes of Assos, and especially Chrysippus of Soli, who died about 206. Their doctrines contained little that was new, seeking rather to give a practical application to the dogmas which they took ready-made from previous systems. With them philosophy is the science of the principles on which the moral life ought to be founded. The only allowable endeavour is towards the attainment of knowledge of things human and divine, in order to regulate life thereby. The method to lead men to true knowledge is provided by logic; physics embraces the doctrines as to the nature and organization of the universe; while ethics draws from them its conclusions for practical life. All knowledge originates in the real impressions of things on the senses, which the soul, being at birth a *tabula rasa*, receives in the form of presentations. These presentations, when confirmed by repeated experience, are syllogistically developed by the understanding into concepts. The test of their truth is the convincing or persuasive force with which they impress themselves upon the soul. In physics the foundation of the Stoic doctrine was the dogma that all true being is corporeal. Within the corporeal they recognized two principles, matter and force—i. e. the material, and the Deity permeating and informing it. Ultimately, however, the two are identical. There is nothing in the world with any independent existence: all is bound together by an unalterable chain of causation. The concord of human action with the law of nature, of the human will with the divine will, or life according to nature, is Virtue, the chief good and highest end in life. It is essentially one, the particular or cardinal virtues of Plato being only different aspects of it; it is completely sufficient for happiness, and incapable of any differences of degree. All good actions are absolutely equal in merit, and so are all bad actions. All that lies between virtue and vice is neither good nor bad; at most, it is distinguished as preferable, undesirable, or absolutely indifferent. Virtue is fully possessed only by the wise man, who is no way inferior in worth to Zeus; he is lord over his own life, and may end it by his own free choice. In general, the prominent characteristic of Stoic philosophy is moral heroism, often verging on asceticism. See ZENO.

The same goal which was aimed at in Stoicism was also approached, from a diametrically opposite position, in the system founded about the same time by Epicurus, of the deme Gargettus in Attica (342–268), who brought it to completion himself. Epicureanism, like Stoicism, is connected with previous systems. Like Stoicism, it is also practical in its ends, proposing to find in reason and knowledge the secret of a happy life, and admitting abstruse learning only where it serves the ends of practical wisdom. Hence, logic (called by Epicurus *κανονικόν*, or the doctrine of canons of truth) is made entirely subservient to physics, physics to ethics. The standards of knowledge and canons of truth in theoretical

matters are the impressions of the senses, which are true and indisputable, together with the presentations formed from such impressions, and opinions extending beyond those impressions, in so far as they are supported or not contradicted by the evidence of the senses. In practical questions the feelings of pleasure and pain are the tests. Epicurus's physics, in which he follows in essentials the materialistic system of Democritus, are intended to refer all phenomena to a natural cause, in order that a knowledge of nature may set men free from the bondage of disquieting superstitions. In ethics he followed within certain limits the Cyrenaic doctrine, conceiving the highest good to be happiness, and happiness to be found in pleasure, to which the natural impulses of every being are directed. But the aim is not with him, as it is with the Cyrenaics, the pleasure of the moment, but the enduring condition of pleasure, which, in its essence, is freedom from the greatest of evils, pain. Pleasures and pains are, however, distinguished not merely in degree, but in kind. The renunciation of a pleasure or endurance of a pain is often a means to a greater pleasure; and since pleasures of sense are subordinate to the pleasures of the soul, the undisturbed peace of the soul is a higher good than the freedom of the body from pain. Virtue is desirable not for itself, but for the sake of pleasure of soul, which it secures by freeing men from trouble and fear and moderating their passions and appetites. The cardinal virtue is wisdom, which is shown by true insight in calculating the consequences of our actions as regards pleasure or pain. See EPICURUS.

The practical tendency of Stoicism and Epicureanism, seen in the search for happiness, is also apparent in the Sceptical School founded by Pyrrho of Elis (about 365–275). Pyrrho disputes the possibility of attaining truth by sensuous apprehension, reason, or the two combined, and thence infers the necessity of total suspension of judgment on things. Thus can we attain release from all bondage to theories, a condition which is followed, like a shadow, by that imperturbable state of mind which is the foundation of true happiness. Pyrrho's doctrine was followed by the Middle and New Academies (see above), represented by Arcesilaüs of Pitané (316–241) and Carneades of Cyrene (214–129) respectively, in their attacks on the Stoics, for asserting a criterion of truth in our knowledge, although they considered that what they were maintaining was a genuine tenet of Socrates and Plato. The latest Academics, such as Antiochus of Ascalon (about B.C. 80), fused with Platonism certain Peripatetic and many Stoic dogmas, thus making way for Eclecticism, to which all later antiquity tended after Greek philosophy had spread itself over the Roman world. After the Christian era Pythagoreanism, in a resuscitated form, again takes its place among the more important systems; but the preëminence belongs to Platonism, which is notably represented in the works of Plutarch of Chaeronea and the physician Galen, while Scepticism is maintained by another physician, Sextus Empiricus.

The closing period of Greek philosophy is marked in the third century A.D. by the establishment in Rome, under Plotinus of Lycopolis in Egypt (205–270), of Neoplatonism, a scientific philosophy of religion, in which the doctrine of Plato is fused with the most important elements in the Aristotelian and Stoic systems and with Oriental speculations. At the summit of existences stands the One or the Good, as the source of all things. It generates from itself, as if from the reflection of its own being, reason, wherein is contained the infinite store of ideas. Soul, the copy of the reason, is generated by and contained in it, as reason is in the One, and, by informing matter in itself non-existent, constitutes bodies whose existence is contained in soul. Nature, therefore, is a whole, endowed with life and soul. Soul, being chained to matter, longs to escape from the bondage of the body and return to its original source. In virtue and philosophic thought it has the power to elevate itself above the reason into a state of ecstasy, where it can behold, or ascend up to, that one good primary Being whom reason cannot know. To attain this union with the Good, or God, is the true function of man, to whom the external world should be absolutely indifferent. Plotinus's most important disciple, the Syrian Porphyrius, contented himself with popularizing his master's doctrine. But the school of Iamblichus, a disciple of Porphyrius, effected a change in the position of Neoplatonism, which now took up the cause of polytheism against Christianity, and adopted for this purpose every conceivable form of superstition, especially those of the East. Foiled in the attempt to resuscitate the old beliefs, its supporters then turned with fresh ardour to scientific work, and especially to the study of Plato and Aristotle, in the interpretation of whose works they rendered great services. The last home of philosophy was at Athens, where Proclus (411–485) sought to reduce to a kind of system the whole mass of philosophic tradition, till in A.D. 529 the teaching of philosophy at Athens was forbidden by Justinian.

II. ROMAN PHILOSOPHY is throughout founded on the Greek. Interest in the subject was first excited at Rome in B.C. 155 by an Athenian embassy, consisting of the Academic Carneades, the Stoic Diogenes, and the Peripatetic Critolaüs. Of more permanent influence was the work of the Stoic Panaetius, the friend of the younger Scipio and of Laelius; but a thorough study of Greek philosophy was first introduced in the time of Cicero and Varro. In a number of works they endeavoured to make it accessible even to those of their countrymen who were outside the learned circles. Cicero chiefly took it up in a spirit of Eclecticism; but among his contemporaries Epicureanism is represented in the poetical treatise of Lucretius (q. v.) on the nature of things, and Pythagoreanism by Nigidius Figulus. In imperial times Epicureanism and Stoicism were most popular, especially the latter, as represented by the writings of Seneca, Cornutus, and the emperor Marcus Aurelius; while Eclectic Platonism was taken up by Apuleius of Madaura. One of the latest philosophical writers of antiquity is Boëthius, whose writings were the chief source of information as to Greek philosophy during the first centuries of the Middle Ages. See BOËTHIUS.

Useful works on the general history of the philosophy of Greece and Rome are the following: Ueberweg, *A History of Philosophy*, vol. i. (Eng. trans., N. Y. 1875), valuable for its bibliography; Ritter and Preller, *Historia Philosophiae*

Graecae et Romanae ex Fontium Locis Contexta (Berlin, 1878; ed. Schultess, Gotha, 1887); Schwegler, *History of Philosophy* (Eng. trans., N. Y. 1882); J. B. Mayor, *A Sketch of Ancient Philosophy from Thales to Cicero* (Cambridge, 1881); Burner, *Early Greek Philosophy* (London, 1892). Zeller's *Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung dargestellt* is the fullest of all works yet published, 5 vols. with index (Berlin, 1874–79). A short syllabus is Scott's *Simple History of Greek Philosophy*, in 91 pp. (London, 1894).

For special periods, the following portions of Zeller's great work, in English translation, may be recommended: *Pre-Socratic Schools* (London, 1880); *Socrates and the Socratic Schools* (2d ed., London, 1877); *Stoics, Epicureans, and Skeptics* (London, 1870); *Plato and the Older Academy* (London, 1877); *Aristotle and the Elder Peripatetics* (London, 1882); *History of Eclecticism in Greek Philosophy* (London, 1883); also Teichmüller, *Xenophon und Platon* (1884); Lange, *History of Materialism*, 2 vols. (Eng. trans., London, 1878–81); Denis, *Histoire des Idées Morales dans l'Antiquité* (2d ed., Paris, 1879); Martha, *Les Moralistes sous l'Empire Romain* (Paris, 1872); Herbart, *Die Philosophie des Cicero* (Leipzig, 1842); Burmeister, *Cicero als Neuakademiker* (Oldenburg, 1860); Levin, *Lectures on the Philosophy of Cicero* (London, 1871); Holzherr, *De Philosophia Senecae* (Rastatt, 1858); Binde, *Seneca de Rerum Natura et Vita Humana* (Glogau, 1883); and Havet, *Le Christianisme et ses Origines* (Paris, 1873).

Philosophy. See PHILOSOPHIA.

Philostrătus (*Φιλόστρατος*). (1) FLAVIUS PHILOSTRĂTUS the elder, a Greek Sophist of Lemnos, son of a celebrated Sophist of the same name. He taught first in Athens, then at Rome till the middle of the third century A.D. By order of his great patroness Iulia Domna, the learned wife of the emperor Septimius Severus, he wrote (*a*) the romantic *Life of Apollonius of Tyana*. Besides this we have by him (*b*) a work entitled *Heroicus* (*Ἡρωικός*), consisting of mythical histories of the heroes of the Trojan War in the form of a dialogue, designed to call back to life the expiring popular religion; (*c*) lives of the Sophists (*Βίοι Σοφιστῶν*), in two books, the first dealing with twenty-six philosophers, the second with thirty-three rhetoricians of earlier as well as later times, a work important for the history of Greek culture, especially during the imperial age; (*d*) seventy-three letters, partly amatory in subject; (*e*) a fragment of a work intended to revive interest in the old *Gymnastic*; lastly (*f*), the *Imagines* (*Εἰκόνες*), in two books, being descriptions of sixty-six paintings on all possible subjects. Of these it is doubtful whether, as he pretends, they really belonged to a gallery at Naples, a statement accepted by Brunn, or whether their subjects were invented by himself, as maintained by Friederichs and Matz. Like all his writings, this work is skilful and pleasing in its manner, and the interest of its topic makes it particularly attractive. It is not so much designed to incite to the study of works of art as to exhibit the art of painting in a totally new field; and herein he is followed both by his grandson and namesake and by Callistratus (q. v.). The works of Philostratus are collected and edited by Kayser (Leipzig, 1870–71), and translated into English by Berwick (London, 1809). See Brunn, *Die Philostratischen Gemälde* (1861); and Bertrand, *Philostrate et son École* (1882). A new edition of the *Imagines* was published by the members of the Vienna Classical Seminary in 1893.

(2) PHILOSTRĂTUS THE YOUNGER, grandson of the preceding, of Lemnos. He lived chiefly at Athens, and died at Lemnos, A.D. 264. Following his grandfather's lead, he devoted himself to the rhetorical description of paintings; but fell considerably behind his model both in invention and descriptive power, as is proved by the sixteen extant *Imagines*, the first book of a larger collection. Printed in Kayser's edition of the preceding.

Philōtas (*Φιλώτας*). A son of Parmenio. He distinguished himself on many occasions as a commander of cavalry under Alexander the Great, but was at last accused of conspiring against the king's life. An informer said that he had at first told his secret to Philotas, who had daily access to Alexander, but who had taken no notice of it for two days, at the end of which time, through the means of another officer near Alexander's person, the information was conveyed to the king. This threw strong suspicion on Philotas, who, however, was not implicated by either the informer or any of the accused in their confessions. But Craterus, who was jealous of Philotas, on account of the favour which the latter enjoyed with the king, encouraged the suspicions of Alexander, who recollected what Philotas had said at the time when the former claimed Zeus Ammon for his father, that he pitied those who were doomed to serve a man that fancied himself to be a god. Craterus had also, for some time previous, bribed a courtesan intimate with Philotas, who reported to him, and, through him, to the king, all the expressions of discontent uttered by Philotas in his unguarded moments. In short, Alexander was induced to order Philotas to be tortured in consequence of the suggestions of Craterus, Hephaestion, and others of the king's companions. The torture was administered by Craterus himself, and Philotas, after enduring dreadful agonies, confessed, though in vague terms, that he had conspired against the life of Alexander, and that his father Parmenio was cognizant of it. This being considered sufficient evidence, Philotas was stoned to death; and Parmenio suffered not long after him. See PARMENIO.

Philoxĕnus (*Φιλόξενος*). (1) A famous Greek dithyrambic poet, of Cythera, born in B.C. 435. He came as a prisoner of war into the possession of the Athenian musician Melanippides, by whom he was educated and set free. He lived long at Syracuse, at the court of the tyrant Dionysius I., who threw him into the stone-quarries for outspoken criticism on his bad poems. On his escape from Sicily he revenged himself on the tyrant, who was short-sighted or perhaps blind of one eye, by witty raillery in the most famous of his twenty-four dithyrambs, the *Cyclops*, which describes the love of the one-eyed Polyphemus for the beautiful nymph Galatea. He died B.C. 380, at Ephesus, after visiting various places in Greece, Italy, and Asia Minor for the public performance of his compositions. These were celebrated among the ancients for originality of expression and rich variety of melody. We have only some considerable fragments of a lyric poem entitled *The Banquet* (*Δεῖπνον*),

in which the burlesque subject affords a comic contrast to the dignified Doric rhythm. Edition by Bippart (Leipzig, 1843), and in Bergk, *Poet. Lyrici Graeci*. (2) A Macedonian officer of Alexander the Great who received from Perdiccas the government of Cilicia in B.C. 321. (3) An Alexandrian grammarian who taught in Rome and wrote on Homer and the Greek dialects, besides compiling a glossary which has been preserved and edited by H. Stephanus (Paris, 1573). See LEXICON.

Philus, Furius. (1) PUBLIUS, was consul B.C. 223 with C. Flaminius, and accompanied his colleague in his campaign against the Gauls in the north of Italy. He was praetor in 216, when he commanded the fleet with which he proceeded to Africa. In 214 he was censor with M. Atilius Regulus, but died at the beginning of the following year. (2) LUCIUS, consul B.C. 136, received Spain as his province, and was commissioned by the Senate to deliver up to the Numantines C. Hostilius Mancinus, the consul of the preceding year. Philus, like his contemporaries Scipio Africanus the younger and Laelius, was fond of Greek literature and refinement. He is introduced by Cicero as one of the speakers in his dialogue *De Republica*.

Philȳra (*Φιλύρα*). One of the Oceanides, and the mother of Chiron by Cronos. The god, dreading the jealousy of his wife Rhea, changed Philyra into a mare and himself into a horse. The offspring of their love was the Centaur Chiron, half man, half horse. Philyra was so ashamed of the monstrous shape of the child that she prayed the gods to change her form and nature. She was accordingly metamorphosed into the linden-tree, called by her name among the Greeks (*φιλύρα*). (Hyg. *Fab.* 138.) See ACHERON; STYX.

Philȳra (*φιλύρα*). A thin strip cut from the inner coat of the papyrus and glued with others to form a page for writing. (See PAPYRUS.) The name is often given to a strip of linden bark used in making garlands of flowers (*coronae sutiles*). See Hor. *Carm.* i. 38, 2; and CORONA.

Phimus (*φιμός*). A dice-box for which the Latin name is *fritillus*. See TESSERA.

Phineus (*Φινεύς*). (1) Son of Belus and Anchinoë, and brother of Cepheus. He was slain by Perseus. For details see ANDROMEDA and PERSEUS. (2) Son of Agenor, and king of Salmydessus in Thrace. He was first married to Cleopatra, the daughter of Boreas and Orithyia, by whom he had two children, Oryithus (Oarthus) and Crambis; but their names are different in the different legends: Ovid calls them Polydectus and Polydorus. Afterwards he was married to Idaea (some call her Dia, Eurytia, or Idothea), by whom he again had two sons, Thynus and Mariandynus.

Phineus was a blind soothsayer, who had received his prophetic powers from Apollo; but the cause of his blindness is not the same in all accounts. He is most celebrated on account of his being tormented by the Harpies, who were sent by the gods to punish him on account of his cruelty towards his sons by the first marriage. His second wife falsely accused them of having made an attempt upon her virtue, whereupon Phineus put out their eyes, or, according to others, exposed them to be devoured by wild beasts, or ordered them to be half buried in the earth, and then to be scourged. Therefore the gods struck him with blindness and sent the Harpies to torment him. Whenever a meal was placed before Phineus, the Harpies darted down from the air and carried it off; later writers add that they either devoured the food themselves or rendered it unfit to be eaten. When the Argonauts visited Thrace, Phineus promised to instruct them respecting their voyage, if they would deliver him from the monsters. This was done by Zetes and Calaïs, the sons of Boreas, and brothers of Cleopatra (Apollon. ii. 284). Phineus now explained to the Argonauts the further course they had to take, and especially cautioned them against the Symplegades. According to another story the Argonauts, on their arrival at Thrace, found the sons of Phineus half buried, and demanded their liberation, which Phineus refused. A battle thereupon ensued, in which Phineus was slain by Heracles. The latter also delivered Cleopatra from her confinement, and restored the kingdom to the sons of Phineus; and on their advice he also sent the second wife of Phineus back to her father, who ordered her to be put to death. Some traditions, lastly, state that Phineus was killed by Boreas, or that he was carried off by the Harpies into the country of the Bistones or Milchessians. Those accounts in which Phineus is stated to have put out the eyes of his sons add that they had their sight restored to them by the sons of Boreas, or by Asclepius.

Phintias (*Φιντίας*). (1) A Pythagorean, the friend of Damon, who was condemned to die by Dionysius the elder. For details, see DAMON. (2) A tyrant of Agrigentum, who established his power over that city during the period of confusion which followed the death of Agathocles (B.C. 289). He founded a new city on the southern coast of Sicily, to which he gave his own name, and whither he removed all the inhabitants from Gela, which he razed to the ground.

Phlebotŏmus (*φλεβοτόμος*). A lancet for opening a vein (Veget. *Vet.* i. 19).

Phlegĕthon (*Φλεγέθων*), "the flaming," and **Pyriphlĕgthon** (*Πυριφλεγέθων*), "flaming with fire." A river in the lower world, in whose channel flowed flames instead of water. See HADES.

Phlegon (*Φλέγων*). A Greek writer, of Tralles in Caria, freedman of the emperor Hadrian. He wrote in the first half of the second century A.D. a work entitled *Περὶ Θαυμασίων* ("On Wonderful Events"). It is a tasteless composition, but instructive as to the superstitions of antiquity. Also a dry catalogue of persons who attained a great age (*Περὶ Μακροβίων*). Of his great chronological work, a catalogue of victors at the Olympian games in 229 Olympiads (B.C. 776 to A.D. 137) in 17 books, only fragments remain. There is an edition of Phlegon by Westermann in his *Paradoxographi* (Brunswick, 1839), and Keller (1877).

Phlegra (*τὰ Φλεγραῖα πεδία*, PHLEGRAEI CAMPI, Phlegraean fields). The scene of the fight between the gods and the Giants. (See GIGANTES.) It was identified with the volcanic plain which extends along the coast of Campania from Cumae to Capua; and, because of its great productiveness, was called by the Romans Campus Laborinus and Laboriae (Pliny, *H. N.* xviii. 111).

Phlegra. See PALLENÉ.

Phliasia. See PHLIUS.

Phlius (*Φλιούς*). The chief town of a small province in the northeast of Peloponnesus, whose

territory, PHLIASIA, was bounded by Sicyonia, Arcadia, and Argos. It was usually allied with Sparta, and under Cleonymus joined the Achaean League (Polyb. ii. 44).

Phobētor (*Φοβήτωρ*). A dream-god, son of Morpheus. See SOMNUS.

Phocaea (*Φώκαια*). The northernmost of the Ionian cities on the west coast of Asia Minor, celebrated as a great maritime State, and especially as the founder of the Greek colony of Massilia (q. v.) in Gaul. The name Phocaean is often used with reference to Massilia. It was said to have been founded by Phocian colonists under Philogenes and Damon. It was originally within the limits of Aeolis, in the territory of Cyme; but the Cymaeans voluntarily gave up the site for the new city, which was soon admitted into the Ionian Confederacy on the condition of adopting oecists of the race of Codrus. It was admirably situated, and possessed two excellent harbours, Naustathmus and Lampter. After the Persian conquest of Ionia, Phocaea had so declined that she could only furnish three ships to support the great Ionian revolt; but the spirit of her people had not been extinguished; when the common cause was hopeless, and their city was besieged by Harpalus, they embarked, to seek new abodes in the distant West, and bent their course to their colony of Aetalia in Corsica. During the voyage, however, a portion of the emigrants resolved to return to their native city, which they restored, and which recovered much of its prosperity, as is proved by the rich booty gained by the Romans, when they plundered it under the praetor Aemilius, after which it does not appear as a place of any consequence in history.

Care must be taken not to confound Phocaea with Phocis, or the ethnic adjectives of the former, *Φωκαεύς* and *Phocaeënsis*, with those of the latter, *Φωκεύς* and *Phocensis*; some of the ancient writers themselves have fallen into these mistakes.

Phocas (*Φωκᾶς*). Emperor of the East from A.D. 602 to 610. He was a Cappadocian of low origin, and began his career as a groom for the general Priscus (q. v.). He won his imperial rank by his reputation for brutal courage and his popularity with the soldiers. He was crowned in succession to Mauricius, against whose authority he had revolted, and whom he caused to be put to death. His short reign was distinguished by a bloody war with the Persians under their king Chosroïs, a war marked by many reverses for the Roman arms. Phocas, instead of taking the field in person, remained at Constantinople, giving himself up to sensual pleasures. A number of insurrections against him followed, and were put down with great severity by Phocas, until Heraclius, son of the exarch of Africa, led a force against Constantinople, which he took by storm, and caused Phocas to be beheaded.

Phocas, COLUMN OF. A pillar fifty-four feet in height, still standing in the Roman Forum, where it was disinterred from the rubbish that covered it, in 1813, at the expense of the Duchess of Devonshire. It was erected by the exarch Smaragdus in A.D. 608 in honour of the emperor Phocas (q. v.), whose gilded statue originally crowned it.

Phocion (*Φωκίων*). An Athenian general and statesman, son of Phocus. He was a man of humble origin, and appears to have been born in B.C. 402. He studied under Plato and Xenocrates. He distinguished himself for the first time under his friend Chabrias, in 376, at the battle of Naxos; but he was not employed prominently in any capacity for many years afterward. In 354 (according to others in 350) he was sent into Euboea in the command of a small force in consequence of an application from Plutarchus, tyrant of Eretria; and he was subsequently employed on several occasions in the war between the Athenians and Philip of Macedon. He frequently opposed the measures of Demosthenes, and recommended peace with Philip; but he must not be regarded as one of the mercenary supporters of the Macedonian monarch. His virtue is above suspicion, and his public conduct was always influenced by upright motives. When Alexander was marching upon Thebes in 335, Phocion rebuked Demosthenes for his invectives against the king; and after the destruction of Thebes he advised the Athenians to comply with Alexander's demand for the surrender of Demosthenes and other chief orators of the anti-Macedonian party. This proposal was indignantly rejected by the people, and an embassy was sent to Alexander, which succeeded in deprecating his resentment. According to Plutarch, there were two embassies, the first of which Alexander refused to receive, but to the second he gave a gracious audience and granted its prayer, chiefly from regard to Phocion, who was at the head of it. Alexander ever continued to treat Phocion with the utmost consideration, and to cultivate his friendship. He also pressed upon him valuable presents; but Phocion persisted in refusing his presents, begging the king to leave him no less honest than he found him, and only so far availed himself of the royal favour as to request the liberty of certain prisoners at Sardis, which was immediately granted to him. After Alexander's death Phocion opposed vehemently, and with all the caustic bitterness which characterized him, the proposal for war with Antipater. Thus, to Hyperides, who asked him tauntingly when he would advise the Athenians to go to war, he answered, "When I see the young willing to keep their ranks, the rich to contribute of their wealth, and the orators to abstain from pilfering the public money." When the Piraeus was seized by Alexander, the son of Polysperchon, in 318, Phocion was suspected of having advised Alexander to take this step; whereupon, being accused of treason by Agnonides, he fled, with several of his friends, to Alexander, who sent them with letters of recommendation to his father Polysperchon. The latter, willing to sacrifice them as a peace-offering to the Athenians, sent them back to Athens for the people to deal with them as they would. Here Phocion was sentenced to death. To the last he maintained his calm and dignified and somewhat contemptuous bearing. When some wretched man spat upon him as he passed to the prison, "Will no one," said he, "check this fellow's indecency?" To one who asked him whether he had any message to leave for his son Phocus, he answered, "Only that he bear no grudge against the Athenians." And when the hemlock which had been prepared was found insufficient for all the condemned, and the jailer would not furnish more until he was paid for it, "Give the man his money," said Phocion to one of his friends, "since at Athens one

cannot even die for nothing." He perished in the year 317, at the age of eighty-five.

The Athenians are said to have repented of their conduct. A brazen statue was raised to the memory of Phocion, and Agnonides was condemned to death. Phocion was twice married, and his second wife appears to have been as simple and frugal in her habits as himself; but he was less fortunate in his son Phocus, who, in spite of his father's lessons and example, was a thorough profligate. As for Phocion himself, commendation of him must be almost wholly confined to his private qualities. His fellow-citizens may have been degenerate, but he made no effort to elevate them. His life is written by Plutarch. See also Morell, *Vita Phocionis* (Leyden, 1869); and Thirlwall, vii. pp. 256 foll.

Phocis (*Φωκίς*). A country in northern Greece, bounded on the north by the Locri Epicnemidii and Opuntii, on the east by Boeotia, on the west by the Locri Ozolae and Doris, and on the south by the Corinthian Gulf. At one time it possessed a narrow strip of country on the Euboean Sea, with the seaport Daphnus, between the territory of the Locri Epicnemidii and Locri Opuntii. It was a mountainous and unproductive country, and owes its chief importance in history to the fact of its possessing the Delphic oracle. Its chief mountain was Parnassus, situated in the interior of the country, to which, however, Cnemis, on its northern frontier, Cirphis, south of Delphi, and Helicon, on the southeastern frontier, all belonged. The principal river in Phocis was the Cephisus, the valley of which contained almost the only fertile land in the country, with the exception of the celebrated Crissaean Plain in the southwest, on the borders of the Locri Ozolae. Among the earliest inhabitants of Phocis we find mentioned Leleges, Thracians, Abantes, and Hyantes. Subsequently, but still in the ante-historical period, the Phlegyae, an Achaean race, a branch of the Minyae at Orchomenos, took possession of the country; and from this time the main bulk of the population continued to be Achaean, although there were Dorian settlements at Delphi and Bulis. The Phocians are said to have derived their name from an eponymous ancestor Phocus (q. v.), and they are mentioned under this name in the *Iliad*.

The Phocians played no conspicuous part in Greek history till the time of Philip of Macedon; but at this period they became involved in a war, called the Phocian or Sacred War, in which the principal states of Greece took part. The Thebans had long been inveterate enemies of the Phocians; and as the latter people had cultivated a portion of the Crissaean Plain, which the Amphictyons had declared in B.C. 585 should lie waste forever, the Thebans availed themselves of this pretext to persuade the Amphictyons to impose a fine upon the Phocians, and upon their refusal to pay it, the Thebans further induced the council to declare the Phocian land forfeited to the god of Delphi. Thus threatened by the Amphictyonic Council, backed by the whole power of Thebes, the Phocians were persuaded by Philomelus, one of their citizens, to seize Delphi, and to make use of the treasures of the temple for the purpose of carrying on the war. They obtained possession of the temple in B.C. 357. The war which ensued lasted ten years, and was carried on with various success on each side. The Phocians were commanded first by Philomelus, B.C. 357–353, afterward by his brother Onomarchus, 353–352, then by Phaÿllus, the brother of the two preceding, 352–351, and finally by Phalaecus, the son of Onomarchus, 351–346. The Phocians received some support from Athens, but their chief dependence was upon their mercenary troops, which the treasures of the Delphic temple enabled them to hire. The Amphictyons and the Thebans, finding at length that they were unable with their own resources to subdue the Phocians, called in the assistance of Philip of Macedon, who brought the war to a close in 346. The conquerors inflicted the most signal punishment upon the Phocians, who were regarded as guilty of sacrilege. All their towns were razed to the ground with the exception of Abae, and the inhabitants distributed in villages containing no more than fifty inhabitants. The two votes which they had in the Amphictyonic Council were taken away and given to Philip. See PHILIPPUS.

Phocus (*Φῶκος*). (1) The son of Aeacus and the nymph Psamathé, slain by his half-brothers Telamon and Peleus, who were therefore sent into banishment by Aeacus. From him the country Phocis derived its name (Pausan. ii. 29, 2). (2) The son of Ornytion of Corinth or of Poseidon. He colonized the territory about Mount Parnassus (Pausan. ii. 4, 3).

Phocylĭdes (*Φωκυλίδης*). An Ionian poet of Miletus, born B.C. 560. His poetry was chiefly gnomic (see EPOS), and only a few fragments of it survive, 18 in number. A poem in 217 hexameters, entitled *Ποίημα Νουθετικόν*, which has come down under his name, is a later forgery.

Phoebé (*Φοίβη*). (1) A special name of Artemis as moon-goddess. See ARTEMIS; SELENÉ. (2) The daughter of Uranus and Gaea, and mother by Coeus of Asteria and Leto (Hes. *Theog.* 136, 404). (3) A sister of Clytaemnestra (Ovid, *Heroid.* viii. 77).

Phoebus (*Φοῖβος*). A special name for Apolol (q. v.).

Phoenīcé (*Φοινίκη*); PHŒNICIA is found in only one passage (Cic. *De Fin.* iv. 20). Phœnicia; an Asiatic country on the Syrian coast. It was bounded on the north by the river Eleutherus, on the south by Mount Carmel, and on the east by Palestine and Coelesyria. It largely consisted of fertile, well-watered valleys, its chief rivers being the Eleutherus, the Sabbaticus, the Tripolis, the Adonis, the Lycus, the Magoras, the Tamyras, the Leo, the Lita, the Belus, and the Kishon. Its principal cities were Sidon, Tripolis, Byblus, Tyrus, Berytus, and Ptolemaïs. Phœnicia being little more than a narrow strip of coast, was almost necessarily a maritime country, and its cities for many centuries were at the head of naval power in ancient times. See SIDON; TYRUS.

Their commerce extended over the known world, and they became everywhere known for their traffic and dyestuffs, especially the Tyrian purple, glass, tin, and amber. They also, in connection with their commerce, established many colonies within the Mediterranean on various islands (see CYPRUS), on the north coast of Africa (see CARTHAGO), and even on the western coasts of Spain and Africa. They also had settlements on the Euxine Sea. In Gaul the city of Massilia was founded by the Phœnicians.

In race the Phœnicians must be classed as Semitic, as is evident from the language which they spoke and of which our knowledge is derived

from a large number of inscriptions, mostly mortuary and votive, found in Phœnicia itself and more numerously on the site of Carthage and Citium. A number of Phœnician phrases are found transliterated in the comedy of Plautus mentioned below. The native Phœnician literature seems not to have been extensive, and of it nothing has been preserved except some fragments such as the Greek translation of Sanchuniathon and Hanno. The inscriptions, such as they are, cover, roughly speaking, a period extending from B.C. 600 to A.D. 250. Like the other Semitic languages the Phœnician is written without the vowel points. Some scholars have regarded the language as being so closely allied to Hebrew as to be almost capable of classification as a Hebrew dialect. Phœnician is more archaic in its structure, simpler in its syntax, and with an apparently limited vocabulary, but this last is perhaps an unsafe generalization owing to the fact that so little material has survived from which to judge of it. The Phœnician script is the prototype of the Greek and Roman alphabets as well as of the principal Semitic scripts. The oldest specimen of it is the Moabite Stone (q v.). The origin of the Phœnician itself is doubtful. Some scholars, like De Rouge, consider it a derivative from the Egyptian hieroglyphics. The language spoken in Carthage was practically the same as the original Phœnician, with differences in the pronunciation and orthography, and to some extent in the script. A curious bit of Phœnician exists in the *Poenulus* of Plautus, where one of the speakers utters some sentences in Carthaginian. The interpretation of the passage has puzzled scholars for generations. See POENULUS.

The influence of the Phœnicians upon Greek art has some importance, as from them the Greeks borrowed the types for all their early gold and silver work and for their vase patterns. The Greek religion was also influenced by them, on which see the article APHRODITÉ.

The internal history of Phœnicia is not very well known, nor is its form of government thoroughly understood. Particularism seems to have been its character, and the different cities of Phœnicia were practically independent of one another. Hence, at different periods, they fell an easy prey to invaders from Egypt, Assyria, Macedon, and Rome. At the earliest period of which we have any knowledge Phœnicia is found a dependency of Egypt, ruled by Egyptian governors and paying an annual tribute. About B.C. 1300 Egypt lost this hold owing to internal disturbances, which compelled her to give up her foreign possessions, and for several centuries after this the importance of the Phœnicians attains its height. About B.C. 800 the Assyrians obtained at least a nominal control and exacted tribute from the Phœnician cities, though without interfering with their commercial importance. Subsequently they were subdued by the Babylonians, the Persians, and the Macedonians, and under the Romans Phœnicia was incorporated into the province of Syria, while under the Empire it became the province of Phœnicé Libanensis.

For the history, see Rawlinson's *History of Phœnicia* (London, 1889); Mover, *Die Phönizier* (3 vols. Bonn, 1841–50); Prutz, *Aus Phönizien* (Leipzig, 1876); Duncker, *History of Antiquity*, Eng. trans. book iii. (London, 1877); Sayce, *Ancient Empires of the East* (London, 1884); Pietschmann, *Geschichte der Phönizier* (Berlin, 1889). On the language, see Levy, *Phönizische Studien* (Breslau, 1864); Schroeder, *Die phönizische Sprache* (Halle, 1869); and Bloch, *Phönizisches Glossar* (Berlin, 1891). The most complete collection of Phœnician inscriptions is that in vol. i. of the *Corpus Inscriptionum Semiticarum* (Paris, 1881–90).

Phoenīcé (*Φοινίκη*). Now Finiki; a city of Epirus on the coast, in the district Chaonia (Livy, xxix. 12).

Phoenicia. See PHOENICÉ.

Phœnicium Maré (*τὸ Φοινίκιον πέλαγος*). A name given to that part of the Mediterranean adjoining the coast of Phœnicia.

Phoenīcus (*Φοινικοῦς*). (1) Also called PHOENIX; a harbour on the southern shore of Crete (Acts, xxvii. 12). (2) A harbour in Messenia. (3) A harbour of Ionia. (4) A city of some size in the southern part of Lycia; on Mount Olympus, whence the city itself is also sometimes called OLYMPUS (Strabo, p. 666). Under the Romans it was a rendezvous for pirates and was destroyed by Servilius Isauricus. See VATIA.

Phoenicūsa. One of the Aeoliae Insulae (q. v.).

Phoenix (*Φοίνιξ*). A fabulous bird, of which Herodotus gives the following account in that part of his work which treats of Egypt (ii. 73): "The phœnix is another sacred bird, which I have never seen except in effigy. He rarely appears in Egypt; once only in five hundred years, immediately after the death of his father, as the Heliopolitans affirm. If the painters describe him truly, his feathers represent a mixture of crimson and gold, and he resembles the eagle in outline and size. They affirm that he does the following thing, which to me is not credible. They say that he comes from Arabia, and, bringing the body of his father inclosed in myrrh, buries him in the temple of the Sun; and that he brings him in the following manner: First, he moulds as great a quantity of myrrh into the shape of an egg as he is well able to carry; and, after having tried the weight, he hollows out the egg, and puts his parent into it, and stops up with some more myrrh the hole through which he had introduced the body, so that the weight is the same as before: he then carries the whole mass to the temple of the Sun in Egypt. Such is the account they give of the phœnix." Similar stories of marvellous birds are found in Persian literature (of the bird Simorg) and in Sanskrit literature (of the bird Semendar).

Phoenix (*Φοίνιξ*). Son of Amyntor, king of Argos, and the preceptor of Achilles, to whom he was so attached that he accompanied him to the Trojan War. According to the Homeric account (*Il.* ix. 447 foll.), Amyntor, having transferred his affections from his lawful wife, Hippodamia, to a concubine, the former besought her son Phœnix to gain the affections of his father's mistress, and alienate her from Amyntor. Phœnix succeeded in his suit, and his enraged father imprecated upon him the bitterest curses. The son, therefore, notwithstanding the entreaties and efforts of his relations to detain him at his parent's court, fled to Phthia, in Thessaly, where he was kindly received by Peleus, monarch of the country, who assigned him a territory on the confines of Phthia and the sway over the Dolopians. He intrusted him also with the education of his son Achilles.

Later writers, however, make Amyntor to have put out his son's eyes, and the latter to have fled in this condition to Peleus, who led him to Chiron, and persuaded the Centaur to restore him to sight. There was a play entitled *Phoenix* by Sophocles, another by Euripides, and a third by Ion.

After the death of Achilles, Phoenix, who had gone with him to the Trojan War, was one of those commissioned to return to Greece and bring young Pyrrhus to the war. On the fall of Troy he returned with that prince to Thessaly, in which country he continued to reside until his death.

Phoenix (*Φοίνιξ*). (1) A harbour in Crete. See PHOENICUS. (2) A river in Malis. (3) A river in the north of Thessaly.

Pholoë (*Φολόη*). A mountain forming the boundary between Arcadia and Elis; mentioned as one of the abodes of the Centaurs. See PHOLUS.

Pholus (*Φόλος*). A Centaur, son of Silenus and the nymph Melia. In the performance of his fourth task, which was to bring the Erymanthian boar alive to Eurystheus, Heracles (q. v.) took his road through Pholoë, where he was hospitably entertained by Pholus. The Centaur set before his guest roast meat, though he himself fared on raw. Heracles asking for wine, his host said he feared to open the jar, which was the common property of the Centaurs; but, when pressed by the hero, he consented to unclose it for him. The fragrance of the wine spread over the mountain, and soon brought all the Centaurs, armed with stones and pine sticks, to the cave of Pholus. The first who ventured to enter were driven back by Heracles with burning brands: he hunted the remainder with his arrows to Malea. When Heracles returned to Pholoë from this pursuit, he found Pholus lying dead along with several others; for, having drawn the arrow out of the body of one of them, while he was wondering how so small a thing could destroy such large beings, it dropped out of his hand and stuck in his foot, and he died immediately (Apollod. ii. 5, 4 foll.).

Phonetics. See PHILOLOGIA; GREEK, PRONUNCIATION OF; LATIN, PRONUNCIATION OF.

Phonos (*φόνος*). The Greek term for manslaughter, homicide. Originally in Greek the right of private vengeance was recognized, and only a ceremonious purification was required of those who thus took life (Antiph. *De Caede Herod.* 11). This primitive custom was disused at Athens as early as the time of the Draconian legislature, and survived in only a few special instances, as where the husband might kill the adulterer whom he caught in the act (see ADULTERIUM); personal chastity might also be defended by bloodshed. From this time, kinsmen of a deceased person, instead of becoming the lawful slayers of his murderer, were rather the legitimate prosecutors before the courts. In Attic law *φόνος ἑκούσιος* is the term for murder, and *φόνος ἀκούσιος* for manslaughter. All suits involving questions of homicide (*φονικαὶ δίκαι*) were under the jurisdiction of the Archon Basileus, assisted by the Ephetae. They were tried in the Court of the Areopagus, or in any of the four courts over which the Ephetae presided. The proceedings took place in the open air, lest the judges should be under the same roof with one accused of impiety. The Archon Basileus presided, and the trial occupied two days. On the third day the judges voted on the question of the acquittal of the accused. Wilful murder was punished with death (Antiph. l. c. 10); less serious cases by fine or exile. For details, see EPHETAE.

Phorbantia. See AEGATES.

Phorbas (*Φόρβας*). (1) The son of Lapithes and Orsinomé, and brother of Periphas. The Rhodians, in pursuance of an oracle, are said to have invited him into their island to deliver it from snakes, and afterwards to have honoured him with heroic worship. From this circumstance he was called Ophiuchus, and is said by some to have been placed among the stars (Diod. v. 54). According to another tradition, Phorbas went from Thessaly to Olenos, where Alector, king of Elis, made use of his assistance against Pelops, and shared his kingdom with him. Phorbas then gave his daughter Diogenia in marriage to Alector, and he himself married Hyrminé, a sister of Alector, by whom he became the father of Augeas and Actor. He is also described as a bold boxer, and is said to have plundered the temple of Delphi along with the Phlegyae, but to have been defeated by Apollo. (2) One of the followers of Aeneas, whose form was assumed by the god of Sleep to deceive Palinurus. (Verg. *Aen.* v. 842.)

Phorcus, Phorcys, or **Phorcyn** (*Φόρκος, Φόρκυς, Φόρκυν*). (1) A sea-deity, described by Homer as "the old man of the sea," to whom a harbour in Ithaca was dedicated, and is called the father of the nymph Thoosa. Later writers call him a son of Pontus and Gaea, and a brother of Thaumas, Nereus, Eurybia, and Ceto. By his sister Ceto he became the father of the Graeae and Gorgones, the Hesperian dragon, and the Hesperides; and by Hecaté or Crataïs, he was the father of Scylla. (2) The son of Phaenops, commander of the Phrygians of Ascania, assisted Priam in the Trojan War, but was slain by Aiax.

Phorcȳdes, Phorcĭdes, or **Phorcynĭdes.** See GORGONES; GRAEAE.

Phorminx (*φόρμιγξ*). A Greek stringed instrument. See LYRA.

Phormio. A comedy of Terence. See TERENTIUS.

Phormion (*Φορμίων*). (1) A celebrated Athenian general, the son of Asopius. He distinguished himself particularly in the command of an Athenian fleet in the Corinthian Gulf, where with far inferior forces he gained some brilliant victories over the Peloponnesian fleet in B.C. 429. In the ensuing winter he landed on the coast of Acarnania, and advanced into the interior, where he also gained some successes (Thucyd. ii. 80–92, 102; Diod. xii. 37–47). He was a man of remarkably temperate habits and a strict disciplinarian. (2) A Peripatetic philosopher of Ephesus, of whom is told the story that he discoursed for several hours before Hannibal on the military art and the duties of a general. When his admiring listeners asked Hannibal what he thought of him, the latter replied that of all the old fools whom he had ever seen, none could match Phormion (Cic. *De Orat.* ii. 18, 75).

Phormis (*Φόρμις*) or **Phormos** (*Φόρμος*). A Greek poet, writer of Dorian comedy. He was born in Arcadia, but removed to Sicily, where he became instructor to the children of the tyrant Gelon. After serving with success in the army under both Gelon and Hiero, he dedicated gifts to

Zeus at Olympia and to Apollo at Delphi as thank-offerings. Aristotle (*Poët.* 5) couples his name with that of Epicharmus (q. v.) as a founder of comedy. See COMOEDIA.

Phorōneus (*Φορωνεύς*). A son of Inachus and the Oceanid Melia or Archia, was a brother of Aegialeüs and the ruler of Argos. He was married to the nymph Laodicé, by whom he became the father of Niobé, Apis, and Car. According to other writers, his sons were Pelasgus, Iasus, and Agenor, who, after their father's death, divided the kingdom of Argos among themselves. Phoroneus is said to have been the first who offered sacrifices to Heré at Argos, and to have united the people, who, until then, had lived in scattered habitations, into a city which was called after him *ἄστυ Φορωνικόν* (Pausan. ii. 15, 5). The patronymic PHORONĪDES is sometimes used of the Argives in general, and especially to designate Amphiaraüs and Adrastus. Ovid (*Met.* i. 668) calls Io, who was a descendant of Phoroneus, *Phoronis*.

Phoros (*φορος*). The tribute paid by her allies to Athens. See DELOS, CONFEDERACY OF; HELLENOTAMIAE.

Photius (*Φώτιος*). A Greek scholar of the Byzantine Period, Patriarch of Constantinople A.D. 857–867 and 871–886. He died 891. Besides playing a prominent part in the ecclesiastical controversies of his time, he was conspicuous for his wide reading of ancient literature. Apart from theological writings, he left two works which are of great service to the student of antiquity. The one, the *Bibliotheca* (*Μυροβίβλιον* or *Βιβλιοθήκη*), is an account of 280 works, some of which are now lost, some only imperfectly preserved, which he read on his embassy to Assyria, with short notices and criticisms of matter and style, and in some cases more or less complete abstracts; the other, a *Lexicon* (*Λέξεων Συναγωγή*), or alphabetical glossary, of special value in connection with the Greek orators and historians. The *Bibliotheca* is edited by Bekker (Berlin, 1824–25); and the *Lexicon* by Hermann (Leipzig, 1808); from the papers of Porson (London, 1822); and by Naber, 2 vols. (1866). See also Hergenröther, *Photios* (1869); and the article LEXICON.

Phraāta or **Phraäspa** (*τὰ Φράατα*). A city of Media Atropatené, the winter residence of the Parthian kings (Dio Cass. xlix. 25).

Phraātes. The name of several Parthian kings. See ARSACES.

Phranza or **Phranzes** (*Φραντζῆ* or *Φραντζῆς*). The last and one of the most important of the Byzantine historians. He was frequently employed on important public business by Constantine XIII., the last emperor of Constantinople. On the capture of Constantinople by the Turks in 1453, Phranza was reduced to slavery, but succeeded in making his escape. He subsequently retired to a monastery, where he wrote his *Chronicon*. This work extends from 1259 to 1477, and is the most valuable authority for the history of the author's time, especially for the capture of Constantinople. It is edited by Alter (Vienna, 1796), and by Bekker, with a Latin translation (Bonn, 1838).

Phraortes (*Φραόρτης*). The second king of Media, and son of Deioces, whom he succeeded. He reigned from B.C. 656 to 634. He first conquered the Persians, and then subdued the greater part of Asia, but was at length defeated and killed while laying siege to Ninus (Nineveh), the capital of the Assyrian Empire. He was succeeded by his son Cyaxares (Herod. i. 73, 102).

Phratria (*φρατρία*, "brotherhood"). A word which denoted among the Greeks the subdivision of a *φυλή* (q. v.) embracing a number of families. In Attica the four old Ionic *phylae* contained three phratriae in each, twelve in all; and each phratria comprehended thirty families. (See GENNETAE.) When the old *phylae* were suppressed by Clisthenes, the phratriae remained in existence as religious associations for the observance of the ancient forms of worship, which did not admit of being suppressed. They had, however, no political importance, except that the sons (by birth or adoption) of a citizen had to be enrolled in the register of *φράτορες*, or members of the phratria of their natural or adoptive father. This was done by the *φρατρίαρχοι* (presidents) at the chief festival of the phratriae, the Apaturia (q. v.). Newly married husbands also introduced their wives into the phratria. Each phratria had a separate place of worship (*φράτριον*), with the altars of its deities (Pollux, iii. 52). Zeus and Athené were common to all, but each phratria worshipped other special deities of its own.

Phricōnis. A name given to Cymé in Aeolis. See also LARISSA.

Phrixa (*Φρίξα*). A town of Elis, on the borders of Pisatis, founded by the Minyae, and traditionally deriving its name from Phrixus (q. v.). See ARGONAUTAE.

Phrixus (*Φρίξος*). A son of Athamas and Nephelé and brother of Hellé. In consequence of the intrigues of his stepmother, Ino, he was to be sacrificed to Zeus; but Nephelé rescued her two children, who rode away through the air upon the ram with the golden fleece, the gift of Hermes. Between Sigeum and the Chersonesus, Hellé fell into the sea which was called after her the Hellespont; but Phrixus arrived in safety in Colchis, the kingdom of Aeëtes, who gave him his daughter Chalciopé in marriage. Phrixus sacrificed the ram, which had carried him, to Zeus Phyxius or Laphystius, and gave its fleece to Aeëtes, who fastened it to an oak-tree in the grove of Ares. This fleece was afterwards carried away by Iason and the Argonauts. (See ARGONAUTAE; IASON.) By Chalciopé Phrixus became the father of Argus, Melas, Phrontis, Cytisorus, and Presbon. Phrixus either died of old age in the kingdom of Aeëtes, or was killed by Aeëtes in consequence of an oracle, or returned to Orchomenus, in the country of the Minyans.

Phrixus (*Φρίξος*). A river in Argolis, which flows into the Argolic Gulf between Temenium and Lerna (Pausan. iii. 36, 6).

Phrygia (*Φρυγία*). A country of Asia Minor, which was of different extent at different periods. Under the Roman Empire Phrygia was bounded on the west by Mysia, Lydia, and Caria; on the south by Lycia and Pisidia; on the east by Lycaonia (which is often reckoned as a part of Phrygia) and Galatia (which formerly belonged to Phrygia), and on the north by Bithynia. The Phrygians are mentioned by Homer as settled on the banks of the Sangarius, where later writers tell us of the powerful Phrygian kingdom of Gor-

dius and Midas. It would seem that they were a branch of the great Thracian family, originally settled in the northwest of Asia Minor as far as the shores of the Hellespont and Propontis, and that the successive migrations of other Thracian peoples, as the Thyni, Bithyni, Mysians, and Teucrians, drove them farther inland. They were not, however, entirely displaced by the Mysians and Teucrians from the country between the shores of the Hellespont and Propontis and Mounts Ida and Olympus, where they continued side by side with the Greek colonies, and where their name was preserved in that of the district under all subsequent changes—namely, Phrygia Minor or Phrygia Hellespontus. The kingdom of Phrygia was conquered by Croesus, and formed part of the Persian, Macedonian, and Syro-Grecian Empires; but, under the last, the northeastern part, adjacent to Paphlagonia and the Halys, was conquered by the Gauls, and formed the western part of Galatia; and under the Romans was included in the province of Asia. In connection with the early intellectual culture of Greece, Phrygia is highly important. The earliest Greek music, especially that of the flute, was borrowed in part, through the Asiatic colonies, from Phrygia. With this country also were closely associated the orgies of Dionysus and of Cybelé, the Mother of the Gods, the *Phrygia Mater* of the Roman poets. After the Persian conquest, however, the Phrygians seem to have lost all intellectual activity, and they became proverbial among the Greeks and Romans for submissiveness and stupidity. The Roman poets constantly use the epithet Phrygian as equivalent to Trojan.

But scanty remains of the Phrygian language survive, chiefly in the shape of brief inscriptions. It was probably an Indo-European dialect closely related to the Armenian, and some such relation is implied in the notices of Herodotus (vii. 73) and Strabo (p. 295).

On Phrygia, see Perrot and Chipiez, *Hist. of Art in Phrygia*, etc. (Eng. trans., London, 1892). On the language, see Fick, *Spracheinheit der indogermanischen Europas*, pp. 408 foll., and a paper in *Bezzenberger's Beiträge*, xiv. 50 foll.

Phrygia Mater. See PHRYGIA; RHEA.

Phrygio. An embroiderer, the Phrygians being famous for their skill in this art (Plaut. *Aul.* iii. 5, 34).

Phrȳné (*Φρύνη*). A celebrated Athenian courtesan, born at Thespis in Boeotia. She flourished in the times of Philip and Alexander the Great, and was the mistress of some of the most distinguished men of the day. She became so wealthy that she is said to have offered to rebuild the walls of Thebes, when destroyed by Alexander, if only she might inscribe upon the walls, "Alexander destroyed these; but Phryné, the *hetaera*, rebuilt them"—an offer which was rejected. The famous painting of Apelles, entitled "Aphrodité Anadyomené," or Aphrodité rising from the sea, is said to have had Phryné for its model. (See APELLES.) Praxiteles, the sculptor, who was another of her lovers, used her as a model for his "Cnidian Aphrodité." At one time she was accused of profaning the Eleusinian Mysteries, and was brought before the court of the Heliasts; but her advocate, Hyperides, threw off her veil, and exposed her breasts to the judges, who at once acquitted her amid the applause of the people, by whom she was carried in triumph to the temple of Aphrodité. See MERETRIX.

Phrynĭchus (*Φρύνιχος*). (1) A Greek tragic poet of Athens, an older contemporary of Aeschylus. He won his first victory as early as B.C. 511. He rendered a great service to the development of the drama by introducing an actor distinct from the leader of the chorus, and so laying the foundation for the dialogue. But the dialogue was still quite subordinate to the lyrics of the chorus. In this department he won extraordinary celebrity by the grace and melody of his verses, which continued to be sung at Athens long after. Besides mythical subjects, he dealt with events of contemporary history, as the conquest of Miletus (*Μίλητου Ἅλωσις*) by the Persians. At the representation of that event the audience burst into tears, and the poet was fined 1000 drachmae for recalling the disasters of his country, all further performance of the piece being prohibited (Herod. vi. 21). Again, in his *Phoenissae* (so named after the chorus of Sidonian women) he dealt with the battle of Salamis. This play, which was put on the stage by Themistocles in 478, was the model of Aeschylus's *Persae*. Phrynichus, like Aeschylus, is said to have died in Sicily. We possess only the titles of nine of his plays and a few fragments.

(2) A Greek poet of Athens; one of the less important writers of the Old Attic Comedy, and a frequent butt of the other comic poets. In B.C. 405, however, his *Musae* took the second prize after Aristophanes' *Frogs*. We have only fragments of about ten plays, ed. by Koch (1880 foll.).

(3) A Greek Sophist, who lived in the second half of the third century A.D. in Bithynia; author of a selection of Attic verbs and nouns (*Ἐκλογὴ Ῥημάτων καὶ Ὀνομάτων Ἀττικῶν*), compiled with great strictness in the exclusion of all but the best Attic forms. We have also notable excerpts from a work of his in thirty-seven books, dedicated to the emperor Commodus, and entitled *The Sophistic Armoury* (*Παρασκευή*). It was founded on the most comprehensive learning, and designed to supply the orator with everything necessary for good and pure expression. The arrangement is alphabetical, and it includes examples from the best authors, the different styles being carefully distinguished. The first work is edited by Lobeck (Leipzig, 1820); the second by Bekker (Berlin, 1814). See Rutherford's *New Phrynichus* (1881).

Phrynnis (*Φρύννις*) or **Phrynis** (*Φρῦνις*). A writer of dithyrambic verse, born at Mitylené, but a resident of Athens about the time of the Peloponnesian War. He is said to have added two strings to the heptachord, and to have been the first to conquer at the musical contests introduced into the Panathenaea by Pericles (cf. Aristoph. *Nub.* 971; Plut. *Mus.* p. 1146).

Phthia (*Φθίη*). See PHTHIOTIS.

Phthiōtis (*Φθιῶτις*). A district in the southeast of Thessaly, bounded on the south by the Maliac Gulf, and on the east by the Pagasaean Gulf, and inhabited by Achaeans. (See THESSALIA.) Homer calls it Phthia, and mentions a city of the same name, which was celebrated as the residence of Achilles. Hence, the poets call Achilles *Phthius heros*, and his father Peleus *Phthius rex*.

Phthira (*τὰ Φθίρα*). A mountain in Caria.

Phya. See PISISTRATUS.

Phycūs (*Φυκοῦς*). A promontory on the coast of Cyrenaïca, a little west of Apollonia.

Phylăcé (*Φυλάκη*). A small town of Thessaly in Phthiotis, the birthplace of Protesilaüs, hence called *Phylacides;* his wife Laodamia is also called *Phylacëis.*

Phylarchus (*Φύλαρχος*). (1) A Greek historian, born probably at Naucratis, in Egypt, about B.C. 210, lived long at Sicyon, afterwards in Athens; author of a great historical work in twenty-eight books, dealing with the fifty years from the invasion of the Peloponnesus by Pyrrhus to the death of Cleomenes, king of Sparta (272–221). His enthusiastic admiration of that monarch appears to be the cause of the severe judgment passed on Phylarchus by Polybius (ii. 56), who represents the Achaean view. His style was lively and attractive, but sensational. His work was much used by Trogus Pompeius and by Plutarch in his lives of Cleomenes and Aratus. Only a few fragments remain, and have been edited by Müller in his *Fragmenta Hist. Graec.* (Paris, 1868).

Phylarchus (*φύλαρχος*). The Athenian term for (*a*) the president of a *φυλή* (see PHYLÉ); (*b*) one of the ten subordinate officers commanding the citizen cavalry. See HIPPEIS.

Phylas (*Φύλας*). (1) A king of the Dryopes, who was attacked and slain by Heracles, because he had violated the sanctuary of Delphi. By his daughter Midea, Heracles became the father of Antiochus. (2) Son of Antiochus and grandson of Heracles and Midea, was married to Deïphilé, by whom he had two sons, Hippotas and Thero. (3) King of Ephyra, in Thesprotia, and father of Polymelé and Astyoché, by the latter of whom Heracles was the father of Tlepolemus.

Phylé (*Φυλή*). Now Fili; a strongly fortified place in Attica, on the confines of Boeotia, and memorable as the place which Thrasybulus and the Athenian patriots seized soon after the end of the Peloponnesian War, B.C. 404, and from which they directed their operations against the Thirty Tyrants (q. v.) at Athens. It was an Attic deme. See THRASYBULUS.

Phylé (*φυλή*). The Greek term for a division of a nation, connected by (supposed) descent from a common ancestor of the stock. Thus the population of Attica, even before Solon, was divided into four phylae, tracing their origin from four legendary sons of Ion, and called Geleontes, Hopletes, Aegicores, and Argades. Probably the division was local, the names referring to the peculiarity or main occupation of the members of each division; for Hopletes appears to mean warriors, Aegicores, goat-herds, and Argades, agriculturalists. The meaning of Geleontes (or Teleontes) is perhaps "the shining." (See IONIC TRIBES.) Each phylé was presided over by a *φυλοβασιλεύς* (king of the phylé) and divided into three *phratriae* (brotherhoods, see PHRATRIA), each *phratria* being subdivided into thirty families. Each family contained about thirty households, and was named after a supposed common progenitor, in whose honour the households celebrated a common cult. Similarly the *phratriae* and phylae were united by the worship of special protecting deities. These old Ionic phylae were suppressed by Clisthenes, who divided the people into ten entirely different phylae, named after ancient heroes (Erechtheïs, Aegeïs, Pandionis, Leontis, Acamantis, Oeneïs, Cecropis, Hippothontis, Aiantis, Antiochis). They were subdivided into fifty *naucrariae* and one hundred *demi.* See DEMUS.

In B.C. 307, in honour of Demetrius Poliorcetes and his father Antigonis, the phylae were increased by two, called Demetrias and Antigonis, which names were afterwards changed, in honour of Ptolemy Philadelphus of Egypt and Attalus I. of Pergamon, into Ptolemais and Attalis. In later times, another, Adrianis, was added in honour of the emperor Hadrian. Besides priests for the cult of their eponymous hero, the phylae had presidents, called *φύλαρχοι*, and treasurers (*ταμίαι*). The assemblies were always held in Athens, and were concerned, not only with the special affairs of the phylé, but also with State business, especially the notification of the persons liable to State burdens. (See LITURGIA.) The ten phylae of Clisthenes served also as a foundation for the organization of the army. The forces were raised when required from the muster-roll of the phylae, and divided accordingly into ten battalions, which were themselves also called phylae.

The Dorian stock was generally divided into three phylae: Hylleis, Dymanes, and Pamphyli, purporting to be named after Hyllus, son of Heracles, and Dymas and Pamphylus, sons of king Aegimius. When families not of Dorian origin formed part of the forces of the State, they constituted an additional phylé. In the purely Dorian state of Sparta the three phylae were divided into thirty *obae*, answering to the families at Athens. See DORIS.

Phyllis (*Φύλλις*). (1) The daughter of Sithon, king of Thrace, and betrothed to Demophoön, son of Theseus, who, on his return from Troy, had stopped on the Thracian coast, and there became enamoured of the princess. A day having been fixed for their union, Demophoön set sail for Athens, in order to arrange affairs at home, promising to return at an appointed time. He did not come, however, at the end of the period which he had fixed, and Phyllis, fancying herself deserted, put an end to her existence. The trees that sprang up around her tomb were said at a certain season to mourn her untimely fate by their leaves withering and falling to the ground. (Hyg. *Fab.* 59.) According to another account, Phyllis was changed after death into an almond-tree, destitute of leaves; and Demophoön having returned a few days subsequently, and having clasped the tree in his embrace, it put forth leaves (*φύλλα*) as if conscious of the presence of a once-beloved object. Ovid has made the absence of Demophoön from Thrace the subject of one of his *Heroides.* It is said that Phyllis, when watching for the return of Demophoön, made nine journeys to the Thracian coast, whence the spot was called Ennea-Hodoi (*Ἐννέα Ὁδοί*) or "the Nine Ways." The true reason of the name, however, was the meeting here of as many roads from different parts of Thrace and Macedon. (2) A region of Thrace, forming part of Edonis, and situate to the north of Mount Pangaeus.

Phyllus (*Φύλλος*). A town of Thessaly in the district Thessaliotis. The poets use *Phyllëïs* and *Phyllëius* in the sense of Thessalian.

Phylobasĭleis (*φυλοβασιλεῖς*), "Tribe-kings." Officers of the Athenian tribes (see PHYLÉ), of

whose origin and functions little is known. They existed earlier than the time of Clisthenes, and were probably four in number, or one for each tribe. They presided in certain courts (e. g. the Prytaneum), and sat with the Archon Basileus in the Basileum. They were probably charged with religious rather than legal functions.

Phylon (*φῦλον*). See TRIBUS.

Physcon (*Φύσκων*). A surname of one of the Ptolemies, king of Egypt, from his great abdominal rotundity (*φύσκων*, "the paunch"; from *φύσκη*, "the lower belly"). See PTOLEMAEUS.

Physcus (*Φύσκος*). (1) A town of Caria, opposite Rhodes, and subject to that island. (2) A river of Lower Assyria flowing into the Tigris.

Physicians. See CHIRURGIA; MEDICINA; MEDICUS.

Picēni. See PICENUM.

Picentes. See PICENUM.

Picentia. Now Vicenza; a town in the south of Campania at the head of the Sinus Paestanus. The name of Picentini was not confined to the inhabitants of Picentia, but was given to the inhabitants of the whole coast of the Sinus Paestanus, from the promontory of Minerva to the river Silarus. They were a portion of the Sabine Picentes, who were transplanted by the Romans to this part of Campania after the conquest of Picenum, B.C. 268, at which time they founded the town of Picentia.

Picentīni. See PICENTIA.

Picēnum. A country in central Italy, was a narrow strip of land along the coast of the Adriatic, and was bounded on the north by Umbria, on the west by Umbria and the territory of the Sabines, and on the south by the territory of the Marsi and Vestini. It is said to have derived its name from the bird *picus*, which directed the Sabine immigrants into the land (Pliny, *H. N.* iii. 110). They were conquered by the Romans in B.C. 268, when a portion of them was transplanted to the coast of the Sinus Paestanus, where they founded the town of Picentia (Flor. i. 19; Eutrop. ii. 16). (See PICENTIA.) Picenum formed the fifth region in the division of Italy by Augustus. See ITALIA.

Picti. The Picts; a people inhabiting the northern part of Britain, who appear to have been either a tribe of the Caledonians, or the same people as the Caledonians, though under another name. They are said to have been called Picti ("painted men") by the Romans, from their practice of painting their bodies; but scholars now regard the word as the same with the other native terms Pictones, Pictavi, found in Gaul (cf. the French Poitou, Poictiers), and as therefore Keltic. The name, however, though not Latin, apparently coincides with the Latin in meaning, being cognate with *cicht*, "an engraver." Picts are first mentioned in A.D. 296 by Eumenius; and after this time their name frequently occurs in the Roman writers, and often in connection with that of the Scoti. See Skene, *Celtic Scotland*, vol. i. (Edinburgh, 1886); Rhys, *Celtic Britain* (London, 1884); and the article CALEDONIA.

Pictŏnes. A people of Aquitanic Gaul, a short distance below the Ligeris (Loire). Their territory corresponds to the modern Poitou. Ptolemy assigns them two capitals, Augustoritum and Limonum, but the former in strictness belonged to the Lemovices. The city of Limonum, the true capital, answers to the modern Poitiers. Strabo gives the name of this people with the short penult, Ptolemy with the long one. The short quantity is followed by Lucan (i. 436). Ammianus Marcellinus uses the form PICTĀVI (xv. 11). See PICTI.

Pictor. See FABIUS, p. 656.

Pictor. A painter. See PICTURA.

Pictūra (*γραφή, ζωγραφία*). Painting. Among the Greeks painting developed into an independent art much later than sculpture, though it was used very early for decorative purposes. This is proved by the evidence of painted vases belonging to the ages of the most primitive civilization, and by the mural paintings discovered by Schliemann at Tiryns. Many students of the subject regard it as suggested and developed by polychrome embroidery or textile work. Homer makes no mention of painting, but speaks of pictures woven on garments, as on the robe of Helen and the veil of Heré; while two of the earliest known artists of Greece (Acesas and Helicon) were weavers by trade. It is certain that the influence of Oriental tapestries is largely felt in Greek painting. Klein and Milchhöfer think that both painting and sculpture were preceded by coloured relief.

The scanty notices in ancient authors respecting the first discoveries in this art connect it with historical persons, and not with mythical names, as in the case of sculpture. Thus it is said (Pliny, *H. N.* xxxv. 16) that either Philocles, the Egyptian, or Cleanthes of Corinth was the first to draw outline sketches; that Telephanes of Sicyon developed them further; that Ecphantus of Corinth introduced painting in single tints (monochrome); and that Eumarus of Athens (in the second half of the sixth century) distinguished man and woman by giving the one a darker, the other a lighter colour. Cimon of Cleonae is mentioned as the originator of artistic drawing in profile (Pliny, *H. N.* xxxv. 56, cf. 90). It is further said of him that he gave variety to the face by making it look backwards or upwards or downwards, and freedom to the limbs by duly rendering the joints; also that he was the first to represent the veins of the human body, and to make the folds of the drapery fall more naturally (ib. 56).

Painting did not, however, make any decided advance until the middle of the fifth century B.C., though Pausanias states that in the sixth century, the Samiote Calliphon painted the Homeric battle of the ships. This advance was chiefly due to Polygnotus of Thasos, who painted at Athens, and with whom as a real art painting may be said to begin. Among other claims to distinction it is attributed to him that he gave greater variety of expression to the face, which hitherto had been rigidly severe. His works, most of them large compositions rich in figures, give evidence of a lofty and poetic conception; they appear to have been, in great part, mural paintings for decorating the interior of public buildings (Pausan. x. 25–31; i. 15, 22, § 6). The colours were first applied in uniform tints, so as to fill in the outlines, and fresh lines and touches were then added to indicate where the limbs and muscles began, and the folds of the garments. The drawing and the combination of colours were the chief considerations; light and shade were wanting, and no attention was paid

to perspective. It is doubtful whether at this early time, besides mural paintings executed *al fresco* on carefully smoothed stucco-priming with plain water-colours, there were any pictures on panels, such as afterwards became common; but we may fairly assume it. These were painted on wooden panels *in tempera*—i. e. with colours mixed with various kinds of distemper, such as gum or size, to make them more adhesive. The art was still limited by its traditions, and each figure had its name carefully painted over it. A good deal of symbolism was tolerated — i. e. a single tree or a house or a piece of water was introduced to suggest a whole scene, which the spectator's imagination was supposed to supply. The range of colours was also still scanty, for Cicero tells us that Polygnotus used only four tints.

In the same century the encaustic method of painting was discovered, though not elaborated till the following century. The process, as described in Roman times by Vitruvius (vii. 9), was as follows: "The medium used was melted white wax (*cera punica*), mixed with oil to make it more fluid. The pot containing the wax was kept over a brazier while the painter was at work, in order to keep the melted wax from solidifying. The stucco itself was prepared by a coating of hot wax applied with a brush or *cestrum*, and it was polished by being rubbed with a wax candle, and finally with a clean linen cloth. After the picture was painted the wax colours were fixed, partly melted into the stucco, and blended with the wax of the ground by the help of a charcoal brazier, which was held close to the surface of the painting, and gradually moved over its whole extent." The encaustic method had several advantages over painting *in tempera:* it lasted longer and was more proof against damp, while the colouring was much brighter; on the other hand, it was much more laborious and slow, which explains the fact that the majority of encaustic paintings were of small size.

While the pictures of Polygnotus certainly did not deceive by too much truth to nature, it was his younger contemporary, the Samian Agatharchus, who practised scene-painting (*σκηνογραφία*) at Athens, and thus gave an impulse to the attempt at illusory effect and the use of perspective. He painted the scenery for a play of Aeschylus (Vitruv. vii. *praef.* 10), and decorated the interior of the house of Alcibiades (Andoc. *Alcib.* 17). The Athenian Apollodorus (about B.C. 420) was the actual founder of an entirely new artistic style, which strove to effect illusion by means of the resources of painting. He was the first to give his pictures the appearance of reality, the first to bring painting into just repute (Pliny, *H. N.* xxxv. 60). He also led the way in the proper management of the fusion of colours and their due gradation in different degrees of light and shade. It was to this that he owed his title of "shadow-painter" (*σκιαγράφος*).

The Attic School flourished till about the end of the fifth century, when this art was for some time neglected at Athens, but made another important advance in the towns of Asia Minor, especially at Ephesus. The principal merits of this, the Ionic School, consist in richer and more delicate colouring, a more perfect system of pictorial representation, rendering on a flat surface the relief and variety of nature, and the consequent attainment of the greatest possible illusion. Its principal representatives were Zeuxis of Heraclea and Parrhasius of Ephesus; Timanthes also produced remarkable works, though not an adherent of the same school. It was opposed by the Sicyonian School, founded by Eupompus of Sicyon, and developed by Pamphilus of Amphipolis, which aimed at greater precision of technical training, very careful and characteristic drawing, and a sober and effective colouring (Pliny, l. c. 75, 76). Pausias, a member of this school, invented the art of foreshortening and of painting on vaulted ceilings, besides perfecting the encaustic art, which was much more favourable for purposes of illusion and picturesque effectiveness than painting *in tempera* (ib. 123–127). Greek painting reached its summit in the works of Apelles (q. v.) of Cos, in the second half of the fourth century; he knew how to combine the merits of the Ionian and the Sicyonian Schools, the perfect grace of the former with the severe accuracy of the latter.

After him the most famous artist was Protogenes of Caunus. The following contemporaries, some older and some younger than himself, deserve also to be mentioned: Nicomachus and Aristides of Thebes, Euphranor of Corinth, Nicias of Athens, the Egyptian Antiphilus, Theon of Samos, and Aëtion. After the age of Alexander the art of painting was characterized by a striving after naturalism, combined with a predilection for the representation of common, every-day scenes, and of still-life. Pictures of a small size came into favour, their models being objects taken from common life, such as barber-shops, cobblers' stalls, eatables, etc., such as one finds in the genre pictures and still-life paintings of the Netherlands. Lewd paintings also became popular, this branch of art being known as Pornographia, or Rhyparographia. At last, as art degenerated, even the floors were adorned with painting, and objects, such as melon-rinds, bits of food, etc., were delineated so as to produce the effect of a room in disorder. Such a curious bit of realism was the "Unswept Floor" (*ἀσάρωτος οἶκος*) at Pergamum, by Sosus. Callicles and Calates were famous painters of ob-

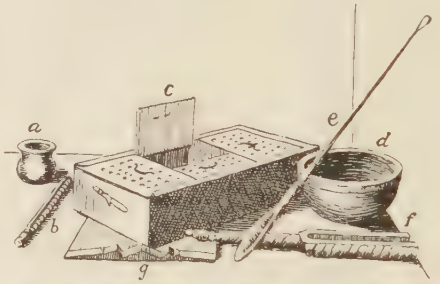
Still-life. (Pompeian Painting.)

scene pictures, while Piraeicus was noted for his scenes from still-life. Among painters of the loftier style the last noteworthy artist was Timomachus of Byzantium.

Among the Romans a few solitary names of early painters are mentioned — for instance, Fabius Pictor and the poet Pacuvius (Pliny, *H. N.* xxxv. 19); but nothing is known as to the value of their paintings, which served to decorate buildings. The way in which landscapes were represented by a certain S. Tadius (or Ludius (?), ib. 116; the best MS. has *studio*) in the reign of Augustus is mentioned as a novelty. These landscapes were mainly for purposes of decoration (Vitruv. vii. 5). Indeed, the love of display peculiar to the Romans, which had led them gradually to accumulate the principal works of the old Greek masters at Rome as ornaments for their public and private edifices, brought about an extraordinary development of decorative art, attested by the numerous mural paintings that have been found in Italy, chiefly at Pompeii and Herculaneum.

These paintings were mostly executed *al fresco* on damp stucco, seldom with colours *in tempera* on the dry surface. The principal subjects represented are figures from the world of myth, such as Maenads, Centaurs male and female, Satyrs, etc.; scenes from mythology and heroic legends, frequently copies of famous Greek originals, one of the best examples of which is Achilles delivering Briseïs to the heralds (see p. 222); landscapes; still-life; animals, and also scenes from real life. From a technical point of view these works do not go beyond the limits of light decorative painting, and are especially wanting in correct perspective; but they show fine harmony, varied gradation, and delicate blending of colour, and frequently a surprising depth and sincerity of expression, qualities which must have characterized the lost masterpieces of the ancient artists to a much more remarkable degree, and cannot but give us a very high idea of them. One of the finest mural paintings is that known as the "Aldobrandini Marriage," discovered in 1606 near the Arch of Gallienus, now in the Library of the Vatican at Rome, and named after its first owner, Cardinal Aldobrandini. It is copied from an excellent Greek original, and represents, in the style of a relief, the preparations

Landscape Painting from Pompeii. (Reber.)



The Aldobrandini Marriage. (Vatican.)

for a marriage. "It is composed," says Woermann (*History of Painting*, i. 115), "not pictorially, but yet with taste. It exhibits several individual motives of much beauty; its colouring is soft and harmonious; and it is instinct with that placid and serious charm which belongs only to the antique. In technical execution, however, the work is insignificant, and in no way rises above the ordinary handling of the Roman house-decorator in similar subjects." The Vatican Library also possesses an important series of landscapes from the *Odyssey*, found during the excavations on the Esquiline in 1848–1850. Landscapes of this kind are mentioned by Vitruvius (vii. 5), among the subjects with which corridors used to be decorated in the early times. They represent the adventure with the Laestrygones, the story of Circé, and the visit of Odysseus to the realm of Hades, thus illustrating a continuous portion of the poem (*Od.* x. 80, xi. 600). The predominant colours are a yellowish brown and a greenish blue, and the pictures are divided from one another by pilasters of a brilliant red. They furnish interesting examples of the landscape-painting of the last days of the Republic or the first of the Empire, and, in point of importance, stand alone among all the remains of ancient painting. On mosaic-painting and vase-painting, see MUSIVUM OPUS; VAS.

The ancients painted on stucco, wood (a thin slab called *πίναξ*, and in Latin *tabula*) which was primed with whitening (λελευκωμένος), stone, and marble. Canvas (*linteum*) was used but rarely (Pliny, *H. N.* xxxv. 51). When used it was stretched on wood or pasted in several layers.

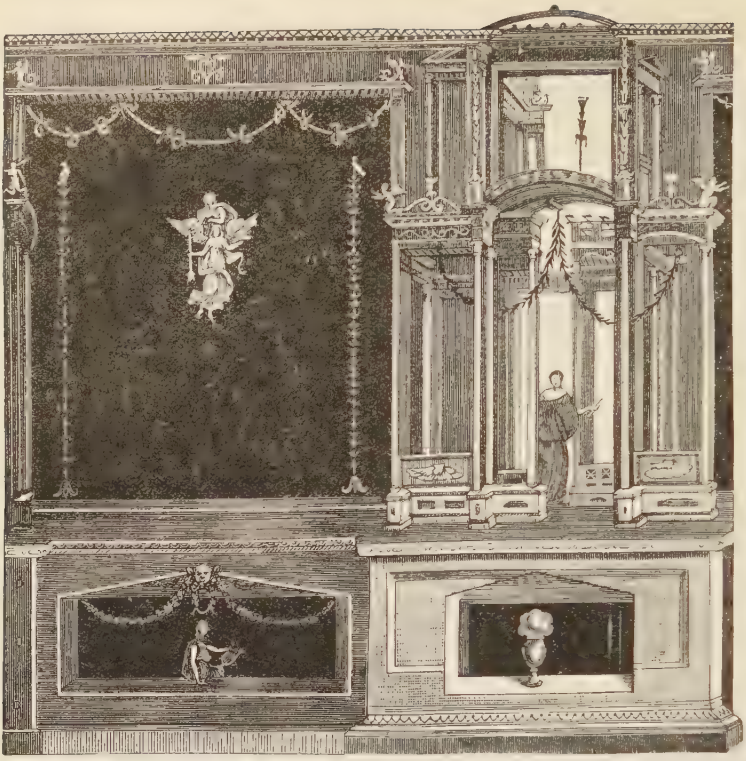
The processes of painting are represented in several works of ancient art—e. g. in three mural paintings from Pompeii. Even some of the implements and materials used by artists have been discovered. Thus, in 1849, at St. Médard-des-Prés in La Vendée, a grave was opened containing a female skeleton surrounded by eighty small vessels of glass, in most of which remains of ancient pigments were still preserved. Besides these there was a small cup of brown glass (a); a knife of cedar-wood with its blade reduced to rust (b); a small bronze box (c) with a movable lid and four partitions, holding materials for pigments: a mortar of alabaster, and a smaller one of bronze (d); one or two elegant bronze spoons (e), either for removing colours from the palette or for adding some liquid to mix them: a small shovel, made of rock crystal, containing gold embedded in gum (f); and an oblong palette of basalt (g). There were also two small cylinders of amber and two brush-handles of bone. One of the glass vessels contained bits of resin; another, wax; a third, a mixture of both; a fourth, a mixture of lampblack and wax, with traces of sebacic acid, possibly due to the presence of oil.

Paint-box and Implements for Painting. (First published by B. Fillon, *Description de la Villa et du Tombeau d'une Femme Artiste Gallo-romaine*, Fontenay, 1849.)

Our principal information about ancient pigments (*φάρμακα*, *medicamenta*, *pigmenta*) comes from Theophrastus (*De Lapidibus*), Dioscorides (bk. v.), Vitruvius (vii.), and the elder Pliny (*H. N.* xxxiii. and xxxv.). It is observed by Cicero in the *Brutus*, 70, that only four colours were used by Polygnotus, Zeuxis, Timanthes, and their contemporaries, as contrasted with their successors, Aëtion, Nicomachus, Protogenes, and Apelles. Pliny (*H. N.* xxxv. 50), who identified the colours as white (*melinum*), yellow (*sil Atticum*), red (*Sinopis Pontica*), and black (*atramentum*), even places Aëtion, Nicomachus, Apelles, and Melanthius under the same limitation. But it is hardly probable that such important colours as blue and green were dispensed with, even in the primitive art of Polygnotus, much less in the more advanced art of Zeuxis and his contemporaries, and least of all in that of Apelles and Protogenes. The earliest artists, however, may well have used comparatively few colours, and those of the simplest kind, the *colores austeri* of Pliny (*H. N.* xxxv. 30), as contrasted with the *colores floridi*, such as vermilion, "Armenian blue," "dragon's blood," malachite green, indigo, and purple. These were characteristic of later developments of art, and were so costly that they were not paid for by the artists, but by those who gave them their commissions (ib. 44; Vitruv. vii. 5, 8).

The pigments known to the ancients were as follows:

White.—The pigment used in Greece was a "pipe-clay" called *melinum*, found in veins in the island of Melos. It was not available for fresco-painting (Pliny, *H. N.* xxxv. 49). A white earth of Eretria was employed by Nicomachus and Parrhasius (ib. 38). A commoner pigment was the *creta Selinusia* of Selinus in Sicily, used for mural paintings (ib. 49, 194), and the *creta anularia*, made by mixing chalk with the glass composition worn in the rings of the poor (ib. 48). For fresco-painting they used *parætonium*, a hydrated silicate of magnesia, so called from a cliff on the African coast near Egypt (ib. 30), which in Rome was adulterated with *creta Cimolia* (ib. 36). For other purposes they employed white-lead (ψιμύθιον, *cerussa*), an artificial product, the finest sorts of which came from Rhodes, Corinth, and Sparta. It is carbonate of lead, and is still used under various names (e. g. ceruse). It is sold in its crude form as "Chemnitz or Vienna white," and mixed with sulphate of barium in "Dutch, Hamburg, and Venetian white." See CERUSSA.



Yellow.—The pigments in use were yellow ochre and orpiment. The best kind of yellow ochre (ὦχρα; Lat. *sil*) was found in the mines of Laurium. It was also found in Scyros, Achaia, Gaul, Cappadocia, Cyprus, and Lydia. The Attic variety was first used by Polygnotus and Micon; it was afterwards preferred for the high lights, while the kinds from Scyros and Lydia were reserved for the shadows (id. xxxiii. 158–160, xxxvii. 179). It is a diluted brown ochre or hydrated peroxide of iron, being composed of oxygen, water, and iron, mixed with more or less clay. Orpiment, or trisulphide of arsenic (ἀρσενικόν: *auripigmentum*), was of two kinds: (1) of a golden yellow, from Mysia on the coast of the Hellespont; and (2) a duller kind, from Pontus and Cappadocia (Dioscorides, v. 120). It could not be used for frescoes (Pliny, *H. N.* xxxv. 49). Yellow ochre and orpiment (under the name of "king's or Chinese yellow") are still in use.

Red.—One of the oldest pigments was ruddle (μίλτος; *rubrica*). This is a red earth coloured by sesquioxide of iron. In the Homeric age it was used to ornament the bows of ships. In later times the clay from which Greek vases were made owed its brilliant hue to the ruddle of Cape Colias on the Attic coast (Suid. s. v. Κωλιάδος κέραμος, and Pliny, *H. N.* xxxv. 152). The best kind came from Cappadocia, by way of Sinopé (hence called *Sinopis Pontica*, ib. 31, 36, xxxiii. 117), or through Ephesus (Strabo, p. 540). It was also found in North Africa (*cicerculum*, Pliny, *H. N.* xxxv. 32), especially in Egypt and at Carthage; also in Spain and the Balearic Islands, and Lemnos and Ceos. There was a treaty forbidding the export of ruddle from Ceos except only to Athens (Hicks, *Gr. Historical Inscriptions*, p. 186). It could be artificially produced by calcining yellow ochre, a discovery due to Cydias, a contemporary of Euphranor (Theophr. l. c. 53). Another mineral supplying a red, sometimes a yellow, pigment, was sandarach (σανδαράχη, *sandaraca*), found in Paphlagonia, probably disulphide of arsenic. As this mineral is poisonous, the mortality in the mines was very high. An artificial substitute, called *cerussa usta*, or *usta* alone, was therefore generally preferred. This was obtained by burning white lead, a discovery attributed to the painter Nicias (Pliny, *H. N.* xxxv. 38). The result is "red lead"—i. e. red oxide of lead. There was besides a colour compounded of equal parts of ruddle and sandarach, called *sandyx* (ib. 40), which is also the designation of a natural pigment of which little is known (Verg. *Ecl.* iv. 45). Of greater importance than these is cinnabar (Gr. originally κιννάβαρι, afterwards ἄμμιον: *minium*), found in Spain, especially at Sisapo (Pliny, *H. N.* xxxiii. 121). An artificial kind was made at Ephesus from the red sand of the *agri Cilbiani*. This discovery is assigned to Callias (ib. 113). The name *cinnabari* was often erroneously given to a red resin, now called dragon's-blood, and produced from the *calamus draco*, a kind of palm growing in the Sunda Islands and elsewhere. The ancients probably imported it from the island of Socotra, as it is a product of the Somali coast on the adjacent mainland of Africa.—A *purple* pigment (ὄστρειον; *ostrum, purpurissum*) was prepared by mixing *creta argentaria* with the purple secretion of the *murex* (see PURPURA); the best kind was made at Puteoli (Pliny, *H. N.* xxxv. 45).

Painter at Work. (Pompeian Caricature.)

Blue.—The pigment used from the earliest times was called in Greek κύανος, in Latin *caeruleum*, a blue silicate of copper, generally mixed with carbonate of lime (chalk). It is not to be confounded with the modern *caeruleum*, which is stannate of cobalt. Κύανος was found in small quantities in copper mines, and artificial kinds were made in Scythia, Cyprus, and Egypt (Theophr. l. c. 51, 55). Vitruvius mentions only the artificial *caeruleum* of Alexandria and Puteoli. The method of manufacturing it was brought from Egypt by Vestorius. It was prepared by heating strongly together sand, *flos nitri* (carbonate of soda), and filings of copper. This "Egyptian azure" was reproduced by Sir Humphry Davy, by taking fifteen parts by weight of carbonate of soda, twenty of powdered opaque flints, and three of copper filings, and heating them strongly for two hours. The product, when pulverized, supplied a fine deep sky blue. The "Alexandrian frit" is in part a species of artificial *lapis lazuli*, the colouring matter of which is naturally inherent in a hard siliceous stone. It was not available for fresco-painting, but could be used for painting *in tempera* (Pliny, *H. N.* xxxiii. 162). The name κύανος was given to a blue mineral, which is to be identified as *lapis lazuli*, a silicate of sodium, calcium, and aluminium, with a sulphur compound of sodium. This was pounded into a pigment, now known as ultramarine. Κύανος was also the name of the blue carbonate of copper from the copper mines of Cyprus, where *lapis lazuli* is not to be found. Artificial blue pigments were produced by colouring pulverized glass with carbonate of copper. "Armenian blue" ('Αρμένιον) is described by Pliny (*H. N.* xxxv. 47) as made from a mineral like *chrysocolla* (malachite?) in colour, the best kinds being almost as good as *caeruleum*. It is probably a kind of ultramarine.—Indigo (*indicum*) was also used. The way in which it is men-

Specimen of Pompeian Mural-painting. (Reber.)

tioned in Vitruvius (vii. 9, 6, and 10, 4) implies that it had been recently introduced. It could not be used for frescoes. Modern experiment has proved that the colouring basis of the blue found in ancient mural paintings is oxide of copper. Cobalt has also been discovered in ancient specimens of transparent blue glass.

Green.—Several pigments were in use: (1) *chrysocolla* (or malachite (?), hydrated dicarbonate of copper), pounded and sifted, and mixed with alum and woad (*lutum*, Pliny, *H. N.* xxxiii. 87). Malachite green, sometimes called mountain, or Hungary, green, is also a modern pigment. (2) *Creta viridis*, the best kind of which came from Smyrna (Vitruv. vii. 7, 4). It is a species of ochre containing silica, oxide of iron, magnesia, potash, and water; and is still used under the names of terra verte, verdetta, green earth, Verona green, green bice, or holly green. (3) Verdigris (*ἰός*; *aerugo*, *aeruca*, Vitruv. vii. 12, 1). This is an acetate of copper (sometimes crystallized), i. e. a compound of acetic acid and oxide of copper. Malachite green and Verona green have both been traced in ancient paintings. Verdigris has not been found: hence it has been conjectured that what was originally a diacetate of copper has in the course of centuries changed into carbonate of copper (l. c. p. 112). It is described as "the least durable of copper greens; light fades it in water; damp and foul air first bleach it, and then turn it black."

Black.—The pigment (*μέλαν*: *atramentum*) was almost always produced by combustion. Polygnotus and Micon produced it by drying and burning the lees of wine (*τρύγινον*). Apelles was the discoverer of "ivory black" (*elephantinum*, Pliny, *H. N.* xxxv. 42). A common material was the smoke of burned resin (our lamp-black), or burned pine-twigs (Vitruv. vii. 10, 1). Pliny (*H. N.* xxxv. 41) also mentions a natural black pigment which is difficult to identify; it may be peat, or else oxide of iron, or oxide of manganese. The best black pigment was called *atramentum Indicum* (*μέλαν Ἰνδικόν*), doubtless the same as "Chinese black," which originally found its way to the West through India, and thus obtained its alternative name of "Indian ink." But it cannot be used for frescoes, and no traces of it have been found in the mural paintings of antiquity. The black in these paintings is always carbonaceous.

Some of the remains of ancient colours and paintings at Pompeii, and in the Baths of Titus and of Livia, and elsewhere, were analyzed by Sir Humphry Davy (*Phil. Trans. Royal Society*, 1815, pp. 97–124: *Some Experiments and Observations on the Colours used in Painting by the Ancients*). In an earthen vase from the Baths of Titus containing a variety of colours, the reds proved to be red oxide of lead, with two iron ochres of different tints, a dull red and a purplish red "nearly of the same tint as prussiate of copper;" all three were mixed with chalk or carbonate of lime (p. 101). The yellows were pure ochres mixed with carbonate of lime, and ochre mixed with red oxide of lead and carbonate of lime (p. 104). The blues were a kind of smalt, with carbonate of lime (p. 106). Of greens there were three varieties; "one, which approached to olive, was the common green earth of Verona; another, which was pale grass-green, had the character of carbonate of copper mixed with chalk; and a third, which was sea-green, was a green combination of copper mixed with blue copper frit" (p. 110). A pale, rose-coloured substance, found in the Baths of Titus, which in its interior "had a lustre approaching to that of carmine," was found to be either of vegetable or animal origin; if the latter, it was most probably a specimen of Tyrian purple (pp. 113–115). In the "Aldobrandini Marriage" the reds and yellows were all ochres; the greens, preparations of copper; the blues, "Alexandrian frit;" the purple, a mixture of red ochre and carbonate of copper; the browns, mixtures of ochres and black; the whites were all carbonates of lime.

Picumnus. An old Italian god of agriculture, credited with the invention of the use of manure. He was said to be the husband of Pomona. His brother Pilumnus was honoured by bakers as the inventor of the pestle (*pilum*) for crushing corn; and the two together were protecting deities to women in child-bed and to new-born infants. Hence, in the country, festal couches were set for them in the *atrium* when children were safely brought to birth. According to another ancient view, there were three divinities protecting mother and child, who prevented the mischievous intrusion of Silvanus into the house. These powers (representing the triumph of civilization over the wild forest life) were impersonated by three men, who went round the house in the night, and knocked on the threshold of the front and back doors, first with a hatchet and then with a pestle, and lastly swept them with a broom (Serv. *ad* Verg. *Aen.* ix. 9; Isid. *Orig.* iv. 11).

The names of these deities were Intercidona, god of the hewing of timbers, Pilumnus, of the crushing of corn into meal by the pestle, and Deverra, of the sweeping together of grain (Varro, quoted by St. Augustine, *De Civitate Dei*, vi. 9). Picumnus, as appears in the name, is identical with Picus (q. v.).

Picus. An Italian god of agriculture, and especially of manure, hence called son of Stercutus ("the dunger"—i. e. Saturn). He also appears as a forest-god with prophetic powers, and as father of Faunus (Verg. *Aen.* viii. 48). In Latin legend he plays a prominent part as a warlike hero, the earliest king of Latium, of great wealth, who was finally changed into a woodpecker (*picus*) (ib. 187–190). According to Ovid (*Met.* xiv. 320–396), this was because he spurned the love of Circé and was faithful to the beautiful nymph Canens. Probably Picus was originally the woodpecker, the symbol of Mars as giver of fertility and warlike prowess, and from this symbol there was developed a separate deity.

Pieria (Πιερία). (1) A narrow strip of country on the southeastern coast of Macedonia, extending from the mouth of the Peneus in Thessaly to the Haliacmon, and bounded on the west by Mount Olympus and its offshoots. A portion of these mountains was called by the ancient writers Pierus, or the Pierian Mountain. The inhabitants of this country, the Pieres, were a Thracian people, and are celebrated in the early history of Greek poetry and music, since their country was one of the earliest seats of the worship of the Muses, hence called Pierides, and Orpheus is said to have been buried there. After the establishment of the Macedonian kingdom in Emathia in the seventh century B.C. Pieria was conquered by the Macedonians, and the inhabitants were driven out of the country. (2) A district in Macedonia east of the Strymon near Mount Pangaeum, where the Pierians settled, who had been driven out of their original abodes by the Macedonians, as already related. They possessed in this district the fortified towns of Phagres and Pergamus. (3) A district on the northern coast of Syria, so called from the mountain Pieria, a branch of the Amanus, a name given it by the Macedonians.

Pierides (Πιερίδες). (1) See Musae; Pieria. (2) The nine daughters of Pierus, king of Emathia, to whom he gave the name of the nine Muses. They entered into a contest with the Muses, and, being defeated, were changed into birds (Ovid, *Met.* v. 300–678; Pausan. ix. 29, 2).

Pierus (Πίερος). (1) See Pieria. (2) See Pierides.

Pietas. The Roman goddess typifying loyalty and devotion, especially to parents. She is depicted on coins as a matron offering incense; and her symbol is the stork (Pliny, *H. N.* vii. 121).

Pietas Iulia. See Pola.

Pignus. In Roman law, a pledge seized by a creditor, or given to him, to secure the performance of an obligation.

I. If given, a contractual relation exists between the pledgor and pledgee (*pignori dans, accipiens*). The pledgee is bound to restore the pledge when the debt is paid; the pledgor is bound to reimburse the pledgee for necessary outlays. The pledgee had originally no right except to hold the pledge until the debt was paid. Even when the debtor was in default, the creditor could not sell the pledge (*pignus distrahere*) unless this had been specially agreed. At a later period such an agreement was presumed, and in the final development of the Roman law an agreement that the pledge should not be sold had no effect except that the creditor, before selling, was obliged to give the debtor three warnings (*denuntiationes*) instead of one. In case the sum realized by the creditor exceeded the amount due him, he was bound to restore the surplus (*superfluum, hyperocha*) to the pledgor. The pledgee had no right to use the property pledged unless this was specially agreed. If the property yielded *fructus* (as was the case, for example, with land), and if, as was not uncommon, it was agreed that the creditor should appropriate the yield in lieu of interest on the debt, the contract was termed *antichresis*.

Originally, the pledgee had no right against third persons. His possession was indeed protected: but if he lost possession, he could not recover as against an honest conveyee or pledgee in

possession. The only method of giving him such a right of recovery was to break loose from the conception of pignus and make him owner, with an understanding that when the debt was paid he should reconvey the property to the debtor. This form of pledge (which did not require delivery of possession) was termed *fiducia* (q. v.). Towards the close of the republican period, however, the law of pignus was so developed as to admit lien without conveyance of ownership or delivery of possession, and to give the pledgee a right of recovery as against third persons. The first step was to recognize that a landlord (*locator fundi*) might obtain, by contract, a lien (*pignus*) on all the chattels which his tenant (*colonus*) brought upon the farm (*invecta et illata*). When the tenant was in arrears with his rent, summary proceedings were devised to put the landlord in possession (*interdictum Salvianum*). The next step was to enable the landlord to follow up any such chattels as were removed from the farm. This was done by the *actio Serviana*. A form of *pignus* was thus developed which operated *in rem*, and therefore created a *ius in re*. The third and last step was to extend the new principle to all contractual pledges, with or without possession. This was done by the *actio quasi Serviana*. A similar form of lien had been developed in Greece; and at the time of Cicero the term *hypotheca* was being naturalized among the Romans, and in the early Empire the jurists spoke of the *actio quasi Serviana seu hypothecaria*. The terms *pignus* and *hypotheca* were thenceforth used interchangeably, although the more careful writers restricted *pignus* to the pledge in possession (which was most frequent in the case of movables) and *hypotheca* to the pledge without possession.

In the earlier civil law it is probable that only corporeal things could be given *pignori*. In the later development of the law it was possible to create a lien on almost any property right, even on a right of action or debt (*pignus nominis*). The right of the pledgee might itself be pledged (*pignus pignoris*). It was finally recognized that all the assets of an estate might be hypothecated.

Successive hypothecations of the same property were possible. As between the different pledgees, the general rule was *prior potior*.

II. Pledges might be seized without the consent of the owners. For the *pignoris capio* of certain favoured creditors in early Roman law, see ACTIO in the Appendix. For the power of the magistrates to enforce obedience to their commands by *pignoris capio*, see MAGISTRATUS. Out of the latter power was gradually developed the seizure of property to satisfy judgment (*pignus in causa iudicati captum*).

Pigres (Πίγρης). A Greek poet of Halicarnassus, regarded by Baumeister and others as author of the *Batrachomyomachia* (q. v.). He is said to have been either the brother or son of Queen Artemisia (q. v.) of Caria. Besides the work mentioned, a poem called *Margites* is ascribed to him by Suidas (s. v.) and by Plutarch. He also inserted a pentameter line after each hexameter in the *Iliad* —a very curious literary freak. The following will serve as an illustration (*Il.* i. 1):

Μῆνιν ἄειδε θεὰ Πηληϊάδεω Ἀχιλῆος,
Μοῦσα γὰρ σὺ πάσης πείρατ' ἔχεις σοφίης·

He is also said to have been the first poet to introduce the iambic trimeter. See HOMERUS.

Pigrum Maré. A name given by the Romans to the furthermost part of the North Sea, because its waters were supposed to be sluggish, or even half congealed (Tac. *Germ.* 45; Pliny, *H. N.* iv. 13).

Pīla. (1) (ἴγδη). A deep mortar in which substances of any kind, as drugs, were brayed and pounded with a pestle (*pilum*). It is chiefly distinguished from a *mortuarium* (q. v.) in being larger. (2) (πεσσός). A pillar used for architectural or other purposes, as the support of a bridge (Livy, xl. 51), a monument (Nepos, *Alcib.* 4), or the post in front of a book-shop, on which the publisher's announcements were hung (Hor. *Sat.* i. 4, 71). (3) (ἐνδόμησις). A pier or breakwater (Verg. *Aen.* ix. 711).

Pila or Mortar. (Pompeii.)

Pīla. Pīla Lusoria (σφαῖρα). (1) A ball. Ball-playing was a very favourite occupation among both Greeks and Romans, though regarded less as a game than as an exercise for strengthening the muscles and cultivating suppleness of limb. The earliest mention of such an exercise is found in two passages of the *Odyssey* (vi. 100; viii. 370). In the second passage, ball-tossing is an adjunct of the dance, and this choric ball-play was very popular at Sparta (Athen. i. 24 b), and long survived. In the Athenian gymnasia a special room (σφαιριστήριον) was devoted to this and similar exercises with balls. The practice was introduced at Rome only in the later days of the Republic (Hor. *Sat.* ii. 2, 10), but when once established it took a strong hold on persons of all classes and of all ages—old men as well as boys adopting it (Seneca, *De Brev. Vit.* 13; Sueton. *Aug.* 83; Pliny, *Epist.* iii. 1, 8).

The different kinds of balls in use were as follows: (*a*) the *harpastum* (μικρὰ σφαῖρα), a small hand-ball stuffed with hair; (*b*) the *pila trigonalis* (μέση σφαῖρα), the one most used, also a hand-ball stuffed with hair, but larger than the *harpastum*; (*c*) the *arenaria*, of doubtful nature; (*d*) the *paganica* (μεγάλη σφαῖρα), a large ball stuffed with feathers (Mart. xiv. 45); and (*e*) the *follis* (κενὴ σφαῖρα), a ball filled with air, like the modern foot-ball. There is nothing to show that in classical times the Greeks and Romans had any games of ball involving the use of a bat or racquet, though in one form of game the ball was struck with the palm of the hand (*lusus pilae cum palma*, Med. Lat.).

The following are the principal technical terms used in playing ball: διδόναι, βάλλειν, ἀφιέναι, *dare, mittere, iactare*, "to throw a ball;" λαμβάνειν, δέχεσθαι, *accipere, excipere, captare*, "to catch;" ἀντιπέμπειν, ἀνταφιέναι, *remittere, reddere*, "to throw *back* a ball to the sender;" οὐρανία, *datatim ludere*, "to play at catch;" ἀπόρραξις, "bounce-ball;" φενίνδα, *fallere*, "pretending to throw to one player when really throwing to another."

GAMES AT BALL (σφαιρομαχίαι). (*a*) The game called ἐπίσκυρος (also ἐφηβικὴ and ἐπίκοινος: Poll. ix. 104, Eustath. l. c.). In this game the ground was marked by two base lines (γραμμαὶ κατόπιν), and another line drawn parallel to them through the middle of the ground, presumably more than a stone's-throw from them, which was called σκῦρος or λατύπη, because it was marked with finely broken stones. The ball was placed upon this line (whence the name ἐπίσκυρος), and the players

started at the same moment from their respective base-lines. The player who could first seize the ball threw it as far as he could towards the enemy's base-line: the object was to force the line of enemies back by constantly returning the ball farther and farther over their heads until they were driven over their own base-line. Clearly, getting the first throw by fast running at the start must have been an enormous advantage (cf. Schol. *ad* Plat. *Leg.* i. p. 633 C). It is not improbable, though there is no proof of it, that the contest of the *pagani* (whence the name *paganica* for the third-sized Roman ball) was a game of this kind. It seems to have been regarded as a game for the young (ἐφηβική), and for large numbers (ἐπίκοινος).

(*b*) *Harpastum* (or, by the older name, *Pheninda;* in Athen. and Eustath. φαινίνδα: in Clem. Alex. φενίνδα: in *Etym. Mag.* φεννίς, φενίνδα, φενακίνδα). This game cannot with certainty be reconstructed, but the following seems to us an outline most consistent with our authorities. (Galen, περὶ τῆς σμικρᾶς σφαίρας: Sidon. Apoll. v. 17; Mart. iv. 19; vii. 32; xiv. 48; Athen. i. p. 25; Eustath. l. c.; Poll. ix. 105). There were clearly two sides, for Galen lays stress on the fact that there is emulation (φιλοτιμία), which exercises the ψυχή, as well as movements which exercise the limbs and the eye: there are presumably base-lines as goals, without which it is hard to understand what he says about generalship (στρατηγία), and positions won and lost. The ground was then probably rectangular, the two ends being base-lines, and it was divided by a line in the centre (*trames*) into two equal camps. There was always one "middle player," a special feature of the game, called *medicurrens* (Sidon.), or ὁ μεταξύ (Galen: cf. *vagus*, Mart. vii. 32), each side being probably so represented in turn: how the "innings" of the *medicurrens* ended we do not know, but perhaps he gave up his place to one of the other side whenever a point was scored against his side. As to the identity of *pheninda* with *harpastum* we have the positive statement of Athenaeus that it was the old name of *harpastum*, the belief of Pollux that it was, and the fact that in some places it still went by that name; and, moreover, no writer mentions both games as distinct.

(*c*) *Trigon.* In this favourite game of the Romans there were no "sides," but each played for himself; still it was a legitimate game, played for winning and losing. The following description may, as it seems to us, best meet the accounts which we have: There were three players standing in the form of an equilateral triangle. Each player had one ball to start with, and played for his own score. He would wish both his fellow-players to miss their strokes, and drop the ball as often as possible. He might send his ball to either player (presumably there was some rule about sending it fairly within their reach), and he might do so either by catching the ball which came to him and throwing it, or by "fiving" it, so as either to strike it back to the sender (*repercutere*) or sideways to the third player (*expulsare*). Obviously the most disastrous position would be receiving three balls nearly at the same time — if, for instance, his own ball is smartly struck back to him, and almost simultaneously the two others have been sent to him; obviously, also, his easiest position was to receive only one ball at a time with a fair interval before the next. The winner was probably the player who allowed his ball to drop the fewest times. A fourth person stood by to count the misses (*numerare*). The ball used was a hard one, covered with leather and stuffed with hair, as stated above. See Becq de Fouquières, *Les Jeux des Anciens*, pp. 176–211.

(*d*) In very late times (i. e. in the Byzantine Period) a game of ball was played on horseback bearing a strong resemblance to our modern "polo" (Cinnamus, *Hist.* vi. 4). It was confined chiefly to princes and the higher nobles, who took sides and struck at a leather ball with a sort of curved stick provided with a catgut network, the object being for each party to drive the ball over the opponents' base-line (πέρας).

The word *pilicrepus*, so often found in Latin, means in general a professional ball-player as distinguished from an amateur, and is applied to teachers of scientific ball-playing and to those who juggled with balls. These last were also called *pilarii*. The following illustration, from the Baths of Titus at Rome, shows a *pilicrepus* (the person with a beard) giving a lesson in *trigon* to three young men:

Lesson in Trigon. (From the Baths of Titus.)

There is an interesting wall-inscription from Pompeii which has been variously interpreted. It is an announcement of a ball-game, and reads as follows, the punctuation being that preferred by the present writer:

Amianthus, Epaphra, Tertius ludant cum Hedysio. Iucandus Nolanus petat. Numerent Citus et Iacus. Amianthus.

In this game, Hedysius is the *pilicrepus* who plays against any two of the three challengers first named. Iucandus of Nola picks up the dropped balls and pitches them back to the players. Citus and Iacus (the latter when not playing himself) keep the score—i. e. note the dropped balls. Amianthus signs the notice.

See Becq de Fouquières, *Les Jeux des Anciens* (1873); Marquardt, *De Sphaeromachiis Veterum* (1876); and Grasberger, *Erziehung und Unterricht*, pp. 88 foll. (1880).

(2) A balloting-ball; employed as a means for selecting what judge should try a cause, and prevent the packing of the bench against the interest of either party. For this purpose a certain number of balls, with the names of different judges inscribed on them, were put into a box, and thence drawn out by lot (Prop. iv. 11, 20; Ascon. *Argument. Milon.*).

(3) An effigy made out of old pieces of cloth stuffed with hay and employed to try the temper of some animals, bulls and buffaloes, when baited; or to infuriate them if they appeared tame and

impassive (Mart. *De Spect.* 19; Ascon. *ad* Cic. *Fragm. pro C. Cornel.*).

Pĭla Mattiăca. A ball of German pomade, employed by the ladies of Rome and young men of fashion to tinge the hair a light or fair colour. It was composed of goats' tallow and beechwood ashes made up into a ball, which received its distinguishing epithet from the town of Mattium (Wiesbaden) from whence it was imported (Mart. xiv. 27). See SAPO; SPUMA.

Pĭla Vitrea. A glass globe filled with water for the purpose of being placed between a person and the object he is contemplating, in order to magnify the object and render it clearer to the view—a custom still adopted in wood-engraving. It would also appear from a passage of Seneca (*Q. N.* i. 6) that this contrivance was sometimes employed by the ancients to assist an imperfect or failing sight, in the place of our spectacles. It must, however, be remembered that the ancients, who employed a numerous class of well-educated slaves in the character of readers, secretaries, and amanuenses, did not stand so much in need of an artificial aid to the eyesight as we moderns do.

Pīlāni. The original name by which the soldiers composing the third line or division of the old Roman legion were distinguished, because they alone at that time were armed with the heavy javelin or *pilum*, the other two using the spear or *hasta*. But when the *pilum* was adopted for all the three divisions, the title of *triarii* was substituted for that of *pilani*, with which it becomes thenceforth synonymous (Varro, *L. L.* v. 89; Paulus *ex* Fest. s. v.; Ovid, *Fast.* iii. 129). Subsequently, however, to this period, and towards the close of the Republic, when the custom obtained of drawing up an army by lines in cohorts, the distinctive character, as well as the name of *pilani* or *triarii* was abandoned, because it no longer represented any real distinction. See TRIARII.

Pilarius. One who exhibits feats of dexterity with a number of balls, similar to the Indian juggler (Quint. x. 7, 11; Inscript. *ap.* Fabrett. p. 250, n. 2), by throwing them up with both hands, catching them on, and making them rebound from, the palm. See PĬLA (1).

Pilarius. (From a Diptych at Verona.)

Pilentum. A sort of spring-cart, used chiefly at Rome by women of the upper classes. No representation of the Roman *pilentum* is known to exist, and hence its form is a matter of conjecture. It had, however, four wheels, was fitted with cushions, and was used on occasions of state for conveying the Roman matrons, *flamines*, and Vestals in processions and to the public games (Verg. *Aen.* viii. 666; Hor. *Epist.* ii. 1, 192; Livy, i. 21; Claud. *De Nupr. Honor.* 285; Isidor. *Orig.* xx. 12). It was covered at the top, but open at the sides. See Ginzrot, *Die Wagen der Alten*, ch. liv.

Pilia. The wife of T. Pomponius Atticus (q. v.), the friend of Cicero (Cic. *Ad Att.* iv. 16).

Pilicrĕpus. A word used to designate an expert ball-player (Seneca, *Epist.* 56). See PĬLA.

Pilleus, Pileus, or **Pilleum** (*πῖλος, πίλιον*). A round felt cap with little or no brim, lying close to the temples. It was the mark of fishermen, sailors, and artisans; hence Castor and Pollux, Odysseus, Charon, Hephaestus, and Daedalus are represented with it. The upper classes wore it only in the country or when travelling; but it was worn in Rome by the whole people at the Saturnalia, and by freedmen as a sign of their new position. Hence the phrase *ad pilleos vocare* means "to set free." (Cf. Pers. iii. 106.) The first form of pilleus represented in the illustration is that which has become in modern times the "liberty cap." It was Phrygian in its origin. It was placed on the head of slaves when sold, as a sign that the vender undertook no responsibility. See SERVI.

Forms of the Pilleus.

The diminutive forms PILLEÓLUS and PILLEŎLUM are also used.

Pillow. See LECTUS.

Pilum. (1) (*ὑσσός*). The javelin of the Roman legionaries (about six feet long), which was hurled at the enemy's ranks at the beginning of the engagement, before proceeding to the use of the sword. It consisted of a wooden shaft three feet long, easily grasped in the hand, and an iron head of the same length, culminating in a barbed point, and provided with a socket to which the shaft was attached by iron rivets. Marius had the heads constructed of soft, weak iron, the point only being steeled. In this way, if the point stuck in the shield of an enemy, the iron was bent by the weight of the shaft, rendering the weapon useless and difficult to draw out, while it made the shield unmanageable so long as it remained in it (Plut. *Mar.* 25). When well thrown, the pilum would penetrate both shield and armour. (2) (*κόπανον*). A large instrument for braying substances in a mortar (*pila*). It was held in both hands, and was much heavier as well as longer than the *pistillum*. See PĬLA.

Pilum. (Mainz Museum.)

Pilumnus. One of the three deities conceived by the Italian tribes to protect women in childbed, and their offspring, from the mischief of the forest god Silvanus. See PICUMNUS; SILVANUS.

Pimplēa (*Πίμπλεια*). A town in the Macedonian province of Pieria, sacred to the Muses, who were hence called *Pimplēïdes*. Horace (*Carm.* i. 26, 9) uses the form *Pimplea* in the singular, and not *Pimplēïs*.

Pin. See ACUS; FIBULA.

Pinacothēca (*πινακοθήκη*). A picture gallery. At Rome pictures were first publicly exhibited by Marcellus after the capture of Syracuse (B.C. 212), from which he brought away many works of art.

Such objects were at first shown in the public buildings which they were used in decorating; but in the later years of the Republic private collections grew to considerable importance, and were kept in special galleries in the mansions of the rich (Cic. *Tusc.* v. 35, 102). See also Vitruv. i. 2, vi. 5, 7; Pliny, *H. N.* xxxv. 4; and Marquardt, *Privatleben*, 611; Becker-Göll, *Gallus*, ii. 275.

Pinăra (*τὰ Πίναρα*). An inland city of Lycia, where Pandarus (q. v.) was worshipped as a hero (Pliny, *H. N.* v. 101).

Pinaria Gens. One of the most ancient patrician gentes at Rome, tracing its origin to a time long previous to the foundation of the city. The legend related that when Hercules came into Italy he was hospitably received, on the spot where Rome was afterwards built, by the Potitii and the Pinarii, two of the most distinguished families in the country. The hero, in return, taught them the way in which he was to be worshipped; but as the Pinarii were not at hand when the sacrificial banquet was ready, and did not come till the entrails of the victim were eaten, Hercules, in anger, determined that the Pinarii should, in all future time, be excluded from partaking of the entrails of the victims, and that in all matters relating to his worship should be inferior to the Potitii (Livy, i. 7; Dionys. i. 40; Macrob. iii. 6, 12). These two families continued to be the hereditary priests of Hercules till the censorship of Appius Claudius (B.C. 312), who purchased from the Potitii the knowledge of the sacred rites, and intrusted them to public slaves; whereat the god was so angry that the whole Potitia gens, containing twelve families and thirty grown-up men, perished within a year, or, according to other accounts, within thirty days, and Appius himself became blind (Livy, ix. 29). The Pinarii did not share in the guilt of communicating the sacred knowledge, and therefore did not receive the same punishment as the Potitii, but continued in existence to the latest times. It appears that the worship of Hercules by the Potitii and Pinarii was a *sacrum gentilicium* belonging to these gentes, and that in the time of Appius Claudius these *sacra privata* were made *sacra publica*. The Pinarii were divided into the families of Mamercinus, Natta, Posca, Rusca, and Scarpus, but none of them obtained sufficient importance to require a separate notice.

Pinarius, Lucius. The great-nephew of Iulius Caesar, being the grandson of his sister Iulia. He was named as one of the heirs in Caesar's will (Suet. *Iul.* 83).

Pinărus (*Πίναρος*). A river of Cilicia, rising in Mount Amanus, and falling into the Gulf of Issus (Strabo, p. 676).

Pinax (*πίναξ*). (1) A tablet. See Tabula. (2) See Cebes.

Pincerna (*οἰνοχόος*). A cup-bearer (Inscr. Orell. 2881).

Pincers. See Forpex.

Pindărus (*Πίνδαρος*). The greatest of the Greek lyric poets, son of Daïphantos, was born at or near Thebes, B.C. 522. He belonged to a noble and priestly family and was carefully educated. His musical training was received from the best masters of the time, among whom is mentioned, perhaps without sufficient warrant, Lasos of Hermioné, the regenerator of the dithyramb. Familiar is the story of his unsuccessful contest with Corinna, and of the advice which she gave the youthful poet when he crowded the opening of one of his hymns with mythological figures: "Sow with the hand and not with the whole sack." Pindar began his career as a local poet early in life, and the Tenth Pythian, which is said to have been composed when he was only twenty years old, shows all the elements of his future greatness. By the time of the Persian War Pindar had risen to the position of a national poet, and though he was a good Theban and a stanch aristocrat, though he was bound by the ties of his family, which belonged to the old nobility, and by the ties of his people, who sided with the Persians, he was too true a Greek, too thoroughly Pan-Hellenic not to be proud of the victory of the Greeks of Attica over the Persians, and the victory of the Greeks of Sicily over the Carthaginians. According to the well-known story the high praise which he bestowed on Athens as the 'Stay of Greece' roused the indignation of the Thebans, who imposed on him a heavy fine, which the Athenians reimbursed twofold, adding, as is further reported, a statue and other honours. Like the other lyric poets of his time, Pindar travelled far and wide in fulfilment of his calling, though, doubtless, he often sent his song instead of going himself. A long sojourn in Sicily is beyond a doubt, and Aegina, which he loved only next to Thebes, must have been to him a second home; nor is it unlikely that he knew Macedon in the North and Cyrené in the South. He was received everywhere with veneration and bore himself as a peer of princes. And not only was he honoured by the highest on earth, but the gods themselves are said to have shown him special favour and to have sent him at last the boon of a swift and easy death as he rested his head on the lap of his favourite in the theatre or in the gymnasium of Argos. The date of that death we do not know with certainty, but his life can hardly have been prolonged much beyond the middle of the fifth century. The reverence felt for the poet in his lifetime was paid to his genius after his death, and when Thebes was pillaged and destroyed by the Macedonian soldiery in the next century, the house of Pindar was spared by the express order of Alexander the Great, whose ancestor he had celebrated in song.

Pindar was a consummate master of the whole domain of lyric poetry, as is shown by the fragments of his hymns (*ὕμνοι*), his paeans (*παιᾶνες*), his dancing-songs (*ὑπορχήματα*), his processional songs (*προσόδια*), his songs for choruses of virgins (*παρθένια*), his songs of praise (*ἐγκώμια*), his drinking-songs (*παροίνια*) and catches (*σκολιά*), his dithyrambs (*διθύραμβοι*) and dirges (*θρῆνοι*). These show the breadth of his genius; the height of it we must estimate by the one group of his poems which we have entire, the Songs of Victory (*ἐπινίκια* or *ἐπίνικοι*), composed to celebrate the successful contestants in the great national games of Greece, Olympian (*Ὀλυμπιονῖκαι*, sc. *ὕμνοι*), Pythian (*Πυθιονῖκαι*), Nemean (*Νεμεονῖκαι*), Isthmian (*Ἰσθμιονῖκαι*). In these poems, which were delivered by trained choruses, the poet is the spokesman, and this is an important point for the appreciation of the often intensely personal tone of the lyric chorus as compared with the chorus of the drama. A victory at one of the great games was a matter of joy and

pride not only to the victor himself and to his kindred, but also to the community, so that there is a peculiar blending of the private with the public, of intimate allusion with wide scope. The elements are many: festal joy, wise and thoughtful counsel, the uplifting of the heart in prayer for prince and for people, the inspiration of a fervent patriotism; but the victory is the dominant theme, and that victory is raised to the high level of the eternal prevalence of the beautiful and the good over the foul and the base; the victor is transfigured into a glorious personification of his race, and the present is reflected, magnified, illuminated in the mirror of the mythic past. The epinician becomes the triumphal song of Hellenism and the triumphal song of idealized humanity. To understand this it is necessary to understand also the deep religious and ethical and artistic meaning of the great games of Greece, of which the Olympian Games were the crown; so that whatever else a man might achieve or suffer, an Olympian victory was sunshine for life. 'To spend and to toil'—this is the motto of him who would attain; a motto that means self-sacrifice, submission to authority, devotion to the public weal; and this motto is incarnate in the Pindaric Heracles, who is held up as the type of achievement and endurance in obedience to the divine will. Heracles is the Doric ideal, and Pindar his last prophet. Pindar still lives in the world of the old gods, still believes in the array of their shining forms, and if he rejects a myth that dishonours god, his faith is intact, the priestly temper conquers. Life was a serious thing to him. The melancholy strain that is not absent from Homer, that dominates Hesiod, makes itself heard in Pindar. We hear over and over again of the shortness and the sorrowfulness of human life, the transitoriness of its pleasures, our utter dependence upon the will of an envious god. And yet it is not a melancholy that degenerates into doleful brooding. It is 'a spur that the clear spirit doth raise' to noble action. But for noble action noble blood is necessary. Pindar is an aristocrat, and to him the blood of the gods is the true channel of the grace of the gods. Government fitly reposes only in the hands of those who are endowed by nature for the work of the ruler, and what is true of government is true also of art. Art is divine, and the eagle, the bird of Zeus, is its chosen symbol. Ineffectual chatter is all that can be expected of crows and daws. But the divine right of government, the divine right of genius, is not absolute, and is to be exercised only in obedience to divine law. Native endowment being god-given involves the duty of self-restraint, which is imposed by the giver. And this "measure," which is the summary of Pindaric ethics, brings with it the recompense of reward in that other world which Pindar sees and makes us see with a startling sense of reality.

Pindar was claimed by the ancient rhetoricians as an exemplar of the "austere" style, as belonging to the same order as Aeschylus in tragedy, as Thucydides in history. His style is the grand style, but grand after the antique pattern of grandeur, which combines weight and fulness of meaning with artistic exactness in every detail. The copiousness of Pindar is a commonplace, but the subtle art of Pindar is often overlooked in the earlier characterizations of his poetry, and it is safe to follow the poet himself, who bears ample witness to his own excellences. Opulence, elevation, force, cunning workmanship, vigorous execution—these are all claimed by the poet for himself; and his splendour, his loftiness, his wealth of imagery, his forceful concentration, his varied metaphor, his vivid narrative, his superb diction must be recognized at once, though the admiration of these characteristics is indefinitely enhanced by closer study. But what withdraws itself from the reader is the sequence of thought, the planfulness of the epinician, and yet this is a point which Pindar also insists on. This planfulness, though disregarded or denied by literary people ancient and modern, has been diligently sought after by the best commentators and by the most thoughtful students of Pindar, and while no consensus has been reached, much has been done to show sequence and balance, to reproduce the architectonic principle, to bring out the relations of the myth which forms the heart of every ode to the rest of the organism, to trace the thread of the thought and to make audible the burden of the song as revealed by the recurrence of significant words and significant sentiments. Despite much straining and much over-interpretation, Pindar is much nearer to us than he was ever before. The music and the dance are lost without which the full significance of a Pindaric ode cannot be appreciated, but the rhythm remains, and under the guidance of the rhythm we can penetrate into many of the recesses of Pindaric songs.

The great Pindaric MSS. are, according to Mommsen's notation, **A** (Ambrosianus A), twelfth century; **B** (Vaticanus B), also of the twelfth century; **C** (Parisinus G), belongs to the close of the twelfth century); **D** (Mediceus B) in the Laurentian Library at Florence, thirteenth or fourteenth century. The inferior MSS. are called Thomani, Moschopulei, Triclinian, as they represent the editions of Thomas Magister, Moschopulos, and Triclinius. A good reading in them is a lucky accident.

The older scholia to Pindar go back to Didymus as Didymus goes back to an earlier time, and they have a certain value for the constitution of the text; the later scholia have very little value of any kind. A critical edition was begun by E. Abel with Nemeans and Isthmians in 1884.

Bibliography.—The *editio princeps* is an Aldine, 8vo (1513), followed by the *editio Romana* (1515). Then the ed. of H. Stephanus, 16mo (Paris, 1560), followed by five other Stephanus editions. Erasmus Schmidt (Wittenberg, 1616), elaborate, learned, with a fair proportion of successful emendations; Heyne (Göttingen, 1773; 2d ed. 1797), who revived the study of Pindar, enriched by the contributions of Gottfried Hermann; (3d ed. 1817) after the death of Heyne (1812). Hermann did much for Pindar, and Pindar was the favourite battle-ground of Hermann and his rival Boeckh, whose monumental edition of Pindar, two volumes in three parts (Leipzig, 1811–22), is still unexcelled for sagacious criticism, wide historical vision, reconstructive power. Metrical science dates from the *Metra Pindari* contained in this edition. Dissen, who prepared the commentary on the Nemeans and Isthmians for Boeckh, put forth a Pindar of his own (Gotha, 1830). Dissen is over-acute, sees too much, explains too much, analyzes too much. Schneidewin's edition of Dissen's Olympians and Pythians (1847) is a good advance. Bergk in the first volume of his *Poetae Lyrici Graeci* (4th ed.,

1874) gives too much play to his rare acumen and brilliant conjectural talent. Tycho Mommsen (Berlin, 1864), also a small text edition (1866), is a model of completeness and system in the presentation of the critical apparatus. Donaldson's Pindar (new ed. 1868), based on Dissen, has been displaced by the excellent edition of C. A. M. Fennell (Olympians and Pythians, 2d ed. 1893; Nemeans and Isthmians, 1883). Fennell exhibits praiseworthy independence and nice scholarship. Christ's text ed. (Teubner, 1869) shows good judgment; the Latin commentary to his large ed. (1896) is hardly adequate. Mezger's commentary, without text (1880), is useful and suggestive but faddish. An elaborate edition by J. B. Bury is in progress (Nemeans, 1890; Isthmians, 1892). The editor lays too much stress on Mezger's "recurrent word," and is often the dupe of his own cleverness. To these editions may be added De Jongh's *Olympians* (Utrecht, 1855); Cookesley's *Olympians and Pythians*, 2 vols. (1850); Seymour's *Select Odes of Pindar* (1882); and Gildersleeve's *Olympians and Pythians* (1885).

TRANSLATIONS.—The best translation into English is the prose rendering of Ernest Myers (2d ed. 1884). The introductions and notes of Friedr. Thiersch's German translation (Leipzig, 1820) are still worth reading. Hartung's Pindar translation and text (Leipzig, 1855–56), contains interesting guesses. Fraccaroli's *Odi di Pindaro dichiarate e tradotte* (1894) is an important contribution to Pindaric studies.

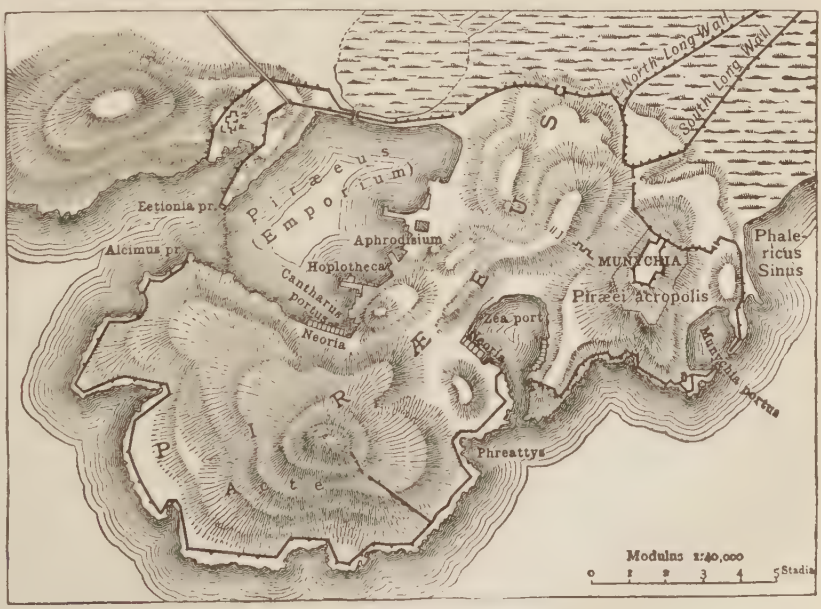
AIDS.—Tafel, *Dilucidationes Pindaricae* (Berlin, 1824) has a great wealth of matter, relevant and irrelevant; Rauchenstein, *Zur Einleitung in Pindars Siegeslieder* (Aarau, 1843), excellent; Leopold Schmidt, *Pindars Leben und Dichtung* (Bonn, 1862), an attempt to reproduce the development of the poet; Alfred Croiset, *La Poésie de Pindare* (2d ed. Paris, 1886), a work of exceptional merit; Bindseil's concordance (Berlin, 1875); Rumpel, *Lexicon Pindaricum* (Leipzig, 1883). For the metres, besides Boeckh, see J. H. H. Schmidt in his *Eurythmie* (vol. i. of the *Kunstformen*, Leipz. 1868), and Moritz Schmidt, *Ueber den Bau der Pindarischen Strophen* (Leipzig, 1882).

Pindenissus (Πινδέννισος). A fortified town of Cilicia, which was taken by Cicero when he was proconsul of Cilicia (Cic. *Ad Att.* v. 20).

Pindus (Πίνδος). (1) A lofty range of mountains in Northern Greece, a portion of the great backbone which runs through the centre of Greece from north to south. The name of Pindus was confined to that part of the chain which separates Thessaly and Epirus; and its most northerly and also highest part was called Lacmon. (2) One of the four towns in Doris, near the sources of a river of the same name.

Pinna (πτερόν). The blade of an oar. See GUBERNACULUM.

Pinna. The chief town of the Vestini, at the foot of the Apennines (Pliny, *H. N.* iii. 107).



Pinnes, Pinneus, or Pineus. The son of Agron, king of Illyria, by his first wife, Triteuta. At the death of Agron (B.C. 231) Pinnes, who was then a child, was left in the guardianship of his stepmother Teuta, whom Agron had married after divorcing Triteuta. When Teuta was defeated by the Romans, the care of Pinnes devolved upon Demetrius of Pharos; but when Demetrius in his turn made war against the Romans and was defeated, Pinnes was placed upon the throne by the Romans, but was compelled to pay tribute (Livy, xxii. 33).

Pinnirăpus. "Feather-snatcher," apparently a sort of slang Latin name for a gladiator who tries to pull the plume off his opponent's cap, as a trophy. The word is found only in Juv. iii. 158, on which see the scholia and Mayor's note.

Pintuaria (Πιντουαρία). Now Teneriffe; one of the Fortunatae Insulae (Canary Islands), also called CONVALLIS. From the perpetual snow on its peak, the name NIVARIA is also given to it.

Piper (πέπερι). Pepper; brought from India, and used by both Greeks and Romans as a seasoning (Pliny, *H. N.* xii. 26–29; Pers. v. 136). The word *piperatorium* is used of a pepper-box (Paul. *Sent.* iii. 6, 86). See the *Gazette Archéologique* for 1885, p. 335.

Piraeeus (Πειραιεύς) or **Piraeus**. Now Porto Leone or Porto Dracone. The most important of the harbours of Athens, was situated in the pen-

Plan of the Harbour of Athens.

insula about five miles southwest of Athens. This peninsula, which is sometimes called by the general name of Piraeeus, contained three harbours: Piraeeus proper on the western side, by far the largest of the three; Zea on the eastern side, separated from the Piraeus by a narrow isthmus; and Munychia (Pharnari), still farther to the east. The northern part of the great harbour of the Piraeus was divided into three smaller harbours: Zea for corn-vessels, Aphrodisium for merchant-ships in general, and Cantharus for ships of war. It was through the suggestion of Themistocles that the Athenians were induced to make use of the harbour of Piraeeus. Before the Persian Wars their principal harbour was Phalerum, which was not situated in the Piraean peninsula at all, but lay to the east of Munychia. At the entrance of the harbour of the Piraeus there were two promontories—the one on the right-hand, called Alcimus (Ἄλκιμος), on which was the tomb of Themistocles (Pausan. i. 1, 2), and Eëtionea (Ἠετιώνεια), where the Four Hundred built a fortress (Thuc. viii. 90). The Piraeus had a good-sized population, especially of resident aliens, who were attracted by its facility for trade. The town was strongly fortified by Themistocles, and was connected with Athens by the Long Walls, due to Pericles. The narrow entrance to its harbour was protected by two great mole-heads, across which a huge chain could be drawn to keep out hostile ships.

The town had a fine agora, which stood in the centre of the place, and temples to Zeus Soter, Athené Soteira, and Aphrodité; and fine halls or *στοαί*.

Piraeĭcus (Πειραϊκός). A Greek painter, probably of the time after Alexander the Great. He was the chief representative of what is called *ῥοπογραφία*, or the painting of petty subjects, such as still-life. He painted genre pictures in the Dutch style (barbers' and cobblers' shops), and subjects in still-life, of small size, but of proportionately careful execution (Propert. iii. 9, 12). In Pliny (*H. N.* xxxv. 112) the manuscript reading is *rhyparographos* ("rag-and-tatter-painter"). The word *rhopographia* is actually found in Cicero (*Ad Att.* xv. 16 *b*), and its opposite, *μεγαλογραφία*, in Vitruvius (vii. 4, § 4). See Pictura.

Pirēné (Πειρήνη). The spring struck out by the winged steed Pegasus on the citadel of Corinth. (See Pegasus.) It is also said to have sprung from Pirené, daughter of Oebalus, who melted into tears in sorrow for the loss of her son Cenchrias, accidentally slain by Artemis (Pausan. ii. 2, 3). It flowed from a rock in the Acrocorinthus (see Corinthus), and was conveyed by subterranean conduits down the hill to a marble reservoir, from which the city received a great part of its water-supply.

Pirithoüs (Πειρίθοος). The son of Ixion (or Zeus), and Dia, and king of the Lapithae in Thessaly. Pirithoüs once invaded Attica; but when Theseus came forth to oppose him, he conceived a warm admiration for the Athenian king; and from this time a most intimate friendship sprang up between the two heroes. When Pirithoüs was celebrating his marriage with Hippodamia, the intoxicated Centaur Eurytion or Eurytus carried her off, and this act occasioned the celebrated fight

Head of Pirithoüs. (West Pediment of the Temple of Zêus at Olympia.)

between the Centaurs and Lapithae, in which the Centaurs were defeated. Theseus, who was present at the wedding of Pirithoüs, assisted him in his battle against the Centaurs. Hippodamia afterwards died, and each of the two friends resolved to wed a daughter of Zeus. With the assistance of Pirithoüs, Theseus carried off Helen from Sparta. Pirithoüs was still more ambitious, and resolved to carry off Persephoné (Proserpina), the wife of the king of the lower world. Theseus would not desert his friend in the enterprise, though he knew the risk which they ran. The two friends accordingly descended to the lower world; but they were seized by Pluto and fastened to a rock, where they both remained till Heracles visited Hades. Heracles delivered Theseus, who had made the daring attempt only to please his friend; but Pirithoüs remained forever in torment (*Il.* i. 263; *Odyss.* xi. 630, xxi. 295; Hor. *Carm.* iii. 4, 80).

Pirus (Πεῖρος) or **Piĕrus** (Πίερος). The chief river of Achaia, falling into the Gulf of Patras.

Pisa (Πῖσα). The capital of Pisātis (Πισᾶτις), the middle portion of the province of Elis, in the Peloponnesus. (See Elis.) Pisa itself was situated north of the Alphaeus, at a very short distance east of Olympia, and, in consequence of its proximity to the latter place, was frequently identified by the poets with it. The history of the Pisatae consists of their struggle with the Eleans, with whom they contended for the presidency of the Olympic Games. The Pisatae obtained this honour in the eighth Olympiad (B.C. 748), with the assistance of Phidon, tyrant of Argos, and also a second time in the thirty-fourth Olympiad (B.C. 644), by means of their own king Pantaleon. In the fifty-second Olympiad (B.C. 572) the struggle between the two peoples was brought to a close by the conquest and destruction of Pisa by the Eleans.

Pisae. Now Pisa. An ancient city of Etruria, and one of the twelve cities of the confederation. It was situated at the confluence of the Arnus and Ausar (Serchio), about six miles from the sea. According to some traditions, Pisae was founded by the companions of Nestor, the inhabitants of Pisa, in Elis, who were driven upon the coast of Italy on their return from Troy; whence the Roman poets give the Etruscan town the surname of Alphea. In B.C. 180 it was made a Latin colony. Its harbour, called Portus Pisanus, at the

mouth of the Arnus (Arno), was much used by the Romans.

Pisander (Πείσανδρος). (1) An early Greek poet, born at Camirus, in the island of Rhodes, and supposed to have flourished about B.C. 650, although some made him earlier than Hesiod, and contemporary with Eumolpus. He wrote a poem, entitled *Heraclea* (Ἡράκλεια), on the exploits of Heracles, of which frequent mention is made by the grammarians. The Alexandrian critics assigned him a rank among epic poets after Homer, Hesiod, Panyasis, and Antimachus. (2) A Greek poet, born at Laranda, a city of Lycaonia, in Asia Minor, and who lived during the reign of Alexander Severus. He composed a long poem, entitled Ἡρῳϊκαὶ Θεογαμίαι, in which he sang of the nuptials of gods and heroes. The sixteenth book of this poem is cited, and Suidas calls the whole production a history varied after the epic manner. One of the interlocutors in the *Saturnalia* of Macrobius (v. 2) accuses Vergil of having translated from Pisander almost all the second book of the *Aeneid*, and particularly the story of the wooden horse. (3) An epigrammatic poet, supposed by Jacobs to be the same with the native of Camirus above mentioned. Heyne, however, thinks that he was identical with the younger Pisander. (4) An Athenian, one of the leaders of the oligarchical party, and instrumental in bringing about the establishment of the Council of Four Hundred (Thuc. vi. 27, 60; viii. 49, 63, 89; Plut. *Alcib.*). (5) A Spartan admiral, in the time of Agesilaüs, slain in a naval battle with Conon near Cnidus, B.C. 394. (Xen. *Hellen.* iv. 3, 10).

Pisātis (Πισᾶτις). See PISA.

Pisaurum. Now Pesaro; an ancient town of Umbria, near the mouth of the river Pisaurus (Foglia), on the road to Ariminum. It was colonized by the Romans in B.C. 186.

Pisaurus. See PISAURUM.

Piscīna (literally, "fish-pond"). (1) (*κολυμβήθρα*). An artificial pond of either salt or fresh water for keeping fish. (See VIVARIUM.) (2) (λουτρόν). A pool or basin of water in Roman bath-rooms. See BALNEAE, p. 191.

Pisidia (ἡ Πισιδική). An inland district of Asia Minor, lying north of Lycia and Pamphylia. It was a mountainous region, inhabited by a warlike people, who maintained their independence against all the successive rulers of Asia Minor. The Romans never subdued the Pisidians in their mountain fortresses, though they took some of the towns on the outskirts of their country — for example, Antiochia, which was made a colony with the *ius Italicum*. In fact, the northern part, in which Antiochia stood, had originally belonged to Phrygia, and was more accessible and more civilized than the mountains which formed the proper country of the Pisidians. Nominally, the country was considered a part of Pamphylia, till the new subdivision of the Empire under Constantine, when Pisidia was made a separate province. The country is still inhabited by wild tribes, among whom travelling is dangerous; and it is therefore little known. Ancient writers say that it contained, amidst its rugged mountains, some fertile valleys, where the olive flourished; and it also produced the gum storax, some medicinal plants, and salt. On the southern slope of the Taurus several rivers flowed through Pisidia and Pamphylia into the Pamphylian Gulf, the chief of which were the Cestrus and the Catarrhactes; and on the northern the mountain streams form some large salt lakes — namely, Ascania (Hoiran and Egerdir), south of Antiochia, Caralius, or Pusgusa (Bei Shehr or Kereli), southeast of the former, and Trogitis (Soghla) further to the southeast, in Isauria. Special names were given to certain districts, which are sometimes spoken of as parts of Pisidia, sometimes as distinct countries — namely, CIBYRATIS, in the southwest, along the north of Lycia, and CABALIA, the southwest corner of Cibyratis itself; MILYAS, the district east of Cibyratis, northeast of Lycia and northwest of Pamphylia; and ISAURIA, in the east of Pisidia, on the borders of Lycaonia.

Pisistratĭdae (Πεισιστρατίδαι). The legitimate sons of Pisistratus. The name is used sometimes to indicate only Hippias and Hipparchus, and sometimes in a wider application, embracing the grandchildren and near connections of Pisistratus (as by Herod. viii. 52, referring to a time when both Hippias and Hipparchus were dead).

Pisistrătus (Πεισίστρατος). The youngest son of Nestor and Anaxibia. He was a friend of Telemachus, and accompanied him on his journey from Pylos to Menelaüs at Sparta.

Pisistrătus (Πεισίστρατος). An Athenian, son of Hippocrates, named after Pisistratus, the youngest son of Nestor, since the family of Hippocrates was of Pylian origin, and traced their descent to Neleus, the father of Nestor. The mother of Pisistratus (whose name we do not know) was first cousin to the mother of Solon. Pisistratus grew up equally distinguished for personal beauty and for mental endowments. The relationship between him and Solon naturally drew them together, and a close friendship sprang up between them. He assisted Solon (q. v.) by his eloquence in persuading the Athenians to renew their struggle with the Megarians for the possession of Salamis, and he afterwards fought with bravery in the expedition which Solon led against the island. When Solon, after the establishment of his constitution, retired for a time from Athens, the old rivalry between the parties of the Plain, the Highlands, and the Coast broke out into open feud. The party of the Plain, comprising chiefly the landed proprietors, was headed by Lycurgus; that of the Coast, consisting of the wealthier classes not belonging to the nobles, by Megacles, the son of Alcmaeon; the party of the Highlands, which aimed at more of political freedom and equality than either of the two others, was the one at the head of which Pisistratus placed himself, because they seemed the most likely to be useful in the furtherance of his ambitious designs. His liberality, as well as his military and oratorical abilities, gained him the support of a large body of citizens. Solon, on his return, quickly saw through the designs of Pisistratus, who listened with respect to his advice, though he prosecuted his schemes none the less diligently. When Pisistratus found his plans sufficiently ripe for execution, he one day made his appearance in the agora with his mules and his own person exhibiting recent wounds, pretending that he had been nearly assassinated by his enemies as he was riding into the country. An assembly of the people was forthwith called, in which one of his partisans proposed that a body-guard of fifty citizens, armed with clubs, should be granted to him. It was in vain

that Solon opposed this; the guard was given him. Through the neglect or connivance of the people, Pisistratus took this opportunity of raising a much larger force, with which he seized the citadel, B.C. 560, thus becoming what the Greeks called *τύραννος* of Athens. See the account in Aristotle, *Ath. Pol.*

Having secured to himself the substance of power, he made no further change in the constitution or in the laws, which he administered ably and well. His first usurpation lasted but a short time. Before his power was firmly rooted, the factions headed by Megacles and Lycurgus combined, and Pisistratus was compelled to evacuate Athens. He remained in banishment six years. Meantime the factions of Megacles and Lycurgus revived their old feuds, and Megacles made overtures to Pisistratus, offering to reinstate him in the tyranny if he would connect himself with him by receiving his daughter in marriage. The proposal was accepted by Pisistratus, and the following stratagem was devised for accomplishing his restoration, according to the account of Herodotus: A maiden named Phya, of remarkable stature and beauty, was dressed as Athené in a full suit of armour, and placed in a chariot, with Pisistratus by her side. The chariot was then driven towards the city, heralds being sent on before to announce that Athené in person was bringing back Pisistratus to her Acropolis. The report spread rapidly, and those in the city believing that the woman was really their tutelary goddess, worshipped her, and admitted Pisistratus. Pisistratus nominally performed his part of the contract with Megacles; but, in consequence of the insulting manner in which he treated his wife, Megacles again made common cause with Lycurgus, and Pisistratus was a second time compelled to evacuate Athens. He retired to Eretria in Euboea, and employed the next ten years in making preparations to regain his power. At the end of that time he invaded Attica with the forces he had raised, and also supported by Lygdamis of Naxos with a considerable body of troops. He defeated his opponents near the temple of Athené at Pallené, and then entered Athens without opposition. Lygdamis was rewarded by being established as tyrant of Naxos, which island Pisistratus conquered (see LYGDAMIS).

Having now become tyrant of Athens for the third time, Pisistratus adopted measures to secure the undisturbed possession of his supremacy. He took a body of foreign mercenaries into his pay, and seized as hostages the children of several of the principal citizens, placing them in the custody of Lygdamis in Naxos. He maintained at the same time the form of Solon's institutions, only taking care, as his sons did after him, that the highest offices should always be held by some member of the family. He not only exacted obedience to the laws from his subjects and friends, but himself set the example of submitting to them. On one occasion he even appeared before the Areopagus to answer a charge of murder, which, however, was not prosecuted. Athens was indebted to him for many stately and useful buildings. Among these may be mentioned a temple to the Pythian Apollo, and a magnificent temple to the Olympian Zeus, which remained unfinished for several centuries, and was at length completed by the emperor Hadrian. Besides these, the Lyceum, a garden with stately buildings a short distance from the city, was the work of Pisistratus, as also the Fountain of the Nine Springs. Pisistratus also encouraged literature in various ways. It was apparently under his auspices that Thespis introduced at Athens his rude form of tragedy (B.C. 535), and that dramatic contests were made a regular part of the Attic Dionysia. It is to Pisistratus that tradition ascribes the first written text of the whole of the poems of Homer, as to which see Flach, *Peisistratos und seine literarische Thätigkeit* (Tübingen, 1885); and the article HOMERUS, pp. 838–39. Pisistratus is also said to have been the first person in Greece who collected a library, to which he generously allowed the public access.

By his first wife Pisistratus had two sons, Hippias and Hipparchus. By his second wife, Timonassa, he had also two sons, Iophon and Thessalus, who are rarely mentioned. He had also a bastard son, Hegesistratus, whom he made tyrant of Sigeum after taking that town from the Mitylenaeans. Pisistratus died at an advanced age in 527, and was succeeded in the tyranny by his eldest son Hippias; but Hippias and his brother Hipparchus appear to have administered the affairs of the State with so little outward distinction that they are frequently spoken of as though they had been joint tyrants. They continued the government on the same principles as their father. Thucydides (vi. 54) speaks in terms of high commendation of the virtue and intelligence with which their rule was exercised till the death of Hipparchus. Hipparchus inherited his father's literary tastes. Several distinguished poets lived at Athens under the patronage of Hipparchus, as, for example, Simonides of Ceos, Anacreon of Teos, Lasus of Hermioné, and Onomacritus.

After the murder of Hipparchus in 514, an account of which is given under HARMODIUS, a great change ensued in the character of the government. Under the influence of revengeful feelings and fears for his own safety, Hippias now became a morose and suspicious tyrant. He put to death great numbers of the citizens, and raised money by extraordinary imposts. His old enemies the Alcmaeonidae, to whom Megacles belonged, availed themselves of the growing discontent of the citizens; and after one or two unsuccessful attempts they at length succeeded, supported by a large force under Cleomenes, in expelling the Pisistratidae from Attica. Hippias and his connections retired to Sigeum in 510. The family of the tyrants was condemned to perpetual banishment, a sentence which was maintained even in after times, when decrees of amnesty were passed. Hippias afterward repaired to the court of Darius, and looked forward to a restoration to his country by the aid of the Persians. He accompanied the expedition sent under Datis and Artaphernes, and pointed out to the Persians the plain of Marathon as the most suitable place for their landing. He was now (490) of great age. According to some accounts, he fell in the battle of Marathon; according to others, he died at Lemnos on his return. Hippias was the only one of the legitimate sons of Pisistratus who had children; but none of them attained distinction. On Pisistratus, see the monographs by Flach (1885) and Töpffer (1886).

Piso, CALPURNIUS. The name of a distinguished plebeian family at Rome. The name of Piso, like many other Roman cognomens, is connected with agriculture, the noblest and most

honourable pursuit of the ancient Romans: it comes from the verb *pisere* or *pinsere*, and refers to the pounding or grinding of corn. (1) A Roman who was taken prisoner at the battle of Cannae, B.C. 216; was praetor urbanus 211, and afterward commanded as propraetor in Etruria 210. Piso, in his praetorship, proposed to the Senate that the Ludi Apollinares, which had been exhibited for the first time in the preceding year (212), should be repeated, and should be celebrated in future annually. The Senate passed a decree to this effect. The establishment of these games by their ancestor was commemorated on coins by the Pisones in later times. (2) C., son of No. 1, was praetor 186, and received Further Spain as his province. He returned to Rome in 184, and obtained a triumph for a victory he had gained over the Lusitani and Celtiberi. He was consul in 180, and died during his consulship.

Pisones with the agnomen Caesonīnus. (3) L., received the agnomen Caesoninus because he originally belonged to the Caesonia gens. He was praetor in 154, and obtained the province of Further Spain, but was defeated by the Lusitani. He was consul in 148, and was sent to conduct the war against Carthage; he was succeeded in the command in the following year by Scipio. (4) L., son of No. 3, was consul 112 with M. Livius Drusus. In 107 he served as legatus to the consul, L. Cassius Longinus, who was sent into Gaul to oppose the Cimbri and their allies, and he fell together with the consul in the battle, in which the Roman army was utterly defeated by the Tigurini in the territory of the Allobroges. This Piso was the grandfather of Caesar's father-in-law, a circumstance to which Caesar himself alludes in recording his own victory over the Tigurini at a later time (Caes. *B. G.* i. 7, 12). (5) L., son of No. 4, never rose to any of the offices of State, and is only known from the account given of him by Cicero in his violent invective against his son. He married the daughter of Calventius, a native of Cisalpine Gaul, who came from Placentia and settled at Rome; and hence Cicero calls his son, in contempt, a semi-Placentian. (6) Lucius, son of No. 5, was an unprincipled debauchee, and a cruel and corrupt magistrate. He is first mentioned in 59, when he was brought to trial by P. Clodius for plundering a province, of which he had the administration after his praetorship, and he was only acquitted by throwing himself at the feet of the judges. In the same year Caesar married his daughter Calpurnia; and through his influence Piso obtained the consulship for 58, having for his colleague A. Gabinius, who was indebted for the honour to Pompey. Both consuls supported Clodius in his measures against Cicero, which resulted in the banishment of the orator. The conduct of Piso in support of Clodius produced that extreme resentment in the mind of Cicero which he displayed against Piso on many subsequent occasions. At the expiration of his consulship Piso went to his province of Macedonia, where he remained during two years (57 and 56), plundering the province in the most shameless manner. In the latter of these years the Senate resolved that a successor should be appointed, and in the debate in the Senate which led to his recall Cicero attacked him in the most unmeasured terms in an oration which has come down to us (*De Provinciis Consularibus*). Piso, on his return (55), complained in the Senate of the attack of Cicero, and justified the administration of his province, whereupon Cicero reiterated his charges in a speech which is likewise extant (*In Pisonem*). Cicero, however, did not venture to bring to trial the father-in-law of Caesar. In 50 Piso was censor with Appius Claudius Pulcher. On the breaking out of the Civil War (49) Piso accompanied Pompey in his flight from the city; and although he did not go with him across the sea, he still kept aloof from Caesar. He subsequently returned to Rome, and remained neutral during the remainder of the Civil War. After Caesar's death (44) Piso at first opposed Antony, but is afterwards mentioned as one of his partisans. (7) Lucius, son of No. 6, was consul B.C. 15, and afterwards obtained the province of Pamphylia; from thence he was recalled by Augustus in 11, in order to make war upon the Thracians, who had attacked the province of Macedonia. He was appointed by Tiberius *praefectus urbi*. While retaining the favour of the emperor, without condescending to servility, he at the same time earned the good-will of his fellow-citizens by the integrity and justice with which he governed the city. He died in A.D. 32, at the age of eighty, and was honoured by a decree of the Senate with a public funeral. It was to this Piso and his two sons that Horace addressed his epistle on the art of poetry (*Ars Poetica*).

Pisones with the agnomen Frugi. (8) Lucius, received from his integrity and conscientiousness the surname of Frugi, which is perhaps nearly equivalent to our "man of honour." He was tribune of the plebs B.C. 149, in which year he proposed the first law for the punishment of extortion in the provinces. He was consul in 133, and carried on war against the slaves in Sicily. He was a staunch supporter of the aristocratic party, and offered a strong opposition to the measures of C. Gracchus. Piso was censor, but it is uncertain in what year. He wrote annals, which contained the history of Rome from the earliest period to the age in which Piso himself lived. (9) Lucius, son of No. 8, served with distinction under his father in Sicily in 133, and died in Spain about 111, whither he had gone as propraetor. (10) C., married Tullia, the daughter of Cicero, in 63, but was betrothed to her as early as 67. He was quaestor in 58, when he used every exertion to obtain the recall of his father-in-law from banishment; but he died in 57 before Cicero's return to Rome. He is frequently mentioned by Cicero in terms of gratitude on account of the zeal which he had manifested in his behalf during his banishment.

Pisones without an agnomen. (11) C., consul B.C. 67, belonged to the high aristocratic party; and in his consulship opposed with the utmost vehemence the law of the tribune Gabinius, for giving Pompey the command of the war against the pirates. In 66 and 65, Piso administered the province of Narbonese Gaul as proconsul, and while there suppressed an insurrection of the Allobroges. In 63 he was accused of plundering the province, and was defended by Cicero. The latter charge was brought against Piso at the instigation of Caesar; and Piso, in revenge, implored Cicero, but without success, to accuse Caesar as one of the conspirators of Catiline. (12) M., usually called M. Pupius Piso, because he was adopted by M. Pupius, when the latter was an old man. He retained, however, his family-name Piso, just as Scipio, after his adoption by Metellus, was called

Metellus Scipio. On the death of L. Cinna, in 84, Piso married his wife Annia. In 83 he was appointed quaestor to the consul L. Scipio; but he quickly deserted this party, and went over to Sulla, who compelled him to divorce his wife on account of her previous connection with Cinna. After his praetorship, the year of which is uncertain, he received the province of Spain with the title of proconsul, and on his return to Rome in 69, enjoyed the honour of a triumph. He served in the Mithridatic War as a legatus of Pompey. He was elected consul for 61 through the influence of Pompey. In his consulship Piso gave great offence to Cicero, by not asking the orator first in the Senate for his opinion, and by taking P. Clodius under his protection after his violation of the mysteries of the Bona Dea. Cicero revenged himself on Piso, by preventing him from obtaining the province of Syria, which had been promised him. Piso, in his younger days, had so high a reputation as an orator, that Cicero was taken to him by his father, in order to receive instruction from him. He belonged to the Peripatetic School in philosophy, in which he received instruction from Staseas. (13) Cn., a young noble who had dissipated his fortune by his extravagance and profligacy, and therefore joined Catiline in what is usually called his first conspiracy (66). (See Catilina.) The Senate, anxious to get rid of Piso, sent him into Nearer Spain as quaestor, but with the rank and title of propraetor. His exactions in the province soon made him so hateful to the inhabitants that he was murdered by them. It was, however, supposed by some that he was murdered at the instigation of Pompey or of Crassus. (14) Cn., fought against Caesar in Africa (B.C. 46), and after the death of the dictator, joined Brutus and Cassius. He was subsequently pardoned, and returned to Rome; but he disdained to ask Augustus for any of the honours of the State, and was, without solicitation, raised to the consulship in 23. (15) Cn., son of No. 14, inherited all the pride and haughtiness of his father. He was consul B.C. 7, and was sent by Augustus as legate into Spain, where he made himself hated by his cruelty and avarice. Tiberius after his accession was chiefly jealous of Germanicus, his brother's son; and accordingly, when the eastern provinces were assigned to Germanicus in A.D. 18, Tiberius conferred upon Piso the command of Syria, in order that the latter might do everything in his power to thwart and oppose Germanicus. Plancina, the wife of Piso, was also urged on by Livia, the mother of the emperor, to vie with and annoy Agrippina. Germanicus and Agrippina were thus exposed to every species of insult and opposition from Piso and Plancina; and when Germanicus fell ill in the autumn of 19, he believed that he had been poisoned by them. Piso on his return to Rome (20) was accused of murdering Germanicus; the matter was investigated by the Senate; but before the investigation came to an end, Piso was found one morning in his room with his throat cut, and his sword lying by his side. It was generally supposed that, despairing of the emperor's protection, he had put an end to his own life, but others believed that Tiberius dreaded his revealing his secrets, and accordingly caused him to be put to death. The powerful influence of Livia secured the acquittal of Plancina. (See Germanicus.) (16) C., the leader of the well-known conspiracy against Nero in A.D. 65. Piso himself did not form the plot; but as soon as he had joined it, his great popularity gained him many partisans. He possessed most of the qualities which the Romans prized—high birth, an eloquent address, liberality, and affability; and he also displayed a sufficient love of magnificence and luxury to suit the taste of the day, which would not have tolerated austerity of manner or character. The conspiracy was discovered by Milichus, a freedman of Flavius Scevinus, one of the conspirators. Piso thereupon opened his veins, and thus died. There is extant a poem in 261 lines, containing a panegyric on a certain Calpurnius Piso, who is probably the same person as the leader of the conspiracy against Nero. (17) L., surnamed Licinianus, was the son of M. Licinius Crassus Frugi, and was adopted by one of the Pisones. On the accession of Galba to the throne, he adopted as his son and successor Piso Licinianus; but the latter only enjoyed the distinction four days, for Otho, who had hoped to receive this honour, induced the Praetorians to rise against the emperor. Piso fled for refuge into the Temple of Vesta, but was dragged out by soldiers, and despatched at the threshold of the temple, A.D. 69.

Pistor. The Roman word for a baker, the Greek terms being *ἀρτοποιός*, "bread-maker," and *ἀρτοπώλης*, "bread-seller." The Latin term is from *pinso*, and means literally "pounder." Bakers are first mentioned in Greece in the fifth century B.C., but do not appear in Rome before the early part of the second century. They were usually freedmen or citizens of the lower class; but, owing to the importance attached by the State to the trade, it became one of some standing. There was a *collegium* or guild of bakers under Augustus, which served the State, and under Trajan it was formally organized with 100 members and special privileges. It was under the supervision of the *praefectus annonae*. (See Annona.) Bread was distributed at Rome at the public expense, at first monthly, but in the third century daily; and at the beginning of the fourth century there were 254 public bakeries in the city. These made only the coarser kinds of bread, the finer sorts being produced at the private establishments.

Baker's Sign found at Pompeii. (Overbeck.)

Baking was sometimes done in furnaces, as in the bake-shop (*pistrina*) excavated at Pompeii; or in the *clibanus*, a clay vessel, in which the dough was placed and then buried in hot ashes (Petron 35; see Clibanus). Wheat-bread (*panas siligneus*) was the most common variety, as the ancients thought rye (*secale*) unfit to eat; and the quality of the flour determined the quality of the bread. Barley-bread (*panis hordeaceus*) was regarded as fit only for soldiers and slaves (Pliny, *H. N.* xviii. 74). Spelt (*ζειά*, *far*) was sometimes used for making a coarse bread.

The dough for bread was prepared by moistening the flour with water, by adding salt, and then by kneading (*μάττειν*, *subigere*, *depsere*) in a trough of wood or pottery. In large bakeries it appears to have been done by a sort of machine, the motive-power of which was supplied by an animal.

Baker selling Bread. (Pompeian Painting.)

The leaven (*ζύμη*, *fermentum*) was prepared from cakes of barley and water, or from the surplus dough of the preceding day's batch, which was kneaded with salt, put into water, and kept till it fermented. The dough was shaped either by hand or in moulds (*artoptae*), and then placed in the oven (*ἰπνός*, *furnus*) on a shovel (*pala*); but was sometimes baked on the hearth in the embers.

Cake and fancy-bread were made in various forms by special confectioners (*πλακουντοποιοί*, *πεμματουργοί*, *clibanarii*, *dulciarii*, *crustularii*, etc.), and were much used for sacrificial purposes. On these sweet preparations, see Athen. xiv. 643 e and f, and Pollux, vi. 75 foll. The sweetening was done with honey. See Blümner, *Technologie*, i. 1 foll.; and id. s. v. "Bäckerei" in Baumeister's *Denkmäler*.

Pistor. "Baker," a surname given to Iupiter by the Romans, because, when their city was taken by the Gauls, the god was believed to have inspired them with the idea of throwing down loaves from the Tarpeian Hill, where they were besieged, that the enemy might suppose that they were not in want of provisions, though, in reality, they were near surrendering through famine. This deceived the Gauls, and they soon withdrew (Ovid, *Fasti*, vi. 343; Lactant. i. 20, 33). This story is probably not the origin of the name *Pistor* as applied to Iupiter; but the name is best explained as "the Pounder" (*pinso*), referring to his smiting with thunderbolts.

Pistoria or **Pistorium.** Now Pistoia; a small place in Etruria, on the road from Luca to Florentia, rendered memorable by the defeat of Catiline in its neighbourhood. See CATILINA.

Pistrīnum and **Pistrīna** (*μυλών*). A place where grain was pounded (*pinso*) in a mortar; hence, a mill. See MOLA.

Pitănē (*Πιτάνη*). A seaport town of Mysia, on the coast of the Elaitic Gulf; the birthplace of the academic philosopher Arcesilaüs.

Pitcher. See URCEUS.

Pitchfork. See FURCA.

Pithecūsa. See AENARIA.

Pitho (*Πειθώ*). In Greek mythology the personification of persuasion. Like Eros and the Graces, with whom Hesiod mentions her (*Works and Days*, 73), she usually appears in the train of Aphrodité. She was, indeed, considered the daughter of the goddess, and was honoured together with her, as in Athens. She was also connected with Hermes as the god of eloquence. (See Herod. viii. 111; Pausan. ii. 7, 7.) The Romans called her **Suada** or **Suadēla** (Hor. *Epist.* i. 6, 38; Enn. *ap.* Cic. *Brut.* 15, 59).

Pithoegia (*Πιθοίγια*). The first day of the festival of the Anthesteria. See DIONYSIA.

Pithos (*πίθος*). A Greek wine-jar of earthenware, with a wide mouth and a close-fitting lid. See DOLIUM.

Pitĭnum. An Umbrian town on the river Pisaurus.

Pittacium (*πιττάκιον*). (1) A slip of parchment or leather used as a label, especially for a wine-jar, to give the date of the vintage, the quality of the wine, etc. (Petron. 34; id. 56). (2) A piece of linen spread with ointment for a plaster (Celsus, iii. 10).

Pittăcus (*Πιττακός*). A native of Mitylené in Lesbos, and one of the so-called Seven Sages of Greece, was born about B.C. 650. Having obtained popularity among his countrymen by successfully opposing the tyrant Melanchrus, he was intrusted with the command of a fleet in a war with the Athenians concerning some territory which they had seized in the island. In the course of this war the Athenian commander Phryno, a man of uncommon size and strength, challenged him to single combat. Providing himself with a net, which he concealed under his buckler, he took the first opportunity to throw it over the head of his antagonist, and by this means gained an easy victory. According to Strabo's account, Pittacus came into the field armed with a casting-net, a trident, and a dagger; and it is said that from this stratagem of the Mitylenean was borrowed the mode of fighting practised by the Roman gladiators called *retiarii*. From this time Pittacus was held in high esteem among the Mityleneans, and was intrusted with the supreme power in the State (Aristot. *Polit.* iii. 15). Among other valuable presents, his countrymen offered him as much of the lands which had been recovered from the Athenians as he chose; but he only accepted of so much as he could measure by a single cast of a javelin; and one half of this small portion he afterward dedicated to Apollo, saying, concerning the remainder, that "the half is better than the whole." Cornelius Nepos says that the Mityleneans offered him many thousand acres, but that he took only a hundred. Pittacus displayed great moderation in his treatment of his

enemies, among whom one of the most violent was the poet Alcaeus, who frequently made him the object of his satire. Finding it necessary to lay severe restrictions upon drunkenness, to which the Lesbians were particularly addicted, Pittacus passed a law which subjected offenders of this class to double punishment for any crime committed in a state of intoxication. When he had established such regulations as seemed to him satisfactory, he resigned his power, which he had held for ten years, and retired to private life.

Some of his famous sayings are as follows: "Power reveals the man;" "Whatever you do, do well;" "Watch for opportunities;" "Never talk of your plans before they are carried out." The life of Pittacus is given by Diogenes Laërtius. See SEVEN SAGES.

Pittheus (Πιτθεύς). A king of Troezen, and father of Aethra (hence called *Pittheïs*), the mother of Theseus (q. v.). He is said to have taught oratory, and even to have written a book on the subject (Pausan. ii. 30, 8).

Pityocamptes (πιτυοκάμπτης, "pine-bender"). A name applied to the robber Sinis (q. v.), who killed travellers by tying them between two pine-trees bent down so as nearly to meet, and then allowed to spring apart (Pausan. ii. 1, 3).

Pityūsae. A group of small islands in the Mediterranean, off the coast of Spain, and lying to the southwest of the Baleares. They derived their name from the number of pine-trees (πίτυς, "a pine") which grew in them. The largest is Ebusus (Ivica), and next to it is Ophiusa (Ias Columbretes). See Mela, ii. 7.

Placard. See LIBELLUS.

Placenta (πλακοῦς). A thin, flat cake of flour, mixed with cheese and honey. It was usually a large cake, so as to be cut up for a number of persons (Cato, *R. R.* 76; Hor. *Epist.* i. 10, 11). See PISTOR; SCRIBLITA.

Placentia. Now Piacenza; a Roman colony in Cisalpine Gaul, founded at the same time as Cremona, B.C. 219, and situated on the right bank of the Po, not far from the mouth of the Trebia. It was taken and destroyed by the Gauls in B.C. 200, but was soon rebuilt by the Romans, and became an important place.

Placidia, GALLA. See GALLA.

Placĭtus, SEXTIUS. The author of a short Latin treatise, in thirty-four chapters, treating of the medical properties supposed to reside in the bodies of certain animals. Its title is *De Medicina* (or *Medicamentis*) *ex Animalibus*. It is thought to have been written in the fourth century A.D. It is edited by Ackermann (Nürnberg, 1788).

Plaga (ἐνάδιον). A hunting-net. See RETÉ.

Plagium. Kidnapping; slave-stealing. A crime punishable by Roman law with a fine and *infamia*. The offence was a common one, but was severely dealt with by Augustus (Suet. *Aug.* 32). See Rein, *Das Criminalrecht der Römer*, p. 386, and the article SERVUS.

Plaguncŭla (πλαγγών). A wax doll (Callim. *Dem.* 32). See PUPA.

Plaits. See COMA; SINUS.

Planaria (prob. also CANARIA). One of the Fortunatae Insulae (q. v.) or Canary Islands.

Planasia. Now Pianosa; an island between Corsica and the coast of Etruria, to which Augustus banished his grandson Agrippa Postumus.

Planciădes Fulgentius. See FULGENTIUS.

Plancīna, MUNATIA. See GERMANICUS; PISO.

Plancius, CN. A Roman who, as quaestor in Macedonia in B.C. 58, showed great kindness to Cicero when the orator came to Macedonia during his exile. (See CICERO.) Plancius was elected curule aedile in 54, but before taking office was accused of *sodalicium* or bribery of the tribes through illegal agencies. (See SODALICIUM.) Cicero defended him in orations still extant, and secured his acquittal. Plancius took the side of Pompey in the Civil War, and on Caesar's triumph went into exile in Corcyra (Corfu). See Cic. *Ad Fam.* iv. 14; xiv. 1, 3.

Plancus. (1) T. BURSA, tribune of the commons in B.C. 52. He took part in the troubles excited by the death of Clodius, and, on the expiration of his office, was accused and condemned, notwithstanding the interest made by Pompey in his behalf. (2) L. MUNATIUS, a native of Tibur, was in early life a pupil of Cicero's, and obtained considerable eminence in the oratorical art. He afterward commanded a legion under Caesar in Gaul. On the assassination of that individual Plancus acted at first a very equivocal part, and frequently changed sides, attaching himself successively to each party according as it became powerful. Thus we find him, after the victory at Mutina, affecting the utmost zeal for the cause of Brutus and freedom; and subsequently, when he saw Antony reestablished in power, he went over to him with four legions which he had at the time under his command. He obtained upon this the consulship along with Lepidus, B.C. 42. Tired at last of Antony, he sided with Octavius, who received him with the utmost cordiality. It was Plancus who proposed in the Senate that the title of Augustus should be bestowed on Octavianus. The ancient writers reproach him with an absurd performance at the court of Cleopatra, in Alexandria, when he appeared on the public stage in the character of a sea-god, having his person painted green, and in a state of almost complete nudity, wearing a crown of reeds on his head, and with the tail of a fish attached to his body behind. Plancus, however, appears to have been a man of literary tastes, and we have an ode addressed to him by Horace on one occasion, when he had become suspected of disaffection by Augustus, and was meditating his departure from Italy (Plut. *Ant.*; Vell. Paterc. ii. 63; Horat. *Carm.* i. vii). (3) LUCIUS, a friend of Julius Caesar, under whom he served both in the Gallic and the Civil Wars. Caesar, shortly before his death, nominated him to the government of Transalpine Gaul for B.C. 44, with the exception of the Narbonese and Belgic portions of the province, and also to the consulship for 42, with D. Brutus as his colleague. After Caesar's death Plancus hastened into Gaul, and took possession of his province. Here he prepared at first to support the Senate against Antony; but when Lepidus joined Antony, and their united forces threatened to overwhelm Plancus, the latter was persuaded by Asinius Pollio to follow his example, and to unite with Antony and Lepidus. Plancus, during his government of Gaul, founded the colonies of Lugdunum and Raurica. He was consul in 42,

according to the arrangement made by Caesar, and he subsequently followed Antony to Asia, where he remained for some years, and governed in succession the provinces of Asia and Syria. He deserted Antony in 32, shortly before the breaking out of the Civil War between the latter and Octavianus. He was favourably received by Octavianus, and continued to reside at Rome during the remainder of his life. It was on his proposal that Octavianus received the title of Augustus in 27; and the emperor conferred upon him the censorship in 22, with Paulus Aemilius Lepidus. Both the public and private life of Plancus were stained by numerous vices. One of Horace's odes (*Carm.* i. 7) is addressed to him.

Planĭpes. See MIMUS.

Planūdes Maxĭmus. See MAXIMUS.

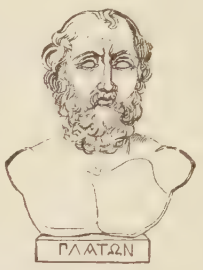
Plastes (πλάστης). A modeller in clay or wax. See STATUARIA ARS.

Plastĭca. See STATUARIA ARS.

Plataea (Πλάταια), more commonly **Plataeae** (Πλαταιαί). An ancient city of Boeotia, on the northern slope of Mount Cithaeron, not far from the sources of the Asopus, and on the frontiers of Attica. It was said to have derived its name from Plataea, a daughter of Asopus. At an early period the Plataeans deserted the Boeotian Confederacy and placed themselves under the protection of Athens; and when the Persians invaded Attica, B.C. 490, they sent 1000 men to the assistance of the Athenians, and fought on their side at the battle of Marathon. Ten years afterward (480) their city was destroyed by the Persian army under Xerxes at the instigation of the Thebans; and the place was still in ruins in the following year (479), when the memorable battle was fought in their territory in which Mardonius was defeated, and the independence of Greece secured. In consequence of this victory, the territory of Plataea was declared inviolable. It now enjoyed a prosperity of fifty years; but in the third year of the Peloponnesian War (429) the Thebans persuaded the Spartans to attack the town, and after a siege of two years at length succeeded in obtaining possession of the place (427). Plataea was now razed to the ground, but was again rebuilt after the peace of Antalcidas (387). It was destroyed the third time by its inveterate enemies the Thebans in 374. It was once more restored under the Macedonian supremacy, and continued in existence till a very late period. See Wiegand, *Platää* (1886).

Plate. See CATINUS; LANX; PATINA.

Platēa (πλατεῖα, sc. ὁδός). The principal street in a town, suggesting the Broad Street and Broadway of modern cities (Ter. *Andr.* iv. 5, 1).



Platform. See CATASTA; ROSTRA; SUGGESTUS.

Plato (Πλάτων). The greatest of the Athenian philosophers. He was born May 26 (the seventh of Thargelion), B.C. 428, probably at Athens, though some say at Aegina (Diog. Laërt. iii. 2, 6). He was of an aristocratic family, his father Aristo claiming descent from Codrus, the last of the Athenian kings, and his mother Perictioné being of the family of Solon. His name was originally Aristocles, after his grandfather, but he was subsequently called Πλάτων, in consequence of his fluency of speech, or, as others say, because of his broad (πλατύς) forehead or his broad shoulders (Diog. Laërt. iii. 4). The traditions that have come down regarding his birth and career are largely mythical, and are given by Diogenes Laërtius. One story makes him the son of Apollo, and another tells how bees settled on his lips when a child, thus foreshadowing his honeyed eloquence (Cic. *Div.* i. 46, 78). Plutarch relates that he was humpbacked, but this, perhaps, was not a natural defect; it may have first appeared late in life as a result of his severe studies (Plut. *De Audiend. Poët.* 26, 53). Other ancient writers, on the contrary, speak in high terms of his manly and noble mien. The only authentic bust that we have of him is at present in the gallery at Florence. It was discovered near Athens in the fifteenth century, and purchased by Lorenzo de' Medici. In this bust the forehead of the philosopher is remarkably large. Plato first learned grammar, that is, reading and writing, from Dionysius. In gymnastics, Ariston was his teacher; and he excelled so much in these physical exercises that he entered, as is said, a public contest at the Isthmian and Pythian Games (Diog. Laërt. iii. 4). He studied painting and music under the tuition of Draco, a scholar of Damon, and Metellus of Agrigentum; but his favourite employment in his youthful years was poetry. The lively fancy and powerful style which his philosophical writings so amply display must naturally have impelled him, at an early period of life, to make some attempts at versification, which were assuredly not without influence on the beautiful form of his later works. After he had enjoyed the instruction of the most eminent teachers of poetry in all its forms, he proceeded himself to make an attempt in heroic verse; but when he compared his production with the masterpieces of Homer, he consigned it to the flames. He next tried lyric poetry, but with no better success; and finally turned his attention to dramatic composition. He elaborated four pieces, or a tetralogy, consisting of three separate tragedies and one satyric drama; but an accident induced him to quit this career, for which he was not probably fitted. A short time before the festival of Dionysus, when his pieces were to be brought upon the stage, he happened to hear Socrates conversing, and was so captivated by the charms of his manners as from that moment to abandon poetry, and apply himself earnestly to the study of philosophy. But, though Plato abandoned his poetic attempts, he still attended to the reading of the poets, particularly Homer, Aristophanes, and Sophron, as his favourite occupation; and he appears to have derived from them, in part, the dramatic arrangement of his dialogues. He had already heard the instructions of Cratylus, a disciple of the school of Heraclitus (Aristot. *Metaphys.* i. 6), and was now twenty years of age when he became acquainted with Socrates. He continued a professed disciple of that philosopher for the space of eight years, until the death of the latter. During all this period Socrates regarded him as one of his most faithful pupils, and Plato always cherished a deep affection and esteem for his master, so that when the latter was brought to trial he undertook to plead his cause; but the partiality and violence of the judges would not permit him to proceed. After the condemnation he presented his master with money sufficient to redeem his life, which, however, Socrates refused to accept. During his imprisonment Plato attended him, and was present at a conversation which he

held with his friends concerning the immortality of the soul, the substance of which he afterwards committed to writing in the dialogue entitled *Phaedo*, not, however, without interweaving his own opinions and language. Upon the death of his master he withdrew, with several other friends of Socrates, to Megara, where they were hospitably entertained by Euclid, and remained till the *émeute* at Athens subsided. Brücker thinks that Plato received instruction in dialectics from Euclid. Cicero relates that the Megarean philosopher drew many of his opinions from Plato (Academ. Quaest. 4, 42).

Desirous of making himself master of all the wisdom and learning which the age could furnish, Plato, after this, travelled into every country which was so far enlightened as to promise him any recompense for his labour. He first visited that part of Magna Graecia where a celebrated school of philosophy had been established by Pythagoras. It is commonly believed that Plato formally became a scholar of the Pythagoreans, and many persons are expressly named as his teachers in the doctrines of that sect of philosophy. But this multitude of teachers is of itself sufficient to excite suspicion; and, besides, Plato must then have been at least thirty years old, and was undoubtedly acquainted with the Pythagorean system long before his Italian voyage. How long Plato remained in Italy cannot be determined, since all the accounts relative to this point are deficient. But so much is certain, that he did not leave this country before he had gained the entire friendship of the principal Pythagoreans, of which they subsequently gave most unequivocal proofs. From Italy Plato went to Cyrené, the celebrated Greek colony in Africa. It is not certain whether he visited Sicily in passing. According to Apuleius, the object of his journey was to learn mathematics of Theodorus. This mathematician, whose fame perhaps surpassed his knowledge, had given instruction to the youth of Athens in this branch of science; and Plato, in all probability, merely wished now to complete his knowledge on this subject. From Cyrené he proceeded to Egypt, and, in order to travel with more safety upon his journey to the last-named country, he assumed the character of a merchant, and, as a seller of oil, passed through the kingdom of Artaxerxes Mnemon. Wherever he came, he obtained information from the Egyptian priests concerning their astronomical observations and calculations. It has been asserted that it was in Egypt that Plato acquired his opinions concerning the origin of the world, and learned the doctrines of transmigration and the immortality of the soul; but it is more than probable that he learned the latter doctrine from Socrates, and the former from the school of Pythagoras. It is not likely that Plato, in the habit of a merchant, could have obtained access to the sacred mysteries of Egypt; for, in the case of Pythagoras, the Egyptian priests were so unwilling to communicate their secrets to strangers that even a royal mandate was scarcely sufficient in a single instance to gain this permission. Little regard is therefore due to the opinions of those who assert that Plato derived his system of philosophy from the Egyptians (Iamblich. *Myst. Aeg.* i. 2, p. 3). That Plato's stay in Egypt extended to a period of thirteen years, as some maintain, or even three years, as others state, is highly incredible; especially as there is no trace in his works of Egyptian research, and all that he tells us of Egypt indicates at most a very scanty acquaintance with the subject.

After leaving Egypt, he went to Sicily in order to see the volcano of Aetna, and visited Syracuse at the time when Dionysius the Elder was reigning. At the court of Dionysius Plato became acquainted with Dio, the brother-in-law of the tyrant, and Dio endeavoured to produce an influence upon the mind of Dionysius by the conversation of Plato. But the attempt failed, and had nearly cost the philosopher his life. Dionysius was highly incensed at the result of an argument in which he was worsted by Plato, who took occasion also to advance in the course of it some unpalatable truths; and in the first heat of his passion he would have punished the hardihood of the philosopher with death, had not Dio and Aristomenes together restrained him from it. They conceived, therefore, that Plato could no longer stay at Syracuse without hazard, and accordingly secured passage for him in a ship which was about to carry home Polis, a Lacedaemonian ambassador, or, according to Olympiodorus, a merchant of Aegina. Dionysius heard of it, and bribed Polis to sell him as a slave. He was accordingly sold by the treacherous Polis on the island of Aegina, which was then involved in war with Athens. According to some writers he was sold by the Aeginetans. A certain Anniceris, from Cyrené, ransomed him for twenty or thirty minae. Plato's friends and scholars (according to some, Dio alone) collected this sum in order to indemnify Anniceris, who, however, was so noble-minded that with the money he purchased a garden in the Academé, and presented it to the philosopher. When Plato had completed his travels, and had reached the end of his various dangers and calamities, he returned to Athens, and began publicly to teach philosophy in the Academy. He had inherited here a garden, which was purchased for five hundred drachmae. This garden remained the property of the philosophic school that he had founded. His memory was honoured by the Athenians and by foreigners with monuments and statues. Diogenes states that Plato taught philosophy first in the Academy, and also in a garden at Colonus. His Academy soon became celebrated, and was numerously attended by high-born and noble young men; for he had already, by means of his travels, and probably by some publications, acquired a distinguished name. Among these disciples, from whom he exacted no fee, were his nephew Speusippus, Xenocrates of Chalcedon, Aristotle, Heraclides of Pontus, Hestiaeus of Perinthus, and Philippus the Opuntian, while others, who were not regularly enrolled among his immediate followers, numbered such men as Iphicrates, Timotheus, Phocion, Lycurgus, Hyperides, Isocrates, and possibly Demosthenes (Cic. *De Orat.* i. 20, 89).

Plato. (Bust at Florence.)

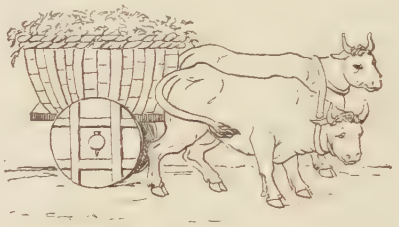
Plato taught in the Academy for twenty-two years prior to his second journey to Syracuse, which he undertook at the instigation of Dio, who hoped, by the lessons of the philosopher, to influence the character of the new ruler of Syracuse. This prince, it is said, had been brought up by his father wholly destitute of an enlightened educa-

tion, and it was now the task of Plato to form his mind by philosophy. It seems, at the same time, to have been the plan of Dio and Plato to bring about, by philosophical instruction, a wholesome reform of the Sicilian constitution, by giving it a more aristocratic character. But, whatever may have been their intentions, they were all frustrated by the weak and voluptuous character of Dionysius. Dio became the object of the tyrant's suspicion, and was conveyed away to the coast of Italy, without, however, forfeiting his possessions. In this condition of affairs, Plato did not long remain in Syracuse, where his position would at best have been ambiguous. He returned to Athens, but, in consequence of some fresh disagreement between Dionysius and Dio, with respect to the property of the latter, he was induced to take a third journey to Syracuse. The reconciliation, which it was his object to effect, completely miscarried; he himself came to an open rupture with Dionysius, and only obtained a free departure from Sicily through the active interposition of his Pythagorean friends at Tarentum. It does not appear that he took any part in the later conduct of Sicilian affairs, though his nephew and disciple Speusippus and others of the Academy, rendered personal assistance to Dio, in a warlike expedition against Dionysius. From this time Plato seems to have passed his old age in tranquillity in his garden, near the Academy, engaged with the instruction of numerous disciples, and the prosecution of his literary labours. He died while yet actively employed about his philosophical studies, in B.C. 347.

The philosophical writings of Plato have come down to us complete, and have always been admired as a model of the union of artistic perfection with philosophical acuteness and depth. They are in the form of dialogue; but Plato was not the first writer who employed this style of composition for philosophical instruction. (See DIALOGUS.) Zeno the Eleatic had already written in the form of question and answer. Alexamenus the Teian and Sophron in the mimes had treated ethical subjects in the same form. Xenophon, Aeschines, Antisthenes, Euclides, and other Socratics had also made use of the dialogical form; but Plato has handled this form not only with greater mastery than any one who preceded him, but, in all probability, with the distinct intention of keeping by this very means true to the admonition of Socrates, not to communicate instruction, but to lead to the spontaneous discovery of it. Moreover, the dramatic form gives great force and liveliness to the teaching, and was used by Plato with so much ability as to lead to the grouping of the dialogues into trilogies and tetralogies as though they had been actual dramas. The dialogues of Plato are closely connected with one another, and various arrangements of them have been proposed. Schleiermacher divides them into three series or classes. In the first he considers that the germs of dialectic and of the doctrine of ideas begin to unfold themselves in all the freshness of youthful inspiration; in the second those germs develop themselves further by means of dialectic investigations respecting the difference between common and philosophical acquaintance with things, respecting notion and knowledge (*δόξα* and *ἐπιστήμη*); in the third they receive their completion by means of an objectively scientific working out, with the separation of ethics and physics. The first series embraces, according to Schleiermacher, the *Phaedrus, Lysis, Protagoras, Laches, Charmides, Euthyphron*, and *Parmenides;* to which may be added as an appendix the *Apologia, Crito, Ion, Hippias Minor, Hipparchus, Minos*, and *Alcibiades II.* The second series contains the *Gorgias, Theaetetus, Meno, Euthydemus, Cratylus, Sophistes, Politicus, Symposium, Phaedo*, and *Philebus;* to which may be added as an appendix the *Theages, Erastae, Alcibiades I., Menexenus, Hippias Major*, and *Clitophon.* The third series comprises the *Republic, Timaeus, Critias*, and the *Laws.* This arrangement may be accepted as a matter of convenience, but scholars long ago ceased to think it possible to discover in the dialogues any satisfactory evidence of the order of their composition. The genuineness of many of the dialogues has been questioned, and the following are undoubtedly spurious: *Alcibiades II., Axiochus, Clitophon, Demadocus, Epinomis, Erastae, Eryxias, Hipparchus, De Iust., Minos, Sisyphus, Theages, De Virtute.* The following are probably spurious: *Hippias Minor, Alcibiades I., Menexenus.* The *Letters* are perhaps forgeries. (See Gudeman in *Classical Studies in Honour of Henry Drisler*, pp. 61–66 [New York, 1894].) The following are cited by Aristotle as having been written by Plato: *Republic, Timaeus, Laws, Phaedrus, Symposium, Gorgias, Meno, Hippias I.;* but obviously his silence as to the rest proves nothing.

It is impossible within any reasonable limits to give a satisfactory account of the Platonic philosophy. His attempt to combine poetry and philosophy (the two fundamental tendencies of the Greek mind) gives to the Platonic dialogues a charm which irresistibly attracts us, though we may have but a deficient comprehension of their subject matter. Plato, like Socrates, was penetrated with the idea that wisdom is the attribute of the Godhead; that philosophy, springing from the impulse *to know*, is the necessity of the intellectual man, and the greatest of the blessings which he possesses. When once we strive after Wisdom with the intensity of a lover, she becomes the true consecration and purification of the soul, adapted to lead us from the night-like to the true day. An approach to wisdom, however, presupposes an original communion with Being, truly so called; and this communion again presupposes the divine nature or immortality of the soul, and the impulse to become like the Eternal. This impulse is the love which generates in Truth, and the development of it is termed Dialectics. Out of the philosophical impulse which is developed by Dialectics, not only correct knowledge, but also correct action, springs forth. Socrates's doctrine respecting the unity of virtue, and that it consists in true, vigorous, and practical knowledge, is intended to be set forth in a preliminary manner in the *Protagoras* and the smaller dialogues attached to it. They are designed, therefore, to introduce a foundation for ethics by the refutation of the common views that were entertained of morals and of virtue; for although not even the words "ethics" and "physics" occur in Plato, and even dialectics are not treated of as a distinct and separate province, yet he must rightly be regarded as the originator of the threefold division of philosophy, inasmuch as he had before him the decided object to develop the Socratic method into a scientific system of dialectics, that should supply the grounds of our knowledge as well as of our moral action (physics and ethics),

and therefore he separates the general investigations on knowledge and understanding, at least relatively, from those which refer to physics and ethics. Accordingly, the *Theaetetus*, *Sophistes*, *Parmenides*, and *Cratylus* are principally dialectical; the *Protagoras*, *Gorgias*, *Politicus*, *Philebus*, and the *Politics* principally ethical; while the *Timaeus* is exclusively physical. Plato's dialectics and ethics, however, have been more successful than his physics. Plato's doctrine of *ideas* (*ἰδέαι*) was one of the most prominent parts of his system. He maintained that the existence of things, cognizable only by means of conception, is their true essence, their *idea*. Hence he asserts that to deny the reality of ideas is to destroy all scientific research. He departed from the original meaning of the word idea (namely, that of form or figure), inasmuch as he understood by it the unities (*ἑνάδες*, *μονάδες*)which lie at the basis of the visible, the changeable, and which can only be reached by pure thinking. He included under the expression "idea" every thing stable amid the changes of mere phenomena, all really existing and unchangeable definitudes, by which the changes of things and our knowledge of them are conditioned, such as the ideas of genus and species, the laws and ends of nature, as also the principles of cognition and of moral action, and the essences of individual, concrete, thinking souls. His system of ethics was founded upon his dialectics, as is remarked above. Hence he asserted that, not being in a condition to grasp the idea of the good with full distinctness, we are able to approximate to it only so far as we elevate the power of thinking to its original purity.



The best MS. of the greater part of Plato is the Codex Clarkianus, secured in Patmos by Daniel Clarke, an Englishman, and now in the Bodleian Library (Oxford). It dates from A.D. 896, and does not include the *Republic*, of which the best copy is a Paris codex (Codex Parisinus A) of the eleventh century.

BIBLIOGRAPHY.—The principal editions of Plato are those of Aldus (Venice, 1513); H. Stephanus (Lausanne, 1587), from which the citations of Plato by page and letter are usually made; convenient texts by Stallbaum (1881 foll.), Orelli (1839), Hirschig (1873), K. F. Hermann (last ed. 1885 foll.); and a critical one is that of Schanz, not yet (1895) completed. Good editions of the separate dialogues with English notes are those of the *Protagoras* by Sihler (1881), the *Philebus* by Badham (1878), the *Theaetetus* by Campbell (1882), the *Phaedo* by Geddes (1885) and Andrew Hind (1883), the *Euthydemus* and *Symposium* by Badham (1866), the *Sophistes* and *Politicus* by Campbell (1867), the *Phaedrus* by Thompson (1868), the *Apology* by Wagner (1869) and by Riddell (1877), the *Gorgias* by Thompson (1871), the *Parmenides* by Maguire (1882) and by Waddell (1894), the *Republic* (bks. i.–v.) by Warren (1888), and complete by Jowett and Campbell (1894). There are notes on the *Cratylus* in French by Lenormant (1861), and on the *Republic* by Charpentier (1877).

The great translation of all of Plato's works into English, by Prof. Jowett (2d ed. Oxford, 1890), is itself a classic. There is a *Lexicon Platonicum* by Ast (1838) and a *Wörterbuch der Platonischen Philosophie* by Wagner (Göttingen, 1799). There is an immense mass of literature dealing with the Platonic philosophy, of which it is possible here to mention only the following for the general student: the introduction to the several dialogues in Jowett's translation; Grote's *Plato* (giving analyses of all the dialogues); Zeller, *Plato and the Old Academy* (Engl. trans. 1876); Stein, *Zur Geschichte des Platonismus* (1862–75); Auffarth, *Die Platonische Ideenlehre* (Berlin, 1883); Fouillée, *La Philosophie de Platon*, 4 vols. (Paris, 1888–89); Pater, *Plato and Platonism* (1895); and the chapters on Plato in the histories of philosophy by Ueberweg and Schwegler. See PHILOSOPHIA.

Platter. See PLATE.

Plaustrum (*ἅμαξα*). A wagon or two-wheeled cart. If it had four wheels, it was styled *plaustrum maius* (Cato, *R. R.* x. 2). It was used for

Plaustrum. (Ginzrot.)

heavy burdens, and was generally drawn by oxen, but sometimes by mules. The wheels of the plaustrum had no spokes.

Plausus. Applause which at Rome was reduced to a system, there being a trained *claque*. The different kinds of applause were *bombi*, "booming;" *imbrices*, clapping with hollowed hands; and *testae*, clapping with the palms of the hands, etc. (Suet. *Nero*, 20).

Plautia Gens, a plebeian gens at Rome. The name is also written PLOTIUS, the latter being the plebeian form. The gens was divided into the families of Hypsaeus, Proculus, Silvanus, Venno, Venox; and although several members of these families obtained the consulship, none of them is of sufficient importance to require a separate notice.

Plautiānus, FULVIUS, an African by birth, the fellow-townsman of Septimius Severus. He served as praefect of the praetorium under this emperor, who loaded him with honours and wealth, and virtually made over much of the imperial authority into his hands. Intoxicated by these distinctions, Plautianus indulged in the most despotic tyranny, and perpetrated acts of cruelty almost beyond belief. In A.D. 202 his daughter Plautilla was married to Caracalla; but having discovered the dislike cherished by Caracalla towards both his daughter and himself, and looking forward with apprehension to the downfall which awaited him upon the death of the sovereign, he formed a plot against the life both of Septimius and Caracalla. His treachery was discovered, and he was immediately put to death, 203. His daughter Plautilla was banished first to Sicily, and subsequently to Lipara, where she was treated with the greatest harshness. After the murder of Geta, in 212, Plautilla was put to death by order of her husband.

Plautilla. See PLAUTIANUS.

Plautius. (1) AULUS, a Roman of consular rank, who was sent by the emperor Claudius in A.D. 43 to subdue Britain. He remained in Britain four

years, and subdued the southern part of the island. He obtained an ovation on his return to Rome in 47. (2) A Roman jurist, who lived about the time of Vespasian, and is cited by subsequent jurists.

Plautus, T. Maccius. The most celebrated comic poet of Rome. He was a native of Sarsina, a small village in Umbria. He used to be called M. Accius Plautus, but his real name, as Ritschl has shown, was T. Maccius Plautus. The date of his birth is uncertain, but it may be placed about B.C. 254. He probably came to Rome at an early age, since he displays so perfect a mastery of the Latin language, and an acquaintance with Greek literature which he could hardly have acquired in a provincial town. Whether he ever obtained the Roman franchise is doubtful. When he arrived at Rome he was in needy circumstances, and was first employed in the service of the actors. With the money he had saved in this inferior station he set himself up in business, but failed; he then returned to Rome, and his necessities obliged him to enter the service of a baker, who employed him in turning a hand-mill. While in this degrading occupation he wrote three plays, the sale of which to the managers of the public games enabled him to quit his drudgery and begin his literary career. He was then probably about thirty years of age (224), and therefore commenced writing comedies a few years before the breaking out of the Second Punic War. He continued his literary occupation for about forty years, and died in 184, when he was seventy years of age. His contemporaries at first were Livius Andronicus and Naevius, afterward Ennius and Caecilius: Terence did not rise into notice till almost twenty years after his death. During the long time that he held possession of the stage, he was always a great favourite of the people; and he expressed a bold consciousness of his own powers in the epitaph which he wrote for his tomb, and which has come down to us:

> "Postquam est mortem aptus Plautus, comoedia luget
> Scena deserta. dein risus, ludus iocusque
> Et numeri innumeri simul omnes collacrumarunt."

Plautus wrote a great number of comedies, and in the last century of the Republic there were 130 plays which bore his name. Most of these, however, were not considered genuine by the best Roman critics. There were several works written upon the subject; and of these the most celebrated was the treatise of Varro, entitled *Quaestiones Plautinae*. Varro limited the undoubted comedies of the poet to twenty-one, which were hence called the *Fabulae Varronianae*. These Varronian comedies are the same as those which have come down to our own time, with the loss of one. At present we possess only twenty comedies of Plautus; but there were originally twenty-one in the manuscripts, and the *Vidularia*, which was the twenty-first, and which came last in the collection, was torn off from the manuscript in the Middle Ages. The titles of the twenty-one Varronian plays are: (1) *Amphitruo*, (2) *Asinaria*, (3) *Aulularia*, (4) *Captivi*, (5) *Curculio*, (6) *Casina*, (7) *Cistellaria*, (8) *Epidicus*, (9) *Bacchides*, (10) *Mostellaria*, (11) *Menaechmi*, (12) *Miles*, (13) *Mercator*, (14) *Pseudolus*, (15) *Poenulus*, (16) *Persa*, (17) *Rudens*, (18) *Stichus*, (19) *Trinummus*, (20) *Truculentus*, (21) *Vidularia*. This is the order in which they occur in the manuscripts, though probably not the one in which they were originally arranged by Varro. The present order is evidently alphabetical; the initial letter of the title of each play is alone regarded, and no attention is paid to those which follow: hence we find *Captivi, Curculio, Casina, Cistellaria: Mostellaria, Menaechmi, Miles, Mercator: Pseudolus, Poenulus, Persa*. The play of the *Bacchides* forms the only exception to the alphabetical order. It was probably placed after the *Epidicus* by some copyist, because he had observed that Plautus, in the *Bacchides* (ii. 2, 36), referred to the *Epidicus* as an earlier work. The names of the comedies are either taken from some leading character in the play, or from some circumstance which occurs in it: those titles ending in *-aria* are adjectives, giving a general description of the play: thus *Asinaria* is the "Ass-Comedy."

The comedies of Plautus enjoyed unrivalled popularity among the Romans, and continued to be represented down to the time of Diocletian. The continued popularity of Plautus through so many centuries was owing, in a great measure, to his being a national poet. Though he founds his plays upon Greek models, the characters in them act, speak, and joke like genuine Romans, and he thereby secured the sympathy of his audience more completely than Terence could ever have done. Whether Plautus borrowed the plan of all his plays from Greek models, it is impossible to say. The *Cistellaria, Bacchides, Poenulus*, and *Stichus* were taken from Menander, the *Casina* and *Rudens* from Diphilus, and the *Mercator* and the *Trinummus* from Philemon, and many others were undoubtedly founded upon Greek originals. But in all cases Plautus allowed himself much greater liberty than Terence; and in some instances he appears to have simply taken the leading idea of the play from the Greek, and to have filled it up in his own fashion. It has been inferred from a well-known line of Horace (*Epist.* ii. 1. 58), *Plautus ad exemplar Siculi properare Epicharmi*, that Plautus took great pains to imitate Epicharmus. But there is no correspondence between any of the existing plays of Plautus and the known titles of the comedies of Epicharmus; and the verb *properare* probably has reference only to the liveliness and energy of Plautus's style, in which he bore a resemblance to the Sicilian poet. It was, however, not only with the common people that Plautus was a favourite; educated Romans read and admired his works down to the latest times. Cicero (*De Off.* i. 29) places his wit on a par with that of the old Attic comedy, and St. Jerome used to console himself with the perusal of the poet after spending many nights in tears on account of his past sins. The favourable opinion which the ancients entertained of the merits of Plautus has been confirmed by the judgment of the best modern critics, and by the fact that several of his plays have been imitated by many of the best modern poets. Thus the *Amphitruo* has been imitated by Molière and Dryden, the *Aulularia* by Molière in his *Avare*, the *Mostellaria* by Regnard, Addison, and others, the *Menaechmi* by Shakespeare in his *Comedy of Errors*, the *Trinummus* by Lessing in his *Schatz*, and so with others. Horace (*A. P.* 270), indeed, expresses a less favourable opinion of Plautus; but it must be recollected that the taste of Horace had been formed by a different school of literature, and that he undervalued the ancient poets of his country. Moreover, it is probable that the censure of Horace does not refer to the general character of Plautus's poetry, but merely to his inharmonious verses and to some of his jests. Plautus performed an impor-

tant work in the enrichment of the Latin language. His genius for coining words was very remarkable, and in after-years the majority of his new terms were taken into the literary language by Cicero, who gave them the stamp of his authority. In this respect he stands out as a unique and important figure, and one whose influence has been too little recognized. See Peck's *History of the Latin Language*, pt. iii.; Besta, *De Verborum Compositione Plaut.* (Breslau, 1876); Ulrich, *Die Composita bei Plautus* (Halle, 1884); Georke, *Vocabula Graeca* in *Linguam Lat. Recepta* (Königsberg, 1868); and Rassow in *Jahn's Jahrbücher*, Suppl. xv. 589.

The MSS. of Plautus that are of especial importance are the Codex Ambrosianus (A) at Milan (a palimpsest) of the fourth or fifth century; the Codex Palatinus (B), now at Rome; the Codex Decurtatus (C) at Heidelberg; the Codex Vaticanus or Vetus (D); and the Codex Britannicus (J) in the British Museum. The last four are of about the eleventh or twelfth century, and represent a single archetype. No MS. contains all the plays.

The text of Plautus has come down to us in a very corrupt state. It contains many lacunae and interpolations. Thus the *Aulularia* has lost its conclusion, the *Bacchides* its commencement, etc. Of the present complete editions the best are by Lambinus (Paris, 1576); Pareus (Frankfort, 1610); Bothe, 2 vols. (Leipzig, 1834); Weise, 2 vols. (Quedlinburg, 1837–38; last ed. 1886); Ussing (Copenhagen, 1886); Leo (2 vols. Berlin, 1885–1896); Ritschl (Bonn, 1848–54; revised by Loewe, Goetz, and Schoell, 1894). There is no complete edition with English notes, but the following of separate plays are good: Wagner's *Aulularia* (1866); Hallidie's *Captivi* (1890); Ramsay's *Mostellaria*, incomplete (1869); Morris's *Mostellaria* (1880); Tyrrell's *Miles Gloriosus* (1885); Gray's *Epidicus* (1893); Sloman's *Trinummus* (1883); Fowler's *Menaechmi* (1889); Palmer's *Amphitruo* (1890); Morris's *Pseudolus* (1894); and Fennell's *Stichus* (1893). Foreign editions are those of the *Asinaria* by Richter (Nuremberg, 1833); of the *Captivi*, with critical apparatus, by Brix (4th ed. Leipzig, 1884); of the *Curculio* by Geppert (Berlin, 1845); of the *Casina* by Geppert (Berlin, 1866); of the *Cistellaria* by Benoist (Lyons, 1863); of the *Epidicus* by Geppert (Berlin, 1865); of the *Bacchides* by Ritschl (Halle, 1835); of the *Menaechmi* by Brix (3d ed. Leipzig, 1880) and Vahlen (Berlin, 1882); of the *Poenulus* by Geppert (Berlin, 1864); of the *Rudens* by Benoist (Paris, 1864); of the *Trinummus* by Brix (3d ed. Leipzig, 1879); and of the *Truculentus* by Spengel and Studemund (Göttingen, 1868). On the *Vidularia*, which was lost during the Middle Ages, see Studemund, *De Vidularia Plautina* (Greifswald, 1870); and Leo, *De Vidularia* (Berlin, 1892).

Playthings. See CREPUNDIA; NUCES; PUPA.

Plea. See ACTIO in the APPENDIX; DIKÉ; JUDICIAL PROCEDURE.

Plebeian Latin. See SERMO PLEBEIUS.

Plebeii Ludi. See LUDI PLEBEII, p. 974.

Plebiscītum. The Roman name for a decree of the Comitia Tributa on the rogation of a tribune. (See COMITIA.) Originally the plebiscitum required confirmation by the Senate, but by a *Lex Hortensia* (B.C. 286) the whole people (*universus populus*) were declared bound by the plebiscita. See LEX.

Plebs, Plebes. A part of the population of Rome, which derived its origin mainly from the conquered Latins settled on Roman territory by the kings Tullus Hostilius and Ancus Martius. At first these possessed only the passive rights of citizenship, being excluded from all its privileges as well as from service in war, and forming a community sharply separated from the old citizens, the patricians. In particular, they did not possess the right of concluding valid marriages with patricians, although they were otherwise equal in matters of private law. When, by the constitution of Servius Tullius, they were compelled to serve in war and to pay war-taxes, they obtained the right of voting with the patricians in the Comitia Centuriata. After the establishment of the Republic in B.C. 510, the plebeians began the struggle with the patricians, who were then in sole possession of the secular and priestly offices. The aim of the plebeians was to secure complete equality of rights, answering to their equality of duties. An important engine in this struggle was the tribunate of the people (see TRIBUNI PLEBIS) established in 491, as well as the Comitia Tributa. (See COMITIA.) The plebeians had the chief weight in that assembly, and after B.C. 448 it was invested with the right of passing decrees binding on the whole people. Among their first acquisitions was the right of entering into valid marriages with the patricians (B.C. 445). One after another, the plebeians gained admittance to the most important offices of State and the priesthoods, down to the year 300, so that only insignificant offices remained reserved for the patricians. (See PATRICII.) When the struggle of the orders was thus settled, the opposition between patricians and plebeians lost its practical importance. The two orders were completely blended together, and the place of the aristocracy of birth was taken by the aristocracy of office, the members of which were called *nobiles* (q. v.). From this time the name *plebs* passed to the lower ranks of the people, as contrasted with this nobler class. See Mommsen, *Römische Forschungen*, vol. i., and id. *Röm. Staatsrecht*, vol. iii.

Plectrum (*πλῆκτρον*). The instrument with which the lyre was struck. It was made of gold or ivory. See LYRA.

Pledge. See PIGNUS.

Pleiad, THE TRAGIC. See CANON ALEXANDRINUS; PLEIAS.

Pleiădes (Πλειάδες). The seven daughters of Atlas and the Ocean-nymph Pleioné, born on the Arcadian mountain Cyllené, sisters of the Hyades. The eldest and most beautiful, Maia, became the mother of Hermes by Zeus; Electra and Taÿgeté, of Dardanus and Lacedaemon by the same; Alcyoné, of Hyrieus by Poseidon; Celaeno, of Lycus and Nycteus by the same; Steropé or Asteropé, of Oenomaüs by Ares; Meropé (i. e. "the mortal"), of Glaucus by Sisyphus. Out of grief, either for the fate of Atlas or for the death of their sisters, they killed themselves and were placed among the constellations. According to another legend, they were pursued for five years by the giant hunter Orion (q. v.), until Zeus turned the distressed nymphs and their pursuer into neighbouring stars. As the constellation of the seven stars, they made known by their rising (in the middle of May) the approach of harvest, and by their setting (at the end of October) the time for the new sowing.

Their rising and setting were also looked upon as the sign of the opening and closing of the sailing season. One of the seven stars is invisible; this was explained to be Meropé, who hid herself out of shame at her marriage with a mortal. The constellation of the Pleiades seems also to have been compared to a flight of doves (πελειάδες). Hence the Pleiades were supposed to be meant in the story told by Homer of the ambrosia brought to Zeus by the doves, one of which is always lost at the Planctae Rocks, but is regularly replaced by a new one (*Od.* xii. 62). Among the Romans, the constellation was called Vergiliae, the stars of spring. As being the daughters of Atlas, the name Atlantides is often used of them. See also HYADES.

Pleias (πλειάς, "a group of seven stars"). The name given by the Alexandrian critics to a group of seven tragic poets, who wrote at Alexandria under Ptolemy Philadelphus in the first half of the third century B.C. Their names were: Alexander Aetolus, Philiscus, Sositheus, Homerus, Aeantides, Sosiphanes, and Lycophron. See CANON ALEXANDRINUS.

Pleïŏné (Πληιόνη). A daughter of Oceanus, and mother of the Pleiades by Atlas. See ATLAS; PLEIADES.

Plemmyrium (Πλημμύριον). A promontory on the southern coast of Sicily, immediately south of Syracuse.

Plemochoë (πλημοχόη). Literally, "an earthen vessel for water"; hence the name πλημοχόαι given to the last day of the Eleusinian festival, when this kind of vessel was used for pouring out water. See ELEUSINIA.

Plethrum (πλέθρον). (1) A measure of length among the Greeks = $\frac{1}{6}$ of a stadium = 100 Greek feet = little more than 101 English feet, or 33 yards 2 feet. (2) A unit of square measure, the square of 100 Greek feet, or 10,000 Greek square feet—i. e. an area of the extent of 10,226.2656 square feet, or about 1136.24 square yards—i. e. about two perches less than a rood, or quarter of an acre. See MENSURA.

Pleumoxii. A small tribe in Gallia Belgica, subject to the Nervii.

Pleurōn (Πλευρών). An ancient city in Aetolia, situated at a little distance from the coast. It was abandoned by its inhabitants when Demetrius II., king of Macedonia, laid waste the surrounding country, and a new city was built under the same name near the ancient one. The two cities are distinguished by geographers under the names of Old Pleuron and New Pleuron respectively.

Plinius. (1) GAIUS PLINIUS SECUNDUS, called the Elder. A Roman representative of encyclopaedic learning, born A.D. 23, at Novum Comum (Como), in Upper Italy. Although throughout his life he was almost uninterruptedly occupied in the service of the State, yet at the same time he carried on the most widely extended scientific studies to which he laboriously devoted all his leisure hours, and thus gained for himself the reputation of the most learned man of his age. Under Claudius he served as commander of a troop of cavalry (*praefectus alae*) in Germany; under Vespasian, with whom he was in the highest favour, he held several times the office of imperial governor in the provinces, and superintended the imperial finances in Italy. Finally, under Titus, he was in command of the fleet stationed at Misenum, when in A.D. 79, at the celebrated eruption of Vesuvius, his zeal for research led him to his death. For a detailed account of this event, as well as of his literary labours, we have to thank his nephew, the Younger Pliny (*Epist.* iii. 5; vi. 16).

Besides writings upon military, grammatical, rhetorical, and biographical subjects, he composed two greater historical works—a history of the Germanic wars in twenty books, and a history of his own time in thirty-one books. His last work was the Natural History (*Historia Naturalis*), in thirty-seven books, which has been preserved to us. This was dedicated to Titus, and was published in A.D. 77; but he was indefatigably engaged in amplifying it up to the time of his death. This encyclopaedia is compiled from 20,000 notices, which he had extracted from about 2000 writings by 474 authors. Book i. gives a list of contents and the names of the authors used; ii. is on astronomy and physics; iii.–vi., a general sketch of geography and ethnography, mainly a list of names; vii.–xix., natural history proper (vii., anthropology; viii.–xi., zoölogy of land and water animals, birds, and insects; xii.–xix., botany); xx.–xxxii., the pharmacology of the vegetable kingdom (xx.–xxvii.) and of the animal kingdom (xxviii.–xxxii.); xxxiii.–xxxvii., mineralogy and the use of minerals in medicine and in painting, sculpture, and the engraving of gems, besides valuable notices upon the history of art. A kind of comparative geography forms the conclusion.

Considering the extent and varied character of the undertaking, the haste with which the work was done, the defective technical knowledge and small critical ability of the author, it cannot be surprising that it includes a large number of mistakes and misunderstandings, and that its contents are of very unequal value, details that are strange and wonderful, rather than really important, having often unduly attracted the writer's attention. Nevertheless, the work is a mine of inestimable value in the information it gives us respecting the science and art of the ancient world; and it is also a splendid monument of human industry. Even the unevenness of the style is explained by the mosaic-like character of the work. At one time it is dry and bald in expression; at another, rhetorically coloured and impassioned, especially in the carefully elaborated introductions to the several books. On account of its bulk, the work was in early times epitomized for more convenient use. An epitome of the geographical part of Pliny's encyclopaedia, belonging to the time of Hadrian, and enlarged by additions from Pomponius Mela and other authors, forms the foundation of the works of Solinus and Martianus Capella. Similarly the *Medicina Plinii* is an epitome prepared in the fourth century for the use of travellers.

About two hundred manuscripts of Pliny are in existence, divided into two general classes—the *vetustiores*, all more or less incomplete, but truer to the original, and the *recentiores*, which are less fragmentary, but also less accurate. Of the former the best is the Codex Bambergensis of the tenth century, containing only bks. xxxii.–xxxvii. The *recentiores* are all of the same "family," going back to a single archetype now lost. See Fels, *De Codicibus Plinianis* (Göttingen, 1861).

Editions are those with notes by Barbari (Rome, 1492); by J. F. Gronovius, 3 vols. (Leyden, 1669);

by Hardouin (Paris, 1685); by Franz, 10 vols. (Leipzig, 1778–91); by Sillig, with critical notes and indices, 8 vols. (Gotha, 1853–55); by Jan, 6 vols. (Leipzig, 1854–65); 2d ed. by Mayhoff (1870 foll.); and by Detlefsen, 6 vols. (Berlin, 1866–73). There is a *Chrestomathia Pliniana* by Urlichs (Berlin, 1857); a good French translation by Grandsagne with notes by various scholars, 20 vols. (Paris, 1829–33); and a fair English one with good index in the Bohn Library (London, 1856). On the language and style of Pliny, see Wannowski, *Pliniana* (Posen, 1847); Grasberger, *De Usu Pliniano* (Würzburg, 1860); J. Müller, *Der Stil des ältern Plinius* (Innsbruck, 1883); and Thüssing (Prague, 1890).

(2) Called the Younger, Gaius Plinius Caecilius Secundus, nephew and adopted son of the elder Pliny, born A.D. 62, at Novum Comum. After the early death of his father Caecilius, he was carefully brought up by his mother Plinia and by his adoptive father. He was trained in rhetoric under Quintilian, and began his public career as an advocate in the nineteenth year of his age. After serving in Syria as military tribune, he devoted himself under Domitian to the service of the State, and became the emperor's quaestor, and also a tribune of the people and praetor (A.D. 93). Under Trajan, he held the consulship in 100, and about 112 governed the province of Bithynia as imperial legate. He died about 114, very widely respected on account of his mild and benevolent character, his exemplary private life, his ability as an orator, his refined taste, and his services to letters. He was distinguished by the favour of the emperor, and was in friendly intercourse with the most celebrated men of his time and the representatives of literature. Among his friends appear Quintilian (*Epist.* ii. 14, § 9), Silius Italicus (iii. 7), Martial (iii. 21), Suetonius (i. 8; iii. 8; v. 10; ix. 34), and, above all, Tacitus (i. 6, 20; iv. 13; vi. 6, 16, 20; vii. 20, 33; viii. 7; ix. 10, 14), to whom he was bound by the most genuine mutual attraction.

Of his poems and forensic speeches, which he published himself, nothing has been preserved, with the exception of a panegyric addressed to Trajan, which he pronounced in the Senate in A.D. 100 in order to thank the emperor for the consulship conferred upon him. This he afterwards published in a revised form. It is composed in an affected and artificial style, and is full of the most exaggerated pieces of flattery addressed to the emperor; it served as a pattern for the later panegyrists. Besides this, we possess a collection of letters in nine books, dating from the year 97–108, edited by himself. To this collection there is added a tenth book, consisting of the official correspondence between him and Trajan, belonging chiefly to the time of his Bithynian governorship, published, we may presume, after his death. (The best-known letters in this book are that on the punishment of the Christians, No. 97, and the emperor's reply, No. 98.) His letters, in which he happily imitates Cicero, give a clear picture of his own personality, his studies, and his intercourse with his friends, as well as of the public, social, and literary life of his time, and are therefore valuable as authorities for the history of the same.

The only existing manuscript which contains all the nine books of Pliny is the Codex Laurentinus (Mediceus) of the ninth or tenth century, from which several others are derived. A very old manuscript, now lost, gave its readings to the editio Aldina of 1508.

The *editio princeps* (eight books only) appeared at Venice in 1471. The first complete edition is that of Aldus (Venice, 1508). Other editions are those of Gruter (1611); Veenhusen, with notes (Leyden, 1669); Döring (Freiburg, 1843); Waltz (Paris, 1833); of bk. iii. with English notes by Mayor (London, 1880); of bks. i. and ii. by Cowan (London, 1889). The best critical text is that of Keil, with indices, etc. by Mommsen (Leipzig, 1853). The Panegyric is edited by Dübner (Paris, 1843). There is a good English version of the Letters by Lewis (London, 1880). See Cauvet, *Étude sur Pline le Jeune* (Toulouse, 1857); Lagergren, *De Vita et Elocutione C. Plinii Secundi* (Upsala, 1872); Schöntag, *Plinius der Junger* (Hof, 1876); Kraut, *Syntax und Stil des jung. Plinius* (Schönthal, 1872); Morillot, *De Plinii Minoris Eloquentia* (Grenoble, 1888); and Platner in the *American Journal of Philology*, iv. pp. 214–218.

Plistus (Πλειστός). A small river in Phocis, rising in Mount Parnassus, and falling into the Crissaean Gulf.

Plostellum Poenĭcum or **Punĭcum**. A threshing-machine used by the Romans, consisting of several rollers fitted with iron spikes, which as they turned around threshed out the grain (Varro, *R. R.* i. 51). The same sort of contrivance is used by the modern Egyptians.

Plotīna. The wife of the emperor Trajan. See Traianus.

Plotīnus (Πλωτῖνος). A Greek philosopher, born A.D. 205 at Lycopolis, in Egypt. In the twenty-eighth year of his life he applied himself to philosophy, and attended the lectures of the most celebrated men of that time in Alexandria. But none of these was able to satisfy him, until in Ammonius Saccas, the founder of Neo-Platonism, he discovered the teacher whom he had sought. With him he stayed for eleven years; then, in 243, he joined the expedition of the emperor Gordian against the Persians, in order to learn the Persian philosophy. In this object he failed, owing to the unsuccessful issue of the undertaking; he was even obliged to flee for his life to Antioch. In 244 he went to Rome, where he worked till 269 with great success, and gained the emperor Gallienus himself and his wife Salonina as converts to his teaching, so that he even dared to conceive the idea of founding an ideal city in Campania, with the approval and support of the emperor: this city was to be called Platonopolis, and its inhabitants were to live according to the laws of Plato. Gallienus was not disinclined to enter into the plan; but it was thwarted by the opposition of the imperial counsellors.

Plotinus died in 270, on the estate of a friend in Campania. With the fiftieth year of his age he had begun to reduce his teaching to a written form; the fifty-four treatises, which have been preserved to us, were published after his death by his pupil and biographer Porphyry, who revised their style and arranged them in order. They were published in six *Enneads*, or sets of nine books. Plotinus was the first to give a systematic development to the Neo-Platonic doctrine, or, at least, the first to put it forth in writing, not indeed with the charm of the Platonic dialogues,

still less with their dialectic force, but nevertheless with depth of thought and in pithy, though at times careless and incorrect, language. It is true that there appears even in him a mystical tendency, especially in his doctrine of the ecstatic elevation of the soul to the divine being, to which he himself (according to the testimony of Porphyry) attained on four occasions; but he is still completely free from the fantastic and superstitious character of the later Neo-Platonism. See the works by Kirchner (1854); Brenning (1864); and Kleist (1884). The *Enneads* of Plotinus are edited by Kreuzer (1835); Kirchhoff (1856); and Müller (1878).

Plotius, MARIUS, called SACERDOS. A Latin grammarian, who wrote a work on grammar (*Ars Grammatica*) in the third century A.D. It was in three books, of which the third, *De Metris*, is preserved entire and the other two in part. It is given in Gaisford's collection of metrical writers (Oxford, 1837); the whole work in Keil's *Grammatici Latini*, vi. 427.

Plotius Tucca. See TUCCA.

Plough. See ARATRUM.

Ploxĕmum and **Ploxĕmus.** The body of a *cisium* or gig, made of leather or covered with this material. Quintilian speaks of the word as a provincial one (i. 5, 8). See CISIUM.

Plumae. The scales in a corselet or cuirass (Verg. *Aen.* xi. 771). See LORICA.

Plumbum (*μόλυβδος*). Lead. (See METALLUM.) The name is applied to (*a*) a water-pipe (see FISTULA); (*b*) a bullet (see GLANS); (*c*) the lumps on the lash of a whip (see FLAGRUM); (*d*) a plummet of lead for drawing lines; a *lead* pencil (Catull. 22, 8). See Beckmann, *Hist. of Inventions*, ii. p. 389 (London, 1846); and Thompson, *Greek and Latin Palaeography*, p. 53 (London, 1893).

Plutarchus (*Πλούταρχος*). A Greek writer of biographies and miscellaneous works, who was born at Chaeronea, in Boeotia, about A.D. 50. He came of a distinguished and wealthy family, and enjoyed a careful education. His philosophical training he received at Athens, especially in the school of the Peripatetic Ammonius (of Lamptrae in Attica), who is identified with Ammonius the Egyptian. After this he made several journeys, and stayed a considerable time in Rome, where he gave public lectures on philosophy, was in friendly intercourse with persons of distinction, and conducted the education of the future emperor Hadrian. From Trajan he received consular rank, and by Hadrian he was in his old age named procurator of Greece. He died about 120 in his native town, in which he held the office of archon and of priest of the Pythian Apollo.

His fame as an author is founded principally upon his *Parallel Lives* (*Βίοι Παράλληλοι*). These he probably prepared in Rome under the reign of Trajan, but completed and published late in life at Chaeronea. The biographies are divided into connected pairs, each pair (which makes a *βιβλίον*) placing a Greek and a Roman in juxtaposition, and generally ending with a comparative view of the two; of these we still possess forty-six: Theseus and Romulus; Lycurgus and Numa; Solon and Valerius Publicola; Themistocles and Camillus; Pericles and Fabius Maximus; Alcibiades and Coriolanus; Timoleon and Aemilius Paulus; Pelopidas and Marcellus; Aristides and the elder Cato; Philopoemen and Flamininus; Pyrrhus and Marius; Lysander and Sulla; Cimon and Lucullus; Nicias and Crassus; Eumenes and Sertorius; Agesilaus and Pompeius; Alexander and Caesar; Phocion and the younger Cato; Agis and Cleomenes and the two Gracchi; Demosthenes and Cicero; Demetrius Poliorcetes and Antonius; Dion and Brutus. To these are added the four specially elaborated lives of Artaxerxes Mnemon, Aratus, Galba, and Otho; a number of other biographies are lost. The sequels which follow most of the lives give a sort of balanced judgment (*σύγκρισις*) of the two men compared.

Plutarch's object was not to write history, but out of more or less important single traits to form distinct sketches of character. The sketches show, indeed, a certain uniformity, inasmuch as Plutarch has a propensity to portray the persons represented either as models of virtue in general, or as slaves of some passion in particular; but the lives are throughout attractive, owing to the liveliness and warmth of the portraiture, the moral earnestness with which they are penetrated, and the enthusiasm which they display for everything noble and great. For these reasons they have always had a wide circle of readers. More than this, their historical value is not to be meanly estimated, in spite of the lack of criticism in the use of the authorities and the manifold inaccuracies and mistakes, which, in the Roman lives, were in part the result of a defective knowledge of the Latin language. There are a large number of valuable pieces of information in which they fill up numerous gaps in the historical narratives that have been handed down to us. Besides this work eighty-three writings of various kinds (some of them only fragments and epitomes of larger treatises) are preserved under the name of Plutarch. These are improperly classed together under the title *Moralia* (ethical writings); for this designation is only applicable to a part of them. The form of these works is as diverse as their tenor and scope: some are treatises and reports of discourses; a large number is composed in the form of Platonic or Aristotelian dialogues; others again are learned collections and notices put together without any special plan of arrangement. A considerable portion of them are of disputable authenticity or have been proved to be spurious. About half are of philosophical and ethical tenor, and have for the most part a popular and practical tendency, some of them being of great value for the history of philosophy, such as the work on the opinions of the philosophers (*De Placitis Philosophorum*) in five books. Others belong to the domain of religion and worship, such as the works *On Isis and Osiris*, *On the Oracles of the Pythian Priestess*, and *On the Decay of the Oracles*; others to that of the natural sciences, while others again are treatises on history and antiquities, or on the history of literature, such as the *Greek and Roman Questions* and the *Lives of the Ten Orators*. This last is undoubtedly spurious. One of the most instructive and entertaining of all his works is the *Table-talk* (*Quaestiones Conviviales*) in nine books, which deal *inter alia* with a series of questions of history, archaeology, mythology, and physics. But even with these works his literary productiveness was not exhausted; for, besides these, twenty-four lost

writings are known to us by their titles and by fragments. In his language he aims at attaining the pure Attic style, without, however, being able altogether to avoid the deviations from that standard which were generally prevalent in his time.

The entire works of Plutarch are edited by Reiske (12 vols. 1774–79); and in the Didot Collection, by Dübner-Döhner (5 vols. 1846–55). The best text of the *Lives* is that of Sintenis in the Teubner series (5 vols. Leipzig, 1874–81); of the *Moralia*, by Bernardakis, still in course of publication. The *Lives* are annotated by Held, Leopold, Siefert-Blass, and Sintenis-Fuhr, all in German; and by Holden in English. Translations in English are those of Langhorne, Dryden, and others (re-edited by A. H. Clough in 5 vols., 1874); and of the Roman lives by George Long. The *Moralia* are translated in a revision by Goodwin (Boston, 1874–78). See Trench, *A Popular Introduction to Plutarch* (London, 1873).

Pluteus and Pluteum. (1) A pent-house or mantlet used by the Romans in sieges. (2) The backboard of a bed, or the raised end of a couch. (3) A dwarf wall or parapet. (4) A bookshelf, bookcase, or desk.

Pluto (Πλοῦτων). In Greek mythology, the king of the underworld, identical with Hades. See HADES.

Plutus (Πλοῦτος). The Greek personification of riches; born in Crete as the son of Demeter and her beloved Iasion or Iasius, whom Zeus, out of jealousy, killed with lightning. He was supposed to have been blinded by Zeus, so that he might distribute his gifts without choice (Aristoph. *Plut.* 90). In Thebes and Athens he was represented as a child on the arm of Tyché and of Irené (q. v.) (Pausan. i. 8, 2; ix. 16, 2; ix. 26, 8).

Pluvius. A name given to Iupiter as the sender of rain (Tibull. i. 7, 26). Other like epithets are PLUVIĀLIS and IMBRICĪTOR. See IUPITER.

Plynteria (πλυντήρια). A festival at Athens in honour of Athené, goddess of the city, held in the month Thargelion. It lasted several days, probably from the 21st to the 25th (A. Mommsen, *Heort.* 436 foll.). See CALLYNTERIA.

Pnyx (Πνύξ). A place at Athens, no longer to be identified with certainty, in which the assemblies of the people were held. See ATHENAE; ECCLESIA.

Pocket. See SINUS.

Pocket-handkerchief. See MUCINUM; SUDARIUM.

Pocŭlum (ποτήρ). A cup. See CALIX.

Podalirius (Ποδαλείριος). The son of Asclepius and Epioné. Like his brother Machaon (q. v.), physician to the Greeks before Troy, and a brave warrior besides. He was honoured as a hero at Mount Dria.

Podarces (Ποδάρκης). (1) The original name of Priam. (2) The leader of the Thessalians of Phylacé against Troy (*Il.* ii. 695).

Podargé (Ποδάργη, "the swift-footed"). One of the Harpies. See HARPYIAE.

Podium. (1) A base projecting like a step from the wall of a room or building, and serving as a sort of low shelf for depositing any objects, as beehives, wine-jars, etc. (2) In the amphitheatre and circus it was a stage raised some eighteen feet from the arena, which it surrounded, and was reserved for the emperor, the Vestal Virgins, and the curule magistrates (Suet. *Nero*, 12; Juv. ii. 147). See AMPHITHEATRUM.

Poeas (Ποίας). King of the Malians at the foot of Mount Oeta. He set fire to the pyre of Heracles, in return for which the hero gave him his bow and his poisoned arrows. His son was Philoctetes (q. v.), who is hence called *Poeantius heros*.

Poecĭlé. A celebrated portico at Athens, which received its name from the paintings with which it was adorned (ποικίλη στοά, from ποικίλος, "diversified"). Its more ancient name is said to have been Peisianactius (Diog. Laërt. *Zen.*). The pictures were by Polygnotus, Micon, and Pamphilus, and represented the battle between Theseus and the Amazons, the contest at Marathon, and other achievements of the Athenians (Pausan. i. 15). Here were suspended also the shields of the Scioneans of Thrace, and those of the Lacedaemonians taken in the island of Sphacteria. It was in this portico that Zeno first opened his school, which was hence denominated the "Stoic," or "School of the Porch," from στοά. See STOICI.

Poemander (Ποίμανδρος). The father by Tanagra, daughter of Aeolus, of Ephippus and Leucippus. He was the reputed founder of the town of Tanagra, in Boeotia. See TANAGRA.

Poena (ποινή). A general name for punishment, while *multa* is a definite pecuniary punishment assigned to a particular offence. A poena was inflicted only by law, while the *multa* was imposed by the magistrate. See MULTA.

Poeni. A common name of the Carthaginians, cognate with PHOENIX, because they were a colony of Phœnicians. See CARTHAGO; PHOENICÉ.

Poenŭlus. A play of Plautus based upon a Greek play called Καρχηδόνιος, probably by Menander. The last scene exists in two separate texts which do not agree. The play is famous for a passage in it which gives in Latin characters a passage in the Phœnician language whose interpretation has exercised the ingenuity of many scholars. (See the programmes by Bellermann [Berlin, 1806–8], Wex [Schwerin, 1838], and Movers [Berlin, 1845].) The play is edited by Geppert (Berlin, 1864).

Poetovio or **Petovio.** Now Pettau; a town in Pannonia Superior on the river Dravus (Drave). It was made a Roman colony by Trajan, and was the station of the Twelfth Legion (*C. I. L.* iii. p. 439; Tac. *Hist.* iii. 1).

Poggio Bracciolini. See BRACCIOLINI.

Pogon (Πώγων). A name given to the harbour of Troezen from its shape, being formed by a curved strip of land which resembled a beard (πώγων): hence arose the proverbial joke, πλεύσειας εἰς Τροιζῆνα, which was addressed to those whose chins were but scantily provided. Herodotus says that the Greek ships were ordered to assemble there prior to the battle of Salamis. See TROEZEN.

Pola. A town in Istria, traditionally founded by the Colchians sent in pursuit of Medea. The modern place of the same name contains magnificent ruins (amphitheatre, triumphal arch, etc.), which attest its past prosperity.

Pole. See CONTUS.

Polemarchus (πολέμαρχος). (1) The third among the Athenian archons. (See ARCHON.) (2) Among the Spartans this was originally the designation of a high officer, who, without any specific command, was employed by the king for special duties. In later times it denoted the commander of a *mora* (q. v.).

Polemius Silvius. A Christian Latin writer of the fifth century A.D., who revised the official calendar, omitting everything that seemed to savour of paganism, and adding historical data and remarks on both grammar and meteorology (ed. by Mommsen, *C. I. L.* i. p. 335). He also wrote a work entitled *Laterculus*, given in the *Abhandl. der Sächs. Gesellsch d. Wissensch.* (1853).

Polĕmon (Πολέμων). (1) I. A king of Pontus and the Bosporus. He was the son of Zenon, the orator of Laodicea. As a reward for the services rendered by his father as well as himself, he was appointed by Antony in B.C. 39 to the government of a part of China; and he subsequently obtained in exchange the kingdom of Pontus. He accompanied Antony in his expedition against the Parthians in 36. After the battle of Actium he was able to make his peace with Octavian, who confirmed him in his kingdom. About the year 16 he was intrusted by Agrippa with the charge of reducing the kingdom of Bosporus, of which he was made king after conquering the country. His reign after this was long and prosperous; he extended his dominions as far as the river Tanaïs; but having engaged in an expedition against the barbarian tribe of the Aspurgians, he was not only defeated by them, but taken prisoner, and put to death. By his second wife Pythodoris, who succeeded him on the throne, he left two sons, Polemon II., and Zenon, king of Armenia, and one daughter, who was married to Cotys, king of Thrace. (2) II. Son of the preceding and of Pythodoris. He was raised to the sovereignty of Pontus and Bosporus by Caligula in A.D. 39. Bosporus was afterwards taken from him by Claudius, who assigned it to Mithridates, while he gave Polemon a portion of Cilicia in its stead, 41. In 62 Polemon was induced by Nero to abdicate the throne, and Pontus was reduced to the condition of a Roman province. (3) Of Athens, an eminent Platonic philosopher. He was the son of Philostratus, a man of wealth and political distinction. In his youth, Polemon was extremely profligate; but one day, when he was about thirty, on his bursting into the school of Xenocrates at the head of a band of revellers, his attention was so arrested by the discourse, which chanced to be upon temperance, that he tore off his garland and remained an attentive listener, and from that day he adopted an abstemious course of life, and continued to frequent the school, of which, on the death of Xenocrates, he became the head, B.C. 315. He died in 273 at a great age. He esteemed the object of philosophy to be, to exercise men in things and deeds, not in dialectic speculation. He placed the *summum bonum* in living according to the laws of nature.

Polĕmon (Πολέμων). The name of several Greek authors. (1) Called PERIEGĒTES, the most celebrated of that class of writers. (See PERIEGETAE.) Born in the district of Troas, he afterwards settled at Athens, where he was presented with the citizenship about B.C. 200. He there worked up the material which he had collected from inscriptions, dedications, and public monuments of all kinds into a number of works (*inter alia*, on Athens, and on the holy road from Athens to Eleusis), which, in succeeding times, were much quoted and highly valued as a mine of archaeological facts, and of important points connected with the history of art. The fragments which are preserved enable us to recognize him as a well-read author. (2) ANTONIUS POLĒMON, the Sophist or rhetorician; a native of Laodicea, who lived in the first half of the second century A.D., and presided over a flourishing school of rhetoric in Smyrna. He was much esteemed by his contemporaries and in high favour with the emperors Trajan, Hadrian, and Antoninus Pius. Towards the end of his life he was a martyr to the gout, and accordingly put an end to his life in his fifty-sixth year by causing himself to be buried alive in the tomb of his ancestors at Laodicea. His fame was founded principally on the pithiness and adroitness of his improvisations. There are preserved two declamations by him, artificial variations upon the same theme—funeral orations in honour of Cynaegirus and Callimachus, the generals who fell at Marathon. They have been edited by Orelli (Leipzig, 1819).

Polemonium (Πολεμώνιον). A city on the coast of Pontus, in Asia Minor, built by King Polemon (probably the second of the name), on the site of the older city of Sidé, and at the end of a deep gulf (Pliny, *H. N.* vi. 11).

Polenta. See PULS.

Polētae (πωληταί). A financial board at Athens, composed of ten members chosen yearly from the tribes by lot. Their chief duties were the leasing of the public taxes and the selling of confiscated goods (Aristot. *Polit. Ath.* § 47). See Gilbert, *Greek Const. Antiq.* pp. 131, 136 (Eng. trans. 1895).

Polias (Πολιάς) or **Poliūchus** (Πολιοῦχος, "Protectress of the city"). A special name of Athené (q. v.) in many Greek cities, but particularly at Athens.

Police. See VIGILES.

Polieus (Πολιεύς). "Protector of the city." A title given to Zeus at Athens, where he was worshipped on the Acropolis.

Polis (πόλις). See POLITEIA.

Politeia (πολιτεία). Citizenship, a citizen (πολίτης) being defined by Aristotle as one who is a sharer in the legislative and judicial power (*μέτοχος κρίσεως καὶ ἀρχῆς*). The character and meaning of citizenship differed in the various States of Greece, and in each State was not always the same. In the Homeric Age the notion of citizenship existed only so far as the condition of slaves and aliens was its negative. In the historical period there was a grand levelling up of the lower ranks, owing to (1) the overthrow of the monarchy, (2) the quarrels of the nobles who succeeded to the power of the kings, and (3) the growth of commerce and of wealth. Among the chief rights of a Greek πολίτης, and which were sometimes granted to πρόξενοι or closely allied aliens, were the right of intermarriage (ἐπιγαμία), the right of acquiring landed property (ἔκτησις), immunity from taxation (ἀτέλεια). These privileges were included under the general name of ἰσοτέλεια or ἰσοπολιτεία, and

the non-citizens who obtained them were called ἰσοτελεῖς. The Greeks regarded the State (πόλις) as a definite entity intended to effect some one great end, as liberty (under a democracy), wealth (under an oligarchy), and education and training (under an aristocracy). This unity of purpose was most fully carried out in Sparta, where the one great aim of all the political institutions was to unite and solidify the governing body against the superior numbers of a subject population. (See HELOTES; SPARTA.) But in all the Greek governments the object was to draw the social bond as close as possible. See Gilbert, *Greek Constitutional Antiquities*, Eng. trans. (1895); METOECI; PERIOECI; PROXENUS.

Politiānus, ANGĔLUS, the Latinized name of ANGELO DE' AMBROGINI, of Monte Puliciano, usually known in English as POLITIAN, a distinguished Italian humanist of the fifteenth century. He was born at Monte Puliciano, in Tuscany, July 14, 1454, the son of a well-known jurist. At the age of ten he was sent to Florence, at that time the centre of the Renaissance movement, and pursued his studies under some of the most famous scholars of the day, among them the Greeks Argyropoulos and Callistus and the two great Italian teachers Landino and Ficino. As a student, Politianus evinced powers of an uncommon nature, especially in the classic languages. His brilliant epigrams in Greek and Latin, written in his sixteenth year, were universally admired and wondered at. When seventeen, he began the translation into Latin hexameters of the *Iliad*, carrying it as far as the fifth book, the first book having been already translated by another scholar. So great was his success in this rather audacious attempt that he won the notice and the favour of Lorenzo de' Medici, then supreme at Florence, who became the patron of the precocious boy then popularly known as "the Homeric youth." Aided alike by the patronage of Lorenzo and his own genius, he soon attained to the first place among the scholars of Italy. In 1484 he was made Professor of Greek and Latin in the University of Florence, whither his increasing fame drew students from all parts of Europe, among them Grocyn, Reuchlin, and Linacre, to whom England and Germany are so greatly indebted. Politian died in 1494, two years after the death of his patron, and during the temporary supremacy of Savonarola. He is buried in the Church of San Marco, Florence, and an inscription on his tomb styles him "an angel with one head and three tongues."

The original works of Politian in Latin fill a closely printed quarto, and consist of letters and miscellaneous papers in both prose and verse. His Latin style, while not of classical purity, is intensely individual, and shows that he used the language not as an imitator, but as a master. He likewise deserves an honourable distinction for the service rendered to his mother tongue, in which he wrote the first secular drama (*Orfeo*) that Italian literature has to show. Besides his translations of Homer mentioned above, he also made versions of Epictetus, Galen, Hippocrates, Herodian, of Plato's *Charmides*, and especially of Callimachus, besides editing the *Pandecta* of Justinian with such acuteness as to impress even modern students of the Roman law. His *praefationes* to Homer, Quintilian, Suetonius, and to the *Silvae* of Statius, as well as his *Praelectio in Persium*, also deserve mention.

The complete works of Politian were published at Florence in 1499, and at Lyons, 3 vols. (1536–46). On his personality, see Roscoe, *Life of Lorenzo de' Medici* (1796); Symonds, *The Renaissance in Italy*, vol. ii. pp. 345–355 (1877); Von Reumont, *Lorenzo de' Medici*, vol. ii. (Eng. trans. 1876); and Voigt, *Die Wiederbelebung des klass. Alterthums*, vol. i. p. 371, vol. ii. p. 199 (Berlin, 1881).

Politĭci Versus (πολιτικοὶ στίχοι). A name given to verses written in popular metres and involving principles peculiar to the popular prosody, as rhyme, accentual quantity, etc. In this sense πολιτικός is used in reference to the general body of the citizens, the πολλοί or plebeians. See RHYME.

Politorium. A town in the interior of Latium, destroyed by Ancus Martius.

Polla, ARGENTARIA. The wife of the poet Lucan. See LUCANUS.

Pollentia. (1) Now Polenza; a town of the Statielli in Liguria, at the confluence of the Sturia and the Tanarus. It was celebrated for its wool. In its neighbourhood Stilicho gained a victory over the Goths under Alaric. (2) A town in Picenum.

Pollentia. An old Roman deity supposed to give strength to growing children (Livy, xxxix. 7).

Pollĭce Verso. See GLADIATORES, p. 733.

Pollinctor. An undertaker's assistant who washed and anointed the corpse, and prepared it either for burial or for the funeral pile (Mart. x. 97).

Pollio, GAIUS ASINIUS. A celebrated Roman poet, orator, and historian. He was born B.C. 75, and made his first public appearance by bringing an impeachment in B.C. 54. In the Civil Wars he fought on Caesar's side at Pharsalus and in Africa and Spain. After the murder of Caesar he at first inclined to the republicans, but in B.C. 43 joined Antony, and on the breaking up of the Triumvirate obtained Gallia Transpadana for his province. In the redistribution of lands there he saved the poet Vergil's paternal estate for him. After negotiating the Peace of Brundisium between Antony and Octavianus, B.C. 41, he became consul in 40, conquered the Parthini in Dalmatia in 39, and celebrated a triumph. He then retired from political life, and devoted himself to the advancement of learning. He served the cause of literature not only by his own writings, but by setting up the first public library at Rome, and by introducing the custom of reading new works aloud to a circle of experts before publication. (See RECITATIO.) He was himself a stern critic of others, as we see by his strictures on Cicero, Sallust, and Livy, though it was remarked that he was not always so severe upon himself. He was especially celebrated as an orator; yet his speeches, in spite of careful preparation, were devoid of elegance, and, as Quintilian remarks, might be supposed to have been written a century earlier than Cicero's. He wrote tragedies also, in which the same stiffness and dryness are complained of. He likewise composed a history of the Civil Wars in seventeen books, from the First Triumvirate to the battle of Philippi, which seems not to have been published in a complete form till after his death. Not one of his

works has survived. The history of Caesar's African campaign, *Bellum Africanum*, has sometimes been attributed to him, but on insufficient grounds. He died in his eightieth year (A.D. 4). Three letters of his to Cicero are found among the Ciceronian collection, *Ad Familiares* (x. 31–33). Fragments of his history of the Civil Wars can be seen in St. Peter's *Historicorum Fragmenta*, 262. See Aulard, *De Asini Pollionis Vita et Scriptis* (Paris, 1877); and Schmalz, *Sprachgebr. des Asinius Pollio* (Munich, 1890).

Pollio, Vedius. A Roman knight and a friend of Augustus. He was by birth a freedman, and has obtained a place in history on account of his riches and his cruelty. He was accustomed to feed his lampreys with human flesh, and whenever a slave displeased him, the unfortunate wretch was forthwith thrown into the pond as food for the fish. On one occasion Augustus was supping with him, when a slave had the misfortune to break a crystal goblet, and his master immediately ordered him to be thrown to the fishes. The slave fell at the feet of Augustus, praying for mercy; and when the emperor could not prevail upon Pollio to pardon him, he dismissed the slave as an act of imperial power, and commanded all Pollio's crystal goblets to be broken and the fish-pond to be filled up. Pollio died B.C. 15, leaving a large part of his property to Augustus. It was this Pollio, who built the celebrated villa of Pausilypum (q. v.) near Naples.

Pollux (Πολυδεύκης). (1) See Dioscuri. (2) Iulius (Ἰούλιος Πολυδεύκης). A Greek rhetorician, a native of Naucratis in Egypt, in the latter half of the second century A.D., tutor of the emperor Commodus, from whom he received an appointment as a public teacher in Athens. His contemporaries, such as Lucian, ridiculed him for his small capacity. Lucian is supposed to have attacked him in his *Rhetorum Praeceptor* (Ῥητόρων Διδάσκαλος), his *Lexiphanes*, and his *De Saltatione*, chap. xxxiii. We possess from his hand a dictionary (Ὀνομαστικόν) in ten books, dedicated to his pupil. This is arranged, not in the order of the alphabet, but according to subjects. It spite of all its confusion and its want of critical acumen, it throws much light on the language, literature, and antiquities of Greece. It has been edited by I. Bekker (Berlin, 1846). See Lexicon.

Polo, the Game of. See Pila, p. 1258.

Polus (Πῶλος). (1) A rhetorician of Agrigentum, introduced by Plato as a speaker in the *Gorgias*. (2) A Greek tragic actor of much repute. He is said to have acted in eight tragedies on four successive days when seventy years of age (Plut. *Dem.* 28).

Polyaenus (Πολύαινος). A Greek writer, who was born in Macedonia and lived about the middle of the second century A.D., as a rhetorician and advocate at Rome, under Marcus Aurelius and Lucius Verus. When the latter was setting out for the war against the Parthians in 162, Polyaenus, being prevented by his age from taking part in the campaign, addressed to him a collection of military stratagems compiled from old writers, under the title *Strategica*, or *Strategemata* (Στρατηγήματα), in eight books. In spite of many serious errors, this laborious and copious collection is not without value for purposes of historical research. It is edited by Casaubon (1589); Wölfflin (1860); and Wescher (1867).

Polybius (Πολύβιος). (1) One of the most important Greek historians, born about B.C. 204 at Megalopolis; the son of Lycortas, general of the Achaean League in 185–184 and after 183. Through his father, and his father's friend Philopoemen, he early acquired a deep insight into military and political affairs, and was afterwards intrusted with high federal offices, such as the commandership of the cavalry, the highest position next to the federal generalship. In this capacity he directed his efforts towards maintaining the independence of the Achaean League. As the chief representative of the policy of neutrality during the war of the Romans against Perseus of Macedonia, he attracted the suspicion of the Romans, and was one of the 1000 noble Achaeans who in 166 were transported to Rome as hostages, and detained there for seventeen years. In Rome, by virtue of his high culture, he was admitted to the most distinguished houses, in particular to that of Aemilius Paulus, the conqueror in the Macedonian War, who intrusted him with the education of his sons, Fabius and the younger Scipio. He was on terms of the most cordial friendship with the latter, whose counsellor he became. Through Scipio's intercession in 150, Polybius obtained leave to return to his home with those of the Achaeans who still survived; but in the very next year he went with his friend to Africa, and was present at the capture of Carthage, B.C. 146. After the destruction of Corinth in the same year, he returned to his native land, and made use of his credit with the Romans to lighten, as far as he could, the lot of his unfortunate countrymen. When Greece was converted into a Roman province, he was intrusted with the difficult task of organizing the new form of government in the Greek towns; and in this office gained for himself the highest recognition both from the conquerors and from the conquered, the latter rewarding his services by setting up statues to him and by other marks of honour (Polyb. *Epitome*, xl. 10; Pausan. viii. 9, 30, 37, 44, 48). The pedestal of such a statue has been discovered at Olympia. The succeeding years he seems to have spent in Rome, engaged on the completion of his historical work, and occasionally undertaking long journeys through the Mediterranean countries in the interest of his history, more particularly with a view to obtaining actual ocular knowledge of historical sites. After the death of his patron he returned to Greece, and died in 122, at the age of eighty-two, in consequence of a fall from his horse.

During his long sojourn in Rome, his study of the history and constitution of Rome, as well as his personal experiences, inspired him with the conviction that the Roman people owed the magnificent development of their power, not to fortune, but to their own fitness, and to the excellence of their political and military institutions, as compared with those of other States, and that therefore their rapid rise to world-wide dominion had been in some measure an historical necessity. In order to enlighten his countrymen on this point, and thereby to supply them with a certain consolation for their fate, he composed his history (Πραγματειά) of the period between B.C. 220 and 146, in forty books. Of these the first two are in the form of an Introduction, and give a compendium of events in Italy, Africa, and Greece, from the destruction of Rome by the Gauls to the First Punic War, thus recording the rise of the Roman suprem-

acy. The first main division (books iii.–xxx.) contained in synchronistic arrangement the occurrences from 220 to 168—that is, of the time in which Rome was founding its world-wide dominion through the Hannibalian, Macedonian, Syrian, and Spanish Wars. The second (books xxxi.–xl.) described the maintenance and consolidation of this dominion against the attempts to overthrow it in the years 168–146. Of this work only books i.–v. have been preserved in a complete form; of the rest we possess merely fragments and epitomes. This is especially to be regretted in those parts in which Polybius narrates events which came within his own experience. He is the first representative of that particular type of historical composition, which does not merely recount the several facts and phenomena in chronological order, but goes back to the causes of events, and sets forth their results. His work rests upon a knowledge of the art of war and of politics, such as few ancient historians possessed; upon a careful examination of tradition, conducted with keen criticism; partly also upon what he had himself seen, and upon the communications of eye-witnesses and actors in the events. It sets forth the course of occurrences with clearness, penetration, sound judgment, and love of truth, and, among the circumstances affecting the result, lays especial stress on the geographical conditions. It belongs, therefore, to the greatest productions of ancient historical writing, though, in respect to language and style, it does not attain the standard of Attic prose. The language is often wanting in purity, and the style is stiff and inharmonious.

There are editions of Polybius by Schweighäuser, in 8 vols. (Leipzig, 1789–95); Bekker (Berlin, 1844); Dindorf (last ed. 1882); and Hultsch (2d ed. 1888); and of a part of the history, with good English notes, by Davidson (1890). There is a translation into English by Shuckburgh, 2 vols. (London, 1889). See Von Scala, *Die Studien des Polybius* (1891 foll.). (2) A favourite freedman of the emperor Claudius. He was the companion of the studies of Claudius; and on the death of his brother, Seneca addressed to him a *Consolatio*, in which he bestows the highest praises upon his literary attainments. Polybius was put to death through the intrigues of Messalina, although he had been one of her paramours.

Polybōtes (Πολυβώτης), one of the giants who fought against the gods. He was pursued by Poseidon across the sea as far as the island of Cos. There Poseidon tore away a part of the island, which was afterwards called Nisyrios, and throwing it upon the giant buried him under it.

Polybus (Πόλυβος). (1) A king of Corinth, foster-father of Oedipus (q. v.). (2) A physician, one of the pupils of Hippocrates. He founded the sect of the Dogmatici. See Medicina.

Polycarpus (Πολύκαρπος). One of the Apostolic Fathers, was a native of Smyrna. The date of his birth and of his martyrdom are uncertain. He is said to have been a disciple of the Apostle John, and to have been consecrated by this apostle bishop of the church at Smyrna. It has been conjectured that he was the angel of the church of Smyrna to whom Jesus Christ directed the letter in the Apocalypse (ii. 8–11); and it is certain that he was Bishop of Smyrna at the time when Ignatius of Antioch passed through that city on his way to suffer death at Rome, some time between 107 and 116. Ignatius seems to have enjoyed much this intercourse with Polycarp, whom he had known in former days, when they were both hearers of the Apostle John. The martyrdom of Polycarp occurred in the persecution under the emperors Marcus Aurelius and Lucius Verus. As he was led to death the proconsul offered him his life, if he would revile Christ. "Eighty and six years have I served him," was the reply, "and he never did me wrong: how then can I revile my King and my Saviour?" We have remaining only one short piece of Polycarp, his *Letter to the Philippians*, which is published along with Ignatius and the other apostolical writers. It is edited in Gebhard's *Patrum Apostolica Opera*, vol. ii. (1876). See Lightfoot's *Apostolic Fathers*, pt. ii. (2d ed. 1889); and Ignatius.

Polychromy. The ancient practice of colouring pieces of sculpture, as well as certain portions of the exterior and interior of buildings. See Statuaria Ars.

Polȳcles (Πολυκλῆς). The name of two artists. The elder Polycles was probably an Athenian, and flourished about B.C. 370. He appears to have been one of the artists of the later Athenian school, who obtained great celebrity by the sensual charms exhibited in their works. One of his chief works was a celebrated statue of an Hermaphrodite. The younger Polycles is placed by Pliny in B.C. 155, and is said to have made a statue of Juno, which was placed in the portico of Octavia at Rome, when that portico was erected by Metellus Macedonicus. But since most of the works of art with which Metellus decorated his portico were not the original productions of living artists, but the works of former masters, it has been conjectured that this Polycles may be no other than the Athenian artist already mentioned.

Polyclētus. See Polyclitus.

Polyclītus (Πολύκλειτος). (1) Next to his somewhat older contemporary Phidias, the most admired sculptor of antiquity. He was a native of Argos, and, like Phidias, a pupil of Ageladas. His name marks an epoch in the development of Greek art, owing to his having laid down rules of universal application with regard to the proportions of the human body in its mean standard of height, age, etc. In close accordance with these rules he fashioned a typical figure, the "Doryphorus," a powerful youth with a spear in his hand: this figure was called the κανών, and for a long time served as a standard for succeeding artists (Pliny, *H. N.* xxxiv. 55). The rules which he practically applied in the canon he also set forth theoretically in a written work (Galen, in Overbeck's *Schriftquellen*, §§ 958, 959). It is also said of him that when he made statues in an attitude of rest, instead of dividing the weight of the body equally between the two feet, according to the custom which had hitherto prevailed, he introduced the practice of causing them to rest upon one foot, with the other foot slightly raised, whereby the impression of graceful ease and calm repose was for the first time fully produced (Pliny, l. c. 56). Except the celebrated chryselephantine colossal statue of Heré (q. v.), which he made for the temple of the goddess at Argos (Pausan. ii. 17, § 4), when it was rebuilt after a fire in B.C. 423, he produced statues in bronze alone, and almost exclusively of men in the prime of youth, such as the "Doryphorus" already mentioned; the "Diadumenus," a

Copy of the Doryphorus of Polyclitus. (Naples.)

youth of softer lineaments, who is tying a band round his head (Pliny, l. c. 55; Lucian, *Philopseudes*, 18); and an "Amazon," which was preferred even to that of Phidias (Pliny, l. c. 53). These statues may still be identified in copies of a later time. He also worked as an architect. The theatre at Epidaurus (of which considerable remains still exist), the circular structure called the Tholos, and the temple of Asclepius (Pausan. ii. 27), are now generally assigned to the younger Polyclitus. (2) Polyclītus the Younger, a pupil of the Argive sculptor Naucydes. Among his works was a statue of the athlete Agenor (Pausan. vi. 6, § 2), and of Zeus Philios at Megalopolis, in which the god was represented with some of the attributes of Dionysus (id. viii. 31, § 4). The statues of Zeus Meilichios at Argos (id. ii. 20, § 1), and those of Apollo, Leto, and Artemis on Mount Lyconé near Argos (ib. 24, § 5), may possibly be assigned to the elder Polyclitus (Overbeck, *Schriftquellen*, §§ 941–943).

Polydămas (Πολυδάμας). (1) Son of Panthoüs and Phrontis. He was a Trojan hero, a friend of Hector, and brother of Euphorbus (*Il.* xvi. 534). (2) Of Scotussa in Thessaly, son of Nicias, conquered in the Pancratium at the Olympic Games in Ol. 93, B.C. 408. His size was immense, and the most marvellous stories are related of his strength, how he killed without arms a huge and fierce lion on Mount Olympus, and how he stopped a chariot at full gallop. His reputation led the Persian king, Darius Ochus, to invite him to his court, where he performed similar feats (Pausan. vi. 5, 4; vii. 27, 6). (3) Of Pharsalus in Thessaly. He was intrusted by his fellow-citizens, about B.C. 375, with the supreme government of their native town. He afterward entered into a treaty with Iason of Pherae. On the murder of Iason in 370, his brother Polyphron put to death Polydamas (Xen. *Hellen.* vi. 1, 2).

Polydectes (Πολυδέκτης). The son of Magnes, king of the island of Seriphus. He attempted to compel Danaë to marry him, but was turned into a stone by her son Perseus by the sight of the head of Medusa. See Perseus.

Polydeuces (Πολυδεύκης). See Dioscuri.

Polydōrus (Πολύδωρος). (1) Son of Cadmus and Harmonia, father of Labdacus, and great-grandfather of Oedipus. (2) Youngest son of Priam and of Laothoë; his father's favourite son. He was killed while yet a boy by Achilles. The tragedians make him the son of Priam and Hecuba, who, before the fall of Troy, committed him with many treasures to the care of their guest-friend, the Thracian king Polymestor (or Polymnestor). After the capture of Troy, Polymestor put the boy to death, in order to get possession of the gold, and threw the body into the sea. The waves cast it up on the Trojan shore, and here Hecuba found it, just as Polyxena was on the point of being sacrificed. Out of revenge she, with the help of the captive Trojan woman, killed the two children of the murderer and blinded Polymestor himself. According to another version, Ilioné, Priam's daughter and Polymestor's wife, brought up the brother, who had been committed to her charge, as her own son, while she gave up her child Deïphilus (or Deïpilus) instead of Polydorus. The Greeks, who wished to exterminate the race of Priam, won over Polymestor by promising him the hand of Electra and a large present of money in return for the murder of Polydorus. Polymestor then murdered his own son, and was blinded and killed by Ilioné. (3) A Greek sculptor of the school of Rhodes, author (in conjunction with Agesander and Athenodorus) of the celebrated group of Laocoön (q. v.).

Polyeuctus (Πολύευκτος). An Athenian orator of the deme Sphettus. He was a political friend of Demosthenes, with whom he worked in resisting the Macedonian party (Plut. *Dem.* 10).

Polygnōtus (Πολύγνωτος). A celebrated Greek painter of the island of Thasos. He worked chiefly in Athens, whither he had been invited by Cimon about B.C. 460, and where he received the citizenship. His most celebrated paintings were the "Capture of Troy" and the "Descent of Odysseus into Hades," in the hall erected by the Cnidians at Delphi. We possess a description of them in considerable detail by Pausanias (x. 25–31). Other celebrated paintings by him (though several of his contemporaries were associated with him in their execution) were to be seen in the Stoa Poecilé, the "Capture of Troy" and the "Battle of Marathon" (ib. 15), and in the temples of the Dioscuri (ib. 18, § 1), and of Theseus at Athens. Though his works were only tinted outlines traced upon a coloured background, without shading and without any perspective, and sketched, as it were, in simple relief, all on the same plane, still his clear, rhythmical

composition, the delicacy of his drawing, the impressiveness of his contours, and the nobility of his figures were highly celebrated. See Overbeck, *Schriftquellen*, 1067–1079.

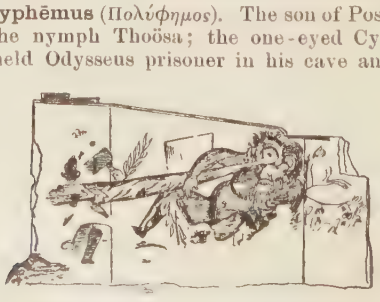
Polyhymnia (Πολύμνια). The Muse of serious songs of adoration. See MUSÆ.

Polyhymnia. (Statue in the Louvre.)

Polyīdus (Πολύϊδος). The son of Coeranus, grandson of Abas, great-grandson of Melampus, father of Euchenor, Astycratia, and Manto; like his ancestor, a celebrated seer, who flourished, according to different accounts, either at Corinth or Argos or Megara. To his son he prophesied his death before Troy; and the son of Minos, Glaucus (q. v.), he raised from the dead. At Megara he cleansed Alcathoüs from the murder of his son Callipolis, and erected a temple of Dionysus.

Polymestor (Πολυμήστωρ). A Thracian king. He murdered Polydorus, the son of Priam, who had been intrusted to his protection, and was blinded by Hecuba and the captive Trojan women. See POLYDORUS.

Polymĭta. See TELA.



Polymnestus or **Polymnastus** (Πολύμνηστος). The son of Melos of Colophon. He was an epic, elegiac, and lyric poet, and a musician. He flourished B.C. 675–644. He belongs to the school of Dorian music, which obtained at this time at Sparta, where he carried on the improvements of Thaletas. The Attic comedians attacked his poems for their erotic character (Aristoph. *Eq.* 1287). As an elegiac poet, he may be regarded as the predecessor of his fellow-countryman, Mimnermus.

Polymnia. See POLYHYMNIA.

Polymyxus (πολύμυξος). See LUCERNA.

Polynīces (Πολυνείκης). Son of Oedipus and Iocasté, was driven out of Thebes by his brother Eteocles (see OEDIPUS), and fled to Adrastus (q. v.) of Argos, who gave him his daughter Argia in marriage, and brought about the expedition of the Seven against Thebes in order to restore him. He fell in single combat with Eteocles. His body, which had been thrown to the birds, was buried by his sister Antigoné (q. v.). His son was Thersander (q. v.). See SEVEN AGAINST THEBES.

Polyphēmus (Πολύφημος). The son of Poseidon and the nymph Thoösa; the one-eyed Cyclops, who held Odysseus prisoner in his cave and ate several of the companions, until the hero made him drunk and blinded him. Later legends made him the lover of the beautiful nymph Galatea. See ACIS; CYCLOPES; GALATEA; ODYSSEUS.

The Blinding of Polyphemus. (Etruscan Painting.)

Polyphontes (Πολυφόντης). A descendant of Heracles, who slew Cresphontes, king of Messené, and married his wife Meropé, taking also possession of the kingdom. He was slain by Aepytus, son of Cresphontes (Apollod. ii. 8, 4).

Polyptȳchon. See DIPTYCHA.

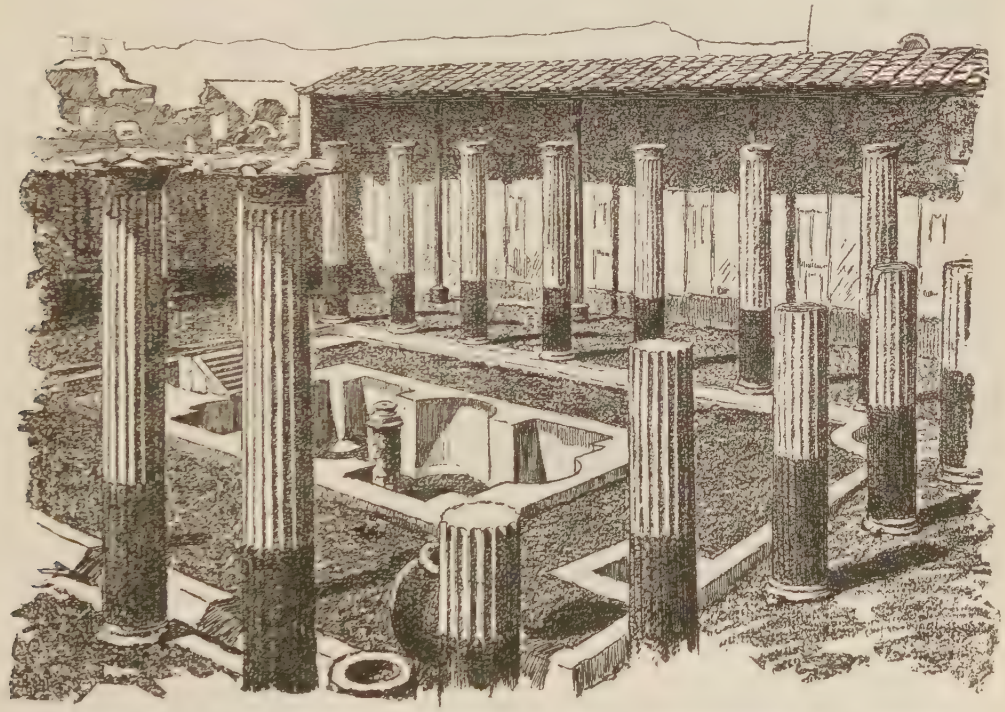
Polysperchon (Πολυσπέρχων). A Macedonian, and a distinguished officer of Alexander the Great (Arrian, *Anab.* iii. 11). In B.C. 323 he was appointed by Alexander II. in command of the army of invalids and veterans, which Craterus had to conduct home to Macedonia. He afterwards served under Antipater in Europe, and so great was the confidence which the latter reposed in him, that Antipater on his death-bed (319) appointed Polysperchon to succeed him as regent and guardian of the king, while he assigned to his own son Cassander the subordinate station of Chiliarch. Polysperchon soon became involved in war with Cassander, who was dissatisfied with this arrangement. It was in the course of this war that Polysperchon basely surrendered Phocion to the Athenians, in the hope of securing the adherence of Athens. (See PHOCION.) Although Polysperchon was supported by Olympias, and possessed great influence with the Macedonian soldiers, he proved no match for Cassander, and was obliged to yield to him the possession of Macedonia about 316. For the next few years Polysperchon is rarely mentioned, but in 310, he again assumed an important part by reviving the long-forgotten pretensions of Heracles, the son of Alexander and Barsiné, to the throne of Macedonia. Cassander marched against him, but distrusting the fidelity of his own troops, he entered into secret negotiations with Polysperchon, and persuaded the latter, by promises and flatteries, to murder Heracles (Diod. xx. 28). From this time he appears to have served under Cassander; but the period of his death is not mentioned.

Polytechnus. An artist of Colophon, who, according to one story, was the husband of Aëdon. See AËDON.

Polyxĕna (Πολυξένη). A daughter of Priam and Hecuba, the betrothed of Achilles, who, at his wedding with her in the temple of the Thymbraean Apollo, was treacherously killed by Paris (Eurip. *Hec.* 40; Hyg. *Fab.* 110). After the fall of Troy the shade of Achilles demanded the expiation of his death with her blood, and she was sacrificed on his funeral pyre. Another tradition makes Achilles and Polyxena to have fallen in love with one another when Hector's body was given up to Priam; that Polyxena fled from Troy and joined the Greeks; and that after the death of Achilles she slew herself upon his tomb (Philostr. *Her.* 19, 11).

Polyxo (Πολυξώ). (1) The nurse of queen Hypsipylé in Lemnos, and celebrated as a prophetess. (2) An Argive woman, married to Tlepolemus, son of Heracles, followed her husband to Rhodes, where, according to some traditions, she is said to have put to death the celebrated Helen. See HELENA.

Pomade. See PILA MATTIACA; SAPO; SPUMA; UNGUENTUM.



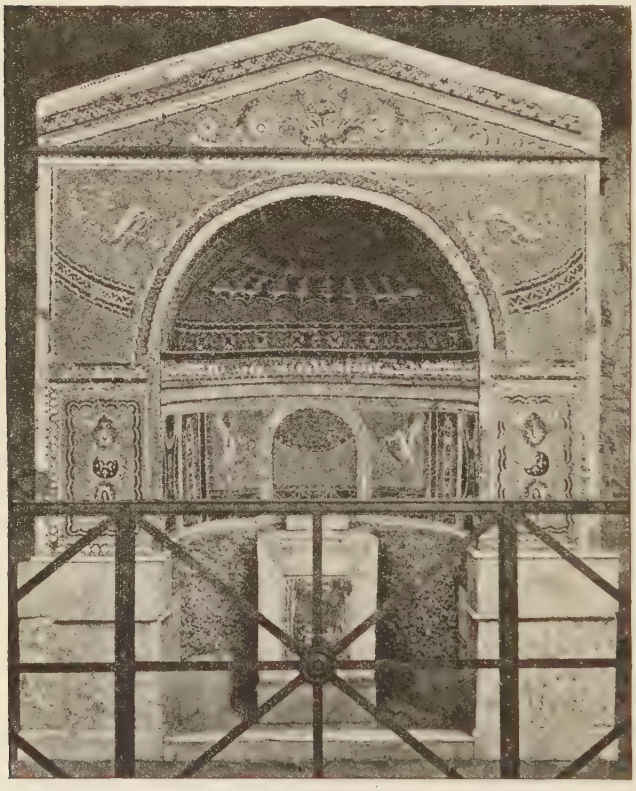
Pomerium and **Pomoerium.** A name given by the Romans to the space, originally along the city wall within and without, which was left vacant and reckoned holy. This space was marked off by stones, and in respect to the auspices formed the limit between city and country. (See Livy, i. 44, and Cicero, *Nat. D.* ii. 11, with the note of J. B. Mayor.) The form *Pomerium* is now generally approved (Mommsen in *Hermes*, x. 40), though the other spelling is more harmonious with the etymology of the word (*post-moerium*).

The old Pomerium remained unchanged until the time of Sulla; after him it was again extended by Claudius, Nero, Vespasian, and Titus, and probably also by Augustus, Trajan, and Aurelian. An extension of the Pomerium was only admissible on the ground of an extension of the legal boundaries of the Empire (Tac. *Ann.* xii. 23). See TEMPLUM.

Pomōna. An old Italian divinity presiding over the fruit of trees (*poma*). Her service was performed by a special priest (*flamen Pomonalis*), and she had a special sanctuary (*Pomonal*) between Ardea and Ostia. See Varro, *L. L.* vii. 45, and VERTUMNUS.

Pompeii (Πομπήϊοι). A city in Campania, founded towards the sixth century B.C. by an Italic tribe, which left its native haunts in the Apennines to seek a happier home on the shores of Campania. They settled on a hill of volcanic origin between the river Sarno and the sea, and divided the land so that each *paterfamilias* should have a share of two *iugera* (57,600 square feet). The number of settlers is estimated by Fiorelli at 150 families. The city was inaugurated with the same political and religious rites which had been observed in the foundation of Rome; it was crossed by two main streets, the *cardo* running from south to north, the *decumanus* running from east to west. Two lanes parallel, one with the *cardo*, one with the *decumanus*, were added in course of time, by means of which the city was finally divided into nine quarters or wards (*regiones*), and each ward subdivided into blocks (*insulae*). The same division is maintained to-day. Thus the house of Lucius Popidius Secundus is marked house n. v., fourth insula, first region; that of Marius Epidius Rufus is n. xx., first insula, ninth region, and so on.

Towards B.C. 424 the city fell a prey to the Sam-



The Doric Peristyle of the Atrium of a House (reg. vi. ins. ix. n. 2), known as the *Casa del Meleagro*, from the subject of one of its finest paintings.

Pompēia. (1) The daughter of Q. Pompeius Rufus, son of the consul of B.C. 88, and of Cornelia, the daughter of the dictator Sulla. She married C. Caesar, subsequently the dictator, in 67, but was divorced by him in 61, because she was suspected of intriguing with Clodius (q. v.), who stealthily introduced himself into her husband's house while she was celebrating the mysteries of the Bona Dea. (2) The sister of Cn. Pompey, the triumvir. She married C. Memmius, who was killed in the war against Sertorius, in 75. (3) Daughter of the triumvir by his third wife Mucia. She married Faustus Sulla, the son of the dictator, who perished in the African War, B.C. 46. She afterwards married L. Cornelius Cinna, and her son by this marriage, Cn. Cinna Magnus, entered into a conspiracy against Augustus. As her brother Sextus survived her, she must have died before 35. (4) Daughter of Sex. Pompey, the son of the triumvir and of Scribonia. At the peace of Misenum in 39 she was betrothed to M. Marcellus, the son of Octavia, the sister of Octavian, but was never married to him. She accompanied her father in his flight to Asia, 36. (5) Paulina. See PAULINA.

nites. The new-comers, under the influence of Hellenic art and civilization, transformed the smoky huts of the conquered tribesmen into gay and commodious dwellings, levelled and paved the streets, and raised public and sacred edifices in the choicest forms of Doric architecture.

Towards the end of the Marsic War the Pompeians were defeated in the plains of Nola; their city and their territory were given up to a colony of veterans; the name was changed into that of Colonia Veneria Cornelia Pompeii. Under the benevolent rule of Augustus, Pompeii became the Newport of ancient Rome, and continued to enjoy the favour of the rich and pleasure-seeking patricians for more than a century. In A.D. 63, on

Specimen of House Decorations of the Time of Augustus. The Mosaic-work is lined with Cornices of Shells, Pumice-stones, and Enamels (From house, reg vii. ins. ii. n. 38.)

February 5th, the *felix* Campania was shaken by an earthquake. Pompeii, Nuceria, Herculaneum, and Naples were seriously damaged; a flock of six hundred sheep disappeared in a fissure of the earth; statues fell from their pedestals; public edifices collapsed, and when the work of repairing the damages was nearly completed, and the recollections of the earthquake had almost died away, another by far more horrible catastrophe took place by which Pompeii, Herculaneum, and Stabia, as living cities, were wiped forever from the face of the earth.

The account of the eruption of Mount Vesuvius in A.D. 79 is given by Pliny the Younger in two well-known letters (vi. 16 and 20) to Tacitus. Other particulars are supplied by Dio Cassius, lxvi. 21; Suetonius, *Titus*, viii; Marcus Aurelius, iv. 48; and Tertullian, *Apol.* 40. The history of those eventful days has therefore been reconstructed in all the leading details. (See Dyer's chapter "History of Vesuvius," pp. 10–29.) Still there are a great many others, revealed by late excavations, which are less known to the general public. Thus, for instance, the year in which the eruption took place is well known (A.D. 79); not so the month and the day, as the text of Pliny which mentions them is undoubtedly corrupt. The Neapolitan scholars have favoured autumn (November) rather than summer (August), alleging the discoveries of carpets drawn over the mosaic and marble floors, of braziers placed in exposed corners, of dried figs and grapes, of chestnuts, pine-nuts, and other fruit belonging to the late autumn. On the other hand, it was alleged that in the hundred and fifty houses excavated since 1870, no carpet has been found, only a piece of matting which, however, seems to have been rolled, and not extended on the floor; that the braziers collected both from Pompeii and Herculaneum number scarcely fifty, and that they were used not for warming but for cooking purposes; and lastly that in Southern climates the fruit mentioned above ripens in August.

The controversy about the precise date of the destruction of Pompeii was settled on October 11th, 1889. While excavating a bed of volcanic ashes, a few steps outside the Porta Stabiana, Signor Ruggero discovered and moulded in plaster two human forms, and that of a trunk of a tree, 3.40 metres long, 0.40 m. in diameter. One of the human casts belonged to a middle-aged man clothed in an overcoat, and lying on his back with drawn-up legs, and arms outstretched, as if trying to protect his chest from the shower of burning ashes by which he was suffocated. The other belongs to an old woman suffocated and buried while attempting to raise herself from the ground by the joint action of hands and knees. By far more important is the cast of the trunk of the tree. The tree was still in its upright position, and must have been twenty-five or thirty feet high. The lower portion, embedded in pumice-stone, does not appear in the mould; the top also has disappeared, because, projecting above the bed of ashes, it must have been burned or cut away. The middle section of the trunk is wonderfully well preserved, together with many leaves and berries. Trunk, leaves, and berries belong undoubtedly to a species of *Laurus Nobilis*, the fruit of which comes to maturity towards the end of autumn. Prof. Pasquale, in a paper published in the *Notizie degli Scavi* for 1889, p. 408, proves that the berries discovered on October 11th were perfectly ripe. This Laurus Nobilis, therefore, so ingeniously brought back to life after a lapse of one thousand eight hundred and ten years, settles the controversy concern-

ing the date of the eruption: it took place in the month of November, on November 23, A.D. 79. The catastrophe took the gay and thoughtless people by surprise. All over the town we find evidence of a sudden panic—of a wild rush for life. The writer has often noticed one of these striking examples in a corner of the Forum opposite to the temple of Iupiter. Some masons were engaged in raising an enclosure round a new altar of white marble; the mortar just dashed against the side of the wall was but half spread out; one can see the long sliding stroke of the trowel about to return and obliterate its own track; but it never did return: the hand of the workman was suddenly arrested. The city was not buried entirely, and concealed from the eyes of survivors. The top of the walls of private buildings, the colonnades of public edifices emerged from the

Showing the thickness of the bed of pumice-stones and ashes under which Pompeii was buried, in comparison with the height of buildings. The view is taken from near the Gate to Herculaneum. In the almost perpendicular cutting of volcanic strata back of Hexedra on the left, the various layers of *lapilli* and *ceneri* are distinctly visible.

dreary waste, so that it was easy for the survivors to dig out the valuables left behind, and even the statues, marbles, fountains, and bronzes. Later eruptions and the work of nature and man obliterated the last traces of the city; a vague recollection of its site survived in the name of *Cività*, given to the hill in which it lay buried. The peasants of the Cività have searched for hidden treasure since time immemorial; to save the trouble and expense of an open excavation they tunnelled the bed of lapilli and scoriae, sometimes paying for their imprudence with their life. The skeletons of four men buried alive by the collapse of the *cuniculus* they were actually digging have been found in a house near the Via dell' Abbondanza. That of Papidius Priscus was searched likewise in the Byzantine period, as proved by the words *Dumnos Pertusa* scratched above a hole cut through one of its walls to obtain a passage from room to room. The house of L. Caecilius Iucundus was found ransacked; its searching-party had left in one of the holes a lantern of the shape still in use among the Neapolitan peasantry. Yet there are a great many exceptions to the rule. Many wealthy houses have never been explored, and their valuable contents fall occasionally our prey, under the form of a treasure-trove. The writer remembers one which took place in 1881. While Michele Ruggero was excavating half-way between the Porta Stabiana and the coast, a building was found—perhaps a bathing establishment—comprising some twenty rooms gayly decorated with frescoes. Here a band of thirty-six Pompeians took refuge from the fury of the eruption, hoping to take to the boats; the fury of the sea, however, deprived the fugitives of their last chance of salvation. They were all buried alive; their skeletons were found mingled together, as they fell in their last struggle for a breath of air. They were wealthy people. Together with their bones the following objects lay scattered on the floor: five bracelets, six pairs of earrings, two necklaces, one chain, one brooch, seventeen finger-rings, fourteen pieces of gold, two hundred and eight of silver, besides engraved stones, pearls, mirrors, cameos, and copper coins.

In the following year (1882, October) a Lararium, or domestic chapel, was found in a house of the Via dell' Abbondanza in a wonderful state of preservation. On the steps of the altar there were seven statuettes of delicate workmanship. One had been taken away at the moment of the catas-

trophe by the fugitives, perhaps because it was the best or the most venerated of the group. The six others were found in their proper places. One represents Apollo Citharoedus, the figure being of bronze, the accessories of silver. The second, made of bronze, silver, and ivory, has undergone a curious transformation. At first it was made to represent Mercury, then, with the addition of proper clothing and attributes, it was turned into an Aesculapius. The others represent Mercury, Hercules, and two Lares.

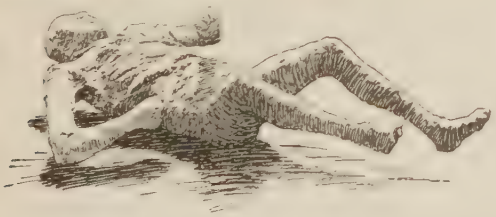
On September 20, 1888, another remarkable discovery of silver-plate and other valuables took place in regio viii. insula ii. house xxiii. It seems that the owners of the house, having made a bundle of their plate, had put it on a stool, waiting, perhaps, for a lull in the shower of burning ashes

Petrinus. In the second she declares herself a debtor to Margaris for the sum of 1450 sestertii. The third document cannot be interpreted with certainty.

The question whether Pompeii was a sea-port town in the strict sense of the word, or whether it was separated from the sea by a strip of land more or less broad, has been fully discussed by Michele Ruggero in the volume published on the eighteenth centenary of the destruction of the ill-fated town. He declares the story of the discovery of a large three-masted ship (believed to be the flag-ship of Pliny) near the farm of Messigna, in 1833, to be devoid of foundation, because the would-be masts, seen by the naval engineer Giuseppe Negri, were but trunks of cypresses. Many such trees have been found since 1833: they are planted in quin-

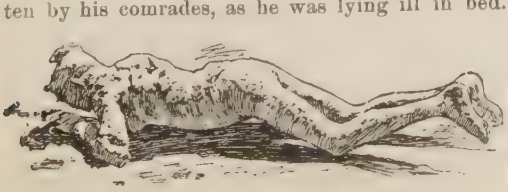
View of Pompeii.

in order to remove it to a safer place. However, in the hurry of flight, the bundle was left behind. Besides pieces of the stool on which it was laid, and of the coarse cloth in which it was enveloped, an exquisite silver set for four was found—viz., four large and four small cups and saucers, four egg-cups, one filter, and one jug, weighing nine pounds in all. There was also broken silverware and table-utensils, such as spoons, salt-cellars, etc. More important still was the discovery of three *libelli* (of wood coated with wax) containing family documents. The deeds, drawn up in A.D. 61, eighteen years before the eruption, belonged to two women—a Decidia Margaris and a Poppaea Noté. In the first deed Poppaea sells to Margaris two young slaves named Simplex and



cunx, with the roots in the ancient vegetable soil, and the trunks buried in pumice-stone of the fatal eruption of 79. The average size of one hundred trees, measured by Palmieri and Scacchi, was 1.42 m. in circumference, 0.47 m. in diameter, which is the average size of cypresses thirty-six years old. Following the line of trees and of antique farm-houses, Ruggero was able to trace the line of the sea-coast before the eruption. It starts from Torre Annunziata, bends inland between the Salerno railway and the high-road to Castellamare, and crosses the river Sarno near the "molino di Rosa." The island of Revigliano, the *petra Herculis* of the Pompeians, which, before the eruption, was separated from the mainland by a channel 1.550 metres wide, comes now within 420 m. of the shore.

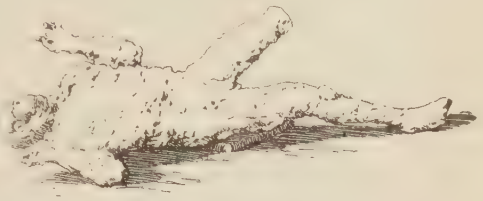
The foregoing view, taken from the north end of the excavations, shows the belt of land created by the shower of ashes and lapilli between the walls of the city and the Petra Herculis.



Of the inhabitants of Pompeii, whom Fiorelli puts down as about 12,000, the greater part fled on foot, on horseback, or in chariots. This is proved by the fact that, although the city contained many stables, two coaches only have been found—one in the court-yard of the house of Papidius Priscus and the other in the stables regio i. insula iv. n. 28. Eight skeletons of horses have been found in the space of eighteen years. In the same period of time 150 human bodies were discovered within the walls, the total number of victims being about 550, less than one in twelve. Many died in their own houses while waiting for the cessation of the shower of ashes; some were crushed by the fall of the roofs; some asphyxiated by the sulphuric vapours or by the fine dust; some starved to death or were buried alive in places from which there was no escape. The skeletons are generally found with a lamp close by, darkness, even in the day-time, having been dense; and they are seldom alone. The Pompeians died in family groups, as shown by the eighteen bodies discovered in the cellar of Diomede's villa; by the twelve in the atrium of house reg. i. ins. ii. n. 28. The fate of these last could not be explained at first, because it seemed so easy for them to have made an escape through the opening of the *impluvium*. On closer examination it was ascertained that a heavy iron grating had been laid across the *impluvium*, and that the unfortunate crowd had tried to force it without success.

Bodies crushed by falling ruins or buried in lapilli cannot be cast in plaster, being reduced to a shapeless heap of bones. Those buried in fine dust (hardened by water) are marvellously well preserved, and can be reproduced in plaster to perfection. Nothing is more impressive than the study of the various kinds of agonies suffered by these poor victims at the last moment of the struggle.

The first cast belongs to a man dashed against the pavement by the fall of the wooden ceiling of his shop-room. His fingers are clenched and his elbows drawn, as if trying to lift the weight under which he had fallen.



The following cast belongs to a workman of the Tanneries (Concia), who was left behind or forgotten by his comrades, as he was lying ill in bed.

The poor wretch, whose legs and body appear emaciated, dragged himself as far as the court-yard of the establishment, and, perceiving no chance of deliverance or help, laid himself down to die quietly on the bare floor.

Women also seem to have died with resignation; they are generally found lying on the left side, with the *tunica* drawn over the face, as a

shelter from the ashes. The attitude of most of the men conveys the idea of energetic despair. Far from showing the abandonment of death, they fight to the last against their fate, raising hands and knees in a supreme effort, as shown by the following casts.

We must not forget the sad fate of a watch-dog, the casting of whose form is the most difficult and delicate yet accomplished in Pompeii, owing to the thinness of the legs and the extraordinary contortion of the body. The faithful animal was forgotten by his ungrateful master, L. Vesonius Primus. He was left tied to a chain behind the street-door of the house, reg. vi. ins. xiv. n. 20. As the lapilli, pouring in from the door, began to fill the vestibule, the dog tried his best to break the ties. He was overtaken by death while lying on his back with outstretched legs.

Watch-dog. Cast from nature. Discovered at the entrance of the prothyrum of the house of L. Vesonius Primus.

Among the manifestations of Pompeian art which strike the visitor most forcibly, the wall-decorations in fresco or encaustic painting come first. There are many publications on this subject, one of the earliest being *Le Antichità di Ercolano e Pompei*, 9 fol. vols. (Napoli, 1755–1792). See also *Herculaneum et Pompei: Recueil général de peintures, bronzes, mosaïques, etc., découverts jusqu'à ce jour . . .*

gravé du trait sur cuivre par M. Roux aîné, et accompagné d'un texte explicatif par M. L. Barre, 8 large 8vo vols. (Paris, Didot); Raoul Rochette, *Choix de peintures de Pompéi, la plupart du sujet historique*, etc., with coloured plates, large fol. (Paris, 1844); E. O. Müller, *Wandgemälde aus Pompei und Herculanum, mit einem erlaüternden Texte* (Berlin, 1844); Wolfgang Helbig, *Wandgemälde der vom Vesuv verschütteten Städte Campaniens* (Leipzig, 1868). See Dilthey's criticism in the *Bullettino dell' Istituto* (1869), pp. 147–160. Professor Mau, of the German Institute, has been illustrating year by year the latest finds in this department, both in the *Bullettino* and the *Mittheilungen* of the German Institute.

The frescoes of Pompeian houses afford the best illustration that could be desired of ancient mythology, but they offer little of historical interest.

Specimen of Pompeian fresco-paintings (The Wounded Adonis), showing the way they are cared for after their discovery. The cracks of the plaster are first filled with gluten, and then fastened with brass clasps shaped like a **T**. Sometimes the whole surface of the fresco is washed with a solution of wax.

Their value, as works of art, has been slightly exaggerated; at all events, they cannot bear comparison with the frescoes discovered in Rome, in Livia's Palatine house, in Livia's villa *ad Gallinas albas* (Prima Porta), in the Roman palace by la Farnesina, in Lamia's gardens (the Nozze Aldobrandine), in Nero's Golden House, etc. Among the few Pompeian frescoes connected with history the one discovered in the autumn of 1882 between the Via dell' Abbondanza, dei Teatri, e de xii. Dei, representing the Judgment of Solomon, took everybody by surprise. Who would ever have conceived that a scene inspired by the Bible should have been discovered on the walls of this purely pagan, dissolute, materialistic town? The picture belongs to the burlesque genre; and although the caricaturist has somewhat exaggerated the conventional deformity of his personages, still every particular of the Biblical account can be recognized. King Solomon, with the sceptre in his hand, sits on a platform between two assessors. He has already told the officer to make two portions of the infant; and while the pretended mother is waiting to receive her half in perfect indifference, the real one falls in a fit of despair.

Many conjectures have been proposed to explain the appearance of such a picture at Pompeii; the most satisfactory seems to be this: The Alexandrian School — after the translation of the Bible by the LXX. — was well acquainted with Hebrew archaeology, history, and tradition. The episode of Solomon's judgment may have become popular in Alexandrian circles. At Pompeii a large contingent of Alexandrians met every summer. No wonder if one of them chose to decorate his house with frescoes derived from legends so popular in his mother country. What renders the conjecture all the more probable is that, in the same apartment, there are other frescoes representing Egyptian scenes, such as crocodile-hunting, the land of the pygmies, etc.

A wine-shop was discovered in 1877, in regio vi. ius. xiv. n. 36, with several *tableaux de genre* painted on the white plastering of its walls. The first scene on the left represents a young man kissing a woman, who appears dressed in yellow garments with black shoes. She says, NOLO! CVM MVRTAL—"I don't want to be kissed; go to your Myrtalis." The second scene represents the same woman talking to Myrtalis. They both point their fingers at a third female, who brings in a great wine-jar and a cup, and says, QVI VOLT SVMAT · OCEANE VENI BIBE—an invitation to partake of the drink. The third scene represents two gamblers seated, with the chessboard on their knees, on which several *latrunculi* are disposed in lines of different colours—yellow, white, and black. The one on the left throws the dice, and says, EXSI—"I am out." His partner, pointing to the dice, answers, NON TRIA · DVAS EST—"You only made two points, not three!" Both fight in the fourth scene. One says, NON ITA · ME TRIA · EGO FVI—"You lie; I made three points; I am out." The other retorts, ORTE FELATOR · EGO FVI—"You . . . ! I have the game." At this moment the shop-keeper interferes, and, pushing the rioters outside, says, ITE FORAS RIXSATIS—"Go out in the street if you want to fight."

Landscapes are an utter failure; there is no colouring, no perspective, no appreciation of nature, no value of tones. Still, the study of the works of Pompeian landscape-painters is not without interest. Prof. O. Comes has compiled from them a catalogue of flowers, shrubs, ornamental and fruit-trees known to the Pompeians. It comprises seventy varieties. See Ruggero's *Pompei*, pp. 177–250.

The name of Pompeii was never forgotten in the Middle Ages. A chronicler of the ninth century, named Martinus Monachus, speaks of Sikkartol, prince of Benevento, having pitched his tents in a spot *qui a Pompeia urbe Campaniae, nunc deserta, nomen accepit* (named from Pompeii, a city of Campania, now deserted). Martinus refers not to Pompeii destroyed in A.D. 79, but to a village of the same name mentioned by the Tabula Peutingeriana at the time of Theodosius, which had in its turn been destroyed by later eruptions.

In 1594 Muzio Tuttavilla, Count of Sarno, while boring an underground channel to convey the waters of the Sarno itself to Torre dell' Annunziata, discovered remains of the amphitheatre, of the temple of Isis, of the Forum, of the *strada delle*

Tombe, to which, however, no attention was paid. Two inscriptions, dug up in the heart of the city, contained the name of Pompeii, of one of its prominent citizens (M. Popidius), of one of its prominent goddesses (Venus Physica Pompeiana); they were thrown aside and probably made use of as building materials. Regular investigation began a century and a half later, on April 1, 1748. I say regular, because the search was undertaken by the State; but there was no order, no regularity, no system. Holes were dug at random, more for the sake of official plunder in favour of the Naples museums than for topographical discovery. The merit of having brought Pompeian excavations to their actual efficiency belongs to Giuseppe Fiorelli, who was named superintendent in 1860. To him we are indebted for a thoroughly scientific organization of the work; since to his ingenuity we owe the invention of the casting in plaster the corpses of the Pompeians who lost their lives in that appalling catastrophe. (See Dyer's *Pompeii*, p. 475; *The Quarterly Review*, No. 230, p. 382.)

BIBLIOGRAPHY. — Works of general interest: Mazois (François), *Les Ruines de Pompéi dessinées et mesurées pendant les années 1809–1811*, 4 vols. (Paris, 1812–38), containing nearly 200 plates, and embracing the results of excavations from 1757 to 1821; Sir William Gell, *Pompeiana*, two series, each of two 8vo vols. (London, 1824–30), giving an account of excavations down to the year 1819; T. L. Donaldson, *Pompeii*, illustrated with picturesque views, engraved by W. B. Cooke, 2 fol. vols. (London, 1827); Breton, *Pompeia Décrite et Dessinée*, 2d ed. (Paris, 1855); Overbeck, *Pompeij in seinen Gebaüden, Alterthümern, und Kunstwerken* (Leipzig, 1856; 2d ed. in 2 vols. 1871); Fausto e Felice Niccolini, *Le Case ed i Monumenti di Pompei Disegnati e Descritti* (Naples, 1864–92); Giuseppe Fiorelli, *Pompeianarum Antiquitatum Historia* (Naples, 1860), in two 8vo vols., containing the diaries of excavations from their commencement in 1748 to 1860, with the reports printed verbatim in Spanish down to July, 1764, after that date in Italian; id. *Giornale degli Scavi di Pompei*, begun in 1861; id. *Descrizione di Pompei*, 4to (Naples, 1875), with a good map; Dyer, *Pompeii: its History, Buildings, and Antiquities*, 3d ed. (London, 1871), with nearly 300 engravings, maps, and plans; Michele Ruggero, *Pompei e la Regione Sotterrata dal Vesuvio nell' Anno LXXIX.*, a joint work of the directors of the Pompeian excavations, most excellent, and copiously illustrated (Naples, 1879); id. *Degli Scavi di Stabia dal MDCCXLIX. al MDCCLXXXII.* (Naples, 1881).

Besides these standard works many important accounts have appeared in archaeological journals, signed by Guaranta, Niccolini, Avellino, Minervini, Mounier, Helbig, Mau, Fiorelli, de Petra Sogliano. These contributions cannot be ignored by students wishing to obtain full knowledge of the subject. See *Il Real Museo Borbonico*, an illustrated serial of Neapolitan antiquities, begun in 1824; the Italian edition numbers fourteen 4to vols.; *Memorie della Reale Accademia di Archeologia di Napoli; Annali e Bullettino dell' Istituto di Corrispondenza Archeologica* (Rome and Paris, 1829–1885); *Jahrbuch und Mittheilungen des k. deutschen archäologischen Instituts* (Römische Abtheilung, 1886–92); Avellino and Minervini, *Bullettino Archeologico Napoletano;* Giuseppe Fiorelli, *Notizie degli Scavi di Antichità* (Rome, 1876–92). The first archaeological map of Pompeii was measured and designed by Antonio Bibent in 1827; the best is that of G. Fiorelli, entitled *Tabula Coloniae Veneriae Corneliae Pompei.* It is divided into 42 sheets, which, put together, form a superficies of 140 square palms, being the 333.3 part of the true area.

Pompeian epigraphy has been admirably illustrated by Mommsen, Zangemeister, Fiorelli, and others. See Theodor Mommsen, *Inscriptiones Regni Neapolitani*, p. 112 foll.; Raffaele Garrucci, *Graffiti di Pompei* (Paris, 1856); Giuseppe Fiorelli, *Monumenta Epigraphica Pompeiana, ad Fidem Archetyporum Expressa*, part first (Oscan inscriptions); Carl Zangemeister, *Corpus Inscriptionum Latinarum*, vol. iv. Inscriptiones Parietariae (Berlin, 1871); Theodor Mommsen, *Corpus Inscriptionum Latinarum*, vol. x. pars prior (Berlin, 1883); and the article GRAFFITI.

Pompeiopŏlis (Πομπηϊούπολις). See POMPELON; SOLOË.

Pompēius. (1) Q. POMPĒIUS, said to have been the son of a flute-player, was the first of the family who rose to dignity in the State. He was consul in B.C. 141, when he carried on war against the Numantines in Spain. Having been defeated by the enemy in several engagements, he concluded a peace with them; but on the arrival of his successor in the command, he disowned the treaty, which was declared invalid by the Senate. He was censor in 131 with Q. Metellus Macedonicus (App. *B.C.* vi. 76; Cic. *De Fin.* ii. 17, *Off.* iii. 30). (2) Q. POMPĒIUS RUFUS, either son or grandson of the preceding, was a zealous supporter of the aristocratic party. He was tribune of the plebs B.C. 100, praetor 91, and consul 88, with L. Sulla. When Sulla set out for the East, to conduct the war against Mithridates, he left Italy in charge of Pompeius Rufus, and assigned to him the army of Cn. Pompeius Strabo, who was still engaged in carrying on war against the Marsi. Strabo, however, who was unwilling to be deprived of the command, caused Pompeius Rufus to be murdered by the soldiers (Cic. *Pro Dom.* 31, *Brut.* 89; App. *B. C.* i. 57). (3) Q. POMPĒIUS RUFUS, son of No. 2, married Sulla's daughter, and was murdered by the party of Sulpicius and Marius in the Forum during the consulship of his father, B.C. 88 (Plut. *Sull.* 8). (4) Q. POMPĒIUS RUFUS, son of No. 3 and grandson of the dictator Sulla, was tribune of the plebs in B.C. 52, when he distinguished himself as the great partisan of the triumvir Pompey, whom he assisted to obtain the sole consulship. Rufus, however, on the expiration of his office, was accused of *vis*, was condemned, and went into exile at Bauli in Campania (Cic. *Ad Fam.* viii. 1, 4; Dio Cass. xi. 45). (5) Q. POMPĒIUS RUFUS, praetor B.C. 63, was sent to Capua and Apulia during Catiline's conspiracy. In 61 he obtained the province of Africa, with the title of proconsul. (6) SEX. POMPEIUS, married Lucilia, a sister of the poet C. Lucilius. (7) SEX. POMPĒIUS, elder son of No. 6, never obtained any of the higher offices of the State, but acquired great reputation as a man of learning, and is praised by Cicero for his accurate knowledge of jurisprudence, geometry, and the Stoic philosophy (Cic. *Brut.* 47, 175). (8) SEX. POMPĒIUS, a descendant of No. 7, consul with Sex. Apuleius A.D. 14, in which year the emperor Augustus died. He seems to have been a patron of literature. Ovid addressed him several letters during his exile

(Ovid, *Pont.* iv. 1, 5). (9) Cn. Pompēius Strabo, younger son of No. 6, and father of the triumvir. He was quaestor in Sardinia, B.C. 103, praetor 94, and propraetor in Sicily in the following year. He was consul in 89, when he carried on war with success against the allies, subduing the greater number of the Italian people who were still in arms. Towards the end of the year he brought forward the law (*Lex Pompeia*) which gave to all the towns of the Transpadani the *ius Latii* or *Latinitas*. He continued in the south of Italy as proconsul in the following year (B.C. 88), and when Pompeius Rufus was appointed to succeed him in the command of the army Strabo caused him to be assassinated by the troops. Next year (87) the Marian party obtained the upper hand. Strabo was summoned by the aristocratic party to their assistance; and, though not active in their cause, he marched to the relief of the city, and fought a battle near the Colline Gate with Cinna and Sertorius (Vell. Pat. ii. 21). Shortly afterwards he was killed by lightning. His avarice and cruelty had made him hated by the soldiers to such a degree that they tore his corpse from the bier and dragged it through the streets. Cicero describes him (*Brut.* 47) "as worthy of hatred on account of his cruelty, avarice, and perfidy" (cf. Flor. iii. 18); but he possessed some reputation as an orator, and still more as a general.

(10) Cn. Pompēius Magnus, the Triumvir, son of No. 9, was born on the 30th of September, B.C. 106, in the consulship of Atilius Serranus and Servilius Caepio, and was consequently a few months younger than Cicero (who was born on the 3d of January in the same year) and six years older than Caesar. He fought under his father in 89 against the Italians, when he was only seventeen years of age, and continued with him till his death two years afterwards. For the next few years the Marian party had possession of Italy; and accordingly Pompey, who adhered to the aristocratic party, was obliged to keep in the background, and was only saved from an indictment by the intervention of Carbo. But when it became known, in 84, that Sulla was on the point of returning from Greece to Italy, Pompey hastened into Picenum, where he raised an army of three legions. Although only twenty-three years of age, Pompey displayed great military abilities in opposing the Marian generals by whom he was surrounded; and when he succeeded in joining Sulla in the course of the year (83) he was saluted by the latter with the title of Imperator.

During the remainder of the war in Italy Pompey distinguished himself as one of the most successful of Sulla's generals; and when the war in Italy was brought to a close, Sulla sent Pompey against the Marian party in Sicily and Africa. Pompey first proceeded to Sicily, of which he easily made himself master (82): here he put Carbo to death. In 81, Pompey crossed over to Africa, where he defeated Cn. Domitius Ahenorbarbus and the Numidian king Hiarbas, after a hard-fought battle. On his return to Rome in the same year, he was received with enthusiasm by the people, and was greeted by Sulla with the surname of Magnus, a name which he bore ever afterwards, and handed down to his children. Pompey, however, not satisfied with this distinction, sued for a triumph, which Sulla at first refused, but at length, overcome by Pompey's importunity, he allowed him to have his own way. Accordingly, Pompey, who had not yet held any public office, and was still a simple *eques*, entered Rome in triumph in September, 81, and before he had completed his twenty-fifth year.

Pompey continued faithful to the aristocracy after Sulla's death (78), and supported the consul Catulus in resisting the attempts of his colleague Lepidus to repeal the laws of Sulla; and when Lepidus had recourse to arms in the following year (77), Pompey took an active part in the war against him, and succeeded in driving him out of Italy. The aristocracy, however, now began to fear the young and successful general; but since Sertorius in Spain had for the last three years successfully opposed Metellus Pius, one of the ablest of Sulla's generals, and it had become necessary to send the latter some effectual assistance, the Senate, with considerable reluctance, determined to send Pompey to Spain, with the title of proconsul, and with equal powers to Metellus. Pompey remained in Spain between five and six years (76–71); but neither he nor Metellus was able to gain any decisive advantage over Sertorius. But when Sertorius was treacherously murdered by his own officer Perperna in 82, the war was speedily brought to a close. Perperna was easily defeated by Pompey in the first battle, and the whole of Spain was subdued by the early part of the following year (71). Pompey then returned to Italy at the head of his army. In his march towards Rome he fell in with the remains of the army of Spartacus, which M. Crassus had previously defeated. Pompey cut to pieces these fugitives, and therefore claimed for himself, in addition to all his other exploits, the glory of finishing the Servile War.

Coin of Pompey.

Pompey was now a candidate for the consulship; and although he was ineligible by law, inasmuch as he was absent from Rome, had not yet reached the legal age, and had not held any of the lower offices of the State, still his election was certain. His military glory had charmed the people; and as it was known that the aristocracy looked upon Pompey with jealousy, they ceased to regard him as belonging to this party, and hoped to obtain, through him, a restoration of the rights and privileges of which they had been deprived by Sulla. Pompey was accordingly elected consul, along with M. Crassus; and on the 31st of December, B.C. 71, he entered the city a second time in his triumphal car a simple knight.

In his consulship (70), Pompey openly broke with the aristocracy, and became the great popular hero. He proposed and carried a law, restoring to the tribunes the power of which they had been deprived by Sulla. He also afforded his all-powerful aid to the Lex Aurelia, proposed by the praetor L. Aurelius Cotta, by which the *iudices* were to be taken in future from the Senate, knights, and tribunes of the treasury, instead of from the senators exclusively, as Sulla had ordained. In carrying both these measures Pompey was strongly support-

ed by Caesar, with whom he was thus brought into close connection.

For the next two years (69 and 68) Pompey remained in Rome. In 67, the tribune A. Gabinius brought forward a bill, proposing to confer upon Pompey the command of the war against the pirates with extraordinary powers. This bill was opposed by the aristocracy with the utmost vehemence, but was notwithstanding carried. The pirates were at this time masters of the Mediterranean, and had not only plundered many cities on the coasts of Greece and Asia, but had even made descents upon Italy itself. As soon as Pompey received the command, he began to make his preparations for the war, and completed them by the end of the winter. His plans were formed with great skill and judgment, and were crowned with complete success. In forty days he cleared the western sea of pirates, and restored communication between Spain, Africa, and Italy. He then followed the main body of the pirates to their strongholds on the coast of Cilicia; and after defeating their fleet, he induced a great part of them, by promises of pardon, to surrender to him. Many of these he settled at Soli, which was henceforward called Pompeiopolis. The second part of the campaign occupied only forty-nine days, and the whole war was brought to a conclusion in the course of three months; so that, to adopt the panegyric of Cicero (*Pro Leg. Man.* 12), "Pompey made his preparations for the war at the end of the winter, entered upon it at the commencement of spring, and finished it in the middle of the summer." Pompey was employed during the remainder of this year and the beginning of the following in visiting the cities of Cilicia and Pamphylia, and providing for the government of the newly-conquered districts.

During his absence from Rome, Pompey had been appointed to succeed Lucullus in the command of the war against Mithridates (66). The bill, conferring upon him this command, was proposed by the tribune C. Manilius, and was supported by Cicero, in an oration which has come down to us (*Pro Lege Manilia*). Like the Gabinian law, it was opposed by the whole body of the aristocracy, but was carried triumphantly. The power of Mithridates had been broken by the previous victories of Lucullus, and it was only left to Pompey to bring the war to a conclusion. On the approach of Pompey, Mithridates retreated towards Armenia, but he was defeated by the Roman general; and as Tigranes now refused to receive him into his dominions, Mithridates resolved to plunge into the heart of Colchis, and from thence make his way to his own dominions in the Cimmerian Bosporus. Pompey now turned his arms against Tigranes; but the Armenian king submitted to him without a contest, and was allowed to conclude a peace with the Republic. In 65 Pompey set out in pursuit of Mithridates, but he met with much opposition from the Iberians and Albanians; and after advancing as far as the river Phasis (Faz), he resolved to leave these savage districts. He accordingly retraced his steps, and spent the winter at Pontus, which he reduced to the form of a Roman province. In 64 he marched into Syria, deposed the king Antiochus Asiaticus, and made that country also a Roman province. In 63 he advanced farther south, in order to establish the Roman supremacy in Phœnicia, Coele-Syria, and Palestine. The Jews refused to submit to him, and shut the gates of Jerusalem against him, and it was not till after a siege of three months that the city was taken. Pompey entered the Holy of Holies, the first time that any human being, except the high priest, had dared to penetrate into this sacred spot. It was during the war in Palestine that Pompey received intelligence of the death of Mithridates. (See MITHRIDATES [6].) Pompey spent the next winter in Pontus; and after settling the affairs of Asia, he returned to Italy in 62. He disbanded his army almost immediately after landing at Brundisium, and thus calmed the apprehensions of many, who feared that, at the head of his victorious troops, he would seize upon the supreme power. He did not, however, return to Rome till the following year (51), and he entered the city in triumph on the 30th of September. He had just completed his forty-fifth year, and this was the third time that he had enjoyed the honour of a triumph.

With this triumph the first and most glorious part of Pompey's life may be said to have ended. Hitherto his life had been an almost uninterrupted succession of military glory. But now he was called upon to play a prominent part in the civil commotions of the commonwealth, a part for which neither his natural talents nor his previous habits had in the least fitted him. It would seem that, on his return to Rome, Pompey hardly knew what part to take in the politics of the city. He had been appointed to the command against the pirates and Mithridates in opposition to the aristocracy, and they still regarded him with jealousy and distrust. At the same time, he was not disposed to unite himself to the popular party, which had risen into importance during his absence in the East, and over which Caesar possessed unbounded influence. The object, however, which engaged the immediate attention of Pompey was to obtain from the Senate a ratification for all his acts in Asia, and an assignment of lands which he had promised to his veterans. The Senate, however, glad of an opportunity to put an affront upon a man whom they both feared and hated, resolutely refused to sanction his measures in Asia. This was the unwisest thing the Senate could have done. If they had known their real interests, they would have sought to win Pompey over to their side, as a counterpoise to the growing and more dangerous influence of Caesar. But their short-sighted policy threw Pompey into Caesar's arms, and thus sealed the downfall of their party. Caesar promised to obtain for Pompey the ratification of his acts, and Pompey, on his part, agreed to support Caesar in all his measures. That they might be more sure of carrying their plans into execution, Caesar prevailed upon Pompey to become reconciled to Crassus, with whom he was at variance, but who, by his immense wealth, had great influence at Rome. The three agreed to assist one another against their mutual enemies, and thus was formed the so-called First Triumvirate. This union of the three most powerful men at Rome crushed the aristocracy for the time. Supported by Pompey and Crassus, Caesar was able in his consulship (59) to carry all his measures. Pompey's acts in Asia were ratified, and Caesar's agrarian law, which divided the rich Campanian land among the poorer citizens, enabled Pompey to fulfil the promises he had made to his veterans. In order to cement their union more closely, Caesar gave to Pompey his daughter Iulia in marriage.

Next year (58) Caesar went to his province in Gaul, but Pompey remained in Rome.

While Caesar was gaining glory and influence in Gaul, Pompey was gradually losing the confidence of all parties at Rome. The Senate hated and feared him; the people had deserted him for their favourite Clodius, and he had no other resource left but to strengthen his connection with Caesar. Thus he came to be regarded as the second man in the State, and was obliged to abandon the proud position which he had occupied for so many years. According to an arrangement made with Caesar, Pompey and Crassus were consuls for a second time in 55. Pompey received as his provinces the two Spains, Crassus obtained Syria, while Caesar's government was prolonged for five years more—namely, from the 1st of January, 53, to the end of the year 49. At the end of his consulship Pompey did not go in person to his provinces, but sent his legates, L. Afranius and M. Petreius, to govern the Spains, while he himself remained in the neighbourhood of the city. His object now was to obtain the dictatorship, and to make himself the undisputed master of the Roman world. Caesar's increasing power and influence had at length made it clear to Pompey that a struggle must take place between them, sooner or later. The death of his wife Iulia in 54, to whom he was tenderly attached, broke the link which still connected him with Caesar, and the fall of Crassus in the following year (53), in the Parthian expedition, removed the only person who had the least chance of contesting the supremacy with them. In order to obtain the dictatorship, Pompey secretly encouraged the civil discord with which the State was torn asunder; and such frightful scenes of anarchy followed the death of Clodius at the beginning of 52 that the Senate had now no alternative but calling in the assistance of Pompey, who was accordingly made sole consul in 52, and succeeded in restoring order to the State. Soon afterwards Pompey became reconciled to the aristocracy, and was now regarded as their acknowledged head.

The history of the Civil War which followed is related in the article Caesar. It is only necessary to mention here that after the battle of Pharsalia (48) Pompey sailed to Egypt, where he hoped to meet with a favourable reception, since he had been the means of restoring to his kingdom the father of the young Egyptian monarch. The ministers of the latter, however, dreading Caesar's anger if they received Pompey, and likewise Pompey's resentment if they forbade him to land, resolved to release themselves from their difficulties by putting him to death. They accordingly sent out a small boat, took Pompey on board, and rowed for the shore. His wife and friends watched him from the ship, anxious to see in what manner he would be received by the king, who was standing on the edge of the sea with his troops; but just as the boat reached the shore, and Pompey was in the act of rising from his seat in order to step on land, he was stabbed in the back by Septimius, who had formerly been one of his centurions, and was now in the service of the Egyptian monarch. Pompey was killed on the 29th of September, B.C. 48, and had just completed his fifty-eighth year. His head was cut off, and his body, which was thrown out naked on the shore, was buried by his freedman Philippus, who had accompanied him from the ship. The head was brought to Caesar when he arrived in Egypt soon afterwards, but he turned away from the sight, shed tears at the melancholy death of his rival, and put his murderers to death. Pompey's untimely death excites pity; but no one who has well studied the state of parties at the close of the Roman commonwealth can regret his fall. There is abundant evidence to prove that, had Pompey's party gained the mastery, a proscription far more terrible than Sulla's would have taken place, and Italy and the provinces have been divided as booty among a few profligate and unprincipled nobles. From such horrors the victory of Caesar saved the Roman world. See Merivale, *The Roman Triumvirates* (London, 1887); Froude, *Caesar* (London, 1879); Mommsen, *Hist. of Rome*, vol. iv. (New York, 1877); and Baring Gould, *The Tragedy of the Caesars*, vol. i. (London, 1892).

(11) Cn. Pompēius Magnus, elder son of the triumvir by his third wife, Mucia. In the Civil War in 48 he commanded a squadron of the fleet in the Adriatic Sea. After his father's defeat at Pharsalia, he crossed over to Africa, and, after remaining there a short time, sailed to Spain in 47. In Spain he was joined by his brother Sextus and others of his party, who had fled from Africa after their defeat at Thapsus. Here the two brothers collected a powerful army, but were defeated by Caesar himself at the battle of Munda, fought on the 17th of March, 45. Cneius escaped from the field of battle, but was shortly afterwards taken prisoner and put to death. (12) Sextus Pompēius Magnus, younger son of the triumvir by his third wife, Mucia, was born B.C. 75. After the battle of Pharsalia he accompanied his father to Egypt, and witnessed his murder. On the defeat at Munda and the death of his brother, Sextus lived for a time in concealment in the country of the Lacetani, between the Iberus and the Pyrenees; but when Caesar quitted Spain he collected a body of troops and emerged from his lurking-place. In the civil wars which followed Caesar's death the power of Sextus increased. He obtained a large fleet, became master of the sea, and eventually took possession of Sicily. His fleet enabled him to stop all supplies of corn which were brought to Rome from Egypt and the eastern provinces, and such scarcity began to prevail in the city that the triumvirs were compelled by the popular discontent to make peace with Pompey. This peace was concluded at Misenum in 39, but the war was renewed in the following year. Octavian made great efforts to collect a large and powerful fleet, which he placed under the command of Agrippa. In 36 Pompey's fleet was defeated off Naulochus, with great loss. Pompey himself fled from Sicily to Lesbos and from Lesbos to Asia. Here he was taken prisoner by a body of Antony's troops, and carried to Miletus, where he was put to death (35) probably by command of Antony, though the latter sought to throw the responsibility of the deed upon his officers (Dio Cass. xiv. 9; xlviii. 17; xlix. 11).

Pompēius Festus. See Festus.

Pompēius Trogus. A contemporary of Livy, author of the first Roman general history. He was of Gallic origin; his grandfather received the Roman citizenship from Pompeius in the Sertorian War, and his father served under Caesar, and discharged at the same time the offices of a secretary, an ambassador, and a keeper of the seals. His extensive work in forty-four books was drawn

from Greek sources, and was a universal history entitled *Historiae Philippicae*, because the history of the various peoples was grouped round the Macedonian Empire founded by Philip; it began with Ninus, and reached down to his own time. With the historical narrative there were interwoven interesting descriptions relating to geography, ethnography, and natural science; and he is said to have also composed zoölogical and botanical works, derived largely from Aristotle and Theophrastus. Of the histories we now possess only lists of the contents of the several books (called the *prologi*) and the epitome of Iustinus. See Crohn, *De Trogi apud Antiquos Auctoritate* (Strassburg, 1882); and the article IUSTINUS.

Pompēlōn. Now Pamplona; equivalent to POMPEIOPŎLIS, so called by the sons of Pompey. The chief town of the Vascones in Hispania Tarraconensis (Pliny, *H. N.* iii. 25).

Pompilius. See NUMA.

Pomponia. (1) The sister of T. Pomponius Atticus, and wife of Quintus Cicero, the brother of the orator. He divorced her in B.C. 45. (2) The daughter of T. Pomponius Atticus, also called Caecilia and Attica. She was married to M. Vipsanius Agrippa, and her daughter, Vipsania Agrippina, married Tiberius, the successor of Augustus.

Pomponiāna. See STOECHADES.

Pomponius. (1) LUCIUS POMPONIUS BONONIENSIS, i. e. of Bononia (Bologna), a Latin writer who flourished about B.C. 90. He was the first to raise the hitherto improvised popular plays called *Atellanae* (q. v.) to a higher plane by the introduction of written composition in the metrical forms of the Greeks. He is particularly praised for richness of fancy, liveliness in plays upon words, and readiness in the use of rustic and farcical language (Vel. Pat. ii. 9, § 6; Macrob. *Sat.* vi. 9, § 4; Sen. *Controv.* vii. 18, § 9). About seventy titles of plays by him are mentioned, a productiveness explained by the small compass of the Atellanae as being after-pieces. Some titles point to travesties of mythological subjects, such as the *Agamemnon Suppositus* and the *Armorum Iudicium*. The fragments are edited by Ribbeck in his *Comicorum Romanorum Fragmenta* (Leipzig, 1873). See Ribbeck, *Röm. Dichter.* i. 210.

(2) TITUS POMPONIUS ATTĪCUS. See ATTICUS.

(3) LUCIUS POMPONIUS SECUNDUS. The most important tragedian of the time of the Empire, probably the last who wrote for the stage. He lived under Tiberius and was a partisan of Seianus, after whose fall (A.D. 31) he had to submit to be kept in custody by his brother for six years, until Caligula gave him his freedom. In 44 he was consul; in 50 he fought with success against the Chatti, and received triumphal honours from Claudius. His poetical productions are highly spoken of by Tacitus (*Ann.* xii. 28) and Quintilian (x. 1, § 98). We possess only very scanty remains of his tragedies.

(4) POMPONIUS MELA. See MELA.

(5) SEXTUS POMPONIUS. A distinguished jurist of the first half of the second century A.D. He composed, among other works, a history of law and jurisprudence down to the time of Hadrian, which is frequently quoted in the *Digest*.

(6) POMPONIUS PORPHYRIO. A Roman grammarian, who lived in the first half of the second century A.D., and composed a commentary on Horace, a fragmentary abridgment of which is still preserved, and is edited by Meyer (Leipzig, 1874).

Pomptīnae (or Pontīnae) Palūdes (Ποντίναι Λίμναι). The Pontine Marshes. The name of a low, marshy plain on the coast of Latium, between Circeii and Terracina, said to have been so called after an ancient town Pontia, which disappeared at an early period. The marshes are formed chiefly by a number of small streams, which, instead of finding their way into the sea, spread over this plain. The miasmas arising from these marshes are exceedingly unhealthful in the summer. At an early period they either did not exist at all or were confined to a narrow district. We are told that originally there were twenty-three towns in this plain; and in B.C. 312 the greater part of it must have been free from the marshes, since the censor Appius Claudius constructed the celebrated Via Appia in that year through the plain, which must then have been sufficiently strong to bear the weight of this road. In the time of Augustus there was a navigable canal running alongside of the Via Appia from Forum Appii to the grove of Feronia, which was intended to carry off a portion of the waters of the marshes. Horace embarked upon this canal on his celebrated journey from Rome to Brundisium in B.C. 37. Juvenal (iii. 307) speaks of the marshes as the haunt of highway robbers. See ROMA.

Pomptorius, GAIUS. A Roman who was praetor in B.C. 63 when he aided Cicero in arresting the Allobrogian ambassadors who had been negotiating with the Catilinarian conspirators. In the year 61 he defeated the Allobroges, and in 54 triumphed (Sall. *Cat.* 45).

Pondĕra. See the tables of weights given in the Appendix.

Pondus (σταθμός). A weight used in weighing objects. The form of the weight was very similar to that employed in grocers' shops to-day, as is seen by the accompanying representation of one found at Herculaneum.

Roman Weight. (Herculaneum.)

Poniard. See SICA.

Pons (γέφυρα). A bridge. The earliest bridge mentioned in history is one built at Babylon across the Euphrates. It was of wood, and was constructed in the reign of Queen Nitocris, about B.C. 606 (Herod. i. 178–186). In GREECE the earliest bridges were temporary ones resting on floats like a pontoon, with cables of flax and papyrus tightly strained by windlasses to support the planking. These bridges were called σχεδίαι, and were for military purposes only. Such was the high bridge thrown across the Thracian Bosporus by a Samian Greek named Mandrocles at the order of the Persian king Darius (Herod. iv. 83, 85, 87, 88), and such also, though more carefully built, was that over the Hellespont connecting Sestos and Abydos, built for Xerxes when he invaded Greece in B.C. 480 (Herod. vii. 36). It was not, in fact, until Greece had fallen under Roman influence that permanent bridges were built over its streams, partly because these were so very narrow, and partly perhaps because of the feeling that to span a river with a bridge was an insult to the river-god. Later, however, the Roman engineers erected massive structures of stone of remarkable size, as that over the Acheron which was a thousand feet

in length (Pliny, *H. N.* iv. 1), and that which united the island of Euboea to the mainland.

The ROMANS, in fact, were great bridge-builders, employing brick and concrete, or solid stone masonry fastened by iron clamps and lead. Roman bridges were usually quite narrow in proportion to their length. The central roadway for horses and vehicles was called *iter*. By the side of it ran footpaths, slightly raised and protected on the outside by a low wall. In the most elaborate bridges, such as the Pons Aelius at Rome, statues and columns were set at regular intervals along the parapet, while the main arches were decorated with mouldings. In some cases a tower was built as a defence at each end of the bridge.

Roman Bridge at Rimini.

Under the later Roman Empire the following bridges existed in the city of Rome:

(1) The PONS SUBLICIUS, which got its name from the wooden beams (*sublicae*) of which it was built. Until the second century B.C. this was the only bridge in Rome. It was said to have been built by Ancus Martius, and it connected the main city with the long walls leading from the right bank of the Tiber to the fortress on the Ianiculum. No traces of it now exist.

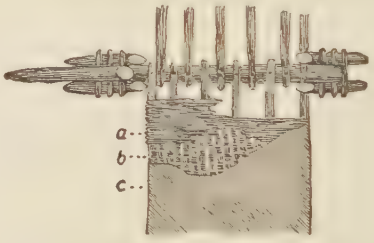
(2) The PONS AEMILIUS, also called the Pons Lapideus, which was the first stone bridge built in Rome. It was begun in B.C. 179 and completed about 146. It spanned the river near the theatre of Marcellus on the site now occupied by the Ponte Rotto.

(3) The PONS FABRICIUS, built in B.C. 62 by L. Fabricius, as is recorded in inscriptions cut across the face of its arches. It unites the Insula Tiberina with the left bank of the river. During the Middle Ages this bridge was called Pons Iudaeus, from its proximity to the Jewish quarter (Ghetto).

(4) The PONS CESTIUS, which unites the Insula Tiberina to the right side of the river. It was probably built in B.C. 46, and an inscription upon it records its restoration in A.D. 370.

(5) The PONS AELIUS, built in A.D. 135 by the emperor Hadrian to connect his Mausoleum with the Campus Martius. (See illustration, p. 1018.)

(6) The PONS AURELIUS, of uncertain date and probably on the site of the modern Ponte Sisto.

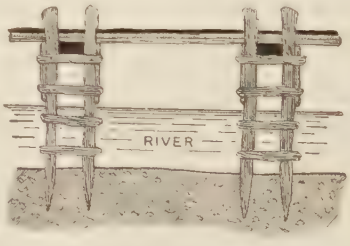


(7) The PONS NERONIĀNUS or VATICĀNUS, begun by Caligula and completed by Nero. The foundations of its piers are still visible in summertime a little below the Pons Aelius.

(8) The PONS MULVIUS, now called Ponte Molle, continues the Via Flaminia across the Tiber. It was built in B.C. 109 by the censor, M. Aemilius Scaurus. On this bridge Cicero caused the arrest of the ambassadors of the Allobroges at the time of Catiline's conspiracy, and in A.D. 312 it was the scene of the rout of Maxentius by Constantine. Under the Empire the Pons Mulvius was a favourite pleasure-resort for the lower classes of Rome (Tac. *Ann.* xiii. 47). Bridges in general were thronged by beggars who importuned the passers-by. See MENDICUS.

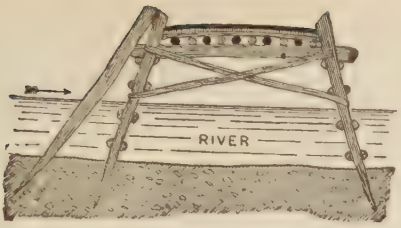
Among the best-preserved stone bridges built by the Romans and still preserved are the bridge at Rimini (Ariminum), shown in the accompanying illustration; the combined aqueduct and bridge near Nîmes, in France (see illustration under NEMAUSUS); the single-arched bridge near Brioude over the Allier; and (in a less complete condition) the bridges at Narni near Rome and at Alcantara across the river Tagus in Spain, this last being 670 feet in length.

The Romans showed great skill in constructing temporary bridges. The most famous of these was the bridge built by Caesar over the Rhine and described by him in a passage (*B. G.* iv. 17) whose translation and explanation are the terror of school-boys, and of some schoolmasters as well. This bridge was finished within ten days, and may be described as follows:



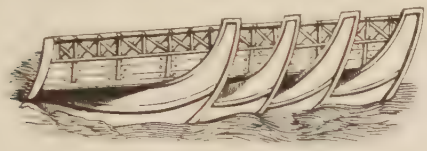
It was supported on a series of double piles, formed of two baulks of timber, each eighteen

Plan of Caesar's Bridge over the Rhine.



(*a*) Rough joists. (*b*) Wattle-work. (*c*) Roadway of earth.

inches square (in section), pointed at one end, and driven into the bed of the river by machines called *fistucae;* they were set in a sloping direction, so as to resist the force of the current. A corresponding parallel row of piles was driven in at a distance of forty feet, thus forming a very wide roadway for the Roman army. The cross-pieces were two feet thick, and were supported by cross struts



Transverse Section of Caesar's Bridge.

so as to diminish the bearing. A little higher up the stream a third row of piles was fixed to support "fenders," to secure the main structure from injury in case the enemy set heavy trees to float down the river and strike against the supports of the bridge.

Longitudinal Section of Caesar's Bridge.

Other temporary bridges were supported by floating casks (*dolia, cupae*) or on boats (Veget. iii. 7; Florus, iii. 5). The accompanying illustration shows one of the latter bridges.

Bridge Supported on Boats. (Column of Trajan.)

See Mayerhöfer, *Die Brücken im alten Rom* (1884); Zippel in the *Jahrbücher für klass. Philologie*, pp. 481 foll. (1886); and Middleton, *Remains of Ancient Rome*, ii. 362–371 (1892).

The word *pons* also denotes any sort of wooden gangway, such as the *pons suffragiorum* through which the voters passed at the Comitia (see illustration under Ovile); and was applied to the gangplank (*ἀποβάθρα*) of a ship whence, by a species of metonymy, the deck itself is called *ponte* in modern Italian and *pont* in French.

Pons. A common name for towns or stations at important fords or places where rivers were crossed. Of these the best known were: (1) Pons Aelius, now Newcastle-on-Tyne in England; (2) Pons Aeni, now Pfünzen in Vindelicia on the river Inn; (3) Pons Aureŏli, now Pontirolo, in Gallia Transpadana, named from Aureolus, one of the Thirty Tyrants, slain here (Aurel. Vict. *Caes.* 33); (4) Pons Mosae, perhaps Maastricht, in the north of Gaul; (5) Pons Sarāvi, now Saarbrück, between the modern Metz and Strassburg.

Pontia. Now Ponza; a rocky island off the coast of Latium, opposite Formiae, taken by the Romans from the Volscians, and colonized B.C. 313. Under the Empire it was used as a place of banishment for State criminals (Suet. *Tib.* 54).

Pontĭcus. A Roman epic poet, the author of a poem on the legends of Thebes. He is best remembered as the friend of Ovid and Propertius (Ovid, *Trist.* iv. 10, 47).

Pontĭfex (*γεφυροποιός*). A member of the highest priestly *collegium* in Rome, to which belonged the superintendence over all sacred observances, whether performed by the State or by private persons. The meaning of the name is uncertain; for the interpretation which follows most obviously from the form of the word, that of "bridge-builder," referring in particular to the sacred bridge on piles (*pons sublicius*) over the Tiber (Varro, *L. L.* v. 83), is open to objection. (See Nettleship, *Lectures and Essays*, p. 27.) It is probable, however, that the pontifex got his name from the duty assigned him of performing rites for the propitiation of river deities on the building of bridges; for a widespread superstition regarded the spanning of a river by a bridge as in itself insulting to the divinity of the stream. See Pons.

The foundation of the college is ascribed to Numa. At first it probably consisted of six patrician members, with the addition of the king, whose place, after the abolition of the monarchy, was transferred to the Pontifex Maximus; from B.C. 300 it was composed of nine members (four patrician and five plebeian), from the time of Sulla of fifteen (seven patrician and eight plebeian); Caesar added another member; and the emperors also raised the number at their pleasure. The office was for life, as was also that of the president. While, in the time of the monarchy, the pontiffs were probably named by the king, under the Republic the college for a long time filled up its own numbers by coöptation, and also appointed the high-pontiff from among its members. From somewhere about B.C. 250 the election of the latter took place in the Comitia Tributa under the presidency of a pontiff, and, from B.C. 103, the other members were also elected in the Comitia out of a fixed number of candidates presented by the college. Under the Empire a preliminary election was held by the Senate, and merely confirmed by the Comitia.

Besides the pontiffs proper, there were also included in the college the *rex sacrorum*, the three higher *flamines* and the three *pontifices minores*, who assisted the pontiffs in transactions relating to sacrifices and in their official business, besides sharing in the deliberations and the banquets of the whole college: these ranked according to length of service. In earlier times an advanced age with freedom from secular offices was necessary for eligibility to the pontificate; the high-pontiff, among other restrictions, was not allowed to leave Italy, was obliged to have a wife without reproach, and might not enter upon a second marriage or see a dead body, much less touch one. As regards his position, he was, as spiritual successor of the king, the sole holder and exerciser of the pontifical power; and his official dwelling was in the king's house, the *regia* of Numa adjoining the Forum, the seat of the oldest State worship. The college existed by his side only as a deliberative and executive body of personal assistants. He appointed to the most important priestly offices of the State—those of *flamen*, of Vestal Virgin, and of *rex sacrorum;* he made public the authoritative decisions of the college. In matters which came within the limits of his official action, he had the right of taking auspices, of holding assemblies of the people, and of publishing edicts. He also exercised a certain jurisdiction over the persons subject to his high-priestly power, especially the flamens and Vestals, over whom his authority was that of an actual father. Owing to the great importance of the office, the emperors from the time of Augustus undertook it themselves until the year 382. As regards the functions of the college, besides performing a number of special sacrifices in the service of the household gods, they exercised (as already mentioned) a superintendence over the whole domain of the religious services recognized by the State, public and private. In all doubts which arose concerning the religious obligations of the State towards the gods, or concerning the form of any religious offices which were to be undertaken, their

MARSHALL HIGH LIBRARY

opinion was asked by the Senate and by the other secular bodies, which were obliged unhesitatingly to follow it. In the various religious transactions, expiatory offerings, vows, dedications, consecrations, solemn appropriations, undertaken on behalf of the State, their assistance was invited by the official bodies, in order that they might provide for the correct performance, especially by dictating the prayers. The knowledge of the various rites was handed down by the *libri pontificii*, which were preserved in the official dwelling of the high-pontiff and kept secret. These included the forms of prayer, the rules of ritual for the performance of ceremonial observances, the *acta pontificum*—i. e. the records relating to the official actions of the college—and the *commentarii pontificum*—i. e. the collection of opinions delivered, to which they were as a rule obliged to have recourse when giving new ones.

An important and, indeed, universal influence was exercised by the pontiffs, not only on religious, but also on civic life, by means of the regulation of the calendar, which was assigned to them as possessing technical knowledge of the subject, and by means of their superintendence over the observance of the holidays. Owing to the character of the Roman reckoning of the year, it was necessary from time to time to intercalate certain days, with a view to bringing the calendar into agreement with the actual seasons to which the festivals were originally attached; and special technical knowledge was needed, in order to be sure on what day the festivals fell. This technical knowledge was kept secret by the pontiffs as being a means of power. It was for the month actually current that they gave information to the people as to the distribution of the days, the festivals falling within the month, and the lawful and unlawful days (*fasti* and *nefasti;* see DIES) for civil and legal transactions. In B.C. 304 the calendar of the months was made public by Gnaeus Flavius; but the pontiffs still retained the right of regulating the year by intercalations, and thereby the power of furthering or hindering the aims of parties and individuals by arbitrary insertion of intercalary months. This they kept until the final regulation of the year introduced by Caesar as high-pontiff in B.C. 46. Closely connected with the superintendence of the calendar was the keeping of the lists of the yearly magistrates, especially of the consuls, since it was by their names that the years were dated, as well as the keeping of the yearly chronicle.

As experts in the law of ritual, the pontiffs had the superintendence over many transactions of private life, so far as ceremonial questions were connected with them, such as the conclusion of marriages, adoption by means of arrogation, and burial. Even upon the civil law they had originally great influence, inasmuch as they alone were in traditional possession of the solemn legal formulae, known as the *legis actiones*, which were necessary for every legal transaction, including the settlement of legal business and the forms for bringing lawsuits. They even gave legal opinions, which obtained recognition in the courts as customary law by the side of the written law, and grew into a second authoritative source of Roman law. Until the establishment of the praetorship (B.C. 366), a member of the college was appointed every year to impart information to private persons concerning the legal forms connected with the formulating of plaints and other legal business. The *legis actiones* were made public for the first time by the above-mentioned Flavius at the same time as the calendar. See Bouché-Leclercq, *Les Pontifes de l'Ancienne Rome* (Paris, 1871); Mommsen, *Röm. Staatsrecht*, ii. 18–70; and the article IURISPRUDENTIA.

Pontificium Ius. See IUS.

Pontius. (1) A special name of the sea-god Glaucus (q. v.). (2) GAIUS, a Samnite general who defeated the Romans in B.C. 321. (3) AQUĬLA, a friend of Cicero. He was one of the assassins of Iulius Caesar. He fell at the battle of Mutina, B.C. 43. (4) PILĀTUS. The sixth procurator of Iudaea (Tac. *Ann.* XV. 44). He held office for ten years under Tiberius, from A.D. 26 to 36, and during this period Christ was put to death. His tyrannical conduct in office and the consequent complaints made by the Samaritans led Vitellius, the governor of Syria, to depose him and send him to Rome for trial. He committed suicide in the reign of Caligula (Euseb. *H. E.* ii. 7). (5) TELESĪNUS. A Samnite, and commander of a Samnite army, with which he fought against Sulla. He was defeated by Sulla in a hard-fought battle near the Colline Gate, B.C. 82. He fell in the fight; his head was cut off, and carried under the walls of Praeneste, to let the younger Marius know that his last hope of succour was gone (Vell. Pat. ii. 27). (6) Brother of the preceding, was shut up in Praeneste with the younger Marius, when his brother was defeated by Sulla. After the death of the elder Pontius, Marius and Telesinus, finding it impossible to escape from Praeneste, resolved to die by one another's hands. Telesinus fell first, and Marius put an end to his own life or was slain by his slave. See MARIUS.

Ponto. (1) A large flat-bottomed boat used in ferrying cattle, soldiers, or passengers over a river (Caes. *B. C.* iii. 29). (2) A floating bridge or pontoon (Gell. x. 25). For illustrations, see PONS, pp. 1298, 1299.

Ponto. (Roman Painting.)

Pontus (Πόντος). The most northeasterly district of Asia Minor, along the coast of the Euxine, east of the river Halys, having originally no specific name, was spoken of as the country ἐν Πόντῳ, "on the Pontus" (Euxinus), and hence acquired the name of Pontus, which is first found in Xenophon's *Anabasis*. The name first acquired a political importance through the foundation of a new kingdom in it, about the beginning of the fourth century B.C., by Ariobarzanes I. This kingdom reached its greatest height under Mithridates VI., who for many years carried on war with the Romans. (See MITHRIDATES VI.) In A.D. 62 the country was constituted by Nero a Roman province. It was divided into the three districts of PONTUS GALATĬCUS in the west, bordering on Galatia; P. POLEMONIACUS in the centre, so called from its capital POLEMONIUM; and P. CAPPADOCIUS in the east, bordering on Cappadocia (Armenia Minor). Pontus was a mountainous country—wild and barren in the east, where the great chains approach the Euxine; but in the west watered by the great rivers Halys and Iris, and their tributaries, the valleys of which,

as well as the land along the coast, are extremely fertile. The eastern part was rich in minerals, and contained the celebrated iron mines of the Chalybes. The inhabitants of Pontus were called generically Leucosyri (q. v.). See Meyer, *Geschichte d. Königr. Pontos* (Leipzig, 1879).

Pontus Euxīnus (Πόντος Εὔξεινος), or simply **Pontus** (Πόντος). Now the Black Sea. The great inland sea enclosed by Asia Minor on the south, Colchis on the east, Sarmatia on the north, and Dacia and Thracia on the west, and having no other outlet than the narrow Bospŏrus Thracius in its southwestern corner. Its length is about 700 miles, and its breadth varies from 400 to 160. The Argonautic legends show that the Greeks had some acquaintance with this sea at a very early period. It is said that they at first called it Ἄξενος ("inhospitable"), from the savage character of the peoples on its coast and from the supposed terrors of its navigation, and that afterwards, on their favourite principle of euphemism (i. e. abstaining from words of evil omen), they changed its name to Εὔξενος (Ion. Εὔξεινος), "hospitable." The Greeks of Asia Minor, especially the people of Miletus, founded many colonies and commercial emporiums on its shores.

Poop. See Navis; Puppis.

Popa (*θύτης*). The priest or attendant who at a sacrifice led the victim to the altar and there struck it a blow with a hammer or the back of an axe; whereas the person who slew it with a knife was called *cultrarius* (q. v.). The popa wore a short kilt, being otherwise unclothed (Suet. *Calig.* 32). See Sacrificium.

Popănum (*πόπανον*). A flat, round cake used in the sacrifices (Juv. vi. 541).

Popillius Laenas. See Laenas.

Popīna (= *coquina*, showing the Umbro-Oscan substitution of *p* for *q* and *c*). A Roman cookshop. See Caupona.

Poplicŏla. See Publicola.

Poplifugia. The festival of the flight of the people when the troops of Fidenae, Ficuleae, and other neighbouring communities appeared in arms against Rome. As this attack followed closely after the departure of the Gauls, the Romans were panic-stricken and fled (Varro, *L. L.* vi. 18). It was celebrated on the fifth of July. Macrobius (*Sat.* iii. 2) supposes the festival to refer to the flight of the Romans before the Etruscans, and Dionysius (ii. 76) thinks it commemorated the panic that prevailed when Romulus was translated to heaven. See Marquardt, *Staatsverwaltung*, iii. 325.

Poppaea Sabīna. See Sabina.

Poppaeus Sabīnus. See Sabinus.

Populāres. See Nobiles.

Populonia or **Populonium.** An ancient town of Etruria, situated on a lofty hill, sinking abruptly to the sea, and forming a peninsula. It was destroyed by Sulla in the Civil Wars, but parts of its walls still exist.

Populus. A collective name for the whole body of Roman citizens of whatever rank or class. Originally it is likely that only the patrician Romans were regarded as fully possessed of citizenship; but from the time of the establishment of the Republic (B.C. 507) the plebeians were also restored as a part of the *populus Romanus*. See Civitas; Comitia; Patricii; Plebs; Quirites; Suffragium.

Porca. A ridge between the furrows of ploughed land (Varro, *R. R.* i. 29).

Porcelain. See Murrha.

Porch. See Porticus; Pronaos.

Porcia. (1) The sister of Cato Uticensis, married L. Domitius Ahenobarbus, consul B.C. 54, who was slain in the battle of Pharsalia. She died in 46. (2) The daughter of Cato Uticensis by his first wife Atilia. She was married first to M. Bibulus, consul B.C. 59, to whom she bore three children. Bibulus died in 48; and in 45 she married M. Brutus, the assassin of Iulius Caesar. She inherited all her father's republican principles, and likewise his courage and firmness of will. She induced her husband, on the night before the fifteenth of March, to disclose to her the conspiracy against Caesar's life, and she is reported to have wounded herself in the thigh in order to show that she had a courageous soul, and could be trusted with the secret. She put an end to her own life after the death of Brutus in 42. The common tale was, that her friends, suspecting her design, had taken all weapons out of her way, and that she therefore destroyed herself by swallowing live coals (Plut. *Brut.* 53). The real fact may have been that she suffocated herself by the vapour of a charcoal fire, which, as we know, was a frequent means of self-destruction among the Romans.

Porcius Cato. See Cato.

Porcius Festus. See Festus.

Porcius Latro. See Latro.

Porcius Licĭnus. See Licinus.

Pordoselēnē (Πορδοσελήνη). The largest of the islands called Hecatonnesi near Lesbos (Pliny, *H. N.* v. 37).

Porfirius (Porphyrius) Optatiānus, Publilius. A Latin poet, who composed, about A.D. 330, a series of short poems in praise of Constantine, constructed in a highly artificial manner, in that the lines in each poem contain exactly the same number of letters. By this composition he obtained his recall from banishment, and won the favour of the emperor. The commendatory letter of Constantine as well as the thanks of the poet have come down to us with the poem. Edited by L. Müller (Leipzig, 1877).

Poristae (*πορισταί*). A financial board at Athens regarding whose functions little is known; but they probably had to do with raising extraordinary supplies (*πόρους πορίζειν*), i. e. a committee of ways and means. They are classed by Antiphon (*De Chor.* 14) with the *poletae* (q. v.).

Pork. See Diaeteta; Victus.

Pornae. See Meretrix.

Porpé (*πόρπη*). The pin of a buckle or clasp; also the clasp itself. See Fibula.

Porphyrion (Πορφυρίων). (1) One of the Giants. He tried to throw the island of Delos upon the gods, and was destroyed by Zeus at Heracles. See Gigantes. (2) See Pomponius.

Porphyrius (Πορφύριος). (1) A Greek scholar and philosopher; in the latter capacity a votary of Neoplatonism. He was born A.D. 233 at Batanaea, in Syria, received his education at Tyre, and afterwards studied grammar, rhetoric,

and philosophy at Athens with Longinus, who, instead of his Syrian name *Malchus* ("king"), gave him the Greek name Porphyrios ("clad in royal purple"). The fame of the Neoplatonist Plotinus (q. v.) drew him in 263 to Rome, where, after some initial opposition, he for six years enthusiastically devoted himself to the study of the Neoplatonic philosophy. Being attacked by a dangerous melancholy, the result of overwork, he went, on the advice of Plotinus, to Sicily, whence after five years he returned to Rome, strengthened in mind and body. Here, until his death (304), he taught philosophy in the spirit of Plotinus, especially by bringing the teaching of his master within the reach of general knowledge by his clear and attractive exposition. His most important scholar was Iamblichus. A man of varied culture, Porphyrius was particularly prolific as an author in the domain of philosophy, grammar, rhetoric, arithmetic, geometry, and music; however, most of his works, including the most important, are lost, among them a treatise against the Christians, in fifteen books, which was publicly burned under Theodosius II. (435). We have to lament the loss of his history of Greek philosophy before Plato, in four books, of which we now possess only the (certainly uncritical) life of Pythagoras, and that not complete. Besides this there are preserved a life of Plotinus; a compendium of the system of Plotinus, in the form of aphorisms; a work on abstaining from animal food (*De Abstinentia*), in four books, from the Pythagorean point of view, valuable for its fulness of information on philosophy, and on the religions, forms of ritual, and customs of various peoples; an introduction to the *Categories* of Aristotle, and a commentary on the same, in the form of questions and answers; a compendium of his own practical philosophy in the form of a letter to Marcella, a widow without property, and with seven children, whom Plotinus married in his old age on account of her enthusiasm for philosophy; scholia on Homer, discussions on a number of Homeric questions, an allegorical interpretation of the Homeric story of the grotto of the nymphs in the *Odyssey*, and a commentary on the *Harmonics* of Ptolemy. See the monograph by Bouillet (Paris, 1864). (2) See PORFIRIUS.

Porridge. See PULS.

Porrĭma. See CARMENTA.

Porsĕna or **Porsenna,** LARS. A king of the Etruscan town of Clusium, who marched against Rome at the head of a vast army, in order to restore Tarquinius Superbus to the throne. He took possession of the hill Ianiculum, and would have entered the city by the bridge which connected Rome with the Ianiculum, had it not been for the superhuman prowess of Horatius Cocles, who kept the whole Etruscan army at bay while his comrades broke down the bridge behind him. (See COCLES.) The Etruscans proceeded to lay siege to the city, which soon began to suffer from famine. Thereupon a young Roman, named C. Mucius, resolved to deliver his country by murdering the invading king. He accordingly went over to the Etruscan camp, but, ignorant of the person of Porsena, killed the royal secretary instead. Seized, and threatened with torture, he thrust his right hand into the fire on the altar, and there let it burn, to show how little he heeded pain. Astonished at his courage, the king bade him depart in peace; and Scaevola, as he was henceforward called, told him, out of gratitude, to make peace with Rome, since three hundred noble youths had sworn to take the life of the king, and he was the first upon whom the lot had fallen. Porsena thereupon made peace with the Romans and withdrew his troops from the Ianiculum after receiving twenty hostages from the Romans. Such was the tale by which Roman vanity concealed one of the earliest and greatest disasters of the city (Livy, ii. 9–15). The real fact is, that Rome was completely conquered by Porsena. This is expressly stated by Tacitus (*Hist.* iii. 72), and is confirmed by other writers (Dionys. v. 34). Pliny tells us that so thorough was the subjection of the Romans that they were expressly prohibited from using iron for any other purpose but agriculture (*H. N.* xxxiv. 139). The Romans, however, did not long remain subject to the Etruscans. After the conquest of Rome, Aruns, the son of Porsena, proceeded to attack Aricia, but was defeated before the city by the united forces of the Latin cities, assisted by the Greeks of Cumae. The Etruscans appear, in consequence, to have been confined to their own territory on the right bank of the Tiber, and the Romans to have availed themselves of the opportunity to recover their independence. Remains of the magnificent tomb of Porsena still exist at Chiusi, the ancient Clusium. See TARQUINIUS.

Porson, RICHARD. The greatest of England's Greek scholars, born on Christmas Day, 1759. He was educated at Eton and at Trinity College, Cambridge, of which college he was elected a Fellow in 1782. He wrote several remarkable criticisms for *Maty's Review*, and in 1790 published *Notae Breviores ad Toupii Emendationes in Suidam*, which made his name known upon the Continent. In 1792 he became Regius Professor of Greek in the University of Cambridge. He published editions of Aeschylus (1795), of the *Hecuba*, *Orestes*, *Phoenissae*, and *Medea* of Euripides (1797–1801), and collated the Harleian MS. of the *Odyssey* for the Grenville Homer. In 1806 he added to his duties the care of the library of the London Institution, and two years later (September 25, 1808) died of apoplexy, and was buried in the chapel of Trinity College. After his death were published his *Adversaria* (1812), his notes on Aristophanes (1820), Pausanias (1820), Photius (1822), and Suidas (1834), besides *Tracts and Criticisms* (1815).

Porson was a man of astonishing erudition, a marvellous memory, great critical acuteness, and good sense, but all these qualities were marred by ill-health, indolence, and an incurable passion for strong drink amounting almost to insanity. His life is written by Watson (1861), and his correspondence has been edited by Luard (Cambridge, 1867).

Porta (πύλη). The gate of a city as opposed to *ianua* or *ostium*, the door of a house. City gates from very early times were flanked by bastions, which ultimately gave way to flanking towers. Additional security was given by double gates, an outer and an inner, with a space between. In some cities the gates had two passages close together, one for carriages entering and one for those leaving the place. There were also, as at Pompeii, small side-passages for persons on foot. Gateways usually had a small chamber on one side or both, for the use of the guard or porter, and re-

sembling the *cella ostiaria* in a private house (Polyb. viii. 20, 23, 24). It was called πυλών. The contrivances for fastening a gate were about the same as those used for doors, only larger in proportion. See IANUA; and for illustrations of ancient gates the articles FALERII; MYCENAE; THORICUS; TREVIRI.

Porta Nigra. See TREVIRI.

Portentum. See PRODIGIUM.

Porthāon (Πορθάων). The son of Agenor and Epicasté. He was king of Pleuron and Calydon, in Aetolia, and married Euryté, by whom he had Agrius, Alcathoüs, Leucopeus, Melas, Oeneus, and Steropé. See OENEUS.

Porthmus (Πόρθμος). Now Porto Bufalo; a harbour in Euboea, opposite to Oropus (Pliny, *H. N.* iv. 64).

Portĭcus. The Roman name for a colonnade. The porticoes of ancient Rome must not be regarded as isolated structures, but as really forming a great connected maze of sheltered walks, in which one could cross, for instance, the whole Campus Martius, or go in a direct line from the Forum Boarium to the Mausoleum of Hadrian, a distance of more than two miles. Professor Lanciani estimates the space covered by the twelve larger porticoes of the Campus Martius as 4600 square yards, the surface protected from sun and rain as 28,000 square yards, and the total area of the porticoes, including the central gardens, as 100,000 square yards. These porticoes were decorated with columns of marble adorned with gilded bronze, and their pavements were inlaid with jasper and porphyry. Each one contained a gallery of sculpture and a collection of paintings, while the space which they enclosed was beautified by gardens, lakes, groves, fountains, and water-falls. There were also museums within their walls, such as one of natural history (in the Portico of the Septa), of Oriental curiosities (in the same), and of wigs and specimens of hair-dressing (in the Portico of Marcius Philippus). See Lanciani, *Ancient Rome*, ch. iv. (Boston, 1888); and STOA.

Portiscŭlus. A staff or truncheon used by the officer in charge of a ship's crew, to beat time to the song (*celeusma*) sung by them as they rowed (Plaut. *Asin.* iii. 1, 14).

Portĭtor (ἑλλιμενιστής). A custom-house officer. See PORTORIUM; PUBLICANI.

Portland Vase. See GEMMA.

Portorium. The customs-duty levied by the Romans upon imports and exports; it was introduced as early as the time of the kings, and was generally leased to *publicani* (q. v.). In B.C. 60 it was abolished for Italy, but was re-introduced by Caesar for foreign goods, and after that time always continued to exist. Free and allied cities were, in earlier times, allowed to levy the customs for their own territory, but from these Romans were to be exempt. Under the emperors customs were levied not only at the frontier of the Empire, but also at the frontiers of the several provinces or of combinations of provinces united in one excise-district. The percentage on the purchasing price of articles was different in different districts. Besides this, export duties were levied on corn, oil, wine, salt, iron, and gold. See VECTIGALIA.

Portŭla (πυλίς, ῥινοπύλη). A wicket-gate, which opened in a valve of a larger one, to admit persons after the gates had been regularly closed (Livy, xxv. 9).

Portūnus or **Portumnus.** The Roman god of harbours, though originally of doors and gates (*portae*). Like Ianus (q. v.), the god of coming in and going out, he was represented with a key, and was perhaps only a personification of one attribute of Ianus. He had a special *flamen* in Rome (*Portunalis*), and at the harbour on the Tiber he had a temple, where a festival, the PORTUNALIA, was held in his honour every year on August 17th. In later times he was identified with the Greek Palaemon (q. v.).

Porus (Πῶρος). A king of the part of India lying east of the Hydaspes River. He was conquered by Alexander the Great in B.C. 327 in a very fiercely waged battle. Porus displayed great courage in the contest, and his reply to Alexander is justly celebrated. When Alexander asked him how, as a prisoner, he desired to be treated, he answered proudly, "Like a king." On this, his conqueror restored his dominions and gave him additional territory. In 321 he was put to death by the Greek general Eudemus (Curt. viii. 14; Arrian, *Anab.* v. 18; Plut. *Alex.* 60).

Posca (ὀξύκρατον). A drink of vinegar, water, and egg beaten together, much drunk by the lower classes at Rome and by the soldiers, and suggesting the New England "switchel" (Suet. *Vitell.* 12). It was this drink that was given to the Saviour on a sponge, as he hung upon the cross.

Poseidon (Ποσειδῶν). The god of the sea and the flowing waters—a name connected with the root of πότος, πόντος, and πόταμος. He was the son of Cronos and Rhea and dwelt in the sea, over which he ruled. With his brazen-hoofed horses he was said to ride over the waves, which became smooth as he approached, and the monsters of the deep recognized him and played around his chariot. Generally he yoked his horses to his chariot himself, but sometimes he was assisted by Amphitrité. Although he generally dwelt in the sea, still he also appears at Olympus in the assembly of the gods. Poseidon, in conjunction with Apollo, is said to have built the walls of Troy for Laomedon. (See ILIUM; TROIA.) Laomedon refused to give these gods the reward which had been stipulated, and even dismissed them with threats. Poseidon, in consequence, sent a marine monster, which was on the point of devouring Laomedon's daughter, when it was killed by Heracles; and he continued to bear an implacable hatred against the Trojans. He sided with the Greeks in the war against Troy, sometimes witnessing the contest as a spectator from the heights of Thrace, and sometimes interfering in person, assuming the appearance of a mortal hero and encouraging the Greeks, while Zeus favoured the Trojans. In the *Odyssey*, Poseidon appears hostile to Odysseus, whom he prevents from returning home in consequence of his having blinded Polyphemus, a son of Poseidon by the nymph Thoösa.

Being the ruler of the sea (the Mediterranean), he is described as gathering clouds and calling forth storms, but at the same time he has it in his power to grant a successful voyage and save those who are in danger; and all other marine divinities are subject to him. As the sea surrounds and holds the earth, he himself is described as the god

Poseidon. (Dolce Gem.)

who holds the earth (γαιήοχος), and who has it in his power to shake the earth (ἐνοσίχθων, κινητὴρ γᾶς). He was further regarded as the creator of the horse. It is said that when Poseidon and Athené disputed as to which of them should give the name to the capital of Attica, the gods decided that it should receive its name from the deity who should bestow upon man the most useful gift. Poseidon then created the horse, and Athené called forth the olive-tree, in consequence of which the honour was conferred upon the goddess. According to others, however, Poseidon did not create the horse in Attica, but in Thessaly, where he also gave the famous horses to Peleus. Poseidon was accordingly believed to have taught men the art of managing horses by the bridle, and to have been the originator and protector of horse-races. Hence he was also represented on horseback, or riding in a chariot drawn by two or four horses, and is designated by the epithets ἵππιος, ἵππειος, or ἵππιος ἄναξ. He even metamorphosed himself into a horse for the purpose of deceiving Demeter. The symbol of Poseidon's power was the trident, or a spear with three points, with which he used to shatter rocks, to call forth or subdue storms, to shake the earth, and the like. Herodotus states that the name and worship of Poseidon were brought into Greece from Libya; but he was probably a divinity of Pelasgian origin, and originally a personification of the fertilizing power of water, from which the transition to regarding him as the god of the sea was not difficult. The following legends respecting Poseidon deserve to be mentioned. In conjunction with Zeus he fought against Cronos and the Titans; and in the contest with the giants he pursued Polybotes across the sea as far as Cos, and there killed him by throwing the island upon him. He further crushed the Centaurs when they were pursued by Heracles, under a mountain in Leucosia, the island of the Sirens. He sued, together with Zeus, for the hand of Thetis; but he withdrew when Themis prophesied that the son of Thetis would be greater than his father. When Ares had been caught in the wonderful net by Hephaestus, the latter set him free at the request of Poseidon; but the latter god afterwards brought a charge against Ares before the Areopagus for having killed his son Halirrhothius. At the request of Minos, king of Crete, Poseidon caused a bull to rise from the sea, which the king promised to sacrifice; but when Minos treacherously concealed the animal among a herd of oxen, the god punished Minos by causing his wife Pasiphaë (q. v.) to fall in love with the bull.

Poseidon was married to Amphitrité, by whom he had three children, Triton, Rhodé, and Benthesicymé; but he had also a vast number of children by other divinities and mortal women. His worship extended over all Greece and Southern Italy, but he was more especially revered in Peloponnesus and in the Ionic towns on the coast. The sacrifices offered to him generally consisted of black and white bulls; but wild boars and rams were also sacrificed to him. Horse and chariot races were held in his honour on the Corinthian Isthmus. The Panionia, or the festival of all the Ionians near Mycalé, was celebrated in honour of Poseidon. In works of art, Poseidon may be easily recognized by his attributes, the dolphin, the horse, or the trident, and he was frequently represented in groups along with Amphitrité, Tritons, Nereïds, dolphins, the Dioscuri, Palaemon, Pegasus, Bellerophontes, Thalassa, Ino, and Galené. His figure does not present the majestic calm which characterizes his brother Zeus; but as the state of the sea is varying, so also is the god represented sometimes in violent agitation and sometimes in a state of repose. For the Roman god corresponding to Poseidon, see NEPTUNUS.

Posidippus (Ποσείδιππος). (1) One of the most eminent poets of the New Comedy at Athens, a native of Cassandrea, in Macedonia. He began to exhibit for the first time in the third year after the death of Menander, or in B.C. 289. Of his pieces, as many as forty are mentioned by name, but only fragments of them are preserved. It was probably in imitation of one of these that the *Menaechmi* of Plautus was written. (2) An Alexandrian writer of epigrams. Twenty-two of his poems are preserved in the Greek Anthology.

Posidium (Ποσείδιον). (1) A promontory on the coast of Lucania. (2) A promontory of Chios. (3) A promontory of Caria between Miletus and the Iassian Gulf. (4) A promontory of Bithynia.

Posidonia. See PAESTUM.

Posidonium (Ποσειδώνιον) or **Posidium**. A promontory on the southwestern coast of Pellené, in Macedonia.

Posidonius (Ποσειδώνιος). (1) A Stoic philosopher, a native of Apamea in Syria, and the last of the Stoics who belongs to the history of the Greek philosophy. He taught at Rhodes with such great success that Pompey came there, on his return

from Syria, after the close of the Mithridatic War, for the purpose of attending his lectures. When the Roman commander arrived at his house, he forbade his lictor to knock, as was usual, at the door; the hero, who had subdued the Eastern and Western world, paid homage to philosophy by lowering the fasces at the gate of Posidonius (Cic. *Tusc.* ii. 25; Pliny, *Epist.* vi. 30). Posidonius studied natural as well as moral science; and, in order to represent the celestial phenomena, he constructed a kind of *planetarium*, by means of which he exhibited the apparent motions of the sun, moon, and planets round the earth (Cic. *N. D.* ii. 34). Cicero says that he himself attended upon this philosopher (*N. D.* i. 3). Posidonius was also known as an historical writer, having composed a supplement to the history of Polybius (Ἱστορία τῶν μετὰ Πολύβιον). It appears to have extended to B.C. 63, or the close of the Mithridatic War. This work is lost, but was one of Plutarch's sources. The fragments are edited by Bake (Leyden, 1810). (2) An astronomer and mathematician of Alexandria. He was the disciple of Zeno, and contemporary with, or else a short time posterior to, Eratosthenes. He probably flourished about B.C. 260. He is particularly celebrated on account of his having employed himself in endeavouring to ascertain the measure of the circumference of the earth by means of the altitude of a fixed star.

Postal Service. See CURSUS PUBLICUS.

Postĭcum. A back-door (Hor. *Epist.* v. 31).

Postilēna (ὑπουρίς). A crupper of wood or leather, encircling the hindquarters of a horse or pack-animal. The breast-strap was called *antilena* (Plaut. *Cas.* i. 1, 36).

Postis. See IANUA.

Postliminium, Postliminii Ius. When a Roman citizen during war came into the possession of an enemy, he sustained a *diminutio capitis maxima* (see CAPUT), and all his civil rights were in abeyance. Being captured by the enemy, he became a slave; but his rights over his children, if he had any, were not destroyed, but were said to be in abeyance (*pendere*) by virtue of the *ius postliminii:* when he returned, his children were again in his power; and if he died in captivity, they became *sui iuris*. Sometimes by an act of the State a man was given up bound to an enemy, and if the enemy would not receive him, it was a question whether he had the *ius postliminii*. This was the case with Sp. Postumius, who was given up to the Samnites, and with C. Hostilius Mancinus, who was given up to the Numantines, but the better opinion was that they had no *ius postliminii*, and Mancinus was restored to his civil rights by a special law (Cic. *De Orat.* i. 40, 141; *Off.* iii. 30, 109; *Top.* 8, 36; *Pro Caec.* 34, 98). It appears that the *ius postliminii* was founded on the fiction of the captive having never been absent from home—a fiction which was of easy application, for, as the captive during his absence could not perform any legal act, the interval of captivity was a period of legal non-activity, which was terminated on his reappearance. See Bechmann, *Das Ius Postliminii und die Fictio Legis Corneliae* (Erlangen, 1872).

Postsignāni. Soldiers stationed immediately behind the standard (*signum*) (Front. *Strat.* ii. 3, 17).

Postumia Gens. One of the oldest patrician gens at Rome, whose most distinguished family was that of Albus or Albinus.

Postŭmus, M. Cassiānus Latinius, the second of the so-called Thirty Tyrants. While acting as governor of Gaul under Valerian in A.D. 258, he caused himself to be proclaimed emperor, and, being a very able ruler, maintained himself in power in Gaul for nearly ten years; but was slain by his own soldiers in A.D. 267, Labienus being proclaimed in his place (Trebell. Poll. *Trig. Tyr.* ii.).

Postverta or **Postvorta.** A goddess presiding over childbirth who was invoked when the infant was born feet first (Varro, *ap.* Gell. xvi. 16, 4). See ANTEVORTA; CARMENTA.

Potămi (Ποταμοί) or **Potămus** (Ποταμός). An Attic deme belonging to the tribe Leontis. Here the tomb of Ion was shown (Pausan. i. 31, 3).

Potentia. (1) A town of Picenum, on the river Flosis. (2) A town of Lucania.

Potestas. See PATRIA POTESTAS.

Potidaea (Ποτίδαια). A town in Macedonia, on the narrow isthmus of the peninsula Pallené, was a colony of the Corinthians. It afterwards became tributary to Athens, and its revolt from the latter city, in B.C. 432, was one of the immediate causes of the Peloponnesian War (q. v.). It was taken by the Athenians in 429, after a siege of more than two years, its inhabitants expelled, and their place supplied by Athenian colonists. In 356 it was taken by Philip, who destroyed the city and gave its territory to the Olynthians. Cassander built a new city on the same site, to which he gave the name of CASSANDRĒA, and which soon became the most flourishing city in all Macedonia.

Potitii. See PINARIA GENS.

Potniae (Ποτνιαί). A small town in Boeotia, on the Asopus. The adjective *Potniades* is an epithet frequently given to the mares which tore to death Glaucus of Potniae. See GLAUCUS.

Pott, August Friedrich. A great philologist, born at Nettelrede in Hanover, November 14, 1802. He received his philological training at Göttingen and Berlin, and in 1833 became Professor Extraordinarius of Linguistic in the University of Halle, and in 1839 Professor Ordinarius. He died at Halle, July 5, 1887. His principal works are the following: *Etymologische Forschungen auf dem Gebiet der indogermanischen Sprachen*, in 2 vols. (1833–36; 2d ed. in 6 vols. 1859–76); *Die Ziegeuner in Europa und Asien*, 2 vols. (1844–45); *Die Personennamen* (1853); *Die Ungleichheit der menschlichen Rassen vom Sprachwissenschaftlichen Standpunkt* (1856); *Doppelung als eins der wichstigsten Bildungsmittel der Sprache* (1862); *Anti-Kaulen oder mythische Vorstellungen*, etc. (1863); and *Die Sprachverschiedenheit in Europa* (1868).

In the development of language-study on a scientific basis, Pott stands next to Franz Bopp (q. v.), and in the vastness of his erudition and sympathetic insight was even his superior. His knowledge of anthropology was very effective in checking rash generalizations and hasty conclusions on the part of enthusiastic followers of the new science of comparative philology; and his *Etymologische Forschungen* was long a treasury of suggestive thought to students, though marred by

lack of order and systematic presentation. See PHILOLOGIA.

Pottery. See FICTILÉ; VAS.

Pouch. See BULGA.

Poultry. See GALLINA.

Praaspa. See PHRAATA.

Practŏres (*πράκτορες*). Subordinate officers at Athens, probably ten in number, who collected the fines and penalties (*ἐπιβολαί, τιμήματα*) imposed by magistrates and courts of justice, and payable to the State. See TIMEMA.

Praecia. A crier who went before the Flamens on holy days, ordering the people to cease from work while a procession was passing, lest the priests should see them, and thus the rites be profaned (Fest. s. h. v.).

Praecinctiōnes. See AMPHITHEATRUM; THEATRUM.

Praeco. The Latin term for a public crier, such as those who were employed in private life, especially at auctions. Their profession was eminently lucrative, but was not considered at all respectable. Similarly those employed by the State ranked as the most insignificant of its paid servants. (See APPARITOR.) Their duties were to summon the meetings of the people and the Senate, to command silence, to proclaim aloud the proposals under consideration, to announce the result of the individual votes, and also the final result; in legal proceedings, to cite the parties to the case, their counsel, and witnesses, to announce the close of the proceedings, and the jury's dismissal; to invite the people to funeral feasts and to games, and to assist at public auctions and other sales, etc. Consuls, praetors, and censors had three decuries of such attendants; quaestors, and probably also tribunes and aediles, one. They also attended on extraordinary magistrates and on governors of provinces. The term praeco was also applied to an auctioneer (Hor. *A. P.* 419; Cic. *Ad Att.* xii. 40). The office of praeco was called *praeconium*, and was regarded with contempt (Mart. v. 56, 10; Juv. iii. 33; vii. 6).

Praeco.

Praeconium. See PRAECO.

Praeda. A Latin word signifying movable things taken by an enemy in war. Such things were either distributed by the *imperator* among the soldiers or sold by the quaestors, and the produce was paid into the Aerarium or State treasury. The difference between praeda and *manubiae* lies in the fact that praeda means the things themselves that are taken in war, while *manubiae* is the money realized from their sale (Gell. xiii. 24). It was the practice to set up a spear at such sales, which was afterwards used at all sales of things by a magistratus in the name of the people. See SECTIO; SPOLIA.

Praedium. Originally any property which was made security to the State by a *praes* (q. v.) (Varro, *L. L.* v. 40). Later it means land or an estate in general.

Praefecti. Twelve officers appointed by the consuls to take command of the troops furnished by the allies. They ranked with the *tribuni* of the Roman legions (Caes. *B. G.* i. 39; iii. 7).

Praefectūra. An Italian township possessing no jurisdiction of its own, but having a prefect to administer justice (*praefectus iure dicundo*) sent to it every year, generally on the nomination of the *praetor urbanus*. When all Italian towns received full citizen rights, B.C. 90, these towns among the rest became *municipia* (see MUNICIPIUM), and retained the old name merely as a tradition.

Praefectus Aerarii. See AERARIUM.

Praefectus Annōnae. The praefect of the provisions at Rome, especially of the corn-market. He was not a regular magistrate under the Republic, but was appointed only in cases of extraordinary scarcity, when he seems to have regulated the prices at which corn was to be sold. Augustus created an officer under the title of *praefectus annonae*, who had jurisdiction over all matters appertaining to the corn-market, and, like the *praefectus vigilum*, was chosen from the knights, and was not reckoned among the ordinary magistrates. See FRUMENTARIAE LEGES.

Praefectus Aquārum. See AQUAE DUCTUS.

Praefectus Castrōrum. The praefect of the Roman camp. He is first mentioned in the reign of Augustus (Vell. Pat. ii. 112). There was one to each legion. See CASTRA; LEGIO.

Praefectus Classis. The commander of a Roman fleet. This title was frequently given under the Republic to the commander of a fleet; but Augustus appointed two permanent officers with this title, one of whom was stationed at Ravenna on the Adriatic, and the other at Misenum on the Tuscan Sea, each having the command of a fleet (Suet. *Aug.* 49).

Praefectus Fabrum. See FABRI.

Praefectus Legiōnis. See EXERCITUS; LEGIO.

Praefectus Praetorio. The commander of the troops who guarded the person of the Roman emperor. (See PRAETORIANI.) This office was instituted by Augustus, and was at first only military. It then had comparatively small power attached to it; but under Tiberius, who made Seianus commander of the Praetorian Guard, it became of much greater importance, till at length the power of these praefects became only second to that of the emperors. From the reign of Severus to that of Diocletian, the praefects, like the Oriental viziers, had the superintendence of all departments of the State, the palace, the army, the finances, and the law; and also had a court in which they decided cases. The office of Praefect of the Praetorium was not confined to military officers: it was filled by Ulpian and Papinian, and by other distinguished jurists. Originally there were two praefects; afterwards sometimes one and sometimes two; from the time of Commodus often three, and even four. They were, as a regular rule, chosen only from the knights; but from the time of Alexander Severus the rank of senator was always joined with their office.

Praefectus Urbi. The praefect or warden of the city of Rome. He was originally called CUSTOS URBIS (Lydus, *De Magistr.* i. 34, 38). The name *praefectus urbi* does not seem to have been used till after the time of the decemvirs. The dignity of *custos urbis*, being combined with that of *princeps senatus*, was conferred in early times by the king, as he had to appoint one of the *decem primi* as *princeps senatus*. The functions of the *custos urbis*, however, were not exercised except in the absence of the king from Rome; and then he acted as the representative of the king. He convoked the Senate, held the Comitia, if necessary, and on any emergency might take such measures as he thought proper; in short, he had the *imperium* in the city (Tac. *Ann.* vi. 11). During the kingly period, the office of *custos urbis* was probably for life. Under the Republic, the office and the title *custos urbis* remained unaltered; but in B.C. 487 it was elevated into a magistracy, to be bestowed by election. The *custos urbis* was, in all probability, elected by the *curiae*. Persons of consular rank alone were eligible. In the early years of the Republic the *custos urbis* exercised within the city all the powers of the consuls if they were absent; he convoked the Senate, held the Comitia, and, in times of war, even levied civic legions, which were commanded by him. When the office of *praetor urbanus* was instituted, the wardenship of the city was merged in it (Lydus, *De Mens.* 19); but as the Romans, by reason of their extreme conservatism, were at all times averse to dropping altogether any of their old institutions, a *praefectus urbi*, though a mere shadow of the former office, was henceforth appointed every year, only for the time that the consuls were absent from Rome for the purpose of celebrating the Feriae Latinae. This praefectus had neither the power of convoking the Senate nor the right of speaking in it; in most cases he was a person below the senatorial age, and was not appointed by the people, but by the consuls.

An office very different from this, though bearing the same name, was instituted by Augustus on the suggestion of Maecenas. This new Praefectus Urbi was a regular and permanent magistrate, whom Augustus invested with all the powers necessary to maintain peace and order in the city. He had the superintendence of butchers, bankers, guardians, theatres, etc.; and to enable him to exercise his power he had distributed throughout the city a number of *milites stationarii*, whom we may compare to modern police. (See VIGILES.) His jurisdiction, however, became gradually extended; and as the powers of the ancient republican Praefectus Urbi had been swallowed up by the office of the Praetor Urbanus, so now the power of the Praetor Urbanus was gradually absorbed by that of the Praefectus Urbi; and at last there was no appeal from his sentence, except to the person of the *princeps* himself, while any one might appeal from the sentence of any other city magistrate, and, at a later period, even from that of a governor of a province, to the tribunal of the Praefectus Urbi. Under the Eastern Empire, there was a Praefectus Urbi for the city of Constantinople as well as for Rome (Symmach. *Epist.* x. 37).

Praefectus Vigĭlum. See EXERCITUS; VIGILES.

Praefĭcae. Women who were hired to act as mourners at Roman funerals (Plaut. *Truc.* ii. 6, 14). They went before the corpse, with their heads bared, their locks dishevelled, uttering cries of lamentation and chanting dirges (*neniae*). See FUNUS.

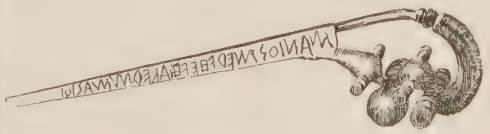
Praefurnium. The mouth of a furnace, through which the fuel was introduced (Cato, *R. R.* 38, 1).

Praegustātor (*προγευστής*). A slave who tasted the dishes at table before offering them to his master, either to see whether they were properly seasoned, or as a precaution against poison (Xen. *Cyrop.* i. 3; Suet. *Claud.* 44).

Praeiudicium. A term used both in the sense of a precedent, in which case it is rather *exemplum* than *praeiudicium*, and also in the sense of a preliminary inquiry and determination about something which belongs to the matter in dispute (*iudiciis ad ipsam causam pertinentibus*), from whence also comes the name praeiudicium.

Praelusio. See GLADIATORES, p. 733.

Praenesté. Now Palestrina; one of the most ancient towns of Latium, situated on a steep and lofty hill about twenty miles southeast of Rome. It was said to have been founded by Telegonus, the son of Odysseus. It was strongly fortified by nature and by art, and frequently resisted the attacks of the Romans. Together with the other Latin towns, it became subject to Rome, and was at a later period made a Roman colony. It was here that the younger Marius took refuge, and was besieged by Sulla's troops. Praenesté possessed a celebrated temple of Fortuna, with an oracle, which is often mentioned under the name of *Praenestinae sortes*. (See ORACULUM.) In consequence of its lofty situation, Praenesté was a cool and healthy residence in the great heats of summer (hence *frigidum Praeneste*, in Horace).



Praenestīna Fibŭla. See next article.

Praenestine Brooch (FIBŬLA PRAENESTĪNA). The name given to a brooch (*fibula*) found at Praenesté in 1886, and believed by Bücheler to be as old as the sixth century B.C. A short inscription on it is the oldest specimen of Latin known to be in existence. It runs as follows:

MANIOS MED VHE VHAKED NVMASIOI

Manius me fe- facid (*fecit*) *Numasio*

The writing is retrograde (i. e. from right to left), and the characters are Greek. It is interesting in several ways: (1) as showing *-d* as an accusative

Fibula Praenestina with Numasios Inscription. (From a photograph.)

ending in use at so early a period of the language; (2) as exhibiting the attempt to represent the sound of Latin *f* in non-Latin characters; (3) as giving the reduplicated perfect in *fefacid*; (4) as separating the reduplicated syllable from the body of the verb (cf. *C. I. A.* 321); (5) as affording an example of the actual use of the dative in *-oi*, which had been postulated on the authority of Marius Victorinus (17, 20) and the analogy of the Greek dative, but

had been questioned by Jordan (*Kritische Beiträge*, p. 241); and (6) as exploding a general belief that the retrograde writing in Latin had been used only in *devotiones* or sacred formulas where an element of secrecy was involved. See the *Wochenschrift für klass. Philologie* (Jan. 26, 1887); Wölfflin, *Archiv für lat. Lexicographie und Grammatik* (1887 pt. i. p. 143); the *Rheinisches Museum*, vol. xlii. p. 317; Darbishire in the (English) *Journal of Philology* (1886–87, pp. 196 foll.); the *Transactions of the Oxford Philological Society* (1887–89); Cortese, *Latini Sermonis Vetustioris Exempla* (Turin, 1892); Lindsay, *The Latin Language*, pp. 305, 504 (Oxford, 1894); and Egbert, *Latin Inscriptions*, p. 65 (New York, 1896).

Praenōmen. See NOMEN.

Praepĕtes. Birds of good omen. See AUGUR.

Praepositus. A title given under the later Roman Empire to various officials, especially to the freedman who acted as chamberlain of the imperial palace (Cod. Theod. vi. tit. 8).

Praerogātīva. See COMITIA, p. 391.

Praes. In Roman law is a surety for one who buys of the State. The goods of a praes were called *praedia*. The *praediator* was a person who bought a *praedium*—that is, a thing given to the State as a security by a praes. See Walter, *Geschichte des röm. Rechts*, § 340.

Praescriptio or **Tempŏris Praescriptio**. A Latin term which signifies the *exceptio* or answer which a defendant has to the demand of a plaintiff, founded on the circumstance of the lapse of time. The word has properly no reference to the plaintiff's loss of right, but to the defendant's acquisition of a right by which he excludes the plaintiff from prosecuting his suit. This right of a defendant did not exist in the old Roman law.

Praeses. See PROVINCIA.

Praesul (*prae*+*salio*). The chief of the Salii or priests of Mars. See SALII.

Praetexta. See TOGA.

Praetexta or **Praetextāta** (sc. *fabula*). A class of Roman tragedies, which found its materials not in the Greek myths, but, in the absence of native legendary heroes, in ancient and contemporary Roman history. The name was derived from the fact that the heroes wore the national dress, the *toga praetexta*, the official garb, edged with purple, of the Roman magistrates. Naevius introduced them, and, following his example, the chief representatives of tragic art under the Republic, Ennius, Pacuvius, and Attius, composed, in addition to tragedies imitated from Greek originals, independent plays of this kind, which were, however, cast in the form they had borrowed from the Greeks. We also hear of some plays of this class written by poets of imperial times. The solitary example preserved to us is the tragedy of *Octavia*, wrongly ascribed to Seneca (q. v.), which, perhaps, may date from A.D. 1. See TOGATA.

Praetor (=στρατηγός, and derived by Cicero from *praeire*). Originally a title of the Roman consuls, but afterwards used to denote that magistrate to whom the administration of justice in Rome was transferred, when the consulship, to which this power had hitherto been attached, was thrown open to the commons in B.C. 366. At first reserved for the patricians, it became a plebeian office as early as 337. The praetor was elected in the Comitia Centuriata, with one of the consuls presiding, on the same day and with the same auspices as the consuls, who entered on their office simultaneously with him. On account of the increase in legal business, a second praetor was appointed in 242, to whom was transferred the hearing of the cases between citizens and foreigners (*inter cives et peregrinos*) and between foreigners (*inter peregrinos*), while the other decided between citizens. The latter, who ranked first, was called *praetor urbanus* (city praetor); the former, *praetor inter peregrinos* and (after the time of Vespasian) *praetor peregrinus*.

The praetors had their respective departments determined by lot after their election. While the *praetor peregrinus* might have a military command also intrusted to him, the city praetor, on account of the importance of his office, might not be absent from Rome, strictly speaking, for longer than ten days. He represented his absent colleague and also the consuls in their absence, presiding, as the highest magistrate present, at the public games, watching over the safety of Rome, summoning the Comitia Centuriata, holding the military levies, and the like. As early as 227 the number was further increased by two. To these was intrusted the administration of Sicily and Sardinia. Two others were added in 197 to administer the two provinces of Spain. In 149, on the establishment of the *quaestiones perpetuae*, a standing criminal court for certain stated offenders, the rule was introduced that the entire body of praetors should stay in Rome during their year of office; the praetors *urbanus* and *inter peregrinos* having jurisdiction in civil cases, as hitherto, while the others presided in the *quaestiones*, and had to instruct the jurors as to the case before the court, and to carry out the sentence passed. After the completion of their year of office, they all proceeded as propraetors or proconsuls to the praetorian provinces assigned them by lot. In consequence of the multiplication of the *quaestiones* and of the provinces, the number of praetors was raised by Sulla to eight, by Caesar to ten, fourteen, and sixteen. Under the Empire the praetorship lost its former importance, the civil jurisdiction of the *praetor urbanus* and *peregrinus* being in part transferred to the *praefectus urbi* and *praefectus praetorio*, while the criminal jurisdiction of the others ceased with the gradual decay of the *quaestiones*, and the praetors retained only particular departments of their judicial power and general administration. Their most important function was the management of the games, some of which had already, in republican times, been assigned to the *praetor urbanus*. When their year's office had expired, they went as proconsuls to the senatorial provinces. Their election was transferred to the Senate by Tiberius. Under the Republic the statutory age for the office was forty; under the Empire, thirty. The praetor's *insignia* were the *toga praetexta*, the *sella curulis*, and, in the provinces, six lictors; in Rome, probably two. Like the consul, he had the honour of a triumph open to him. See MAGISTRATUS.

Praetoriāni. The body-guard of the Roman emperor. Even in the armies of the Republic there had been a separate corps, the *cohors praetoria*, to guard the general, and protect the headquarters. The organization of a body-guard for the emperor, one of whose permanent powers was the

Praetoriani. (Relief in the Louvre.)

chief military command, was among the first administrative measures of Augustus. The supreme command was generally held by two *praefecti praetorio* in the emperor's name. The guard consisted of nine, and at a later time, of ten *cohortes praetoriae*, each composed of ten centuries of infantry and ten squadrons of cavalry (*turmae*), and commanded by a *tribunus* (see TRIBUNI MILITUM). They had higher rank and pay than the legions, and a shorter time of service (sixteen years instead of twenty). While the other cohorts were stationed at various places in Italy, where the emperors were in the habit of staying, there were quartered in Rome, to keep watch in the emperor's palace, three cohorts, which at first were billeted on separate parts of the city, until under Tiberius they were placed in a fortified camp (*castra praetoria*) to the northeast of the city, outside the walls. By being thus united, they gained such importance that they were often able to raise an emperor to the throne, and to overthrow him. To break down their influence and to make them simply a picked corps, Septimius Severus, towards the end of the second century, brought legions to Italy, and made a regulation that the Guard, which had hitherto been recruited exclusively from Italy and a few Romanized provinces, should have its ranks filled up from deserving legionary soldiers, and should serve for a longer time. To be thus transferred to the Guard was considered a promotion. The Guard was disbanded by Constantine the Great.

Praetorium. The headquarters in the Roman camp; a wide space, on which stood the general's tent, the altar of the camp, the *augurale*, and the *tribunal*. (See CASTRA.) In the provinces this name was given to the official residence of the governor (Cic. *Verr.* iv. 28, 65) and to any large country-house (Suet. *Calig.* 37).

Praevaricatio (literally, "deviation from the straight path"). The Latin term for the improper conduct of a case on the part of a prosecutor in favour of the defendant, or on the part of a *patronus* to the detriment of his client. The penalty was forfeiture of the right to prosecute and to act as an advocate. If the acquittal of the defendant was demonstrably due to *praevaricatio*, the case might be undertaken anew by a second prosecutor.

Prandium (*ἄριστον*). The second morning meal of the Romans. See CENA.

Prasiae (*Πρασιαί*). (1) Or PRASIA, a town on the eastern coast of Laconia (Thuc. ii. 56). (2) A deme of Attica belonging to the tribe Pandionis (Thuc. viii. 95).

Prasii (*Πράσιοι*), **Praesii**, or **Parrhasii** (Skt. Prachinas). A great people of India on the Ganges, whose capital was Palibothra (Patna) (Curt. ix. 2; Plut. *Alex.* 62). See SANDROCOTTUS.

Prasiniāni. See CIRCUS, p. 356.

Prasĭnus. A charioteer wearing the green colours in the Circus races. See CIRCUS, p. 356.

Prasum (*Πράσον Ἀκρωτήριον*, "Green Headland"). A promontory on the eastern coast of Africa. It appears to have marked the farthest limit of that country to the ancients. The neighbouring part of the Indian Ocean was called PROSŌDIS MARĒ (*Προσώδης Κόλπος*).

Pratinas. (*Πρατίνας*. The quantity of the penult is uncertain, probably long. See Fick, *Gr. Personen-Namen*, p. xxxv.) A Greek dramatist, of Phlius, who lived about B.C. 496 at Athens. He was a contemporary and rival of Aeschylus, and is believed to have invented the satyric drama. At any rate, he was a very prolific writer in this department of literature. He also wrote tragedies, dithyrambs, and *hyporchemata*, of which we possess a fairly long and highly original fragment, preserved by Athenaeus (xiv. 617). His son Aristias was also a dramatic poet.

Praxagŏras (*Πραξαγόρας*). A physician born in the island of Cos in the fourth century B.C. He was one of the school known as the Dogmatici (Pliny, *H. N.* xxvi. 10). See MEDICINA.

Praxias (*Πραξίας*). An Athenian sculptor of the age of Phidias, but more archaic than that great artist. He began the statues in the pediments of the great temple of Apollo at Delphi (Artemis, Leto, and Apollo with the Muses, Dionysus, and the Thyades and Helios), but died leaving them unfinished (Pausan. x. 19, 3).

Praxidĭcé (*Πραξιδίκη*). The goddess who carried out the ends of justice. She is sometimes regarded as identical with Diké. In some traditions there appear to be three goddesses of the name forming a triad (Suidas, s. h. v.; Pausan. iii. 13, 3).

Praxilla (*Πράξιλλα*). A Greek poetess of Sicyon, about B.C. 450, who composed hymns and dithyrambs, but was especially famous for her *scolia*,

or drinking-songs. We possess only insignificant fragments of her poems (Suidas, s. h. v.).

Praxiphănes (*Πραξιφάνης*). A Peripatetic philosopher, born either at Mitylené or Rhodes. He flourished about B.C. 322, and is said to have taught Epicurus. He paid much attention to grammatical study, and is hence classed with Aristotle as one of the founders of scientific grammar (Clem. Alex. i. p. 365). He wrote treatises on the poets, on history, and on poetry, and was the teacher of Aratus and Callimachus. See Preller, *De Praxiphane* (Berlin, 1864); Wilamowitz in *Hermes*, xii. 316 foll., and Hirzel in *Hermes*, xiii. 46 foll.

Praxitĕles (*Παξιτέλης*). One of the most famous Greek sculptors, born at Athens about B.C. 390. He and his somewhat older contemporary, Scopas, were at the head of the later Attic school. He chiefly worked in marble, but at the same time occasionally used bronze. His recorded works exhibit every age and sex in the greatest variety of the divine and human form. Still, he paid most attention to youthful figures, which gave him the opportunity of displaying all the charm of sensuous grace in soft and delicate contours.

Hermes of Praxiteles. (From the Heraeum at Olympia.)

Among his most celebrated works the naked Aphrodité, of Cnidus, stands first—according to the enthusiastic descriptions of the ancients a masterpiece of the most entrancing beauty (e. g. Pliny, *H. N.* xxxvii. §§ 20, 21; cf. APHRODITÉ). Not less famous were his representations of Eros, among which the marble statue at Thespiae was esteemed most highly (ib. § 22; cf. EROS); his Apollo Sauroctonos (lizard-slayer) in bronze (ib. xxxiv. § 70); and a youthful Satyr in Athens (Pausan. i. 20, § 1). As to the group of Niobé's children, preserved at Rome in Pliny's time, it was disputed even among the ancients whether it was the work of Praxiteles or, as is more probable, of Scopas (*H. N.* xxxvi. § 28). Of all these only later copies have been preserved. An important original work by him (mentioned by Pausan. v. 17, § 3) was unearthed in 1877 by the German excavators at Olympia. It represents Hermes with the child Dionysus in his arms, and was set up in the *cella* of the temple of Heré. The arms and legs are partially mutilated, but otherwise it is in an excellent state of preservation. His sons, Cephisodotus the younger and Timarchides, were masters of some importance. See STATUARIA ARS.

Prayer. See PRECATIO.

Precatio. The act of praying. The Greeks and early Romans stood upright in prayer, extending both the arms, and bringing the hands together with the palms wide open (Verg. *Aen.* iii. 176; Lucret. v. 1199). In the imperial period the

Precatio. (Vatican Vergil.)

Precatio. (Museo Pio-Clem. ii. 47.)

arms were thrown wide apart, though the supplicant still stood erect, as is seen from the figures on medals.

Prelum. (1) The beam of the press used for squeezing grapes or olives. (2) The press itself. (See VINUM.) (3) A clothes-press (Sen. *Q. N.* i. 3, 2). In modern Latin the word is also applied to the printing-press.

Prensatio. See AMBITUS.

Press. See PRELUM.

Pressorium. A clothes-press. (Plin. Vet. ii. 17.)

Priamĭdes. A patronymic applied to Paris, as being a son of Priam. It is also given to Hector, Deïphobus, and all the other children of the Trojan king (Verg. *Aen.* iii. 295 foll.).

Priămus (*Πρίαμος*). The last king of Troy. He was the son of Laomedon. When Heracles took the city of Troy Priam was in the number of his prisoners; but his sister, Hesioné, redeemed him from captivity, and he exchanged his original name of Podarces for that of Priamus, which signifies "bought" or "ransomed." (See HESIONÉ.) He was placed on his father's throne by Heracles, and employed himself in repairing, fortifying, and embellishing the city of Troy. He had married, by his father's orders, Arisba, whom now he divorced for Hecuba, the daughter of Dymas the Phrygian (Hom. *Il.* xvi. 718), or, according to others, of Cisseus (Eurip. *Hec.* 3). Hecuba bore him nineteen children (Hom. *Il.* xxiv. 496), of whom the chief were Hector, Paris or Alexander, Deïphobus, Helenus, Troïlus, Polites, Polydorus, Cassandra, Creüsa, and Polyxena. After he had reigned for some time

in the greatest prosperity, Priam expressed a desire to recover his sister Hesioné, whom Heracles had carried into Greece, and married to Telamon, his friend. To carry this plan into execution, Priam manned a fleet, of which he gave the command to his son Paris, with orders to bring back Hesioné. Paris, to whom Aphrodité had promised the fairest woman in the world (see PARIS), neglected, in some measure, his father's injunctions, and, as if to make reprisals upon the Greeks, carried away Helen, the wife of Menelaüs, king of Sparta, during the absence of her husband. This violation of hospitality caused a general war. All the suitors of Helen, at the request of Menelaüs (q. v.), assembled to avenge the abduction of his wife, and the combined armament set sail for Troy. Priam might have averted the impending blow by the restoration of Helen; but this he refused to do when the ambassadors of the Greeks came to him for that purpose. Troy was accordingly beleaguered, and frequent skirmishes took place, in which the success was various. The siege was continued for ten successive years, and Priam had the misfortune to see the greater part of his sons fall in defence of their native city. Hector, the eldest of these, was the only one upon whom now the Trojans looked for protection and support; but he, too, fell a victim to his own courage, and was slain by Achilles. The father thereupon resolved to go in person to the Grecian camp, and ransom the body of the bravest of his children. The gods interested themselves in his behalf, and Hermes was directed to guide the aged monarch in safety amid the dangers of the way, and conduct him to the tent of Achilles. The meeting of Priam and Achilles was solemn and affecting. The conqueror paid to the Trojan monarch the reverence due to his dignity, his years, and his misfortunes; and Priam, as a suppliant, addressed the prince who had robbed him of the greatest and best of his sons. Achilles was moved by his tears and entreaties. He restored Hector, and permitted Priam a truce of twelve days for the funeral of his son. Some time after Troy was betrayed into the hands of the Greeks by Antenor and Aeneas, and Priam was slain by Neoptolemus, the son of Achilles, at the foot of the altar of Zeus Herceus; the wounded Polites, one of the sons of Priam, also fell, who, after the example of his father and mother, had fled thither for protection during the burning of the city (Hom. *Il.* xxiv. 139 foll.; Verg. *Aen.* ii. 507 foll.; Horace, *Carm.* x. 14; Hygin. *Fab.* 110). See HELENA; TROJAN WAR.

Priapeia. A collection of some eighty-six elegant but indecent Latin poems in various metres on the subject of Priapus. Judging from their execution, they may be referred to the time of Augustus, and may probably be traced to the circle of Messala, who, like other distinguished men of that age, occupied himself with amusements of this kind. Printed in Bücheler's Petronius (Berlin, 1886).

Priāpus (Πρίαπος). According to the usual account, son of Dionysus and Aphrodité, a god of the fruitfulness of the field and of the herds. Horticulture, vine-growing, goat and sheep-breeding, bee-keeping, and even fishing were supposed to be under his protection. The original seat of his worship lay in the towns of Asia Minor, situated on the Hellespont, especially Lampsacus, where it was said he was born. From here it afterwards spread over Greece and Italy. His statues were usually placed in gardens, generally in the form of rude *hermae* cut out of wood, stained with vermilion, with a club and sickle and a phallic symbol of the creative and fructifying powers of nature. The sacrifices offered to him included asses, as well as the first-fruits of the garden and the field. In the mystical interpretation of the myths, he was regarded as symbolizing the future life, and hence his image was placed upon tombs (*C. I. L.* v. 3634). Besides Lampsacus, he had as especial seats of his worship, Cyzicus, on the Hellespont, at Panium, (Catull. 18; Verg. *Georg.* iv. 110), and at Priapus in Mysia. See PHALLUS.

Priāpus (Πρίαπος). A Mysian city on the Propontis, a chief seat of the worship of the god Priapus. The surrounding district was called PRIĀPIS or PRIAPĒNÉ (Thuc. viii. 107).

Priēné. One of the twelve Ionian cities on the coast of Asia Minor, stood in the northwest corner of Caria, at the foot of Mount Mycalé. It was the birthplace of Bias, one of the Seven Sages of Greece. It was important from a religious point of view in connection with the Pan-Ionian festival on Mount Mycalé, where the people of Priené took precedence as being the supposed descendants of the inhabitants of Helicé in Hellas Proper (Strabo, p. 639).

Priest. See SACERDOS.

Primipīlus. The first centurion of the first maniple of the *triarii*. He had charge of the eagle, had the right of attending the general council of officers, and, in the absence of the tribune, took command of the men. See EXERCITUS; LEGIO.

Primus, M. ANTONIUS. A native of Tolosa in Gaul, who was condemned of forgery (*falsum*) in the reign of Nero, was expelled from the Senate, of which he was a member, and was banished from the city. After the death of Nero (68), he was restored to his former rank by Galba, and appointed to the command of the seventh legion, which was stationed in Pannonia. He was one of the first generals in Europe who declared in favor of Vespasian, and rendered him the most important services. In conjunction with the governors of Moesia and Pannonia, he invaded Italy, gained a decisive victory over the Vitellian army at Bedriacum, and took Cremona, which he allowed his soldiers to pillage and destroy. He afterwards forced his way into Rome, notwithstanding the obstinate resistance of the Vitellian troops, and had the government of the city till the arrival of Mucianus from Syria. (See MUCIANUS.) We learn from Martial, who was a friend of Antonius Primus, that he was alive at the accession of Trajan.

Princeps (ἡγεμών). The use of the word *princeps* as a title originated according to Tacitus (*Ann.* iii. 56) in the desire of Augustus to secure a term which should express the preëminence of the first citizen of the Republic (*princeps civitatis*), and imply the possession of all the functions belonging to him, and yet not suggest the idea of despotic rule (Tac. *Ann.* i. 1; ii. 53; *Hist.* iv. 3; Dio Cassius, lvii. 8). The word *princeps*, as thus used, was merely a title of courtesy; it does not appear in the titular list in the inscriptions, it was not official and did not refer to any definite function.

The origin of the title has been variously assigned to the phrases *princeps senatus* and *princeps civitatis*. The former was an honorary title indicating that the holder was first on the list of senators and was the first to be asked his opinion. We know from Monumentum Ancyranum (Gr. iv. 2) that Caesar was *princeps senatus* in B.C. 28. Nevertheless he is always termed simply *princeps* (Hor. *Car.* i. 2, 50) and thus speaks of himself (*me principe, Mon. Anc.* ii. 45; vi. 9). In the same inscription the Greek translation of the word is *ἡγεμών*. The title *princeps senatus* would certainly be too restricted in its application, indicating the relation to the Senate and not to the State.

The view that the word *princeps* as used of the emperor was an abridgment of the phrase *princeps senatus* which came to have a wider signification is best stated by Herzog in his *Geschichte und Syst. der röm. Staatsv.* ii. 134. The other view which is more generally accepted is held by Mommsen (*Staatsrecht*, ii. 733), and is clearly set forth by H. F. Pelham in *Jour. of Philol.* viii. p. 322. The expression *princeps civitatis* is found in classical writers and is applied by Cicero to Pompey, while *princeps*, evidently standing for the complete phrase, is used by Cicero of both Pompey and Caesar (*Ad Att.* viii. 9; *Ad Fam.* vi. 6), and by Sallust of Pompey (Hist. iii. 61 D or 81 K). Cf. also Suet. *Iul.* 26. See PRINCIPATUS.

Princeps Iuventūtis. See EQUITES.

Princeps Senātus. See SENATUS.

Principālis Porta. See CASTRA.

Principātus. In January of the year B.C. 27 (A.U.C. 727) Gaius Caesar Octavianus established the Roman Empire, or, as the new form of government at this stage of its existence may be more correctly termed, the principate. On the thirteenth day of that month he voluntarily laid aside the extra-constitutional powers granted him under the stress of civil disorder and on the sixteenth initiated a new system whose constitutional theory and plan were based upon the old republican form of government.

According to Augustus's own words, as given in *Mon. Anc.* vi. 83, *consulatu sexto* (B.C. 28) *et septimo* (B.C. 27) *rem publicam ex mea potestate in senatus populique Romani arbitrium transtuli*, in his sixth consulship he performed the initial act in the abolition of the provisional government by surrendering powers which he had received as triumvir, and which he had held alone after the deposing of Lentulus and after the hostility of Antonius. In January of the following year he completed the restoration of authority to the Senate and people, by what final act it is impossible to say, although at that time he may have surrendered the *proconsulare imperium* which was involved in the triumviral powers granted by the plebescite of P. Titius (*Mon. Anc. Lat.* vi. 13; Tac. *Ann.* iii. 28; Dio Cass. liii. 2). This voluntary return of intrusted powers was immediately followed by the renewal of the *proconsulare imperium* for a period of ten years and by the conferring, by the Senate and people, of the *cognomen Augustus*, which thus dignified and consecrated the new position assumed by Caesar in his relation to the State, and which became the distinctive title of the principate (*Mon. Anc. Lat.* vi. 16). The constitution of the principate thus dates from the renunciatory and reëstablishing enactments of January, B.C. 27.

Augustus still held, however, some form of the *tribunicia potestas* which had been given to him for life in B.C. 36 (A.U.C. 718) (Dio Cass. xlix. 15). He was also consul, for he succeeded himself each year from B.C. 31–23 (A.U.C. 723–731) in a series of nine consulships (Tac. *Ann.* i. 2). The *proconsulare imperium*, which was similar in character to that given to Pompey by the Gabinian and Manilian laws, implied the exclusive command of the armies and fleet, as well as the control of the most important border provinces. Inasmuch as Rome and Italy were not included under this *imperium*, Augustus relied upon the consulship which not only brought the city and Italy under his control, but rendered his *imperium* superior to that of other proconsuls. This is substantially the view of Mommsen as given in his *Staatsrecht*, vol. ii. Another theory stated by H. F. Pelham, *Jour. of Philol.* xvii., bases the new principate entirely on the consulship on the ground that in January, B.C. 27, Augustus, while consul, received from the people the *consulare imperium* involved in the conferring of the usual "province," which was in this case of very broad area, carrying with it control of armies, the direction of foreign relations, as well as the government of important provinces.

On the 27th of June, B.C. 23, Augustus, finding the consulship unsuited to his purpose, laid it aside (Dio Cass. liii. 32) and brought into prominence the *tribunicia potestas*, which, being perpetual, he made nominally annual by renewal from year to year. Thenceforward the title TR(*ibunicia*) POT(*estate*) appears in the inscriptions in the titular list followed by a numeral indicating the number of renewals (*Corpus Inscr. Latin.* indices, particularly vol. iii.). This tribunician power was the civil magistracy supplementing the authority given by the imperium, ranking higher moreover than the latter prerogative (Dio Cass. liii. 32; Momm. *Staatsr.* ii. 1050). Through its privileges the *princeps* had the right of *intercessio* or veto, also that of *coercitio* or power of compelling obedience, also *sacrosancta potestas*, so that his person was inviolable. This substitution of *tribunicia potestas* for the consulship involved the loss of *consulare imperium*, which gave authority in Rome and Italy although naturally it did not interfere with the *proconsulare imperium*. (According to Mr. Pelham's view stated above, the *consulare imperium* given Augustus in B.C. 27, which conferred such extensive powers, he now no longer holds as consul, but as proconsul, so that it really becomes *proconsulare imperium*.)

The renunciation of the consulship meant, however, the loss of an *imperium*, superior to that of other proconsuls, as well as most important prerogatives possessed by the consuls alone. This difficulty was met by special legislative action, whereby Augustus received from the Senate and people rights which belonged originally and legitimately to the consulship. These were, the enlargement of his *imperium* as *proconsul*, so that it became *maius* as compared with that of other proconsuls (B.C. 23), the privilege of introducing the first motion in the Senate (*ius primae relationis*) (B.C. 23), the right of convening the Senate (B.C. 22), the insignia of consular dignity—the twelve fasces and the curule chair between those of the consuls (B.C. 19). An inscription, *Lex de Imperio Vespasiani* (*Corp. Inscr. Lat.* vi. 930), engraved on a bronze tablet, which is extant in fragmentary form, confers upon Vespasian certain rights which were

not included in the scope of his *imperium* or of his *tribunicia potestas*. In this *lex* we probably possess in documentary form the special legislative measures which were passed in favour of Augustus. For opposing views on this subject, see Mommsen (*Staatsr.* vol. ii.), who believes that the *lex de imperio* conferred the *tribunicia potestas* extended in its scope, and Herzog (*op. cit.* ii. 617–619), who holds the view expressed above.

The constitutional theory of the principate that the *princeps* was a citizen provided with exceptional powers by the Senate and people did not look to the transmission of this delegated power, but left the matter in the hands of the Senate and people in so far as the conferring of these remarkable powers was concerned. Thus at the death of the *princeps* the principate ended and was not renewed until similar powers had been delegated to his successor, the government being carried on by the consuls during the interregnum. Although there seems to have been no constitutional provision for the selection of a *princeps*, yet, theoretically at least, he was the creature of the people, and his appointment consisted in the conferring of the *imperium* and subsequently of the *tribunicia potestas* by the Senate and the people, the latter ratifying the action of the Senate in their Comitia. The final act was the bestowal of special privileges by the *lex de imperio*. In these acts the choice of the one thus honoured is implied and involved. Although the *princeps* was in theory elected, the choice, however, virtually depended upon certain influences which indicated and determined the selection, as, for example, in times of peace the designating of a son or near relative on the part of the reigning *princeps* and the investing such a one with powers of an imperial nature so as to confirm the choice. In time of civil strife other influences naturally prevailed, such as popularity with the Senate or army, or marked military ability. For opposing theories as to the election of the *princeps*, see Herzog, *Geschichte und Syst. der röm. Staatsv.* ii. 610 foll.; Momm. *Staatsr.* ii. 1038, and Pelham in the *Jour. of Philol.* xvii. 47.

This in outline is the constitution of the principate which recognized the existence of a republican form of government, and also the establishment of a new authority which, standing alongside of the consuls, theoretically the chief magistrates (Tac. *Ann.* iv. 19), held under the designation of *tribunicia potestate* powers equal to those of the consul at home and superior to them abroad. The government is practically in the hands of the *princeps* and the Senate, so that it has been aptly termed a dyarchy. The history of the first three centuries of the Christian era records the dissolution of this dyarchy by the absorption of all power by the *princeps*, and the disclosure of the imperial government in its true character as an absolute monarchy. The fictitious nature of the principate and the inevitable tendency under such a system to the centralization of power in the hands of Caesar may be more readily appreciated by considering the *princeps*, first in his relation to this second governing power, the Senate, and their mutual partition of governmental functions, and again in his personal position as ostensible magistrate but actual monarch, with all the attributes of kingly station.

The constitution of the Senate was controlled in various ways by the *princeps*. He was able to influence the election of magistrates in the assembly by certain privileges known as *nominatio* and *commendatio*. The former arose from the right, belonging to the magistrates (regularly the consuls) presiding at the elections, to canvass the names of the candidates and publish a list of those qualified to stand (Tac. *Ann.* i. 81). By accepting only a sufficient number to fill vacancies the *princeps* could easily control the election. Through the right of *commendatio* the princeps recommended his own candidates, *candidati Caesaris*, and naturally these persons were sure of election (Vell. ii., 124, 4; Tac. *Ann.* i. 15). See also the *Lex de Imperio*, 4, 12; Mommsen, *Staatsr.* ii. 865.

Again, while only those of senatorial rank could hold the office of *quaestor*, the initial office of the senatorial career, yet the emperor would admit to the preliminary service, the vigintivirate and the tribunate of the soldiers, those outside of the senatorial order who were thus placed in the line of promotion as prospective senators (Marquardt, *Staatsv.* ii. 354). By a process known as *adlectio* the *princeps* could place a non-senator in the senatorial order, assigning him to the performance of certain functions as those of quaestor or praetor. Hence we find in inscriptions *adlecti inter praetorios, inter tribunicios*, and rarely *inter quaestorios*, but after the third century *inter consulares*. In the meetings of the Senate the *princeps* had the privilege of voting first, also the right of introducing bills (*relatio*), and of receiving information as to the transactions.

The Senate under the principate discharged administrative functions in regard to religion, the affairs of Italy, and at first of the city itself; but its important control was over the senatorial provinces. In these provinces, however, the *princeps* had certain powers which resulted from his control of the troops, and again, because of the collection by imperial officers of the revenues which came to the *fiscus* of the emperor. Since his *imperium* was *maius*, all proconsuls were his subordinates and under his direction (Momm. *Staatsr.* ii. 227). The final result was the entire subordination of authority in the senatorial provinces to that of Caesar. This change is seen in the gradual modification in the relations existing between the *princeps* and the proconsuls of senatorial provinces. The former at first refused to control such officials of the Senate and people (Tac. *Ann.* ii. 47; iii. 60; Momm. *Staatsr.* iii. 1211), but in the latter part of the second century, Caesar, by virtue of his *maius imperium*, controlled proconsuls, and looked to them to follow his edicts as carefully as any of his own *legati* (*Lex de Imperio*, 6; Momm. *Staatsr.* ii. 843). What was true of the provinces was true of the general departments of administration in Italy and in Rome. They were gradually brought under the control of the *princeps*, so that officers of his own appointment, *praefecti* and *procuratores*, were in charge of public works, of the corn supply, and of the *viae*.

As regards judicial functions, Augustus made the Senate a high court of justice, in which he himself sat, and thus could influence decisions by his vote and by his right of *intercessio* (Tac. *Ann.* iii. 12; iv. 34; iii. 70). Although all criminal cases could be brought before this court, only those of the highest importance really fell to its jurisdiction. The emperor also had a private court of his own, before which only cases of political importance seem

to have been brought (Suet. *Aug.* 32). The court of the praetors still existed in Rome and Italy, but the *princeps* often appointed the praetor and frequently sat at his side as *assessor* (Dio Cass. liii. 2, 3; Tac. *Ann.* i. 75). Appeals from senatorial provinces against the judicial decisions of governors were often heard by the *princeps* on the authority of his *maius imperium* (Mommsen, *Staatsr.* ii. 110).

The Senate, by the republican theory, had no direct legislative power, save through the acceptance of *senatus consulta* by the assembly of the people. Under the principate, however, the *senatus consulta*, enacted according to the wish of the emperor, became laws. The emperor, however, became the real source of law, for by special acts of the Senate (Cic. *Verr.* ii. 2, 49, 121) he was empowered to found colonies, grant charters, confer the Roman franchise (*leges datae*) (e. g. the Lex Malacitana, Bruns, *Fontes Iuris Romani*, vi. 147; *C. I. L.* ii. 876, 1964); and on his own authority he issued legislative documents (*constitutiones*), which were entirely of imperial origin. These were either *edicta, decreta, rescripta*, or *epistulae*. See Bruns, *op. cit.* 237 foll.

The financial affairs of the Empire were divided between the Senate and the *princeps*. There was a Senate treasury, known as the *aerarium*, and also the privy purse of the emperor, the *fiscus*. The latter was drawn upon not merely for the direct expenses of the emperor, but for provincial administration, the support of the army and fleet, and many public expenditures. The collection of taxes in all the provinces was at first farmed out on the old republican principle, but was ultimately conducted by the imperial officials. The coinage of gold and silver belonged at first to the Senate and emperor, but it was finally given exclusively to the emperor, and the coinage of copper was assigned to the Senate.

The falseness of the pretensions as to the magisterial character of the principate in the matter of limited tenure was disclosed at an early period in the acceptance by Tiberius and his successors of a life imperium, although the festival known as *decennalia* still recalled the periodical renewal. According to Dio Cassius (lix. 3, 2), Gaius received the powers of the principate by one grant, an act which showed still further the tendency to individualize the *princeps* in the possession of sole and permanent authority (Momm. *Staatsr.* ii. 744). Augustus refused the censorship consistently with his evident purpose; for a *princeps* possessed of the censor's power would be a monarch, inasmuch as he would absolutely control the constitution of the Senate. He indeed acted at times as censor, but only by virtue of his consular power. Domitian and his successors, however, performed the censorial functions simply by reason of their authority as *principes* (Mommsen, *Staatsr.* ii. 1018).

The name of the *princeps* was similar to that of an ordinary citizen, but differed in certain special features. The title *imperator* was substituted by Augustus for his *praenomen*, Gaius; and although the custom was disregarded by Tiberius, Gaius, and Claudius, it was resumed by Nero and regularly followed by his successors. The inscriptions show that it regularly took the position of a *praenomen*. A distinction must be made between this use of the word and the *acclamatio imperatoria* followed by the numeral of iteration, which appears among the titles. From the names of the early emperors, with the exception of the Claudii and Vitellius, the *nomen* was omitted, but its use was resumed by Hadrian. Caesar, the inherited *cognomen* of the Julian family, became a distinguishing mark of the reigning house, but from the time of Hadrian it was restricted to the emperor and his successor.

Augustus, the last word, strictly speaking, in the name of the *princeps*, was associated with the principate, and was conferred with the official granting of power by the Senate and people. From the latter part of the second century the word *Augustus* was preceded by additional surnames—e. g. *Pius, Pius Felix Invictus*—and from the beginning of the fourth century it was strengthened by *perpetuus* and *semper*. Special *cognomina ex virtute*—e. g. *Germanicus, Dacicus, Armeniacus*—were assumed by Vitellius and Nerva and regularly by Trajan and his successors. The following titles indicating *honores* also belonged to the imperial name: *Pontifex Maximus, Tribunicia Potestate, Imperator, Consul, Censor* (held only by Claudius, Vespasian, Titus, and Domitian), *Pater Patriae* (declined by Tiberius, Nero, Vespasian, Hadrian), *Proconsul* (in the names of Trajan, Hadrian, M. Aurelius, L. Verus, Septimius Severus, and his successors).

The emperors, because of the founding of the principate upon republican principles and precedents, had the right to use republican insignia, the curule chair, the laurel wreath and gold-embroidered toga of the *triumphator*, which were henceforth restricted to their use (Dio Cass. liii. 26), and the purple-bound toga of the magistrate (*Vita Hadriani*, 22). The right to wear the purple *paludamentum* was granted to Caesar as an indication of the supreme nature of his *imperium*, but it was rarely used in the first century, although it subsequently became the symbol of assumed authority (Momm. *Staatsr.* i. 349). As *imperator* the *princeps* had the privilege of carrying the sword of military power. For the personal safety of the *princeps* the *cohors praetoria* kept guard at the palace.

Consecration and deification of emperors testify to the unrepublican position they occupied. Iulius Caesar had permitted himself to be regarded as a god, but Augustus refused to allow worship of himself, at least in Rome and Italy. Like Iulius Caesar, however, he was placed among the gods of Rome after death, and with his deified successors received the title *divus*. Temples were built in Asia to Augustus and Tiberius during their lives, and the tendency to deify living emperors prevailed generally during the latter half of the second century.

Augustus and the early emperors endeavoured to follow republican principles in the natural dignifying and honouring of members of their families. Livia was an exception in the privileges she obtained (Dio Cass. xlix. 38), but at her death honours were restricted and deification was at first denied (Tac. *Ann.* v. 2). The title Augusta was conferred upon Livia by the will of Augustus, perhaps with some political significance; but though from the time of Domitian it was regularly given to the wife of the reigning prince, it became a general title of honour, being granted also to other relatives of the *princeps*. Later the wife of the reigning emperor was still more highly honoured by the granting of the appellation *mater castrorum*, e. g.,

to Faustina, wife of Marcus Aurelius, and *mater castrorum et senatus et patriae* to Iulia Domna, wife of Severus. The young men were made *principes iuventutis*, a title merely signifying entrance into the equestrian order, and whatever rank they obtained came through the holding of magistracies perhaps at an unusually early age, a favour granted, however, by a special decree alone. Notwithstanding this moderation on the part of the early emperors, there is a persistent endeavour to glorify the imperial family. In the *votorum nuncupatio* (Wilmanns, 2876) we find the *tota domus* associated with the names of the emperor Domitian, of Domitia and Iulia (Momm. *Staatsr.* ii. 776), and the phrase *tota domus Augusta* occurs in an inscription of the time of Hadrian (Wilm. 319), while *numina Augusti totiusque domus divinae* is seen in an inscription of the time of Commodus (Wilm. 120), and mention of the *domus divina* is very common thereafter (Momm. *Staatsr.* ii. 780–81).

As with his family, so with his associates and friends, Augustus endeavoured to prevent intimate relations with the *princeps* from implying undue influence and power (Suet. *Aug.* 56; Tac. *Ann.* ii. 34). It was inevitable, however, that the preëminence of the *princeps* should result in an exaggeration of the standing of those who had the honour of his friendship. The morning receptions, similar to those of other prominent citizens, became with the *princeps* the gatherings of magistrates and senators (Friedländer, *Sittengeschichte* I. ch. ii.). The *amici Caesaris* developed under Tiberius into a distinct and semi-official body (*cohors*) (Tac. *Ann.* vi. 9), arranged in classes with rank determined by degree of intimacy. The *renuntiatio amicitiae* on the part of the *princeps* was equivalent to sentence of banishment (Suet. *Tib.* 56; Tac. *Ann.* ii. 70; iii. 12, 24). The travelling companions (*comites*) of the *princeps* were chosen from this circle of *amici* (Suet. *Tib.* 46). After the first century *amici* became a general term, and included the regular attendants upon the emperor as well as any of high rank who were especially favoured. The term *comes* becomes more definite in its application, referring to those assigned to expeditions. These were supplied with special camp-quarters, and had precedence over provincial governors. A proof of the value assigned to appointment as *comes* is found in the appearance of the title in the inscriptions among the *honores* (Friedländer, *Sittengeschichte*, i. 118 foll.). At first the agents of the *princeps* belonged strictly to his own household, and were either slaves or freedmen. The necessity of having a body of imperial representatives led to the formation of the equestrian *cursus honorum*. From a select class of the *equites* the *princeps* selected administrative officers, who were his agents, while the magistrates of the senatorial order were the officers of the State. The equestrian *cursus honorum* was introduced by a military service, which led to procuratorships of various grades and finally to the important praefectures. These imperial officers formed an organized service, which, spreading throughout the Empire, supplanted in many instances the representatives of the State, and brought the control of the provinces directly into the hands of the *princeps*, centralizing the governmental control in Caesar, and making him in this respect also a monarch. See Hirschfeld, *Verwaltungsgeschichte*; and the article HONORES.

Mommsen, *Res Gestae Divi Augusti* (Berlin, 1883); Ernst Herzog, *Geschichte und System der Römischen Staatsverfassung*, 2 vols. (Leipzig, 1884–87); A. Bouché-Leclercq, *Manuel des Institutions Romaines* (Paris, 1886); P. Willems, *Le Droit Public Romain* (Paris, 1888); Theodor Mommsen, *Römisches Staatsrecht*, 3 vols. (Leipzig, 1887–88).

Principia. The term for the headquarters of the Roman camp. Here the officers' tents were pitched, the standards reared, and the harangues (*contiones*) made to the troops (Livy, vii. 12; xxviii. 24). See CASTRA.

Prisciānus. (1) A Latin grammarian of Caesarea, in Mauritania, who lived, at the beginning of the sixth century A.D., as a teacher of the Latin language in Constantinople. He there compiled, in addition to a number of smaller grammatical works, his *Institutiones Grammaticae* in eighteen books, the fullest and completest systematic Latin grammar which has come down to us. This work, which is of great importance owing to its ample quotations from ancient literature, was for a long time, in the Middle Ages, the school-book in ordinary use in the shape of an epitome by Rabanus Maurus, and formed the foundation for the earlier treatises on Latin grammar in modern times. We also possess an insipid panegyrical poem written by Priscian on the emperor Anastasius, a translation of the Cosmography of the geographer Dionysius, in hexameter verse, besides a grammatical catechism on twelve lines of the *Aeneid* for school use, a treatise on accent, a treatise on declension, a treatise on symbols for coins and weights, a treatise on the metres of Terence, a translation of the Προγυμνάσματα (*Praeexercitamenta*) of Hermogenes, a poem *De Sideribus*, and two epigrams. The best editions of Priscianus are those of Krehl (Leipzig, 1819–20) in 2 vols. and Keil in his *Grammatici Latini* (1855). (See GRAMMATICA.) (2) A physician, who lived in the fifth century, named THEODŌRUS PRISCIĀNUS, has left us a *Medicina Praesentanea* (a book of rapid curatives) in five books. (3) LYDUS, a Neo-Platonic philosopher in the reign of Justinian. He wrote a paraphrase and commentary on the physics of Theophrastus (*Metaphrasis in Theophrastum*), and *Solutiones* to certain philosophic questions. His remains are edited by Bywater (1886).

Priscus (Πρίσκος). A Byzantine historian who was a native of Panium in Thrace, and was one of the ambassadors sent by Theodosius the Younger to Attila, A.D. 445. He died about 471. Priscus wrote an account of his embassy to Attila, enriched by digressions on the life and reign of that chief. The work was in eight books, but only fragments of it have come down to us. Priscus was an excellent and trustworthy historian, and his style was remarkably elegant and pure. The fragments are published with those of Dexippus and others, by Bekker and Niebuhr (Bonn, 1829), and by Müller in his *Frag. Hist. Graec.*

Priscus, HELVIDIUS. The son-in-law of Thrasea Paetus, and, like him, distinguished by his love of virtue, philosophy, and liberty. He was quaestor in Achaia during the reign of Nero, and tribune of the plebs A.D. 56. When Thrasea was put to death by Nero (66), Priscus was banished from Italy. He was recalled to Rome by Galba (68); but in conse-

quence of his freedom of speech and love of independence, he was again banished by Vespasian, and was shortly afterwards put to death by order of this emperor. His life was written by Herennius Senecio at the request of his widow Fannia; and the emperor Domitian, in consequence of this work, subsequently put Senecio to death, and sent Fannia into exile (Pliny, *Epist.* vii. 19, 5; Dio Cass. lxvii. 13). Priscus left a son, Helvidius, who was put to death by Domitian.

Priscus, SERVILIUS. The Prisci were an ancient family of the Servilia gens, and filled the highest offices of the state during the early years of the republic. They also bore the agnomen of Structus, which is always appended to their name in the Fasti, till it was supplanted by that of Fidenas, which was first obtained by Q. Servilius Priscus Structus, who took Fidenae in his dictatorship, B.C. 435, and which was also borne by his descendants.

Priscus, TARQUINIUS. See TARQUINIUS.

Prison. See CARCER.

Prista (*πριστήρ*). A sawyer. See SERRA.

Privernum. An ancient town of Latium, on the river Amasenus.

Privilegium. See LEX.

Prize-fighters. See PUGILATUS.

Proaeresius (*Προαιρέσιος*). A teacher of rhetoric, born in Armenia about A.D. 276. He studied at Athens and Antioch, and was afterwards the principal professor of rhetoric at Athens. He died in A.D. 368 (Suidas, s. h. v.).

Proba Faltonia or Falconia. A Roman lady who, in the fourth century A.D., put together a cento on the creation of the world, composed of verses gathered from Vergil. The poem, which is still extant, is printed in Migne's *Patrologia*, xix. pp. 803–817. (See CENTO.) She also wrote an account of the war of Constantine against Magnentius, as is stated in the *subscriptio* to a MS. of the tenth century.

Probalinthus (*Προβάλινθος*). A deme of Attica, south of Marathon, and belonging to the tribe Pandionis (Strabo, p. 383).

Probŏlé (*προβολή*). A motion for a judicial prosecution. In Attic legal procedure it was a particular kind of public indictment. In the first assembly of every prytany, on the archon's inquiring whether the people were satisfied with the conduct of the magistrates, any citizen might accuse a magistrate of official misconduct. If the assembly considered there was foundation for the charge, the magistrate was temporarily suspended or even absolutely deposed from his office, and a judicial prosecution was instituted. Even against a private citizen, especially for doing an injury to magistrates, or to sacred persons or things, for interrupting a festival, embezzling public money, or instituting a vexatious prosecution, a complaint could be brought before the people in order to see whether they considered the case suitable for a judicial trial. The most celebrated example of this procedure is the case of Demosthenes against Midias for assaulting him in the discharge of public functions at the Dionysia. However, this neither bound the man who laid the complaint to bring forward an actual indictment nor the jury to follow in the formal trial the preliminary verdict of the people, although it would always influence them.

Probouli (*πρόβουλοι*). A name applied in Greece to any persons appointed to consult or take measures for the benefit of the people—e. g. delegates sent by the twelve Ionic cities to the Panionian Council (Herod. vi. 7) at the time of the Persian Wars. The word also denotes an oligarchical body which exercises the functions performed in a democracy by the *βουλή*, or is co-ordinate with the *βουλή* and a check upon it (Arist. *Pol.* vi. 15, 11).

Probus, M. AURELIUS. A Roman emperor (A.D. 276–282). He was a native of Sirmium in Pannonia, and rose to distinction by his military abilities. He was appointed, by the emperor Tacitus, governor of the whole East, and, upon the death of that sovereign, the purple was forced upon his acceptance by the armies of Syria. The downfall of Florianus (q. v.) speedily removed his only rival, and he was enthusiastically hailed by the united voice of the Senate, the people, and the legions. The reign of Probus presents a series of the most brilliant achievements. He defeated the barbarians on the frontiers of Gaul and Illyricum and in other parts of the Roman Empire, and put down the rebellions of Saturninus at Alexandria, and of Proculus and Bonosus in Gaul. But, after crushing all external and internal foes, he was killed at Sirmium by his own soldiers, who had risen in mutiny against him, because he had employed them in laborious public works. Probus was as just and virtuous as he was warlike, and is deservedly regarded as one of the greatest and best of the Roman emperors. His life is given in the Historia Augusta; see also Zosim. i. 64.

Probus, MARCUS VALERIUS. A famous Roman scholar and critic, born at Berytus, in Syria. He flourished in the second half of the first century A.D. He devoted almost all his attention to the archaic and classical literature of Rome, which had been previously neglected, and to the critical revision of the most important Roman poets, as Lucretius, Vergil, and Horace, after the manner of the Alexandrian scholars. Some of his criticisms on Vergil may possibly be preserved to us in a commentary to the Eclogues and Georgics, which bears his name. From a commentary, or criticism, on Persius we have his biography of that poet; and from his work *De Notis* we have an extract containing the abbreviations used for legal terms. Other grammatical writings bearing his name are the work of a grammarian of the fourth century. Probus ranks as the greatest of the Roman philologists. See Suet. *Frag.* ed. Reifferscheid, p. 138; Kübler, *De Probi Commenti. Verg.* (Berlin, 1881); and Steub, *De Probis Grammaticis* (Jena, 1871). The treatise of the second Probus is printed in Keil's *Grammatici Latini*.

Procas. A mythical king of Alba Longa, succeeding Aventinus. He was the father of Numitor and Amulius (Livy, i. 3).

Prochўta. Now Procida; an island off the coast of Campania near the promontory Misenum, is said to have been torn away by an earthquake either from this promontory or from the neighbouring island of Pithecusa or Aenaria (Pliny, *H. N.* ii. 203).

Proclus (*Πρόκλος*). The most important representative of the later Neo-Platonic School, born A.D. 412 at Byzantium. He received his first instruction at Xanthus, in Lycia, and betook him-

self to Alexandria to complete his education. There he attached himself chiefly to Heron, the mathematician, and to the Aristotelian Olympiodorus. Before the age of twenty, he removed to Athens to attend the lectures of the most celebrated Platonists of the time, Syrianus and Plutarchus. On the death of the latter he became head of the Platonic School until his own death in 485. His disciples were very numerous; and his learning and zeal for the education of the young, combined with his beneficence, his virtuous and strictly ascetic life, and his steadfastness in the faith of his fathers, gained him the enthusiastic devotion of his followers. We possess an account of his life, full of admiration for his character, by his pupil and successor, Marinus. The efforts of Proclus were directed to the support of paganism in its struggle with the now victorious Christianity, by reducing to a system all the philosophic and religious traditions of antiquity. His literary activity was very great, and extended over almost every department of knowledge; but Platonic philosophy was the centre of the whole. His philosophical works, now extant, are a commentary on a few dialogues of Plato (mainly on the *Timaeus*), also his chief work on the theology of Plato, as well as a summary of the theology of Plotinus, with writings treating several branches of philosophy from his own point of view. Some of his minor works have reached us only in a Latin translation. As specimens of his mathematical and astronomical works, we have a commentary on the first book of Euclid, a sketch of the astronomical teaching of Hipparchus, Ptolemy, and others, a slight treatise on the heavens, etc. One of his grammatical writings survives in his commentary on Hesiod's *Works and Days*. Lastly, we have two epigrams by him and six hymns. It is doubtful whether the *Grammatical Chrestomathy*, extracts from which, preserved by Photius, are the only source of our knowledge of the Greek cyclic poets, was really written by him, and not rather by a grammarian of the same name in the second century A.D. There is no complete edition of the works of Proclus. A partial edition is that of Cousin, 6 vols. (Paris, 1820). See Zeller, *Philos. der Griechen*, iii. 2, in the third edition.

Procné (Πρόκνη). A daughter of the Athenian king Pandion and Zeuxippé, sister of Philomela. She was given in marriage by her father to the Thracian prince Tereus, in Daulis near Parnassus, in return for assistance given him in war. Tereus became by her the father of Itys. Pretending that his wife Procné was dead, Tereus brought her sister Philomela from Athens, and ravished her on the way. He then cut out her tongue that she might be unable to inform against him, and concealed her in a grove on Parnassus; but the unfortunate girl contrived to inform her sister of what had happened by a robe, into which she ingeniously wove the story of her fate. Taking the opportunity of a feast of Dionysus in Parnassus, Procné went in quest of her sister, and agreed with her on a bloody revenge. They slew the boy Itys, and served him up to his father to eat. When Tereus learned the outrage, and was on the point of slaying the sisters, the gods changed him into a hoopoe or hawk, Procné into a nightingale, and Philomela into a swallow, or (according to another version) Procné into a swallow, and Philomela into a nightingale. See AËDON.

Procoeton (*προκοιτών*). An ante-room (Pliny, *Epist.* ii. 17, 10).

Proconnēsus (Προκόννησος). Now Marmora; an island of the Propontis, which takes from it its modern name (Sea of Marmora), off the northern coast of Mysia, northwest of the peninsula of Cyzicus or Dolionis. The island was celebrated for its marble, and hence its modern name.

Proconsul (*ἀνθύπατος*, *pro consule*, "deputy-consul"). A Roman officer to whom the consular power was intrusted for a specified district outside the city. The regular method of appointing the proconsul was to prolong the official power of the retiring consul (*prorogatio imperii*) on the conclusion of his year of office. In exceptional cases, however, others were appointed proconsuls, generally those who had already held the office of consul. This was especially done to increase the number of generals in command. The proconsuls were appointed for a definite or indefinite period; as a rule for a year, reckoned from the day on which they entered their province. This period might be prolonged by a new prorogation. In any case the proconsul continued in office till the appearance of his successor. With the growth of the provinces, the consuls as well as the praetors were employed to administer them as proconsuls on the expiration of their office. After Sulla this became the rule; indeed, the Senate decided which provinces were to be consular and which praetorian. The regulation, in B.C. 53, that past consuls should not govern a province till five years after their consulship broke down the immediate connection between the consulship and succession to a province, and the proconsuls thereby became in a more distinctive sense governors of provinces. After Augustus the title was given to governors of senatorial provinces, whether they had held the consulship before or not. As soon as the proconsul had been invested with his official power (*imperium*), he had to leave Rome forthwith, for there his *imperium* became extinct. Like the consuls, he had twelve lictors with bundles of rods and axes, whom he was bound to dismiss on reëntering Rome. In the province he combined military and judicial power over the subject peoples and the Roman citizens alike—only that in the case of the latter, on a capital charge, he had to allow them to appeal to Rome. To administer justice he travelled in the winter from town to town. In the case of war he might order out the Roman citizens as well as the provincials. His power was absolutely unlimited, so that he might be guilty of the greatest oppression and extortion, and was only liable to prosecution for these offences on the expiration of his office. He might advance a claim for a triumph or an *ovatio* (q. v.) for military services. When the senatorial provinces came generally to have no army under the Empire, the duties of the proconsuls became limited to administration, political and judicial. See Mommsen, *Röm. Staatsrecht*, ii. 90, 233, 238–246, 257; and the article PROVINCIA.

Procopius (Προκόπιος). A Greek historian of Caesarea in Palestine, a rhetorician and advocate by profession. In and after A.D. 526 he attended the general Belisarius as private secretary and adviser in nearly all his campaigns. He was after-

wards made a senator, and in 562, when prefect of Constantinople, was deposed from his office by a conspiracy, and shortly afterwards died suddenly, more than seventy years old. He has left us a history of his own times down to 554 in eight books (Ἱστορίαι), dealing with the wars of Justinian against the Persians, Vandals, and East Goths; a book on the buildings of Justinian (Κτίσματα); and the *Anecdota* (Ἀνέκδοτα), or secret history, supplementing the first-mentioned work. It discloses the scandals of the court of the day, and, on account of its contents, was not published until after the death of the author. His information is partly derived from the oral testimony of others, but he prefers to record his own experiences. This, and his fresh treatment of his subject, together with his pure and, on the whole, simple style, make him one of the most eminent authors of his age. The collected works of Procopius, including orations, are edited by Dindorf in 3 vols. (Bonn, 1833–38). There is an old translation of Procopius into English by Henry Holcroft (London, 1653). See Renan, *Essais de Morale et de Critique* (3d ed. Paris, 1867).

Procŭlus, Iulius. See Romulus.

Procŭlus, Sempronius. A Roman jurist, the founder of the school called after him the Proculiani. See Antistius Labeo; Iurisprudentia.

Procurātor. Under the Roman Republic, the fully accredited agent of a private citizen; a steward; a *maître d'hôtel* (Sen. *Epist.* 14). (See Promus.) Under the Empire, the title was given to those who, as household officers of the emperor, were considered administrators of the imperial purse. The fiscal administration of the imperial provinces was in the hands of a procurator of equestrian rank, under whom were freedmen of the emperor, bearing the same title, and attending to particular departments of the administration. In the senatorial provinces, also, there was an imperial procurator, independent of the governor, to manage the domains and to collect the revenues belonging to the *fiscus*. Further, there were particular provinces which, before they were administered as actual provinces, were governed as domains by an administrator appointed by the emperor and personally responsible to him. He likewise was styled procurator, and in general had a position similar to that of the other governors. Such a procurator was Pontius Pilate in Judaea, which for a long time was under a procurator. The imperial chief treasury was administered by a *procurator a rationibus*, also called *procurator fisci*, at first an imperial freedman, but after the second century a knight (Suet. *Vitell.* 2). To administer the imperial privy purse, into which flowed the revenues from the crown lands and the private fortune of the emperor, there were special procurators. See Fiscus.

Prodĭcus (Πρόδικος). A Greek Sophist of Ceos, contemporary with Socrates. He repeatedly visited Athens as an ambassador from his native country. The applause which his speeches gained there induced him to come forward as a rhetorician. In his lectures on literary style he laid chief stress on the right use of words and the accurate discrimination between synonyms, and thereby paved the way for the dialectic discussions of Socrates (Plato, *Euthyd.* 277; *Cratyl.* 384; *Charmid.* 163). None of his lectures has come down to us in its original form. We have the substance only of his celebrated fable of the *Choice of Heracles* preserved by Xenophon (*Mem.* ii. 21–34).

Prodigium. The Latin term for an unnatural or, at any rate, unusual and inexplicable phenomenon, which was always treated as requiring expiation (*procuratio*). This was only done on behalf of the State, if the phenomenon had been observed on ground belonging to the State. The Senate, acting on the advice of the pontiffs, ordained either particular sacrifices, to specified deities, or a nine days' sacrifice, or a public intercession, and left the execution of the ordinance to the consuls (Livy, i. 20). If a prodigium caused so much alarm that the usual means of expiation seemed insufficient, the Senate had recourse to the Sibylline Books, or the Etruscan *haruspices*. (See Haruspex; Sibylla.) For the prodigium of a thunderbolt, see Puteal; and in general see Müller, *Die Etrusker*, ii. 191; Hartung, *Die Religion der Römer*, i. 96; Bouché-Leclercq, *Hist. de la Divination*, p. 181; and Mommsen, *Staatsverwaltung*, 2d ed. iii. pp. 259–264.

Prodosia (προδοσία). A general term of Greek law for treason, including any attempt to subvert the Constitution of the State. The trial was before the people and the punishment was death, the loss of the right of burial in Attic soil, and confiscation of property (Xen. *Hellen.* i. 7, 22). Lesser degrees of treason were, however, probably recognized and punished only by fines (Demosth. *c. Timocr.* p. 740 § 127).

Prodrŏmi. Greek skirmishers. See Hippeis.

Proedria (προεδρία). The right of occupying the front row of seats next the orchestra, at the dramatic performances in the Greek theatre. This distinction was enjoyed by the priests, the chief magistrates, distinguished citizens, the descendants of those who had fallen in battle for their country, and members of foreign States whom it was desired to honour, especially ambassadors. The term also denotes the presidency at the Council (see Boulé), and in the assemblies of the people. In the fifth century B.C. the *prytanes*, under their *epistates*, presided over the Council and the assemblies of the people; in the fourth, the *proedri* were instituted. The latter were appointed on each occasion from nine of the tribes, and the presidential duties were transferred to them and their *epistates* (a member of the tenth tribe). See Aristotle, *Athen. Polit.* xliv. p. 115, with Kenyon's note.

Proetĭdes. See Proetus.

Proetus (Προῖτος). Son of Abas and Ocalé, and twin-brother of Acrisius. In the dispute between the two brothers for the kingdom of Argos Proetus was expelled, whereupon he fled to Iobatos, in Lycia, and married Antea or Stheneboea, the daughter of the latter. With the assistance of Iobates, Proetus was restored to his kingdom, and took Tiryns, which was now fortified by the Cyclopes. Acrisius then shared his kingdom with his brother, surrendering to him Tiryns, Midea, and the coast of Argolis. By his wife, Proetus became the father of three daughters, Lysippé, Iphinoë, and Iphianassa, who are often mentioned under the general name of Proetĭdes. When these daughters arrived at the age of maturity, they were stricken with madness, the cause of which is differently explained. Some say that it was a punishment inflicted upon them by Dionysus, because they had despised his worship; others relate that they were driven mad

by Heré, because they presumed to consider themselves more handsome than the goddess, or because they had stolen some of the gold of her statue. The frenzy spread to the other women of Argos; till at length Proetus agreed to divide his kingdom between Melampus and his brother Bias, upon the former promising that he would cure the women of their madness. Melampus then chose the most robust among the young men, gave chase to the mad women, amid shouting and dancing, and drove them as far as Sicyon. During this pursuit, Iphinoë died, but the two other daughters were cured by Melampus by means of purifications, and were then married to Melampus and Bias. The place where the cure was effected upon his daughters is not the same in all traditions, some mentioning the well Anigros, others the fountain Clitor in Arcadia, or Lusi in Arcadia. Besides these daughters, Proetus had a son, Megapenthes. When Bellerophon came to Proetus to be purified of a murder which he had committed, the wife of Proetus fell in love with him; but, as Bellerophon declined her advances, she charged him before Proetus with having made improper proposals to her. Proetus then sent Bellerophon to Iobates in Lycia, with a letter desiring the latter to murder Bellerophon. (See BELLEROPHON.) According to Ovid (*Met.* v. 238) Acrisius was expelled from his kingdom by Proetus; and Perseus, the grandson of Acrisius, avenged his grandfather by turning Proetus into stone by means of the head of Medusa. See PERSEUS.

Professors. See EDUCATION.

Profesti Dies. See DIES.

Proletarii. The name in the Roman centuriate system (see COMITIA) of those citizens who were placed in the lowest of the five property classes, and who were exempt from military service and tribute. Their name owes its origin to the fact that they only benefited the State by their children (*proles*). Another name for them is *capite censi*—i. e. those who were classed in the list of citizens at the census solely in regard to their status as citizens (*caput*). Afterwards, the richer among them were taken to serve in the wars: these were then called *proletarii;* and those without any property at all, *capite censi.* In and after the time of Marius, when the levy of troops was no longer founded on the census, the Roman armies were recruited by preference from the last class. See Mommsen, *Staatsrecht*, iii. 238.

Prolŏgus (*πρόλογος*). A technical term applied to that part of a Greek drama which precedes the entrance of the first chorus. From the time of Euripides it came to mean a monologue containing a narrative of the facts introductory to the main action, and this is the meaning which the word possessed in the language of Roman comedy. It is thus opposed to *ἐπίλογος*, the concluding part of the play. Aristotle compares the prologue to the prelude in a piece of music (*Rhet.* iii. 14, 1). The word is also applied to the actor who speaks the Prologue. In some plays there are two speakers of this sort—e. g. in the *Alcestis* of Euripides and the *Trinummus* of Plautus. Terence uses the Prologue as a means of personal communication on the part of the author to the public and as a vehicle for replying to adverse criticism (e. g. in the *Andria*). (See Liebig, *De Prologis Terentianis et Plautinis* [Görlitz, 1859].) The tables of contents prefixed to the divisions of books are also called *prologi*, as those of the lost history of Pompeius Trogus. See Hallberg, *De Trogo Pompeio* (Paris, 1869).

Promăchus (*πρόμαχος*, "fighter in the front rank," "protector"). (1) An epithet of Athené (q. v.). (2) Son of Parthenopaeus and the nymph Clymené, one of the Epigoni (q. v.).

Promenade. See PORTICUS.

Prometheia (*τὰ Προμήθεια*). A festival in honour of Prometheus (q. v.). It was one of the five Attic feasts which were celebrated by a torch-race in the Ceramicus. See LAMPADEDROMIA.

Promētheus (*Προμηθεύς*, "forethought"). A son of the Titan Iapetus and the Ocean-nymph Clymené, brother of Atlas, Menoetius, and Epimetheus, father of Deucalion (q. v.). The most ancient account of him, as given by Hesiod (*Theog.* 521–616) is as follows: When the gods, after their conquest of the Titans, were negotiating with mankind about the honour to be paid them, Prometheus was charged with the duty of dividing a victim offered in sacrifice to the gods. He endeavoured to impose upon Zeus by dividing it in such a way as cleverly to conceal the half which consisted of flesh and the edible vitals under the skin of the animal, and to lay thereon the worst part, the stomach, while he heaped the bones together and covered them with fat.

Zeus divined the stratagem, but, out of enmity towards man, purposely chose the worst portion, and avenged himself by refusing mortals the use of fire. Thereupon Prometheus stole it from Olympus and brought it to men in a hollow reed (*νάρθηξ*). As a set-off to this great blessing, Zeus resolved to send them an equally great evil. He caused Hephaestus to make of clay a beautiful woman named Pandora—that is, the all-gifted; for the gods presented her with all manner of charms and adornments, coupled however with lies, flattering words, and a crafty mind. Hermes brought her, with a jar as her dowry, in which every evil was shut up, to the brother of Prometheus, named Epimetheus (i. e. the man of afterthought, for he never thought of what he did until it had brought him into trouble). In spite of his brother's warning not to receive any present from Zeus, he was ensnared by her charms and took her to wife. Pandora opened the jar, and out flew all manner of evils, troubles, and diseases, before unknown to man, and spread over all the earth. Only delusive Hope remained in the jar, since, before she could escape, Pandora put the lid on the jar again (Hes. *Op. et D.* 54–105). But Prometheus met with his punishment. Zeus had him bound in adamantine fetters to a pillar with an eagle to consume in the day-time his liver, which grew again in the night. At last Heracles, with the consent of Zeus, who desired to increase his son's renown, killed the eagle, and set the son of Iapetus free. According to this account, the guile of Prometheus, and his opposition to the will of Zeus, brought on man far more evil than good.

Aeschylus, on the other hand, taking the view suggested by the Attic cult of Prometheus, in which the fire-bringing god was honoured as the founder of human civilization, gave the myth an entirely different form in his trilogy of *Prometheus the Fire-bearer*, *Prometheus Bound*, and *Prometheus Released.* In these Prometheus is still, of course, the opponent of Zeus; but, at the same time, he is

represented as full of the most devoted love for the human race. See AESCHYLUS.

Aeschylus makes him son of Themis, by whom he is put in possession of all the secrets of the future. In the war with the Titans, his advice assisted Zeus to victory. But when the god, after the partition of the world, resolved on destroying the rude human race, and to create other beings in their stead, Prometheus alone concerned himself with the fate of wretched mortals, and saved them from destruction. He brought them the fire he had stolen from Hephaestus at Lemnos, the fire that was to become the source of all discoveries and of mastery over nature; and raised them to a higher civilization by his inventive skill and by the arts which he taught mankind. For this he was punished by being chained on a rock beside the sea in the wilds of Scythia. Oceanus advised him to bend beneath the might of Zeus; but he consoled himself with the knowledge that, if the god begat a son by a certain goddess known to himself alone (Thetis), the son would dethrone his father. When no menaces could tear from him the secret, Zeus hurled him with a thunderbolt into Tartarus together with the rock to which he was chained. From this abode he first emerged into the light of day a long time after, to be fastened on Mount Caucasus and torn by the eagle until another immortal voluntarily entered Hades for him. At last Heracles, on his journey to the Hesperides, shot the eagle; the centaur Chiron (q. v.), suffering from his incurable wound, gladly renounced his immortality; and, after Prometheus had revealed the name of the goddess, he was set free. But, as a sign of his punishment, he ever after bore on his finger an iron ring and on his head a willow crown. He returned to Olympus, and once more became adviser and prophet of the gods. Legends related that he moulded men and animals of clay, and either animated these himself with the heavenly fire or induced Zeus or Athené to do so (Ovid, *Met.* i. 81; Hor. *Carm.* i. 16, 13). In Athens Prometheus shared with Hephaestus a common altar in the Academy, in the sacred precinct of Athené, and was honoured with a torch-race in a yearly festival called the Prometheia. There are monographs on the myth of Prometheus, by Weiske (1842); Lasaulx (1843); Holle (1879); and Milchhöfer (1882); see also Kuhn, *Die Herabkunft des Feuers* (1886); and E. B. Tylor, *Researches into the Early History of Mankind* (1865). The story of Prometheus has been made the subject of two fine poems by Shelley and Mrs. Browning.

Promētrae. See METRONOMI.

Promulsidārē. A tray for holding the dishes that contained the *promulsis* (q. v.).

Promulsis. Any relish taken before a meal, such as eggs, oysters, and radishes (Cic. *Ad Fam.* ix. 20). See CENA.

Promus. A steward or butler (Plaut. *Pseud.* ii. 2, 14).

Pronāos (*πρόναος*). In the Greek temple, the porch, portico, or entrance-hall to the temple proper, or *ναός*. See TEMPLUM.

Pronax (Πρῶναξ). The son of Talaüs and Lysimaché and brother of Adrastus and Eriphylé. By some the Nemean Games were said to have been founded in his honour.

Pronouns. See GRAMMATICA.

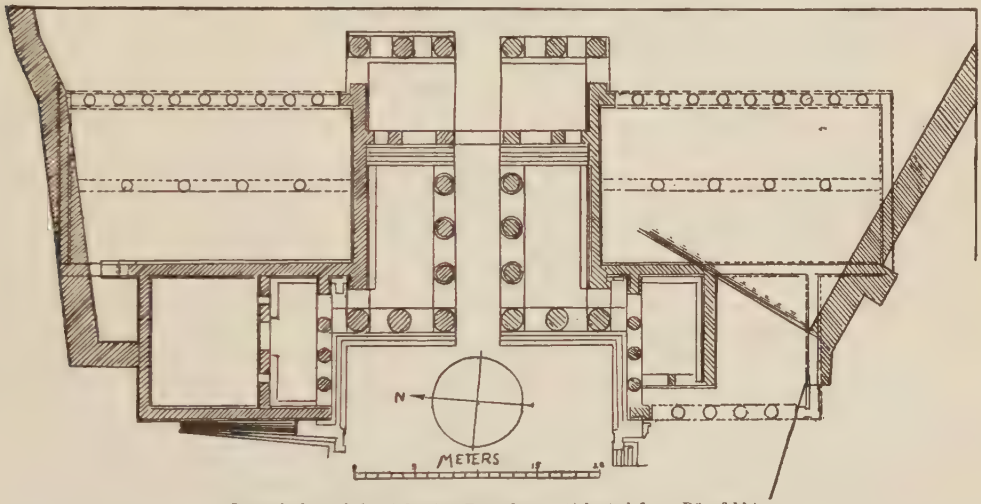
Pronŭba. A name given to Iuno as presiding over marriage. See IUNO.

Pronŭbae et Pronŭbi. See MATRIMONIUM, p. 1015.

Pronunciation of Greek. See GREEK, PRONUNCIATION OF.

Pronunciation of Latin. See LATIN, PRONUNCIATION OF.

Propertius, SEXTUS. A Roman elegiac poet born at Asisium (Assisi), in Umbria (Prop. i. 22, 9, 65–66, 121–126, and v. 1). The date of his birth is uncertain. He was somewhat older than Ovid, and was probably born about B.C. 50. He lost his parents at an early age; and, through the general confiscation of land in 42, was deprived of the greater part of his paternal estate. Still, he possessed enough to live a typical poet's life at Rome, whither he had proceeded soon after coming of age, about B.C. 34. He there associated with his patron Maecenas and with other poets, such as Vergil and Ovid. To complete his studies he afterwards went to Athens. When he was still quite young, the poet's spirit woke within him, and expanded through his attachment to the beautiful and witty Hostia. Under the name Cynthia, she henceforth was the subject of his love-poems. For five years (B.C. 28–23) this attachment lasted, though often disturbed by the jealousy of the sensitive poet and the capriciousness of his mistress. When it had come to an end, and even after Cynthia's death (probably before B.C. 18), the poet could not forget his old passion. He himself died young. He often expresses forebodings of an early death; there is no indication in his poems that any of them were written later than B.C. 16. They have come down to us in four books, but some scholars are of opinion that the poet himself had divided them into five, and that the original second and third books have been united, perhaps through the oversight of friends at the publication of the last. Propertius himself seems to have only published the first. In the first four books amatory poems preponderate. The fifth book, the confused order of which may well be referred to the poet's untimely death, deals mainly with subjects taken from Roman legends and history, in the same way as Ovid subsequently treated them in the *Fasti*.



Propertius possesses a poetical genius with which his talent is unable to keep pace. Endowed with a nature susceptible of passion as deep as it was strong, as ardent as it was easily evoked, and possessed of a rich fancy, he strives to express the fulness of his thoughts and feelings in a manner modelled closely on that of his Greek masters; and yet in his struggle with linguistic and metrical form, he fails to attain the agreeable in every instance. His expression is often peculiarly harsh and difficult, and his meaning is frequently obscured by far-fetched allusions to unfamiliar legends, or actual transcripts of them. Herein he follows the example of his models, the Alexandrian poets, Callimachus and Philetas. Nevertheless he is a great poet, and none of his countrymen has depicted the fire of passion so truly and so vividly as he. The personality of Propertius seems not to have been altogether agreeable, but to have been characterized by a certain conceit and youthful bumptiousness; and editors have argued with some probability that he is the person whom

Horace had in mind in depicting the famous bore in the ninth satire of the First Book, though there are some chronological difficulties in the way of this theory. See Palmer's notes on this satire.

The principal manuscript of Propertius is the Codex Neapolitanus, now at Wolfenbüttel, which dates from the fifteenth century, though long regarded as older. See the introduction to L. Müller's critical edition (Leipzig, 1880). The *editio princeps* of Propertius appeared at Venice in 1472. Propertius is edited by Hertzberg, with Latin notes, 3 vols. (1845); Keil (Leipzig, 1850); Palmer, with English notes (Dublin, 1880); Paley (1872); and Postgate (London, 1881). There is an English rendering by Cranstoun (1875). See Jacob, *Propertius* (Lübeck, 1847); on his style, the *Prolegomena* in Hertzberg's edition; and on his versification, Eschenburg, *Observationes Criticae in Propertium*, pp. 1–28 (Bonn, 1864); also Gruppe, *Die röm. Elegie*, i. pp. 274 foll.

Propylaeum, Propylaea (*προπύλαιον, προπύλαια*). (The singular and plural forms seem not to have differed in meaning. The gateway to the Athenian acropolis went almost invariably under the name Προπύλαια, but it is called Προπύλαιον in a contemporary official inscription (*C. I. A.* i. 314). The elder Pliny uses *propylon* for the same structure.) A gate-building, serving generally as an entrance to a sacred precinct. A city-gate is never so called.

The most important edifice of this kind, both architecturally and historically, and also the best preserved, is that designed by Mnesicles, and built in the years B.C. 437–432, as an entrance to the Athenian acropolis. The material is chiefly Pentelic marble; black Eleusinian marble is sparingly used for thresholds, wall-bases, etc.; the foundations are, in part, of Piraeus limestone (*poros*). The diagram shows the ground-plan both as originally designed and as actually carried out. (The unshaded parts were not built.) The central and essential part of the structure consists of two parallel lateral walls terminating in antae; a cross-wall, placed much nearer the eastern than the western front, and pierced by five doorways of three different widths; and two Doric hexastyle porticos, the greater or western one of which included six Ionic columns, placed three on each side of the central passage-way, and helping to support the flat ceiling. The whole was completely roofed over. The central and broadest of the five doorways was intended for processions, for animals, and perhaps also for wheeled vehicles; the other four, designed for ordinary pedestrians, were approached from the west by five steps. Each of the five doorways was provided originally with double doors. The central structure thus far described constituted the Propylaea proper. To this Mnesicles designed extensive wings, the like of which are not found with any other known Propylaea. Of these wings, only one, the northwestern, was carried out according to the design. This consists of a rectangular closed chamber and a Doric portico, whose three columns are much smaller than those of the central structure. The chamber was entered by a door in its south wall. On either

Ground-plan of the Athenian Propylaea. (Adapted from Dörpfeld.)

Propes. The lower end of the sheet (*pes*) attached to the clews of a square sail. See NAVIS.

Proplasma (*πρόπλασμα*). A model in clay or terra cotta made by a sculptor as a rough embodiment of his design for a statue (Cic. *Ad Att.* xii. 41).

Propnigēum (*προπνιγεῖον*). The mouth of a furnace (*πνιγεύς*); a term equivalent to the Latin *praefurnium* (Pliny, *Epist.* ii. 17, 11).

Propontis (Προποντίς). "The fore-sea." Now the Sea of Marmora; so called from its position with reference to the Pontus (Euxinus), being *πρὸ τοῦ Πόντου*, "before the Pontus." It is the small sea uniting the Euxine and the Aegaean, and dividing Europe (Thracia) from Asia (Mysia and Bithynia). See BOSPORUS.

Propraetor. A title given to a praetor who after discharging his judicial duties in Rome received the charge of a province. See PRAETOR; PROVINCIA.

Propugnacŭlum. (1) In general, any construction on land used for purposes of defence, as a barricade, rampart, etc. (2) The tower on a man-of-war from which the marines (*classiarii*) discharged missiles at the enemy (Hor. *Epod.* i. 2). See NAVIS.

side of the door was a window. Pausanias speaks of this northwestern wing as "a building to the left of the Propylaea containing pictures," whence it is often called the Pinacotheca by modern writers. The southwestern wing was to have been of the same dimensions as the northwestern, but of a different plan, with an open row of columns towards the west in place of a closed wall. This project had to be greatly changed; it is probable that unexpected opposition was raised to the destruction of a piece of venerable Pelasgic wall, and to encroachment on the precinct of Athena Niké. As a result this wing became a shrunken and abnormal structure, with a free-standing double anta at the northwestern corner and a unique form of roof. Again, Mnesicles designed two great porticos flanking the Propylaea and fronting eastward. These were both given up, the one probably because it would have encroached upon the precinct of Artemis Brauronia, the other perhaps in consequence of the outbreak of the Peloponnesian War. Even those parts of the whole edifice which were actually erected did not everywhere receive the finishing touch. The most obvious evidence of this is the existence of numerous rough bosses on the exposed surfaces of the marble blocks. These bosses were for assistance in hoisting the blocks, and were intended to be subsequently worked off.

The Propylaeum of Mnesicles was a building of great originality and skill, and, though it lacks something of the perfect simplicity and harmony of a Doric temple of the same period, it must still be ranked as one of the greatest achievements of Greek architecture. The artistic forms are admirable, the Ionic capitals being especially noteworthy for combined vigour and refinement; the workmanship is of unsurpassed precision. The juxtaposition of different orders, necessitated by the greater height required for the interior columns, is by some considered unfortunate. There is a similar juxtaposition in the temple of Athené Alea at Tegea, where the columns of the peristyle were Doric and those of the pronaos and opisthodomos Corinthian (probably). Owing to the width required for the principal entrance-way, the central intercolumniations on the east and west fronts are much greater than the others, with the result that there are two triglyphs instead of one over the central intercolumniations. This asymmetry would not be found in a temple. In consequence of the rise of the ground, the eastern pediment is nearly one and a half metres higher than the western. This superposition would have been very disagreeable if seen, but must have been invisible from most of the possible points of view. See ATHENAE, p. 155 (illustration).

The Propylaeum of Mnesicles was built on the site of an earlier and smaller structure of the same sort, of which slight traces can still be seen. Other remains of propylaea exist at Eleusis, Epidaurus, Olympia, Delos, and Priené.

See Bohn, *Die Propyläen der Akropolis zu Athen* (1882); W. Dörpfeld in the *Mittheilungen des arch. Instituts in Athen*, x. 38–56, 131–144 (1885). From these sources most of the foregoing material has been derived. Also F. C. Penrose, *Principles of Athenian Architecture* (2d ed. 1888). L. Fenger's *Dorische Polychromie* (1886) devotes a plate to the polychromy of the Athenian Propylaea.

Proquaestor. See QUAESTOR.

Prora (*πρῷρα*). A ship's prow. See NAVIS.

Prorēta (*πρῳράτης*). The look-out on a ship stationed upon the forecastle of the ship's prow He was second in command to the *gubernator* (Plaut. *Rud.* iv. 3, 86).

Prorogatio. The Roman term for the extension either of a man's year of office (*prorogatio magistratus*), or of a supreme command (*prorogatio imperii*), or of a provincial administration (*prorogatio provinciae*).

Proscenium (*προσκήνιον*). See THEATRUM.

Proscriptio (from *proscribere*, "to advertise for sale"). From the time of Sulla (B.C. 82) it came to mean the sale of the property of those whom he had condemned to death and who were themselves styled *proscripti*. During the civil strife of the following fifty years, other leaders used the precedent thus established as a means of weakening the opposing party. A famous proscription is that of the Second Triumvirate (B.C. 43), under which Cicero was put to death. See CICERO; SULLA.

Prosecta. See ABLEGMINA.

Proserpĭna. See PERSEPHONÉ.

Prosodium (*προσῳδία*). A kind of song generally sung to the accompaniment of the flute at festal processions to the temple or the altar, chiefly in the worship of Apollo. It had a rhythm corresponding to the measure of the march.

Prospalta (*τὰ Πρόσπαλτα*). A deme of Attica belonging to the tribe Acamantis.

Prosper. A celebrated ecclesiastical writer. He was a native of Aquitania, and flourished during the first half of the fifth century A.D. He distinguished himself by his numerous writings in defence of the doctrines of Augustine against the attacks of the Semipelagians. Many of his theological works are extant; and there are also two chronicles bearing his name: (1) *Chronicon Consulare*, extending from A.D. 379, the date at which the chronicle of St. Jerome ends, down to 455, the events being arranged according to the years of the Roman consuls. We find short notices with regard to the Roman emperors, the Roman bishops, and political occurrences in general; but the troubles of the Church are especially dwelt upon, and, above all, the Pelagian heresy. (2) *Chronicon Imperiale*, comprehended within the same limits as the preceding (379–455), but the computations proceed according to the years of the Roman emperors, and not according to the consuls. While it agrees with the *Chronicon Consulare* in its general plan, it differs from it in many particulars, especially in the very brief allusions to the Pelagian controversy, and in the slight, almost disrespectful notices of Augustine. The second of these chronicles was probably not written by Prosper of Aquitania, and is assigned by most critics to Prosper Tiro, who, it is imagined, flourished in the sixth century. There are likewise several poems, which have come down to us under the name of Prosper. The best edition of Prosper's works is that of Lebrun and Maugeant (Paris, 1711).

Prostas (*προστάς*). The vestibule of a house.

Prostătes (*προστάτης*). The Greek name for the person who acted as patron to a former slave. See LIBERTUS; SERVUS.

Prostătes Tou Demou (*προστάτης τοῦ δήμου*). In Athens and other democratic States of Greece, a word denoting the person who by his character and ability was generally regarded as the most influential statesman of the day. Such, for example, was Pericles in his time. (Xen. *Mem.* i. 2, 40.) In most of the Doric States it was also the title of public officers of various kinds.

Prostitution. See MERETRIX.

Prostȳlos (*πρόστυλος*). Literally, "with columns in front," an epithet of a temple (*ναός*) with the columns in front of its portico standing completely free from the front wall of the temple itself. See TEMPLUM.

Protagonistes (*πρωταγωνιστής*). In the Greek drama the actor who played the leading part. See DRAMA; HISTRIO; TRAGOEDIA.

Protagŏras (*Πρωταγόρας*). A celebrated Sophist, born at Abdera, in Thrace, probably about B.C. 480, and died about 411, at the age of nearly seventy years. It is said that Protagoras was once a poor porter, and that the skill with which he had fastened together, and poised upon his shoulders, a large bundle of wood, attracted the attention of Democritus, who conceived a liking for him, took him under his care, and instructed him in philosophy (Diog. Laërt. ix. 53; x. 8; Gell. v. 3). This well-known story, however, appears to have arisen out of the statement of Aristotle that Protagoras invented a sort of porter's knot for the more convenient carrying of burdens. In addition to this, Protagoras was about twenty years older than Democritus. Protagoras was the first who called himself a Sophist, and taught for pay; and he practised his profession for the space of forty years. He must have come to Athens before B.C. 445, since he drew up a code of laws for the Thurians, who left Athens for the first time in that year. Whether he accompanied the colonists to Thurii, we are not informed; but at the time of the plague (430) we find him again in Athens. Between his first and second visit to Athens he had spent some time in Sicily, where he had acquired great fame; and he brought with him to Athens many admirers out of other Greek cities through which he had passed. His instructions were so highly valued that he sometimes received 100 minae from a pupil; and Plato says that Protagoras made more money than Phidias and ten other sculptors. In 411 he was accused of impiety by Pythodorus, one of the Four Hundred. His impeachment was founded on his book on the gods, which began with the statement, "Respecting the gods, I am unable to know whether they exist or do not exist" (Diog. Laërt. ix. 52). The impeachment was followed by his banishment, or, as others affirm, only by the burning of his book. His doctrine was, in fact, a sort of agnosticism based upon the impossibility of attaining any absolute criterion of truth. It is summed up in the sentence, "Man is the measure of all things" (*πάντων ἄνθρωπος μέτρον*, or, in Latin, *homo mensura omnium*), implying that each one must be his own final authority; for just as each thing appears to any individual, so it really is for him. This doctrine is therefore styled Individualism. Protagoras wrote a large number of works, of which the most important were entitled *Truth* (Ἀλήθεια) and *On the Gods* (Περὶ Θεῶν). The first contained the theory refuted by Plato in the *Theaetetus*. Plato gives a vivid picture of the teaching of Protagoras in the dialogue that bears his name. Protagoras was especially celebrated for his skill in the rhetorical art. By way of practice in the art he was accustomed to make his pupils discuss theses (*communes loci*), an exercise which is also recommended by Cicero. He also directed his attention to language, and endeavoured to explain difficult passages in the poets. He is said to have been the first to make the grammatical distinctions of moods in verbs and of genders in nouns.

See Geist, *De Protagora Sophista* (Giessen, 1827); Herbst, *Protagoras Leben und Sophistik* (Hamburg, 1832); Vitringa, *De Protagorae Vita* (Groningen, 1853); Blass, *Attische Beredsamkeit*, pp. 23–29; Ueberweg, *Hist. of Philosophy*, i. pp. 73–76 (Eng. trans. N. Y. 1872).

Protesilāus (*Πρωτεσίλαος*). The son of Iphiclus and Astyoché, dwelling in Phylacé in Thessaly. He is called Phylacius and Phylacides, either from his native place or from his being a grandson of Phylacus. He led the warriors of several Thessalian towns against Troy, and was the first of all the Greeks who was killed by the Trojans, being the first who leaped from the ships upon the Trojan coast. According to the common tradition he was slain by Hector. Protesilaüs is most celebrated in ancient story for the strong affection existing between him and his wife Laodamia, the daughter of Acastus. (See LAODAMIA.) His tomb was shown near Eleus, in the Thracian Chersonesus, where a magnificent temple was erected to him. There was a belief that nymphs had planted elm-trees around his grave, which died away when they had grown sufficiently high to see Troy, and that fresh shoots then sprang from the roots. There was also a sanctuary of Protesilaüs at Phylacé, at which funeral games were celebrated.

Proteus (*Πρωτεύς*). The prophetic old man of the sea, described in the earliest legends as a subject of Poseidon, whose flocks (the seals) he tended. According to Homer, he resided in the island of Pharos at a distance of one day's sail from the river Aegyptus (i. e. the Nile); whereas Vergil places his residence in the island of Carpathos between Crete and Rhodes. At mid-day Proteus rose from the sea, and slept in the shadow of the rocks of the coast, with the sea-monsters lying around him. Any one wishing to learn from him the future was obliged to catch hold of him at that time; as soon as he was seized he assumed every possible shape in order to escape the necessity of prophesying; but whenever he saw that his endeavours were of no avail he resumed his usual form, and told the truth. After finishing his prophecy he returned into the sea (*Odyss.* iv. 351). Homer ascribes to him a daughter Idothea. Another set of traditions describes Proteus as a son of Poseidon and as a king of Egypt, who had two sons—Telegonus and Polygonus or Tmolus. His Egyptian name is said to have been Cetes, for which the Greeks substituted that of Proteus. His wife is called Psamathé or Toroné, and, besides the above-mentioned sons, Theoclymenus and Theonoë are likewise called his children. He is said to have hospitably received Dionysus during his wanderings. Hermes brought to him Helen after her abduction; or, according to others, Proteus himself took her from Paris, gave to the lover a phantom, and restored the true Helen to

Menelaüs after his return from Troy (Herod. ii. 112, 118; Diod. i. 62).

Prothesmia (*προθεσμία*). The term in which actions and prosecutions could be brought in Athens. The *προθεσμίας νόμος* was a sort of statute of limitations, the time for bringing action for debt or for damages on account of injuries being apparently five years, but there were no doubt different periods assigned in the case of different actions.

Prothȳrum (*διάθυρον*). The entrance-hall of a Roman house, being a small passage between the street-door (*ianua*) and the house-door (*ostium*). The Greek *πρόθυρον* is the Latin *vestibulum* (q. v.). See DOMUS.

Protogĕnes (Πρωτογένης). A celebrated Greek painter of Caunus, in Caria, who lived for the most part at Rhodes, in the time of Alexander the Great and his first successors. He died B.C. 300. His poverty seems to have prevented him from attending the school of any of the celebrated masters of his age, for no one is named as his instructor. He long remained poor, until the unselfish admiration which his contemporary and brother painter Apelles showed for his works raised him in riper years to great celebrity. His works, owing to the excessive care he bestowed on them, were few in number; but their perfect execution led to their being ranked by the unanimous voice of antiquity among the highest productions of art. His most celebrated works were a "Resting Satyr," and also a painting representing the Rhodian hero, Ialysus. On the latter he spent seven or, according to others, as many as eleven years. To insure its permanence he covered it with four distinct coats of paint, so that when the upper coating perished the lower might take its place (Pliny, *H. N.* xxxv. 101–105).

Proverbium (*παροιμία*). A proverb. Both the Greeks and Romans were fond of short, pithy sayings, embodying the accumulated experience of mankind, and they abound in the pages of the classic writers. Mere academic and philosophic sayings were styled *γνῶμαι* (*sententiae*), and writers in whom they abound are called "gnomic." (See EPOS.) The maxims of the Seven Sages were famous throughout Greece (see SEVEN SAGES), and among the Romans writers like Cato the Elder, Iulius Caesar, Tiro, and Suetonius made collections of apothegms. The mimes of Publilius Syrus were full of maxims, hundreds of which are still preserved. (See PUBLILIUS SYRUS.) For the literature of the subject, see Duplessis, *Bibliographie Parémiologique* (Paris, 1847); Rheinsberg-Düringsfeld, *Sprichwörter der Germanischen und Romanischen Sprachen* (1872–75), which is the ablest work on proverbs that has ever been written; and for convenient reference, the *Dictionary of Classical Quotations* in the Bohn Library (London, 1874).

Provincia. A word which, in Roman public law, designated primarily the sphere of action allotted to a particular magistrate. (See MAGISTRATUS.) When, in the third century B.C., Rome began to assume the permanent rule of territories outside of Italy, it became customary to intrust the government of each such territory to a single magistrate; and, by a natural transition, "province" became the technical term for conquered territory ruled by a Roman governor, and "provincials" the technical term for the inhabitants of such a territory—the subjects as distinguished from the citizens of Rome. Territories left under the sceptres of native princes, though practically controlled by Rome, were not provinces. Free and allied cities, though included within the boundaries of a province, were not parts of the province, nor were individuals who had received Roman citizenship properly numbered among the provincials. In the imperial period, however, with the gradual disappearance of the protected kingdoms and allied commonwealths and the gradual extension of Roman citizenship throughout the Roman world, the term province became purely territorial; the provinces were simply the great governmental districts outside of Italy. At the same time, in consequence of the growth of imperial absolutism, the distinction between Italy and the provinces lost all real importance. As early as the second century after Christ, the methods of provincial administration were introduced into Italy; and under Diocletian, at the close of the third century, the distinction disappeared even in name, Italy being divided into a number of provinces.

Provincial Officers.—Provision was made for the government of the first four provinces by increasing the number of praetors annually elected at Rome (so B.C. 227 and again B.C. 197). The praetors-elect drew lots to determine which should do duty in Rome and which should go to the provinces. With the increase in the number of provinces (B.C. 146–120) the Senate began to prolong (*prorogare*) the imperium of outgoing magistrates, who then ruled the provinces allotted them as *pro*consuls or *pro*praetors. The more important provinces—those in which military operations were in progress or in prospect—were commonly assigned to the outgoing consuls. A *lex Sempronia* (C. Gracchus) provided that the Senate should indicate annually, before the election of the consuls, which provinces were to be assigned to them. The consuls-elect then drew lots for these provinces. The system of governing the provinces through such promagistrates was made general by Sulla (about B.C. 80). The new criminal courts (*quaestiones*) established by him, together with the older civil courts, kept all the praetors (now eight in number) busy at Rome during their first year of office, and all the provinces (now ten in number) were allotted to proconsuls or propraetors. The consuls continued to draw lots for the consular provinces before taking office: the praetors drew lots during their year of office. With the further increase in the number of provinces (B.C. 64 there were fourteen or fifteen) recourse was had to various expedients. Two or more provinces were not infrequently assigned to a single proconsul, or a proconsul or propraetor was left in his province for two or more years. Exceptionally, an outgoing praetor or even a private citizen might be invested with proconsular powers, but only by a vote of the Comitia. Iulius Caesar restored the equilibrium between the urban magistracies and the provincial promagistracies by a further increase in the number of praetors.

Under Augustus a division of provinces was made between the emperor and the Senate. He reserved to himself those provinces in which it was necessary to maintain a considerable armed force, and assigned to the Senate those which

were pacified. The senatorial provinces (ten in number) continued to be allotted to the ex-magistrates: Africa and Asia to ex-consuls, the rest to ex-praetors. All of the senatorial governors bore the title of proconsul, but those of consular rank had twelve fasces, those of praetorian rank but six. With the multiplication of the city magistracies and the decrease in the number of available provinces, governorships were no longer obtainable by the outgoing magistrates at the expiration of their regular terms, but only after a legal interval of five years, and then in the order of seniority. Under Tiberius the actual interval averaged about thirteen years.

Under the governors served: (1) *Legati*, lieutenants, usually nominated by the governor and appointed by the Senate. The governor assigned to them their duties, and had the power of dismissing them (see LEGATUS); (2) *comites* or *contubernales*, a staff of military and administrative assistants, appointed by the governor with the approval of the Senate, and removable at his pleasure; (3) *apparitores*, etc., secretaries, clerks, copyists, interpreters, attendants and messengers, engineers (*architecti*), physicians, and priests. All these (with the possible exception of the *medici*) were public employés, paid by the treasury. The governor might also take with him, at his own expense, as many clients and slaves as he saw fit; but until late in the republican period he was not permitted to take his wife.

The provincial quaestors, or treasury officials, were magistrates of subordinate rank, but of independent tenure and powers. They were elected, not appointed; and were responsible only to the treasury and the Senate. The number of quaestors annually elected at Rome had increased with the organization of new provinces, so that, even at the close of the republican period, the quaestors-elect drew lots for Italian or provincial duty, and proquaestors were rarely needed. Under the Empire these officials were gradually replaced by imperial procurators (q. v.).

The quaestors, legates, and *comites* constituted the governor's council. See *consilia*, under MAGISTRATUS.

In the provinces of Caesar the emperor himself was proconsul. The governors were his appointees and lieutenants, *legati Augusti pro praetore*. Their authority was as ample as that of a proconsul, but since it was a delegated authority they had but five fasces (*legati quinquefascales*). Their military aids (*legati legionis*) and their officers of justice (*legati iuridici*) were appointed by the emperor. The interests of the imperial fiscus were guarded by procurators.

Early in the imperial period there appears another type of imperial province, in which the emperor rules not as proconsul, but as sovereign proprietor, and not through a *legatus*, but through a viceroy (*praefectus*) or steward (*procurator*). Many of these provinces were ruled for a time by tributary kings or princes, and with the extinction or deposition of the original dynasty the resident procurator of Caesar becomes *procurator et praeses* or *procurator pro legato*. In nearly all of these provinces there was some obstacle, either in the temper of the inhabitants (as in Egypt and Iudaea) or in the topography (as in the Alps), or in the backward stage of civilization (as in Thrace and Mauretania) to the introduction of the ordinary provincial administration.

Organization and Government.—In the republican period the main lines of the provincial organization were fixed by the Senate, and the details were worked out in each province by a special committee of senatorial legates. The constitution thus framed was the *lex provinciae*. The normal unit of local government was the city or town. If there were no cities, local government districts were created by combining several villages or even, as in Spain and Gaul, by adopting the existing tribal districts. In such districts towns gradually grew up, sometimes about a market-place, sometimes about a Roman garrison. In other cases the nuclei of municipal organizations were furnished by Roman colonies. The effect of Roman rule was gradually to develop, where it did not previously exist, the Graeco-Latin municipal system. This development was largely due to the method of government instinctively adopted. It was always the Roman practice, while maintaining a strong central control, to leave the immediate management of local affairs to the local authorities, and to throw upon them as much of the provincial and even of the imperial business as they could manage—particularly the conscription of soldiers and the collection of taxes. Only where there were no trustworthy local authorities was a prefecture or local dictatorship established. In the imperial period municipal self-government was secured and enlarged, in proportion as the provinces were Romanized, by special charters and general laws. See MUNICIPIUM.

For the administration of justice the provinces were divided into much larger districts or dioceses (*conventus*). To the municipalities was left only a petty civil and criminal jurisdiction.

In the original demarkation of the municipal districts and judicial circuits the Romans retained the older native divisions only where the people submitted readily to the Roman rule. Where this was not the case the older political or racial connections were purposely severed; hostile communes were placed under the rule of those more friendly to Rome or under that of Roman colonies, and *connubium* and even *commercium* were suspended between different portions of the same province. But the Romans made no such innovations for the sake of innovation, or even for the sake of uniformity.

In the government of a province the governor was subject to no limitations except those expressly imposed by Roman legislation. In theory the provincials had no political or religious organization, no law, and no rights. They were conquered subjects of the Roman people (*dediticii*), holding their lives and their property at the pleasure of Rome. The authority of the governor was in principle absolute: he had *imperium militiae*. (See MAGISTRATUS.) Upon the exercise of his governmental power, however, certain restrictions were imposed, at first by Roman tradition and custom, and later, in many cases, by written law. In criminal matters he was sole judge of the law and the facts, but he was expected to administer criminal justice publicly and at stated places and times, to hear evidence and argument, and to consult his councillors. In the exercise of his civil jurisdiction he was expected, after hearing the pleadings and discovering the point at issue, to refer the decision to a *iudex* or *arbiter*.

In the absence of any provincial law (for the provincials had lost their own law and had no share in the civil law of Rome) he was obliged to lay down the rules which the *iudex* was to apply; but this he was expected (and ultimately required) to do in a general way, by a public edict, at the beginning of his term of office. He was bound to adhere to his own edict, and his successor generally reënacted it, with such emendations and additions as seemed advisable. These provincial edicts were, in general, admirably drawn, and they constituted an important element in the development of the *ius gentium*. See EDICTUM; IUS.

Such special laws as were passed at Rome for the protection of the provincials were intended primarily to safeguard the proprietary interest of the Roman people, to prevent the governors from so impairing the resources of the provinces as to lessen their value to Rome. By a series of laws the governors were forbidden to extort money or goods from the provincials, directly or indirectly. They were forbidden to accept gifts, and to purchase anything beyond current supplies. For oppression and maladministration they were liable to criminal indictment after their return to Rome. Such charges were originally tried by the Senate; then by a standing committee of the Senate; later by a regular court with a large bench of *iudices* (*quaestio repetundarum*). The governors were also expected to protect the provincials against the tax-farmers (*publicani*) and the speculators (*negotiatores*), but as a rule governors, publicans, and speculators acted in concert. When the provincials were unable to meet the exactions of the governor and the publicans, the speculators advanced the necessary sums at usurious interest; and if their loans were not repaid when due, troops were placed at their disposal for the collection of principal and interest. The transfer of the *iudicia* from the senatorial to the equestrian order (C. Gracchus) tended to force the governors into such a concert, because the publicans and speculators belonged to, and exercised a controlling influence in, the equestrian order. The short terms allotted to the provincial governors made their robberies more rapid, and the prospect of criminal prosecution forced them to steal on a larger scale that they might purchase their acquittal at Rome without sacrificing more than the moiety of their gains. That the governors should make their fortunes out of the provinces was so much a matter of course that the few honourable exceptions were matters of special note and record. Even the free and allied cities were not secure against robbery by the provincial ring. Some of them paid subsidies, which brought them into relations with the publicans and speculators: nearly all of them were bound to furnish recruits and, in case of need, to provide free quarters for the legions, which placed them at the mercy of the governor. The sale of protection against the quartering of troops was an important source of illegal revenue.

The establishment of the Empire greatly improved the position of the provincials. The theory that the provinces must not be so exploited as to lessen their productivity was now enforced, not only in the provinces of Caesar, but in those which were nominally under the control of the Senate. A careful census of the provinces and the abandonment of the wasteful and oppressive system of tax-farming made it possible to lessen the burden of the provincial taxes and yet increase the revenue. All the provincial governors, including the proconsuls, received not only their outfit and a liberal allowance for expenses, as in the Republican period, but a salary. The extension of municipal rights and of Roman citizenship gave the provincials much more effective protection against arbitrary and unjust treatment. The systematic organization of the cult of Rome and of the *divi Augusti* led to annual meetings of delegates from the localities, and to these assemblies (*communia, concilia*, κοινά), whose character and duties were at first purely religious, some representative functions were conceded, especially the right of petition. Under Tiberius they became something very like advisory administrative councils. Charges against the governors formulated by such bodies received serious consideration. Tacitus and Pliny mention twenty-seven trials of ex-governors, with but seven acquittals.

Public Works.—Even under the Republic much had been done to develop the resources of the provinces by the building of roads, the improvement of harbours, the establishment of colonies, etc. Under the Empire all these things were done on a larger scale and with more consistency of purpose. For an account of the imperial postal system, see CURSUS PUBLICUS.

Defence of the Frontiers.—With the pacification and gradual Romanization of the provinces the troops were gradually removed to the frontier. The frontier line (*limes*), even in those portions most exposed to barbarian inroads, was a road rather than a wall, and served primarily for the rapid concentration of troops. These were quartered in forts (*castella*). The road itself was protected, where it was deemed necessary, by ditches and palisades, and frequently by a broad zone of waste country, in which no settlements were tolerated. The movement of persons across the line was strictly controlled, as was also, for revenue purposes, the transit of goods.

General Development.—In judging the results of Roman conquest and rule, it must never be forgotten that the suppression of brigandage and piracy, and of the interminable wars which formerly raged between the petty States of the ancient world, gave to industry and commerce an unexampled security, which went far to balance the spoliation of the provinces even in the worst period of misgovernment. With the administrative reforms of the early Empire and the effective defence of the frontiers, the majority of the provinces grew rapidly in wealth, comfort, and civilization. The contributions of the ruder, non-Hellenic provinces to the art, literature, and science of the Roman world grew steadily in importance. Provincials played a prominent part in the government of the Empire: they gave it not only the bulk of its troops, but a constantly increasing number of military leaders, administrative officers, and jurists. In the end they furnished the majority of its emperors.

Later Empire.—In the course of the third century the military and the civil government of the provinces began to be assigned to different officers, the former to *duces*, the latter to *praesides* or *correctores*. Under Diocletian this separation of powers became general. At the same time the larger provinces were subdivided and grouped for administrative purposes into a dozen dioceses, each under a *vicarius*, and these, again, into four great prefectures—Gaul, Italy, Illyricum, and the Orient.

With the extension of the provincial organization to Italy proper, the following additional provinces were included (about 400) in the *praefectura Italiae:*

I. Under the *vicarius Italiae:* (1) Venetia et Histria, (2) Liguria, (3) Aemilia, (4) Flaminia et Picenum annonarium. II. Under the *vicarius urbis Romae:* (5) Tuscia et Umbria, (6) Picenum suburbicarium, (7) Valeria, (8) Samnium, (9) Campania, (10) Apulia et Calabria, (11) Lucania et Bruttii. Provinces 1–6 and 9 were governed by *consulares;* 10 and 11 by *correctores;* 7 and 8 by *praesides.*

Provocatio. The Roman term for the appeal from the verdict of the magistrate to the decision of the people.

Under the kings the court of appeal was the Comitia Curiata; after Servius Tullius, the Comitia Centuriata. While, under the arbitrary rule of the kings, the right of appeal was allowed, on the establishment of the Republic, in B.C. 509, this was imposed on the consuls as a duty, and was repeatedly enjoined by special enactments in all cases where it was a question of life and death, or of corporal punishment. The appeal was only valid within the city, and the Pomerium, but not in the camp. Moreover, no one could appeal against the dictator. When afterwards (B.C. 454), besides the consuls, the tribunes and aediles acquired the right of imposing a fine (*multa*, q. v.), a maximum limit was fixed for it, and if that was exceeded, there was an appeal to the Comitia Tributa.

As this appeal was expected in all legitimate cases, trials of this kind were held immediately before the Comitia concerned with such appeals; and after the verdict had been pronounced by the magistrate presiding, it was either confirmed or reversed by the votes of the people. About B.C. 195 the right of appeal was extended over the whole of Italy and the provinces. After permanent courts for certain offences had been established, the *quaestiones perpetuae* (see Quaestio), the jurisdiction of the people, and with it the appeal thereto, became more and more limited. For the provocatio under the Empire, see Appellatio.

Provocatōres. A class of gladiators whose special characteristics are not clearly defined in

Prow. See PRORA.

Proxĕnus (*πρόξενος*). The Greek term for the representative of a State who was appointed, from the citizens of another State, to attend to the interests of its citizens there resident, as often as they needed legal protection and assistance. In the interests of foreigners, many States appointed such representatives from among their own citizens. Their position may be compared with that of our consuls. The *proxenus* received many distinctions and honours from the State which he represented. To be nominated *proxenus* was in some cases only an honorary distinction, which the State conferred on such foreigners as resided in it as aliens (see METOECI), and were therefore unable to do any service abroad for the citizens of the State in which they resided. This distinction insured many privileges, such as freedom from taxation and from public burdens which otherwise fell on the resident aliens, and, in general, exemption from tolls and taxes; also the right to acquire property in land, free admission to the Senate and to the assemblies of the people, etc. See Monceaux, *Les Proxenies Grecques* (1886).

Proxĕnus (*Πρόξενος*). A Boeotian, the disciple of Gorgias, and friend of Xenophon. Being connected by the ties of hospitality with the younger Cyrus, the latter engaged him in his service. He was seized by Tissaphernes and put to death with the other Greek generals. It was at the invitation of Proxenus that Xenophon was induced to enter the service of Cyrus (Xen. *Anab.* i. 1, 11).

Prudentius, AURELIUS CLEMENS. The earliest of the Christian poets of any celebrity. He was a native of Spain, and was born A.D. 348. After practising as an advocate, and discharging the duties of a civil and criminal judge in two important cities, he received from the emperor Theodosius, or Honorius, a high military appointment at court; but as he advanced in years he became sensible of the emptiness of worldly honour and earnest in the exercises of religion. His poems are composed in a great variety of metres, and are brilliant in style and in the fervour of their Christian sentiment. The Latinity, for its period, is good; and his metrical skill surpasses that of his pagan contemporaries. The best editions of Prudentius are by Obbarius (Tübingen, 1845) and Dressel (Leipzig, 1860). See Faguet, *De Prudent. Carminibus Lyricis* (Paris, 1883); Rösler, *Der katholische Dichter Prudentius* (Freiburg, 1886); Puech, *Prudence* (Paris, 1888); and the monograph by Lease on the language and style (Baltimore, 1895). There is an English translation of selections from Prudentius by F. St. J. Thackeray, with good introduction and notes (1890).

Prusa or **Prusias** (*Προῦσα*). (1) P. AD OLYMPUM (*ἡ ἐπὶ τῷ Ὀλύμπῳ*), now Brusa. A great city of Bithynia, on the northern side of Mount Olympus, fifteen Roman miles from Cius and twenty-five from Nicaea. It was built by Prusias, king of Bithynia, or, according to some, by Hannibal. (2) Some writers distinguish from this a smaller city, called P. AD HYPIUM or HYPPIUM (*πρὸς τῷ Ὑππίῳ ποταμῷ*) which stood northwest of the former, and was originally called CIĔRUS (*Κίερος*), and belonged to the territory of Heraclea, but was conquered by Prusias, who named it after himself. It stood northwest of the former. Perhaps it is only another name for Cius.

Prusias (*Προυσίας*). (1) I. King of Bithynia from about B.C. 228 to 180, though the date neither of his accession nor of his death is exactly known. He was the son of Zielas, whom he succeeded. He appears to have been a monarch of vigour and ability, and raised his kingdom of Bithynia to a much higher pitch of power and prosperity than it had previously attained. It was at his court that Hannibal took refuge; and when the Romans demanded the surrender of the Carthaginian general, the king basely gave his consent, and Hannibal only escaped falling into the hands of his enemies by a voluntary death. (2) II. King of Bithynia, son and successor of the preceding, reigned from about B.C. 180 to 149. He courted assiduously the alliance of the Romans. He carried on war with Attalus, king of Pergamus, with whom, however, he was compelled by the Romans to conclude peace in 154. He was slain in 149 by order of his son Nicomedes, as is related in the life of the latter. (See NICOMEDES II.) Prusias is described to us as a man in whom personal deformity was combined with a character the most vicious and degraded. His passion for the chase is attested by the epithet of the "Huntsman" (*Κυνηγός*) given to him (Polyb. xxiv. 1).

Prymnēsia or **Prymnēsus** (*Πρυμνησία*). A city in the north of Phrygia, which appears, from its coins, to have been a chief seat of the worship of Midas as a hero (Ptol. v. 2, 24).

Prytaneia (*πρυτανεία*). (1) Any public office held by rotation for given periods; e. g. in Herodotus (vi. 110) the chief command for the day, held by each of the ten generals in turn. (2) The period of thirty-five or thirty-six days, i. e. about one-tenth of the year, during which each of the ten *phylae* presided in turn over the Boulé and Ecclesia. The order was determined by lot. The presiding tribe was represented by its *epistates*, who was appointed by lot to preside for the day, and could not hold this office more than once in each year (Aristot. *Athen. Polit.* 44). See BOULÉ.

Prytanēum (*πρυτανεῖον*). In many Greek towns, a public building consecrated to Hestia (q. v.), and containing the State hearth. At Athens, it was here that the State offered hospitable entertainment as a public compliment to foreign ambassadors, to Athenian envoys on their return from the successful discharge of their mission, also to citizens who had done good service to the State, especially to distinguished generals, and victors in the great Panhellenic Games, and sometimes even to their descendants. In the case of those who were Athenian citizens, this privilege was usually granted for life.

Prytănis (*πρύτανις*, "a president"). The name in various Greek free States for the highest officials. In many States, especially in early times, one, two, or five *prytaneis* ruled with almost kingly power. At Athens *prytanis* was the name for the member of a body of officials who presided over that body when it had any public business to transact. This title was also given to the presidents of the *naucrariae* and Senate (who, with their *epistates* at their head, presided over the Senate and Assembly during the fifth century B.C.). In the fourth century the presidential duties were

transferred to the *proedri* and their *epistates*. See Aristot. *Athen. Polit.* 44, ed. Kenyon; and the articles BOULÉ; ECCLESIA; NAUCRARIA.

Psalterium (ψαλτήριον). A stringed instrument, something between the *cithara* and the *harpa* (Verg. *Ciris*, 179).

Psalteria. (1) From a painting at Thebes. (2) From an original in the British Museum.

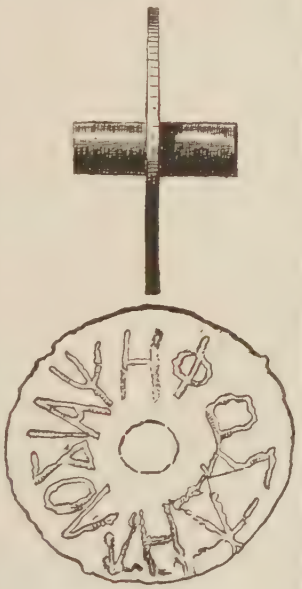
Psaltria (ψάλτρια). A music-girl (Livy, xxxix. 6).

Psammenĭtus (Ψαμμήνιτος). Psamthek III., the last king of Egypt and a member of the Saïtic dynasty, the twenty-sixth of the royal lines that ruled in this country. Iulius Africanus calls him PSAMMECHERĪTES. He was the son and successor of Amasis, and ascended the throne at the very moment that Cambyses was marching against Egypt to dethrone the father. Psammenitus met Cambyses on the frontiers, near the Pelusiac branch of the Nile, with all his forces—Egyptians, Greeks, and Carians—but was totally defeated in a bloody battle. Shutting himself up in Memphis, he was besieged here by Cambyses, and, according to Ctesias, was finally betrayed and taken prisoner. All Egypt thereupon fell under the Persian power, and the reign of Psammenitus ended after a duration of only six months. The greatest outrages were heaped upon the unfortunate monarch and his family; but the firmness with which he endured them all touched at last even the ferocious Cambyses with compassion. Psammenitus was thereupon retained at court, treated with honour, and finally sent to Susa along with 6000 Egyptian captives. Having been accused, however, subsequently, of attempting to stir up a revolt, he was compelled to drink bull's blood, and ended his days (Herod. iii. 10 foll.).

Psammetĭchus (Ψαμμήτιχος). (1) The first king of Egypt who opened that country to strangers, and induced the Greeks to come and settle in it. He was the fourth in the Saïtic dynasty, and the son of Necos or Nechao, who had been put to death by the Aethiopians, at that time masters of Egypt. Psammetichus, being quite young at the time of his father's death, had been carried into Syria to avoid a similar fate, and, after the retreat of the conquerors, was recalled to his native country by the inhabitants of the Saïtic nome. It would seem that the Aethiopians, on their departure, had left Egypt a prey to trouble and dissension, and that the early princes of the Saïtic dynasty, also, had never enjoyed supreme control over the whole kingdom. When Psammetichus, therefore, ascended the throne, he was obliged to share his power with eleven other monarchs, and Egypt was thus divided into twelve independent sovereignties. This form of government was like what the Greeks called a "dyodecarchy" (δυοδεκαρχία). The twelve kings regulated in common, in a general council, all that related to the affairs of the kingdom considered as a whole. This state of things lasted for fifteen years, when it met with a singular termination. An oracle had declared that the whole kingdom would fall to the lot of that one of the twelve monarchs who should one day offer a libation with a brazen cup. It happened, then, one day, that the kings were all sacrificing in common in the temple of Hephaestus at Memphis, and that the high priest, who distributed the golden cups for libations, had brought with him, by some accident, only eleven. When it came, therefore, to the turn of Psammetichus, who was the last in order to pour out a libation, he unthinkingly employed for this purpose his brazen helmet. This incident occasioned great disquiet to his colleagues, who thought they saw in it the fulfilment of the oracle. Being unable, however, with any appearance of justice, to punish an unpremeditated act, they contented themselves with banishing him to his own kingdom, which lay on the coast, and with forbidding him to take any part thereafter in the general affairs of the country. Psammetichus, however, retaliated upon them by calling to his aid some Greek mercenaries who had landed on the Egyptian shore, and eventually conquered all his colleagues, and made himself master of the whole of Egypt (B.C. 652). The monarch now recompensed his Greek allies not only by paying them the sums of money which he had promised, but also in assigning them lands on the Syrian frontier, where they formed, in fact, a military colony. Psammetichus showed a great partiality for the Greeks on all occasions; and, in a Syrian expedition, gave them the place of honour on the right, while he assigned the left to the Egyptians. The discontent of the national troops was so great at this that a large number of the military caste, amounting, it is said, to 240,000 men, left Egypt and retired to Aethiopia. So strong was the preference of Psammetichus for everything Greek that he caused a number of children to be trained up after the Grecian manner, and with these he formed the body of interpreters, whom Herodotus found in his day existing in Egypt. Psammetichus also embellished his capital with several beautiful structures, and, among others, with the southern propylaea of the great temple of Hephaestus. He carried on a long war in Syria, and his forces are said to have remained twenty-nine years before the city of Azotus. It was during this period, probably, that he arrested by presents the victorious career of the Scythians, who had overrun Asia Minor, and were advancing upon Palestine and Egypt (B.C. 626). Psammetichus died after a reign of fifty-four years, leaving the crown to his son Necos.

Herodotus relates a curious story of Psammetichus, who, it seems, was desirous of ascertaining what nation was the most ancient in the world; or, in other words, what was the primitive language of men. In order to discover this, he took two newly born children, and, having caused them to be placed in a lonely hut, directed a shepherd to nourish them with the milk of goats, which animals were sent in to them at stated times, and to take care himself never to utter a word in their hearing. The object was to ascertain what words

they would first utter of themselves. At length, on one occasion, when the shepherd went in to them as usual, both the children, running up to him, called out *bekos*. Psammetichus, on being informed of the circumstance, made inquiries about the word, and found that it was the Phrygian term for bread. He therefore concluded that the Phrygians were the most ancient of men (Herod. ii. 151 foll.).



(2) A descendant of the preceding, who came to the throne about B.C. 400, as a kind of subject-king to Persia.

Pselcis (Ψελκίς). A city in upper Aethopia (Dio Cass. liv. 5).

Psellus (Ψέλλος). (1) MICHAEL, a native of Andros in the ninth century A.D. He was probably the author of some of the works which are ascribed to the younger Psellus. (2) MICHAEL CONSTANTIUS, the younger, a far more celebrated person, flourished in the eleventh century of our era. He was born at Constantinople 1020, and lived at least till 1105. He taught philosophy, rhetoric, and dialectics at Constantinople, where he stood forth as almost the last upholder of the falling cause of learning. The emperors honoured him with the title of Prince of the Philosophers. His works are both in prose and poetry, on a vast variety of subjects, and distinguished by an eloquence and taste which are worthy of a better period. They are too numerous to be mentioned here. Edited by Migne (Paris, 1863).

Psephisma (ψήφισμα). The Greek, and especially the Athenian, term for a resolution of the people arrived at by voting. See BOULÉ; ECCLESIA.

Psephus (ψῆφος). A pebble or stone ball used by the Athenian dicasts in giving a verdict. Hence ψηφίζεσθαι is the regular term for voting, etc. See DICASTES.

Greek Psephus. (Vischer.)

Pseudengraphes Graphé (ψευδεγγραφῆς γραφή). An action to punish the false entry upon the official register at Athens of an item in reference to the existence or the collection of a debt. See Platner, *Klagen und Process*, ii. 117 foll.

Pseudisodŏmum (ψευδισόδομον). An early style of masonry used by the Greeks, in which the stones were regularly laid but were not of the same size (Vitruv. ii. 8, 6; Pliny, *N. H.* xxxvi. 51). (See ISODOMUS.) An example is found in the wall of the Lion Gate at Mycenae, for an illustration of which see MYCENAE.

Pseudodiptĕros (ψευδοδίπτερος, "falsely dipteral"). An epithet describing a temple which is surrounded on all four sides by only a single row of columns, placed at intervals which correspond to the position of the outer row of columns in a dipteral temple. See TEMPLUM.

Pseudodipteral Arrangement.

Pseudoperiptĕros (ψευδοπερίπτερος, "falsely peripteral"). An epithet of a temple in which the side columns were "engaged" in the wall of the *cella*, instead of standing out at a distance from it. See TEMPLUM.

Pseudoperipteral Arrangement.

Pseudothўrum (ψευδόθυρον). A secret door (Ammian. xiv. 1).

Pseudo-urbāna (sc. *aedificia*). The portions of a farm-house (*villa*) reserved for the owner and his family, separate from the tenements of the overseers and labourers (Vitruv. vi. 5, 3). In the case of a rich land-owner these portions would be as elegant as a house in town. See VILLA.

Psilōthrum (ψίλωθρον). A depilatory made from arsenic and lime, and used for removing hair from the surface of the skin (Mart. iii. 74).

Psophis (Ψωφίς). A town in the northwest of Arcadia, on the river Erymanthus, is said to have been originally called PHEGIA (Pausan. viii. 24, 2). It sided with the Aetolians against the Achaeans, but was taken B.C. 219 by Philip, king of Macedonia, who was then in alliance with the Achaeans.

Psychē (Ψυχή), "the soul," occurs, in the later times of antiquity, as a personification of the human soul. Psyché was the youngest of the three daughters of a king, and excited by her beauty the jealousy and envy of Venus. In order to avenge herself, the goddess ordered Cupid or Eros to inspire Psyché with a love for the most contemptible of all men; but Cupid was so stricken with her beauty that he himself fell in love with her. He accordingly conveyed her to a charming spot, where, unseen and unknown, he visited her every night, and left her as soon as the day began to dawn. Psyché might have continued to enjoy this state of happiness if she had attended to the advice of her lover, who told her never to give way to her curiosity, or to inquire who he was. But her jealous sisters made her believe that in the darkness of night she was embracing some hideous monster, and accordingly once, while Cupid was asleep, she drew near to him with a lamp, and, to her amazement, beheld the most handsome and lovely of the gods. In her excitement of joy and fear, a drop of hot oil fell from her lamp upon his shoulder. This awoke Cupid, who censured her for her mistrust, and escaped. Psyché's happiness was now gone, and after attempting in vain to throw herself into a river, she wandered about from temple to temple, inquiring after her lover, and at length came to the palace of Venus. There her real sufferings began, for Venus retained her, treated her as a slave, and imposed upon her the hardest and most humiliating labours. Psyché

would have perished under the weight of her sufferings, had not Cupid, who still loved her in secret, invisibly comforted and assisted her in her toils. With his aid she at last succeeded in overcoming the jealousy and hatred of Venus: she became immortal, and was united to him forever. Many have tried to see in this lovely story an idea of which it is said to be the mythical embodiment; that Psyché is the human soul, which is purified by passions and misfortunes, and is thus prepared for the enjoyment of true and pure happiness. The story, however, is only a variation of an Indo-European folk-tale found among many peoples. See Zingow, *Psyche und Eros* (1881). It forms an episode in the *Metamorphoses* of Apuleius (iv. 28–vi. 24), and is borrowed by him from a Greek original. This episode is separately edited by Jahn and Michaelis (3d ed. Leipzig, 1883). See Jahn in his *Populäre Aufsätze* (Bonn, 1868); and the article APULEIUS. In works of art Psyche is represented as a maiden with the wings of a butterfly, along with Cupid in the different situations described in the allegory.

Psychomanteion (ψυχομαντεῖον). A Greek term for an oracle of the dead. See ORACULA.

Psychopompos (Ψυχοπομπός). "The guider of souls"; another name for Hermes (q. v.).

Psycter (ψυκτήρ). A vessel for cooling wine or water. It was of various shapes, but probably in general resembled the *calathus*. (See CALATHUS.) The name might be given to any vessel in which wine was cooled, even when the process was merely putting in snow, but the contrivance especially so called consisted of a smaller vessel placed within a larger one. Sometimes the wine or water to be iced was placed in the smaller and plunged into the larger vessel which contained snow; sometimes the snow was placed in the smaller vessel and let down into the larger vase of wine. When the wine was sufficiently iced, the smaller vessel was no doubt removed, and the wine ladled out with a *cyathus* (Athen. xi. 503): we have no reason to suppose that a tap was used, as seems to have been sometimes the case in the *Authepsa* for hot drinks. See AUTHEPSA.

Iced water, the *gelida* of Juv. v. 63 (*frigida*, Tac. *Ann.* xiii. 16), which, like the *calida*, was handed round to mix with the wine, or was used as a drink by itself (Athen. iii. p. 121 e, 122 f), was prepared in a ψυκτήρ as above described (in Mart. xiv. 116, *lagona nivaria*), and a special term *decocta* belongs to it, because it was boiled first in order that it might more readily be iced afterwards (Juv. v. 50, with Mayor's note). Pliny says that this *decocta* was an invention of Nero's (cf. Suet. *Ner.* 48), and that the water, which had sometime previously been boiled, was placed in a glass vessel and so plunged into a larger vessel of snow, that it might escape any impurities (*vitia*) of the snow.

The snow for this purpose, or for use in the *colus* or *saccus nivarius*, was kept through the summer in pits covered over with chaff and woollen cloths (Plut. *Symp.* vi. 6). Another method of Antiochus, whereby ὑδρίαι κεράμεαι were placed on straw on the top of the house at night, seems to have been the method of freezing by evaporation which is common in Persia at the present time. See Ussing in *Annal. d. Inst.* (1849); Beckmann, *Hist. of Inventions*, iii. 322; Becker-Göll, *Charikles*, ii. 346; *Gallus*, iii. 430; Marquardt, *Privatleben*, 333.

Psylli (Ψύλλοι). A Libyan people, the earliest known inhabitants of the district of North Africa called Cyrenaïca. Pliny (*H. N.* vii. 2, 13) speaks of them as able to heal wounds caused by serpents. Persons of this race are said to have been brought to the bedside of Cleopatra after she had been bitten by the asp (Suet. *Aug.* 17, with Peck's notes).

Psyttalēa (Ψυττάλεια). An island near Salamis (q. v.).

Pteleum (Πτελεόν). (1) An ancient seaport town of Thessaly in the district Phthiotis, at the southwestern extremity of the Sinus Pagasaeus, was destroyed by the Romans. (2) A town in Elis Triphylia, said to have been a colony from the preceding. (3) A fortress of Ionia, on the coast of Asia Minor, belonging to Erythrae.

Pterōma (πτέρωμα) and **Pteron** (πτερόν). An architectural term denoting a colonnade on the flank of a temple and projecting like a wing, whence the name (Pliny, *H. N.* xxxvi. 4, 9).

Ptolemaeus (Πτολεμαῖος), usually called **Ptolemy**. I. MINOR HISTORICAL PERSONS.—(1) The nephew of Antigonus, king of Asia. He carried on war in Greece on behalf of Antigonus, but in B.C. 310 he abandoned the cause of his uncle, and concluded a treaty with Cassander and Ptolemy the son of Lagus. He soon gave offence to the Egyptian king, and was, in consequence, compelled to put an end to his life by poison, B.C. 309. (2) The son of Lysimachus, king of Thrace. He was the eldest of the three sons of that monarch by his last wife Arsinoë, and the only one who escaped falling into the hands of Ptolemy Ceraunus. (3) The son of Pyrrhus, king of Epirus, by his wife Antigoné, the step-daughter of Ptolemy Lagi. When only fifteen years of age he was left by his father in charge of his hereditary dominions, when Pyrrhus himself set out on his expedition to Italy, 280. At a later time he fought under his father in Greece, and was slain in the course of Pyrrhus's campaign in the Peloponnesus, 272. (4) Surnamed PHILADELPHUS, son of M. Antony, the triumvir, by Cleopatra. After the death of Antony, B.C. 30, his life was spared by Augustus at the intercession of Iuba and Cleopatra, and he was brought up by Octavia with her own children.

II. KINGS OF EGYPT.—(1) Surnamed SOTER, the Preserver, but more commonly known as the son of Lagus, reigned B.C. 323–285. His father Lagus was a Macedonian of ignoble birth, but his mother Arsinoë had been a concubine of Philip of Macedon, on which account it seems to have been gen-

Coin of Ptolemy Soter.

erally believed that Ptolemy was in reality the offspring of that monarch. Ptolemy is mentioned among the friends of the young Alexander before the death of Philip. He accompanied Alexander throughout his campaigns in Asia, and was always treated by the king with the greatest favour. On the division of the Empire which followed Alex-

ander's death (323), Ptolemy obtained the government of Egypt. In 321 his dominions were invaded by Perdiccas, the regent; but the assassination of Perdiccas by his mutinous soldiers soon delivered Ptolemy from this danger. In the following year Ptolemy enlarged his dominions by seizing upon the important satrapy of Phœnicia and Coele-Syria. It was probably during this expedition that he made himself master of Jerusalem by attacking the city on the Sabbath. A few years afterwards (316) Ptolemy entered into an alliance with Cassander and Lysimachus against Antigonus, whose growing power had excited their common apprehensions. In the war which followed, Antigonus conquered Coele-Syria and Phœnicia (315–314); but Ptolemy recovered these provinces by the defeat of Demetrius, the son of Antigonus, in 312. In 311 hostilities were suspended by a general peace. This peace, however, was of short duration, and Ptolemy appears to have been the first to recommence the war. He crossed over to Greece, where he announced himself as the liberator of the Greeks, but effected little. In 306 Ptolemy was defeated by Demetrius in a great sea-fight off Salamis in Cyprus. In consequence of this defeat, Ptolemy lost the important island of Cyprus, which had previously been subject to him. Antigonus was so much elated by this victory as to assume the title of king, an example which Ptolemy, notwithstanding his defeat, immediately followed. Antigonus and Demetrius followed up their success by the invasion of Egypt, but were compelled to return to Syria without effecting anything. Next year (305) Ptolemy rendered the most important assistance to the Rhodians, who were besieged by Demetrius; and when Demetrius was at length compelled to raise the siege (304), the Rhodians paid divine honours to the Egyptian monarch as their saviour and preserver (Σωτήρ), a title which appears to have been now bestowed upon Ptolemy for the first time. Ptolemy took comparatively little part in the contest, which led to the decisive battle of Ipsus, in which Antigonus was defeated and slain (301). The latter years of Ptolemy's reign appear to have been devoted almost entirely to the arts of peace, and to promoting the internal prosperity of his dominions. In 285 Ptolemy abdicated in favour of his youngest son Ptolemy Philadelphus, the child of his latest and most beloved wife, Berenicé, excluding from the throne his two eldest sons Ptolemy Ceraunus and Meleager, the offspring of Eurydicé. The elder Ptolemy survived this event two years, and died in 283. His reign is variously estimated at thirty-eight or forty years, according as we include or not these two years which followed his abdication.

The character of Ptolemy has been generally represented in a very favourable light by historians, and there is no doubt that if we compare him with his contemporaries and rivals he appears to deserve the praises bestowed upon his mildness and moderation. But it is only with this important qualification that they can be admitted: for there are many evidences that he did not shrink from any measure that he deemed requisite in order to carry out the objects of his ambition. Yet as a ruler Ptolemy certainly deserves the highest praise. By his able and vigorous administration he laid the foundations of the wealth and prosperity which Egypt enjoyed for a long period. Under his fostering care Alexandria quickly rose to the place designed for it by its founder —that of the greatest commercial city of the world. Not less eminent were the services rendered by Ptolemy in the advancement of literature and science. In this department, indeed, it is not always easy to distinguish the portion of credit due to the father from that of his son: but it seems certain that to the elder monarch belongs the merit of having originated those literary institutions which assumed a more definite and regular form, as well as a more prominent place, under his successor. Such appears to have been the case with the two most celebrated of all—the Library and the Museum of Alexandria. The first suggestion of these important foundations is ascribed by some writers to Demetrius of Phalerus, who spent all the latter years of his life at the court of Ptolemy. But many other men of literary eminence were also gathered around the Egyptian king, among whom may be especially noticed the great geometrician Euclid, the philosophers Stilpo of Megara, Theodorus of Cyrené, and Diodorus surnamed Cronus, as well as the elegiac poet Philetas of Cos, and the grammarian Zenodotus. To the last two we are told Ptolemy confided the literary education of his son Philadelphus. Many anecdotes sufficiently attest the free intercourse which subsisted between the king and the men of letters by whom he was surrounded, and prove that the easy familiarity of his manners corresponded with his simple and unostentatious habits of life. We also find him maintaining a correspondence with Menander, whom he in vain endeavoured to attract to his court, and sending overtures probably of a similiar nature to Theophrastus. (See ALEXANDRIAN SCHOOL; BIBLIOTHECA.) Nor were the fine arts neglected: the rival painters Antiphilus and Apelles both exercised their talents at Alexandria, where some of their most celebrated pictures were produced. See Mahaffy, *The Empire of the Ptolemies* (1896).

Ptolemy was himself an author: he composed a history of the wars of Alexander, which is frequently cited by later writers, and is one of the chief authorities which Arrian made the groundwork of his own history.

(2) PHILADELPHUS (B.C. 285–247), the son of Ptolemy I. by his wife Berenicé, was born in the island of Cos, 309. His long reign was marked by few events of a striking character. He was engaged in war with his half-brother Magas, who had governed Cyrené as viceroy under Ptolemy Soter, but on the death of that monarch not only asserted his independence, but even attempted to invade Egypt. Magas was supported by Antiochus II., king of Syria; and the war was at length terminated by a treaty, which left Magas in undisputed possession of the Cyrenaïca, while his infant daughter Berenicé was betrothed to Ptolemy, the son of Philadelphus. Ptolemy also concluded a treaty with the Romans. He was frequently engaged in hostilities with Syria, which were terminated towards the close of his reign by a treaty of peace, by which Ptolemy gave his daughter Berenicé in marriage to Antiochus II. Ptolemy's chief care, however, was directed to the internal administration of his kingdom, and to the patronage of literature and science. The institutions of which the foundations had been laid by his father quickly rose un-

der his fostering care to the highest prosperity. The Museum of Alexandria became the resort and abode of all the most distinguished men of letters of the day, and in the library attached to it were accumulated all the treasures of ancient learning. Among the other illustrious names which adorned the reign of Ptolemy may be mentioned those of the poets Philetas and Theocritus, the philosophers Hegesias and Theodorus, the mathematician Euclid, and the astronomers Timocharis, Aristarchus of Samos, and Aratus. Nor was his patronage confined to the ordinary cycle of Hellenic literature. By his interest in natural history he gave a stimulus to the pursuit of that science, which gave birth to many important works, while he himself formed collections of rare animals within the precincts of the royal palace. It was during his reign also, and perhaps at his desire, that Manetho gave to the world in a Greek form the historical records of the Egyptians; and according to a well-known tradition it was by his express command that the Holy Scriptures of the Jews were translated into Greek. The new cities or colonies founded by Philadelphus in different parts of his dominions were extremely numerous. On the Red Sea alone we find at least two bearing the name of Arsinoë, one called after another of his sisters Philotera, and two cities named in honour of his mother Berenicé. The same names occur also in Cilicia and Syria: and in the latter country he founded the important fortress of Ptolemaïs in Palestine. All authorities concur in attesting the great power and wealth to which the Egyptian monarchy was raised under Philadelphus. He possessed at the close of his reign a standing army of 200,000 foot and 40,000 horse, besides war-chariots and elephants, a fleet of 1500 ships, and a sum of 740,000 talents in his treasury; while he derived from Egypt alone an annual revenue of 14,800 talents. His dominions comprised, besides Egypt itself, and portions of Aethiopia, Arabia, and Libya, the important provinces of Phœnicia and Coele-Syria, together with Cyprus, Lycia, Caria, and the Cyclades, and during a great part at least of his reign Cilicia and Pamphylia also. Before his death Cyrené was reunited to the monarchy by the marriage of his son Ptolemy with Berenicé, the daughter of Magas. The private life and relations of Philadelphus do not exhibit his character in as favourable a light as we might have inferred from the splendour of his administration. He put to death two of his brothers; and he banished his first wife Arsinoë, the daughter of Lysimachus, to Coptos in Upper Egypt on a charge of conspiracy. After her removal Ptolemy married his own sister Arsinoë, the widow of Lysimachus, a flagrant violation of the religious notions of the Greeks, but one which was frequently imitated by his successors. He evinced his affection for Arsinoë not only by bestowing her name upon many of his newly-founded colonies, but by assuming himself the surname of Philadelphus, a title which some writers referred in derision to his unnatural treatment of his two brothers. By this second marriage Ptolemy had no issue: but his first wife had borne him two sons—Ptolemy, who succeeded him on the throne, and Lysimachus; and a daughter, Berenicé, whose marriage to Antiochus II., king of Syria, has been already mentioned.

(3) Euergétes (B.C. 247–222), eldest son and successor of Philadelphus. Shortly after his accession he invaded Syria, in order to avenge the death of his sister Berenicé. (See Berenicé, No. 2.) He met with the most striking success. He advanced as far as Babylon and Susa, and after reducing Mesopotamia, Babylonia, and Susiana, received the submission of all the upper provinces of Asia as far as the confines of Bactria and India. From this career of conquest he was recalled by the news of seditions in Egypt, and returned to that country, carrying with him an immense booty, comprising, among other objects, all the statues of the Egyptian deities which had been carried off by Cambyses to Babylon or Persia. These he restored to their respective temples, an act by which he earned the greatest popularity with his native Egyptian subjects, who bestowed on him in consequence the title of Εὐεργέτης ("Benefactor"), by which he is generally known. While the arms of the king himself were thus successful in the East, his fleets reduced the maritime provinces of Asia, including Cilicia, Pamphylia, and Ionia, as far as the Hellespont, together with Lysimachia and other important places on the coast of Thrace which continued for a long period subject to the Egyptian rule. Concerning the events

Coin of Ptolemy Euergetes.

which followed the return of Euergetes to his own dominions (probably in 243) we are almost wholly in the dark; but it appears that the greater part of the eastern provinces speedily fell again into the hands of Seleucus, while Ptolemy retained possession of the maritime regions and a great part of Syria itself. He soon obtained a valuable ally in the person of Antiochus Hierax, the younger brother of Seleucus, whom he supported in his wars against his elder brother. We find Euergetes maintaining the same friendly relations as his father with Rome. During the latter years of his reign he subdued the Aethiopian tribes on his southern frontier, and advanced as far as Adule, a port on the Red Sea, where he established an emporium, and set up an inscription commemorating the exploits of his reign. To a copy of this, accidentally preserved to us by an Egyptian monk, Cosmas Indicopleustes, we are indebted for much of the scanty information we possess concerning his reign.

Ptolemy Euergetes is scarcely less celebrated than his father for his patronage of literature and science: he added so largely to the library at Alexandria that he has been sometimes erroneously deemed its founder. Eratosthenes, Apollonius Rhodius, and Aristophanes the grammarian flourished at Alexandria during his reign—sufficient to prove that the literature and learning of the Alexandrian school still retained their former eminence. By his wife Berenicé, who survived him, Euergetes left three children: (*a*) Ptolemy, his successor; (*b*) Magas; and (*c*) Arsinoë, afterwards married to her brother Ptolemy Philopator.

(4) Philopător (b.c. 222–205), eldest son and successor of Euergetes. He was very far from inheriting the virtues or abilities of his father, and his reign was the commencement of the decline of the Egyptian kingdom, which had been raised to such a height of power and prosperity by his three predecessors. Its beginning was stained with crimes of the darkest kind. He put to death his mother, Berenicé, and his brother, Magas, and his uncle Lysimachus, the brother of Euergetes. He then gave himself up without restraint to a life of indolence and luxury, while he abandoned to his minister Sosibius the care of all political affairs. The latter seems to have been as incapable as his master, and the kingdom was allowed to fall into a state of the utmost disorder, of which Antiochus the Great, king of Syria, was not slow to avail himself. In the first two campaigns (219, 218), Antiochus conquered the greater part of Coele-Syria and Palestine, but in the third year of the war (217), he was completely defeated by Ptolemy in person at the decisive battle of Raphia, and was glad to conclude a peace with the Egyptian monarch. On his return from his Syrian expedition, Ptolemy gave himself up more and more to every species of vice and debauchery. His mistress Agathoclea, and her brother Agathocles, divided with Sosibius the patronage and distribution of all places of honour or profit. Towards the close of his reign Ptolemy put to death his wife Arsinoë.

Coin of Ptolemy IV. Philopator.

His debaucheries shortened his life. He died in 205, leaving only one son, a child of five years old. We find Ptolemy following up the policy of his predecessors by cultivating the friendship of the Romans, to whom he furnished large supplies of corn during their struggle with Carthage. Plunged as he was in vice and debauchery, Philopator appears to have still inherited something of the love of letters for which his predecessors were so conspicuous. We find him associating on familiar terms with philosophers and men of letters, and especially patronizing the distinguished grammarian Aristarchus.

(5) Epiphănes (b.c. 205–181), son and successor of Ptolemy IV. He was a child of five years old at the death of his father, 205. Philip, king of Macedonia, and Antiochus III. of Syria determined to take advantage of the minority of Ptolemy, and entered into a league to divide his dominions between them. In pursuance of this arrangement, Antiochus conquered Coele-Syria, while Philip reduced the Cyclades and the cities in Thrace which had still remained subject to Egypt. In this emergency the Egyptian ministers had recourse to the powerful intervention of the Romans, who commanded both monarchs to refrain from further hostilities, and restore all the conquered cities. In order to evade this demand without openly opposing the power of Rome, Antiochus concluded a treaty with Egypt, by which it was agreed that the young king should marry Cleopatra, the daughter of Antiochus, and receive back the Syrian provinces as her dower. This treaty took place in 199, but the marriage was not actually solemnized until six years after. The administration of Egypt was placed in the hands of Aristomenes, a man who was every way worthy of the charge. As early, however, as 196, the young king was declared of full age, and the ceremony of his anacleteria, or coronation, was solemnized with great magnificence. It was on this occasion that the decree was issued that has been preserved to us in the celebrated inscription known as the Rosetta Stone (q.v.), a monument of great interest in regard to the internal history of Egypt under the Ptolemies, independent of its importance as having afforded the key to the discovery of hieroglyphics. In 193 the marriage of Ptolemy with the Syrian princess Cleopatra was solemnized at Raphia. Ptolemy, however, refused to assist his father-in-law in the war against the Romans, which was at this time on the eve of breaking out, and he continued steadfast in his alliance with Rome. But he derived no advantage from the treaty which concluded it, and Antiochus still retained possession of Coele-Syria and Phœnicia. As long as Ptolemy continued under the guidance and influence of Aristomenes, his administration was equitable and popular. Gradually, however, he became estranged from his able and virtuous minister, and threw himself more and more into the power of flatterers and vicious companions, until at length he was induced to rid himself of Aristomenes, who was compelled to take poison. Towards the close of his reign Ptolemy conceived the project of recovering Coele-Syria from Seleucus, the successor of Antiochus, and had assembled a large mercenary force for that purpose; but having, by an unguarded expression, excited the apprehensions of some of his friends, he was cut off by poison in the twenty-fourth year of his reign and the twenty-ninth of his age (181). He left two sons, both named Ptolemy, who subsequently ascended the throne, under the names of Ptolemy Philometor and Euergetes II., and a daughter who bore her mother's name of Cleopatra. His reign was marked by the rapid decline of the Egyptian monarchy, for the provinces and cities wrested from it during his minority by Antiochus and Philip were never recovered, and at his death Cyprus and the Cyrenaïca were almost the only foreign possessions still attached to the crown of Egypt.

(6) Philomētor (b.c. 181–146), eldest son and successor of Ptolemy V. He was a child at the death of his father in 181, and the regency was assumed during his minority by his mother Cleopatra, who, by her able administration, maintained the kingdom in a state of tranquillity. But after her death in 173, the chief power fell into the hands of Eulaeus and Lenaeus, ministers as corrupt as they were incapable, who had the rashness to engage in war with Antiochus Epiphanes, king of Syria, in the vain hope of recovering the provinces of Coele-Syria and Phœnicia. But their army was totally defeated by Antiochus near Pelusium, and Antiochus was able to advance without opposition as far as Memphis, 170. The young king himself fell into his hands, but was treated with kindness and distinction, as Antiochus hoped by his means to make himself the master of Egypt. On learning the captivity of his brother, the young

Ptolemy, who was then at Alexandria with his sister Cleopatra, assumed the title of king, under the name of Euergetes II., and prepared to defend the capital to the utmost. Antiochus hereupon laid siege to Alexandria, but he was unable to take the city, and withdrew into Syria, after establishing Philometor as king at Memphis, but retaining in his hands the frontier fortress of Pelusium. This last circumstance, together with the ravages committed by the Syrian troops, awakened Philometor, who had hitherto been a mere puppet in the hands of the Syrian king, to a sense of his true position, and he hastened to make overtures of peace to his brother and sister at Alexandria. It was agreed that the two brothers should reign together, and that Philometor should marry his sister Cleopatra. But this arrangement did not suit the views of Antiochus, who immediately renewed hostilities. The two brothers were unable to offer any effectual opposition, and he had advanced a second time to the walls of Alexandria, when he was met by a Roman embassy, headed by M. Popilius Laenas, who haughtily commanded him instantly to desist from hostilities. Antiochus did not venture to disobey, and withdrew to his own dominions in 168. Dissensions broke out between the brothers, and Euergetes expelled Philometor from Alexandria. Philometor repaired to Rome, and by the influence of the Roman Senate was reinstated in the sovereign power, Euergetes, however, receiving the territory of Cyrené as a separate kingdom. To Cyprus also he soon laid claim, and war broke out once more, ending in the defeat of Euergetes, who from that time remained content with Cyrené as a kingdom. The attention of Philometor appears to have been, from this time, principally directed to the side of Syria. Demetrius Soter having sought during the dissensions between the two brothers to make himself master of Cyprus, Ptolemy now supported the usurper Alexander Balas, to whom he gave his daughter Cleopatra in marriage (150). But when Ptolemy advanced with an army to the assistance of his son-in-law, Ammonius, the favourite and minister of Alexander, formed a plot against the life of Ptolemy; whereupon the latter took away his daughter Cleopatra from her faithless husband, and bestowed her hand on Demetrius Nicator, the son of Soter, whose cause he now espoused. In conjunction with Demetrius, Ptolemy carried on war against Alexander, whom he defeated in a decisive battle; but he died a few days afterwards in consequence of an injury which he had received from a fall from his horse in this battle (146). He had reigned thirty-five years from the period of his first accession, and eighteen from his restoration by the Romans. Philometor is praised for the mildness and humanity of his disposition. Polybius even tells us that not a single citizen of Alexandria was put to death by him for any political or private offence. On the whole, if not one of the greatest, he was at least one of the best of the race of the Ptolemies. He left three children: (*a*) A son, Ptolemy, who was proclaimed king after his father's death, under the name Ptolemy Eupator, but was put to death almost immediately after by his uncle Euergetes. (*b*) A daughter, Cleopatra, married first to Alexander Balas, then to Demetrius II. king of Syria; and (*c*) Another daughter, also named Cleopatra, who was afterwards married to her uncle Ptolemy Euergetes.

(7) Euergĕtes II. or Physcon (Φύσκων), "Big-Belly," reigned B.C. 146–117. His history down to the death of his brother has been already given. In order to secure undisputed possession of the throne, he married his sister Cleopatra, the widow of his brother Philometor, and put to death his nephew Ptolemy, who had been proclaimed king under the surname of Eupator. A reign thus commenced in blood was continued in a similar spirit. Many of the leading citizens of Alexandria, who had taken part against him on the death of his brother, were put to death, while the populace were given up to the cruelties of his mercenary troops, and the streets of the city were repeatedly deluged with blood. Thousands of the inhabitants fled from the scene of such horrors, and the population of Alexandria was so greatly thinned that the king found himself compelled to invite foreign settlers from all quarters to re-people his deserted capital. At the same time that he thus incurred the hatred of his subjects by his cruelties, he rendered himself an object of their aversion and contempt by abandoning himself to the most degrading vices. In consequence of these, he had become bloated and deformed in person, and enormously corpulent, whence the Alexandrians gave him the nickname of Physcon, by which he is more usually known. His union with Cleopatra was not of long duration. He became enamoured of his niece Cleopatra (the offspring of his wife by her former marriage with Philometor), and he did not hesitate to divorce the mother, and receive her daughter instead, as his wife and queen. By this proceeding he alienated still more the minds of his Greek subjects; and his vices and cruelties at length produced an insurrection at Alexandria. Thereupon he fled to Cyprus, and the Alexandrians declared his sister Cleopatra queen (130). Enraged at this, Ptolemy put to death Memphitis, his son by Cleopatra, and sent his head and hands to his unhappy mother. But Cleopatra having been shortly afterwards expelled from Alexandria in her turn, Ptolemy found himself unexpectedly reinstated on the throne (127). His sister Cleopatra fled to the court of her elder sister Cleopatra, the wife of Demetrius II., king of Syria, who espoused the cause of the fugitive. Ptolemy, in revenge, set up against him a pretender named Zabinas or Zebina, who assumed the title of Alexander II. But the usurper behaved with such haughtiness to Ptolemy that the latter suddenly changed his policy, became reconciled to his sister Cleopatra, whom he permitted to return to Egypt, and gave his daughter Tryphaena in marriage to Antiochus Grypus, the son of Demetrius. Ptolemy died after reigning twenty-nine years from the death of his brother Philometor; but he himself reckoned the years of his reign from the date of his first assumption of the regal title in 170. Although the character of Ptolemy Physcon was stained by the most infamous vices, and by the most sanguinary cruelty, he still retained that love of letters which appears to have been hereditary in the whole race of the Ptolemies. He had in his youth been a pupil of Aristarchus, and not only courted the society of learned men, but was himself the author of a work called Ὑπομνήματα, or memoirs, which extended to twenty-four books. He left two sons: Ptolemy, afterwards known as Soter II., and Alexander, both of whom subsequently ascended the throne of Egypt; and three daughters: (*a*) Cleopatra,

married to her brother Ptolemy Soter; (*b*) Tryphaena, the wife of Antiochus Grypus, king of Syria; and (*c*) Selené, who was unmarried at her father's death. To his natural son Ptolemy, surnamed Apion, he bequeathed by his will the separate kingdom of Cyrené.

(8) Soter II., and also Philomētor, but more commonly called Lathyrus or Lathūrus (Λάθουρος), reigned B.C. 117–107, and also 89–81. Although he was of full age at the time of his father's death (117), he was obliged to reign jointly with his mother, Cleopatra, who had been appointed by the will of her late husband to succeed him on the throne. She was indeed desirous of associating with herself her younger son, Ptolemy Alexander; but since Lathyrus was popular with the Alexandrians, she was obliged to give way, and sent Alexander to Cyprus. After declaring Lathyrus king, she compelled him to repudiate his sister Cleopatra, of whose influence she was jealous, and to marry his younger sister Selené in her stead. After reigning ten years jointly with his mother, he was expelled from Alexandria by an insurrection of the people which she had excited against him (107). His brother Alexander now assumed the sovereignty of Egypt, in conjunction with his mother, while Lathyrus was able to establish himself in the possession of Cyprus. Cleopatra, indeed, attempted to dispossess him of that island also, but without success, and Ptolemy held it as an independent kingdom for the eighteen years during which Cleopatra and Alexander reigned in Egypt. After the death of Cleopatra and the expulsion of Alexander in 89, Ptolemy Lathyrus was recalled by the Alexandrians, and established anew on the throne of Egypt, which he occupied thenceforth without interruption till his death in 81. The most important event of this period was the revolt of Thebes, in Upper Egypt, which was still powerful enough to hold out for nearly three years against the arms of Ptolemy, but at the end of that time was taken and reduced to the state of ruin in which it has ever since remained. Lathyrus reigned in all thirty-five years and a half; ten in conjunction with his mother (117–107), eighteen in Cyprus (107–89), and seven and a half as sole ruler of Egypt. He left only one daughter, Berenicé, called also Cleopatra, who succeeded him on the throne; and two sons, both named Ptolemy, who, though illegitimate, became severally kings of Egypt and Cyprus.

(9) Alexander I., youngest son of Ptolemy VII., reigned conjointly with his mother Cleopatra from the expulsion of his brother Lathyrus, B.C. 107 to 90. In this year he assassinated his mother; but he had not reigned alone a year, when he was compelled by a general sedition of the populace and military to quit Alexandria. He, however, raised fresh troops, but was totally defeated in a sea-fight by the rebels; whereupon Lathyrus was recalled by the Alexandrians to Egypt, as has been already related. Alexander now attempted to make himself master of Cyprus, and invaded that island, but was defeated and slain. He left a son, Alexander, who afterwards ascended the throne of Egypt.

(10) Alexander II., son of the preceding, was at Rome at the death of Ptolemy Lathyrus in 81. Sulla, who was then dictator, nominated the young Alexander (who had obtained a high place in his favour) king of Egypt, and sent him to take possession of the crown. It was, however, agreed, in deference to the claims of Cleopatra Berenicé, the daughter of Lathyrus, whom the Alexandrians had already placed on the throne, that Alexander should marry her, and admit her to share the sovereign power. He complied with the letter of this treaty by marrying Cleopatra, but only nineteen days afterward caused her to be assassinated. The Alexandrians thereupon rose against their new monarch and put him to death.

(11) Dionȳsus, but more commonly known by the appellation of Aulētes, "the flute-player," was an illegitimate son of Ptolemy Lathyrus. When the assassination of Berenicé and the death of Alexander II. had completed the extinction of the legitimate race of the Lagidae, Ptolemy was proclaimed king by the Alexandrians, B.C. 80. He was anxious to obtain from the Roman Senate their ratification of his title to the crown, but it was not till the consulship of Caesar (59) that he was able to purchase by vast bribes the desired privilege. He had expended immense sums in the pursuit of this object, which he was compelled to raise by the imposition of fresh taxes, and the discontent thus excited combining with the contempt entertained for his character, led to his expulsion by the Alexandrians in 58. Thereupon he proceeded in person to Rome to procure from the Senate his restoration. His first reception was promising; and he procured a decree from the Senate commanding his restoration, and intrusting the charge of effecting it to P. Lentulus Spinther, then proconsul of Cilicia. Meanwhile, the Alexandrians sent an embassy of one hundred of their leading citizens to plead their cause with the Roman Senate; but Ptolemy had the audacity to cause the deputies, on their arrival in Italy, to be waylaid, and the greater part of them murdered. The indignation excited at Rome by this proceeding produced a reaction: the tribunes took up the matter against the nobility; and an oracle was produced from the Sibylline Books forbidding the restoration of the king by an armed force. The intrigues and disputes thus raised were protracted throughout the year 56, and at length Ptolemy, despairing of a favorable result, quitted Rome in disgust, and withdrew to Ephesus. But in 55, A. Gabinius, who was proconsul in Syria, was induced, by the influence of Pompey, aided by the enormous bribe of 10,000 talents from Ptolemy himself, to undertake his restoration. The Alexandrians had in the meantime placed on the throne of Egypt Berenicé, the eldest daughter of Ptolemy, who had married Archelaüs, the son of the general of Mithridates, and they opposed Gabinius with an army on the confines of the kingdom. They were, however, defeated in three successive battles, Archelaüs was slain, and Ptolemy once more established on the throne (55). One of his first acts was to put to death his daughter Berenicé, and many of the leading citizens of Alexandria. He survived his restoration only three years and a half, during which time he was supported by a large body of Roman soldiers who had been left behind by Gabinius for his protection. He died in 51, after a reign of twenty-nine years from the date of his first accession. He left two sons, both named Ptolemy, and two daughters, Cleopatra and Arsinoë.

(12) Eldest son of the preceding. By his father's will the sovereign power was left to himself and his sister Cleopatra jointly, and this arrangement was carried into effect without opposition (51). Auletes had also referred the execution of his will

to the Roman Senate, and the latter accepted the office, confirmed its provisions, and bestowed on Pompey the title of guardian of the young king. But the approach of the Civil War prevented them from taking any active part in the administration of affairs, which fell into the hands of a eunuch named Pothinus. It was not long before dissensions broke out between the latter and Cleopatra, which ended in the expulsion of the princess, after she had reigned in conjunction with her brother about three years (48). Hereupon she took refuge in Syria, and assembled an army, with which she invaded Egypt. The young king, accompanied by his guardians, met her at Pelusium, and it was while the two armies were here encamped opposite to one another that Pompey landed in Egypt, to throw himself as a suppliant on the protection of Ptolemy; but he was assassinated, by the orders of Pothinus, before he could obtain an interview with the king himself. Shortly after, Caesar arrived in Egypt, and took upon himself to settle the dispute between Ptolemy and his sister. But as Cleopatra's charms gained for her the support of Caesar, Pothinus determined to excite an insurrection against Caesar. Hence arose what is usually called the Alexandrian War. Ptolemy, who was at first in Caesar's hands, managed to escape, and put himself at the head of the insurgents; but he was defeated by Caesar, and was drowned in an attempt to escape by the river (47).

(13) The youngest son of Ptolemy Auletes. He was appointed by Caesar to reign jointly with Cleopatra after the death of his elder brother Ptolemy XII., 47; and although he was a mere boy, it was decreed that he should marry his sister, with whom he was thus to share the power. Both his marriage and his regal title were of course purely nominal; and in the year 43 Cleopatra put him to death.

III. Other Kings. — (1) Surnamed Alorītes, that is, of Alorus, regent, or, according to some authors, king of Macedonia. He obtained the supreme power by the assassination of Alexander II., the eldest son of Amyntas, B.C. 367, but was, in his turn, assassinated by Perdiccas III., 364. (2) Surnamed Apion, king of Cyrené (117–96), was an illegitimate son of Ptolemy Physcon, king of Egypt, who left him by his will the kingdom of the Cyrenaïca. At his death in 96, Apion bequeathed his kingdom by his will to the Roman people. The Senate, however, refused to accept the legacy, and declared the cities of the Cyrenaïca free. They were not reduced to the condition of a province till near thirty years afterwards. (3) Surnamed Ceraunus, king of Macedonia, the son of Ptolemy I., king of Egypt, by his second wife Eurydicé. When his father in B.C. 285 set aside the claim of Ceraunus to the throne and appointed his younger son Ptolemy Philadelphus his successor, Ceraunus repaired to the court of Lysimachus. After Lysimachus had perished in battle against Seleucus (281) Ptolemy Ceraunus was received by the latter in the most friendly manner; but shortly afterwards (280) he basely assassinated Seleucus, and took possession of the Macedonian throne. After reigning a few months he was defeated in battle by the Gauls, taken prisoner, and put to death. (4) Tetrarch of Chalcis in Syria, the son of Mennaeus. He appears to have held the cities of Heliopolis and Chalcis as well as the mountain district of Ituraea, from whence he was in the habit of infesting Damascus and the more wealthy parts of Coelé-Syria with predatory incursions. He reigned from about 70 to 40, when he was succeeded by his son Lysanias. (5) King of Cyprus, the younger brother of Ptolemy Auletes, king of Egypt, being like him an illegitimate son of Ptolemy Lathyrus. He was acknowledged as king of Cyprus at the same time that his brother Auletes obtained possession of the throne of Egypt (B.C. 80). He had offended P. Clodius by neglecting to ransom him when he had fallen into the hands of the Cilician pirates; and accordingly Clodius, when he became tribune (53), brought forward a law to deprive Ptolemy of his kingdom, and reduce Cyprus to a Roman province. Cato, who had to carry into execution this nefarious decree, sent to Ptolemy, advising him to submit, and offering him his personal safety, with the office of high-priest at Paphos, and a liberal maintenance. But the unhappy king refused these offers, and put an end to his own life (57). (6) King of Epirus, the second son of Alexander II., king of Epirus, and Olympias, and grandson of the great Pyrrhus. He succeeded to the throne on the death of his elder brother, Pyrrhus II., but reigned only a very short time. The date of his reign cannot be fixed with certainty, but as he was contemporary with Demetrius II., king of Macedonia, it may be placed between 239 and 229. (7) King of Mauretania, was the son and successor of Iuba II. By his mother Cleopatra he was descended from the kings of Egypt, whose name he bore. The period of his accession cannot be determined with certainty, but we know that he was on the throne in A.D. 18. He continued to reign without interruption till A.D. 40, when he was summoned to Rome by Caligula, and shortly after put to death, his great riches having excited the cupidity of the emperor.

IV. Claudius Ptolemaeus. A famous Greek mathematician, astronomer, and geographer. He came from Ptolemaïs Hermeiou (ruins at modern Menschie), in Upper Egypt, and lived and worked in the second century A.D. The most important of his writings which have been preserved are: (*a*) Γεωγραφικὴ Ὑφήγησις ("instructions for the drawing of maps"), a geographical work in eight books, the first of which contains the principles of mathematical geography, the drawing of maps, and the calculation of the longitudes and latitudes of places in the then known world; books ii.–vii. contain tables of names of places in the maps described, arranged according to degrees and their subdivisions; and book viii. contains an astronomical table of climates. This work is one of the chief sources of our knowledge of ancient geography. It is edited by Nobbe (Leipzig, 1845); and Müller (Paris, 1883). (*b*) Μεγάλη Σύνταξις τῆς Ἀστρονομίας, usually known by its Arabic name of *Almagest*. Since the *Tetrabiblus*, the work on astrology, was also entitled σύνταξις, the Arabs, to distinguish the two, probably called the greater work μεγάλη, and afterwards μεγίστη: the title *Almagest* (*Tabrir al Magesthi*) is a compound of this last adjective and the Arabic article. The *Almagest* is divided into thirteen books. It treats of the relations of the earth and heaven; the effect of position upon the earth; the theory of the sun and moon, without which that of the stars cannot be undertaken; the sphere of the fixed stars, and those of the five stars called *planets*. The seventh and eighth books are the most interesting to the modern astronomer, as they contain

a catalogue of the stars. This catalogue gives the longitudes and latitudes of 1022 stars, described by their positions in the constellations. It seems that this catalogue is in the main really that of Hipparchus, altered to Ptolemy's own time by assuming the value of the precession of the equinoxes given by Hipparchus as the least which could be, some changes having also been made by Ptolemy's own observations. Indeed, the whole work of Ptolemy appears to have been based upon the observations of Hipparchus, whom he constantly cites as his authority. Ptolemy's system of the heavens, which made the earth the fixed centre, was not superseded till the time of Copernicus (A.D. 1473–1543). The best edition of the *Almagest* is by Halma, 2 vols. (Paris, 1813–16). (*c*) Τετράβιβλος Σύνταξις, generally called *Tetrabiblos*, or *Quadripartitum de Apotelesmatibus et Iudiciis Astrorum*. With this goes another small work, called Καρπός, or *Fructus Librorum Suorum*, often called *Centiloquium*, from its containing a hundred aphorisms. Both of these works are astrological, and it has been doubted by some whether they be genuine. But the doubt merely arises from the feeling that the contents are unworthy of Ptolemy. (*d*) Κανὼν Βασιλέων, a catalogue of Assyrian, Persian, Greek, and Roman sovereigns, with the length of their reigns, several times referred to by Syncellus. (*e*) *Φάσεις ἀπλανῶν ἀστέρων καὶ συναγωγὴ ἐπισημασειῶν, De Apparentiis et Significationibus inerrantium*, an annual list of sidereal phenomena. (*f, g*) *De Analemmate* and *Planisphaerium*. These works are obtained from the Arabic. The *Analemma* is a collection of graphical processes for facilitating the construction of sun-dials. The *Planisphere* is a description of the stereographic projection, in which the eye is at the pole of the circle on which the sphere is projected. (*h*) Περὶ *ὑποθέσεων τῶν πλανωμένων, De Planetarum Hypothesibus*. This is a brief statement of the principal hypotheses employed in the *Almagest* for the explanation of the heavenly motions. (*i*) Ἁρμονικῶν *βιβλία γ'.*, a treatise on the theory of the musical scale, and the most important ancient work on music next to that of Aristoxenus. Most of the works of Ptolemy are contained in the edition of Halma in 4 vols. (Paris, 1813–28). The principal MSS. are at Vienna, Venice, and Mount Athos. This last is photographed and published by Langlois (Paris, 1866).

Ptolemaïs (Πτολεμαΐς). (1) Also called Acé (Ἀκή) (in Old Test. Acco; Arab. Akka, Fr. St. Jean d'Acre, Eng. Acre), a celebrated city on the coast of Phœnicia, south of Tyre, and north of Mount Carmel, lies at the bottom of a bay surrounded by mountains, in a position marked out by nature as a key of the passage between Coele-Syria and Palestine. It is one of the oldest cities of Phœnicia, being mentioned in the Book of Judges (i. 31). (2) (At or near El-Lahum), a small town of Middle Egypt, in the Nomos Arsinoïtes. (3) P. Hermii (Menschie), a city of Upper Egypt, on the west bank of the Nile, below Abydos. (4) P. Theron, or Epitheras, a port on the Red Sea, on the coast of the Troglodytae. (5) Now Tolmeïta, or Tolometa, on the northwestern coast of Cyrenaïca, one of the five great cities of the Libyan Pentapolis.

Pubes, Pubertas. See Curator; Impubes; Tutor.

Publicāni. A name given by the Romans to those who did business with the State, by becoming contractors for public buildings and for supplies, and to farmers of public lands (see Ager Publicus), especially those who farmed the public taxes (*vectigalia*) for a certain time on payment of a fixed sum. In Rome, as indeed throughout the ancient world (see Telones), the collection of taxes was not made by paid officials, but by farmers of taxes, who belonged to the equestrian order, as the senators were excluded from such business. The farmers of taxes, by the immense profits which they made, became a politically powerful class of capitalists. As the various taxes in the different provinces were let out as a whole by the censors, joint-stock companies were formed, *societates publicanorum*, whose members received a proportionate return for their invested capital. (See Provincia.) One member, the *manceps*, made a tender at the public auction, concluded the contract with the censors, and gave the necessary security. The duration of the contract was a *lustrum*—i. e. the period between one censorship and another; in imperial times always five years. It began on the 15th of March.

The general superintendence was given to a *magister societatis* in Rome, who vacated office every year; the management of details was in the hands of numerous officials. According to the amount of the taxes farmed, the publicani received special names. The highest class, *decumani*, were the farmers of the *decuma*, the tenth part of the produce of the agricultural lands which had been taken from the old possessors. The *pecuarii* or *scripturarii* were the farmers of the *scriptura*, the tax levied for the use of the State pastures. The *conductores portoriorum* were the farmers of the *portoria*, the import and export dues, etc. In order to make the greatest possible gain, the publicani were guilty of the most grievous oppression of the provincials, whose only hope of relief lay in the governor, who was rarely able to help them for fear of these influential societies. Under the Empire the position of the provincials was improved; for the emperor, as the governor-in-chief of all the provinces, heard the final appeal in the case of any grievances. In imperial times the *decumani* ceased to exist, and the letting out of taxes was intrusted to the official boards especially concerned with them. See Vectigalia.

Publications. See Editio Princeps; Liber.

Public Houses. See Caupona.

Publicŏla or **Poplicŏla, Publius Valerius.** A Roman who took a prominent part in the expulsion of the Tarquins, and who was therefore elected consul with Brutus (B.C. 509) and in three other years (B.C. 508, 507, 504). He did much to secure the rights of the plebeians, and secured the passage of a law giving to every citizen who was condemned by a magistrate the right of appeal to the people. He died in B.C. 503, and was mourned for ten days by the Roman matrons (Livy, i. 58; ii. 2–16; Dionys. iv. 67; v. 12, 40; Plut. *Publ.*).

Publilia. The second wife of Cicero the orator, whom he married in B.C. 46, when he was sixty years of age and she quite young. The marriage caused great scandal, as it was generally believed that Cicero was simply in love with her fortune. The marriage proved unhappy, and Publilia was divorced by her husband in B.C. 45 (Cic. *Ad Att.*

xii. 32; Dio Cass. xlvi. 18). See CICERO; TULLIA.

Publiliae Leges. Three laws carried B.C. 339 by the dictator Q. Publilius Philo: their substance is described by Livy (viii. 12). The first of them seems to stand in connection with one of the *leges Valeriae Horatiae* (B.C. 449) which enacted *ut quod tributim plebs iussisset populum teneret* (Livy, iii. 55)—i. e. it restored the Comitia Tributa after the second secession of the plebs, and perhaps also provided that plebiscita which had no constitutional import, or which related purely to matters of private law, should have the force of statute, even without subsequent confirmation or enactment by the centuries. In B.C. 339, the patricians having now brought themselves to take regular part in the business of the Comitia Tributa, confirmation by the centuries must have seemed a superfluity in any case; and accordingly the first Lex Publilia seems to have dispensed with it for all plebiscita whatsoever. They still, however, required to be sanctioned by the Senate before they acquired complete validity; but the necessity of this seems to have been abolished by the Lex Hortensia (B.C. 287), which enacted *ut eo iure, quod plebs statuisset, omnes Quirites tenerentur* (Gaius, i. 3; Dig. 1, 2, 2, 8; Laelius Felix in Gell. xv. 27; Pliny, *H. N.* xvi. § 37). There is, however, great difference of opinion as to the real import of, and the relation between, these three leges, which, if literally taken, seem all to have enacted the same thing. See Walter, *Geschichte des röm. Rechts*, § 65.

Publilius Syrus. A Roman writer of mimes (see MIMUS), a younger contemporary and rival of Laberius. He flourished about B.C. 43. Probably born at Antioch, in Syria, he came to Rome in early youth as a slave. On account of his wit he was liberated by his master, and received a careful education. As a writer of mimes and as an improviser, he was exceedingly popular, and, after the death of Laberius, held sole sway on the stage. His mimes contained, in addition to the farcical humour of this sort of writing, a great number of short, witty sayings. These were so much admired that they were excerpted at an early date, and used in schools, while the pieces themselves were soon forgotten.

In the Middle Ages these sayings were popular under the name of Seneca. We have an alphabetical collection of nearly seven hundred of these single-line apophthegms, bearing the title *Publilii Syri Mimi Sententiae*, though not all of them are certainly the work of their alleged author. Among them are many of much pungency and pith—e. g. *Necesse est multos timeat, quem multi timent; Beneficium accipere, libertatem est vendere;* (the motto of the *Edinburgh Review*) *Iudex damnatur cum nocens absolvitur;* and many others that find their parallels in the saws and maxims of modern times. They are collected by Ribbeck in his edition of the comic fragments (1873), and are separately edited by O. Friedrich (Berlin, 1880); and with English notes by Gray (1895).

Publilius, VOLĔRO. A tribune of the plebs, B.C. 472, and again 471, who effected an important change in the Roman constitution. In virtue of the laws which he proposed, the tribunes of the plebs and the aediles were elected by the Comitia Tributa, instead of by the Comitia Centuriata, as had previously been the case, and the tribes obtained the power of deliberating and determining in all matters affecting the whole nation, and not such only as concerned the plebs. Some say that the number of the tribunes was now for the first time raised to five, having been only two previously.

Publishers. See LIBER.

Pudicitia. The Roman goddess of modesty and chastity. She was at first worshipped in a chapel in Rome exclusively by the patrician matrons. When, in B.C. 296, the patrician Virginia was excluded from this worship by her marriage with the plebeian consul Volumnius, she erected in her own house a chapel to the goddess, so that the plebeian matrons might worship there. Afterwards this cult died out with the decay of morals. In imperial times altars were erected to Pudicitia in honour of the empresses. The goddess was represented as a draped matron, concealing her right hand in her garment. Pudicitia is the same as the Greek Αἰδώς, who had an altar at Athens.

Pugil (*πύκτης*). A boxer; one who fights with his fists (*pugni*). See ATHLETAE; CAESTUS; GYMNASIUM; PUGILATUS.

Pugilātus (*πύξ, πυγμή, πυγμαχία, πυγμοσύνη*). Boxing. The fist being the simplest and most natural weapon, it may be taken for granted that boxing was one of the earliest athletic games among the Greeks. Hence even gods and several of the earlier heroes are described either as victors in the *πυγμή* or as distinguished boxers, such as Apollo, Heracles, Tydeus, Polydeuces, and others (Theocrit. xxiv. 113; Apollod. iii. 6, § 4; Pausan. v. 8, 2). The Scholiast on Pindar (*Nem.* v. 89) says that Theseus was believed to have invented the art of boxing. The Homeric heroes are well acquainted with it (Hom. *Il.* xxiii. 691; cf. *Od.* viii. 103 foll.). Boxing for men was introduced at the Olympic Games in Ol. 23, and for boys in Ol. 37 (Pausan. v. 8, § 3). Contests in boxing for boys are also mentioned in the Nemea and Isthmia (Pausan. vi. 4, § 6).

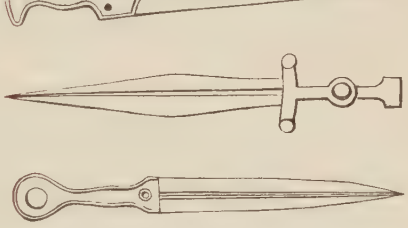
In the earliest times boxers (*pugiles, πύκται*) fought naked, with the exception of a *ζῶμα* round their loins (Hom. *Il.* xxiii. 683; Verg. *Aen.* v. 421); but this was not used when boxing was introduced at Olympia, as the contests in wrestling and racing had been carried on here by persons entirely naked ever since Ol. 15. Respecting the leathern thongs with which pugilists surrounded their fists, see CAESTUS, where its various forms are illustrated by woodcuts.

The boxing of the ancients appears to have resembled the practice of modern times. It was a point of skill, we are told, not to attack the antagonist, but to remain on the defensive, and thus to wear out the opponent, until he was obliged to acknowledge himself to be conquered (Eustath. *ad Il.* p. 1322, 29). It was considered a merit in a boxer to conquer without receiving any wounds, so that the two great points in this game were to inflict blows, and at the same time not to expose one's self to any danger. As regards the position of the hands, no doubt it varied according to circumstances, then as now. In art-representations we see sometimes the right arm guarding and the left striking, sometimes the contrary: the blows were directed against the upper parts of the body, and

Pugilists, from a Tomb at Chiusi. (Dennis.)

the wounds inflicted on the head were often severe (Hom. *Od.* xviii. 96; Apollon. Rhod. ii. 785; Theocrit. ii. 126; Verg. *Aen.* v. 469; Aelian, *V. H.* x. 19). The ears especially were exposed to great danger, and with regular pugilists they were generally much mutilated and broken (Plato, *Gorg.* p. 516; *Protag.* p. 342; Martial, vii. 33, 5). Hence in works of art the ears of the pancratiasts always appear beaten flat, and, although swollen in some parts, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called ἀμφωτίδες, were invented (Poll. ii. 82). But these ear-covers were undoubtedly never used in the great public games, but only in the gymnasia and palaestrae, or at most in the public contests of boxing for boys; for they are never seen in any ancient work of art.

Two points of distinction between ancient and modern pugilists may be noticed: (1) that, as we gather from vase-pictures, the fist was not constantly doubled, as with us, but the fingers were often merely curved over, sometimes almost extended; in some representations, however, the fists are fairly clenched: probably the differences are due to the caestus; (2) the inarticulate sounds emitted by the boxers, instead of the modern silence: this, according to Cicero, was to add force to the blow (*Tusc.* ii. 23, 54).



The game of boxing, like all the other gymnastic and athletic games, was regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancratium. Cases of death, either during the fight itself or soon after, appear to have occurred rather frequently; but if a fighter wilfully killed his antagonist, he was severely punished (Pausan. vi. 9, § 3; viii. 40, § 3). If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength; and in some cases they are described as resting on their knees (Apollon. Rhod. ii. 86). The contest did not end until one of the combatants was compelled by fatigue, wounds, or despair to declare himself conquered, which was generally done by lifting up one hand (Plut. *Lycurg.* 19).

The Ionians, especially those of Samos, were at all times more distinguished pugilists than the Dorians, and at Sparta boxing is said to have been forbidden by the laws of Lycurgus (Pausan. vi. 2, § 4; Plut. *Lycurg.* 19). But the ancients generally considered boxing as a useful training for military purposes, and a part of education no less important than any other gymnastic exercise. Even from a medical point of view, boxing was recommended (Aretaeus, *De Morb. Diut. Cur.* i. 2).

In Italy boxing appears likewise to have been practised from early times (Livy, i. 35). It continued as a popular game during the whole period of the Republic as well as of the Empire (Suet. *Aug.* 45; Cic. *De Leg.* ii. 15, 38; Suet. *Calig.* 18). Besides the *legitimi pugiles*, there was a peculiarly Italian institution of *catervarii pugiles*, who fought, not in pairs, but in a general mêlée (Suet. l. c.). See Krause, *Die Gymnastik und Agon. d. Hellenen*, pp. 497–534; Blümner in Baumeister, *Denkmäler*, p. 523; Grasberger, *Erziehung*, p. 205.

Pugillāres. Small tablets for writing. See TABULA; WRITING AND WRITING MATERIALS.

Pugio (μάχαιρα), dim. **Pugiuncŭlus** (ἐγχειρίδιον). A dagger with two edges (Suet. *Vitell.* 15).

Pugiones.

Pulcher, CLODIUS. See CLODIUS.

Pulcheria. The eldest daughter of the Roman emperor Arcadius, born A.D. 399. In 414, when she was only fifteen years of age, she became the guardian of her brother Theodosius, and was declared Augusta or empress. She had the virtual government in her hands during the whole lifetime of her brother, who died in 450. On his death she remained at the head of affairs, and shortly afterwards she married Marcian, with whom she continued to reign in common till her death in 453. Pulcheria was a woman of ability, and was celebrated for her piety and her public and private virtues. See THEODOSIUS II.

Pulchrum Promontorium. A promontory on the northern coast of the Carthaginian territory in North Africa, probably identical with the Apollinis Promontorium.

Pullarius. A person who had charge of the sacred chickens (*pulli*), and made predictions from the way in which they ate their food. See AUGUR, p. 167.

Pullus, L. IUNIUS. Consul B.C. 249, in the First Punic War. His fleet was destroyed by a storm, on account, it was said, of his neglecting the auspices. In despair he put an end to his own life (Cic. *N. D.* ii. 3).

Pulpĭtum (*βῆμα*). (1) The platform of a public speaker. (2) (*λογεῖον*). The stage of the Roman theatre. See THEATRUM.

Puls. A sort of porridge much eaten in Italy, so that it was regarded as a national dish. It was made of spelt (*far, odor*), and is to be distinguished from the other native dish *polenta*, which was a porridge of barley-meal (Pliny, *H. N.* xviii. 72).

Pulvīnar. A sort of pillow or cushion used on large couches (Petron. 135, 5), and especially associated with the feast of the Lectisternium, at which the images of the gods were laid upon cushions and had a banquet spread before them. See LECTISTERNIUM.

Punctuation. See PALAEOGRAPHY.

Punic Language. See CARTHAGO; PHŒNICÉ.

Punic Wars. A name given to the three wars fought between the Romans and the Carthaginians (*Poeni*).

THE FIRST PUNIC WAR (B.C. 264–241) began when the Romans allied themselves with the Mamertini (q. v.) of Messana, a people of Italian stock, who had appealed to Rome against the Syracusans under Hiero; and a little later against a Carthaginian force that had gained possession of the citadel of Messana. The Romans prevailed against Hiero, who made peace with them so that they could turn their whole attention to the Carthaginian armies. The principal events of this war are the siege and capture of Agrigentum by the Romans (B.C. 262), the defeat of the Roman naval force at Lipara (B.C. 260), the great naval victory of C. Duilius over the Carthaginians near Mylae (see COLUMNA ROSTRATA; DUILIUS); the still greater success of the Romans off Ecnomus (B.C. 256); the Roman invasion of Africa by Regulus, and his defeat and capture (B.C. 255); the Roman victory of L. Metellus at Panormus in Sicily (B.C. 250); the Roman naval defeat at Drepanum (B.C. 249); the decisive Roman victory off the Aegetes Islands (B.C. 242) when Catulus defeated Hanno; and the final treaty made by Hamilcar (B.C. 241) whereby the Romans secured Sicily and an indemnity of 3200 talents. See CARTHAGO; HAMILCAR; REGULUS; SICILIA.

THE SECOND PUNIC WAR (B.C. 218–201) began when Hannibal attacked the Spanish city of Saguntum, then in alliance with Rome (B.C. 219). The chief events were the invasion of Italy by Hannibal, the counter-invasion of Spain by Cn. Scipio, the Roman defeats on the Trebia and the Ticinus, near Lake Trasimenus (B.C. 217) and at Cannae (B.C. 216), the revolt of the Samnites, Apulians, Lucanians, and Bruttians to Hannibal, the war in Sicily ending in the capture of Syracuse by the Romans (B.C. 212), the war in Spain (Hasdrubal against the Scipios), the recovery of Tarentum by Fabius Maximus (B.C. 209), the defeat of Hasdrubal on the Metaurus by the Roman consul Nero, the expulsion of the Carthaginians from Spain by P. Scipio (B.C. 210–207) and his invasion of Africa, the recall of Hannibal to Carthage (B.C. 203), his final defeat by Scipio at Zama (B.C. 202), and the submission of Carthage (B.C. 201). See FABIUS; HANNIBAL; HASDRUBAL; SCIPIO.

THE THIRD PUNIC WAR (B.C. 149–146) began with the demand of the Romans for the destruction of the city of Carthage, a measure long advocated by Cato the Elder. (See CATO.) Although the Carthaginians had already surrendered all their arms to Rome, they resolved to perish rather than submit to the annihilation of their ancient and beautiful city. They slew all the resident Italians, manufactured new arms and military equipments, collected great stores of provisions, and even the women are said to have cut off their hair for use as strings for the catapults. The first attacks of the Roman soldiery were repulsed with great slaughter, and only the genius of the younger Scipio, who was present as a military tribune, saved the attacking army from total destruction. In B.C. 147, Scipio, though under the legal age, was unanimously elected consul, and at once took command of the forces operating against Carthage. He landed in Africa in the same year, restored both discipline and confidence to the demoralized troops, and, though his fleet of fifty ships was destroyed in a three days' naval engagement, he succeeded in carrying the city by storm after a desperate and bloody resistance which lasted nearly a week. Carthage was razed to the ground, and its territory divided between Utica and the new Roman province of Africa. See Neumann, *Geschichte Roms im Zeitalter der punischen Kriege* (Breslau, 1883) and the articles CARTHAGO; SCIPIO.

Punĭcum Bellum. See NAEVIUS.

Puns. The pun or play on words (*lusus verborum*) is common in both Greek and Latin as it is in the Oriental literatures. It was not merely an amusement or a trick of speech as it is to-day, but was based upon the generally prevalent notion that there is an intimate connection between things and their names, and that a likeness of name denotes a certain likeness of quality in the things named. (See PHILOLOGIA.) Hence a species of divination from names (Onomantia) existed, and omens were regularly sought in names. It is for this reason that we find the greatest writers systematically punning even in their most serious passages, as in the famous line of Aeschylus when he plays on the name of Helen (*Agamem.* 689):

Ἑλένη ἑλένας ἕλανδρας ἑλέπτολις.

(See also lines 1040, 1049 of the same play; and *Prom.* 718, 742, 875; Theocr. xxvi. 26, etc.) So the Romans enrolled in their military levies the names of good omen, such as Felix, Faustus, Victor, etc., at the head of the lists, and put such auspicious ones as Salvius Valerius first on the roll of the census. On one occasion the Roman troops mutinied because they were to be led into the field by one Atrius Umber (Livy, xxviii. 28). So Ausonius (*Epist.* xx.) says:

> Nam divinare est nomen componere, quod sit
> Fortunae, morum, vel necis iudicium.

Changes of name were often made on the principle of punning, as when the enemies of the Athenians (Ἀθηναῖοι) called them Κεχηναῖοι (Aristoph. *Eq.* 1262), when the Romans gave the drink-loving Tiberius Claudius Nero the expressive nickname of Biberius Caldius Mero, suggesting *bibo*, *calda*, and *merum* (see the article NOMEN at the end), and when Jerome called his adversary Vigilantius, "Dormitantius." Cicero was especially fond of puns, and a collection of these was made and published, which is mentioned by Quintilian (vi. 3, 5; cf. id. vi. 3, 3; Macrobius, *Sat.* ii. 2, 5, where some of them are quoted; Suet. *Iul.* 50; Plut. *Cic.* 38).

See the chapter of Quintilian, *De Risu* (vi. 3, 5); Lersch, *Sprachphilosophie*, iii. 11–17; Sturz, *Opus-*

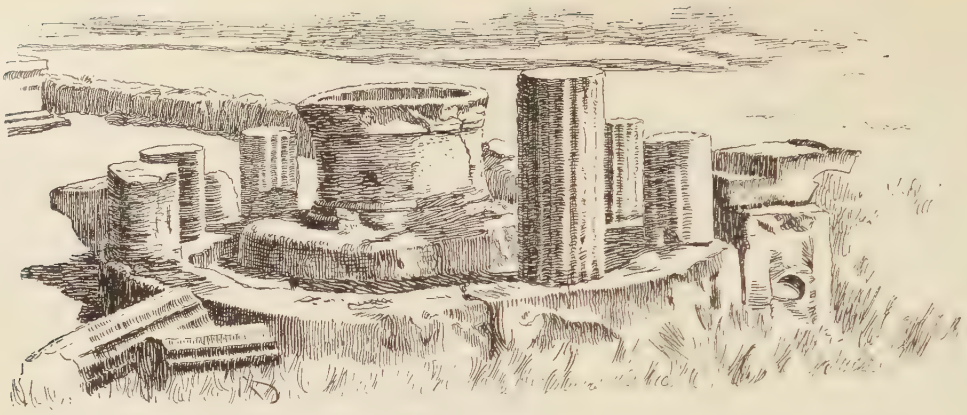
cula, p. 78; Mervoyer, *Sur l'Association des Idées* (Paris, 1864); Farrar, *Chapters on Language*, pp. 235–250 (London, 1873); and Salverte, *History of Names*, pp. 8 foll. (London, 1862).

Pupa (*κόρη*). Literally, "a little girl"; and applied to a doll. Dolls were made by the Romans of rags, wood, wax, ivory, and terra-cotta. A wax-doll was called by the Greeks *δάγυνον*, *δαγύς*, and *πλαγγών*, and they often had movable limbs (Baumeister, *Denkm.* p. 778). At marriage the Greek girls dedicated their dolls to Artemis, the Roman girls to Venus (*Anth. Pal.* vi. 280; Pers. ii. 70); but if they died before marriage their dolls were buried with them. Dolls with movable limbs were called *νευρόπαστα*, and were worked by strings or wires. Marionettes were exhibited as in Italy to-day (Becq de Fouquières, *Les Jeux des Anciens*, pp. 27 foll.; Blümner, *Technologie*, ii. 123).

Roman Doll of Ivory. (Biscari, tav. v.)

Pupiēnus Maximus, M. Clodius. A Roman who was elected emperor with Balbinus, in A.D. 238, when the Senate received intelligence of the death of the two Gordians in Africa; but the new emperors were slain by the soldiers at Rome in the same year. See Balbinus.

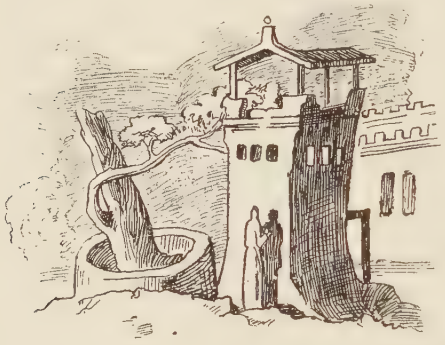
Pupilla. An orphan girl; a ward, a minor. See Infans; Tutela.



Puppis (*πρύμνα*). The poop or stern of a ship. See Navis.

Purpŭra (*πορφύρα*). The finest and most costly dye of the ancients, a discovery of the Phœnicians, though known to the Greeks in the Homeric Age. This may be inferred from the frequent epithet *πορφύρεος* applied to robes, rugs, etc. It was also known to the Romans in the time of their kings. It was obtained from two kinds of shells in the Mediterranean Sea: (1) from the trumpet-shell (Gr. *κῆρυξ*; Lat. *bucinum*, *murex*); (2) from the true purple-shell (Gr. *πορφύρα*; Lat. *purpura*, *pelagia* = *murex brandaris* or *tribulus*). These shells respectively contained in a diminutive bladder a small quantity of (1) scarlet-coloured, (2) black-and-red-coloured juice. The juice collected from a number of these shells was placed in salt in the proportion of about one pint of salt to every seventy-five pounds avoirdupois of juice, and heated in metal vessels by the introduction of warm vapours; then the raw material, wool and silk, was dyed in it. The best and dearest purple was always the Phœnician, especially that of Tyre, although it was prepared by other inhabitants of the Mediterranean. As the colour of the *bucinum* was not lasting, it was not used by itself, but only in combination with the true purpura for producing certain varieties of purple dye. By mixing *bucinum* with black *pelagium*, the juice of the true purple-shell, the fashionable violet, called the "amethyst" purple, was produced; and, by a double process of dyeing, first in half-boiled *pelagium*, and then in *bucinum*, Tyrian purple was produced. This had the colour of clotted blood, and when looked at straight appeared black, but when held to the light it glowed with colour. A pound of violet wool cost in Caesar's time 100 *denarii* ($20), Tyrian purple wool above 1000 *denarii* ($200). By mixing *pelagium* with other matter—water, urine, and orchilla—the bright purple dyes—heliotrope-blue, mauve-blue, and violet-yellow—were obtained. Other colours were produced by the combination of the different methods of dyeing; first dyeing the material with violet colour, purple dye, and scarlet (produced from the *coccus ilicis*); then by using the Tyrian method they obtained the *tyrianthinum*, the Tyrian shell-purple, and the variety called the *ὕσγινον*, from *ὗσγη*, a variety of *πρῖνος*, or *quercus coccifera* (Pliny, *H. N.* ix. 124–141). The native dye was apparently not easily distinguished from the Tyrian when newly applied, except by the connoisseur (Hor. *Epist.* i. 10, 26–30). For further details, see Blümner's *Technologie*, i. 224–240.

Purple robes were used at an early date by the Greeks as a mark of dignity. Even the Athenian archons wore purple mantles officially. In Rome at one time broad, at another narrow, stripes of purple on the toga and tunic served as marks of distinction for senators, magistrates, and members of the equestrian order. The robes of the general were dyed in purple (see Paludamentum); so also was the gold-embroidered mantle worn by one who celebrated a triumph. For a long time home-purple was used; Tyrian purple was not introduced till the middle of the first century B.C., and from that time it became a luxury. In spite of repeated attempts to check by imperial decrees the use of real purple among private individuals, robes trimmed with purple, or altogether dyed with it, became more and more used. Only a complete robe of *blatta*, the finest kind of purple, of which there were five varieties, was reserved as an imperial privilege, and any private person who wore it was punished as being guilty of high-treason (*Cod. Theod.* iv. 40, 1). From the second century A.D. the emperors took part in this lucrative industry, and from the end of the fourth century A.D. the manufacture of the *blatta* became an imperial monopoly.



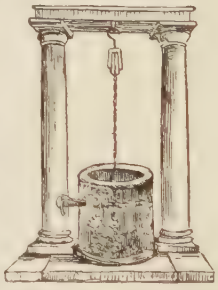
Purpurariae Insŭlae (probably the Madeira group). A group of islands in the Atlantic Ocean, off the northwestern coast of Africa.

Puteal. The Latin term for a circular stone enclosure, consisting of a dwarf wall, surrounding either (1) the mouth of a well (*puteus*) or (2) a spot struck by lightning. Italian superstition demanded that every flash of lightning which struck and was buried in the earth should have, as it were, a grave and a propitiatory offering, as in the case of a human being. According to the place where the flash fell, this offering was made, either by the State or by private individuals, in the earlier times according to the directions of the *pontifices*, at a later date after consultation with the Etruscan *haruspices*. The earth which was touched by the divine fire was carefully collected (Lucan, i. 606), and enclosed in a coffin constructed out of four side-pieces and without any bottom (this was the burying of the lightning). Then round the coffin a shaft, consisting of four walls and open at the top, was built up to the surface of the ground. A place which had thus been consecrated by the offering which the *haruspices* made of a sheep fully teethed (*bidens*) was especially called a *bidental*, and was not allowed to be desecrated. According to the pontifical rite introduced by Numa, the propitiatory offering consisted of onions, hair, and sardels. If a human being had been struck

Puteal. (Pompeii.)

by lightning, his body was not burnt, but buried on the spot (Pliny, *H. N.* ii. 145). Such a spot was called a *bidental*, and a propitiatory offering was made on his behalf (Fest. p. 27; Non. pp. 53, 26). See BIDENTAL.

Puteal enclosing a Tree. (From a Painting found at Herculaneum.)



The puteal, with bay wreaths, lyres, and a pair of pincers, may be seen on coins of the gens Scribonia. The ancient puteal in the Forum, near the Arcus Fabianus, was repaired by Scribonius Libo, whence it was called the Puteal Libonis or Puteal Scribonianum. In its neighbourhood he erected a tribunal for the praetor, which led to its becoming the resort of litigants, money-lenders, etc. (Hor. *Sat.* ii. 6, 35; *Ep.* i. 19, 8; Cic. *Pro Sestio*, 18).

Puteolānum. A country-house of Cicero, near Puteoli, where he wrote his *Quaestiones Academicae*, and where the emperor Hadrian was buried (Cic. *Ad Att.* xiv. 7; *Vit. Hadr.* 25).

Puteolānus Sinus. Now the Bay of Naples; a bay of the sea on the coast of Campania between the promontory Misenum and the promontory of Minerva. It was originally called Cumanus.

Putĕoli. Now Pozzuoli; originally named Dicaearchia. A celebrated seaport town of Campania, situated on a promontory on the eastern side of the Puteolanus Sinus, and a little to the east of Cumae, was founded by the Greeks of Cumae, B.C. 521, under the name of Dicaearchia. It obtained the name of Puteoli either from its numerous wells or from the stench arising from the mineral springs in its neighbourhood. The town was indebted for its importance to its excellent harbour, which was protected by an extensive mole to which Caligula attached a floating bridge, which extended as far as Baiae, a distance of two miles. Puteoli was the chief emporium for the commerce with Alexandria and with the greater part of Spain. The town was colonized by the Romans in B.C. 194, and also anew by Augustus, Nero, and Vespasian. It was destroyed by Alaric in A.D. 410, by Genseric in 455, and also by Totila in 545, but was on each occasion speedily rebuilt. There are still many ruins of the ancient town at the modern Pozzuoli.

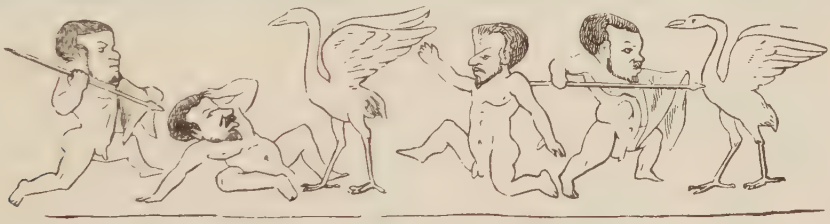
Puteus (*φρέαρ*). (1) A well dug in the ground and supplied from its own spring. (2) The fountain in a Roman house. (See DOMUS.) (3) A pit for storing grain (Varro, *R. R.* i. 57).

Roman Well. (From the Basilica of S. Giovanni Laterano, Rome.)

Puticŭlus and **Puticŭla.** A grave-pit used in the burial of the people of the lower classes and of slaves (Varro, *L. L.* v. 25). See SEPULCRUM.

Pyanepsia (*τὰ πυανέψια*, sc. *ἱερά*). A festival celebrated at Athens on the seventh day of the month PYANEPSION, the end of October, in honour of the departing god of summer, Apollo. The festival received its name from the cooked beans which were offered to the god as firstfruits of autumn. Another firstfruit offering of this festival was the *eiresioné* (*εἰρεσιώνη*), a branch of olive or bay, bound with purple and white wool, and hung about with all sorts of autumn fruits, pastry, and small vessels full of honey, wine, and oil. This branch was borne by a boy whose parents were both alive; a song, which bore the same name, *eiresioné*, was sung, while he was escorted by a procession to the temple of the god, where the wreath was deposited as a votive offering. Other branches were hung at the doors of the houses. In later times this festival was also kept as a mark of gratitude for the safe return of Theseus from Crete, which was supposed to have taken place on this day; and the cooking of the beans was regarded as commemorating the cooking of the scanty remains of the provisions of his ships. In

the ancient calendar of the Attic festivals built into the wall of the metropolitan church at Athens, the festival of the Pyanepsia is represented by a youth carrying the *eiresioné*. Besides Apollo, the Horae were worshipped at the Pyanepsia with offerings and invocations, as the goddesses of the blessings of the year.



Pycnostȳlus (*πυκνόστυλος*). An architectural term applied to an arrangement of columns used only in the Ionic and Corinthian orders, and denoting the placing of columns very close to one another (Vitruv. iii. 2).

Pyctes (*πύκτης*). See PUGIL.

Pydna (*Πύδνα*). Now Kitron. A town of Macedonia in the district Pieria, was situated at a small distance west of the Thermaic Gulf, on which it had a harbour. It was originally a Greek colony, but it was subdued by the Macedonian kings, from whom, however, it frequently revolted. It was subdued by Philip, who enlarged and fortified the place. It is especially memorable on account of the victory gained under its walls by Aemilius Paulus over Perseus, the last king of Macedonia, 168. Under the Romans it was also called CITRUM or CITRUS.

Pygĕla (*Πύγελα*) or **Phygĕla** (*Φύγελα*). A small town of Ionia, on the coast of Lydia.

Pygmaei (*Πυγμαῖοι*, i. e. men of the height of a *πυγμή*, i. e. thirteen and a half inches). A fabulous people, first mentioned by Homer (*Il.* iii. 5) as dwelling on the shores of Ocean, and attacked by cranes in springtime. The fable is repeated by numerous writers in various forms, especially as to the locality, some placing them at the sources of the Nile (Aristot. *H. A.* viii. 12) in Aethiopia, others in India (Pliny, *H. N.* vi. 22), and others in the extreme north of the earth (Eustath. *ad* Hom. p. 372). Philostratus represents them as fighting with Heracles, one army of them attacking his right hand and one his left (*Icon.* ii. 21). Aristotle did not regard the stories of the Pygmies as wholly fabulous (*H. A.* viii. 14), and recent African explorers have discovered in that Continent two types of dwarfish people whose existence in ancient times coming vaguely to the knowledge of the Greeks and Romans doubtless gave rise to the various stories about them. Ctesias and Pomponius Mela also speak of Pygmies in Asia. See Tarver, *The Pygmies* (London, 1894); Quatrefages, *The Pygmies*, Eng. trans. (New York, 1895).

Battle of Pygmies and Cranes. (Pompeian Caricature.)

Pygmalion (*Πυγμαλίων*). (1) A king of Cyprus and father of Metharmé. He is said to have fallen in love with the ivory image of a maiden which he himself had made, and therefore to have prayed to Aphrodité to breathe life into it. When the request was granted, Pygmalion married the maiden, and became by her the father of Paphus (Ovid, *Met.* x. 243, etc.). (2) Son of Belus and brother of Dido, who murdered Sichaeus, Dido's husband. For details, see DIDO.

Pygmé (*πυγμή*). Boxing. See ATHLETAE; GYMNASIUM; PUGILATUS.

Pylădes (*Πυλάδης*). (1) The son of Strophius and Anaxibia, a sister of Agamemnon. His father was king of Phocis; and after the death of Agamemnon, Orestes was secretly carried to his father's court. Here Pylades contracted that friendship with Orestes which became proverbial. He assisted Orestes in murdering his mother Clytaemnestra, and also accompanied him to the Tauric Chersonesus; and he eventually married his sister Electra, by whom he became the father of Hellanicus, Medon, and Strophius. For details, see ORESTES. (2) A pantomime dancer in the reign of Augustus, spoken of in the article BATHYLLUS.

Pylae (*Πύλαι*). A general name for any narrow pass, such as Thermopylae, Pylae, Albaniae, Caspiae, etc.

Pylagŏrae (*Πυλαγόραι*) and **Pylagŏri** (*Πυλαγόροι*). See AMPHICTYONES.

Pylēné (*Πυλήνη*). An ancient town of Aetolia near the coast, mentioned by Homer. The Aeolians who took Pylené afterwards removed higher up into the country and founded Proschium.

Pylos (*Πύλος*). The name of three towns on the western coast of the Peloponnesus. (1) In Elis, at the foot of Mount Scollis, and about seventy or eighty stadia from the city of Elis on the road to Olympia, near the confluence of the Ladon and the Peneus. (2) In Triphylia, about thirty stadia from the coast, on the river Mamaüs, west of the mountain Minthé, and north of Lepreum. (3) In the southwest of Messenia, was situated at the foot of Mount Aegaleos on a promontory at the northern entrance of the basin, now called the Bay of Navarino, the largest and safest harbour in all Greece. This harbour was fronted and protected by the small island of Sphacteria (Sphagia), which stretched along the coast about 1¾ miles, leaving only two narrow entrances at each end. Pylos became memorable in the Peloponnesian War, when the Athenians under Demosthenes built a fort on the promontory Coryphasium a little south of the ancient city, and just within the northern entrance to the harbour (B.C. 425). The attempts of the Spartans to dislodge the Athenians proved unavailing; and the capture by Cleon of the Spartans who had landed on the island of Sphacteria was one of the most important events in the whole war (Thuc. iv. 3–13; 29–40).

Pyra (*πυρά*). A funeral pyre. See FUNUS; ROGUS.

Pyracmon. See CYCLOPES.

Pyrămis (*πυραμίς*). A pyramid; a form of structure which doubtless originated with the Egyptians, though it was adopted by the Etruscans and Romans, and is found in the so-called Cyclopean remains in Greece. (See CYCLOPES, p. 451.) The Romans used the pyramid as a design for sepulchral monuments (see illustration, p. 732), a fine existing specimen being the tomb of C. Cestius on the Appian Way just outside of Rome. The tomb of Augustus, remains of which are still to be seen, was pyramidal, rising to the height of some 328 feet. (See AUGUSTUS.) The pyramidal form is found in the Birs-Nimrûd or Tower of Belus (see pages 175, 176), and it occurred in the famous mausoleum at Halicarnassus. See illustration, p. 1018.

Pyramidal Tomb of Gaius Cestius. (From a photograph.)

Pyrămus (*Πύραμος*). See THISBÉ.

Pyrămus (*Πύραμος*). Now the Jihan; a large river in Asia Minor, rising in the Anti-Taurus range in Cappadocia, and flowing southwest through Cilicia until it falls into the sea near Mallus. It was also called LEUCOSŸRUS from the Leucosyri, who lived on its banks.

Pyrēné (*Πυρήνη*) or **Pyrenaei Montes** (*τὰ Πυρηναῖα ὄρη*). The Pyrenees; a range of mountains extending from the Atlantic to the Mediterranean, and forming the boundary between Gaul and Spain. The length of these mountains is about 270 miles in a straight line; their breadth varies from about 40 miles to 20; their greatest height is between 11,000 and 12,000 feet. The continuation of the mountains along the Maré Cantabricum was called Saltus Vasconum, and still farther west Mons Vindius or Vinnius.

Pyrēnes Promontorium or **Promontorium Venĕris.** Now C. Creus; the southeastern extremity of the Pyrenees in Spain, on the frontiers of Gaul, derived its second name from a temple of Venus on the promontory.

Pyrgi (*Πύργοι*). (1) The southernmost town of Triphylia, in Elis, near the Messenian frontier, said to have been founded by the Minyae. (2) Now Santa Severa; an ancient Pelasgic town on the coast of Etruria, was used as the port of Caeré or Agylla, and was a place of considerable importance as a commercial emporium.

Pyrgotĕles (*Πυργοτέλης*). A celebrated Greek engraver of gems who flourished in the fourth century B.C., in the reign of Alexander the Great, who admired him so much as to allow no other artist to engrave the royal seal-rings (Pliny, *H. N.* vii. 125; xxxvii. 8). See GEMMA.

Pyriphlegĕthon (*Πυριφλεγέθων*, "flaming with fire"). The name of one of the rivers in the lower world. See HADES; PHLEGETHON.

Pyromăchus (*Πυρόμαχος*) or **Phyromăchus** (*Φυρόμαχος*). (1) An Athenian sculptor who made the bas-reliefs on the frieze of the temple of Athenê Polias, about B.C. 408 (*C. I. A.* i. 324). (2) A Pergamene sculptor who with Antigonus, Isigonus, and Stratonicus produced a number of groups representing the battle of Attalus and Eumenes of Pergamum against the Gauls. The so-called "Dying Gladiator" (really a dying Gaul) in the Capitol at Rome is a copy from one of these groups. The date of Pyromachus is about B.C. 150.

Pyrrha (*Πύρρα*). See DEUCALION.

Pyrrha (*Πύρρα*). (1) A town on the west coast of the island of Lesbos, on the inner part of the deep bay named after it, and consequently on the narrowest part of the island. (2) A town and promontory of Phthiotis, in Thessaly, on the Pagasaean Gulf, and near the frontiers of Magnesia. Off this promontory there were two small islands named Pyrrha and Deucalion. See DEUCALION.

Dying Gaul copied from Pyromachus (Capitoline Museum, Rome.)

Pyrrhĭca (*πυρρίχη*). A war-dance of Doric origin. It was danced to the sound of the flute in rapid measure by men dressed in armour, and illustrated the various positions of attack and defence. See SALTATIO.

Pyrrho (*Πύρρων*). The founder of the Sceptical or Pyrrhonian School of philosophy, a native of Elis in the Peloponnesus. He is said to have been poor, and to have followed at first the profession of a painter. He is then said to have been attracted to philosophy by the books of Democritus, to have attended the lectures of Bryson, a disciple of Stilpon, to have attached himself closely to Anaxarchus, and with him to have joined the expedition of Alexander the Great. During the greater part of his life he lived in retirement, and endeavoured to render himself independent of all external circumstances. His disciple Timon extolled with admiration his supreme repose of soul and his indifference to pleasure or pain. So highly was he valued by his fellow-citizens that they made him their high-priest, and erected a monument to him after his death. The Athenians conferred upon him the rights of citizenship. We know little respecting the principles of his sceptical philosophy, and the tales told about him by Diogenes Laërtius are probably the invention of his enemies. He asserted that certain knowledge on any subject was unattainable, and that the great object of man ought to be to lead a virtuous life. Pyrrho wrote no works, except a poem addressed to Alexander, which was rewarded by the latter in a royal manner. Pyrrho's philosophical system was first reduced to writing by his disciple Timon the Sillographer. (See TIMON.) He reached the age of ninety years, but his dates are uncertain.

Pyrrhus (*Πύρρος*). Mythological. See NEOPTOLEMUS.

Pyrrhus (*Πύρρος*). (1) I. A king of Epirus, son of Aeacides and Phthia, born B.C. 318. His ancestors claimed descent from Pyrrhus, the son of Achilles, who was said to have settled in Epirus after the Trojan War, and to have become the founder of the race of Molossian kings. On the deposition of his father by the Epirots (see AEACIDES), Pyrrhus, who was then a child only two years old, was saved from destruction by the faithful adherents of the king, who carried him to Glaucias, the king of the Taulantians, an Illyrian people. Glaucias took the child under his care and brought him up with his own children. He not only refused to surrender Pyrrhus to Cassander, but about ten years afterwards he marched into Epirus at the head of an army, and placed Pyrrhus on the throne, leaving him, however, under the care of guardians, as he was then only twelve years of age. In the course of four or five years, however, Cassander, who had gained his supremacy in Greece, prevailed upon the Epirots to expel their young king. Pyrrhus, who was then only sevénteen years of age, joined Demetrius, who had married his sister Deïdamia, accompanied him to Asia, and was present at the battle of Ipsus (301), in which he gained great renown for his valour. Antigonus fell in the battle, and Demetrius became a fugitive; but Pyrrhus did not desert his brother-in-law in his misfortunes, and shortly afterwards went for him as a hostage into Egypt. Here he was fortunate enough to win the favour of Berenicé, the wife of Ptolemy, and received in marriage Antigoné, her daughter by her first husband. Ptolemy now supplied him with a fleet and forces, with which he returned to Epirus. Neoptolemus, who had reigned from the time that Pyrrhus had been driven from the kingdom, agreed to share the sovereignty with Pyrrhus. But such an arrangement could not last long, and Pyrrhus anticipated his own destruction by putting his rival to death. This appears to have happened in 295, in which year Pyrrhus is said to have begun to reign.

He was now twenty-three years old, and he soon became one of the most popular princes of his time. His daring courage made him a favourite with his troops, and his affability and generosity secured the love of his people. He seems at an early age to have taken Alexander as his model, and to have been fired with the ambition of imitating his exploits and treading in his footsteps. His eyes were first directed to the conquest of Macedonia. By assisting Alexander, the son of Cassander, against his brother Antipater, he obtained possession of the whole of the Macedonian dominions on the western side of Greece. But the Macedonian throne

itself fell into the hands of Demetrius, greatly to the disappointment of Pyrrhus. The two former friends now became the most deadly enemies, and open war broke out between them in 291. After the war had been carried on with great vigour and various vicissitudes for four years, Pyrrhus joined the coalition formed in 287 by Seleucus, Ptolemy, and Lysimachus against Demetrius. Lysimachus and Pyrrhus invaded Macedonia; Demetrius was deserted by his troops and obliged to fly in disguise, and the kingdom was divided between Lysimachus and Pyrrhus. But the latter did not long retain his portion; the Macedonians preferred the rule of their old general Lysimachus, and Pyrrhus was accordingly driven out of the country after a reign of seven months (286).

For the next few years Pyrrhus reigned quietly in Epirus without embarking in any new enterprise. But a life of inactivity was insupportable to him, and accordingly he readily accepted the invitation of the Tarentines to assist them in their war against the Romans. He crossed over to Italy early in 280, in the thirty-eighth year of his age. He took with him 20,000 foot, 3000 horse, 2000 archers, 500 slingers, and either fifty or twenty elephants, having previously sent Milo, one of his generals, with a detachment of 3000 men. As soon as he arrived at Tarentum he began to make vigourous preparations for carrying on the war; and as the giddy and licentious inhabitants of Tarentum complained of the severity of his discipline, he forthwith treated them as their master rather than as their ally, shut up the theatre and all other public places, and compelled their young men to serve in his ranks. In the first campaign (280) the Roman consul M. Valerius Laevinus was defeated by Pyrrhus near Heraclea, on the bank of the river Siris. The battle was long and bravely contested, and it was not till Pyrrhus brought forward his elephants, which bore down everything before them, that the Romans took to flight. The loss of Pyrrhus, though inferior to that of the Romans, was still very considerable. A large proportion of his officers and best troops had fallen, and he said, as he viewed the field of battle, "Another such victory, and I must return to Epirus alone." He therefore availed himself of his success to send his minister Cineas to Rome with proposals of peace, while he himself marched slowly towards the city. His proposals, however, were rejected by the Senate. He accordingly continued his march, ravaging the Roman territory as he went along. He advanced within twenty-four miles of Rome; but as he found it impossible to compel the Romans to accept the peace, he retraced his steps and withdrew into winter-quarters at Tarentum. As soon as the armies were quartered for the winter, the Romans sent an embassy to Pyrrhus to endeavour to obtain the ransom of the Roman prisoners. The ambassadors were received by Pyrrhus in the most distinguished manner, and his interviews with C. Fabricius, who was at the head of the embassy, form one of the most celebrated stories in Roman history. See FABRICIUS.

In the second campaign (279) Pyrrhus gained another victory near Asculum over the Romans, who were commanded by the consuls P. Decius Mus and P. Sulpicius Saverrio. The battle, however, was followed by no decisive results, and the brunt of it had again fallen, as in the previous year, almost exclusively on the Greek troops of the king. He was therefore unwilling to hazard his surviving Greeks by another campaign with the Romans, and accordingly he lent a ready ear to the invitations of the Greeks in Sicily, who begged him to come to their assistance against the Carthaginians. The Romans were likewise anxious to get rid of so formidable an opponent, that they might complete the subjugation of Southern Italy without further interruption. When both parties had the same wishes, it was not difficult to find a fair pretext for bringing the war to a conclusion. This was afforded at the beginning of the following year (278) by one of the servants of Pyrrhus deserting to the Romans and proposing to the consuls to poison his master. The consuls Fabricius and Aemilius sent back the deserter to the king, stating that they abhorred a victory gained by treason. Thereupon Pyrrhus, to show his gratitude, sent Cineas to Rome with all the Roman prisoners without ransom and without conditions; and the Romans granted him a truce, though not a formal peace, as he had not consented to evacuate Italy.

Pyrrhus now crossed over into Sicily, where he remained upwards of two years, from the middle of 278 to the latter end of 276. At first he met with brilliant success, defeated the Carthaginians and took Eryx; but having failed in an attempt upon Lilybaeum, he lost his popularity with the Greeks, who began to form cabals and plots against him. This led to retaliation on the part of Pyrrhus, and to acts which were deemed both cruel and tyrannical by the Greeks. His position in Sicily at length became so uncomfortable and dangerous that he soon became anxious to abandon the island. Accordingly, when his Italian allies again begged him to come to their assistance, he gladly complied with their request. Pyrrhus returned to Italy in the autumn of 276. In the following year (275) the war was brought to a close. Pyrrhus was defeated with great loss near Beneventum by the Roman consul Curius Dentatus, and was obliged to leave Italy. He brought back with him to Epirus only 8000 foot and 500 horse, and had not money to maintain even these without undertaking new wars. Accordingly, in 273, he invaded Macedonia, of which Antigonus Gonatas, the son of Demetrius, was then king. His only object at first seems to have been plunder, but his success far exceeded his expectations. Antigonus was deserted by his own troops, and Pyrrhus thus became king of Macedonia a second time. But scarcely had he obtained possession of the kingdom before his restless spirit drove him into new enterprises. On the invitation of Cleonymus he turned his arms against Sparta, but was repulsed in an attack upon this city. From Sparta he marched towards Argos in order to support Aristeas, one of the leading citizens at Argos, against his rival Aristippus, whose cause was espoused by Antigonus. In the nighttime Aristeas admitted Pyrrhus into the city, but the alarm having been given, the citadel and all the strong places were seized by the Argives of the opposite faction. On the dawn of day Pyrrhus saw that it would be necessary for him to retreat; and as he was fighting his way out of the city, an Argive woman hurled down from the housetop a ponderous tile, which struck Pyrrhus on the back of his neck. He fell from his horse stunned with the blow, and being recognized by some of the soldiers of Antigonus, was quickly despatched.

His head was cut off and carried to Antigonus, who turned away from the sight, and ordered the body to be interred with becoming honours. Pyrrhus perished in B.C. 272, in the forty-sixth year of his age and in the twenty-third of his reign.

He was the greatest warrior and one of the best princes of his time. With his daring courage, his military skill, and his kingly bearing, he might have become the most powerful monarch of his day if he had steadily pursued the immediate object before him. But he never rested satisfied with any acquisition, and was ever grasping at some fresh object: hence Antigonus compared him to a gambler, who made many good throws with the dice, but was unable to make the proper use of the game. Pyrrhus was regarded in subsequent times as one of the greatest generals that had ever lived. Hannibal said that of all generals Pyrrhus was the first, Scipio the second, and himself the third; or, according to another version of the story, Alexander was the first, Pyrrhus the second, and himself the third. Pyrrhus wrote a work on the art of war, which was read in the time of Cicero; and his commentaries are quoted both by Dionysius and Plutarch. Pyrrhus married four wives: (*a*) Antigoné, the daughter of Berenicé; (*b*) a daughter of Audoleon, king of the Paeonians; (*c*) Bircenna, a daughter of Bardylis, king of the Illyrians; (*d*) Lanassa, a daughter of Agathocles of Syracuse. His children were: (*a*) Ptolemy, born 295; killed in battle, 272; (*b*) Alexander, who succeeded his father as king of Epirus; (*c*) Helenus; (*d*) Nereis, who married Gelon of Syracuse; (*e*) Olympias, who married her own brother Alexander; (*f*) Deidamia or Laodamia. See the Life by Plutarch.

(2) II. A king of Epirus, son of Alexander II. and Olympias, and grandson of Pyrrhus I., was a child at the time of his father's death (between B.C. 262 and 258). During his minority the kingdom was governed by his mother, Olympias. According to one account Olympias survived Pyrrhus, who died soon after he had grown up to manhood; according to another account Olympias had poisoned a maiden to whom Pyrrhus was attached, and was herself poisoned by him in revenge.

Pythagŏras (*Πυθαγόρας*). (1) A celebrated Greek philosopher, a native of Samos, and the son of Mnesarchus, who was either a merchant, or, according to others, an engraver of signets. The date of his birth is uncertain; but all authorities agree that he flourished in the times of Polycrates and Tarquinius Superbus (B.C. 540–510). He studied in his own country under Creophilus, Pherecydes of Syros, and others, and is said to have visited Egypt and many countries of the East for the purpose of acquiring knowledge. We have not much trustworthy evidence, either as to the kind and amount of knowledge which he acquired, or as to his definite philosophical views. It is certain, however, that he believed in the transmigration of souls; and he is said to have pretended that he had been Euphorbus, the son of Panthoüs, in the Trojan War, as well as various other characters. He is further said to have discovered the propositions that the triangle inscribed in a semicircle is right-angled; that the square on the hypotenuse of a right-angled triangle is equal to the sum of the squares on the sides. There is a celebrated story of his having discovered the arithmetical relations of the musical scale by observing accidentally the various sounds produced by hammers of different weights striking upon an anvil, and suspending by strings weights equal to those of the different hammers. The retailers of the story of course never took the trouble to verify the experiment, or they would have discovered that different hammers do not produce different sounds from the same anvil, any more than different clappers do from the same bell. Discoveries in astronomy are also attributed to Pythagoras. There can be little doubt that he paid great attention to arithmetic, and its application to weights, measures, and the theory of music. Apart from all direct testimony, however, it may safely be affirmed that the very remarkable influence exerted by Pythagoras, and even the fact that he was made the hero of so many marvellous stories, proves him to have been a man both of singular capabilities and of great acquirements. It may also be affirmed with safety that the religious element was the predominant one in the character of Pythagoras, and that religious ascendancy in connection with a certain mystic religious system was the object which he chiefly laboured to secure. It was this religious element which made the profoundest impression upon his contemporaries. They regarded him as standing in a peculiarly close connection with the gods. The Crotoniats even identified him with the Hyperborean Apollo. And, without viewing him as an impostor, we may easily believe that he himself, to some extent, shared the same views. He pretended to divination and prophecy; and he appears as the revealer of a mode of life calculated to raise his disciples above the level of mankind, and to recommend them to the favour of the gods. No certainty can be arrived at as to the length of time spent by Pythagoras in Egypt or the East, or as to his residence and efforts in Samos or other Grecian cities, before he settled at Crotona in Italy. He probably removed to Crotona because he found it impossible to realize his schemes in his native country while under the tyranny of Polycrates. The reason why he selected Crotona as the sphere of his operations it is impossible to ascertain; but soon after his arrival in that city he attained extensive influence, and gained over great numbers to enter into his views. His adherents were chiefly of the noble and wealthy classes. Three hundred of these were formed into a select brotherhood or club, bound by a sort of vow to Pythagoras and each other, for the purpose of cultivating the religious and ascetic observances enjoined by their master, and of studying his religious and philosophical theories. Everything that was done and taught among the members was kept a profound secret from all without its pale. It was an old Pythagorean maxim, that everything was not to be told to everybody. There were also gradations among the members themselves, as in the distinction of *ἀκουσματικοί* or "hearers" as contrasted with *μαθηματικοί* or esoteric students. In the admission of candidates Pythagoras is said to have placed great reliance on his physiognomical discernment. If admitted, they had to pass through a period of probation, in which their powers of maintaining silence were especially tested, as well as their general temper, disposition, and mental capacity. As regards the nature of the esoteric instruction to which only the most approved members of the fraternity were admitted, some have supposed that it had reference to the political views of Pythagoras. Others have main-

tained, with greater probability, that it related mainly to the *orgies*, or secret religious doctrines and usages, which undoubtedly formed a prominent feature in the Pythagorean system, and were peculiarly connected with the worship of Apollo. There were some outward peculiarities of an ascetic kind in the mode of life to which the members of the brotherhood were subjected. Some represent him as forbidding all animal food; but all the members cannot have been subjected to this prohibition, since the athletic Milo, for instance, could not possibly have dispensed with animal food. According to some ancient authorities, he allowed the use of all kinds of animal food except the flesh of oxen used for ploughing, and rams. There is a similar discrepancy as to the prohibition of fish and beans. But temperance of all kinds seems to have been strictly enjoined. It is also stated that they had common meals, resembling the Spartan syssitia, at which they met in companies of ten. Considerable importance seems to have been attached to music and gymnastics in the daily exercises of the disciples. Their whole discipline is represented as tending to produce a lofty serenity and self-possession, regarding the exhibition of which various anecdotes were current in antiquity. Among the best ascertained features of the brotherhood are the devoted attachment of the members to each other, and their sovereign contempt for those who did not belong to their ranks. It appears that they had some secret conventional symbols, by which members of the fraternity could recognize each other, even if they had never met before. Clubs similar to that at Crotona were established at Sybaris, Metapontum, Tarentum, and other cities of Magna Graecia. The institutions of Pythagoras were certainly not intended to withdraw those who adopted them from active exertion, that they might devote themselves exclusively to religious and philosophical contemplations. He rather aimed at the production of a calm bearing and elevated tone of character, through which those trained in the discipline of the Pythagorean life should exhibit in their personal and social capacities a reflection of the order and harmony of the universe. Whether he had any distinct political designs in the foundation of his brotherhood is doubtful; but it was perfectly natural, even without any express design on his part, that a club such as the Three Hundred of Crotona should gradually come to mingle political with other objects, and, by the facilities afforded by their secret and compact organization, should speedily gain extensive political influence. That this influence should be decisively on the side of aristocracy or oligarchy resulted naturally both from the nature of the Pythagorean institutions, and from the rank and social position of the members of the brotherhood. Through them, of course, Pythagoras himself exercised a large amount of indirect influence over the affairs both of Crotona and of other Italian cities. This Pythagorean brotherhood or order resembled in many respects the one founded by Loyola. It is easy to understand how this aristocratical and exclusive club would excite the jealousy and hostility not only of the democratical party in Crotona, but also of a considerable number of the opposite faction. The hatred which they had excited speedily led to their destruction. The populace of Crotona rose against them; and an attack was made upon them while assembled either in the house of Milo, or in some other place of meeting. The building was set on fire, and many of the assembled members perished; only the more active escaped. Similar commotions ensued in the other cities of Magna Graecia in which Pythagorean clubs had been formed. As an active and organized brotherhood, the Pythagorean Order was everywhere suppressed; but the Pythagoreans still continued to exist as a sect, the members of which kept up among themselves their religious observances and scientific pursuits, while individuals, as in the case of Archytas, acquired now and then great political influence.

Respecting the fate of Pythagoras himself, the accounts varied. Some say that he perished in the temple with his disciples, others that he fled first to Tarentum, and that, being driven thence, he escaped to Metapontum, and there starved himself to death. His tomb was shown at Metapontum in the time of Cicero. According to some accounts, Pythagoras married Theano, a lady of Crotona, and had a daughter Damo, and a son Telauges, or, according to others, two daughters, Damo and Myia; while other notices seem to imply that he had a wife and a daughter grown up when he came to Crotona. When we come to inquire what were the philosophical or religious opinions held by Pythagoras himself, we are met at the outset by the difficulty that even the authors from whom we have to draw possessed no authentic records bearing upon the age of Pythagoras himself. If Pythagoras ever wrote anything, his writings perished with him, or not long after. The probability is that he wrote nothing. Everything current under his name in antiquity is spurious. It is all but certain that Philolaüs was the first who *published* the Pythagorean doctrines, at any rate in a written form. (See PHILOLAÜS.) Still there was so marked a peculiarity running through the Pythagorean philosophy that there can be little question as to the germs of the system, at any rate, having been derived from Pythagoras himself. Pythagoras resembled the philosophers of the Ionic school, who undertook to solve, by means of a single primordial principle, the vague problem of the origin and constitution of the universe as a whole. His predilection for mathematical studies led him to trace the origin of all things to *number*, his theory being suggested, or at all events confirmed, by the observation of various numerical relations, or analogies to them, in the phenomena of the universe. Musical principles likewise played almost as important a part in the Pythagorean system as mathematical or numerical ideas. We find running through the entire system the idea that order, or harmony of relation, is the regulating principle of the whole universe. The intervals between the heavenly bodies were supposed to be determined according to the laws and relations of musical harmony. Hence arose the celebrated doctrine of the harmony of the spheres; for the heavenly bodies, in their motion, could not but occasion a certain sound or note, depending on their distances and velocities; and as these were determined by the laws of harmonical intervals, the notes altogether formed a regular musical scale or harmony. This harmony, however, we do not hear, either because we have been accustomed to it from the first, and have never had an opportunity of contrasting it with stillness, or because the sound is so powerful as to
